# PRELIMINARIES SPECIFICATION

## Table of Contents

### PRE.B Preliminaries for Building, Piling, Demolition and Soft Landscape Contracts

- PRE.B1 Project Particulars
- PRE.B2 The Works
- PRE.B3 The Site
- PRE.B4 Possession and Completion
- PRE.B5 The Contract Conditions
- PRE.B6 Information Required by Conditions of Contract
- PRE.B7 Documentation and Records
- PRE.B8 Contractor’s Obligations
- PRE.B9 Quality Standards
- PRE.B10 Temporary Works and Facilities
- PRE.B11 Work, Materials and Services by Others
- PRE.B12 Attendance

### PRE.BS Preliminaries for Building Services Sub-Contracts

- PRE.BS1 Preliminaries

### PRE.C Preliminaries for Civil and Geotechnical Engineering Contracts

- PRE.C1 Project Particulars
- PRE.C2 The Works
- PRE.C3 The Site
- PRE.C4 Possession and Completion
- PRE.C5 The Contract
- PRE.C6 Information Required by Conditions of Contract
- PRE.C7 Documentation and Records
- PRE.C8 Quality Standards
- PRE.C9 Contractor’s Obligations
- PRE.C10 Traffic Arrangements
- PRE.C11 Temporary Works and Facilities
- PRE.C12 Attendance
- PRE.C13 Appendix 1
- PRE.C14 Appendix 2
- PRE.C15 Appendix 3
### Appendices

- **APA** | Appendix A - Site/Phase/Estate Boundary Plan
- **APB** | Appendix B - List of Contract Drawings
- **APC** | Appendix C - Sketches and Details
- **APD** | Appendix D - Schedule of Samples to be Provided by the Contractor
- **APP** | Appendix P - List of Sub-contract Drawings
- **APQ** | Appendix Q - Extracts from the Main Contract
- **APR** | Appendix R - Information Required by Conditions of Sub-contract
- **APS** | Appendix S - Building Services Material Delivery Inventory Record
- **APU** | Appendix U - List of Reference Drawings
- **APV** | Appendix V - List of Sub-contract Reference Drawings
- **APW** | Appendix W - BEAM Plus requirements in building services nominated sub-contracts
- **APZ** | Appendix Z - Commissioning Management Plan

PRELIMINARIES FOR BUILDING, PILING, DEMOLITION, AND SOFT LANDSCAPE CONTRACTS

PRE.B > TABLE OF CONTENTS

PRE.B8.240.7 SAFETY EQUIPMENT AND CLOTHING FOR PERSONAL PROTECTION OF CM, CM’S REPRESENTATIVES AND VISITORS.................................................. 135
PRE.B8.241.7 INSPECTION AND CERTIFICATION OF OVERHAUL OF MAJOR CONSTRUCTION PLANT ON SITE............................................. 135
PRE.B8.242.7 USE OF TOWER CRANES................................................. 139
PRE.B8.245.7 USE OF STATIC AND MOBILE CRANES.............................. 144
PRE.B8.250.7 GUARDS TO LIFT WELL OPENINGS................................... 144
PRE.B8.255.7 PROTECTIVE STEEL RAILING AT SLABS EDGES.................. 144
PRE.B8.260.7 REQUIREMENTS FOR PRECAST CONCRETE FACADES TO DOMESTIC BLOCKS.......................................................... 144
PRE.B8.262.7 REQUIREMENTS FOR LARGE PANEL FORMWORK AND WORKING PLATFORMS TO DOMESTIC BLOCKS............................. 145
PRE.B8.270.7 TRAFFIC CONTROL......................................................... 146
PRE.B8.280.7 TEMPORARY TRAFFIC SIGNS............................................. 146
PRE.B8.290.7 SAFETY OF SITE VEHICLES AND MOBILE PLANT.................... 146

HEALTH ....................................................................................... 147
PRE.B8.300.7 HEALTH CARE PLAN.................................................... 147

FIRE PRECAUTIONS ....................................................................... 147
PRE.B8.310.7 FIRE REGULATIONS ..................................................... 147
PRE.B8.320.7 STREET FIRE HYDRANTS .............................................. 147
PRE.B8.325.7 TEMPORARY FIRE SERVICES WATER TANK..................... 147
PRE.B8.330.7 WATER RELAYING FACILITIES....................................... 147
PRE.B8.340.7 DANGEROUS GOODS STORE........................................ 147
PRE.B8.350.7 PORTABLE FIRE FIGHTING APPLIANCES......................... 147
PRE.B8.360.7 PROHIBITING SMOKING ON SITE................................... 148

GENERAL NUISANCE ..................................................................... 148
PRE.B8.410.7 COMPLIANCE WITH REGULATIONS................................. 148

AIR POLLUTION CONTROL ............................................................. 150
PRE.B8.450.7 BONFIRE RESTRICTION ................................................. 148
PRE.B8.455.7 DUST CONTROL............................................................... 148
PRE.B8.460.7 DEBRIS CONTROL............................................................. 149
PRE.B8.465.7 SCREENS GENERALLY............................................... 150
PRE.B8.470.7 AIR POLLUTION CONTROL (VOLATILE ORGANIC COMPOUNDS) REGULATION.................................................. 150
PRE.B8.475.7 USE OF ULTRA-LOW-SULPHUR DIESEL......................... 150

CONSTRUCTION DUST MONITORING ............................................. 150
PRE.B8.510.7 BASELINE DUST MONITORING...................................... 150
PRE.B8.520.7 IMPACT DUST MONITORING.......................................... 151
PRE.B8.530.7 AIR SENSITIVE RECEIVERS (ASRS) ................................. 151
PRE.B8.540.7 ACTIONS AND LIMIT LEVELS........................................ 151
PRE.B8.550.7 DUST MONITORING EQUIPMENT.................................... 151
PRE.B8.560.7 NON-COMPLIANCE WITH LIMITS................................... 152
PRE.B8.570.7 ACTION PLAN................................................................. 152

MEASUREMENT OF INDOOR AIR QUALITY ..................................... 153
PRE.B8.610.7 QUALIFIED AGENT FOR INDOOR AIR QUALITY (IAQ) MEASUREMENT................................................................. 153
PRE.B8.620.7 MEASUREMENT OF AIRBORNE CONTAMINANT(S)......... 154

CONTROL OF NOISE - STATUTORY REQUIREMENTS .................... 155
PRE.B8.710.7 NOISE CONTROL REGULATIONS.................................... 155
PRE.B8.730.7 CONSTRUCTION NOISE PERMIT...................................... 155

CONTROL OF NOISE - ADDITIONAL REQUIREMENTS .................... 155
PRE.B8.750.7 ADDITIONAL REQUIREMENTS......................................... 155
PRE.B8.760.7 PNEUMATICALLY DRIVEN DRILLING RIGS........................ 155
PRE.B8.770.7 OPERATING RESTRICTIONS............................................ 155
PRE.B8.773.7 EQUIPMENT NOISE LEVEL LIMITS ................................ 155
PRE.B8.775.7 SCHOOL EXAMINATION RESTRICTIONS......................... 156
PRE.B8.777.7 SOUND LEVEL METER.................................................. 156
PRE.B8.830.7 USE OF PERCUSSIVE PILING RIGS.................................. 156

### SITE ORGANISATION AND SITE SUPERVISION PLAN

- **PRE.B8.1405.7** Submissions of organisation chart and SSP ................................. 178
- **PRE.B8.1410.7** Site meetings .................................................................................. 179
- **PRE.B8.1420.7** Co-ordination of services ............................................................... 179
- **PRE.B8.1425.7** Quality control system .................................................................... 181
- **PRE.B8.1430.7** Progress and record photographs .................................................... 181
- **PRE.B8.1435.7** Public relations plan ....................................................................... 181
- **PRE.B8.1440.7** As-built drawings and documentation ............................................. 182
- **PRE.B8.1450.7** Wage books .................................................................................. 185
- **PRE.B8.1460.7** Records of plant and materials ....................................................... 186
- **PRE.B8.1470.7** Removal of materials from site ...................................................... 186
- **PRE.B8.1480.7** Calibration of equipment ................................................................ 186
- **PRE.B8.1490.7** Equipment calibration schedule ...................................................... 187
- **PRE.B8.1510.7** Protection from weather ................................................................. 189
- **PRE.B8.1520.7** Emergency standby team ............................................................... 189
- **PRE.B8.1540.7** Drying the works ........................................................................... 189
- **PRE.B8.1550.7** Protection from overloading ............................................................ 189
- **PRE.B8.1560.7** Protection to lift lobbies ................................................................. 190
- **PRE.B8.1570.7** Protection of workers from heat stroke ........................................... 190
- **PRE.B8.1610.7** Site presentation ............................................................................ 190
- **PRE.B8.1620.7** Storage of new materials and plant ................................................. 190
- **PRE.B8.1630.7** Disposal of waste materials ............................................................ 191
- **PRE.B8.1640.7** Cleaning works on completion ....................................................... 191
- **PRE.B8.1650.7** Display of posters - prevention of mosquito breeding ..................... 191
- **PRE.B8.1660.7** Removal and treatment of standing water ..................................... 191
- **PRE.B8.1670.7** Treatment of water receptacles ....................................................... 191
- **PRE.B8.1680.7** Pesticides and larvicides ................................................................. 191
- **PRE.B8.1710.7** Compliance with personal data (privacy) ........................................... 191
- **PRE.B8.1810.7** Disposal of inert C&D materials ..................................................... 192
- **PRE.B8.1820.7** Disposal of non-inert C&D materials .............................................. 192
- **PRE.B8.1830.7** Trip-ticket system for disposal of C&D materials at public fill reception facilities/landfills/outlying islands transfer facilities ................................................................. 192
- **PRE.B8.1831.7** Trip-ticket system for disposal of C&D materials at disposal facilities other than public fill reception facilities/landfills/outlying islands transfer facilities ................................................................. 192
- **PRE.B8.1835.7** Site video recording system .............................................................. 194
- **PRE.B8.1836.7** Monitoring of weight of trucks with C&D materials .................... 194
- **PRE.B8.1838.7** Mechanical cover system for dump trucks for transporting C&D materials ................................................................. 195
- **PRE.B8.1850.7** Alternative disposal ground ............................................................. 196
- **PRE.B8.1860.7** Removal of C&D materials from unauthorized disposal grounds .... 197
- **PRE.B8.1910.7** Construction waste management - general .................................... 197
- **PRE.B8.1920.7** Special waste management responsibilities .................................... 197
- **PRE.B8.1950.7** Hazardous waste .......................................................................... 198

THE PROJECT

Option 1
The Project is the Construction of Phase ............... of a Public Housing Estate at ........................................................ for the Hong Kong Housing Authority.

Option 2
The Project is the demolition of ................................ existing domestic blocks (Block Nos. ................. and ..............), one existing school and one existing electrical substation in ............... Estate at ........................................................ for the redevelopment of ............... Estate Phase ........ for the Hong Kong Housing Authority.

Option 3
1. The Project is the execution of piling to foundations for the construction of ................................................................. for the Hong Kong Housing Authority.
2. The Project is the design and execution of piling, to foundations for the construction of ................................................................. for the Hong Kong Housing Authority.

Option 4
1. The Project is the execution of piling (and pilecaps) to foundations and the execution of certain substructure works for the construction of ................................................................. for the Hong Kong Housing Authority.
2. The Project is the design and execution of piling (and pilecaps) to foundations and the execution of certain substructure works for the construction of ................................................................. for the Hong Kong Housing Authority.

Option 5
The Project is the Soft Landscape Works at ................................................................. for the Hong Kong Housing Authority.

THE CONTRACT MANAGER

Option 1
The Contract Manager is the Chief Architect/............... of the Development and Construction Division, Housing Department.

Option 2
The Contract Manager is Messrs .................................................................

Option 3
The Contract Manager is the Chief Structural Engineer/ .......... of the Development and Construction Division, Housing Department.

Option 4
The Contract Manager is Messrs .................................................................

THE SURVEYOR

Option 1
The Surveyor is the Chief Quantity Surveyor/......... of the Development and Construction Division, Housing Department.

Option 2
The Surveyor is Messrs .................................................................
OPTION 1

The Works to be executed under this Contract include the construction of the following major items:

1. ....... - storey domestic blocks (Blocks ....... and .......), each block approximately ....... x ....... m overall on plan and approximately ....... m high from ground floor to main roof level. The long wing of each block is linked to its two short wings with a 90° angle link core approximately ....... x ....... m overall on plan.

The blocks contain ....... No. Type 1B, ....... No. Type 2B, ....... No. Type 3B and ....... No. Type 1P rental domestic units in ....... domestic upper floors. The ground floors fitted out;

2. The external facades of the domestic units to Blocks ....... and ....... are to be constructed in precast concrete panels by the Contractor in accordance with the Drawings and Specification;

3. The external facades of the domestic units to Blocks ....... and ....... are designed as cast in situ reinforced concrete; particular attention is drawn to APE3.A490;

4. One-seven-storey Flexi Primary School approximately ....... x ....... m overall on plan and approximately ....... m high from ground floor to main roof level with associated single storey Menial Staff Quarters:
   a. In accordance with PRE.B6.200 and GCC Clause 9.1, this part of the works is "Works Subject to Excision".

5. ....... storey non-standard commercial centre links with one ....... storey carpark building;

6. One multi-storey carpark building of ....... plus ....... split levels of carpark spaces and a top storey of ....... approximately ....... x ....... m overall on plan and approximately ....... m high from ground floor to roof garden level;

7. One ....... storey carport of ....... parking spaces, approximately ....... x ....... m overall on plan and ....... m high from ground floor to carport podium with .......;

8. One District Park with .......;

9. One pedestrian footbridge approximately ....... x ....... m overall on plan, spanning .......;

10. One Pedestrian Spine composed of .......;

11. All associated drainage and external works, including lorry parking areas, slopes, road, emergency and service access, play areas, ball courts, covered walkways, service mains, ducts and pits, and refuse storage area etc.;

12. All such works and/or services in relation to the taking care of the Works after completion in accordance with Clause SCC8.5.

Note: Special requirements for works and/or services are given in PRE.B6 to this Specification;

13. Work outside the boundary of the Site, including:
   a. Soil and surface water drainage connection works. Area ....... refers;
   b. Water supply connection works. Area ....... refers;
   c. Road run-in and footpath works. Area ....... refers;
   d. Utilities investigation survey. Area ....... refers (such survey shall be carried out both within the Site and outside the boundary of the Site; see also PRE.B3.060);
   e. ....... Area ....... refers.
Option 2

The Works to be executed under this Contract comprise the following major items:

1. The demolition of the following buildings and all existing structures annexed thereto, including grubbing up ground slabs, pavings, footings, pile caps, tie beams, strap beams etc., and all blinding, hardcore and mass concrete filling thereunder. Demolition to a level 1 m below the underside of the existing pile caps including cutting off concrete piles and dowel bars:
   a. ............-storey reinforced concrete blocks (Blocks ............). Each block approximately ............ x ............ m overall on plan and approximately ............ m high from ground floor to main roof level;
   b. One 6-storey high reinforced concrete school (School No. ........) approximately ............ x ............ m overall on plan and approximately ............ m high from ground floor to main roof level;
   c. One 1-storey high reinforced concrete electrical substation approximately ............ x ............ m overall on plan and approximately ............ m high.

2. The survey, removal, storage, salvage and disposition of the reusable and recyclable materials specified in DEM1.D140;
3. The survey and removal of asbestos in the above buildings;
4. The breaking up of all existing railings, fencing, barriers, concrete curbs, flower beds and pots, sitting benches, tree protective cages, chess tables and chairs, lamp poles (except for lamp posts belonging to utility undertakings), telephone poles, vehicle barriers, bollards, surface water channels, external pavings and hardcore under, and all other structures including grubbing up their foundations;
5. Sealing off disused drains and manholes but maintaining the flow of live drains, etc.;
6. The backfilling of all voids resulting from demolition;
7. The protection and preservation of all slopes and embankments;
8. The protection and preservation of all trees and shrubs inside and outside the Site boundary. The transplanting of certain trees will be carried out by a Direct Contractor employed direct by the Authority;
9. The removal from Site of all materials, debris, etc., arising from the Works. (See DEM1.M010 and DEM1.M020);
10. The preparation and submission of a record plan showing levels and details at completion of the Works in a form agreed by the CM;
11. All such works and/or services in relation to the taking care of the Works after completion in accordance with Clause SCC8.4 and PRE.B8.170;
12. All such other work as may be shown on the Drawings or described in this Specification or may otherwise be ordered in accordance with the Conditions of Contract.

Option 3

The Works to be executed under this Contract for piling (and pilecaps) comprise the following major items:

1. The design and execution of piling (and pile caps) to foundations to sustain the dead, superimposed, earth and wind loads and all other loads as shown on the Drawings and in accordance with this Specification to the following:
   a. .......... -storey domestic blocks (Blocks ........... and ...........);
   b. One .......... -storey commercial complex;
   c. One .......... -storey carpark;
   d. One pedestrian footbridge;
   e. .................................................................;
f. ..........................................................................................

2. The design only of pilecaps for items ........... to sub-clause (1) above and specification thereto as may be necessary to ensure that the construction of such pilecaps satisfies the assumptions made in their design;

3. Excavation, filling and disposal in connection with construction of pilecaps;

4. Execution of starter bars for walls and columns of a future superstructure contract as referred to on the Drawings;

5. Preliminary additional piles;

6. The construction for use by subsequent contractors of a transformer compound/transformer and switch room compound comprising single storey building size ........... x ........... x ........... m and associated external works;

7. All testing in connection with the above works as required by this Specification and/or as Instructed;

8. The erection, relocation and maintenance of permanent site hoardings;

9. All such works and/or services in relation to the taking care of the Works after completion in accordance with Clause SCC8.3 and PRE.B8.170.

10. All such other work as indicated on the Drawings or described in this Specification or is otherwise instructed in accordance with the Contract.

Option 4

The Works to be executed under this Contract include:

1. Section A - Planting Works:
   a. Existing vegetation treatment;
   b. Soil excavation, filling and grading to plant beds;
   c. Supplying and applying soil, soil conditioners, compost, drainage materials, and mulches;
   d. Supplying and placing boulders;
   e. Supplying and spreading fertilizer;
   f. Supplying and sowing grass, laying turf and sprigs, including for use in grass paving system;
   g. Supplying and planting climbing plants, ground cover plants, herbaceous plants, shrubs, trees and other plant materials;
   h. Supplying and placing artificial plants;
   i. Supplying and planting aquatic plants;
   j. Supplying and placing indoor plants;
   k. Hydroseeding;
   l. Tree surgery works;
   m. Ancillary works including provision of protective fencing, daily hiring of plants etc..

2. Section B - Establishment Works:
   Establishment Works including maintaining the new and existing planted and grassed areas, and tending and replacing plants as necessary for the period defined in PRE.B4.080.
   These works shall include the following:
   a. Those trees and palms transplanted to the Site by the Employer's Direct Contractor;
   b. Conducting annual tree risk assessment management (TRAM) exercise in accordance with PRE.B8.1210 for new and existing trees as instructed by CM; and
   c. Providing a full set of tree numbering and survey data.

PRE.B2.020.7 WORKS SUBJECT TO EXCISIION

Parts of the Works which are "Works Subject to Excision" in accordance with GCC Clause 9.1 are listed in PRE.B6.200.
PRE.B2.030.7  PREPARATORY WORKS

Option 1

There are no previous contracts for this project.

Option 2

1. The following preparatory work has been (is being) executed under previous separate contract(s):
   a. Demolition;
   b. Site formation, the levels having generally been formed to ..........;
   c. Substructures;
   d. Piling;
   e. Pilecaps;
   f. Temporary transformer compound/transformer and switch room compound;
   g. Temporary works as described in PRE.B10.010 ........

2. Drawings for the above works may be seen by prior appointment at the Hong Kong Housing Authority Headquarters' office during normal office hours. The above information is given in good faith without limiting the Contractor's obligations and liabilities under the Contract. The Contractor is also advised to inspect the relevant works on site.

Option 3

1. The following preparatory work has been (is being) executed under previous separate contract(s):
   a. The construction of ...................... (Building Contract);
   b. The construction of ground level and/or raised planting beds;
   c. Spreading and levelling soil in certain planting areas.

2. Drawings for the above works may be seen by prior appointment at the Hong Kong Housing Authority Headquarters' office during normal office hours.

PRE.B2.040.7  CONCURRENT ADJOINING WORKS

1. Other contracts are being carried out concurrently on adjoining sites as follows:
   ...................................................................................................

2. In accordance with GCC Clause 5.27, liaise with and co-ordinate the sequence of the Works with the contractors for these separate contracts and with the Direct Contractors, Government Departments and utility undertaking engaged in the development of the adjoining sites. In particular attention is drawn to the following requirements:
   a. The (demolition of) external works in this Phase ............ contract connect directly with the external works for the separate Phase ...... contract. Allow, in the time for completion of the Works, for all time taken in liaison and co-ordination with the separate contractors;
   b. Works by others will be carried out on the site boundary. Allow for providing access for such works and for temporary shifting and reinstatement of fencing and site hoardings to suit the requirements of separate contracts;
   c. ........................................................................................................

PRE.B2.050.7  WORK, MATERIALS AND SERVICES BY OTHERS

Refer to Worksection PRE.B11 of this Specification.
PRE.B3 THE SITE

PRE.B3.010.7 SITE LOCATION

Option 1

The Site of the Works is at..............................................................................................................................

Option 2

The Site of the Works is the various planting beds, grassed areas etc at
..........................................................................................................................................................

PRE.B3.020.7 SITE BOUNDARY

The boundary of the Site is delineated on Drawing No: ..........................................................

PRE.B3.030.7 PHASE/ESTATE BOUNDARY

The Phase/Estate boundary is delineated on plan at Appendix A of this Specification

PRE.B3.040.7 WORKS SUBJECT TO HIGH WATER LEVELS

This Site is close to the sea waterfront and works for some pile caps and some drainage works will be required to be carried out below high water levels. Obtain a copy of the times and heights of high and low water for Hong Kong, adjusted as necessary for ........................................ Notwithstanding the published tide tables, which indicate a maximum high water level of not exceeding + .......m PD, take account of and accept responsibility for any consequences of the abnormal high tide build up above these levels that can occur in this area due to extreme weather conditions.

PRE.B3.050.7 EXISTING BUILDINGS

Attention is drawn to the following buildings adjacent or abutting the Site:
..........................................................................................................................................................

PRE.B3.060.7 EXISTING SERVICES

Option 1

1. The following utility services, drains etc are known to be within the Site (see also PRE.B8.970)
..........................................................................................................................................................

2. A plan indicating known existing underground services may be viewed by prior appointment at the Hong Kong Housing Authority Headquarters' office during normal office hours;

3. The Contractor shall at his own cost and time mentioned in sub-clause (5) carry out and complete utilities investigation survey to:
   a. Verify the alignments, extent and invert levels of any existing utilities and services within the Site and outside the boundary of the Site;
   b. Identify the locations and alignments of existing utilities and services that may have potential clashes with the Works, in particular the drainage works, and demonstrate any clashes with sufficient information for the CM's consideration;
   c. Take necessary precautionary measures to avoid causing disturbances and damage to existing utilities and services during the utilities investigation survey.

4. Submit the methodology, arrangement, programme and details of the utilities investigation survey to the CM for comments. The survey methodology may include but not be limited to all or combination of the followings:
a. Obtain the latest information of existing underground utilities and services installation from utility undertakings and Government departments immediately at commencement of the Works;
b. Locate existing underground utilities and services by visual inspection of surface features such as manhole and utility pit covers, etc.;
c. Carry out survey using methods such as 'electromagnetic detection methods' and 'ground probing radar' in areas where non-destructive means are needed to investigate potential clashes of existing utilities with the Works, or as instructed by the CM;
d. Excavate trial pits and trenches to locate the existing utilities and services;
e. Verify and agree with Government departments and utilities undertakings on the alignment and extent of the existing underground utilities and services.

5. Within ........ months from the notified date for commencement of the Works, the Contractor shall complete utilities investigation survey including the submission of the reports, record drawings, photographs of the survey findings and reinstate the affected areas of the Site to CM's satisfaction;

6. Ensure the existing utilities and services incidental to utilities investigation survey works are not damaged. Alter and adapt the utilities investigation survey works to suit the existing utilities and services if necessary. No claim whatsoever will be considered for the consequence due to any difference between the existing utilities and services shown on the drawings and those actually found on Site;

7. Render all necessary assistance to the Employer in application for an Excavation Permit or any extension in respect thereof in accordance with PRE.B8.2710, PRE.B8.2720, PRE.B8.2730 and PRE.B8.2740 when the utilities investigation survey is to be carried out on Street Maintained by the Highways Department; and

8. Attention is drawn that the extent and locations of the existing utilities and services may render conventional trench excavation impracticable and require unconventional method such as hand dug tunneling to suit the actual site conditions in construction of the drainage works. Allow sufficient time in the programme for implementing the required temporary works and construction sequence for the Works.

Option 2

1. The following utility services, drains etc are known to be within the Site (see also PRE.B8.970)

2. A plan indicating known existing underground services may be viewed by prior appointment at the Hong Kong Housing Authority Headquarters' office during normal office hours.

PRE.B3.070.7 SITE INFORMATION

1. Attention is drawn to the following Site information:

2. A number of boreholes and trial pits have been made on and near the Site and the logs and cores may be inspected by prior arrangement with the CM;

3. A copy of compact disc containing part or whole of the information about the logs and/or cores of the boreholes and trial pits as mentioned above may be obtained from the CM by prior arrangement with the CM;

4. Accept responsibility for ascertaining the nature of the soil; the available information mentioned above will not limit Contractor's obligations and responsibilities under the Contract.

PRE.B3.080.7 ACCURACY OF PREVIOUS WORKS

Option 1
1. Carry out a survey to record the site topography, the setting out and levels of piles, pilecaps, the position, number, size and length of starter bars of the piles, etc. which are to be taken over from the previous piling contractor. Bear all cost in connection with the survey including preparation of survey drawings. Immediately inform the CM of any discrepancies or faults otherwise no claim will be considered for costs incurred in respect of such discrepancies or faults;

2. When instructed by the CM:
   
a. Carry out sub-clause (1) above by a joint survey with the previous piling contractor immediately upon award of the Contract in the presence of the CM or his representatives;
   
b. Prepare, submit and re-submit after reconciliation as necessary the draft survey drawings produced from the joint survey to the CM or his representatives and the previous piling contractor for checking;
   
c. Prepare and submit the finalized survey drawings signed by both the Contractor and the previous piling contractor for endorsement by the CM or his representatives within 14 days after commencement of the joint survey;
   
d. Bear all cost in connection with the joint survey including preparation of survey drawing.

Option 2

Establish the correctness of the setting out, levels etc; immediately inform the CM of any discrepancies or faults, otherwise no claim will be considered for costs incurred in respect of such discrepancies or faults.

PRE.B3.090.7 LIMITATIONS OF WORKING AREAS

Option 1

1. Limitations of working areas and storage spaces are as shown on Drawing No. ......................... included at Appendix C to this Specification/temporary works described in PRE.B10.010;

2. Make allowance in the programme and construction sequence to cater for such limitations;

3. Additional works area and/or borrow area(s) as delineated on Drawing No. ......................... will be made available to the Contractor, if required, free of charge. Make good and reinstate areas to former condition before handing back to the Authority;

4. Parts of the site required to be taken over by the Contractor for temporary works areas for designated periods are as shown in ......................... Make good and reinstate areas to former condition before handing back to the Authority when directed.

Option 2

Subject to prior agreement with the CM, the Contractor is permitted to make use of the paved areas within the Phase/Estate boundary, as working area. The CM may withdraw the agreement or impose additional restrictions at any time subsequent to the agreement. Keep the working area clean, tidy, and maintain and keep clear all drains, U channels, gulleys and the like, at all times.

PRE.B3.100.7 WORKS IN OCCUPIED PREMISES

Take note that the domestic units on the Estate are, or shortly will be, inhabited and that the inhabitants may cause obstructions and hindrances to the Contractor in the execution of the Works. Provide necessary measures to protect the inhabitants from injury and their property from damage, etc in the carrying out of the Works.

PRE.B3.110.7 ACCESS TO THE SITE

1. Accept responsibility for providing own access routes, access points and entry on to the Site. Requirement for temporary access and roads are given in PRE.B10.020. Restrictions on the number of entrances and exits to the Site are stated in PRE.B10.710;
2. Charges may be applied for the parking of vehicles within the estate car park which are used during the period of the contract. The Contractor is to make due allowance for such charges;

3. Other restrictions apply as follows: ...................................................
PRE.B4 POSSESSION AND COMPLETION

PRE.B4.010.7 PHASED POSSESSION OF THE SITE

Option 1
There are no special requirements for phased possession of the Site in Portions for this Contract.

Option 2
In accordance with GCC Clause 8.2, the extent of Portions to which the Contractor will be given possession from time to time, and the order in which such Portions will be made available, are as follows:
1. Area .......... for Blocks .......... and .......... - available at the notified date for commencement of the Works;
2. Area .......... for Blocks .......... and .......... - available within .......... months after the notified date for commencement of the Works;
3. Area(s) .......... available at the commencement date specified in the Excavation Permit issued by Highways Department or other duly constituted authority.

Option 3
In accordance with GCC Clause 8.2 the extent of Portions of the Site to which the Contractor will be given possession from time to time are as follows:
No less than 80% of the various areas which comprise the Site will be handed over to the Contractor on the notified date for commencement of the Works; the remainder of the areas may be handed over progressively with the last area being handed over no later than half way between the notified date for commencement and the date for completion, or extended date for completion of Section A - Planting Works.

PRE.B4.020.7 NOTIFIED DATE FOR COMMENCEMENT OF THE WORKS
The period of time within which the notified date for commencement shall occur will be within 28 days after the date of the Letter of Acceptance. Provided that if the date of the Letter of Acceptance is subsequent to the first day of August of the same year as, and before the first day of February of the following year of the Tender submission, the period of time within which the notified date for commencement of the Works shall occur as stated in the Appendix to the Form of Tender will be deemed to be deleted and substituted by the following related to the month in which the tender is accepted.

<table>
<thead>
<tr>
<th>Month of Acceptance</th>
<th>Period of Time for Commencement in the Appendix to the Form of Tender</th>
</tr>
</thead>
<tbody>
<tr>
<td>August (of year of tender)</td>

</tbody>
</table>

PRE.B4.021.7 DATES FOR COMMENCEMENT OF SECTIONS

Option 1
There are no special requirements for phased commencement of the Works in Sections for this Contract.

Option 2
In accordance with GCC Clause 8.1, the dates for commencement of the following Sections are not the same as the notified date for commencement of the Works. The notified dates for commencement of such Sections shall be as follows:

1. Section ……… for Blocks ........ and ........ shall have a date for commencement within ...........months of the notified date for commencement of the Works. The date for commencement of the Section shall be as notified in writing by the CM;

2. Section ……… for Blocks ........ and ........ shall have a date for commencement within ...........months of the notified date for commencement of the Works. The date for commencement of the Section shall be as notified in writing by the CM.

**PRE.B4.030.7 PHASED ISSUANCE OF WORKING DRAWINGS AND DETAILS**

1. The following working drawings and details will be available for issue to the Contractor for construction purposes as follows:

   - (Specify works affected)
   - Available within ........ months after the notified date for commencement of the works.

2. Programme the works to suit and allow for any additional costs in connection with the above restrictions and timing for issue of drawings. Any of the above works executed by the Contractor before the receipt of the drawings/information from the CM will be at his own risk.

**PRE.B4.035.7 PHASED SUBMISSION OF CONTRACTOR'S DESIGN**

1. Phase the submission of Contractor's design in the following Stages:

   a. Type Ma Submission (Major Works):

<table>
<thead>
<tr>
<th>Phased Submission</th>
<th>Time for Submission</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stage 1</td>
<td></td>
</tr>
<tr>
<td>Type of Major Works:</td>
<td></td>
</tr>
<tr>
<td>i.</td>
<td>Not later than ...... months from the notified date for commencement of the Works or at least ...... days before the commencement of the Works as listed in Stage 1, whichever is the earlier.</td>
</tr>
<tr>
<td>ii</td>
<td></td>
</tr>
<tr>
<td>iii</td>
<td></td>
</tr>
</tbody>
</table>

   The number of Stage 1 submission for each type of works shall be limited to not more than ONE first submission and ONE amendment.

   | Stage 2            |                     |
   | Type of Major Works: |                     |
   | i.                 | Not later than ...... months from the notified date for commencement of the Works or at least ...... days before the commencement of the Works as listed in Stage 2, whichever is the earlier. |
   | ii                |                     |
   | iii               |                     |

   The number of Stage 2 submission for each type of works shall be limited to not more than ONE first submission and ONE amendment.
PRE.B4.040.7  RESTRICTIONS ON COMMENCEMENT

Option 1

Attention is drawn to the following restrictions on commencement of parts of the Works:

1. Commencement of those Sections of the Works which are "Works Subject to Excision" in accordance with GCC Clause 9.1 are listed in PRE.B6.200 (see also PRE.B2.020);
2. Do not commence the laying of pipes in the open area/roads in the first 12 months after the notified date for commencement of the Works;
3. Commencement of the Building Works (except pile installation, pile cap and footing construction) is subject to CM's written permission which shall be obtained as follows:
   a. Submit SSP in accordance with PRE.B8.1405;
   b. Apply for CM's written permission to commence the Building Works before the commencement of the Building Works. CM's written permission will not be granted before:
      i. The SSP mentioned in sub-clause (a) has been submitted;
      ii. The hoarding and gantries works specified in PRE.B10.710, PRE.B10.720 and PRE.B10.730 have been completed.
   c. Within three days after the date of the Letter of Acceptance, complete and submit Form ICU 10 to the CM for commencing the Building Works.
4. Commencement of the ELSW is subject to CM's written permission which shall be obtained as follows:
a. Submit ELSP in accordance with EAR1.D030;
b. Submit SSP in accordance with PRE.B8.1405;
c. Apply for CM’s written permission to commence ELSW at least 22 days before the commencement of ELSW. CM’s written permission will not be granted before:
   i. The ELSP mentioned in sub-clause (a) has been Approved;
   ii. The conditions imposed by the CM in the approval of the ELSP have been fulfilled;
   iii. The SSP mentioned in sub-clause (b) has been submitted;
   iv. The hoarding and gantries works specified in PRE.B10.710, PRE.B10.720 and PRE.B10.730 have been completed.
d. Complete and submit Form ICU 10 for commencing ELSW to CM at least 14 days prior to the commencement of the ELSW.

5. Commencement of curtain walling works is subject to CM’s written permission which shall be obtained as follows:
a. Submit design calculations and details in accordance with PRE.B6.085 to CM at least 45 days before the commencement of curtain walling works. Allow a further 45 days for each re-submission;
b. Apply for CM’s written permission to commence the curtain walling works at least 22 days before the commencement of the curtain walling works. CM’s written permission will not be granted before the submission mentioned in sub-clause (a) has been Approved;
c. Complete and submit Form ICU 10 for commencing the curtain walling works to CM at least 14 days prior to the commencement of the curtain walling works.

6. Programme the Works by taking into account of the submissions and any re-submission as may be required under the above sub-clauses.

Option 2

Attention is drawn to the following restrictions on commencement of parts of the Works:

1. Do not commence the demolition works in general before all the precautionary measures as described in DEM1.W210 have been completed to the satisfaction of the CM.

Option 3

Attention is drawn to the following restrictions on commencement of parts of the Works:

1. Commencement of those Sections of the Works which are ”Works Subject to Excision” in accordance with GCC Clause 9.1 are listed in PRE.B6.200 (see also PRE.B2.020).

PRE.B4.050.7 RESTRICTIONS ON COMMENCEMENT OF PILE INSTALLATION AND/OR FOOTING CONSTRUCTION AND/OR ELSW

Option 1

1. Commencement of pile installation and/or footing construction is subject to CM’s written permission which shall be obtained as follows:
a. Submit the piling and/or footing design in accordance with PIL1.D210;
b. Submit SSP in accordance with PRE.B8.1405;
c. Apply for CM’s written permission to commence pile installation and/or footing construction at least 22 days before the commencement of pile installation and/or footing construction. CM’s written permission will not be given before:
   i. The piling and/or footing design mentioned in sub-clause (a) has been Approved;
   ii. The conditions imposed by the CM in the approval of the piling and/or footing design have been fulfilled;
iii. The SSP mentioned in sub-clause (b) has been submitted;
iv. The hoarding ............ and gantries works specified in Drawings provided in PRE.B10.710, PRE.B10.720 and PRE.B10.730 have been completed.

d. Complete and submit Form ICU 10 for commencing the pile installation and/or footing construction to CM at least 14 days prior to the commencement of the pile installation and/or footing construction.

2. Commencement of pile installation and/or footing construction is subject to CM's written permission which shall be obtained as follows:
a. Submit SSP in accordance with PRE.B8.1405;
b. Submit proposal of method statement for pile installation and/or footing construction for Approval;
c. Apply for CM's written permission to commence pile installation and/or footing construction at least 22 days before the commencement of pile installation and/or footing construction. CM's written permission will not be given before:
i. The SSP mentioned in sub-clause (a) has been submitted;
ii. The proposed method statement mentioned in sub-clause (b) has been Approved;
iii. The hoarding ............ and gantries works specified in Drawings provided in PRE.B10.710, PRE.B10.720 and PRE.B10.730 have been completed.

d. Complete and submit Form ICU 10 for commencing the pile installation and/or footing construction to CM at least 14 days prior to the commencement of the pile installation and/or footing construction.

3. Commencement of the part(s) of piling and/or footing works affected by amendment of piling and/or footing design is subject to CM's written permission which shall be obtained as follows:
a. Submit the amendment of piling and/or footing design in accordance with PIL1.D220;
b. Apply for CM's written permission to commence the part(s) of piling and/or footing works affected by amendment of piling and/or footing design at least 22 days before the commencement of such works. CM's written permission will not be given before:
i. The amendment of piling and/or footing design mentioned in sub-clause (a) has been Approved.

4. Commencement of the ELSW is subject to CM's written permission which shall be obtained as follows:
a. Submit ELSP in accordance with EAR1.D030;
b. Submit SSP in accordance with PRE.B8.1405;
c. Apply for CM's written permission to commence ELSW at least 22 days before the commencement of ELSW. CM's written permission will not be granted before:
i. The ELSP mentioned in sub-clause (a) has been Approved;
ii. The conditions imposed by the CM in the approval of the ELSP have been fulfilled;
iii. The SSP mentioned in sub-clause (b) has been submitted;
iv. The hoarding and gantries works specified in PRE.B10.710, PRE.B10.720 and PRE.B10.730 have been completed.
d. Complete and submit Form ICU 10 for commencing ELSW to CM at least 14 days prior to the commencement of the ELSW.

5. Programme the Works by taking into account of the submissions that may be required under the above sub-clauses.

**Option 2**

1. Commencement of footing construction is subject to CM's written permission which shall be obtained as follows:
a. Submit the footing design in accordance with PIL1.D210;
b. Submit SSP in accordance with PRE.B8.1405;
c. Apply for CM’s written permission to commence footing construction within three days after the date of the Employer’s Letter of Acceptance of the Tender. CM’s written permission will not be given before:
   i. The footing design mentioned in sub-clause (a) has been Approved;
   ii. The conditions imposed by the CM in the approval of the footing design have been fulfilled;
   iii. The SSP mentioned in sub-clause (b) has been submitted;
   iv. The hoarding ………… and gantries works specified in Drawings provided in PRE.B10.710, PRE.B10.720 and PRE.B10.730 have been completed.
d. Complete and submit Form ICU 10 for commencing the footing construction to CM within three days after the date of the Employer’s Letter of Acceptance of the Tender.

2. Commencement of footing construction is subject to CM’s written permission which shall be obtained as follows:
   a. Submit SSP in accordance with PRE.B8.1405;
   b. Submit proposal of method statement for footing construction for Approval;
   c. Apply for CM’s written permission to commence footing construction within three days after the date of the Employer’s Letter of Acceptance of the Tender. CM’s written permission will not be given before:
      i. The SSP mentioned in sub-clause (a) has been submitted;
      ii. The proposed method statement mentioned in sub-clause (b) has been Approved;
      iii. The hoarding ………… and gantries works specified in Drawings provided in PRE.B10.710, PRE.B10.720 and PRE.B10.730 have been completed.
   d. Complete and submit Form ICU 10 for commencing the footing construction to CM within three days after the date of the Employer’s Letter of Acceptance of the Tender.

3. Commencement of the part(s) of footing works affected by amendment of footing design is subject to CM’s written permission which shall be obtained as follows:
   a. Submit the amendment of footing design in accordance with PIL1.D220;
   b. Apply for CM’s written permission to commence the part(s) of footing works affected by amendment of footing design at least 22 days before the commencement of such works. CM’s written permission will not be given before the amendment of piling and/or footing design mentioned in sub-clause (a) has been Approved.

4. Commencement of the ELSW is subject to CM’s written permission which shall be obtained as follows:
   a. Submit ELSP in accordance with EAR1.D030;
   b. Submit SSP in accordance with PRE.B8.1405;
   c. Apply for CM’s written permission to commence ELSW at least 22 days before the commencement of ELSW. CM’s written permission will not be granted before:
      i. The ELSP mentioned in sub-clause (a) has been Approved;
      ii. The conditions imposed by the CM in the approval of the ELSP have been fulfilled;
      iii. The SSP mentioned in sub-clause (b) has been submitted;
      iv. The hoarding and gantries works specified in PRE.B10.710, PRE.B10.720 and PRE.B10.730 have been completed.
   d. Complete and submit Form ICU 10 for commencing ELSW to CM at least 14 days prior to the commencement of the ELSW.
5. Programme the Works by taking into account of the submissions that may be required under the above sub-clauses.

PRE.B4.060.7 RESTRICTIONS ON COMMENCEMENT OF CONSTRUCTION OF PILE CAPS

1. Commencement of pile caps construction is subject to CM's written permission which shall be obtained as follows:
   a. Make all necessary submissions in accordance with ……… including Form ICU14;
   b. Submit the pile cap design in accordance with PIL1.D830;
   c. Submit SSP in accordance with PRE.B8.1405;
   d. Apply for CM's written permission to commence pile caps construction at least 22 days before the commencement of pile caps construction. CM's written permission will not be given before:
      i. The submissions mentioned in sub-clause (a) have been made and the proof test results comply with the specification's requirements;
      ii. The pile cap design mentioned in sub-clause (b) has been Approved;
      iii. The conditions imposed by the CM in the approval of the pile cap design have been fulfilled;
      iv. The SSP mentioned in sub-clause (c) has been submitted.
   e. Obtain CM's written permission to proceed with the construction of pile caps on a block by block basis unless otherwise agreed by the CM.

2. Commencement of the part(s) of pile cap works affected by amendment of pile cap design is subject to CM's written permission which shall be obtained as follows:
   a. Submit the amendment of pile caps design to CM at least 42 days before the commencement of the part(s) of pile cap works affected by amendment of pile cap design. Allow a further 42 days for each re-submission;
   b. Apply for CM's written permission to commence the part(s) of pile cap works affected by amendment of pile cap design at least 22 days before the commencement of such works. CM's written permission will not be given before the amendment of pile caps design mentioned in sub-clause (a) has been Approved.

3. Bear all expenditure involved by reason of the progress of the Works or any part thereof having been materially affected by the time taken by the Contractor for making submissions and/or re-submissions in connection with applying for CM's written permission for commencement of pile cap construction. Any delay so caused will not be accepted as a cause for granting extension of time under GCC Clause 8.4.

PRE.B4.065.7 RESTRICTIONS ON COMMENCEMENT OF SITE FORMATION WORKS

Option 1

Attention is drawn to the following restrictions on commencement of Site Formation Works:

1. Commencement of the Site Formation Works is subject to CM's written permission, which shall be obtained as follows:
   a. Submit SSP for the Site Formation Works in accordance with PRE.B8.1405;
   b. Apply for CM's written permission to commence the Site Formation Works at least 22 days before the commencement of the Site Formation Works. CM's written permission will not be granted before the SSP mentioned in sub-clause (a) has been submitted;
   c. Complete and submit Form ICU 10 for commencing the Site Formation Works to CM at least 14 days prior to the commencement of the Site Formation Works.
2. Programme the Works by taking into account of the submissions required under the above sub-clauses.

Option 2

Attention is drawn to the following restrictions on commencement of Site Formation Works:

1. Commencement of the Site Formation Works is subject to CM's written permission, which shall be obtained as follows:
   a. Submit SSP for the Site Formation Works in accordance with PRE.B8.1405;
   b. Apply for CM's written permission to commence the Site Formation Works within three days after the date of the Letter of Acceptance. CM's written permission will not be granted before the SSP mentioned in sub-clause (a) has been submitted;
   c. Complete and submit Form ICU 10 for commencing the Site Formation Works to CM within three days after the date of the Letter of Acceptance.

2. Programme the Works by taking into account of the submissions required under the above sub-clauses.

PRE.B4.070.7 TIME FOR COMPLETION

Option 1

In accordance with GCC Clause 8.3, the time for completion of the whole of the Works, but excluding any works and/or services in relation to taking care of the Works after completion, is ....... months.

Option 2

In accordance with GCC Clause 8.3, the time for completion of the whole of the Works, but excluding any works and/or services in relation to taking care of the Works after completion is:

Tender 'A' - ......... months;

Tender 'B' - to be proposed by the tenderer and to be less than the time for completion in Tender 'A' but not less than ......... months.

Option 3

In accordance with GCC Clause 8.3 the time for completion of the whole of the Works is ......... months.

Option 4

In accordance with GCC Clause 8.3 the time for completion of the whole of the Works is ......... months or such period as stipulated by the Contractor in his Tender 'B' or alternative tender, as appropriate.

Option 5

In accordance with GCC Clause 8.3 the time for completion of the whole of the Works, but excluding any works and/or services in relation to taking care of the Works after completion is ....... months.

PRE.B4.080.7 SECTIONS FOR PHASED COMPLETION

Option 1

1. There are no special requirements for phased completion of the Works in Sections for this Contract;

2. As stated in PRE.B2.010 sub-clause ......... complete the placement of fill in the open area/roads to the required finished levels within six months from the notified date for commencement of the Works;
3. Provide timber mock up for the external and internal walls of kitchen and bathroom with gas, plumbing and drainage pipeworks, reinforcement bars and building services fittings such as conduits and switch boxes for the following typical domestic flats. Install gas, plumbing and drainage pipeworks, reinforcement bars and building services fittings as shown on Drawings on both sides of the timber walls to show that the alignments and openings of the pipeworks, reinforcement bars and building services fittings do not encroach upon each other at the external and internal sides of the kitchen and bathroom. Agree with CM on the alignment of all items before the commencement of concreting works of the first domestic floor. Flats: ................;

4. Provide the following sample wing, sample flats and construction mock-up on the location of the typical floor at 4th floor or above of the appropriate blocks to be proposed by the Contractor and agreed with the CM, no later than two months after completion of the tenth floor concrete frame including the eleventh floor slab:
Block ........... entire wing of ...........
Block ........... .......... floor 1 No. flat type.
Block ........... .......... floor 1 No. construction mock-up as described in PRE.B9.440.

Conform with the following requirements for the sample wing, sample flats and construction mock-up:

a. Completion to include all finishes and fittings including all utility connections and building services item, and passing all necessary tests including watertightness and equipotential bonding tests;

b. Externally, complete with external finishes, services pipes, windows with glazing and drying racks;

c. Externally, finishes for the floor of the sample wing;

d. Keep clean and clear access to sample wing, sample flats and construction mock-up at all times and allow for access by parties authorized by the CM;

e. Provide security and maintain the Approved sample wing and sample flats until completion of the Works, including provision of all necessary temporary lighting inside the flats and at corridors and provide lockable gates at strategic locations to prevent unauthorized entry but not obstructing fire escape routes;

f. Provide security and maintain the Approved construction mock-up including provision of all necessary temporary lighting inside the flats and at corridors and provide lockable gates at strategic locations to prevent unauthorized entry but not obstructing fire escape routes;

g. Obtain the CM's Approval for the removal of the installed finishes and fittings at the construction mock-up and to complete the Works in accordance with GCC Clause 8.3.

5. Provide exhibition and/or show flats in accordance with Clause SCC22.6 and PRE.B6.830.

Option 2

1. Phase the completion of the Works in the following Sections:

<table>
<thead>
<tr>
<th>Section</th>
<th>Time for completion</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>(from and including the notified date for commencement of the Works unless otherwise stated)</td>
</tr>
</tbody>
</table>

a. Section 1: Block ........... .......... months (........... days);

b. Section 2: Block ........... .......... months (........... days);

c. Section 3: .......... at Area ........... .......... months from and including the date of possession of Area ...........;
d. Section 4: Primary School  .......... months (.......... days);

  e. Section 5: .......... at Area ..........  .......... months (.......... days) from
  and including the notified date for commencement of Section 5;

  f. Section 6: .......... at Area(s) ..........  * From and including the date of
  possession of Area .......... and for the validity period specified in the
  Excavation Permit;

  g. Section 7: Remaining Works  .......... months; (.......... days).

  Completion of each Section shall be deemed to include completion of all
  associated services, emergency vehicular access roads, drainage, external works
  and the like.

  * Completion of the Section shall be conditional upon the passing of final tests
  and inspections prescribed by the Specification and the completion of any remedial
  work arising from such tests and inspections.

2. As stated in PRE.B2.010 sub-clause .......... complete the placement of fill in the
  open area/roads to the required finished levels within six months from the
  notified date for commencement of the Works;

3. Special requirements for phasing the Works to suit Nominated Sub-contractors
  and Direct Contractors, utility undertaking and Government Departments are
  given in PRE.B12.710 to PRE.B12.740 inclusive;

4. Provide timber mock up for the external and internal walls of kitchen and
  bathroom with gas, plumbing and drainage pipeworks, reinforcement bars and
  building services fittings such as conduits and switch boxes for the following
  typical domestic flats. Install gas, plumbing and drainage pipeworks,
  reinforcement bars and building services fittings as shown on Drawings on both
  sides of the timber walls to show that the alignments and openings of the
  pipeworks, reinforcement bars and building services fittings do not encroach
  upon each other at the external and internal sides of the kitchen and bathroom.
  Agree with CM on the alignment of all items before the commencement of
  concreting works of the first domestic floor.

  Flats: ..............;

5. Provide the following sample wing, sample flats and construction mock-up on
  the location of the typical floor at 4th floor or above of the appropriate blocks to
  be proposed by the Contractor and agreed with the CM, no later than two months
  after completion of the tenth floor concrete frame including the eleventh floor
  slab:

  Block .......... entire wing of ..........  
  Block .......... .......... floor 1 No. flat type.

  Block .......... .......... floor 1 No. construction mock-up as described in
  PRE.B9.440.

  Conform with the following requirements for the sample wing, sample flats and
  construction mock-up:

  a. Completion to include all finishes and fittings, including all utility
     connections and building services items, and passing all necessary tests
     including watertightness and equipotential bonding tests;
  
  b. Externally, complete with external finishes, services pipes, windows with
     glazing and drying racks;
  
  c. Externally, finishes for the floor of the sample wing;

  d. Keep clean and clear access to sample wing, sample flats and construction
     mock-up at all times and allow for access by parties authorized by the CM;

  e. Provide security and maintain the Approved sample wing and sample flats
     until completion of the Works, including provision of all necessary
     temporary lighting inside the flats and at corridors and provide lockable
     gates at strategic locations to prevent unauthorized entry but not obstructing
     fire escape routes;
f. Provide security and maintain the Approved construction mock-up including provision of all necessary temporary lighting inside the flats and at corridors and provide lockable gates at strategic locations to prevent unauthorized entry but not obstructing fire escape routes;

g. Obtain the CM’s Approval for the removal of the installed finishes and fittings at the construction mock-up and to complete the Works in accordance with GCC Clause 8.3.

6. Provide exhibition and/or show flats in accordance with Clause SCC22.6 and PRE.B6.830.

Option 3

1. Phase the completion of the Works in the following Sections:

<table>
<thead>
<tr>
<th>Section</th>
<th>Time for completion</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>(from and including the notified date for commencement of the Works unless otherwise stated)</td>
</tr>
<tr>

</tr>
</tbody>
</table>
h. Section 8: Remaining Works .......... months * .......... months
(.......... days); (.......... days);

Completion of each Section shall be deemed to include completion of all associated services, emergency vehicular access roads, drainage, external works and the like.

* To be proposed by the tenderer, but not greater than the time for completion of the Section in Tender 'A' and in any event not more than the time for completion of the whole of the Works for Tender 'B' and not less than .......... months and (.......... days if applicable).

** To be proposed by the tenderer, but not greater than the time for completion of the Section in Tender 'A', and in any event the total of the time for completion of the Section (Tender 'B') plus the maximum period stated in PRE.B4.010 is not to be greater than the time for completion of the whole of the Works for Tender 'B'.

*** Completion of the Section shall be conditional upon the passing of final tests and inspections prescribed by the Specification and the completion of any remedial work arising from such tests and inspections.

2. As stated in PRE.B2.010 sub-clause .......... complete the placement of fill in the open area/roads to the required finished levels within six months from the notified date for commencement of the Works;

3. Special requirements for phasing the Works to suit Nominated Sub-contractors and Direct Contractors, utility undertaking and Government Departments are given in PRE.B12.710 to PRE.B12.740 inclusive;

4. Provide timber mock up for the external and internal walls of kitchen and bathroom with gas, plumbing and drainage pipeworks, reinforcement bars and building services fittings such as conduits and switch boxes for the following typical domestic flats. Install gas, plumbing and drainage pipeworks, reinforcement bars and building services fittings as shown on Drawings on both sides of the timber walls to show that the alignments and openings of the pipeworks, reinforcement bars and building services fittings do not encroach upon each other at the external and internal sides of the kitchen and bathroom. Agree with CM on the alignment of all items before the commencement of concreting works of the first domestic floor.

Flats: ...............;

5. Provide the following sample wing, sample flats and construction mock-up on the location of the typical floor at 4th floor or above of the appropriate blocks to be proposed by the Contractor and agreed with the CM, no later than two months after completion of the tenth floor concrete frame including the eleventh floor slab:

Block ........... entire wing of ...........
Block ........... ........... floor 1 No. flat type.
Block ........... ........... floor 1 No. construction mock-up as described in PRE.B9.440.

Conform with the following requirements for the sample wing, sample flats and construction mock-up:

a. Completion to include all finishes and fittings, including all utility connections and building services items, and passing all necessary tests including watertightness and equipotential bonding tests;

b. Externally, complete with external finishes, services pipes, windows with glazing and drying racks;

c. Externally, finishes for the floor of the sample wing;

d. Keep clean and clear access to sample wing, sample flats and construction mock-up at all times and allow for access by parties authorized by the CM;

e. Provide security and maintain the Approved sample wing and sample flats until completion of the Works, including provision of all necessary temporary lighting inside the flats and at corridors and provide lockable gates at strategic locations to prevent unauthorized entry but not obstructing fire escape routes;
f. Provide security and maintain the Approved construction mock-up including provision of all necessary temporary lighting inside the flats and at corridors and provide lockable gates at strategic locations to prevent unauthorized entry but not obstructing fire escape routes;

g. Obtain the CM's Approval for the removal of the installed finishes and fittings at the construction mock-up and to complete the Works in accordance with GCC Clause 8.3.

6. Provide exhibition and/or show flats in accordance with Clause SCC22.6 and PRE.B6.830.

Option 4

Phase the completion of the Works in the following Sections:

<table>
<thead>
<tr>
<th>Section</th>
<th>Time for completion</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>(from and including the notified date for commencement of the Works unless otherwise stated)</td>
</tr>
<tr>
<td>a. Section 1: Demolition of Blocks</td>
<td>.................. months;</td>
</tr>
<tr>
<td>b. Section 2: Demolition of Blocks</td>
<td>.................. months;</td>
</tr>
<tr>
<td>c. Section 3: Demolition of School No</td>
<td>.................. months;</td>
</tr>
<tr>
<td>d. Section 4: Demolition of Electrical Substation</td>
<td>.................. months from and including the notified date for commencement of Section 4;</td>
</tr>
<tr>
<td>e. Section 5: Remaining works</td>
<td>.................. months;</td>
</tr>
<tr>
<td>f. Section 6: Taking care of the works after the completion of the preceding Sections</td>
<td>.................. months.</td>
</tr>
</tbody>
</table>

Option 5

In accordance with GCC Clause 8.1 the time for completion of each Section of the Works is as follows:

<table>
<thead>
<tr>
<th>Section</th>
<th>Time for Completion</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Section A: Planting Period</td>
<td>........... weeks from and including the notified date for commencement of the Works.</td>
</tr>
<tr>
<td>b. Section B: Establishment Period</td>
<td>24 months commencing from and including the day after the date of completion of Section A certified under GCC Clause 8.7.</td>
</tr>
</tbody>
</table>

Option 6

Phase the completion of the Works in the following Sections:

<table>
<thead>
<tr>
<th>Section</th>
<th>Time for completion</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>(from and including the notified date for commencement of the Works unless otherwise stated)</td>
</tr>
<tr>
<td>a. Section 1: Block ..........</td>
<td>........... months;</td>
</tr>
<tr>
<td>b. Section 2: Block ..........</td>
<td>........... months;</td>
</tr>
<tr>
<td>c. Section 3: School ..........</td>
<td>........... months from and including the notified date for commencement of Section 3;</td>
</tr>
<tr>
<td>d. Section 4: Remaining Works</td>
<td>........... months.</td>
</tr>
</tbody>
</table>

Completion of each Section shall be deemed to include completion of all associated services, drainage, external works and the like which are necessary for the proper functioning of the Section.
**Option 7**

Phase the completion of the Works in the following Sections:

<table>
<thead>
<tr>
<th>Section</th>
<th>Time for completion</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>(from and including the notified date for commencement of the Works unless otherwise stated)</td>
</tr>
<tr>
<td></td>
<td>Tender 'A'</td>
</tr>
<tr>
<td></td>
<td>Tender 'B'</td>
</tr>
<tr>
<td>a. Section 1: Block ....</td>
<td>.......... months; *.......... months;</td>
</tr>
<tr>
<td>b. Section 2: Block ....</td>
<td>.......... months; *.......... months;</td>
</tr>
<tr>
<td>c. Section 3: Primary School</td>
<td>.......... months from and including the notified date for commencement of Section 3;</td>
</tr>
<tr>
<td>d. Section 4: Remaining works</td>
<td>.......... months.</td>
</tr>
</tbody>
</table>

Completion of each Section shall be deemed to include completion of all associated services, drainage, external works and the like which are necessary for the proper functioning of the Section.

* To be proposed by the tenderer, but not greater than the time for completion of the Section in Tender 'A' and in any event not more than the time for completion of the whole of the Works for Tender 'B'.

**PRE.B4.085.7 OCCUPATION OF NEW BUILDING**

1. The occupation of a New Building is subject to ICU's control and CM has to obtain from ICU an occupation permit (OP) in respect of a New Building before such New Building can be occupied. Comply with the followings for OP application by CM:
   a. Programme and complete the works including building services installations in accordance with Specification, Drawings and CM's instructions for obtaining OP by CM;
   b. At least 45 days prior to the completion of the Works, provide information and drawings to CM which include but are not limited to the followings for assisting CM to prepare the record plans for building, structural and drainage works (including drainage in external works) as required for OP application:
      i. Record plans for works designed by the Contractor;
      ii. Record plans for drainage in external works.
   c. At least 30 days prior to the completion of the Works, provide information to CM which includes but is not limited to the followings for assisting CM to obtain the certificates as required for OP application:

<table>
<thead>
<tr>
<th>Certificate</th>
<th>Information Required</th>
</tr>
</thead>
<tbody>
<tr>
<td>i. Certificate of Accepted Building Materials Products (Form ICU 202)</td>
<td>Test reports, assessment reports or supporting documents with name of laboratory, report no., validity date &amp; name of laboratory accreditation body.</td>
</tr>
<tr>
<td>ii. Use Permit issued by the Electrical and Mechanical Services Department</td>
<td>Application form for inspection duly completed with all information as required in LTE1.8.010.</td>
</tr>
<tr>
<td>iii. Fire Services Certificate</td>
<td>Application form for inspection duly completed with all information as required in PLU1.T060 and FWP1.6.020.</td>
</tr>
</tbody>
</table>
iv. Certificate of water supply connection (including FS installation) issued by WSD

| Application form for inspection duly completed with all information as required in PLU1.W1120. |

| d. Submit Form ICU 13 to CM for processing the OP application; |
| e. Provide attendance on Site for inspection by ICU in accordance with PRE.B9.113. |

2. When a part of a New Building has to be occupied, CM has to obtain from ICU a temporary occupation permit (TOP) in respect of that part of a New Building before such part of the New Building can be occupied. Comply with the followings for TOP application by CM:

| a. Programme and complete the works in accordance with CM's instructions for obtaining TOP by CM; |
| b. Provide information and drawings in accordance with sub-clause (1)(b) at least 45 days prior to the completion of the part of the New Building that will be occupied; |
| c. Provide information and drawings in accordance with sub-clause (1)(c) at least 30 days prior to the completion of the part of the New Building that will be occupied; |

| d. Submit Form ICU 12 to CM for processing TOP application; |
| e. Provide attendance on Site for inspection by ICU in accordance with PRE.B9.113. |

**PRE.B4.090.7 TAKING CARE OF THE WORKS AFTER COMPLETION**

Execute and/or provide works and/or services in relation to the taking care of the Works after completion during such times after certified completion as instructed by the CM under the Conditions of Contract.
THE CONTRACT CONDITIONS

CONDITIONS OF CONTRACT

GENERAL CONDITIONS OF CONTRACT

Option 1

The General Conditions of Contract are the "Hong Kong Housing Authority General Conditions of Contract for Building Works (2013 Edition)".

Option 2

The General Conditions of Contract are the "Hong Kong Housing Authority General Conditions of Contract for Foundation Works (2013 Edition)".

Option 3

The General Conditions of Contract are the "Hong Kong Housing Authority General Conditions of Contract for Miscellaneous Works (2013 Edition)".

SPECIAL CONDITIONS OF CONTRACT

The Special Conditions of Contract are as scheduled and detailed in the Contract "booklet" for this Contract.

SAID CONDITIONS

1. The General Conditions of Contract, the Special Conditions of Contract and the Articles of Agreement are referred to elsewhere in this Specification as the "said Conditions";

2. The "said Conditions" include clauses dealing specifically with the provision of plant, equipment, labour and the quality of workmanship and samples and testing. This Specification is written for use in conjunction with the "said Conditions" and the Contractor is deemed to have knowledge of all relevant clauses in the "said Conditions".

CONDITIONS OF SUB-CONTRACT FOR NOMINATED SUB-CONTRACTS

The form of sub-contract referred to in GCC Clause 12.1(2) is the “Hong Kong Housing Authority Articles of Agreement and General Conditions of Nominated Sub-contract to Building Works Contracts (2013 Edition)” (To be used in conjunction with the Hong Kong Housing Authority General Conditions of Contract for Building Works (2013 Edition)).

INFORMATION REQUIRED BY SAID CONDITIONS

Information required by the Conditions of Contract is scheduled in Worksection PRE.B6 and other Worksections as appropriate of this Specification.

CONTRACT TERMINOLOGY

CONTRACT DEFINITIONS

All definitions in the "said Conditions" are deemed also to apply to this Specification.

EMPLOYER

The Employer is the Hong Kong Housing Authority, as defined in the "said Conditions", and referred to in this Specification as "The Authority".

DIRECT CONTRACTOR

"Direct Contractor” means the "Specialist Contractor” as defined in GCC Clause 1.1.
PREF.B5.140.7 DIRECT TESTING CONTRACTOR
"Direct Testing Contractor" and similar means the "Direct Contractor" as defined in PREF.B5.130.

PREF.B5.150.7 DIRECT CONTRACTOR'S WORKS
"Direct Contractor's Works" means "Specialist Works" as defined in GCC Clause 1.1.

PREF.B5.160.7 DIRECT TESTING CONTRACTOR'S WORKS
"Direct Testing Contractor's Works" and similar means "Direct Contractor's Work" as defined in PREF.B5.150.
PRE.B6 INFORMATION REQUIRED BY CONDITIONS OF CONTRACT

GENERAL CONDITIONS OF CONTRACT

PRE.B6.010.7 STATUS
The information given in clause PRE.B6.020 is to be read in conjunction with the General Conditions of Contract and is to form part of the Contract.

**PRE.B6.030.7 GCC 3.1 - ASSIGNMENT**

Submit details to support an application for the assignment of the Contractor's financial benefit in the Contract in accordance with GCC Clause 3.1(2) as follows:

1. Written confirmation that the assignment is for financing the execution and completion of the Works under the Contract;
2. Written confirmation from the financial institution to which the benefit is to be assigned that it is a bank with a Full Banking Licence in Hong Kong under the Banking Ordinance and its Full Banking Licence number;
3. Written confirmation that the Contractor and the financial institution will enter into a Deed of Assignment in the terms and conditions approved by the Employer.

**PRE.B6.035.7 GCC 3.2 - SUB-CONTRACTING**

1. The Contractor shall submit a Sub-contractors Management Plan to the CM within 30 days of the date of the Letter of Acceptance. Update such Sub-contractors Management Plan on a quarterly basis during the currency of the Works until the date of certified completion of the Works. The first quarter shall commence from the expiry of the month in which such Sub-contractors Management Plan was submitted to the CM. Submit any updated Sub-contractors Management Plan within one month from the expiry of the quarter.
2. Should there be any changes in the sub-contracting arrangements at any time before the next quarterly submission is due, notify the CM forthwith of such changes in writing. Such notification shall not affect the obligation to submit an updated Sub-contractors Management Plan under sub-cause (1) above. In the event that there are no changes to the sub-contracting arrangements in any one quarter, notify the CM of the same and no updated submission for such quarter will be required to be made.

3. Any Sub-contractors Management Plan or updated Sub-contractors Management Plan submitted under sub-clause (1) above shall contain such detailed information as required by the “Guidelines on Scope and Contents of the Sub-contractors Management Plan” in APPENDIX PRE.B6/II to this Worksection, and the latest “Contractor's Guideline on Wage Monitoring System” published by HA.

4. The CM may, upon receipt of any Sub-contractors Management Plan or updated Sub-contractors Management Plan, provide his comments on such plan. Amend or revise forthwith such Sub-contractors Management Plan or updated Sub-contractors Management Plan upon receipt of such CM comments, to the satisfaction of the CM. The CM shall have no obligation to comment or approve any Sub-contractors Management Plan or updated Sub-contractors Management Plan.

5. For the purpose of sub-clauses (1) to (4), the term “sub-contractor” means all types of sub-contractors irrespective of the tiers and including but not limited to Specialist Sub-contractors and Nominated Sub-contractors.

Option 1

6. The following prohibition on sub-contracting the Works or any part thereof shall apply:
   a. Do not sub-contract the provision of management/site supervision team as specified in the Contract;
   b. Do not sub-contract to a single sub-contractor for the provision of labour and materials or labour only to the Works after excepting the works undertaken by the Nominated Sub-contractors and the provision of management/site supervision team. For the purpose of this clause, separate sub-contracting of works on a piece-work basis to the same sub-contractor will be considered as a whole.

7. The following parts of the Works are to be executed by contractors selected by the Contractor from the relevant list given or referred to in the Specification if the Contractor is not on the relevant list:
   a. Ground investigation works and works required to be carried out by RSC(GIFW) under the Contract: refer to PRE.B9.210, PRE.B9.250 & PIL1.G460;
   b. Footbridge bearings: refer to PRE.B9.210;
   c. Play equipment: refer to PRE.B9.210;
   d. Road run-in, footpath repair and drainage works outside the boundary of the Site: refer to PRE.B9.210;
   e. Water supply connection works outside the boundary of the Site: refer to PRE.B9.210;
   f. Construction of footing: refer to PIL1.G520;
   g. Piling activities as stated in sub-clause (1) of PIL1.G515. refer to PIL1.G515;
   h. Site Formation Works: refer to PRE.B9.260.
8. In the event that any of the following parts of the Works is to be sub-contract, ensure that no more than two tiers of sub-contractors are to be engaged to carry out that part of the Works and such sub-contractors must be registered under the respective trades of the Primary Register of the Subcontractor Registration Scheme where applicable:
   a. Scaffolding;
   b. Mechanical handling and lifting (for tower crane only);
   c. Mechanical plant and equipment (for tower crane only);
   d. Concreting Formwork (for Large Panel formwork and Small Panel Metal formwork only);
   e. Concreting (for Large Panel formwork and Small Panel Metal formwork only);
   f. Painting (outside external wall of building);
   g. Plumbing and drainage work (outside external wall of building);
   h. Demolition.
9. When sub-contracting part of the site formation works, ensure that no more than one tier of sub-contractor is to be engaged to carry out that part of the works. The first tier of sub-contracting means the sub-contract between the Contractor and his sub-contractor and the first tier sub-contractor refers to the sub-contractor of the first tier of sub-contracting;
10. For the purpose of sub-clauses (7), (8) and (9) where any part of the Works is to be sub-contracted, the first tier of sub-contracting means the sub-contract between the Contractor and his sub-contractor and the first tier sub-contractor refers to the sub-contractor of the first tier of sub-contracting. The second tier of sub-contracting means the sub-contract between the first tier sub-contractor and his sub-contractor;
11. In the event that the piling activities stated in sub-clause (1) of PIL1.G515 are to be further sub-contracted, comply with the requirements stated in the relevant clauses given under the heading of 'Approved Contractors and Subcontractors' of the PIL Worksection (PIL1.G510 to PIL1.G630);
12. Provide particulars of the sub-contractors of all tiers employed or to be employed on the Works including those for the associated Nominated Sub-contracts complying with the format similar to the prescribed forms attached to the latest "Contractor’s Guideline on Wage Monitoring System" published by HA from time to time. Submit these particulars in both printed and electronic copies to the CM and Labour Relations Officer (LRO) within 14 days from the date for commencement of the Works, and thereafter within 2 days of any change thereon or within the time frames as stated in the aforesaid Contractor’s Guideline;
13. When CM has instructed the replacement of the sub-contractor in the event of non-performance of the sub-contractor, or any of his staff who is not performing to the entire satisfaction of the CM, comply with the followings:
   a. Submit particulars of another sub-contractor or replacement staff of the sub-contractor for CM's approval within two weeks after receipt of the CM's instruction;
   b. Bear all associated costs and no extension of time will be granted.
14. The Contractor shall submit for the approval of the CM, the names, experience, company profiles and all other details of the Piling Subcontractor and Piling Sub-subcontractor. Approval by the CM on engaging the Piling Subcontractor and Piling Sub-subcontractor shall under no circumstances relieve the Contractor's responsibility whatsoever under the Contract;
15. In the event of non-performance of the Piling Subcontractor or Piling Sub-subcontractor, or any of their staff who is not performing to the entire satisfaction of the CM, he may instruct the replacement of the Piling Subcontractor and Piling Sub-subcontractor, or any of their staff. In this event, the Contractor shall submit within two weeks of receipt of the CM’s instruction another Piling Subcontractor and Piling Sub-subcontractor or replacement staff of the Piling Subcontractor and Piling Sub-subcontractor for the approval of the CM. The Contractor is deemed to have made provision for all costs and time to be incurred in this respect;

16. The erection, dismantling and height alteration of tower cranes are to be executed by contractor(s) selected by the Contractor from the register on the specialty of "erection, dismantling and climbing" of the Tower Crane trade of the Subcontractor Registration Scheme administered by Construction Industry Council.

Option 2

6. The following prohibition on sub-contracting the Works or any part thereof shall apply:
   a. Do not sub-contract the provision of management/site supervision team as specified in the Contract;
   b. Do not sub-contract to a single sub-contractor for the provision of labour and materials or labour only to the Works after excepting the provision of management/site supervision team. For the purpose of this clause, separate sub-contracting of works on a piece-work basis to the same sub-contractor will be considered as a whole.

7. The following parts of the Works are to be executed by contractors selected by the Contractor from the relevant list given or referred to in the Specification if the Contractor is not on the relevant list:
   a. Ground investigation works and works required to be carried out by RSC(GIFW) under the Contract: refer to PRE.B9.210, PRE.B9.250 & PIL1.G460;

8. In the event that the piling activities stated in sub-clause (1) of PIL1.G510 are to be sub-contracted, comply with the requirements stated in the relevant clauses given under the heading of ‘Approved Contractors and Subcontractors’ of the PIL Worksection (PIL1.G510 to PIL1.G630);

9. The Contractor shall submit for the approval of the CM, the names, experience, company profiles and all other details of the Piling Subcontractor and RSC(GIFW). Approval by the CM on engaging the Piling Subcontractor and RSC(GIFW) shall under no circumstances relieve the Contractor’s responsibility whatsoever under the Contract;

10. In the event of non-performance of the Piling Subcontractor, RSC(GIFW) or any of their staff being not to the entire satisfaction of the CM, he may instruct the replacement of the Piling Subcontractor or any of their staff. In this event, the Contractor shall submit within two weeks of receipt of the CM’s instruction another Piling Subcontractor, RSC(GIFW) or replacement staff of the Piling Subcontractor or RSC(GIFW) for the approval of the CM. The Contractor is deemed to have made provision for all costs and time to be incurred in this respect;

11. Provide particulars of the sub-contractors of all tiers employed or to be employed on the Works including those for the associated Nominated Sub-contracts complying with the format similar to the prescribed forms attached to the latest "Contractor’s Guideline on Wage Monitoring System" published by HA from time to time. Submit these particulars in both printed and electronic copies to the CM and Labour Relations Officer (LRO) within 14 days from the date for commencement of the Works, and thereafter within 2 days of any change thereon or within the time frames as stated in the aforesaid Contractor’s Guideline;
12. When sub-contracting part of the site formation works, ensure that no more than one tier of sub-contractor is to be engaged to carry out that part of the works. The first tier of sub-contracting means the sub-contract between the Contractor and his sub-contractor and the first tier sub-contractor refers to the sub-contractor of the first tier of sub-contracting;

13. The erection, dismantling and height alteration of tower cranes are to be executed by contractor(s) selected by the Contractor from the register on the specialty of "erection, dismantling and climbing" of the Tower Crane trade of the Subcontractor Registration Scheme administered by Construction Industry Council.

**Option 3**

6. The following prohibition on sub-contracting the Works or any part thereof shall apply:
   a. Do not sub-contract the provision of management/site supervision team as specified in the Contract;
   b. Do not sub-contract to a single sub-contractor for the provision of labour and materials or labour only to the Works after excepting the provision of management/site supervision team. For the purpose of this clause, separate sub-contracting of works on a piece-work basis to the same sub-contractor will be considered as a whole.

7. The following parts of the Works are to be executed by contractors selected by the Contractor from the relevant list given or referred to in the Specification:

8. The following parts of the Works are to be executed by contractors included in the Register of Asbestos Contractors kept by Environmental Protection Department:
   a. Asbestos removal.

9. The following parts of the Works are to be executed by independent asbestos laboratory registered under Air Pollution Control Ordinance:
   a. Air monitoring test.

10. In the event that any part of the Works is to be sub-contracted, comply with the following:
    a. When sub-contracting part of the demolition works, ensure that no more than one tier of sub-contractor is to be engaged to carry out that part of the works. While such sub-contractor shall be registered under the Demolition Trade of the Primary Register of the Subcontractor Registration Scheme, he shall also be registered on either the Housing Authority List of Demolition Contractors or the Buildings Department List of Registered Specialist Contractor (Demolition Works). Submit information regarding the subcontracting works in accordance with DEM1.G010 and DEM1.G020. For the purpose of this sub-clause, demolition works mean any work carried out on any building or structure to be demolished;
    b. When sub-contracting any of the following parts of the Works, ensure that no more than two tiers of sub-contractors are to be engaged to carry out that part of the Works and such sub-contractors must be registered under the respective trades of the Primary Register of the Subcontractor Registration Scheme where applicable:
       i. Scaffolding;
       ii. Mechanical handling and lifting (for tower crane only);
       iii. Mechanical plant and equipment for demolition works.
11. When sub-contracting part of the site formation works, ensure that no more than one tier of sub-contractor is to be engaged to carry out that part of the works. The first tier of sub-contracting means the sub-contract between the Contractor and his sub-contractor and the first tier sub-contractor refers to the sub-contractor of the first tier of sub-contracting;

12. For the purpose of sub-clauses (10) and (11) where any part of the Works is to be sub-contracted, the first tier of sub-contracting means the sub-contract between the Contractor and his sub-contractor and the first tier sub-contractor refers to the sub-contractor of the first tier of sub-contracting. The second tier of sub-contracting means the sub-contract between the first tier sub-contractor and his sub-contractor;

13. Provide particulars of the sub-contractors of all tiers employed or to be employed on the Works including those for the associated Nominated Sub-contracts complying with the format similar to the prescribed forms attached to the latest "Contractor's Guideline on Wage Monitoring System" published by HA from time to time. Submit these particulars in both printed and electronic copies to the CM and Labour Relations Officer (LRO) within 14 days from the date for commencement of the Works, and thereafter within 2 days of any change thereon or within the time frames as stated in the aforesaid Contractor’s Guideline;

14. In the event of non-performance of the Demolition Sub-contractor, or any of their staff not to the entire satisfaction of the CM, he may instruct the replacement of the Demolition Sub-contractor or any of their staff. In this event, comply with the following:
   a. Submit particulars of another sub-contractor or replacement staff of the sub-contractor for CM’s approval within two weeks after receipt of the CM's instruction;
   b. Bear all associated costs and no extension of time will be granted.

15. The erection, dismantling and height alteration of tower cranes are to be executed by contractor(s) selected by the Contractor from the register on the specialty of "erection, dismantling and climbing" of the Tower Crane trade of the Subcontractor Registration Scheme administered by Construction Industry Council.

---

**GCC 5.3 - ON-DEMAND BOND**

1. Procure an on-demand bond in favour of the Employer in an amount of 3 per cent of the Contract Sum excluding the Prime Cost Sums for works by Nominated Sub-contractors. Submit the on-demand bond to the Employer within 21 days of the date of the Letter of Acceptance;

2. Obtain from each Nominated Sub-contractor an on-demand bond in favour of the Employer in an amount of 3 per cent of the sub-contract sum and to the requirements of the sub-contract between the Contractor and the Nominated Sub-contractor. Submit the on-demand bond to the Employer within 42 days of the acceptance of the Nominated Sub-contractor's tender by the Contractor.

---

**GCC 5.7 - PROGRAMME TO BE FURNISHED**

*Option 1*

1. Submit programme to the CM to incorporate the dates for the key activities which include but are not limited to the followings:
   a. Commencement and completion of the Works;
   b. Commencement and completion of the utilities investigation survey works within the Site and outside the boundary of the Site in compliance with PRE.B3.060;
   c. Submission of SSP;
   d. Completion of sample wing, sample flats and construction mock-up;
   e. Commencement and completion of works to be executed by Nominated Sub-contractors;
f. Handing over of the lift well and machine rooms by the Contractor to the Nominated Sub-contractor for lift installation in accordance with the Contract;

g. Completion of the works for OP or TOP application.

2. Supply Nominated Sub-contractors with details of any revisions to programme as soon as possible;

3. Submit programmes in the form of: 

---

Option 2

Submit programmes for Section B - Establishment Works as and when required by the CM.

Option 3

1. Submit programmes in the form of: ..........................................

2. Incorporate into the programme the dates for the key activities which include but are not limited to the followings:
   a. Commencement and completion of the Works;
   b. Approval for ELSP;
   c. Submission of SSP.

3. Allow in the programme the time required for CM's approval on the submissions and re-submissions, if so required.

---

Option 4

1. Submit programmes in the form of: ..........................................

2. Incorporate into the programme the dates for the key activities which include but are not limited to the followings:
   a. Commencement and completion of the Works;
   b. Approval for ELSP;
   c. Submission of SSP.

3. Allow in the programme the time required for CM's approval on the submissions and re-submissions, if so required.

---

PRE.B6.060.7 GCC 5.8 - CONTRACTOR'S SUPERINTENDENCE

Option 1

There are no specific requirements on the provision of superintendence.

Option 2

Set up Contractor’s Management Team as in Sub-clause (1) of this clause and provide the services of the superintendents as in the other Sub-clauses of this clause. Ensure that safety training requirements of respective superintendents as specified are complied with. Superintendents with relevant qualifications can take up one or more of the posts subject to CM's prior approval. Submit the names, qualifications, experience and documentary proof of employment status of the superintendents for approval of the CM. Such superintendents shall be approved by the CM before in service, or shall be deemed to be approved if not expressly disapproved by the CM in writing within 14 days of the submission for approval.

1. Contractor’s Management Team

   Within 14 days from the notified date for commencement of the Works, submit to the CM with all necessary details a list of sufficient number of staff in the following disciplines for the management/site supervision team:
   a. Project Manager;
   b. Quantity Surveyors;
   c. Quality Control Manager (QCM);
   d. Architectural Quality Control Coordinator (AQCC);
   e. Structural Quality Control Coordinator (SQCC);
   f. Environmental Manager (EM);
g. Environmental Supervisor (ES);

h. Site Agent;

i. General Foremen;

j. Block Foremen.

**Option 1**

Except for the following personnel, all members of the management /site supervision team shall be full time on Site when they are deployed to the Site:

a. Project Manager;

b. Quantity Surveyor;

c. Environmental Manager.

**Option 2**

Except for the following personnel, all members of the management /site supervision team shall be full time on Site when they are deployed to the Site:

a. Project Manager;

b. Quantity Surveyor.

2. **Quality Control Manager (QCM):**

   a. The QCM must hold the following qualifications:

      i. Qualification and relevant experience equivalent to Technically Competent Person (TCP) Grade T4 of Registered Contractor's Stream for ………………. Works as stated in Table 8.7 of CoPSS; and

      ii. ………………………………………………………………………..

   b. The QCM shall be full time on Site. The duties and responsibilities of the QCM are as follows:

      i. Organize, plan and supervise Quality Control Coordinators (QCCs) in checking, endorsing and inspecting works in their relevant disciplines;

      ii. Carry out further inspection, checking and endorse on work as specified in sub-clauses (4) to (5) below;

      iii. Ensure works were inspected by the respective QCCs in accordance with the Quality Control System (QCS), and are in accordance with the Specification and Drawings before seeking Approval from CM to covering up under GCC Clause 7.3;

      iv. Certify photocopies of the ISO certificates for materials or components as true copies of the original certificates when circumstances warranted;

      v. Submit relevant forms to CM within 14 days of completion of the works;

      vi. Any other duties as required in the Specification.

3. **Architectural Quality Control Coordinator (AQCC):**

   a. AQCC must hold qualifications equivalent to higher certificate or higher diploma in building studies, building surveying or architectural studies awarded by universities funded by the University Grants Committee, or the Institutes of Vocational Education or the previous Technical Institutes operated under the Vocational Training Council plus at least 3 years of relevant working experience to the satisfaction of Building Authority;

   b. The role of AQCC can be taken up by superintendents with relevant qualifications;

   c. The AQCC shall be deployed on Site for a period of ………… months commencing ……… months after the notified date for commencement of the Works. AQCC shall assist QCM in inspecting and checking of the works, respond to queries and endorsing all relevant documents as assigned;

   d. The AQCC shall check and endorse the following items and QCM shall further inspect and endorse the forms and documents relevant to items (i) and (ii) below:

      i. Architectural shop drawings, associated design and method statement;

      ii. Remedial works proposal;

      iii. Sample submission for materials and components;
iv. Material delivered on Site against Approved samples;
v. Testing reports for materials and components;
vi. Request for inspection and tests;
vii. Delivery vouchers, certificate of origin, etc.;
viii. ........................................................................

4. Structural Quality Control Coordinator (SQCC):
   a. SQCC must hold qualifications and relevant experience as follows:
      i. Higher certificate or higher diploma in civil or structural engineering
         with 5 years relevant experience; or
      ii. Degree in civil or structural engineering with 2 years relevant experience;
         and
      iii. The qualifications stated in sub-clauses (a)(i) and (a)(ii) above shall
           comply with the requirements of clause 8.19 of the CoPSS; and
      iv. The relevant experience stated in sub-clauses (a)(i) and (a)(ii) above
           shall comply with the requirements of clauses 8.23 and 8.24 of CoPSS
           for TCP Grade T3.
   b. The role of SQCC can be taken up by superintendents with relevant
      qualifications;
   c. The SQCC shall be deployed on Site for a period of ............... months
      commencing .......... months after the notified date for commencement of
      the Works. SQCC shall assist QCM in inspecting and checking of the works,
      respond to queries and endorsing on all relevant documents as assigned;
   d. The SQCC shall check and endorse on the following items:
      i. Structural engineering shop drawings, associated design and method
         statement;
      ii. Design and erection for formwork and falsework;
      iii. Concreting of critical structures;
      iv. Remedial works proposal;
      v. Erection of steel structures;
      vi. Reinforcement fixing, including mechanical splice works where
          appropriate;
      vii. Core tests, pile tests and tests on critical structural elements carried out
          on or off Site;
      viii. Construction of cantilever structures;
      ix. Sample submission for materials and components;
      x. Material delivered on Site against Approved samples;
      xi. Other testing reports for materials and components, and summary of test
          results;
      xii. Request for inspection and tests;
      xiii. Delivery vouchers; and
           xiv. ..............................................................
   e. The items listed in sub-clauses (d)(i) to (d)(vi) above shall be further
      inspected and endorsed by a Contractor's superintendent who must hold
      qualification and relevant experience as follows:
      i. Degree in civil or structural engineering with 4 years relevant experience;
         or
      ii. Registered Professional Engineer (civil or structural); and
      iii. The qualifications stated in sub-clauses (e)(i) and (e)(ii) above shall
           comply with the requirements of clause 8.19 of the CoPSS; and
      iv. The relevant experience stated in sub-clauses (e)(i) and (e)(ii) above
           shall comply with the requirements of clauses 8.23 and 8.24 of CoPSS
           for TCP Grade T4.

5. Building Services Engineer:
a. Provide the services of a full time competent English-speaking Building Services Engineer. Within seven days from the date of commencement of the Works, as notified by the CM in accordance with GCC Clause 8.1, submit for Approval the name, qualifications and experience of the Building Services Engineer;

b. The Building Services Engineer must hold qualifications and relevant experience as follows:
   i. Preferably corporate membership of the Hong Kong Institution of Engineers (Building Services, Electrical or Mechanical Discipline) elected after 5.12.75, or equivalent, with 1 year of relevant post qualification experience in supervising construction of building services installations in new developments; or
   ii. Degree in Building Services, Electrical or Mechanical Engineering with 4 years of relevant post qualification experience in supervising construction of building services installations in new developments.

c. The duties of the Building Services Engineer are:
   i. Obligations defined in PRE.B8.1410, PRE.B8.1420, PRE.B8.1430, PRE.B8.1440 and generally as PRE.B12;
   ii. Obligations defined in GCC Clause 5.25(3);
   iii. Liaise with the Safety Officers/Safety Supervisors on all Site operations in respect of building services Nominated Sub-contractors.

6. Blasting Control Engineer:

a. Provide the services of a competent English-speaking Blasting Control Engineer full-time on Site during blasting operations. Within seven days from the notified date for commencement of the Works, submit for Approval the name, qualifications and experience of the Blasting Control Engineer;

b. The Blasting Control Engineer must be:
   i. Suitably qualified to the satisfaction of the CM;
   ii. Experienced in bulk and controlled blasting; and
   iii. From an Approved independent agency.

c. The duties of the Blasting Control Engineer will include:
   i. Notify the CM of the Contractor's blasting proposals in accordance with the Contract requirements and certify in writing to the Contractor's Representative that all the requirements have been complied with prior to each blast. Copy this certification to the CM at least 1 hour before each blast;
   ii. Act as an intermediary with the Mines and Quarries Division, Geotechnical Engineering Office;
   iii. Advise the Contractor on and vet the techniques for controlled blasting, such as pre-splitting, smooth blasting etc., with particular reference to the preservation of high quality rockslope faces and the minimizing of necessary protection works;
   iv. Advise on all aspects of blasting safety in particular prevention of fly rock;
   v. Monitor effects of blasting on adjacent property and where necessary recommend improvements to the blasting techniques used;
   vi. Prepare a Blasting Assessment for comment by the Geotechnical Engineering Office before commencement of any rock blasting works.

d. Compliance with this sub-clause will not relieve the Contractor of his general obligations regarding blasting given elsewhere in this Specification.

7. Registered Structural Engineer:

a. Employ a Registered Structural Engineer registered with Building Authority to comply with the requirements of the Specification;
b. The Registered Structural Engineer shall utilise standard forms (EPS-F1 and EPS-F2 in APPENDIX PRE.B6/I to this Worksection) when submitting all items requiring his certification, approval and calculation as detailed in the relevant sections of the Specification and including the following:
   i. All temporary works classified as Case 1 under the CoPSS clause 4.7;
   ii. All substantial temporary works stipulated in PRE.B10.010, as directed by CM;
   iii. Temporary works erected on slopes or retaining walls, as directed by CM;
   iv. Design and calculation for metal scaffolding in lift well for lift installation.

c. The Registered Structural Engineer shall carry out the responsibility detailed in DEM1.D050;

d. The Registered Structural Engineer shall possess the experience stipulated in EAR1.D010 and shall carry out the responsibility detailed in EAR1.D050;

e. The Registered Structural Engineer shall take up the role of Responsible Engineer as stipulated in the Code of Practice for the Structural use of Steel 2005 and in STR1.G030;

f. Where off-site fabrication of structural steelworks is proposed by the Contractor, the Registered Structural Engineer shall carry out the responsibility detailed in STR1.W1430.

8. Asbestos Removal Site Supervisor:
   The qualifications, experience and duties of the Asbestos Removal Site Supervisor are stated in the Specification;

9. Registered Asbestos Consultant:
   The Registered Asbestos Consultant registered with Environmental Protection Department is to carry out duties under Air Pollution Control Ordinance;

10. Defect Rectification Co-ordinator for domestic portion of domestic blocks only:
   a. Provide the services of one full time Defect Rectification Co-ordinator during the first six months of the Maintenance Period or where Sections are applicable to the Contract the first six months of the individual Maintenance Period for each Section;

b. The Defect Rectification Co-ordinator shall be an authorised English speaking agent of the Contractor competent for the discharge of the duties as Defect Rectification Co-ordinator. The minimum requirements of the Defect Rectification Co-ordinator shall include the followings:
   i. At least five years' works experience in a capacity equivalent to a Block Foreman as specified in sub-clause (13) on building works contracts; and
   ii. Of which two years shall be on Housing Department's public housing construction; and
   iii. Capable of English and Chinese writing and Cantonese speaking.

c. The Defect Rectification Co-ordinator shall take up the following roles and duties related to defect rectification:
   i. Liaise with all parties concerned, co-ordinate, programme and ensure that the execution of Maintenance Works including any works of repair or rectification, or making good any defect, imperfection, shrinkage, settlement or other fault identified within the Maintenance Period for all works including building services works shall be in accordance with the provisions of the Contract;
   ii. Attend meetings and to be a member of the Customer Service Team organised and chaired by the site representative of the CM in accordance with PRE.B8.2005;
   iii. Work in a collaborative manner with the site representative(s) of the CM and the property management agent's representative(s) under the Customer Service Team; and
iv. Be accessible by other team members in the Customer Service Team at all times through a designated mobile phone in particular for urgent repairs.

d. Notwithstanding the minimum requirements stipulated for a Defect Rectification Co-ordinator in sub-clause (10)(b) above, the Site Agent or General Foreman as specified in sub-clause (12) can act as the Defect Rectification Co-ordinator.

11. Design Certifying Consultant:
   a. Select a consultant on the Architectural and Associated Consultants Selection Board's (AACSBB) List of Structural Engineering Consultants for CM's approval as the Design Certifying Consultant;
   b. Design Certifying Consultant shall certify all layouts, details and calculations submitted to the CM for permanent works designed by the Contractor as stated in PRE.B6.085. The submissions must be signed by a Director of the Design Certifying Consultant, who must be a Registered Structural Engineer registered with the Building Authority;
   c. The Design Certifying Consultant shall utilise standard forms (EPS-F1 and EPS-F2 in APPENDIX PRE.B6/I to this Worksection) when submitting all items requiring his certification.

12. Site Agent, General Foreman & Block Foreman:
   a. For building works, appoint the following minimum number of site supervisory staff constantly on Site who should possess the minimum qualification and experience as specified:
      i. One Site Agent who must hold a diploma or higher certificate in building studies / civil / structural engineering from a Government approved educational institute or equivalent, plus 8 years site experience of which 5 years must have been spent in building construction as a site supervisory staff;
      ii. One General Foreman who must hold an ordinary certificate in building studies / civil / structural engineering from a Government approved educational institute or equivalent, plus 8 years site experience of which 6 years must have been spent in building construction as a site supervisory staff.
         If the General Foreman does not possess the specified minimum qualification, he must have at least 17 years site experience of which 10 years must have been spent in building construction as a site supervisory staff;
      iii. One Block Foreman per domestic block who must hold a Construction Industry Council certificate in construction supervisory role or trade test certificate in levelling & setting out, plus 6 years site experience of which 4 years must have been spent in building construction as a site supervisory staff.
         If the Block Foreman does not possess the specified minimum qualification, he must have at least 10 years site experience of which 6 years must have been spent in building construction as a site supervisory staff.
   b. To underpin implementation of the Safety Plan, the Site Agent, General Foreman and Block Foreman are at duty to assist in promoting the safety and health of personnel employed on Site, which shall include but are not limited to the following:
      i. Supervise the observance of safety standards by the workers;
      ii. Carry out daily safety inspection;
      iii. Promote safety-at-work in carrying out work on Site;
      iv. Attend Site Safety Committee meetings; and
      v. Conduct tool-box talks as necessary.
   c. Site Agent, General Foreman and Block Foreman are to be directly employed by the Contractor on a monthly wage basis;
d. Submit for Approval within seven days from the notified date for commencement of the Works the name(s), qualifications and experience of the Site Agent, General Foreman and Block Foreman.

13. Site Agent:
   a. The Site Agent must hold qualifications and relevant experience as follows:
      i. Higher certificate or higher diploma in civil or structural engineering, with 5 years relevant experience; or
      ii. Degree in civil or structural engineering with 2 years relevant experience; and
      iii. The qualifications stated in sub-clauses (a)(i) and (a)(ii) above shall comply with the requirements of clause 8.19 of the CoPSS; and
      iv. The relevant experience stated in sub-clauses (a)(i) and (a)(ii) above shall comply with the requirements of clauses 8.23 and 8.24 of CoPSS for TCP Grade T3.
   b. The Site Agent is to be directly employed by the Contractor on a monthly wage basis;
   c. Submit for Approval within seven days from the notified date for commencement of the Works the name(s), qualifications and experience of the Site Agent.

14. Qualified Engineer (QE)
   a. The qualifications and experience of the QE shall be as follows:
      i. Member of the Hong Kong Institution of Engineers or a Registered Professional Engineer in Civil or Structural discipline registered under the Engineers Registration Ordinance (Chapter 409 of the Laws of the HKSAR) in an appropriate discipline plus at least 5 years of relevant experience; plus
      ii. .................................................................
   b. Utilise standard forms (EPS-F1 and EPS-F2 in APPENDIX PRE.B6/I to this Worksection) when submitting the items requiring QE's certification as detailed in sub-clauses (14)(d) to (14)(g) below;
   c. Allow sufficient time in the construction programme for such checking and certification by the QE and submission to the CM for written consent;
   d. Certification by the QE is required for the design and construction of the following Temporary Works:
      i. erection of temporary protective canopy at F1 of Blocks ....... and Carport ....... as specified in PRE.B10.860;
      ii. erection of movable noise barrier as specified in PRE.B8.856;
      iii. .................................................................
   e. Submit QE certificate for construction of the Temporary Works listed in sub-clause (14)(d) above to the CM for consent before the Temporary Work is put in use;
   f. Submit QE certificate for construction of the Temporary Works listed in sub-clause (14)(d) above to the CM for consent before the staged Temporary Work is put in use in the order of the following schedule:
      
      | Temporary Works | Schedule of stages for QE certificate submission |
      |-----------------|-----------------------------------------------|
      | i. ............... | ...................................................... |
      | ii. ............... | ..................................................... |
      | iii. ................ | ................................................................ |
   g. Checking and certification by QE are required for design only on the following Temporary Works:
      i. ....................................................
      ii. ....................................................

15. Authorized Signatory (AS):
a. The qualification and experience of the AS shall be as required under the Buildings Ordinance in particular, the requirements stated in the PNRC No. 38, the CoPSS and other relevant PNRCs issued by the BD;

b. The AS shall carry out the duties in the Site Supervision Plan (SSP) stated in clause PRE.B8.1405 and other relevant requirements.

16. Technically Competent Person (TCP) for SSP:

a. Appoint one or more TCP of the grade and with qualification and relevant experience specified in the TMSP and CoPSS for various types of works as required under the SSP, to carry out the duties as specified in the SSP, and to act as and perform the duties of the “Safety Supervision Personnel” as referred to in the Guidelines on Safety of Tower Cranes (GSTC) issued by the Construction Industry Council (CIC);

b. Appoint a TCP who must hold qualifications and relevant experience equivalent to TCP Grade T4 of Registered Contractor’s Stream for building works with significant geotechnical content as stated in Table 8.7 of the CoPSS to carry out the following duties:

i. Supervise and control the quality of all slope filling and compaction works to ensure their compliance with the requirements of the Contract;

ii. Supervise all testing associated with the filling and compaction works;

iii. Prepare the monthly reports, covering assessment, “as-built” plans and sections and testing records specified in EAR1.W2410;

iv. Prepare geological logs of drillholes, exploratory pits, excavation faces of rock and soil faces; keep photographic records of same; prepare geological sections and reports to the CM, as directed by the CM;

v. Monitor behaviour of rock and soil slopes by means of geotechnical instrumentation; collect and present data to the CM, as directed by the CM;

vi. Observe and record the geological characteristics of the excavated material, all as directed by the CM;

vii. Monitor behaviour of groundwater on the Site by observing and recording surface flows, piezometers, and flows from any raking drains; collect and present data to the CM, as directed by the CM;

viii. Observe and record rock mass characteristics by means of discontinuity surveys; select samples for testing; carry out rock and soil slope stability and stabilisation works analyses; present data and reports to the CM as directed by the CM;

ix. Design and sketch stabilisation works using personal computers and Approved computer software, as directed by the CM;

x. Collect and analyse data relating to effects of blasting procedures on condition of rock berms and faces and report to the CM, as directed by the CM;

xi. Ensure adequate field supervision and procedural correctness of rock and soil slope protection and stabilisation works, as directed by the CM. Assess the stability of boulders and recommend the types of stabilisation works to the CM;

xii. Liaise with the CM on all aspects of the engineering geology and geotechnical works;

xiii. Certify the accuracy, correctness, and completeness, of all geotechnical information supplied to the CM by the Contractor;

xiv. Keep a detailed record of all aspects of the geotechnical works carried out on site and report to the CM weekly.

c. Subject to the CM’s approval, one TCP may be assigned to cover the duties and responsibilities of more than one role provided that:

i. The TCP who is appointed satisfies the requirements of the highest grade of TCP specified;
ii. The TCP undertakes inspections at a frequency no less than the frequency derived in accordance with the documents stated in sub-clause (16)(a).

d. Notify the CM immediately if there is any subsequent change of the TCP during the course of services.

17. Technical Director (TD):

a. The qualification and experience of the TD shall be as required under the Buildings Ordinance in particular, the requirements stated in the PNRC No.38, and other relevant PNRCs issued by the BD;

b. The TD shall be authorized by the Contractor to:
   i. Have access to plant and resources;
   ii. Provide technical and financial support for the execution of the Works;
   iii. Make decisions for the company and supervise the AS and other personnel.

c. The TD should not be the same person as the AS in sub-clause (16).

18. Registered Geotechnical Engineer (RGE):

a. Employ a RGE registered with Building Authority to prepare and sign the geotechnical report and supporting documentation to support the Contractor's submissions made by the Design Certifying Consultant/Registered Structural Engineer employed for the following works:
   i. Excavation and Lateral Support Works as stated in EAR1.D030;
   ii. Foundation works as stated in the Worksection PIL;
   iii. Demolition works as stated in the Worksection DEM.

b. The RGE shall utilise standard forms (EPS-F1 and EPS-F2 in APPENDIX PRE.B6/I to this Worksection) when submitting all items requiring his certification, approval and calculation as detailed in the above sub-clauses;

c. The RGE shall verify that the conditions on Site are consistent with assumptions made in the geotechnical report and supporting documentation prepared by him;

d. Comply with PNAP APP-141 for the division of responsibilities between RSE and RGE.

19. Certified Supervisor (CS) for Application of Tile Adhesive:

a. The CS must be certified for supervision on the application of tile adhesive on Site and at the factory of precast concrete components by the manufacturer who will provide the tile adhesive;

b. The CS shall be full time on Site and at the factory of precast concrete components during the application of tile adhesive. The duties and responsibilities of the CS are as follows:
   i. Have thorough understanding on mixing, application and limitations of the tile adhesive to be used;
   ii. Ensure that the trade tested workers on tiling works have attended the technical briefing provided by the tile adhesive manufacturer;
   iii. Supervise the application of tile adhesive to ensure proper procedures, in particular the open time requirement, have been followed;
   iv. Maintain records of supervision including any rectification works carried out for inspection by the CM if required.

c. The role of the CS can be taken up by superintendents with relevant certification as sub-clause (19)(a).

20. Piling Sub-contractor's Superintendents:

Require the Piling Sub-contractor to deploy the following staff full time on Site during the construction period of the foundation works:

a. A superintendent with qualification and relevant experience equivalent to TCP Grade T4 of Registered Contractor's Stream for Foundation Works as stated in table 8.7 of CoPSS to take up the duties and responsibilities of the QCM for works relating to construction of foundations;
b. A superintendent with qualification and relevant experience same as those required of the SQCC to take up the duties and responsibilities of the SQCC for works relating to construction of foundations.

21. Supervising Engineer (Tower Crane):
   a. The qualification and experience of the Supervising Engineer (Tower Crane) shall be same as those required for the supervising engineer in Section F(i) under the Guidelines on Safety of Tower Cranes issued by Construction Industry Council;
   b. The Supervising Engineer (Tower Crane) shall carry out the duties of the supervising engineer same as those required in Section F in the Guidelines on Safety of Tower Cranes issued by Construction Industry Council.

22. Competent Engineer for Utilities Investigation Survey Works:
   a. The Competent Engineer shall be competent, able to communicate in both English and Chinese and qualified in accordance with the following requirements and appropriately experienced to carry out the duties specified in the Contract;
   b. The Competent Engineer shall have a minimum of 4 years' working experience on construction sites of which 2 years must be spent in building construction works, and hold one of the following qualifications:
      i. MICE or MIStructE or MCIBSE or MIEE or MIME or HKIE or MCIOB or MHKICM; or
      ii. A degree/higher diploma in civil or structural or building services or electronic or electrical or mechanical engineering or building studies or building surveying or architectural studies from a Hong Kong or British University or Government recognised tertiary educational institution.
   c. The Competent Engineer shall have hands-on experience in carrying out and supervision of the utilities investigation survey specified in PRE.B3.060 involved;
   d. The Competent Engineer shall be in full time attendance to supervise the carrying out of the utilities investigation survey works, and shall certify the accuracy, correctness and completeness of all relevant survey information supplied to the CM by the Contractor;
   e. The Contractor shall submit the name and particulars of the Competent Engineer for CM's approval 2 weeks prior to the commencement of the utilities investigation survey works.

23. Environmental Manager (EM):
   a. Appoint a person as the EM working part time on Site to provide professional advice to the Contractor and overseeing all Environmental Management and Site Hygiene matters of the Works and include but not limited to the duties in sub-clause (d) below;

Option 1

Option 2

a. Appoint a person as the EM working full time on Site to provide professional advice to the Contractor and overseeing all Environmental Management and Site Hygiene matters of the Works and include but not limited to the duties in sub-clause (d) below;

b. The minimum qualification of the EM or the person providing the services of an EM under sub-clause (a) above shall be as follows-
   i. Degree in Environmental Discipline (Environmental Science, Environmental Engineering, Environmental Studies or Environmental Management); or
   ii. Degree in construction related discipline and having satisfactorily completed a certificate course in environmental management by a local or overseas tertiary education institute; or
   iii. A corporate member of the Hong Kong Institution of Engineers (HKIE) in Environmental Discipline or equivalent; or
iv. A full member of the Hong Kong Chartered Institute of Water and Environmental Management; or

v. A corporate member of a professional institution other than those as mentioned in (iii) and (iv) above and EITHER having at least 3 years working experience in construction/project management with environmental management content OR in possession of a diploma or above in environmental studies or environmental engineering awarded by a local or overseas tertiary educational institution.

c. The minimum qualification of the EM or the person providing the services of an EM under sub-clause (a) above shall be as follows:

i. A corporate member of the Hong Kong Institution of Engineers (HKIE) in Environmental Discipline or equivalent; or

ii. A full member of the Hong Kong Chartered Institute of Water and Environmental Management; or

iii. A corporate member of a professional institution other than those as mentioned in (i) and (ii) above and EITHER having at least 3 years working experience in construction/project management with environmental management content OR in possession of a diploma or above in environmental studies or environmental engineering awarded by a local or overseas tertiary educational institution.

d. The EM's duties include but not limited to the followings:

i. Prepare, implement and update the Environmental Management Plan;

ii. Advise on measures to be taken to comply with legislative and contractual obligations under environmental protection, waste management and site hygiene and implement such measures;

iii. Liaise on all matters relating to environmental and site hygiene monitoring;

iv. Conduct periodic inspections of the Site for identifying potential hazards to the environment and deficiencies in site hygiene, and recommend corrective actions as necessary;

v. Attend to enforcement actions taken by the Environmental Protection Department, Food and Environmental Hygiene Department, and other enforcing departments on matters relating to site environment and hygiene;

vi. Attend to public complaints and coordinate remedial actions;

vii. Oversee all the environmental performance on the Site and ensure that any polluting or potentially polluting situation is promptly rectified;

viii. Organize and attend Environmental Management and Site Hygiene meetings;

ix. Compile monthly environmental report for submission to the CM at least five working days before such meetings and produce monitoring records, in prescribed format, to meet BEAM Plus standards where applicable;

x. Advise on the implementation of an environmental management system; waste disposal, trip ticketing and other enhancement measures;

xi. Arrange and provide environmental training including site specific induction training and toolbox talks for all Site Personnel, and organize environmental promotional activities;

xii. Prepare the documentation to support submissions under the Housing Authority's incentive schemes in respect of environmental and site hygiene items;

xiii. Monitor the maintenance of cleanliness and tidiness on the Site; and

xiv. Oversee the proper maintenance of amenity facilities by dedicated workers stated in clause PRE.B8.2520 on the Site.

24. Environmental Supervisor (ES)
a. Appoint an ES working full time on Site to assist EM for the inspection, supervision and monitoring of the environmental and hygiene performance of the Works;

Option 2

a. Appoint two ES working full time on Site to assist EM for the inspection, supervision and monitoring of the environmental and hygiene performance of the Works;

b. The qualification and experience of ES shall be as follows:
   i. A person in possession of a higher diploma or a higher certificate in construction related discipline or environmental studies or environmental engineering awarded by a local or overseas tertiary educational institution, plus 3 years' working experience with a minimum of one year working experience in environmental related work; or
   ii. A person in possession of a higher diploma or a higher certificate in construction related discipline and has satisfactorily completed the "Environmental Protection Course for Environmental Supervisors" organised by CIC, IVE or equivalent.

c. The ES's duties include but not limited to the followings:
   i. Assist the EM in carrying out his duties;
   ii. Carry out routine inspections of the Site for identifying potential hazards to the environment and deficiencies in site hygiene, report findings with recommendations for corrective actions; and ensure that follow-up action is taken promptly to rectify defects;
   iii. Supervise and monitor all the environmental performance on the Site; check and ensure that any polluting or potentially polluting situation is promptly rectified and assist EM in preparing the monitoring records, in prescribed format to meet BEAM Plus standards where applicable;
   iv. Advise EM on the up-keeping of environmental performance and hygiene standards of the Site;
   v. Supervise and promote the execution of environmental protection and hygiene works by workers on the Site;
   vi. Organize site-based environmental protection and hygiene promotion awards and promotional activities as prescribed under the Integrated Pay for Safety, Environment and Hygiene Scheme (IPSEHS); and
   vii. Supervise the dedicated workers stated in clause PRE.B8.2520 in the proper maintenance of amenity facilities on the Site.

25. Contractor's Labour Officer (CLO):

   a. The qualifications and experience of the CLO shall be as follows:
      i. Completed Secondary 5 or equivalent; and
      ii. Well versed in Hong Kong Employment Ordinance & relevant labour legislation; and
      iii. Good command of both oral and written English and Chinese; and
      iv. Good knowledge and experience of the operation and practices of the construction industry is preferable; and
      v. Good computer knowledge preferably with past experience on the operation of a computerized smart-card system; and
      vi. 2 years' full-time working experience on personnel management or human resources related duties; or Post-secondary qualification in Human Resources or Personnel Management is preferable.
b. Within 7 days from the notified date for commencement of the Works, the Contractor shall nominate at least .......... numbers of Contractor's Labour Officer (CLO) for CM's approval. The nominated CLO(s) when approved shall work on-site and responsible for monitoring the payment of wages and MPF contributions. The CLO(s) shall provide all necessary assistance to the Labour Relations Officer in the monitoring process and in the handling of complaints on arrears of wages and MPF contributions raised by any Site Personnel;

c. The provision of CLO shall be maintained for the duration of the Contract and at least 2 months after the month in which the operation of ACRS is terminated as stipulated in PRE.B8.2660, and within the period with the termination of operation of the ACRS the Contractor is required to keep the wage books as stipulated in PRE.B8.1450;

d. The CM shall have the power to withdraw his approval of the CLO at any time. If such approval shall be withdrawn the Contractor shall, after receiving notice in writing of such withdrawal, remove the CLO from the Site forthwith and shall replace him by another CLO approved by the CM.

26. Appointed superintendents required to comply with safety training requirements:
Quality Control Manager (QCM), Building Services Engineer, Blasting Control Engineer, Registered Asbestos Consultant, Site Agent, Qualified Engineer, Technically Competent Person (TCP) Grade T4 to T5 for SSP, Supervising Engineer (Tower Crane). Competent Engineer and Environmental Manager (EM) shall have attended and completed the following mandatory safety training:

a. Safety Training Course for Site Management Staff (nominal course duration 27 hours) provided by the Construction Industry Council. Acceptance of training provided by other organizations is subject to verification that the training is based on course contents of equivalent or above standards and the appointed superintendent has attained the associated qualification;

b. The appointed superintendents should participate and give advice in Induction Training and Tool Box Talks to enrich the knowledge of personnel of particular trades upon completion of the course.

27. Appointed superintendents required to comply with safety training requirements:
Architectural Quality Control Coordinator (AQCC), Structural Quality Control Coordinator (SQCC), Asbestos Removal Site Supervisor, General Foreman, Block Foreman, Authorized Signatory (AS), Technically Competent Person (TCP) Grade T1 to T3 for SSP, Certified Supervisor (CS) for Application of Tile Adhesive, Piling Sub-contractor’s Superintendents and Environmental Supervisor (ES) shall have attended and completed the following mandatory safety training:

a. Safety and Health Supervisor (Construction) Course (nominal course duration 43 hours) provided by the Occupational Safety and Health Council; or

b. Construction Safety Supervisor Course (nominal course duration 42 hours) provided by the Construction Industry Council; or

c. Acceptance of training provided by other organization is subject to verification that the training is based on course contents of equivalent or above standards of the courses stated at (a) and (b) above and the appointed superintendent has attained the associated qualification;

d. The appointed superintendents should participate and give advice in Induction Training and Tool Box Talks to enrich the knowledge of personnel of particular trades upon completion of the course.

PRE.B6.065.7 GCC 5.9 - CONTRACTOR'S EMPLOYEES
1. The minimum number of Trade Tested Workers to be employed by the Contractor or his subcontractors in accordance with GCC Clause 5.9(1)(c) shall be calculated in accordance with the stated percentages of the total workforce on Site at any one time in each of the following scheduled trades:
a. For piling works:

<table>
<thead>
<tr>
<th>Trade</th>
<th>Requirement of Combined Percentage for Skilled and Semi-skilled Trade Tested Workers</th>
<th>Max. Permissible Percentage of Semi-skilled Workers</th>
</tr>
</thead>
<tbody>
<tr>
<td>i.  Ground Investigation Operator</td>

2. Pursuant to GCC Clause 5.9(1), the Trade Tested Workers shall have acquired the following qualifications:

a. Skilled Workers shall be either one of the followings:

i. A registered skilled worker or registered skilled worker (provisional) as respectively defined in section 2(1) of the Construction Workers Registration Ordinance (Cap 583);

ii. Holder of a full trade test certificate issued by the Construction Industry Council (CIC).
b. Semi-skilled Workers shall be either one of the followings:
   
i. A registered semi-skilled worker or registered semi-skilled worker (provisional) as respectively defined in section 2(1) of the Construction Workers Registration Ordinance (Cap 583);
   
ii. Holder of an intermediate trade test certificate issued by the Construction Industry Council (CIC).

3. Complete a return for the Trade Tested Workers, giving details of the personal particulars showing but not limited to the trade, name, identity card number and signature of each of such Trade Tested Workers employed, and deliver it together with the returns submitted by the Nominated Sub-contractors to the CM in accordance with GCC Clause 5.25(3):
   
a. Obtain the format of the return from the CM;
   
b. A return is to be completed in respect of the Trade Tested Workers employed on the fifteenth (15) day of each month, or in the event of the fifteenth (15) day being a General Holiday on the day immediately following the General Holiday.

3. Complete a return for the Trade Tested Workers, giving details of the personal particulars showing but not limited to the trade, name, identity card number and signature of each of such Trade Test Workers employed, and deliver it to the CM in accordance with GCC Clause 5.25(3):
   
a. Obtain the format of the return from the CM;
   
b. A return is to be completed in respect of the Trade Tested Workers employed on the fifteenth (15) day of each month, or in the event of the fifteenth (15) day being a General Holiday on the day immediately following the General Holiday.

4. Employment of trainees may be allowed subject to CM's agreement. The trainees should be closely supervised by Skilled Workers/Semi-skilled Workers;

5. Arrange and release workers to attend either the 2-day or 5-day course including examination organised by the Construction Industry Council (CIC) for attaining the status of registered skilled worker in the trade of Demolition Worker (Building) under the Workers Registration-Secretariat of CIC as appropriate. Submit evidence to CM for substantiating the fulfilment of all of the following conditions, which shall be provided to CM for ascertaining Contractor's entitlement to the designated payment as provided and detailed in the Bills of Quantities or Schedule of Rates in respect of the arrangement and release of workers to attend the aforesaid course, and attainment of the status of registered skilled worker:
   
a. Each worker is counted only once;
   
b. The worker passed the examination of CIC after the tender-out date of the concerned demolition contract;
   
c. Submission of the original payment receipt of course and examination fees issued by CIC;
   
d. The worker has provided proof of registration as registered skilled worker in the trade of Demolition Worker (Building) under Workers Registration-Secretariat of CIC;
   
e. The worker has worked for the Contract as a demolition worker for at least 60 working days after the registration with Workers Registration-Secretariat of CIC; and
   
f. The worker has been reimbursed of one of the followings:
      
i. The designated payment with workers' signed acknowledgement of receipt available in the event that the course and examination fees were paid by the worker;
      
ii. The designated payment net of the course and examination fees with workers' signed acknowledgement of receipt available in the event that the course and examination fees were paid by the Contractor.
6. Arrange and release workers to sit for the examination organised by CIC for attaining the status of registered skilled worker in the trade of Asbestos Abatement Worker under Workers Registration-Secretariat of CIC as appropriate. Submit evidence to CM for substantiating the fulfilment of all of the following conditions, which shall be provided to CM for ascertaining Contractor's entitlement to the designated payment as provided and detailed in the Bills of Quantities or Schedule of Rates in respect of the arrangement and release of workers to sit for the aforesaid examination, and attainment of the status of registered skilled worker:
   a. Each worker is counted only once;
   b. The worker passed the examination of CIC after the tender-out date of the concerned demolition contract;
   c. Submission of the original payment receipt of examination fee issued by CIC;
   d. The worker has provided proof of registration as registered skilled worker in the trade of Asbestos Abatement Worker under Workers Registration-Secretariat of CIC;
   e. The worker has worked for the Contract as an asbestos abatement worker for at least 30 working days after the registration with Workers Registration-Secretariat of CIC; and
   f. The worker has been reimbursed of one of the followings:
      i. The designated payment with workers' signed acknowledgement of receipt available in the event that the examination fee was paid by the worker;
      ii. The designated payment net of the examination fee with workers' signed acknowledgement of receipt available in the event that the examination fee was paid by the Contractor.

7. Keep record of payment for the course fee/examination fee of CIC and payment of wages to workers with workers' signed acknowledgement of receipt;

8. The total amount of designated payment payable in accordance with sub-clauses (5) and (6) above shall not exceed the ceiling sum calculated as 0.1% of the Contract Sum;

9. The total amount of designated payment payable in accordance with sub-clauses (5) and (6) above shall not exceed the ceiling sum calculated as 0.1% of the total sum for the demolition works within the Contract Sum.

---

**PRE.B6.070.7 GCC 5.11 - SAFETY, SECURITY AND ENVIRONMENTAL MANAGEMENT OF THE WORKS**

**Option 1**

1. The safety and security requirements in respect of the Works and all operations on the Site are specified in PRE.B8.110 to PRE.B8.360 and elsewhere in Worksection PRE.B8.

2. The environmental management and site hygiene requirements in respect of the Works and all operations on the Site are specified in PRE.B8.410 to PRE.B8.2850 and elsewhere in Worksection PRE.B8.

3. Pursuant to GCC Clause 5.11, the Contractor shall submit the Safety Plan and the Environmental Management Plan and their subsequent revisions or updates to the CM in accordance with the requirements as specified in PRE.B8.210 and PRE.B8.2515 respectively.

**Option 2**

1. The safety and security requirements in respect of the Works and all operations on the Site are specified in PRE.B8.110 to PRE.B8.360 and elsewhere in Worksection PRE.B8.
GCC 5.14 - THIRD PARTY INSURANCE

1. The list of insurers approved by the Authority will be the "List of authorized insurance companies published by the Office of the Commissioner of Insurance under the Financial Services and the Treasury Bureau, Government Secretariat". Any insurer not on this list will not be approved. The Insurer must provide, together with the insurance policy, a covering letter undertaking to inform the Authority of any cessation of the insurance policy due to any reason whatsoever. No insurance shall be approved without such a covering letter;

2. The minimum amount of third party insurance is stated in the Appendix to the Form of Tender. The amount stated is deemed to be in respect of any one accident and unlimited in the aggregate amount for the period of insurance.

The expression 'accident' meaning any one accident or series of accidents arising out of any one event irrespective of the number of claims that may arise therefrom but unlimited in number for the period of insurance.

GCC 5.15 - DESIGN RESPONSIBILITY (BUILDING)

1. Accept liability for:
   a. The suitability of purpose of the materials and equipment incorporated in the Works by any Nominated Sub-contractor;
   b. All design responsibilities included in Nominated Sub-contracts. The design requirements for each of the Nominated Sub-contractors are generally set out in the typical Sub-contract documents, available for inspection at the Housing Department Office, and the Contractor must satisfy himself of these responsibilities.
      The Nominated Sub-contracts which carry a design responsibility and for which the Contractor is responsible are:
      i. .................................................................;
      ii. .................................................................;
      iii. .................................................................;
   c. Design responsibility for all modifications in design and/or Specification proposed by the Contractor (refer to Appendix E to this Specification);
   d. Design responsibility of the following permanent works which are designed by the Contractor:
      i. Design mixes of concrete: refer to CON1.M1110;
      ii. Playground/fitness equipment: refer to EXT10.M010;
   e. Design responsibility of the following permanent works which are designed by the Contractor and require certification by the Design Certifying Consultant:
      i. Roof lights - refer to .........................;
      ii. Precast concrete facades: refer to CON5.D010 - CON5.D1040 inclusive;
      v. Aluminium windows and louvres: refer to COM2.D010 - COM2.D320 inclusive;
      vi. Stainless steel windows, doors and louvres complete with glazing for domestic blocks: refer to COM1.D010 - COM1.D240 inclusive;
      vii. Structural steelwork: refer to STR1.D010 - STR1.D780 inclusive;
      viii. Bridge bearing: refer to ...............;
      ix. .................................................................
   2. Submit to the CM certificate signed by the Design Certifying Consultant as specified in PRE.B6.060 certifying that the permanent works listed in sub-clause (1)(e) which are designed by the Contractor are structurally safe;
   3. Submit the followings to CM for approval:
      a. Design calculations and details for the following items of work:
i. Curtain wall: ..............................................................;
ii. ..............................................................................

b. Supporting document in relation to the items of works given in sub-clause (3)(a) above:
   i. ...............................................................;
   ii. ..........................................................................

c. Allow for at least 45 days for processing of first submission and at least 45 days for each re-submission to CM for approval.

4. The principles of design will be as set out in the Contract documents and the Contractor shall not vary these without first obtaining the written permission of the CM.

5. Any design for which the Contractor is responsible shall be submitted to the CM prior to execution of any work in accordance with the design for the CM’s written confirmation that the requirements of the Employer appear to have been met, and after the CM’s confirmation the Contractor shall not vary such design without the written consent of the CM. The submission to the CM of such design and the CM’s confirmation shall not relieve the Contractor of any duty or responsibility under the Contract.

**PRE.B6.090.7 GCC 5.27 - FACILITIES FOR OTHER PERSONS**

Facilities required to be provided to others under the Contract are specified in Worksection PRE.B12.

**PRE.B6.100.7 GCC 5.33 - CARE OF THE WORKS INSURANCE**

The list of insurers approved by the Authority will be the “List of authorized insurance companies published by the Office of the Commissioner of Insurance under the Financial Services and the Treasury Bureau, Government Secretariat”. Any insurer not on this list will not be approved. The Insurer must provide together with the insurance policy a covering letter undertaking to inform the Authority of any cessation of the insurance policy due to any reason whatsoever. No insurance policy shall be approved without such a covering letter. In the event that a Nominated Sub-contractor or a Direct Contractor submits a claim under the insurance policies required to be maintained by the Contractor under GCC Clause 5.33 for any loss or damage from whatsoever cause arising, other than the “excepted risks”, he will be entitled to be reimbursed the amount paid to the Contractor by the insurer for that claim. The Nominated Sub-contractor or the Direct Contractor will also be entitled to be reimbursed from the Contractor 30% of the amount of any policy excesses deducted.

**PRE.B6.150.7 GCC 6.3 - PASSES**

1. Ensure everyone entering the Site has a Pass. The requirements of Passes shall conform to the smart cards as stipulated in PRE.B8.2620 and PRE.B8.2650.

2. Issue Passes to, including but not limited to, all staff and sub-contractors, Nominated Sub-contractors, Specialist Contractors, Utility Undertaking staff and contractors, workers or contractors employed by the Employer, the Surveyor and his representatives, the CM and his representatives and anyone authorised by him, and the authorised representatives of the Employer.

**PRE.B6.200.7 GCC 9.1 - WORKS SUBJECT TO EXCISION**

*Option 1*

There are no parts of the Works subject to excision.

*Option 2*

1. The following parts of the Works are "Works Subject to Excision":
   a. Primary School. The written instruction either to proceed or to excise pertaining to such parts shall be given within ............ months from the notified date for commencement of the Works;
   b. ........................................................................
2. In the event of any work being excised in respect of this clause there will not be any adjustment to the prices in Bill No. 1 - Preliminaries.

Option 3

1. The following parts of the Works are "Works Subject to Excision":
   a. Primary School. The written instruction either to proceed or to excise pertaining to such parts shall be given within ............ .months from the notified date for commencement of the Works;
   b. .......................................................... 

2. In the event of any work being excised in respect of this clause there will not be any adjustment to the rates in Preliminaries Section of the Schedule of Rates.

Option 4

1. The following parts of the Works are "Works Subject to Excision". The written instruction either to proceed or to excise pertaining to such Parts shall be given within ............ .months from the notified date for commencement of the Works;
   a. .......................................................... 

PRE.B6.210.7 GCC 10.1 - EXECUTION OF MAINTENANCE WORKS

1. Carry out and complete such Maintenance Works within the respective times for completion as set out in Schedule A and Schedule B below, which stipulate the times for completion of the various categories of Maintenance Works;

2. The periods of time set out in the legends of Schedule A and Schedule B shall commence from the date when the Contractor is in receipt of the instruction;

3. Defects that are commonly identified as incurring maximum inconvenience to tenants once found are classified as urgent Maintenance Works and they are not listed in the schedules. These urgent Maintenance Works require different completion time and the schedules will no longer apply. Instead, the Contract Team shall issue an instruction to the Contractor for immediate rectification or completion in a shorter time;

4. In situation where it becomes apparent that the progress of the execution of Maintenance Works is likely to be delayed, notify the CM of the cause and probable effect and extent of such delay. If the CM considers that the delay is due to occurrence of a special circumstance and the Contractor is fairly entitled to a longer duration for completion, CM shall notify the Contractor of such extended time accordingly;

5. When the Maintenance Works have been completed, notify the CM, who shall issue confirmation of the date of completion of such works.

---

**Specification Library 2014 Edition**

PRE.B/71
**PRE.B6.250.7**  
**GCC 11.1(7) – MEASUREMENT AND VALUATION FOR PROVISIONAL QUANTITIES**

*Option 1*

Pursuant to GCC Clause 11.1(7)(b) relating to the measurement and valuation for provisional quantities, the Surveyor shall issue the Surveyor’s determination for provisional quantities within 12 months after the date of commencement of the Period of Final Measurement.

*Option 2*

Pursuant to GCC Clause 11.1(7)(b) relating to the measurement and valuation for provisional quantities, the Surveyor shall issue the Surveyor’s determination for provisional quantities within 6 months after the date of commencement of the Period of Final Measurement.

**PRE.B6.260.7**  
**GCC 11.2 - VARIATIONS**

For the avoidance of doubt, the words "position", "dimension", "level" and "line" in GCC Clause 11.2 (1)(a) shall be deemed to include the actual founding level of each pile and the actual rockhead levels (where appropriate for individual pile types) for those piles as designed by the Contract Manager.

**PRE.B6.270.7**  
**GCC 11.7 - SURVEYOR'S DETERMINATION AND ASCERTAINMENT**

*Option 1*

Pursuant to GCC Clause 11.7(2)(a) and prior to issuing Surveyor’s determination under the Contract relating to the measurement and valuation of a variation ordered by the CM, the Surveyor shall assess the sum which in his opinion shall be added to or deducted from the Contract Sum and provide the Contractor with such assessment progressively in accordance with the following time frames:

<table>
<thead>
<tr>
<th>Variation ordered by the CM *</th>
<th>Surveyor to provide his assessment to the Contractor</th>
</tr>
</thead>
<tbody>
<tr>
<td>(From the notified date for commencement of the Works unless otherwise stated)</td>

* For verbal variation subsequently confirmed in writing by the Contract Manager, the relevant date for the purpose of the time frames is the date on which the Contract Manager confirms in writing of the verbal variation and not the date on which the verbal instruction is given to the Contractor.

** In the event that different certificates of completion have been issued for different Sections or parts of the Works, the date for completion shall mean the last date of completion certified amongst the certificates of completion.

**GCC 14.1 - CONTRACTOR'S INTERIM STATEMENTS**

In accordance with GCC Clause 14.1, the list of materials shall be the following:

1. For domestic block:
   a. Bar reinforcement of any diameter;
   b. Panel wall partition;
   c. Doorset;
   d. Timber door excluding door frame;
   e. Kitchen cupboard/cabinet/cooking bench and sink units;
   f. Door lock and latch;
   g. Door closer;
   h. Window and composite window;
   i. Metal gateset;
   j. Floor and wall tile;
   k. Sanitary fitting;
   l. Valve and tap;
   m. Glass.

2. For other building including ..........:
   a. ................;
   b. ................;
   c. ................;
   d. ................

3. For external works:
   a. Drain pipe;
   b. Flexible connector;
4. For Nominated Sub-contractors' works:
   a. All materials for the respective Nominated Sub-contract works.

PRE.B6.310.7 GCC 14.1 - PAYMENT FOR PRE-DETERMINED AMOUNTS FOR SITE SAFETY, ENVIRONMENTAL MANAGEMENT AND SITE HYGIENE
The payment for pre-determined amounts for site safety, environmental management and site hygiene is specified in PRE.B8.2570.

PRE.B6.320.7 GCC 14.2 - INTERIM PAYMENTS, RETENTION MONEY AND INTEREST
1. The percentage of certified value retained and the limit of Retention Money Held in respect of the Contractor are stated in the Appendix to the Form of Tender;
2. In accordance with GCC Clause 14.2(5)(a), the Retention Money Held in respect of the Nominated Sub-contractor shall be released in accordance with the following proportions:

PRE.B6.350.7 GCC 17.1 - AVOIDANCE AND RESOLUTION OF DISPUTES
Option 1
1. The DARA system set forth in GCC Clause 17.1 is for the following purposes:
   a. Foster co-operation among the Employer, the Contractor and the Nominated Sub-contractors and Specialist Sub-contractors who may be engaged for the execution of any part of the Works;
   b. Minimize the volume of claims, disputes and disruptions to the Works;
   c. Ensure the cost-effective and expeditious resolution of disputes.
2. With respect to GCC Clause 17.1(3), engage the DARA in accordance with the following:
   a. Selection of a DARA:
The Employer and the Contractor shall jointly select a DARA by agreement through a ranking system and procedures as set out in DCMP-A12 of the Master Process Manual of the Housing Department, which may be inspected at the office of the Contract Officer of the Housing Department.

b. Appointment of the DARA:
   i. Appoint the DARA within 63 days commencing from the award of the Contract;
   ii. If the Employer and the Contractor fail to agree on a suitable DARA within 63 days commencing from the award of the Contract and there is no agreement between the Employer and the Contractor on extending the 63 day period, then the DARA shall be appointed by the Hong Kong International Arbitration Centre upon the written application of either the Employer or the Contractor;
   iii. The Employer and the Contractor shall enter into a written agreement with the DARA which is, inter alia, to give effect to the obligations of the DARA under the Contract;
   iv. The Contractor, by the Nominated Sub-contract conditions, is authorised to appoint the DARA and to execute the DARA Agreement for and on behalf of each of the Nominated Sub-contractors.

c. Termination of the DARA’s services:
   i. If the DARA resigns from the position, or is discharged by the Employer and/or the Contractor, or is otherwise unable to fulfil his obligations, then the Employer and the Contractor shall choose another DARA pursuant to the procedures set forth in sub-clauses (2)(a) and (2)(b) above;
   ii. The replacement DARA shall be appointed within 14 days after the date of discharge or resignation or incapacity of the incumbent DARA.

d. Experience and requirements of the DARA:
   i. The DARA shall be an individual person possessing general construction experience and knowledge, and dispute resolution skills;
   ii. The DARA shall be neutral and independent of the Employer and the Contractor;
   iii. The DARA cannot be an employee of the Employer, the Contractor, any Nominated Sub-contractor or any Specialist Sub-contractor, and must not have any actual, potential or perceived conflict of interest with the Employer, the Contractor, any Nominated Sub-contractor or any Specialist Sub-contractor.

e. To facilitate the carrying out of dispute avoidance and dispute resolution duties, the DARA shall take steps which shall include but not be limited to the following:
   i. Spend a sufficient amount of time at the beginning of each section of the Works on the Site to become familiar with the relevant personnel, including the Contract Manager, the Contract Manager’s Representative, the Surveyor, the Surveyor’s Representative, the liaison from the end-user’s administration (where appropriate), and the representatives of the Contractor and some or all of the Nominated Sub-contractors and Specialist Sub-contractors;
   ii. Familiarize with the construction, design and programme of each section of the Works, including all plans for the co-ordination of building services.

Option 2

1. The DARA system set forth in GCC Clause 17.1 is for the following purposes:
   a. Foster co-operation between the Employer and the Contractor;
   b. Minimize the volume of claims, disputes and disruptions to the Works;
   c. Ensure the cost-effective and expeditious resolution of disputes.

2. With respect to GCC Clause 17.1(3), engage the DARA in accordance with the following:
a. Selection of a DARA:
The Employer and the Contractor shall jointly select a DARA by agreement through a ranking system and procedures as set out in DCMP-A13 of the Master Process Manual of the Housing Department, which may be inspected at the office of the Contract Officer of the Housing Department.

b. Appointment of the DARA:
   i. Appoint the DARA within 63 days commencing from the award of the Contract;
   ii. If the Employer and the Contractor fail to agree on a suitable DARA within 63 days commencing from the award of the Contract and there is no agreement between the Employer and the Contractor on extending the 63 day period, then the DARA is to be appointed by the Hong Kong International Arbitration Centre upon the written application of either the Employer or the Contractor;
   iii. The Employer and the Contractor shall enter into a written agreement with the DARA which is, inter alia, to give effect to the obligations of the DRAd under the Contract.

c. Termination of the DARA's services:
   i. If the DARA resigns from the position, or is discharged by the Employer and/or the Contractor, or is otherwise unable to fulfil his obligations, the Employer and the Contractor shall choose another DARA pursuant to sub-clauses (2)(a) and (2)(b) above;
   ii. The replacement DARA shall be appointed within 14 days after the date of discharge or resignation or incapacity of the incumbent DARA.

d. Experience and requirements of the DARA:
   i. The DARA shall be an individual person possessing general construction experience and knowledge, and dispute resolution skills;
   ii. The DARA shall be neutral and independent of the Employer and the Contractor;
   iii. The DARA cannot be an employee of either the Employer or the Contractor and must not have any actual, potential or perceived conflict of interest with the Employer or the Contractor.

e. To facilitate the carrying out of dispute avoidance and dispute resolution duties, the DARA shall take steps which shall include but not be limited to the following:
   i. Spend a sufficient amount of time at the beginning of each section of the Works on the Site to become familiar with the relevant personnel, including the Contract Manager, the Contract Manager's Representative, the Surveyor, the Surveyor's Representative, the liaison from the end-user's administration (where appropriate), and the representatives of the Contractor;
   ii. Familiarize with the construction, design and programme of each section of the Works.

PRE.B6.370.7 GCC 20.2(4) SCHEDULE OF PROPORTIONS
1. The "Schedule of Proportions" to be used in calculating the "Price Fluctuation Factor" is included at Schedule I to the Form of Tender;
2. The list of items of labour and selected materials included in the "Schedule of Proportions" is pre-determined and shall not be changed during the currency of the Contract;
3. The "Schedule of Proportions" shall be completed in accordance with the instructions contained in the Schedule I;
4. The "Price Fluctuation Factor" for each payment certificate shall be calculated by the Surveyor. The following applies to such calculations:
a. The figure of 0.1500 given in the column (4) of the "Schedule of Proportions" represents 15% of the "Effective Value" that will not be subject to fluctuation adjustment. The figure of 0.1500 will therefore not be used in the calculation of the "Price Fluctuation Factor";

b. The products obtained by multiplying each of the calculated proportions given in column (4) of the "Schedule of Proportions" by the (index) fractions shall be to eight decimal places. Decimal places in excess of eight shall be rounded up or down to the nearest eighth decimal place;

c. The final calculated "Price Fluctuation Factor" shall be to six decimal places. Decimal places in excess of six shall be rounded up or down to the nearest sixth decimal place.

SPECIAL CONDITIONS OF CONTRACT

PRE.B6.500.7 STATUS
The information given in clauses PRE.B6.510 to .......... is to be read in conjunction with the Special Conditions of Contract and is to form part of the Contract.

PRE.B6.510.7 SCC5.3 - THIRD PARTY INSURANCE
1. The Area … as shown in Drawing No. ................ in Appendix A to this Specification is a temporary pedestrian walkway with minimum clear width of 3.5m which runs across the Site with ingress/egress at ........Street to the north and .......... Street to the south of the Site.
2. The walkway shall be a thoroughfare for pedestrians of the public at all times during the first three months from the date of commencement of the Works, and such period may be extended for up to two months subject to one month’s prior written notice of the CM.
3. The Contractor shall maintain in good condition and provide all safety measures and lighting as necessary to ensure that the walkway is safe and convenient for pedestrians to pass through during the aforesaid period including planning and sequencing of the Works, provision of temporary hoarding and fencing arrangement to separate the pedestrians from the Works and associated vehicular traffic for the Works.
4. Indemnify the Employer against all damages and claims whatsoever that may arise from or in connection with the possession of the Area …... while it is being used as temporary pedestrian walkway.

PRE.B6.520.7 SCC5.4 - DESIGN RESPONSIBILITY (ADJUSTMENT)
The Contractor shall design and be responsible for the design of the following part(s) of the Works:
1. Piling;
2. Pilecaps;
3. Shallow foundations including footings raft;
4. .....................

PRE.B6.550.7 SCC6.1 - PAYMENT OF WAGES OF SITE PERSONNEL
1. Labour Relations Officer (LRO):
   a. One LRO shall be authorized by the Employer and notified to the Contractor by the CM to work on Site. The LRO shall be responsible to CM and accommodated in the office of CM's representatives;
   b. The duties and responsibilities of the LRO shall include but not necessarily be limited to the following:
      i. Check and verify the proper operation of the ACRS;
      ii. Conduct checking of the records as required in PRE.B8.1450;
iii. Prepare and submit directly to the CM a monthly report on the payment of the wages and MPF contribution, and the daily records of ACRS based on the wage books prepared by the Contractor;

iv. Conduct random inspection on Site to verify the identity of the Site Personnel and to promote effective communication with the Site Personnel;

v. Be responsible for receiving complaints from the Site Personnel on any matters relating to the payment of wages and other employment conditions;

vi. Check the validity of the complaints based on the compiled records;

vii. Provide all necessary assistance to the Site Personnel for referring the complaint cases to the Labour Department if necessary and work in collaboration with the Labour Department to investigate and verify the validity of the complaints;

viii. Inform the CM of anomalies and to refer the same to the Contractor for investigation and appropriate follow-up actions;

ix. Witness the surveys of Site Personnel on behalf of the CM pursuant to sub-clause 2(d) below.

c. Provide all necessary facilities including direct telephone lines, office accommodation and furniture for the use of LRO working on Site to carry out his/her duties;

d. Provide all necessary assistance to the LRO for carrying out his/her duties on Site.

2. Comply with the following for monitoring the payment of wages and Mandatory Provident Fund (MPF) contribution to Site Personnel:

a. Employment contract:

i. Keep a copy of the complete set of the executed employment contracts of all Site Personnel in the wage books as required in PRE.B8.1450. Each copy of the executed employment contracts together with an updated register of the employment contracts shall be kept in the wage books within two days from the date that the Site Personnel commences to work on Site;

ii. Deliver the original executed employment contracts of any Site Personnel to the office of the CM's representatives for inspection by the CM within one day when requested by the CM;

iii. Seek written approval from the CM before a Site Personnel without an executed employment contract executes any work on the Site.

iv. The terms of the employment contract shall not be less favourable to the terms provided in the "Specimen Employment Contract" in the latest "Guidelines on Wage Payment Monitoring and Reimbursement of Contractor's and Sub-contractors' Contributions to the Mandatory Provident Fund for their Site Personnel" published by Development Bureau of HKSAR from time to time.

b. Wage payment and mandatory provident fund ("MPF") arrangement for Site Personnel:

i. Ensure that sufficient funds have been reserved in the designated bank account for the payment of all wages and MPF contribution to all Site Personnel employed or engaged by the Contractor. Instruct promptly the designated bank to effect the timely payment to the respective wage payment accounts, employee MPF contribution accounts and the employer MPF contribution accounts of all Site Personnel employed or engaged by the Contractor according to the schedule as prepared in sub-clause (c)(ii);
ii. Ensure that sub-contractors of all tiers have sufficient funds available in the designated bank accounts for the payment of all wages and MPF contribution to all Site Personnel employed or engaged by them. Also ensure that sub-contractors of all tiers shall promptly instruct the designated banks to effect the timely payment to the respective wage payment accounts, employee MPF contribution accounts and the employer MPF contribution accounts of all Site Personnel employed or engaged by them according to the schedule as prepared in sub-clause (c)(ii);

iii. Pay, and require the sub-contractors of all tiers to pay the wages to all the Site Personnel by bank's autopay service and make the MPF contribution as stipulated in sub-clause (c);

iv. Require each of the Site Personnel to provide a bank account and an employee MPF contribution account via which wage payment will be paid by bank's autopay service.

c. Wage payment and MPF contribution records:

i. Within 14 days from the notified date for commencement of the Works, submit to the CM the name of the designated bank and all related arrangement details for the payment of wages and MPF contribution to all the Site Personnel;

ii. Prepare schedules of wages and the corresponding MPF contribution of all the Site Personnel employed or engaged by the Contractor based on the verified daily record as required in PRE.B.8.2610. Keep a copy of such schedules in the wage books as required in PRE.B.8.1450 within 14 days from the end of the corresponding wages period;

iii. Require the sub-contractors of all tiers to prepare the respective schedules of wages and the corresponding MPF contribution of all the Site Personnel employed or engaged by them based on the verified data from the ACRS as required in PRE.B.8.2610. Keep a copy of such schedules in the wage books as required in PRE.B.8.1450 within 14 days from the end of the corresponding wages period;

iv. Keep a copy of the records of transactions in the wage books as required in PRE.B.8.1450 within 21 days from the end of the corresponding wages period;

v. Submit and require sub-contractors of all tiers to submit to the CM for each worker's payment cycle a written declaration that all wages of the Site Personnel have been paid and all MPF contribution have been made. For the records of payment of wages and MPF contribution of the Site Personnel in the managerial grade shown on the latest site organization chart, it is optional to keep them in the wage books as required in PRE.B.8.1450 provided that they are directly employed by the Contractor and the CM has no objection to the site organization chart.

d. Wage payment status survey:
Assign designated staff (not less than 2 persons and one of them shall be at Site Foreman grade or above) to conduct surveys with Site Personnel on Site under the witness of the LRO for checking their status of wage payment at least at monthly interval commencing from the second month from the notified date for commencement of the Works up to and including the month in which the operation of ACRS is terminated as stipulated in PRE.B8.2660. For Contracts with more than one Portion of the Site, the survey on each Portion of the Site shall be conducted at least at monthly interval commencing from the second month from the commencement of the works of that particular Portion of the Site up to and including the month in which the operation of ACRS is terminated as stipulated in PRE.B8.2660. The number of Site Personnel to be surveyed in each month shall not be less than the percentage agreed with CM of the total number of Site Personnel who have or had worked on Site, irrespective of duration, for the monthly period preceding the date of commencement of the survey, or otherwise a smaller number if agreed by the CM. The outcome of these surveys shall be submitted to the CM and LRO for record no later than 1 week from the first day of each monthly survey exercise. Prior agreement on detailed arrangement of the surveys is required from the CM.

3. Provide all necessary assistance in the handling of complaints on arrears of wages raised by all Site Personnel:
   a. Provide site office telephone lines or other off-Site contact telephone lines installed with voice mail system solely for receiving workers' enquiries or complaints about wages arrears and provide the telephone numbers to the LRO;
   b. Assign designated staff (not less than 2 persons) to receive the calls. Record workers' enquiries or complaints and report the same to the CM, LRO and other relevant parties as instructed by the CM;
   c. Display the posters provided by the LRO at workstations for reminding workers about the hotlines for enquiring or complaining arrears of workers' wages;
   d. Display notices on Site at prominent locations notifying the Site Personnel to seek assistance from the LRO on matters concerning wages arrears and disputes, and showing the contact details of the LRO;
   e. Assign a designated staff to respond to issues raised by the LRO in connection with the discharge of his duties;
   f. Provide to a Site Personnel free of charge a copy of his daily attendance records whenever his written request for same is received. The daily attendance records shall be verified by the Contractor or employer of the Site Personnel;
   g. Address immediately the enquiries and/or complaints lodged by Site Personnel to the Contractor, CM or LRO and reply to them the outcome or the follow-up actions taken or to be taken within two days upon receipt of the enquiries and/or complaints.

4. The requirements stipulated in sub-clauses (2) and (3) above may be exempted subject to the compliance with all relevant criteria and procedures stipulated in the latest "Contractor's Guideline on Wage Monitoring System" published by HA from time to time or as Approved by the CM on individual case basis.

PRE.B6.580.7  
**SCC7.2 - STRUCTURAL WARRANTY**

Pursuant to Clause SCC7.2, structural warranty is required for the following Building Structures:

1. ...........................................................................................
2. ...........................................................................................
PRE.B6.590.7  **SCC7.3 - WARRANTY (ROOFING INSTALLATION, REFUGE FLOOR INSTALLATION AND/OR OTHER WATERPROOFING SYSTEM INSTALLATION)**

Pursuant to Clause SCC7.3, warrant the Waterproofing System Installation in the following areas:
1. Kitchens;
2. Bathrooms, toilets, lavatories;
3. Refuse storage and material recovery rooms;
4. Lift pits;
5. External tankings;
6. .......................... 

PRE.B6.600.7  **SCC8.1 - POSSESSION OF THE SITE (FIXED RATE FOR DELAY)**

The specified rate inserted by the Contractor related to SCC8.1 of the Special Conditions of Contract is deemed to have included any costs and expenditure incurred by the Contractor as a result of delay in giving possession of Portions of the Site and such costs and expenditure shall include, inter alia, the cost of any prolonged obligations on the part of the Contractor under the Contract including any prolonged maintenance, protection and insurance etc of the completed parts of the Works; any uneconomical use of labour, plant and materials; disruption to progress of the Works; and fluctuations in the cost of labour and materials for the remaining works.

PRE.B6.610.7  **SCC8.3 - ADDITIONAL LIQUIDATED DAMAGES FOR DELAY**

1. In accordance with SCC8.3(1) the Specified Section(s) and the respective relevant Section(s) is/are:

<table>
<thead>
<tr>
<th>Specified Section(s)</th>
<th>relevant Section(s)</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Section ............</td>
<td>Section ............</td>
</tr>
<tr>
<td>b. Section ............</td>
<td>Section ............</td>
</tr>
</tbody>
</table>

2. In accordance with SCC8.3(1) the rate per day for Additional Liquidated Damages (ALD) shall be as follows:

<table>
<thead>
<tr>
<th>relevant Section</th>
<th>ALD rate*</th>
<th>ALD rate**</th>
</tr>
</thead>
<tbody>
<tr>
<td>Section ..........</td>
<td>($ per day)</td>
<td>Insert rate</td>
</tr>
<tr>
<td>Section ..........</td>
<td>(Insert rate)</td>
<td>Insert rate</td>
</tr>
</tbody>
</table>

* ALD rate in brackets applies to the period up to the date 90 days from the prescribed date for completion or any extension thereof of the relevant Section with HOS domestic blocks.

**ALD rate not in brackets is either for the relevant Section with rental buildings, or applies to the period beyond the date 90 days from the prescribed date for completion or any extension thereof of the relevant Section with HOS domestic blocks.

PRE.B6.612.7  **SCC8.3 - USE OF THE SITE BY POLICE AND OTHER DISCIPLINED SERVICES**

1. Allow the Hong Kong Police Force or other disciplined services of the Government to use part(s) or area(s) of the Site for tactical training(s) for a period not more than five days or for periods not more than five days in total upon written notice of the Employer or the Hong Kong Police Force or such other disciplined services provided that such training(s) shall be carried out within one month of the taking possession of the Site;
2. Such training(s) will include but not be limited to tactical movement through the building blocks and the use of mechanical breaking equipment and methods to practise entry and operational techniques;

3. Liaise and coordinate with the representatives of the Hong Kong Police Force or such other disciplined services regarding such use of the Site. Agree on the part of the Site where there is no likelihood of asbestos containing materials being disturbed, affected or exposed and the amount or period(s) of time required for such training(s), and provide all necessary assistance and support;

4. Include due and adequate allowance for such use of the Site and such training(s) in the programme of the Works;

5. Allow for time and additional costs to be incurred or expended as a result of or arising from such use of the Site and such training(s).

**PRE.B6.620.7 SCC8.3 - TAKING CARE OF THE WORKS AFTER COMPLETION**

In accordance with Clause SCC8.3 and where instructed by the CM, execute the following works and/or provide the following services for the purpose of the taking care of the Works after completion:

1. The Site Security Services which shall include, in respect of the parts of the Works and the Site specified in the notice (hereinafter referred to as the Property), the following:
   a. Take full responsibility for the care of the Property. In case of any damage, loss or any injury from any cause whatsoever, except the "excepted risks" as defined in GCC Clause 5.12, the Contractor shall at his own expense and with all possible speed make good or at the option of the Employer shall pay to the Employer the cost of making good any damage to the Property;
   b. Indemnify and keep indemnified the Employer against all losses and claims for injury or damage to any person including any employee of the Employer or property including the Property or any other property of the Employer whatsoever which may arise from any incident occurring on, in, or arising from the Property;
   c. Take out and maintain an insurance policy with an insurer approved by the Employer to cover the risks described in sub-clause (1)(b) above. The insurance shall be in the joint names of the Contractor and the Employer and shall contain a Cross-Liability clause as between the Contractor and the Employer;
   d. Take all legally valid available means of preventing trespassers entering the Site;
   e. Supply, on Site at all times, at least one security guard;
   f. Operate (including provision of electricity supply), at any time whenever it is dark, lighting associated with walkways, hoardings, and accesses;
   g. Keep the Site closed with all accesses locked; and
   h. Do not permit visitors to enter the Site unless approved by the CM.

For each day of the Site Security Services Period, the Contractor shall be paid at the respective tendered daily rates included in the Contract in respect of the Works and the Site or part thereof as appropriate. Such payments shall be included in the statement to be delivered under GCC Clause 14.1 and certified under GCC Clause 14.2.

**PRE.B6.625.7 SCC8.4 - TAKING CARE OF THE WORKS AFTER COMPLETION**

In accordance with Clause SCC8.4 and where instructed by the CM, execute the following works and/or provide the following services for the purpose of the taking care of the Works after completion:

1. The Site Security Services which shall include, in respect of the parts of the Works and the Site specified in the notice (hereinafter referred to as the Property), the following:
a. Take full responsibility for the care of the Property. In case of any damage, loss or any injury from any cause whatsoever, except the "exceptioned risks" as defined in GCC Clause 5.12, the Contractor shall at his own expense and with all possible speed make good or at the option of the Employer shall pay to the Employer the cost of making good any damage to the Property;

b. Indemnify and keep indemnified the Employer against all losses and claims for injury or damage to any person including any employee of the Employer or property including the Property or any other property of the Employer whatsoever which may arise from any incident occurring on, in, or arising from the Property;

c. Take out and maintain an insurance policy with an insurer approved by the Employer to cover the risks described in sub-clause (1)(b) above. The insurance shall be in the joint names of the Contractor and the Employer and shall contain a Cross-Liability clause as between the Contractor and the Employer;

d. Take all legally valid available means of preventing trespassers entering the Site;

e. Supply, on Site at all times, at least one security guard;

f. Operate (including provision of electricity supply), at any time whenever it is dark, lighting associated with walkways, hoardings, and accesses;

g. Keep the Site closed with all accesses locked; and

h. Do not permit visitors to enter the Site unless approved by the CM.

For each day of the Site Security Services Period, the Contractor shall be paid at the respective tendered daily rates included in the Contract in respect of the Works and the Site or part thereof as appropriate. Such payments shall be included in the statement to be delivered under GCC Clause 14.1 and certified under GCC Clause 14.2.

---

**PRE.B6.640.7 SCC8.4 - SECOND LIQUIDATED DAMAGES FOR DELAY (HOS)**

1. In accordance with SCC8.4(1) the rate per day for Second Liquidated Damages (Second LD) shall be as follows:

<table>
<thead>
<tr>
<th>Section</th>
<th>Second LD rate ($) per day</th>
</tr>
</thead>
<tbody>
<tr>
<td>Section 1 (i.e. HOS block)</td>
<td>(insert rate)</td>

**PRE.B6.650.7 SCC8.5 - TAKING CARE OF THE WORKS AFTER COMPLETION**

In accordance with Clause SCC8.5 and where instructed by the CM, execute the following works and/or provide the following services for the purpose of the taking care of the Works after completion:

1. The Site Security Services which shall include, in respect of the parts of the Works and the Site specified in the notice (hereinafter referred to as the Property), the following:
   a. Take full responsibility for the care of the Property. In case of any damage, loss or any injury from any cause whatsoever, except the "excepted risks" as defined in GCC Clause 5.12, the Contractor shall at his own expense and with all possible speed make good or at the option of the Employer shall pay to the Employer the cost of making good any damage to the Property;
   b. Indemnify and keep indemnified the Employer against all losses and claims for injury or damage to any person including any employee of the Employer or property including the Property or any other property of the Employer whatsoever which may arise from any incident occurring on, in, or arising from the Property;
   c. Take out and maintain an insurance policy with an insurer approved by the Employer to cover the risks described in sub-clause (1)(b) above. The insurance shall be in the joint names of the Contractor and the Employer and shall contain a Cross-Liability clause as between the Contractor and the Employer;
   d. Take all legally valid available means of preventing trespassers entering the Site;
   e. Supply, on Site at all times, at least one security guard;
   f. Operate (including provision of electricity supply), at any time whenever it is dark, lighting associated with walkways, hoardings, and accesses;
   g. Keep the Site closed with all accesses locked; and
h. Do not permit visitors to enter the Site unless approved by the CM. For each day of the Site Security Services Period, the Contractor shall be paid at the respective tendered daily rates included in the Contract in respect of the Works and the Site or part thereof as appropriate. Such payments including any fluctuation adjustment shall be included in the statement to be delivered under GCC Clause 14.1 and certified under GCC Clause 14.2.

2. The maintenance of the protections to lifts and G/F lift lobbies which shall include the following:
   a. Maintain the plywood protective linings to the frames and architraves of lift openings on each and every floor, to the internal walls, floors and ceilings of lift cars, and to the walls and floors of the lift lobbies on ground floor, including repairs and replacement, to the satisfaction of the CM, and keep the same in good working condition; and
   b. Dismantle, remove and clear away the whole protective linings, including cleaning and making good of the protected works to the satisfaction of the CM, on the date before the issue of Maintenance Certificate and as determined by an instruction from the CM. Alternatively, the CM shall have the option to instruct the Contractor, prior to the issue of the Maintenance Certificate, to pass the property in the plywood protective linings to the Employer on the date as determined by an instruction, in which case the Contractor is not required to dismantle, remove or clear away the same;
   c. For each day of the maintenance of the said protective lining, the Contractor shall be paid at the tendered daily rate which shall include any repair and replacement where necessary to keep the same in good working conditions. Furthermore, the Contractor shall be paid the respective tendered amount either for the dismantling and removal of the protective lining, or for the Employer to take over the same, as the case may be. Such payments including any fluctuation adjustment shall be included in the statement to be delivered under GCC Clause 14.1 and certified under GCC Clause 14.2.

3. When Instructed by the CM during the 6-month period from the date of completion of the Works certified by the CM under GCC Clause 8.7 or where the Works are completed in Sections, from the last certified date of completion of the Sections, adjust the level of cooking bench to one of the fixing levels for stainless steel supporting frames for occupied domestic flats as follows:
   a. On the date of appointment as requested by tenants and arranged by the CM for carrying out the level adjustment work, liaise with the Intake Ambassador who shall coordinate with the tenants for access to their flats for the works;
   b. With the presence of tenants, carry out the adjustment of level of the polymer resin cooking bench to one of the fixing levels for stainless steel supporting frame as requested by the tenants and instructed by the CM;
   c. Seal joints between cooking bench and wall and between cooking bench and supporting leg for sink unit with silicon sealant; make good, restore or reinstate any finishes that are damaged, disturbed or affected to their prior conditions;
   d. In the event that the tenants have failed to keep their appointment for the level adjustment work, notify the Intake Ambassador and carry out the adjustment work at other time to be arranged and informed by the Intake Ambassador. Allow for maximum three repeated visits to occupied flats to complete the level adjustment work and bear all associated costs.

PRE.B6.660.7 SCC8.6 - EXTENSION OF TIME FOR COMPLETION
Refer to the Appendix to the Form of Tender for Sections of the Works which are subject to Extensions of Time for Inclement Weather.
PRE.B6.700.7  SCC11.2 - SCHEDULE OF RATES (FOR PART OF THE WORKS)
Schedule of Rates for the following part(s) of the Works are provided in the Contract:
1. ................
2. ................

PRE.B6.720.7  SCC14.1 - SPECIALIST SUB-CONTRACTOR
1. In accordance with GCC Clause 3.2(6), the following part(s) of the Works are to be executed by Specialist Sub-contractors selected by the Contractor from the relevant list given or referred to in the Specification:
   a. ................
   b. ................
2. In accordance with Clause SCC14.1(7)(b), the limit of the total amount of retention monies held for the following Specialist Sub-contract is:
   Limit of Retention Money (HK$)
   a. ................
   b. ................

PRE.B6.750.7  SCC20.1 - CONTRACT PRICE FLUCTUATIONS
1. The increases or decreases in the sums payable in an interim or final payment certificate pursuant to GCC Clause 20.2 shall be the net total of the material fluctuations (F) calculated from the following formula:
   \[ F = \frac{MCf \times EVf \times (CIf - BIf)}{BIf} \]
   \[ + \frac{MCr \times EVr \times (Clr - Br)}{Br} \]
   \[ + \frac{MCs \times EVs \times (Cl - Bls)}{Bls} \]
2. The definitions for the variables of the formula specified in sub-clause (1) above are stipulated in the following sub-clauses (3) to (16):
3. MCf represents the percentage of "Material Content of Diesel Fuel", which shall be ……;
4. MCr represents the percentage of "Material Content of Steel Reinforcement", which shall be 70%;
5. MCs represents the percentage of "Material Content of Steel H-piles", which shall be 80%;
6. EVf represents "Effective Value of Diesel Fuel in respect of the Whole or any Section of the Works", which shall be the difference between the sums specified in sub-clauses (6)(a) and (6)(b):
   a. The sum, exclusive of any increases or decreases made in accordance with this clause, as computed for the items in the Schedule of Effective Items for Fluctuation Adjustments in respect of Diesel Fuel as given in sub-clause (17), which in the opinion of the Surveyor is due to the Contractor under GCC Clause 14.2, before deducting retention and before deducting previous payments on account, less all sums for piling work items based on actual cost or current prices;
   b. The sum calculated in accordance with sub-clause (6)(a) above and included in the last preceding interim payment certificate issued by the Surveyor.
7. EVr represents "Effective Value of Steel Reinforcement in respect of the Whole or any Section of the Works", which shall be the difference between the sums specified in sub-clauses (7)(a) and (7)(b):
a. The sum of steel reinforcement, exclusive of any increases or decreases made in accordance with this clause, as computed for the items in the Schedule of Effective Items for Fluctuation Adjustments in respect of steel reinforcement as given in sub-clause (17), which in the opinion of the Surveyor is due to the Contractor under GCC Clause 14.2, before deducting retention and before deducting previous payments on account, less all sums for steel reinforcement items based on actual cost or current prices;

b. The sum calculated in accordance with sub-clause (7)(a) above and included in the last preceding interim payment certificate issued by the Surveyor.

8. EVs represents "Effective Value of Steel H-piles in respect of the Whole or any Section of the Works", which shall be the difference between the sums specified in sub-clauses (8)(a) and (8)(b):

   a. The sum for the supply only of steel H-piles, exclusive of any increases or decreases made in accordance with this clause, as computed for the items in the Schedule of Effective Items for Fluctuation Adjustments in respect of steel H-piles as given in sub-clause (17), which in the opinion of the Surveyor is due to the Contractor under GCC Clause 14.2, before deducting retention and before deducting previous payments on account, less all sums for the supply only of steel H-piles items based on actual cost or current prices;

   b. The sum calculated in accordance with sub-clause (8)(a) above and included in the last preceding interim payment certificate issued by the Surveyor.

9. BIf represents "Base Material Index for Diesel Fuel", which shall be the Index Number of "Diesel fuel" listed in the "Index Numbers of the Costs of Labour and Materials used in Public Sector Construction Projects (April 2003 = 100)" published monthly by the Census and Statistics Department of the Government of the Hong Kong Special Administrative Region and applicable to the date 42 days prior to the date for the return of tenders;

10. BIf represents "Base Material Index for Steel Reinforcement", which shall be the Index Number of "Steel reinforcement" listed in the "Index Numbers of the Costs of Labour and Materials used in Public Sector Construction Projects (April 2003 = 100)" published monthly by the Census and Statistics Department of the Government of the Hong Kong Special Administrative Region and applicable to the date 42 days prior to the date for the return of tenders;

11. Bls represents "Base Material Index for Steel H-piles", which shall be the Index Number of "Galvanised mild steel" listed in the "Index Numbers of the Costs of Labour and Materials used in Public Sector Construction Projects (April 2003 = 100)" published monthly by the Census and Statistics Department of the Government of the Hong Kong Special Administrative Region and applicable to the date 42 days prior to the date for the return of tenders;

12. CIF represents "Current Material Index for Diesel Fuel", which shall be the Index Number of "Diesel fuel" listed in the "Index Numbers of the Costs of Labour and Materials used in Public Sector Construction Projects (April 2003 = 100)" published monthly by the Census and Statistics Department of the Government of the Hong Kong Special Administrative Region and applicable to the date 42 days prior to the "date" stipulated below in either sub-clause (13) or (14) as appropriate;

13. In the event that the Works are not phased for completion in Sections in the Contract, the "date" mentioned in sub-clause (12) above shall be determined as follows:

   a. Where the whole of the Works is certified complete pursuant to GCC Clause 8.7, the "date" shall be the earliest date of the following dates:

      i. The due date, but in the event of the time for completion having been extended, then the extended date, for completion of the Works; or

      ii. The date of completion of the Works certified pursuant to GCC Clause 8.7; or

      iii. The date of the last day of the period to which the Surveyor's certificate relates.
b. Where a part of the Works is certified complete pursuant to GCC Clause 8.7, the "date" applicable to such completed part of the Works shall be the earliest date of the following dates:
   i. The due date, but in the event of the time for completion having been extended, then the extended date, for completion of the Works; or
   ii. The date of completion of such part of the Works certified pursuant to GCC Clause 8.7; or
   iii. The date of the last day of the period to which the Surveyor's certificate relates.

c. Where a part of the Works is certified complete pursuant to GCC Clause 8.7, the "date" applicable to the remainder of the Works shall be the earliest date of the following dates:
   i. The due date, but in the event of the time for completion having been extended, then the extended date, for completion of the remainder of the Works; or
   ii. The date of completion of the remainder of the Works certified pursuant to GCC Clause 8.7; or
   iii. The date of the last day of the period to which the Surveyor's certificate relates.

14. In the event that the Works are phased for completion in Sections in the Contract, the "date" mentioned in sub-clause (12) above shall be determined as follows:

   a. Where the whole of the Section is certified complete pursuant to GCC Clause 8.7, the "date" shall be the earliest date of the following dates:
      i. The due date, but in the event of the time for completion having been extended, then the extended date, for completion of the Section; or
      ii. The date of completion of the Section certified pursuant to GCC Clause 8.7; or
      iii. The date of the last day of the period to which the Surveyor's certificate relates.

   b. Where a part of the Section is certified complete pursuant to GCC Clause 8.7, the "date" applicable to such completed part of the Section shall be the earliest date of the following dates:
      i. The due date, but in the event of the time for completion having been extended, then the extended date, for completion of the Section; or
      ii. The date of completion of such part of the Section certified pursuant to GCC Clause 8.7; or
      iii. The date of the last day of the period to which the Surveyor's certificate relates.

   c. Where a part of the Section is certified complete pursuant to GCC Clause 8.7, the "date" applicable to the remainder of the Section shall be the earliest date of the following dates:
      i. The due date, but in the event of the time for completion having been extended, then the extended date, for completion of the remainder of the Section; or
      ii. The date of completion of the remainder of the Section certified pursuant to GCC Clause 8.7; or
      iii. The date of the last day of the period to which the Surveyor's certificate relates.

15. CIr represents "Current Material Index for Steel Reinforcement", which shall be the Index Number of "Steel reinforcement" listed in the “Index Numbers of the Costs of Labour and Materials used in Public Sector Construction Projects (April 2003 = 100)” published monthly by the Census and Statistics Department of the Government of the Hong Kong Special Administrative Region and applicable to the date of acceptance of the Tender for the Works;
16. CI represents "Current Material Index for Steel H-piles", which shall be the Index Number of "Galvanised mild steel" listed in the "Index Numbers of the Costs of Labour and Materials used in Public Sector Construction Projects (April 2003 = 100)" published monthly by the Census and Statistics Department of the Government of the Hong Kong Special Administrative Region and applicable to the date of acceptance of the Tender for the Works;

17. The effective items which are subject to fluctuation adjustment are listed as follows:
   a. Schedule of Effective Items for Fluctuation Adjustments:
      
      | Diesel Fuel | Steel Reinforcement | Steel H-Piles |
      |-------------|---------------------|---------------|
      | ............. and items assessed based on the rate of any of the above scheduled items | ............. and items assessed based on the rate of any of the above scheduled items | ............. and items assessed based on the rate of any of the above scheduled items |

   b. Other items not listed in the schedule given in sub-clause (17)(a) above, which shall include but not be limited to the following, will not be included in the calculation of the effective value for fluctuation adjustment:
      i. Preliminaries items;
      ii. Site safety items;
      iii. Environmental management and site hygiene items;
      iv. Taking care of the works after completion;
      v. Provision of Labour Relations Officer, Contract Technical Assistants and the like.

PRE.B6.810.7 SCC22.3 - EXCAVATION PERMIT FOR WORKS
1. Without limiting the areas subject to Clause SCC22.3(11) possession of the actual area for the following Portion(s) of the Site are to be given by the Designated Authority and are subject to the conditions of Excavation Permits to be applied for by the Employer:
   a. Area .........;
   b. Area .........

2. Render all necessary assistance to the Employer in processing any application for an Excavation Permit for works on Street Maintained by the Highways Department with reference to PRE.B8.2710 - PRE.B8.2740;

3. For works on land other than Street Maintained by the Highways Department that require an Excavation Permit, apply the Excavation Permit in accordance with Clauses SCC22.3(1)(b) and SCC22.3(5).

PRE.B6.820.7 SCC22.4 - HOUSING CONSTRUCTION MANAGEMENT ENTERPRISE SYSTEM (HOMES)
1. Follow the HOMES accounts creation procedures, which will be provided to the Contractor when CM informs the Start Date, for obtaining the authorized main contractor submission account (AMCSA) and the associated security token for HOMES before the Start Date, and the quality control account (QCA) and main contractor data operation account (MCDOA) upon approval to the appointment of QCM;

2. Ensure the availability of computer systems that can fulfill the minimum requirement as specified in the Guide for HOMES, and bear all costs for the computer systems and the connection of the computer systems to the HOMES through web browser (internet connection);
3. Use the HOMES as the electronic communication media for the Contract from the Start Date onward. In the event the Contract stipulates that a specified personnel except QCM, AQCC and SQCC is responsible for the submission of the specified documents or certification of specified activities, such personnel should sign on the required documents as proper record. The signed documents shall be scanned in 'pdf' format and submitted to CM through HOMES via the AMCSA. Keep the original of the signed documents as proper record or submit to the CM when instructed;

4. The QCM and QCCs shall use QCA for submissions in HOMES. The QCM shall assume overall responsibility in all the submissions using QCA in HOMES;

5. Upon issue of the maintenance certificate of the Works, only AMCSA will remain active for access to HOMES until the End Date unless otherwise determined by the CM;

6. Train staff for operating the computer system to input and submit the required information through HOMES. While self-learning training kit CD is distributed to the Contractor free of charge at the Start Date, the Employer will be organizing training courses for HOMES from time to time and the Contractor may arrange their staff to attend the training course where considered appropriate on payment of the relevant cost and fees;

7. Follow the 'Guide for Housing Construction Management Enterprise System (HOMES) for Hong Kong Housing Authority (for Contractors' use only)' for any necessary process available/required by the HOMES;

8. Co-ordinate with Nominated Sub-contractors and other contractors directly appointed by the Employer who are HOMES users for proper and timely execution of the functions in HOMES.

PRE.B6.830.7  
**SCC22.6 - PROVISION OF EXHIBITION FLATS AND/OR SHOW FLATS**

1. Exhibition flats:
   a. Provide the following flats for exhibition to members of the public on the specified floor of the appropriate blocks in locations as directed by the CM no later than ...............months before that block is due to be completed:

<table>
<thead>
<tr>
<th>Block</th>
<th>Floor</th>
<th>Flat Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>...............</td>
<td>..................</td>
<td>1 No. Type .............</td>
</tr>
<tr>
<td>...............</td>
<td>..................</td>
<td>1 No. Type .............</td>
</tr>
</tbody>
</table>

   b. Complete flats with finishings and furnish flats with the built-in furniture to be provided by the Contractor and with loose furniture (supplied and installed by a separate contractor/supplied by the Authority and fixed by the Contractor);
   
   c. Give possession of these flats to the Authority for exhibition to members of the public for a period of 21 days following their completion.

2. Show flats;

3. Provide flats with temporary water and electricity connections and supplies until the permanent supplies are available;

4. Provide access direct to the flats for members of the public suitable for pedestrians including all necessary protective measures, temporary covered walkways, temporary guardrails, temporary lighting and indicative signs all as directed by the CM. Ensure that the access is kept clean and safe during the period that it is used for the public viewing of the flats. Attention is drawn to GCC Clauses 5.14 and 5.33.

PRE.B6.840.7  
**SCC22.7 - CONTRACTOR COOPERATIVE TRAINING SCHEME**

1. Submit the training proposal for joining the Contractor Cooperative Training Scheme (hereinafter referred to as "CCTS") to the Construction Industry Council (hereinafter referred to as "CIC") for approval. On approval, enter into an agreement with CIC to join the CCTS;
2. Submit to CM a copy of the executed agreement with CIC for joining the CCTS and the approved CCTS training proposal within 12 months from the notified date for commencement of the Works;

3. Employ and/or procure one or more of the first-tier sub-contractor(s) of the Contractor to employ at least a total of ............ number of trainees (hereinafter referred to as "CCTS Trainees") to undergo CCTS training;

4. Provide a copy of the employment contracts of the CCTS Trainees to CM within 1 month from the execution of employment contract of each of the CCTS Trainees;

5. The CCTS Trainees shall be employed full time and solely designated to work for the Contract;

6. Provide, supervise, monitor and complete on-the-job training on the Site for each of the CCTS Trainees in a CCTS trade in accordance with the approved CCTS training proposal;

7. The training of each CCTS Trainee is completed when the Trainee has passed the intermediate trade test applicable to the CCTS trade conducted or approved by CIC. Submit to CM a copy of the passing record of the CCTS Trainees in the intermediate trade test within 1 month of receipt of the passing record. A summary of all submitted passing records shall be submitted to CM within 1 month from the certified date of completion of the Works, but where the Works are to be completed in sections then the last certified date of completion;

8. Provide further training to the CCTS Trainee(s) who has/have failed the intermediate trade test, and replenish any drop-out CCTS Trainee(s) for fulfilling the training requirements of CCTS Trainees under this clause;

9. For the avoidance of doubt, the CCTS Trainees shall not form part of the total workforce on the Site in the calculation of the minimum number of Trade Tested Workers as stipulated under PRE.B6.065;

10. The Contractor shall be deemed to have made, allowed and included sufficient consideration, rates, prices, sums and allowance in his Tender to cover and satisfy all requirements, obligations and liabilities for and in respect of the joining, carrying out and implementation of the CCTS by the Contractor and/or his first-tier sub-contractor(s) under or in accordance with the Contract. No claims for additional costs, expenses or extension of time in connection therewith or in respect thereof will be considered or entertained;

11. The Employer shall not be liable for any matter, dispute or claim between (a) the Contractor and his first-tier sub-contractor; (b) the Contractor/his first-tier sub-contractor and any CCTS Trainee; and (c) the Contractor/his first-tier sub-contractor and the CIC, in connection with or in respect of any matter or issue in relation to the CCTS or the employment or training of any CCTS Trainee.

________________________________________

Name of Company

* Delete whichever is inapplicable
FORM EPS-F1 (SHEET 2 OF 2)

Confirmation of Appointment

I (name in full) __________________________ (Chinese) __________________________ confirm that I have been appointed as the RSE / RGE / QE / DCC* for the purpose of the General Conditions of Contract Clause 5.8 and the Specification Clause PRE.B6.060 of the above Contract.

Date: __________________________

Signature of RSE / RGE / QE / DCC*

Certificate of Registration No.* : __________________________

Date of Expiry of Registration* : __________________________

* Delete whichever is inapplicable

Notes :-
1. The appointment of RSE, RGE and DCC is for the purpose of GCC Clause 5.8 only.
2. Certificate of Registration and Date of Expiry of Registration is applicable to the appointment of RSE and RGE only.
FORM EPS-F2 (SHEET 1 OF 2)

Contract Title : ________________________________
Contract No. : ________________________________

Works / Certificate* Submission by Registered Structural Engineer (RSE)* / Registered Geotechnical Engineer (RGE)* / Qualified Engineer (QE)* / Design Certifying Consultant (DCC)*

To: Hong Kong Housing Authority
Attention: Contract Manager

In accordance with the provisions of the Contract for demolition / foundation / building* works as detailed in Specification clause/Drawing no.* ________________________________
I/we* hereby submit the (here specify the type of plans) ________________________________
plans / geotechnical report / supporting documentation / structural details / calculations / certificate on Temporary Works* for your approval / consent* prior to works commencement. The said plans / calculations / certificate* have been prepared by ________________________________ (RSE / RGE / QE / DCC*)
(name in full) (Chinese)

the appointment of whom has been notified to you in the Form EPS-F1 submitted on ________________________________

Date: ________________________________
Authorized Signature of the Contractor

APPENDIX PRE.B6/II

PRE.B6.APPEND2.7 GUIDELINES ON SCOPE AND CONTENTS OF SUB-CONTRACTORS MANAGEMENT PLAN

1. Scope of works to be sub-contracted including the form and extent of sub-contracting arrangement such as labour only, labour and plant, labour and material, plant only, lump sum or any other combination of types.

2. Details of sub-contracts (irrespective of tiers) including the names of sub-contractors and proposed form of sub-contracts.

3. The Contractor’s approach to demand/ensure his sub-contractors to:
   a. abstain from sub-contracting the whole of the works sub-contracted to them, and
   b. report upwards their sub-contracting arrangement and any subsequent changes with written declarations of no “hidden” sub-contracts for any part of the Works sub-contracted to him.

4. The Contractor’s proposed measures for supervision of the works and monitoring of the performance of sub-contractors, particularly the aspects of the works programming, quality and safety of the works and environmental protection.

5. The Contractor’s approach to ensure all his sub-contractors (irrespective of tiers) to adopt written contracts in their sub-contracting and that all the sub-contracts comply with the requirements as stipulated in Clause SCC3.2 of the Special Conditions of Contract “Sub-contracts”.

6. Details of the Contractor’s superintendence and management team as required in Clause 5.8 of the General Conditions of Contract “Contractor’s superintendence”, employed on direct supervision and management of sub-contractors. An organization chart showing the responsibilities of the Contractor’s direct staff in supervision and management of his sub-contractors should be submitted.

7. Declaration that members of staff on the Contractor’s management team are prohibited to be given a sub-contract to any part of the Works or to have a vested interest in any of the sub-contractors irrespective of tiers.

8. The Contractor’s proposed measures to ensure the compliance with the implementation of the system of payment of wages to the Site Personnel as stipulated in Clause SCC6.1 of the Special Conditions of Contract “Payment of wages of Site Personnel”. The Contractor’s proposed measures for ensuring timely payments to sub-contractors and payments by sub-contractors to sub-contractors of lower tiers.
PRE.B7  DOCUMENTATION AND RECORDS

DEFINITIONS AND ABBREVIATIONS

PRE.B7.010.7  APPROVAL
"Approval" or "Approved" means the approval in writing by the CM as required under the Contract. "Approval" or "Approved" shall not relieve the Contractor from any responsibility imposed by the Contract and shall not be relied upon by the Contractor to alter, transfer or otherwise change, diminish or void any liability or obligation imposed on him by the Contract.

PRE.B7.020.7  INSTRUCTED
"Instructed" means an instruction in writing by the CM, but shall not relieve the Contractor from his responsibilities imposed by the Contract.

PRE.B7.030.7  PROPRIETARY NAMES
1. The phrase "or products having equivalent functions or performance" is deemed to be included whenever materials are specified by using
   a. Proprietary names;
   b. Proprietary names in conjunction with the phrases "or Approved equivalent", "or equivalent", "equivalent and approved", "equal or equivalent", "equal or approved", "equal and approved" and other similar phrases.
2. When the phrase "or products having equivalent functions or performance" is deemed to be included or is used in conjunction with the name of a proprietary material, materials of different manufacture but having equivalent functions or performance may be substituted if prior Approval has been obtained, provided that:
   a. Proof of equivalent functions or performance including details of functions or performance standards of the specified product and the proposed alternative is provided to CM for comparison; and
   b. Rates and prices will not be changed from those for the proprietary materials specified.
3. If the Contractor intends to use the intellectual property rights of another party in performing his obligations under the Contract, appropriate licences should be obtained from relevant owners.

PRE.B7.040.7  SPECIFIED
"When specified" or "as specified" means the incorporation of a particular clause or alternative by specific reference in the Drawings or Specifications. When alternatives are given in this Specification the Contractor is at liberty to make his own choice from the alternatives listed.

PRE.B7.050.7  MANUFACTURER'S RECOMMENDATIONS
"Manufacturer's recommendations" means those recommendations or instructions, printed or in writing and produced by the manufacturer of any specified product, current at the date of tender.

PRE.B7.060.7  REGULATIONS
"Regulations" means any Ordinance or Regulation published by Government, bylaws of any local or duly constituted authority and rules or regulation of public bodies and companies which may be applicable to the Works.

PRE.B7.062.7  HOUSING DEPARTMENT
"Housing Department" means "The Housing Department of the Government of the Hong Kong Special Administrative Region".
ABBREVIATIONS

Abbreviations used have the following meanings:

AFCD - Agriculture, Fisheries and Conservation Department of the Government of the Hong Kong Special Administrative Region.

BD - Buildings Department of the Government of the Hong Kong Special Administrative Region.

BQ - Bills of Quantities.

BS - British Standards.

BS EN - European Standard adopted as British Standard.

CEDD - Civil Engineering and Development Department of the Hong Kong Special Administrative Region.

CM - Contract Manager.

CoPSS - Code of Practice for Site Supervision 2009 (issued by BD).

CP - Codes of Practice.

CS - Hong Kong Construction Standard.

DEVB - Development Bureau of Government of the Hong Kong Special Administrative Region.

DIN - German Industrial Standard.

ELSP - Excavation and Lateral Support Plan.

ELSW - Excavation and Lateral Support Works.

EPD - Environmental Protection Department of the Hong Kong Special Administrative Region.

EW - Establishment Works.

ETWB - Former Environment, Transport and Works Bureau of the Government of the Hong Kong Special Administrative Region.

FSD - The Fire Services Department of the Hong Kong Special Administrative Region.

GCC - General Conditions of Contract.

GEO - Geotechnical Engineering Office.

HA - The Hong Kong Housing Authority.

HD - The Housing Department of the Government of Hong Kong Special Administrative Region.

HKAS - Hong Kong Accreditation Service.

HOKLAS - Hong Kong Laboratory Accreditation Scheme.

ICU - Independent Checking Unit.

ITS - Independent Tree Specialist.

JIS - Japanese Industrial Standard.
LANP - DEVB's List of Approved Suppliers of Materials and Specialist Contractors for Public Works – Landslip Preventive/Remedial Works to Slopes/Retaining Walls.

OVT - Old and Valuable Tree

PASS - Performance Assessment Scoring System.

PNAP - Practice Note for Authorized Persons, Registered Structural Engineers and Registered Geotechnical Engineers (issued by BD).

PNRC - Practice Note for Registered Contractors (issued by BD).

RGE - Registered Geotechnical Engineer.

RSC - Registered Specialist Contractor.

RSC(GIFW) - Registered Specialist Contractor in the Ground Investigation Field Works Category.

RSC(SF) - Registered Specialist Contractor in the Site Formation Works Category.

RSE - Registered Structural Engineer.

SCC - Special Conditions of Contract.

SSP - Site Supervision Plan.

TCP - Technically Competent Person (defined in TMSP).

TMSP - Technical Memorandum for Supervision Plans 2009 (issued by BD).

PRE.B7.080.7 SPECIFICATION

1. This Specification is applicable to the whole of the Works in so far as it is not overridden by the General Conditions of Contract, Special Conditions of Contract, Contract Drawings or the instructions of the Contract Manager;

2. Materials and Workmanship specified in one Worksection of the Specification will apply to the same items in other Worksections unless particularly stated otherwise.

PRE.B7.090.7 GS CEW

1. Reference to "Hong Kong Government General Specification for Civil Engineering Works, 2006 Edition", abbreviated in this Specification as "GS CEW", will be deemed to include amendments and revisions, etc, published at date of tender;

2. Whenever a clause in the "GS CEW" is referred to, the provisions of the clause will be applicable to this Contract except where specifically modified by this Specification. The word 'Engineer' in the relevant clauses will be substituted by the abbreviation 'CM'.

PRE.B7.100.7 SITE STAFF

The words "Site Staff" mean the Clerk of Works or Inspector of Works or the Building Services Inspector or Amenities Officers or their assistants appointed by the CM to assist him and/or his representatives to watch and inspect the Works, to test and examine any materials to be used and workmanship employed in connection with the Works, and to carry out such other duties as may be required by the CM and/or his representatives.

PRE.B7.110.7 THE EMPLOYER'S DIRECT CONTRACTOR

The words "The Employer's Direct Contractor" mean the contractor appointed to undertake works in accordance with the Employer's "Annual Contract for Minor New Soft Landscape Works".
PRE.B7.120.7 **INDEPENDENT CHECKING UNIT**
"Independent Checking Unit" means the Independent Checking Unit of the Housing Department of the Hong Kong Special Administrative Region.

PRE.B7.130.7 **BUILDING WORKS**
The words "Building Works" means "building works" referred under "Interpretation", Section 2 of Buildings Ordinance, Chapter 123.

PRE.B7.132.7 **NEW BUILDING**
The words "New Building" means "new building" referred under "Interpretation", Section 2 of Buildings Ordinance, Chapter 123.

PRE.B7.135.7 **SITE FORMATION WORKS**
The words 'Site Formation Works' means 'site formation works' referred to under 'Interpretation', Section 2 of Buildings Ordinance, Chapter 123.

PRE.B7.140.7 **DIRECTOR**
"The Director" referred to in this Specification is the Director of Housing.

PRE.B7.145.7 **TENANT OR OCCUPANT**
Any reference to "tenant" or "occupant" shall mean "resident".
PRE.B8  CONTRACTOR'S OBLIGATIONS

USE OF SITE

PRE.B8.010.7 PURPOSE
Do not use the Site, or permit the Site to be used by others for any purpose other than carrying out the Works or work ancillary thereto carried out by any Direct Contractor.

PRE.B8.020.7 ADVERTISING
Do not display, or permit advertisements to be displayed on the Site.

PRE.B8.030.7 WORKERS
Do not permit workers to live on Site. Exception is made for guards and watchmen.

SECURITY

PRE.B8.110.7 SECURITY MEASURES
1. In addition to the security measures described in GCC Clause 5.11 and elsewhere in this Specification, provide all necessary security measures and accept full responsibility for the adequacy of precautions taken;
2. Seek the advice of the Crime Prevention Bureau of the Hong Kong Police Force on security matters and display notices giving warning of watch dogs and warning of prosecution of trespassers.

PRE.B8.120.7 WATCHMEN/SECURITY GUARDS
Option 1
1. Keep capable watchmen or security guards about the Site and on the Works, day and night;
2. At commencement of the Contract, provide a minimum of ............ security guards at all times;
3. Once the construction of the structural frame and ceiling slab of 6/F of a domestic block is completed, provide a minimum of ................. security guards for the Contract at all times, such that at least one security guard is allocated to individual blocks;
4. The CM may approve a lesser number of security guards when any Section of the Works has been completed, or increase the number as is considered necessary for the Works;
5. As soon as the security gate and fence are installed at the staircase of each domestic block, as required by PRE.B8.160, station the security guard at all times at G/F of the block to allow control of access to the upper floors of building;
6. Provide securely built hut(s) or room(s) to accommodate all the security guards, and fit each with a direct telephone line or equivalent and a lock operated internally. Fix the huts securely to the ground and fit windows with burglar grilles;
7. Provide each security guard with a walkie-talkie and make suitable arrangements for regular patrolling and reporting by security guards and for a key system check on each store. Confine watch dogs to Site, keep under control and properly inoculate and licence.

Option 2
1. Keep capable watchmen or security guards about the Site and on the Works, day and night;
2. At commencement of the Contract, provide a minimum of .......... security guards at all times;
3. The CM may approve a lesser number of security guards when any Section of the Works has been completed, or increase the number as is considered necessary for the Works;
4. Provide securely built hut(s) or room(s) to accommodate all the security guards, and fit each with a direct telephone line or equivalent and a lock operated internally. Fix the huts securely to the ground and fit windows with burglar grilles;
5. Provide each security guard with a walkie-talkie and make suitable arrangements for regular patrolling and reporting by security guards and for a key system check on each store. Confine watch dogs to Site, keep under control and properly inoculate and licence.

PRE.B8.140.7 PERSONNEL CONTROL
1. Provide smart cards, as specified in PRE.B8.2610, to all workers for wearing conspicuously at all times on Site;
2. Keep daily records of all vehicles and people with no smart cards.

PRE.B8.150.7 ENTRANCE WARNING NOTICES
Post and maintain permanent warning notices at each site entrance, in both Chinese and English characters, indicating the following:
1. Vehicular entry/exit, (at vehicular accesses only);
2. That all workers must show their identity passes, and all vehicles and personnel without identity passes must report to security control at site entrance;
3. The prosecution of trespassers.

PRE.B8.160.7 PARTICULAR REQUIREMENTS FOR EVERY STAIRCASE OF DOMESTIC BLOCKS
Provide at the space above parapet wall at the G/F or at first landing of every staircase of the domestic block:
1. Local audio alarm system;
2. Temporary security metal gate and security fence to space above parapet wall:
   a. Construct the gate and fence to prevent access to the upper floors when locked;
   b. Fit the gate with a mortice lock to be operated by key from both sides;
   c. Install at least 12 months before the original contract completion date of each domestic block;
   d. Maintain the gate in good condition until it is removed at such time, either when the installation of the permanent security gate is complete or as agreed with the CM;
   e. Make good the affected area after the gate is removed;
   f. Submit detailed design and location of the metal gate and security fence to the CM for comment before commencing installation of the same.

PRE.B8.162.7 SITE SECURITY PLAN
1. Submit a Site Security Plan to the CM for information and comment on the following occasions:
   a. Within 14 days of the date of the Letter of Acceptance;
   b. Necessitated by revisions of programme in accordance with GCC Clauses 8.4 or 8.5;
   c. When the Site Security Plan is revised by the Contractor.
2. The Site Security Plan comprises but is not restricted to the following:
   a. Policy Statement for security on the Site;
   b. Security staff organisational structure which shows:
i. Duty list of the responsible officers;
ii. Chain of responsibility;
iii. Details of the resources allocated on the Site;
iv. Emergency contact telephone number for security aspects of the Works.

c. Means of compliance on the following aspects of works at various stages of construction which are to be programmed into the programme or revised programme furnished pursuant to GCC Clauses 5.7, 8.4 and 8.5:
i. Proposed number, qualification and surveillance check on the performance of security guards;
ii. Control for the care of personal security and safety of all people on site;
iii. Control for the care and storage of any Constructional Plant, temporary buildings and materials and anything whatsoever on the Site or delivered to or placed on the Site in connection with or for the purpose of the Works or any Specialist Works;
iv. Control over hoardings, gantries, fencings, etc.;
v. Control of accessibility at Site entrance(s) and individual building blocks;
vi. Control of entry and exit of visitors and vehicles to and from the Site with records;
vii. Control over delivery and removal of materials, goods, equipment and plant with records;
viii. Control over unused materials, goods, plant and equipment;
ix. Control over storage of concrete cubes;
x. Adequacy of temporary lighting inside the buildings, within the Site and around the Site boundary especially during night time.

d. Procedures and records for security control and patrolling services on building blocks, storage areas for materials, goods, equipment and plant and the Site for the times/periods as follows:
i. At day and night time;
ii. At and within 6 months of the date for completion of each Section and the Works;
iii. For the period 28 days after CM has certified completion of each Section and the Works pursuant to GCC Clause 5.12.

e. Emergency procedures in case of crime e.g. theft, burglary etc. or fire, including systems of reporting, recording and remedial measures;
f. Site security reports submitted at monthly site meetings to include, but not restricted to, the following information:
i. Site security measures implemented on the Site;
ii. Designated site security personnel for implementing and monitoring the plan;
iii. Cases of failure;
iv. Feedback from Nominated Sub-Contractors, Suppliers or others.

g. Proposal for security training to the concerned personnel including Site Agent, General Foremen, Block Foremen and other concerned Site Staff;
h. Programme for reference to the local regional Crime Prevention Unit of the Hong Kong Police Force.

3. Accept full responsibility under the Contract. The obligation for site security is not relieved by:
a. CM’s consent to the Site Security Plan and any proposed revision or update;
b. CM’s rejection of the Site Security Plan and any proposed revision or update;

4. Do not impose any obligation or responsibility on the Employer or CM with regard to site security.
**PRE.B8.170.7 SECURITY ON COMPLETION**

*Option 1*

1. Leave the Works secure, with all accesses locked;
2. Tag and label all other keys where applicable;
3. Account for all keys and hand to the CM.

*Option 2*

Unless otherwise instructed, leave the Works secure and all accesses locked. If the CM orders Site Security Services as a requirement to fulfil the obligations imposed by the Special Conditions of Contract,

1. Supply, on Site at all times, at least one security guard;
2. Operate (including provision of electricity supply), at any time whenever it is dark, lighting associated with walkways, hoardings, and accesses;
3. Keep the Site closed with all accesses locked; and
4. Do not permit visitors to enter the Site unless approved.

*Option 3*

1. Leave the Works secure, with all accesses locked;
2. Account for all keys and hand back to the Housing Manager.

**SAFETY**

**PRE.B8.210.7 COMPLIANCE WITH SAFETY REGULATIONS AND CONTRACT REQUIREMENTS**

*Option 1*

In relation to the requirements of GCC Clause 5.11 and PRE.B6.070, comply with all current Regulations concerning safety on the Site in particular the Factories and Industrial Undertakings Regulations and the requirements specified in the Contract as follows.

1. Safety Officers:
   a. Employ Safety Officer(s) and Safety Supervisor(s) in accordance with the Factories and Industrial Undertakings (Safety Officers and Safety Supervisors) Regulations with specific detailed requirements as follows, and employ any other safety personnel in excess of the followings as may be required by any enactments, regulations, by-laws or rules that may be in force at any time during the progress of the Works:
      i. The number of Safety Officer(s) to be employed shall depend on the total number of persons employed on Site as indicated below:

      | No. of persons employed on Site | No. of Safety Officer(s) required |
      |-------------------------------|--------------------------------|
      | Not more than 200              | 1                               |
      | 201 to 700                     | 2                               |
      | 701 to 1200                    | 3                               |
      | 1201 and above                 | 4                               |
      ii. The number of Safety Supervisor(s) to be employed shall depend on the total number of persons employed on Site and in compliance with the abovesaid regulation;
      iii. The total number of persons employed on Site as referred to in sub-clauses (a)(i) and (a)(ii) shall include the workforce of the Contractor, the Contractor's sub-contractors and Nominated Sub-contractors but shall exclude the workforce of those separate contractors employed directly by the Employer;
iv. The Safety Officer(s) and Safety Supervisor(s) must be employed full time solely and designated for the Contract. The Safety Officer(s) shall be registered by the Commissioner for Labour under the Factories and Industrial Undertakings (Safety Officers and Safety Supervisors) Regulations;

b. Do not commence any construction work on the Site without the appointment of the required number of Safety Officer(s) and Safety Supervisor(s) unless expressly permitted by the CM in writing;

c. At the end of each period of interim certificates, report to the CM a written confirmation that Safety Officer(s) are employed in accordance with the Contract. Such written confirmation shall append with the following documents:

   i. The name and a copy of the written notification of registration from the Commissioner of Labour for each Safety Officer;
   
   ii. A signed statement by each Safety Officer declaring that he is registered as a Safety Officer and he will advise the CM in writing immediately if he is no longer so registered.

d. The duties of Safety Supervisor shall be as stipulated in the Factories and Industrial Undertakings (Safety Officers and Safety Supervisors) Regulations;

e. The duties of the Safety Officer shall be solely directed towards safety and health matters. In addition to the duties stipulated in the Factories and Industrial Undertakings (Safety Officers and Safety Supervisors) Regulations, the Safety Officer's duties include:

   i. Site inspection:
      Carry out comprehensive safety inspections on all activities on the Site including temporary works and scaffolding at weekly intervals. The safety inspection shall identify any unsafe operation or potential hazards. Give prior notice to the CM of the date and time of the weekly inspection and allow the CM to attend the inspection;
      
      The Safety Officer shall be clearly identified on the Site by wearing an armband or a safety helmet appropriately marked in Chinese and English;
      
      The Contractor shall empower the Safety Officer to order any person working on the Site to suspend any unsafe operation or to take urgent action to make safe the Site or the Works or to disallow any practice which may infringe the Safety Plan or any statutory safety requirement;
      
      Liaise with the Nominated Sub-contractors' Safety Supervisors;
      Prepare safety inspection reports.

   ii. Safety Plan:
      Supervise and monitor implementation of the Safety Plan;
      Ensure that sub-contractors and all persons working on the Site are made aware of and comply with the Safety Plan.

   iii. Accident/Incident report, investigation and follow-up actions:
      Carry out the duties relating to accident/incident report, investigation and follow-up actions as specified in Safety Plan.

   iv. Training:
      Include in the Safety Plan or its monthly update the programme and the number of workers to receive training including site specific induction training, tool box talks and Silver Card training for the coming month;
      Conduct general induction training, site specific induction training as specified. Supervise the conduction of tool box talks specified;
      Identify those workers in the specified trades without valid Silver Card and coordinate their enrolment in requisite Silver Card training provided by the Construction Industry Council (CIC);
At the end of each period of interim certificates report, report to the CM the actual number of workers trained as specified.

v. Site Safety Committee:
   Arrange and coordinate Site Safety Committee;
   Invite Nominated Sub-contractors' Safety Supervisors to attend Site Safety Committee meeting and other safety-related meetings.

vi. Assessment report:
   Prepare risk assessment reports for the following month and recommend measures to remove or minimize hazards.

vii. Action on Labour Department contravention notices:
   Attend to the notices issued by the Labour Department to the Contractor advising that safety related regulations are contravened, in particular:
   - Construction Site (Safety) Regulations;
   - Subsidiary regulations of the Factories and Industrial Undertaking Ordinance;
   Take all necessary actions to ensure full compliance with all statutory requirements.
   Report monthly to the CM the following Labour Department's notices received:
   - Labour Department's Construction Site Inspection Report with category Part I or Part II contravention;
   - Labour Department's Improvement Notice;
   - Labour Department's Suspension Notice.
   Inform the Nominated Sub-contractor's Safety Supervisor in writing and make a copy to the CM, if any of the above notices received are associated with contravention made by the Nominated Sub-contractor.

viii. Safety audit:
   Implement the recommendations of the external Safety Audit Report.

ix. Safety Officer's report:
   Compile and report the above duties to the CM at the monthly site meetings.

x. Safety diary:
   Maintain a safety diary which shall record all matters related to safety and health, including Safety Supervisors' reports, details of safety inspections and audits, accidents, dangerous occurrences, safety related incidents, etc.. Check to ensure that all unsafe situations are promptly rectified and the dates of their completion duly recorded in the safety diary. The safety diary shall be made available for inspection by the CM upon request and copy thereof shall be submitted to the CM upon request.

xi. Keep a register of the names, telephone numbers, addresses and qualifications of any competent persons and competent examiner as defined in the Construction Sites (Safety) Regulations, who has carried out duties on this Contract. Keep a register of the names of Safety Supervisors and their duties discharged as required under the Factories and Industrial Undertakings (Safety Officers and Safety Supervisors) Regulations. Keep examination reports and certificates required by legislation or contract.

2. Safety Plan:
a. Prepare and submit to the CM three copies of a draft Safety Plan within 14 days of the date of the Letter of Acceptance. Arrange and hold an ad hoc meeting (or meetings if necessary) with the CM or his representative to discuss the draft Safety Plan within 7 days from the submission of such plan. If the CM is of the opinion that the draft Safety Plan does not meet the requirements of the Contract, he can request for remedy of the deficiency. Comply with any such CM’s request prior to submitting six copies of the Safety Plan to the CM for endorsement within 35 days of the date of the Letter of Acceptance.

b. Update the Safety Plan at monthly intervals or when required by the CM so that the Safety Plan is at all times a comprehensive and contemporary statement of the Contractor’s safety and health policies, procedures and requirements to achieve the safety and health obligations and responsibilities under the Contract. In the circumstance that there is no amendment of the Safety Plan in the monthly updating, submit such update Safety Plan to the CM with explicit reasons why there is no amendment.

c. The CM may by notice in writing require the Contractor to supplement, revise or update the Safety Plan if he is of the opinion that the Safety Plan is insufficient or requires revision or modification in the interest of the safety, whether for the Works and/or the safety and health of persons on or adjacent to the Site or protection of any property on or adjacent to the Site or otherwise. Comply with the CM’s requirements within 7 days of such notice.

d. Ensure the Safety Plan has incorporated the Nominated Sub-contractor’s safety plan in respect of the Nominated Sub-contract Works. Request the Nominated Sub-contractor to prepare and submit a safety plan in respect of the Nominated Sub-contract Works within 14 days of the Letter of Acceptance of the Nominated Sub-contractor’s tender for agreement and incorporation into the Safety Plan. Ensure consistency between the Safety Plan and the safety plan in respect of the Nominated Sub-contract Works. Submit the agreed safety plan in respect of the Nominated Sub-contract Works to the CM for endorsement. Revise and update the Safety Plan to incorporate the safety plan in respect of the Nominated Sub-contract Works endorsed by the CM when the Safety Plan is due to be revised or updated.

e. Request the Nominated Sub-contractor to revise or update the safety plan in respect of the Nominated Sub-contract Works by virtue of a revision or update of the Safety Plan pursuant to sub-clauses (2)(b) and 2(c) above, Ensure the revised or updated safety plan in respect of the Nominated Sub-contract Works is consistent with the Safety Plan and submit the revised or updated safety plan in respect of the Nominated Sub-contract Works to the CM for endorsement.

f. The CM’s endorsement, comment or rejection of the Safety Plan, the safety plan in respect of the Nominated Sub-contract Works, and of any proposed revision or update, and the implementation of the Safety Plan by the Contractor including the safety plan in respect of the Nominated Sub-contract Works shall not relieve the Contractor from any obligations or responsibilities under the Contract or any statutory regulations.

g. The Safety Plan and subsequent monthly updated Safety Plan shall contain, without limitation, details of the followings:

i. Company safety policy:
   A safety policy is a written statement produced by the Contractor, signed by a senior member of the management board, in which it sets out its aims and objectives for securing safety and the means whereby the objectives can be met. It is the Contractor’s statement of intent on matters of safety.

ii. Safety organisation:
   The safety staff organisational structure including an organisation chart which shows the chain of responsibility and accountability from managing director, project manager, safety manager, Site Agent, Safety Officer and Safety Supervisors. Responsibilities and duties of these safety personnel shall be defined.
iii. Safety training:
   Provide all employees and others with adequate information, instruction and training on health and safety. State in the safety and health policy the detail arrangements for providing safety and health training;
   The safety training shall include but not be limited to the followings:
   - General induction training;
   - Site specific induction training;
   - Tool box talks;
   - Trade specific safety training to be arranged and conducted by the respective Nominated Sub-contractors; and
   - Silver Card training.

iv. In-house safety rules and regulations:
   Activities which are complex or inherently hazardous must be accompanied by detailed written procedures to clearly identify the hazards and/or potential risks, and to clearly identify steps to be taken to minimise risks. These procedures may take the form of method statements and/or written instructions;
   Attention to strictly control access to particularly hazardous areas or operations. The activities identified as demanding permits to work to be listed, and the person identified by job title to be responsible for the design/preparation of permits;
   A lock-off involves the physical isolation or locking-off to danger areas.
   A permit to work procedure involves written authorization by a specified responsible person for an individual to enter a danger area, or period of time.

v. Safety Committee as specified;

vi. Programme for inspection of hazardous conditions:
   Effective arrangements to closely monitor by formal inspection the implementation of the safety and health legal requirements, policies and procedures. This function must be allocated to suitably trained and experienced individuals. Reports highlighting actions to be taken following an inspection will be speedily prepared and issued to the appropriate manager;
   Inspections should include, but not be limited to:
   - Excavation, shafts, earthworks and tunnels;
   - Cofferdams and caissons, and suspected dangerous atmospheres;
   - All lifting appliances;
   - All scaffolding;
   - Local exhaust;
   - Pressure system and gas containers;
   - Breathing apparatus, revival and other safety and rescue equipment;
   - Electrical equipment and appliances;
   - Fire fighting equipment;
   - First-aid box provisions.

vii. Job hazard analysis:
   Risk assessment to identify hazards in the workplace and assess the risk to employees and others who may be affected. Assessments to be carried out by competent persons. When a risk assessment has indicated that a task poses a significant risk to safety and health, a written safety system of work to be produced. A safe system of work must include not only procedures, equipment, materials and environment that is safe, but also safe work-force i.e. adequately trained, informed and supervised. Where appropriate, the safety system should also specify and checks to be made before the task is carried out.

viii. Personal protection programme:
The type of personal protective equipment (PPE) to be worn in particular situations and any specific requirement related thereto, to be established as a result of a risk assessment which will be the first step towards ensuring compatibility between the risk and correct personal protective equipment. Correct procedures for PPE issue, maintenance and reporting defects.

ix. Accident/Incident report, investigation and follow-up actions:

Report accidents and dangerous occurrence as defined in the Factories and Industrial Undertakings Regulations to the Labour Department in the prescribed Form 2 with Supplementary Information Sheet on Accidents on Construction Sites & Dangerous Occurrence Report Form;

Copy such reports to the CM according to GCC Clause 5.21;

Notify the CM immediately of all 'reportable accidents' as defined under the Factories and Industrial Undertakings Regulations and of the accident/incident to be reported under the 'accident/incident reporting procedures' of the HD. Download the accident/incident reporting form from HD's Site Safety Website and comply with the procedures;

Notify the HD Site Staff immediately (i.e. within the day of the accident/incident) of accident/incident on Site, including:

- Serious accident/incident;
- Reportable accidents, dangerous occurrence and near miss/incidents (if the accident/incident, though not serious by immediate effect, may have potentially serious consequence, such as those involving but not limited to falling from height, falling object, being struck by moving object, tower crane lifting, public safety etc.) on Site;
- Tree failure incident of any of the following nature occurs:
  - Loss of human life;
  - Major injury where the injured is admitted or to be admitted to hospital;
  - Substantial damage to properties;
  - Serious/complete blockage to main pedestrian/vehicular access; and
- Death of person.

Provide statistics and analysis of accidents, investigate and ascertain the contributory factors and root causes, identify the trends and recommend means of prevention and improvement;

Provide necessary information to the Nominated Sub-contractors' Safety Supervisors for preparing Nominated Sub-contractors' accident report and investigation;

Provide means to communicate accident statistics information, recommendation to prevent recurrences and lessons learnt from previous accidents to all persons working on the Site.

x. Emergency preparedness:

An emergency situation means a situation requiring emergency assistance of fire services/police/ambulance etc. It includes:

- An accident which results in death or serious injury;
- A fire breaking out which requires rescue crews from Fire Services Department to effect control;
- A flood that causes or threatens life on site;
- A leakage of dangerous goods or chemicals; and
- Any other accident/incident which creates a dangerous situation.

Evacuation plans to be drawn for all areas. The procedures are to be reviewed and revised periodically, especially when the work-site configuration is altered or changes in some way.

xi. Safety promotion:
The effort made by different sub-contractors or individuals to reduce accidents at work by the application of soundly based policies, procedures and disciplines to be recognised by the presentation of safety and health award. Adopt proactive attitude towards improving health and safety performance and/or the best related achievement in reducing number of accidents. The site as a whole is encouraged to participate in the following designated safety campaigns:

- "Construction Safety Day", "Construction Safety Promotional Campaign" or "Good Housekeeping Promotion Campaign" led by the Occupational Safety and Health Council;
- "Construction Industry Safety Award Scheme" led by the Labour Department; and
- "Considerate Contractors Site Award Scheme" led by the Development Bureau and the Construction Industry Council.

The Contractor is also encouraged to organize site-based safety awards and competitions to promote participation of his workers and teams in safety theme competitions during the contract period. The adjudicating team shall comprise the site management team, safety personnel and workers' representatives, and shall act openly and fairly in such events.

xii. Health assurance programme:

The health of employees and others affected by the Contractor's activities must form an important part of the Contractor's safety and health policy. Work related health aspects, such as pre-employment and routine medical examination of employees engaged in specific jobs, are to be considered. Similarly, health related matters which may affect the workplace such as fumes or vapours from hazardous or toxic substances, pollution, noise, radiation etc., are to be reviewed;

Health surveillance is to be used to detect adverse health effects at an early stage. Appropriate risk assessment to identify the circumstances in which health surveillance becomes necessary.

xiii. Health care plan:

Implement a health care plan for workers on Site as specified under PRE.B8.300.

xiv. Evaluation, selection and control of sub-contractors:

The means by which to ensure sub-contractors of all levels including Nominated Sub-contractors and Specialist Sub-contractors comply with the Safety Plan and statutory requirements on safety and health.

xv. Process control programme:

Safety rules, regulations and working procedures covering all safety and health aspects, and in particular method statements and permit-to-work systems for identified high risk operations are to be addressed.

xvi. Safety plans in respect of Nominated Sub-contract Works:

Incorporate safety plans in respect of Nominated Subcontract Works in the Safety Plan when submitted by the Nominated Sub-contractors.

xvii. Non-smoking policy:

Mandate a non-smoking policy including the rules adopted by the Contractor with respect to prohibition of smoking on Site. In the event that the Contractor does not fully prohibit smoking on Site, include a site plan showing the number and sizes of the designated smoking areas and describe the associated requirements of provisions of fire fighting appliances and cleaning services in the policy.
h. Comply with the Safety Plan and ensure all Safety Officers, Safety Supervisors and all personnel who are in a position of authority among sub-contractors including Nominated Sub-contractors have access to the Safety Plan and made aware of their obligation to comply with the Safety Plan. Any Specialist Contractor and other entities (e.g. public utilities) working on the Site shall be provided with a copy of the Safety Plan and be required to comply with it, and report to the CM for any non-compliance on their part.

i. Provide all facilities, access and assistance to the CM to periodically check that the Safety Plan is being implemented properly and fully. If the CM is of the opinion that the Contractor fails to implement the Safety Plan properly and fully and the failure does or may adversely affect the safety, whether for the Works and/or the safety and health of persons on or adjacent to the Site, or protection of any property on or adjacent to the Site or otherwise, the CM shall notify the Contractor in writing of the failure. The Contractor shall take action to remedy the failure immediately. The CM may suspend the Works, or any part of it, until such time the failure has been rectified.

3. Housing Authority Safety Auditing System (HASAS):
   a. Safety Auditor:
      i. To be nominated by the CM. More than one Safety Auditor may be nominated for each safety audit and Safety Auditors may be nominated on rotation by the CM for safety audits;
      ii. Must be from the Occupational Safety and Health Council (OSHC)'s list of Accredited Safety Auditors after the date of the Letter of Acceptance;
      iii. Must have no current commercial dealings with the Contractor and the Nominated Sub-contractors;
      iv. Clear of any conflict of interest in exercising his role as safety auditor.
   b. The Contractor may agree or reject such nomination with valid reason. Re-nominate by the CM within 7 days from the date of the rejection if the nominee is rejected;
   c. Once nomination is agreed:
      i. The Accredited Safety Auditor shall conduct safety audit with the Contractor's and the Nominated Sub-contractors' representatives under the management of the OSHC once every three months;
      ii. CM may instruct the Accredited Safety Auditor to commence the Safety Audit at any time, but not later than the end of the third month from the notified date for commencement of the Works;
      iii. Provide attendance of most senior site representative at each safety audit;
      iv. Provide all necessary attendance for the safety audit including fully facilitating the inspection of the Site and the Works and all certificates, records and reports relating to safety and health matters, and fully cooperate with the Accredited Safety Auditor in the carrying out of the safety audit;
      v. Report to the Accredited Safety Auditor innovative and functional safety installation or safety measures, applications of Building Information Modeling for safety and applications of Radio Frequency Identification for safety implemented for this Contract for onward payment assessment.
   d. The Project Director/Heads of Projects of the Contractor shall sign an acknowledgement of receipt of the Safety Audit Report prepared by the Accredited Safety Auditor and submit to OSHC for record;
   e. Implement the recommendations of the Accredited Safety Auditor within the time frame specified in the Safety Audit Report;
   f. The Safety Officer shall report on the implementation of Accredited Safety Auditor's recommendations in the monthly site meeting;
   g. Allow for all work undertaken in preparation for the safety audit or in the implementation of the Accredited Safety Auditor's recommendations. Neither shall entitle the Contractor to any extension of time for completion of the Works.
4. Green Card and Silver Card:
   a. The Contractor, and any of his sub-contractors including Nominated Sub-contractors, shall provide and employ for the purposes of the Works such technical personnel and such skilled, semi-skilled and unskilled labour who, upon their first appearance in the Site and throughout their working in the Site, are a holder of either a valid Green Card issued by an organisation or institution recognized by the Labour Department or a valid Construction Workers Registration Card. The Green Card referred to in this sub-clause is a statutory identification document issued to a person by an organization or institution recognized by the Labour Department upon completion of the training on Green Card;
   b. The following trades shall be carried out by workers holding Silver Cards issued by the Construction Industry Council upon their first appearance in the Site and throughout their working in the Site:
      i. Painter and Decorator;
      ii. Carpenter;
      iii. Demolition Worker (Building);
      iv. Plumber;
      v. Bar Bender and Fixer;
      vi. Plasterer and Tiler;
      vii. Bamboo Scaffolder and Metal Scaffolder;
      viii. Construction Materials Rigger;
      ix. Curtain Wall Installer;
      x. Tower Crane Worker (Erecting, Dismantling, Telescoping & Climbing);
      xi. Lift Mechanic and worker for lift installation (installation and maintenance);
   c. Arrange and release workers of the trades listed in sub-clauses (4)(b)(i) to (4)(b)(x) to attend Silver Card training or revalidation training. Bear the fees for the training courses and pay workers the wages which they would otherwise earn during that period of attending the training courses had the Contractor not released them to attend the training courses;
   d. The Nominated Sub-contractor for lift installation shall arrange and release workers of the trade listed in sub-clause (4)(b)(xi) to attend Silver Card training or revalidation training. The Nominated Sub-contractor for lift installation shall bear the fees for the training courses and pay workers the wages which they would otherwise earn during that period of attending the training courses had the Nominated Sub-contractor for lift installation not released the workers to attend the training courses;
   e. Keep record of payment for the fees of the training courses and, if applicable, payment of wages to workers who have attended Silver Card training, with workers’ signed acknowledgement of receipt;
   f. Keep record of card numbers, card holders’ names and expiry dates of the cards, for the inspection by the CM. Ensure that the Green Cards or Silver Cards held by all workers are valid;
   g. Submit to the CM a duly completed prescribed form (DASM-F6211) for the record of Silver Card holders for all workers engaged in the specified trades as listed in sub-clause(4)(b);
   h. The Contractor shall ensure that all such personnel and workers shall at all times put on the appropriate Silver Card or Green Card or a valid Construction Workers Registration Card with a printed statement indicating that the holder has a valid Green Card and that such Green Card has not yet expired while they are within the Site. The CM shall, pursuant to GCC Clause 5.9(2), have the power to require the Contractor to remove forthwith any person employed by the Contractor, or by any of his sub-contractors including Nominated Sub-contractors, from the Works who has not complied with the requirements prescribed by sub-clauses (4)(a) and (4)(b) above.
5. Induction training, tool-box talks and other training:

The training material shall cover critical items, namely working at height, housekeeping, prevention against falling objects, lifting operations, tower crane, mobile crane among other site activities in the form of audio-visual medium. The training will be subject to verification by safety auditor managed by OSHC.

a. Site specific induction training:

All persons employed on the Works or in connection with the Contract whether in the employ of the Contractor or his sub-contractor shall receive site specific induction training. The induction training shall cover contents to alert persons new to the site to know specific hazards related to the site or works nature and activities in operation, and necessary precautionary measures. This training should be carried out within 2 working days of any such employee commencing work on the Site. Thereafter, he/she shall be given refresher training at intervals of about 6 months depending on the amount of changes to the site condition. The course shall be conducted by Safety Officers.

b. Tool-box talks:

i. Provide tool-box talks to workers once per week. The talks shall be attended by workers who are working on the Site and engaged in activities relevant to the topic of that training. The topics and contents of tool-box talks shall be proposed by the Safety Officer having regard to the activities of the Site and the prevailing safety concern at that time;

ii. Tool-box talks shall be conducted based on training kits published by the Hong Kong Construction Association Ltd. (HKCA). If the proposed topic is not amongst one of those published by HKCA kits, the Contractor shall then develop training kits of comparable standard for approval by the CM;

iii. The Contractor's Safety Officer shall ensure that tool-box talks are carried out by Safety Supervisors, foreman or gangers who have received training organised by the Hong Kong Construction Association Ltd. or other approved training organisations.

c. Allow the CM or the CM's representative to attend any of the training courses viz. general induction training, site specific induction training, and tool-box talks to verify that they are conducted according to specification;

d. Maintain attendance records on site specific induction training and tool-box talks, the names of the trainers, names and trades of the persons receiving the training and their signatures; maintain electronic photo records taken during the training and talks that show the attendants attending such training and talks. These records shall be made available for CM's inspection upon request by CM;

e. The Contractor's Site Agent or Safety Officer shall certify the accuracy of attendance records on site specific induction training and tool box talks before they are submitted monthly to the CM;

f. Management and other staff, other than workers, employed on the Works or in connection with the Contract whether in the employ of the Contractor or his sub-contractors shall have received appropriate training on safety and health commensurate with their duties;

g. Maintain attendance records on site for all safety training conducted or arranged. These records shall include the topics and dates of the events, the names of trainers, names and trades of the persons receiving the training and their signature. Make them available for CM’s inspection upon request;

h. Submit the Nominated Sub-contractors' trade specific safety training proposal to CM for approval.

6. Site Safety Committee:

a. Establish a Site Safety Committee which shall be responsible for ensuring the implementation of the Safety Plan, reviewing and monitoring the effectiveness of the safety and health measures taken and seeking the cooperation and commitment of staff at all levels;
b. The Site Safety Committee shall be chaired by the Site Agent with members comprising the Contractor's project manager, Safety Officers, all Nominated Sub-contractors' Safety Supervisors, selected Safety Representatives and other staff of the Contractor or sub-contractors as may be considered necessary. It shall meet at least monthly discussing all matters relating to the implementation of the Safety Plan. The first meeting shall be held no later than 28 days from and including the date for commencement of the Works notified by the Contract Manager in accordance with GCC Clause 8.1. The Contractor may invite any other party such as the Labour Department, Police or representatives of utility undertaking to attend the meeting and provide advice as necessary;

c. Give advance notice of every Site Safety Committee meeting to the CM who will attend the meeting in person or nominate a representative to attend the meeting as an observer;

d. The following items shall, amongst others, be reported and discussed at the Site Safety Committee meeting:
   i. Review of the Safety Plan, update risk assessment for the work scheduled at least for the next two months, review and establish safety and health provisions, safe working procedures and method statements, update the emergency and rescue procedure;
   ii. Update of the safety organisation chart and review of the adequacy of safety personnel;
   iii. Review of the safety performance of sub-contractors;
   iv. Any unsafe practices and conditions identified during safety inspections/audits and any follow up action;
   v. Advisory/warning or contravention notices letters issued by Labour Department and any Improvement/Suspension Notices received;
   vi. Review of accident frequency rates and statistics of the Contractor and sub-contractors and identification of trends;
   vii. Details of the Contractor's accident and dangerous occurrence experience;
   viii. Safety and health training undertaken in the previous month and the proposed training programme for the following month;
   ix. Details of safety promotional activities; and
   x. Safety co-ordination among various sub-contractors working in close proximity to each other;
   xi. Submission of forms GF527 and GF527A or other pertinent forms on the employment statistics of the Contract to the Census and Statistics Department with copy to CM or CM's representative on a monthly basis;
   xii. Compilation and submission to the Commissioner for Labour the Supplementary Information on Accidents on Construction Sites for the purpose of analysis in addition to the statutory forms and the requirements of GCC Clause 5.21;
   xiii. Updated Safety Plan.

e. Prepare minutes of the Site Safety Committee meeting and copy it to the CM within 5 working days of the meeting.

7. Safe Working Cycle:
   a. Practise 'Safe Working Cycle' (SWC) to improve and promote the safety and health of the Site. Safe Working Cycle should begin when there are workers working on the Site, and shall cease by the date of substantial completion of the Works. The activities of SWC are classified into three categories. They are Daily Cycle, Weekly Cycle and Monthly Cycle. Details of the each category of SWC are given below:
      i. Daily Cycle:
         - Pre-work Exercise and Safety (PES) meeting;
         - Hazard Identification Activity (HIA) meeting;
- Pre-work Safety Checks;
- Safety inspection by Site Agent or his representatives;
- Guidance and supervision during work;
- Safety co-ordination meeting;
- Daily cleaning and tidying up of the Site;
- Checking of the Site after each day's works.

ii. Weekly Cycle:
- Weekly safety inspection by Site Agent and Safety Officer;
- Weekly safety co-ordination meeting;
- Weekly overall cleaning and tidying up of the Site.

iii. Monthly Cycle:
- Site Safety Committee meeting and pre-meeting inspection.

b. The first three items under Daily Cycle described in sub-clause (7)(a)(i), namely, Pre-work Exercise and Safety (PES) meeting, Hazard Identification Activity (HIA) meeting and Pre-work Safety Checks, are collectively referred to as the "Pre-work Activities". Pre-work Activities are to be held for attendance by persons employed on the Works (excluding clerical and administrative staff in site office), irrespective of whether they are in the employment of the Contractor or sub-contractors. Detail requirements for the Pre-work Activities are:

i. Arrange and hold Pre-work Exercise & Safety (PES) meeting of about 10 to 15 minutes for all persons employed on the Works. The PES meeting shall be led by the Site Agent or senior staff of site management of the Contractor, who has attended the training course on Safe Working Cycle of the Occupational Safety & Health Council (OSHC) or Construction Industry Council. The PES meeting shall start with physical exercise, followed by a briefing to workers on the prevailing safety and health matters related to the Site, such as common hazards and control measures, safety precautions, specific safety concerns etc.;

ii. Arrange and hold Hazard Identification Activity (HIA) meeting of about 10 minutes for the attendees immediately after the PES meeting. Alternatively, the HIA meetings can be held in small groups according to the trades, work teams or works areas set out by the Contractor for the Site. If so, the Contractor shall ensure that the assigned persons are competent to lead the HIA meetings. Persons who have attended one day training course on HIA leadership provided by OSHC are considered competent to lead the HIA meetings. The issues discussed at the HIA meetings shall cover, but not limited to, hazards and control measures specific to the works or trades, special safety concerns, assurance of safety requirements and measures, reprimand of repeated irregularities and malpractice etc.;

iii. Arrange and hold Pre-work Safety Checks for the attendee immediately after the HIA meeting. The Pre-work Safety Checks shall be carried out by foremen, gangers, Safety Supervisors or Safety Representatives of the attendees according to the trades, work teams or works areas. The Pre-work Safety Checks shall include the checking of personal protective equipment worn by attendees before they start working on that day such as safety helmet, reflective vest, ear protectors, eye protectors, safety harness, safety footwear etc..

c. Pre-Work Activities are to be held daily, but in any case the frequency of Pre-work Activities for attendance by each person employed on the Works shall not be less than once a week. The Pre-work Activities shall be carried out prior to any work carried out by the persons attending the Pre-work Activities on that day;

d. Maintain attendance records of the workers participating in the Pre-Work Activities including their names and trades. Such attendance records are to be certified by Site Agent. Maintain electronic photo record showing the attendants during such activities. These records shall be made available for CM's inspection upon request by CM;
e. Trade Specific Pre-Work Activities (Hazard Identification Activity meetings and Pre-work Safety Checks) are to be conducted by the respective Nominated Sub-contractors prior to the commencement of particular type of the nominated sub-contract works.

8. Safety Representatives:

a. Appoint the ganger of each labour group or team working on Site to act as Safety Representative. The ganger of the bar benders and fixers responsible for supervision and fabrication of reinforcement cages for barrettes and large diameter bored piles must be appointed as Safety Representative. The Safety Representatives shall be clearly identified on Site by wearing an armband or a safety helmet appropriately marked in Chinese and English;

b. The Safety Representatives shall attend Safety and Health Supervisor (Construction) Course (nominal course duration 43 hours) provided by the Occupational Safety and Health Council or Construction Safety Supervisor Course (nominal course duration 42 hours) provided by the Construction Industry Council. Acceptance of training provided by other organizations is subject to verification that the training is based on course contents of equivalent or above standards and the appointed superintendent has attained the associated qualification;

c. In respect of underpinning safety management, the Safety Representative shall be responsible for ensuring that:

i. The directives on safety and health matters from the Contractor, the Safety Officer, Safety Supervisors, Site Agent and Foremen are duly carried out;

ii. Safety practices are adopted by the workers; and

iii. Protective clothing and equipment are used by the workers at all times on the Site.

d. Ensure that the Safety Representatives and the workers on the Site under supervision of the Safety Representatives are aware of the roles and responsibilities of the Safety Representatives on safety and health matters.

9. Lift Well Works:

In addition to any obligation under clause GCC 5.11 or similar obligations under any enactment or Regulation, adopt the practices and/or measures in respect of lift well works as recommended in the latest edition of the Guidelines on Safety of Lift Shaft Works issued by the Construction Industry Council and as stated in this sub-clause (9). All references to “lift shaft” in the Guidelines shall mean “lift well” for the purpose of this sub-clause (9). Examine critically the practices and/or measures as recommended in the above-mentioned Guidelines, especially their applicability and suitability to the Works on account of the actual site conditions and the specific safety hazards of the Works. Alternative practices and/or measures which should not be inferior to those recommended in the said Guidelines may be proposed for CM's approval before implementation. In addition, carry out the site safety practices and measures including but not be limited to the following which are highlights of the above-mentioned Guidelines with more specific or stringent requirements:

a. The Site Safety Committee shall finalise and endorse the lift installation safety plan submitted by the Nominated Sub-contractor for lift installation, and shall incorporate such plan into the Safety Plan for submission to the CM for his approval;

b. Provide sufficient protection to lift wells before commencement of any lift well works thereto;

c. Provide and maintain temporary work, services and protective measures:

i. Be responsible for keeping proper records of all inspection records for safety provisions;

ii. Appoint suitable competent persons to conduct bi-weekly inspections and maintain lift well platforms, scaffolding, wall anchors, independent lifelines and gangways connecting floor edges of lift well and the scaffolding;
iii. If a scaffolding section is required to be altered to facilitate lift car assembly, conveying of components or other lift installation work, the altered scaffolding shall be supported and reinforced by designated anchors on the wall of lift well in accordance with the designed requirements stipulated in the Safety Plan;

iv. Be responsible for keeping all keys and locks of lift well protection cages in a neat and orderly manner. The keys shall only be released to other sub-contractors under the conditions of a permit-to-work system. A log shall be kept to register the locations of the door keys or the person-in-charge for holding such keys;

v. Provide temporary electricity at voltage 110V with circuits equipped with waterproof sockets for use by the Nominated Sub-contractor for lift installation;

vi. Obtain from the Nominated Sub-contractor for lift installation the necessary information on the required position of independent lifelines inside lift well. Install at least 3 sets of independent lifelines anchored to eyebolts inside a lift well before handing over to the Nominated Sub-contractor for lift installation. At least one independent lifeline shall be located near the door openings of a lift well;

vii. Allow no lift worker and other trade workers to work simultaneously inside a lift well;

viii. Keep to a minimum the number of workers working within a lift well at the same time to the extent that simultaneous working at different levels is strongly not advisable. If simultaneous working at different levels is practically unavoidable, it shall only be limited to one work activity and prior approval from Contract Manager shall be obtained;

ix. Provide anchorage near the lift well openings at the lowest landing floor for use by worker to lock fall arrestor and safety harness when required to access lift pit. Provide anchorage near the lift well openings at other landing floors if necessary for use by worker to lock fall arrestor and safety harness when working near or in the lift well;

x. For anchorages which are installed by the Contractor for any use, appoint a registered professional engineer to check the design and method statement for the construction and to certify the load bearing capacity and the fixing details of the anchorages;

xi. If any particular anchorage plus the corresponding applied load may have effect on the permanent structure by way of overstressing or overloading, appoint a person whose qualification and experience are not inferior to a TCP T5 to certify the plans, design information/justification, load bearing capacity, fixing details and method statement of the anchorages for submission to the CM for approval. The person so appointed should also certify the completion of such works.

d. Conduct risk assessment and prepare the method statements that are not provided by the Nominated Sub-contractor for lift installation.

i. The risk assessment report shall be signed by the Safety Officer and endorsed by the Site Agent and made available on Site for inspection by the CM and the Labour Department.

e. Design, construct, use and maintain every lift well platform;

f. Develop and implement a permit-to-work system for lift well works:

i. Enforce and implement permit-to-work system and endorse permits of the permit-to-work system for all hazardous trade processes;

ii. Each permit of the permit-to-work system shall specify details of its length of validity in terms of shift and the type of trade workers who are required to work inside the lift well.

g. Provide fall-arrest system and associated safety training that are not provided by the Nominated Sub-contractor for lift installation;
h. Provide sufficient safety precautionary measures for buildings with "temporary occupation permit" arrangement, etc..

10. Surprise Safety Inspection Programme (SSIP):
   a. Professional Safety Inspectors (SI) appointed by Occupational Safety & Health Council (OSHC) will conduct surprise safety inspection;
   b. The surprise safety inspection may be conducted at any time after the date for commencement of the Works till the certified date of completion of the Works;
   c. Provide all necessary attendance for the surprise safety inspection including fully facilitating the inspection of the Site, the Works and all necessary supporting documents such as certificates, records and reports relating to safety and health matters, and fully co-operate with the Safety Inspector in the carrying out of the surprise safety inspection;
   d. A Contractor’s representative must accompany the Safety Inspector throughout the inspection;
   e. The Contractor’s representative shall acknowledge the result of the inspection by signing in the presence of Housing Department resident site staff and submit a copy of signed report to the Contract Manager and another copy to OSHC for record;
   f. Rectify the non-conformance items recorded by the Safety Inspector;
   g. The Site Agent shall report the results of surprise safety inspection and the respective follow up rectification actions for non-conformance items in the monthly site meeting.

Option 2

In relation to the requirements of GCC Clause 5.11 and PRE.B6.070, comply with all current Regulations concerning safety on the Site in particular the Factories and Industrial Undertakings Regulations and the requirements specified in the Contract as follows.

1. Safety Officers:
   a. Employ Safety Officer(s) and Safety Supervisor(s) in accordance with the Factories and Industrial Undertakings (Safety Officers and Safety Supervisors) Regulations with specific detailed requirements as follows, and employ any other safety personnel in excess of the followings as may be required by any enactments, regulations, by-laws or rules that may be in force at any time during the progress of the Works:
      i. The number of Safety Officer(s) to be employed shall depend on the total number of persons employed on Site as indicated below:

<table>
<thead>
<tr>
<th>No. of persons employed on Site</th>
<th>No. of Safety Officer(s) required</th>
</tr>
</thead>
<tbody>
<tr>
<td>Not more than 200</td>
<td>1</td>
</tr>
<tr>
<td>201 to 700</td>
<td>2</td>
</tr>
<tr>
<td>701 to 1200</td>
<td>3</td>
</tr>
<tr>
<td>1201 and above</td>
<td>4</td>
</tr>
</tbody>
</table>

   ii. The number of Safety Supervisor(s) to be employed shall depend on the total number of persons employed on Site and in compliance with the above said regulation;
   iii. The total number of persons employed on Site as referred to in sub-clauses (a)(i) and (a)(ii) shall include the workforce of the Contractor, the Contractor’s sub-contractors but shall exclude the workforce of those separate contractors employed directly by the Employer;
   iv. The Safety Officer(s) and Safety Supervisor(s) must be employed full time solely and designated for the Contract. The Safety Officer(s) shall be registered by the Commissioner for Labour under the Factories and Industrial Undertakings (Safety Officers and Safety Supervisors) Regulations;
b. Do not commence any construction work on the Site without the appointment of the required number of Safety Officer(s) and Safety Supervisor(s) unless expressly permitted by the CM in writing;

c. At the end of each period of interim certificates, report to the CM a written confirmation that Safety Officer(s) are employed in accordance with the Contract. Such written confirmation shall append with the following documents:

   i. The name and a copy of the written notification of registration from the Commissioner of Labour for each Safety Officer;
   ii. A signed statement by each Safety Officer declaring that he is registered as a Safety Officer and he will advise the CM in writing immediately if he is no longer so registered.

d. The duties of Safety Supervisor shall be as stipulated in the Factories and Industrial Undertakings (Safety Officers and Safety Supervisors) Regulations;

e. The duties of the Safety Officer shall be solely directed towards safety and health matters. In addition to the duties stipulated in the Factories and Industrial Undertakings (Safety Officers and Safety Supervisors) Regulations, the Safety Officer's duties include:

   i. Site inspection:
      Carry out comprehensive safety inspections on all activities on the Site including temporary works and scaffolding at weekly intervals. The safety inspection shall identify any unsafe operation or potential hazards. Give prior notice to the CM of the date and time of the weekly inspection and allow the CM to attend the inspection;
      The Safety Officer shall be clearly identified on the Site by wearing an armband or a safety helmet appropriately marked in Chinese and English;
      The Contractor shall empower the Safety Officer to order any person working on the Site to suspend any unsafe operation or to take urgent action to make safe the Site or the Works or to disallow any practice which may infringe the Safety Plan or any statutory safety requirement; Prepare safety inspection reports.

   ii. Safety Plan:
      Supervise and monitor implementation of the Safety Plan;
      Ensure that sub-contractors and all persons working on the Site are made aware of and comply with the Safety Plan.

   iii. Accident/Incident report, investigation and follow-up actions:
      Carry out the duties relating to accident/incident report, investigation and follow-up actions as specified in Safety Plan.

   iv. Training:
      Include in the Safety Plan or its monthly update the programme and the number of workers to receive training including site specific induction training, tool box talks and Silver Card training for the coming month;
      Conduct general induction training, site specific induction training as specified. Supervise the conduction of tool box talks specified;
      Identify those workers in the specified trades without valid Silver Card and coordinate their enrolment in requisite Silver Card training provided by the Construction Industry Council (CIC);
      At the end of each period of interim certificates report, report to the CM the actual number of workers trained as specified.

   v. Site Safety Committee:
      Arrange and coordinate Site Safety Committee;

   vi. Assessment report:
      Prepare risk assessment reports for the following month and recommend measures to remove or minimize hazards.
vii. Action on Labour Department contravention notices:
Attend to the notices issued by the Labour Department to the Contractor advising that safety related regulations are contravened, in particular:
- Construction Site (Safety) Regulations;
- Subsidiary regulations of the Factories and Industrial Undertaking Ordinance.
Take all necessary actions to ensure full compliance with all statutory requirements.
Report monthly to the CM the following Labour Department's notices received:
- Labour Department's Construction Site Inspection Report with category Part I or Part II contravention;
- Labour Department's Improvement Notice;
- Labour Department's Suspension Notice.

viii. Safety audit:
Implement the recommendations of the external Safety Audit Report.

ix. Safety Officer's report:
Compile and report the above duties to the CM at the monthly site meetings.

x. Safety diary:
Maintain a safety diary which shall record all matters related to safety and health, including Safety Supervisors’ reports, details of safety inspections and audits, accidents, dangerous occurrences, safety related incidents, etc. Check to ensure that all unsafe situations are promptly rectified and the dates of their completion duly recorded in the safety diary. The safety diary shall be made available for inspection by the CM upon request and copy thereof shall be submitted to the CM upon request.

xi. Keep a register of the names, telephone numbers, addresses and qualifications of any competent persons and competent examiner as defined in the Construction Sites (Safety) Regulations, who has carried out duties on this Contract. Keep a register of the names of Safety Supervisors and their duties discharged as required under the Factories and Industrial Undertakings (Safety Officers and Safety Supervisors) Regulations. Keep examination reports and certificates required by legislation or contract.

2. Safety Plan:

a. Prepare and submit to the CM three copies of a draft Safety Plan within 14 days of the date of the Letter of Acceptance. Arrange and hold an ad hoc meeting (or meetings if necessary) with the CM or his representative to discuss the draft Safety Plan within 7 days from the submission of such plan. If the CM is of the opinion that the draft Safety Plan does not meet the requirements of the Contract, he can request for remedy of the deficiency. Comply with any such CM’s request prior to submitting six copies of the Safety Plan to the CM for endorsement within 35 days of the date of the Letter of Acceptance.

b. Update the Safety Plan at monthly intervals or when required by the CM so that the Safety Plan is at all times a comprehensive and contemporary statement of the Contractor’s safety and health policies, procedures and requirements to achieve the safety and health obligations and responsibilities under the Contract. In the circumstance that there is no amendment of the Safety Plan in the monthly updating, submit such update Safety Plan to the CM with explicit reasons why there is no amendment.
c. The CM may by notice in writing require the Contractor to supplement, revise or update the Safety Plan if he is of the opinion that the Safety Plan is insufficient or requires revision or modification in the interest of the safety, whether for the Works and/or the safety and health of persons on or adjacent to the Site or protection of any property on or adjacent to the Site or otherwise. Comply with the CM’s requirements within 7 days of such notice.

d. The CM’s endorsement, comment or rejection of the Safety Plan, and of any proposed revision or update, and the implementation of the Safety Plan by the Contractor shall not relieve the Contractor from any obligations or responsibilities under the Contract or any statutory regulations.

e. The Safety Plan and subsequent monthly updated Safety Plan shall contain, without limitation, details of the followings:

i. Company safety policy:
A safety policy is a written statement produced by the Contractor, signed by a senior member of the management board, in which it sets out its aims and objectives for securing safety and the means whereby the objectives can be met. It is the Contractor's statement of intent on matters of safety.

ii. Safety organisation:
The safety staff organisational structure including an organisation chart which shows the chain of responsibility and accountability from managing director, project manager, safety manager, Site Agent, Safety Officer and Safety Supervisors. Responsibilities and duties of these safety personnel shall be defined.

iii. Safety training:
Provide all employees and others with adequate information, instruction and training on health and safety. State in the safety and health policy the detail arrangements for providing safety and health training; The safety training shall include but not be limited to the followings:
- General induction training;
- Site specific induction training;
- Tool box talks;
- Trade specific safety training; and
- Silver Card training.

iv. In-house safety rules and regulations:
Activities which are complex or inherently hazardous must be accompanied by detailed written procedures to clearly identify the hazards and/or potential risks, and to clearly identify steps to be taken to minimise risks. These procedures may take the form of method statements and/or written instructions;
Attention to strictly control access to particularly hazardous areas or operations. The activities identified as demanding permits to work to be listed, and the person identified by job title to be responsible for the design/preparation of permits;
A lock-off involves the physical isolation or locking-off to danger areas. A permit to work procedure involves written authorization by a specified responsible person for an individual to enter a danger area, or period of time.

v. Safety Committee as specified;

vi. Programme for inspection of hazardous conditions:
Effective arrangements to closely monitor by formal inspection the implementation of the safety and health legal requirements, policies and procedures. This function must be allocated to suitably trained and experienced individuals. Reports highlighting actions to be taken following an inspection will be speedily prepared and issued to the appropriate manager;
Inspections should include, but not be limited to:
- Excavation, shafts, earthworks and tunnels;
- Cofferdams and caissons, and suspected dangerous atmospheres;
- All lifting appliances;
- All scaffolding;
- Local exhaust;
- Pressure system and gas containers;
- Breathing apparatus, revival and other safety and rescue equipment;
- Electrical equipment and appliances;
- Fire fighting equipment;
- First-aid box provisions.

vii. Job hazard analysis:
Risk assessment to identify hazards in the workplace and assess the risk to employees and others who may be affected. Assessments to be carried out by competent persons. When a risk assessment has indicated that a task poses a significant risk to safety and health, a written safety system of work to be produced. A safe system of work must include not only procedures, equipment, materials and environment that is safe, but also safe work-force i.e. adequately trained, informed and supervised. Where appropriate, the safety system should also specify and checks to be made before the task is carried out.

viii. Personal protection programme:
The type of personal protective equipment (PPE) to be worn in particular situations and any specific requirement related thereto, to be established as a result of a risk assessment which will be the first step towards ensuring compatibility between the risk and correct personal protective equipment. Correct procedures for PPE issue, maintenance and reporting defects.

ix. Accident/Incident report, investigation and follow-up actions:
Report accidents and dangerous occurrence as defined in the Factories and Industrial Undertakings Regulations to the Labour Department in the prescribed Form 2 with Supplementary Information Sheet on Accidents on Construction Sites & Dangerous Occurrence Report Form;
Copy such reports to the CM according to GCC Clause 5.21;
Notify the CM immediately of all 'reportable accidents' as defined under the Factories and Industrial Undertakings Regulations and of the accident/incident to be reported under the 'accident/incident reporting procedures' of the HD. Download the accident/incident reporting form from HD's Site Safety Website and comply with the procedures;
Notify the HD Site Staff immediately (i.e. within the day of the accident/incident) of accident/incident on Site, including:
- Serious accident/incident;
- Reportable accidents, dangerous occurrence and near miss/incidents (if the accident/incident, though not serious by immediate effect, may have potentially serious consequence, such as those involving but not limited to falling from height, falling object, being struck by moving object, tower crane lifting, public safety etc.) on Site;
- Tree failure incident of any of the following nature occurs:
  • Loss of human life;
  • Major injury where the injured is admitted or to be admitted to hospital;
  • Substantial damage to properties;
  • Serious/complete blockage to main pedestrian/vehicular access; and
- Death of person.
Provide statistics and analysis of accidents, investigate and ascertain the contributory factors and root causes, identify the trends and recommend means of prevention and improvement;

Provide means to communicate accident statistics information, recommendation to prevent recurrences and lessons learnt from previous accidents to all persons working on the Site.

x. Emergency preparedness:
An emergency situation means a situation requiring emergency assistance of fire services/police/ambulance etc. It includes:
- An accident which results in death or serious injury;
- A fire breaking out which requires rescue crews from Fire Services Department to effect control;
- A flood that causes or threatens life on site;
- A leakage of dangerous goods or chemicals; and
- Any other accident/incident which creates a dangerous situation.
Evacuation plans to be drawn for all areas. The procedures are to be reviewed and revised periodically, especially when the work-site configuration is altered or changes in some way.

xi. Safety promotion:
The effort made by different sub-contractors or individuals to reduce accidents at work by the application of soundly based policies, procedures and disciplines to be recognised by the presentation of safety and health award. Adopt proactive attitude towards improving health and safety performance and/or the best related achievement in reducing number of accidents. The site as a whole is encouraged to participate in the following designated safety campaigns:
- "Construction Safety Day", "Construction Safety Promotional Campaign" or "Good Housekeeping Promotion Campaign" led by the Occupational Safety and Health Council;
- "Construction Industry Safety Campaign" led by the Labour Department; and
- "Considerate Contractors Site Award Scheme" led by the Development Bureau and the Construction Industry Council.
The Contractor is also encouraged to organize site-based safety awards and competitions to promote participation of his workers and teams in safety theme competitions during the contract period. The adjudicating team shall comprise the site management team, safety personnel and workers' representatives, and shall act openly and fairly in such events.

xii. Health assurance programme:
The health of employees and others affected by the Contractor's activities must form an important part of the Contractor's safety and health policy. Work related health aspects, such as pre-employment and routine medical examination of employees engaged in specific jobs, are to be considered. Similarly, health related matters which may affect the workplace such as fumes or vapours from hazardous or toxic substances, pollution, noise, radiation etc., are to be reviewed;
Health surveillance is to be used to detect adverse health effects at an early stage. Appropriate risk assessment to identify the circumstances in which health surveillance becomes necessary.

xiii. Health care plan:
Implement a health care plan for workers on Site as specified under PRE.B8.300.

xiv. Evaluation, selection and control of sub-contractors:
The means by which to ensure sub-contractors of all levels comply with the Safety Plan and statutory requirements on safety and health.

xv. Process control programme:
Safety rules, regulations and working procedures covering all safety and health aspects, and in particular method statements and permit-to-work systems for identified high risk operations are to be addressed.

xvi. Non-smoking policy:
Mandate a non-smoking policy including the rules adopted by the Contractor with respect to prohibition of smoking on Site. In the event that the Contractor does not fully prohibit smoking on Site, include a site plan showing the number and sizes of the designated smoking areas and describe the associated requirements of provisions of fire fighting appliances and cleaning services in the policy.

f. Comply with the Safety Plan and ensure all Safety Officers, Safety Supervisors and all personnel who are in a position of authority among subcontractors have access to the Safety Plan and made aware of their obligation to comply with the Safety Plan. Any Specialist Contractor and other entities (e.g. public utilities) working on the Site shall be provided with a copy of the Safety Plan and be required to comply with it, and report to the CM for any non-compliance on their part.

g. Provide all facilities, access and assistance to the CM to periodically check that the Safety Plan is being implemented properly and fully. If the CM is of the opinion that the Contractor fails to implement the Safety Plan properly and fully and the failure does or may adversely affect the safety, whether for the Works and/or the safety and health of persons on or adjacent to the Site, or protection of any property on or adjacent to the Site or otherwise, the CM shall notify the Contractor in writing of the failure. The Contractor shall take action to remedy the failure immediately. The CM may suspend the Works, or any part of it, until such time the failure has been rectified.

3. Housing Authority Safety Auditing System (HASAS):

a. Safety Auditor:
   i. To be nominated by the CM. More than one Safety Auditor may be nominated for each safety audit and Safety Auditors may be nominated on rotation by the CM for safety audits;
   ii. Must be from the Occupational Safety and Health Council (OSHC)'s list of Accredited Safety Auditors after the date of the Letter of Acceptance;
   iii. Must have no current commercial dealings with the Contractor;
   iv. Clear of any conflict of interest in exercising his role as safety auditor.

b. The Contractor may agree or reject such nomination with valid reason. Re-nominate by the CM within 7 days from the date of the rejection if the nominee is rejected;

c. Once nomination is agreed:
   i. The Accredited Safety Auditor shall conduct safety audit with the Contractor's representatives under the management of the OSHC once every three months;
   ii. CM may instruct the Accredited Safety Auditor to commence the Safety Audit at any time, but not later than the end of the third month from the notified date for commencement of the Works;
   iii. Provide attendance of most senior site representative at each safety audit;
   iv. Provide all necessary attendance for the safety audit including fully facilitating the inspection of the Site and the Works and all certificates, records and reports relating to safety and health matters, and fully cooperate with the Accredited Safety Auditor in the carrying out of the safety audit;
   v. Report to the Accredited Safety Auditor innovative and functional safety installation or safety measures, applications of Building Information Modeling for safety and applications of Radio Frequency Identification for safety implemented for this Contract for onward payment assessment.
d. The Project Director/Heads of Projects of the Contractor shall sign an acknowledgement of receipt of the Safety Audit Report prepared by the Accredited Safety Auditor and submit to OSHC for record;

e. Implement the recommendations of the Accredited Safety Auditor within the time frame specified in the Safety Audit Report;

f. The Safety Officer shall report on the implementation of Accredited Safety Auditor's recommendations in the monthly site meeting;

g. Allow for all work undertaken in preparation for the safety audit or in the implementation of the Accredited Safety Auditor's recommendations. Neither shall entitle the Contractor to any extension of time for completion of the Works.

4. Green Card and Silver Card:

   a. The Contractor, and any of his sub-contractors, shall provide and employ for the purposes of the Works such technical personnel and such skilled, semi-skilled and unskilled labour who, upon their first appearance in the Site and throughout their working in the Site, are a holder of either a valid Green Card issued by an organisation or institution recognized by the Labour Department or a valid Construction Workers Registration Card. The Green Card referred to in this sub-clause is a statutory identification document issued to a person by an organization or institution recognized by the Labour Department upon completion of the training on Green Card;

   b. The following trades shall be carried out by workers holding Silver Cards issued by the Construction Industry Council upon their first appearance in the Site and throughout their working in the Site:

      i. Painter and Decorator;
      ii. Carpenter;
      iii. Demolition Worker (Building);
      iv. Plumber;
      v. Bar Bender and Fixer;
      vi. Plasterer and Tiler;
      vii. Bamboo Scaffolder and Metal Scaffolder;
      viii. Construction Materials Rigger;
      ix. Curtain Wall Installer;
      x. Tower Crane Worker (Erecting, Dismantling, Telescoping & Climbing);
      xi. Lift Mechanic and worker for lift installation (installation and maintenance).

   c. Arrange and release workers of the trades listed in sub-clauses (4)(b)(i) to (4)(b)(x) to attend Silver Card training or revalidation training. Bear the fees for the training courses and pay workers the wages which they would otherwise earn during that period of attending the training courses had the Contractor not released them to attend the training courses;

   d. Keep record of payment for the fees of the training courses and, if applicable, payment of wages to workers who have attended Silver Card training, with workers' signed acknowledgement of receipt;

   e. Keep record of card numbers, card holders' names and expiry dates of the cards, for the inspection by the CM. Ensure that the Green Cards or Silver Cards held by all workers are valid;

   f. Submit to the CM a duly completed prescribed form (DASM-F6211) for the record of Silver Card holders for all workers engaged in the specified trades as listed in sub-clause(4)(b);
g. The Contractor shall ensure that all such personnel and workers shall at all times put on the appropriate Silver Card or Green Card or a valid Construction Workers Registration Card with a printed statement indicating that the holder has a valid Green Card and that such Green Card has not yet expired while they are within the Site. The CM shall, pursuant to GCC Clause 5.9(2), have the power to require the Contractor to remove forthwith any person employed by the Contractor, or by any of his sub-contractors, from the Works who has not complied with the requirements prescribed by sub-clauses (4)(a) and (4)(b) above.

5. Induction training, tool-box talks and other training:

The training material shall cover critical items, namely working at height, housekeeping, prevention against falling objects, lifting operations, tower crane, mobile crane among other site activities in the form of audio-visual medium. The training will be subject to verification by safety auditor managed by OSHC.

a. Site specific induction training:

All persons employed on the Works or in connection with the Contract whether in the employ of the Contractor or his sub-contractor shall receive site specific induction training. The induction training shall cover contents to alert persons new to the site to know specific hazards related to the site or works nature and activities in operation, and necessary precautionary measures. This training should be carried out within 2 working days of any such employee commencing work on the Site. Thereafter, he/she shall be given refresher training at intervals of about 6 months depending on the amount of changes to the site condition. The course shall be conducted by Safety Officers.

b. Tool-box talks:

i. Provide tool-box talks to workers once per week. The talks shall be attended by workers who are working on the Site and engaged in activities relevant to the topic of that training. The topics and contents of tool-box talks shall be proposed by the Safety Officer having regard to the activities of the Site and the prevailing safety concern at that time;

ii. Tool-box talks shall be conducted based on training kits published by the Hong Kong Construction Association Ltd. (HKCA). If the proposed topic is not amongst one of those published by HKCA kits, the Contractor shall then develop training kits of comparable standard for approval by the CM;

iii. The Contractor's Safety Officer shall ensure that tool-box talks are carried out by Safety Supervisors, foreman or gangers who have received training organised by the Hong Kong Construction Association Ltd. or other approved training organisations.

c. Allow the CM or the CM's representative to attend any of the training courses viz. general induction training, site specific induction training, and tool-box talks to verify that they are conducted according to specification;

d. Maintain attendance records on site specific induction training and tool-box talks, the names of the trainers, names and trades of the persons receiving the training and their signatures; maintain electronic photo records taken during the training and talks that show the attendants attending such training and talks. These records shall be made available for CM's inspection upon request by CM;

e. The Contractor's Site Agent or Safety Officer shall certify the accuracy of attendance records on site specific induction training and tool box talks before they are submitted monthly to the CM;

f. Management and other staff, other than workers, employed on the Works or in connection with the Contract whether in the employ of the Contractor or his sub-contractors shall have received appropriate training on safety and health commensurate with their duties;
g. Maintain attendance records on site for all safety training conducted or arranged. These records shall include the topics and dates of the events, the names of trainers, names and trades of the persons receiving the training and their signature. Make them available for CM's inspection upon request;

6. Site Safety Committee:
   a. Establish a Site Safety Committee which shall be responsible for ensuring the implementation of the Safety Plan, reviewing and monitoring the effectiveness of the safety and health measures taken and seeking the cooperation and commitment of staff at all levels;
   b. The Site Safety Committee shall be chaired by the Site Agent with members comprising the Contractor's project manager, Safety Officers, selected Safety Representatives and other staff of the Contractor or sub-contractors as may be considered necessary. It shall meet at least monthly discussing all matters relating to the implementation of the Safety Plan. The first meeting shall be held no later than 28 days from and including the date for commencement of the Works notified by the Contract Manager in accordance with GCC Clause 8.1. The Contractor may invite any other party such as the Labour Department, Police or representatives of utility undertaking to attend the meeting and provide advice as necessary;
   c. Give advance notice of every Site Safety Committee meeting to the CM who will attend the meeting in person or nominate a representative to attend the meeting as an observer;
   d. The following items shall, amongst others, be reported and discussed at the Site Safety Committee meeting:
      i. Review of the Safety Plan, update risk assessment for the work scheduled at least for the next two months, review and establish safety and health provisions, safe working procedures and method statements, update the emergency and rescue procedure;
      ii. Update of the safety organisation chart and review of the adequacy of safety personnel;
      iii. Review of the safety performance of sub-contractors;
      iv. Any unsafe practices and conditions identified during safety inspections/audits and any follow up action;
      v. Advisory/warning or contravention notices letters issued by Labour Department and any Improvement/Suspension Notices received;
      vi. Review of accident frequency rates and statistics of the Contractor and sub-contractors and identification of trends;
      vii. Details of the Contractor's accident and dangerous occurrence experience;
      viii. Safety and health training undertaken in the previous month and the proposed training programme for the following month;
      ix. Details of safety promotional activities; and
      x. Safety co-ordination among various sub-contractors working in close proximity to each other;
      xi. Submission of forms GF527 and GF527A or other pertinent forms on the employment statistics of the Contract to the Census and Statistics Department with copy to CM or CM's representative on a monthly basis;
      xii. Compilation and submission to the Commissioner for Labour the Supplementary Information on Accidents on Construction Sites for the purpose of analysis in addition to the statutory forms and the requirements of GCC Clause 5.21;
      xiii. Updated Safety Plan.
   e. Prepare minutes of the Site Safety Committee meeting and copy it to the CM within 5 working days of the meeting.

7. Safe Working Cycle:
a. Practise 'Safe Working Cycle' (SWC) to improve and promote the safety and health of the Site. Safe Working Cycle should begin when there are workers working on the Site, and shall cease by the date of substantial completion of the Works. The activities of SWC are classified into three categories. They are Daily Cycle, Weekly Cycle and Monthly Cycle. Details of the each category of SWC are given below:

i. Daily Cycle:
   - Pre-work Exercise and Safety (PES) meeting;
   - Hazard Identification Activity (HIA) meeting;
   - Pre-work Safety Checks;
   - Safety inspection by Site Agent or his representatives;
   - Guidance and supervision during work;
   - Safety co-ordination meeting;
   - Daily cleaning and tidying up of the Site;
   - Checking of the Site after each day's works.

ii. Weekly Cycle:
   - Weekly safety inspection by Site Agent and Safety Officer;
   - Weekly safety co-ordination meeting;
   - Weekly overall cleaning and tidying up of the Site.

iii. Monthly Cycle:
   - Site Safety Committee meeting and pre-meeting inspection.

b. The first three items under Daily Cycle described in sub-clause (7)(a)(i), namely, Pre-work Exercise and Safety (PES) meeting, Hazard Identification Activity (HIA) meeting and Pre-work Safety Checks, are collectively referred to as the "Pre-work Activities". Pre-work Activities are to be held for attendance by persons employed on the Works (excluding clerical and administrative staff in site office), irrespective of whether they are in the employment of the Contractor or sub-contractors. Detail requirements for the Pre-work Activities are:

i. Arrange and hold Pre-work Exercise & Safety (PES) meeting of about 10 to 15 minutes for all persons employed on the Works. The PES meeting shall be led by the Site Agent or senior staff of site management of the Contractor, who has attended the training course on Safe Working Cycle of the Occupational Safety & Health Council (OSHC) or Construction Industry Council. The PES meeting shall start with physical exercise, followed by a briefing to workers on the prevailing safety and health matters related to the Site, such as common hazards and control measures, safety precautions, specific safety concerns etc.;

ii. Arrange and hold Hazard Identification Activity (HIA) meeting of about 10 minutes for the attendees immediately after the PES meeting. Alternatively, the HIA meetings can be held in small groups according to the trades, work teams or works areas set out by the Contractor for the Site. If so, the Contractor shall ensure that the assigned persons are competent to lead the HIA meetings. Persons who have attended one day training course on HIA leadership provided by OSHC are considered competent to lead the HIA meetings. The issues discussed at the HIA meetings shall cover, but not limited to, hazards and control measures specific to the works or trades, special safety concerns, assurance of safety requirements and measures, reprimand of repeated irregularities and malpractice etc.;
iii. Arrange and hold Pre-work Safety Checks for the attendee immediately after the HIA meeting. The Pre-work Safety Checks shall be carried out by foremen, gangers, Safety Supervisors or Safety Representatives of the attendees according to the trades, work teams or works areas. The Pre-work Safety Checks shall include the checking of personal protective equipment worn by attendees before they start working on that day such as safety helmet, reflective vest, ear protectors, eye protectors, safety harness, safety footwear etc..

c. Pre-Work Activities are to be held daily, but in any case the frequency of Pre-work Activities for attendance by each person employed on the Works shall not be less than once a week. The Pre-work Activities shall be carried out prior to any work carried out by the persons attending the Pre-work Activities on that day;

d. Maintain attendance records of the workers participating in the Pre-Work Activities including their names and trades. Such attendance records are to be certified by Site Agent. Maintain electronic photo record showing the attendants during such activities. These records shall be made available for CM’s inspection upon request by CM;

8. Safety Representatives:

a. Appoint the ganger of each labour group or team working on Site to act as Safety Representative. The ganger of the bar benders and fixers responsible for supervision and fabrication of reinforcement cages for barrettes and large diameter bored piles must be appointed as Safety Representative. The Safety Representatives shall be clearly identified on Site by wearing an armband or a safety helmet appropriately marked in Chinese and English;

b. The Safety Representatives shall attend Safety and Health Supervisor (Construction) Course (nominal course duration 43 hours) provided by the Occupational Safety and Health Council or Construction Safety Supervisor Course (nominal course duration 42 hours) provided by the Construction Industry Council. Acceptance of training provided by other organizations is subject to verification that the training is based on course contents of equivalent or above standards and the appointed superintendent has attained the associated qualification;

c. In respect of underpinning safety management, the Safety Representative shall be responsible for ensuring that:

i. The directives on safety and health matters from the Contractor, the Safety Officer, Safety Supervisors, Site Agent and Foremen are duly carried out;

ii. Safety practices are adopted by the workers; and

iii. Protective clothing and equipment are used by the workers at all times on the Site.

d. Ensure that the Safety Representatives and the workers on the Site under supervision of the Safety Representatives are aware of the roles and responsibilities of the Safety Representatives on safety and health matters.

9. Surprise Safety Inspection Programme (SSIP):

a. Professional Safety Inspectors (SI) appointed by Occupational Safety & Health Council (OSH) will conduct surprise safety inspection;

b. The surprise safety inspection may be conducted at any time after the date for commencement of the Works till the certified date of completion of the Works;

c. Provide all necessary attendance for the surprise safety inspection including fully facilitating the inspection of the Site, the Works and all necessary supporting documents such as certificates, records and reports relating to safety and health matters, and fully co-operate with the Safety Inspector in the carrying out of the surprise safety inspection;

d. A Contractor’s representative must accompany the Safety Inspector throughout the inspection;
e. The Contractor’s representative shall acknowledge the result of the inspection by signing in the presence of Housing Department resident site staff and submit a copy of signed report to the Contract Manager and another copy to OSHC for record;

f. Rectify the non-conformance items recorded by the Safety Inspector;

g. The Site Agent shall report the results of surprise safety inspection and the respective follow up rectification actions for non-conformance items in the monthly site meeting.

**Option 3**

In relation to the requirements of GCC 5.11 and **PRE.B6.070**, comply with all current Regulations concerning safety on the Site in particular the Factories and Industrial Undertakings Regulations and the requirements specified in the Contract as follows.

1. Safety Plan:
   a. Prepare and submit to the CM a detailed and comprehensive draft Safety Plan within 28 days of the notified date for commencement of the Works and shall implement the same throughout the progress of the Works.
   b. Update the Safety Plan from time to time and as necessary, or when required by the CM, revise and update the Safety Plan so that it is at all times a comprehensive and contemporary statement of the Contractor’s safety and health policies, procedures and requirements to achieve the safety and health obligations and responsibilities under the Contract. The submission to the CM of a revision and/or update of the Safety Plan shall be made in accordance with the GCC Clause 4.3.
   c. The CM may by notice in writing require the Contractor to supplement, revise or update the Safety Plan if he is of the opinion that the Safety Plan is insufficient or requires revision or modification in the interest of the safety, whether for the Works and/or the safety and health of persons on or adjacent to the Site or protection of any property on or adjacent to the Site or otherwise. Comply with the CM’s requirements within a reasonable time.
   d. The CM’s endorsement, comment or rejection of the Safety Plan and of any proposed revision or update, and the implementation of the Safety Plan by the Contractor shall not relieve the Contractor from any obligations or responsibilities under the Contract or any statutory regulations.
   e. Comply with the Safety Plan and ensure that all Safety Officers, Safety Supervisors and all personnel who are in a position of authority among subcontractors have access to a copy of the Safety Plan and made aware of their obligation to comply with the Safety Plan. Any Specialist Contractor and other entities (e.g. public utilities) working on the Site shall be provided with a copy of the Safety Plan and be required to comply with it, and report to the CM for any non-compliance on their part.
   f. Provide all facilities, access and assistance to the CM to periodically check that the Safety Plan is being implemented properly and fully. If the CM is of the opinion that the Contractor fails to implement the Safety Plan properly and fully and the failure does or may adversely affect the safety, whether for the Works and/or the safety and health of persons on or adjacent to the Site, or protection of any property on or adjacent to the Site or otherwise, the CM shall notify the Contractor in writing of the failure. The Contractor shall take action to remedy the failure immediately. The CM may suspend the Works, or any part of it, until such time the failure has been rectified.
   g. The Safety Plan and any subsequent updated Safety Plan shall contain, without limitation, details of the following:
      i. A policy statement for health and safety signed by the managing director of the Contractor and his most senior representative on the Site;
      ii. Statutory and contractual obligations regarding safety and health imposed on the Contractor and the means by which the Contractor will achieve due compliance;
iii. The safety staff organisational structure including an organisation chart which shows the chain of responsibility and accountability from managing director, project manager, safety manager, and site agent. Define responsibilities and duties of these safety personnel;

iv. The means by which to ensure sub-contractors of all levels shall comply with the Safety Plan and statutory requirements on safety and health;

v. Assessment of the risks to health and safety associated with the Works, where appropriate, and proposals for necessary precautions including safe working procedures and methods for the following:
- Work at height and the associated risks of fall of persons and objects;
- Use of lifting appliances;
- Excavation;
- Use of electricity;
- Use of machinery, construction plant and equipment;
- Temporary works;
- Use of dangerous substances;
- Use of hand tools;
- Working in confined space;
- Working on slopes;
- Working in roads and footways.

vi. Emergency procedures for the following situations:
- Fire;
- Accidents;
- Typhoons;
- Heavy rainstorms.

vii. Procedures for reporting and recording accidents and dangerous occurrences;

viii. Proposed items in the safety supervisor's report presented at the monthly site meeting. Include, but do not limit to the following:
- Implementation and updating of the Safety Plan and all relevant aspects of safety and health to be addressed;
- Safety inspections and monthly self-audit against the Safety Plan;
- Risk assessment of the construction activities to be carried out in the following month;
- Report on accidents and dangerous occurrences during the month;
- Implementation of the recommendations in the monthly self-audit;
- Examination reports and test certificates required by legislation or the Contract.

ix. The personal protective equipment which will be required for the Works and the means or ensuring proper and where appropriate, mandatory use by the persons on the Site;

x. The means and frequency by which safety equipment, scaffold, working platform, lifting appliance, machinery, electrical equipment and installation, lighting, warning signs and guarding equipment will be inspected, tested and maintained and records kept and made available for inspection;

xi. Proposal for safety training for workers engaged in hazardous trades including attendance at relevant courses run by the Occupational Safety and Health Council (OSHC).
PRE.B8.220.7 **PROVISION OF SAFETY REGULATIONS**

Provide on Site for the use of the CM for the duration of the Contract, one set of the latest Construction Site (Safety) Regulations, the Factories and Industrial Undertakings Regulations concerning Safety Officers, Safety Supervisors and any other safety matter. Provide any revisions or new Safety Regulations that may be introduced during the continuance of the Works.

PRE.B8.225.7 **CARING OF NEW WORKERS**

Provide caring programme for new workers including but not limited to the following:

1. **Probationers** (workers who newly join the construction industry)
   a. Provide identification with "P" labels;
   b. Assign mentors (with a ratio of 1 mentor to not more than 4 probationers) who possess good experience on the Site to take care of the Probationers and provide guidance on site safety with a caring period not less than 3 months;
   c. Provide a safety orientation programme covering the essential safety aspects related to the Site, guidance for work and arrangement for familiarization of the Site;
   d. Subject to the mentor being satisfied with the Probationer's safety performance, remove identification label from safety helmet after the 3 months' caring period.

2. **New Comers** (workers with relevant job experience but newly arrive at the Site)
   a. Provide identification with "N" labels;
   b. The display of "N" labels shall not be less than two weeks;
   c. Provide a safety orientation programme covering the essential safety aspects related to the Site, guidance for work and arrangement for familiarization of the Site.

3. **Requirements of labels for Probationers and New Comers**
   a. Each label shall be adhered on a conspicuous part of a safety hamlet;
   b. The size of label shall not be less than 50 mm (L) x 50 mm (H);
   c. The name and telephone number of the mentor shall be shown on the label.

PRE.B8.230.7 **SAFETY POSTERS**

Obtain posters, in both English and Chinese, drawing attention to safety on site and display prominently upon all structures or temporary huts on the Site throughout the construction period and remove on completion. These posters are obtainable free of charge from the Labour Department of the Hong Kong Government.

PRE.B8.235.7 **SAFETY EQUIPMENT AND CLOTHING FOR PERSONAL PROTECTION OF OPERATIVES AND SITE SUPERVISORY STAFF**

**Option 1**

In relation to PRE.B8.210, comply with the particular requirements as follows:

1. **Safety helmet**: provide each of the operatives and site supervisory staff with safety helmet with ventilation vents and Y-type chin strap, and sunshade accessories such as brim or neck protector where appropriate, and ensure that each of them wears the safety helmet on Site. Notwithstanding the above, provision and wearing of safety helmet with I-type chin strap up to 31 December 2015 is permitted;

2. **Clothing and footwear**: provide each of the operatives (other than Casual Workers) and site supervisory staff with and ensure that each of them wears on Site the following items of clothing and footwear:
   a. Polo shirt made with CVC fabric or such other fabric as appropriate, in short sleeves and long sleeves to suit the weather, with reflective strips and imprinted with a logo of the construction industry;
   b. Wind breaker with reflective strips and imprinted with a logo of the construction industry;
c. Safety boots (except for bamboo scaffolders, plasterers and tilers). Notwithstanding the above, the Contractor may propose his corporate uniform for construction works to replace the items of clothing in sub-clauses (a) and (b) above, subject to CM's approval.

3. Eye and ear protection: ensure that
   a. Operatives of grinding machines and cutting wheels wear goggles;
   b. Operatives chiselling or drilling rock or concrete wear goggles;
   c. Welders use visors;
   d. Operatives of percussion tools wear ear mufflers;
   e. Operatives handling corrosives wear plastic gloves and goggles;
   f. Operatives using hand held cartridge-operated tools wear goggles and ear mufflers.

4. Provide and maintain machine guards to dangerous parts of machines;

5. Ensure that operatives using spray paint or similar materials wear suitable protective respirators.

**Option 2**

In relation to **PRE.B8.210**, comply with the particular requirements as follows:

1. Safety helmet: provide each of the operatives and site supervisory staff with safety helmet with ventilation vents and Y-type chin strap, and sunshade accessories such as brim or neck protector where appropriate, and ensure that each of them wears the safety helmet on Site. Notwithstanding the above, provision and wearing of safety helmet with I-type chin strap up to 31 December 2015 is permitted;

2. Clothing and footwear: provide each of the operatives and site supervisory staff with and ensure that each of them wears on Site the following items of clothing and footwear:
   a. Polo shirt made with CVC fabric or such other fabric as appropriate, in short sleeves and long sleeves to suit the weather, with reflective strips and imprinted with a logo of the construction industry;
   b. Wind breaker with reflective strips and imprinted with a logo of the construction industry;
   c. Safety boots (except for bamboo scaffolders, plasterers and tilers). Notwithstanding the above, the Contractor may propose his corporate uniform for construction works to replace the items of clothing in sub-clauses (a) and (b) above, subject to CM's approval.

3. Eye and ear protection: ensure that
   a. Operatives of grinding machines and cutting wheels wear goggles;
   b. Operatives chiselling or drilling rock or concrete wear goggles;
   c. Welders use visors;
   d. Operatives of percussion tools wear ear mufflers;
   e. Operatives handling corrosives wear plastic gloves and goggles;
   f. Operatives using hand held cartridge-operated tools wear goggles and ear mufflers.

4. Provide and maintain machine guards to dangerous parts of machines, ensure that all machines are fitted with "Dead Man's Handles";

5. Ensure that operatives using spraying equipment or similar wear suitable protective respirators.
SAFETY EQUIPMENT AND CLOTHING FOR PERSONAL PROTECTION OF CM, CM’S REPRESENTATIVES AND VISITORS

1. Provide sufficient safety helmets with ventilation vents and Y-type chin straps and sunshade accessories such as brim or neck protector, reflective vests, rubber boots, protective and waterproof clothing and devices such as ear muffs and protective glasses where appropriate for the use of the CM, CM’s representatives and authorised persons visiting the Site;

2. The reflective vests provided shall conform to the following with reference to drawing no. RJ-SK-01:
   a. Background material: fluorescent orange-red, mesh knitted;
   b. Retroreflective strips:
      i. 50 mm in silver gray with fabric backing, conforming to photometric performance requirements as mentioned in EN471-2003 (Class 2);
      ii. Be durable and can still comply with the requirement in sub-clause 2(b)(i) after washing for a minimum of 25 cycles;
      iii. The supplier shall submit test reports on retroreflective materials for demonstrating compliance with the following requirements under EN471-2003 (Class 2): photometric performance (initial), abrasion, flexing, folding at cold temperatures, exposure to temperature variations, washing and influence of rainfall.

INSPECTION AND CERTIFICATION OF OVERHAUL OF MAJOR CONSTRUCTION PLANT ON SITE

Option 1

1. The major construction plant on Site covered under this Specification include but not limited to the following:
   a. Tower cranes (rented);
   b. Tower cranes (self-owned);
   c. Derrick cranes (used for installing and dismantling tower cranes);
   d. Gondolas;
   e. Material hoists;
   f. Mobile cranes (excluding crawler cranes);
   g. Truck-mounted cranes.

Option 2

1. The major construction plant on Site covered under this Specification include but not limited to the following:
   a. Mobile cranes (excluding crawler cranes);
   b. Truck-mounted cranes;
   c. Crawler cranes (rented);
   d. Crawler cranes (self-owned);
   e. Pile drivers (rented);
   f. Pile drivers (self-owned);
   g. Hydraulic hammers (rented);
   h. Hydraulic hammers (self-owned);
   i. Oscillators (rented);
   j. Oscillators (self-owned);
   k. Rotators (rented);
   l. Rotators (self-owned).

Option 3

1. The major construction plant on Site covered under this Specification include but not limited to the following:
   a. Mobile cranes (excluding crawler cranes);
b. Truck-mounted cranes.

2. Mobile crane (excluding crawler crane) and truck-mounted crane are defined as follows:
   a. A mobile crane (excluding crawler crane) is a crane mounted on a wheeled chassis for travel as shown in Fig. 1b and 1d on page 14 of the Code of Practice for Safe Use of Mobile Cranes published by the Labour Department;
   b. A truck-mounted crane is a loader crane (consisting of a column, a base and a boom system) mounted on a truck or lorry as shown in Fig. 1c (irrespective of the position of mounting of the crane) on page 14 of the Code of Practice for Safe Use of Mobile Cranes published by the Labour Department.

3. Comply with all statutory requirements in relation to the use of the major construction plant on Site. Compliance with this Specification clause does not by itself confer any immunity from legal obligations;

4. Submit the schedule of inspection, examination, testing and maintenance for the major construction plant on Site to the CM in accordance with the manufacturer's recommendation or to suit the actual plant conditions, whichever is more frequent, to ensure that the construction plant are in safe and serviceable conditions;

5. Appoint a responsible person or persons to perform inspection during and after the erection or re-erection or alteration of the major construction plant on Site. The responsible person or persons shall have adequate training and experience to ensure that the major construction plant under checking are in safe and serviceable conditions;

6. The responsible person or persons shall look out for any signs of material defect in the components of the major construction plant such as fatigue crack or corrosion crack during his inspection. Carry out Non-destructive Test (NDT) to further assess the integrity of those components in question. Any part with damages or defects found shall be repaired or replaced in accordance with the manufacturer's recommendations;

7. Keep on Site all records of inspection, examination, testing, maintenance and breakdown of the major construction plant in a form to the satisfaction of the CM for checking by the CM or his representatives on monthly basis;

8. In addition to the requirements in sub-clauses (3) to (7), overhaul the following major construction plant and provide Certificates of Overhaul which shall be certified and signed by a "Competent Examiner" (CE) as defined under Cap. 59I Construction Sites (Safety) Regulations, Cap. 59J Factories and Industrial Undertakings (Lifting Appliances and Lifting Gear) Regulations or Cap. 59AC Factories and Industrial Undertakings (Suspended Working Platforms) Regulation at the overhaul ages as defined in the following table:

<table>

Any overhaul, regular maintenance, etc. required by the manufacturers should also be met in addition to any overhaul requirements above.

"Overhaul age" means the age at or beyond which overhaul maintenance is required at least in accordance with the specified overhaul procedures including the Checklists of Critical Parts for Overhaul Maintenance of the respective types of major construction plant as specified in Appendix PRE.B8/XI before the plant is put into use on Site again.

"Overhaul maintenance" means an overall inspection, examination, repair, renewal and maintenance on critical parts and main components of a plant to be carried out in a depot with good engineering practice throughout by maintenance technicians and plant engineers to ensure that the critical parts and main components of the plant conform to the manufacturers' specifications and reinstate in a fully serviceable condition.

"Serviceable condition" means the state of a plant that is fit for use with due regard to the manufacturers' specifications and the relevant national or international standards.

**a.** The age of the major construction plant shall be clearly indicated on the plant itself and in the manufacturers' documents, such that it can be verifiable by the CM's representatives on Site;

**b.** Provide evidence of the eligibility of the CE responsible for certifying the overhaul at the time of certification;

**c.** The Certificate of Overhaul of the respective types of major construction plant on Site at Appendix PRE.B8/X shall be used, indicating the following:

**i.** the CE has verified and confirms the age of plant based on the manufacturer's records;
ii. the CE has inspected and confirms that overhaul has been done in accordance with the Checklists of Critical Parts for Overhaul Maintenance for the respective types of major construction plant in Appendix PRE.B8/XI where applicable;

iii. the CE has recorded any deviation from the requirements in the checklist with full substantiation;

iv. the CE confirms that the plant is in a safe working condition.

d. The Checklists of Critical Parts for Overhaul Maintenance at Appendix PRE.B8/XI for the respective types of major construction plant is not exhaustive and compliance with which shall not relieve the Contractor from his responsibility and liability under the Contract. NDT in the Checklists of Critical Parts for Overhaul Maintenance refers to such inspection and tests to be carried out by persons specifically qualified to conduct NDT. When both English and Chinese are presented, English takes precedence over Chinese in the Checklists of Critical Parts for Overhaul Maintenance.

9. Provide Certificates of Overhaul for all major construction plant on Site in accordance with sub-clause (8). The age of any major construction plant on Site must at all times within the Contract period be less than or equal to the age due for the next immediate overhaul or the respective ages beyond which the plant is not allowed to be on Site, whichever is lower. Ensure compliance with the overhaul requirements herein throughout the service period of all major construction plant on Site by measures including forecasting the service periods and deploying plant of appropriate ages when first installed;

10. The overhaul ages for the respective major construction plant as referred in sub-clause (8) are defined by the critical parts of the plant or the whole plant itself as tabulated below:

<table>
<thead>
<tr>
<th>Major construction plant</th>
<th>Definition of overhaul age</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tower cranes (rented and self-owned)</td>
<td>Age of tower crane itself</td>
</tr>
<tr>
<td>Derrick cranes (used for installing and dismantling tower cranes)</td>
<td>Age of winches of derrick crane</td>
</tr>
<tr>
<td>Gondolas</td>
<td>Age of the climber or arrestor, whichever is greater</td>
</tr>
<tr>
<td>Material hoists</td>
<td>Age of winches of material hoist</td>
</tr>
<tr>
<td>Mobile cranes (excluding crawler cranes)</td>
<td>Age of mobile crane itself</td>
</tr>
<tr>
<td>Truck-mounted cranes</td>
<td>Age of the crane itself only, not the truck on which the crane is mounted</td>
</tr>
<tr>
<td>Crawler cranes (rented and self-owned)</td>
<td>Age of crawler crane itself</td>
</tr>
<tr>
<td>Pile drivers (rented and self-owned)</td>
<td>Age of pile driver itself</td>
</tr>
<tr>
<td>Hydraulic hammers (rented and self-owned)</td>
<td>Age of hydraulic hammer itself</td>

11. For mobile cranes (excluding crawler cranes) older than 12 years old, during a period of .... months from the notified date for Commencement of the Works, comply with the requirements in sub-clauses (8) to (10) inclusive or provide signed Forms LALG-F3 required by Cap. 59J Factories and Industrial Undertakings (Lifting Appliances and Lifting Gear) Regulations issued not earlier than 8 May 2013;

12. Notwithstanding the requirements in sub-clause (8), the following apply to truck-mounted cranes:
a. The overhaul requirements herein for truck-mounted cranes apply to the cranes only but not to the trucks on which the cranes are mounted;
b. Provide Certificates of Overhaul for the cranes mounted on all trucks on Site in accordance sub-clause (8) herein;
c. Prohibit the operation of the cranes mounted on any trucks on Site in case Certificates of Overhaul are not provided for the cranes mounted thereon. In such cases, provide and operate all necessary alternative lifting appliances to perform offloading/uploading from and onto such trucks;
d. Plan ahead for delivery of goods, materials, etc. to ensure the use of trucks for which Certificates of Overhaul is provided for the cranes mounted thereon.

13. "Self-owned" plant mentioned above shall mean plant owned by the Contractor or by the Contractor's parent, sister or subsidiary company for the exclusive use of the Contractor. In case the Contractor sublets part of the Works to a sub-contractor and this sub-contractor is on the appropriate Category of Housing Authority List of Piling Contractors, then "self-owned" plant shall be extended to cover also plant owned by this sub-contractor or by the sub-contractor's parent, sister or subsidiary company for the exclusive use of the sub-contractor. "Rented" plant mentioned above shall mean plant that are not considered as "self-owned" plant;

14. Bear all the additional time and costs arising from compliance with the requirements in sub-clauses (1) to (13) above.

PRE.B8.242.7 USE OF TOWER CRANES

1. In addition to any obligation under GCC Clause 5.11 or similar obligations under any enactment or Regulation, adopt the practices and/or measures in respect of tower crane operation as recommended in the latest edition of the Guidelines on Safety of Tower Cranes issued by the Construction Industry Council. Examine critically the practices and/or measures as recommended in the above-mentioned Guidelines, especially their applicability and suitability to the Works on account of the actual site conditions and the specific safety hazards of the Works. Alternative practices and/or measures which should not be inferior to those recommended in the said Guidelines may be proposed for CM's approval before implementation. The following highlights of the crucial practices and/or measures, albeit not exhaustive, are extracted from the above-mentioned Guidelines:

a. Check critical parts of the tower crane, anchorage and supporting structure before erection of tower cranes;
b. Improve site supervision of tower crane operations;
c. Specify qualification and experience of the specialist sub-contractor(s) performing erection, dismantling and height alteration of tower crane;
d. Specify qualification and experience of competent persons and workers for tower crane operations, etc.

2. Engage, or arrange through Contractor's subcontractor(s) the engagement of, the following personnel full time on Site (except the personnel under sub-clauses (2)(a), (2)(f) and (2)(g) who need to be on Site for the carrying out of the duties in accordance with the Code of Practice for Safe Use of Tower Cranes issued by Labour Department and the Guidelines on Safety of Tower Cranes issued by Construction Industry Council) during the operation of tower crane:

a. Competent Examiner:
   i. The competent examiner shall be a registered professional engineer registered under the Engineers Registration Ordinance within the discipline of Mechanical Engineering or Marine & Naval Architecture or a relevant discipline specified by the Commissioner for Labour.

b. Tower Crane Operator:
   i. The tower crane operator(s) shall hold qualifications and possess relevant experience as specified in the Code of Practice for Safe Use of Tower Cranes issued by Labour Department.
c. Slinger (Construction Materials Rigger):
   i. The slinger(s) shall possess relevant qualification and experience as specified in the Code of Practice for Safe Use of Tower Cranes issued by Labour Department.

d. Signaller:
   i. The signaller(s) shall possess relevant qualification and experience as specified in the Code of Practice for Safe Use of Tower Cranes issued by Labour Department;
   ii. The role of signaller can be taken up by a slinger possessing relevant qualification and experience in carrying out the duties as specified in sub-clause (d)(i) above.

e. Responsible Person
   i. The responsible person shall possess relevant training and experience in respect of discharging duties for the proper implementation of the safe system of work as specified in the Code of Practice for Safe Use of Tower Cranes issued by Labour Department.

f. Competent Person
   i. The competent person shall possess adequate training and experience as specified in the Code of Practice for Safe Use of Tower Cranes issued by Labour Department and the Guidelines on Safety of Tower Cranes issued by Construction Industry Council.

g. Competent Mechanical Engineer (CME)
   i. The CME shall possess relevant qualification and experience as required under the Guidelines on Safety of Tower Cranes issued by Construction Industry Council;
   ii. The role of CME can be taken up by a competent examiner as specified in sub-clause (a) above.

3. Ensure all the personnel as specified in sub-clauses (2)(a) to (2)(g), the Safety Supervision Personnel as per PRE.B6.060 sub-clause (15) and the Supervising Engineer (Tower Crane) as per PRE.B6.060 sub-clause (20) shall carry out their respective duties on Site in accordance with the Code of Practice for Safe Use of Tower Cranes issued by Labour Department and the Guidelines on Safety of Tower Cranes issued by Construction Industry Council;

4. Submit particulars of all the personnel as specified in sub-clauses (2)(a) to (2)(g) the Safety Supervision Personnel as per PRE.B6.060 sub-clause (15) and the Supervising Engineer (Tower Crane) as per PRE.B6.060 sub-clause (20), including their names and qualifications, to the CM for his approval before their engagement in this Contract;

5. In addition to the above sub-clauses, adopt all the practices and/or measures recommended in the latest edition of the Guidelines on Safety of Tower Cranes (GSTC) issued by Construction Industry Council unless otherwise directed by the CM. The following terms used in the GSTC, however, shall be construed with the respective meaning as follows for the purpose of the Specification:

<table>
<thead>
<tr>

</table>

6. Ensure that the following are complied with in lifting operations:
   a. All materials being lifted are safely and securely tied;
   b. Care is taken to avoid falling objects;
   c. Materials are not transported by the crane outside the Site boundary unless obtained CM's prior approval;
   d. There is another site personnel to assist the slinger to carry out his work within the lifting zone.
7. Display a currently valid test and examination certificate duly signed by a Registered Professional Engineer (Mechanical or Marine Discipline) for all lifting equipment. The certificate shall be Forms 1, 2, 3 and 5 of Factories and Industrial Undertakings (Lifting Appliances and Lifting Gear) Regulations where appropriate;

8. Before the commissioning of a tower crane for its lifting operations, provide and install a CCTV system comprising a camera fixed at each designated lifting zone proposed by the Contractor and a camera fixed on tower crane (for "A" frame or flat top tower crane) and associated equipment in the tower crane cabin in compliance with the following:

a. CCTV camera at each designated lifting zone proposed by the Contractor and associated equipment:
   i. The constant speed dome camera must be capable of 360° rotation and tilting from 0-90°;
   ii. The zooming control system for the camera shall have minimum 20X optical zoom with resolution 752(H) x 582(V). It shall be able to function at 1 lux with automatic iris and focus control which can be manually overridden;
   iii. The constant speed dome camera shall be fixed at each designated lifting zone proposed by the Contractor at the ground floor or a low level of each block;
   iv. The power, control and video cables connecting the camera shall be of the plug and socket type 75 ohms BNC type video connectors shall be provided for all cable connections of the video system equipment;
   v. The diagonal of the LCD colour display unit shall be at least 7 inches wide. Its screen shall be provided with anti-glare surface/coating;
   vi. The LCD display unit shall be of industrial type and its resolution shall not be lower than 752(H) x 582(V);
   vii. The LCD display unit shall be equipped with control buttons/knobs to adjust the basic settings, including brightness and contrast;
   viii. All connection panels, equipment mounting brackets, camera housing that are constructed with metal shall be duly earthed to prevent any electric shock.

b. CCTV camera fixed onto tower crane and associated equipment:
   i. CCTV camera shall be fixed onto tower crane trolley (for "A" frame or flat top tower crane) or the end of the tower jib/boom to capture the best view;
   ii. The installation shall consist of a CCTV camera, a wireless transmission unit, a control unit, and a monitor. The system (for "A" frame or flat top tower crane) shall be automatically started as the tower crane trolley leaves the control cabin and automatically stopped as the tower crane trolley returns to the control cabin. The system (for other types of tower cranes) shall be automatically started as the tower crane is in operation;
   iii. The zooming control system for the camera shall have minimum 30X optical zoom with resolution 752(H) x 582(V). It shall be able to function at 1 lux with automatic iris and focus control which can be manually overridden;
   iv. Camera housing shall be provided with proper shading against direct sunlight;
   v. The camera shall be powered by rechargeable battery, which can be charged during the normal operation of the tower crane without any disruption to the tower crane operation;
   vi. Its wireless transmission unit shall work on 2.4 GHz, be of a type as approved by Office of the Telecommunications Authority of Hong Kong and have a transmission distance of 200 m at minimum. There shall not be any obstruction between the transmitter and the receiver units;
vii. The zooming of the camera shall be capable of being controlled by the tower crane operator by joystick or foot pedals in the tower crane cabin;

viii. The power, control and video cables connecting the camera shall be of the plug and socket type. 75 ohms BNC type video connectors shall be provided for all cable connections of the video system equipment;

ix. The diagonal of the LCD colour display unit shall be at least 7 inches wide. The screen shall be provided with anti-glare surface/coating;

x. The LCD display unit shall be of industrial type and its resolution shall not be lower than 752(H) x 582(V);

xi. The LCD display units shall be equipped with control buttons/knobs to adjust the basic settings, including brightness and contrast;

xii. All connection panels, equipment mounting brackets, camera housing that are constructed with metal shall be duly earthed to prevent any electric shock.

c. Maintenance and Repair:

i. Tower crane operator shall check the CCTV system daily for its normal functioning;

ii. Carry out weekly inspection and monthly checking of the CCTV system;

iii. Check the focus of the CCTV camera on a regular basis;

iv. Clean the camera lens, camera housing and the screen of the LCD display unit on regular basis;

v. If the CCTV system is not functioning, attend to the problem within 24 hours of its failure;

vi. In case of malfunctioning of the CCTV system, the tower crane shall have a visual alarm to alert the signaler who is in charge of the lifting operation and can communicate with the tower crane operator by Walkie-Talkie.

9. Special lifting operations:

a. Apply "permit to work" system to all special lifting operations including:

i. Lifting in overlapping area where the anti-collision system of tower crane is by-passed;

ii. Lifting in restricted area in which lifting operations are not normally allowed unless in exceptional circumstances;

iii. Use of multiple lifting appliances.

b. Where a special lifting operation is involved, Site Agent shall ensure a block foreman is appointed as the lifting coordinator in addition to the signaler, slinger and tower crane operator for the operation;

c. Where a special lifting operation is involved, Site Agent shall ensure a foreman is appointed as the lifting coordinator in addition to the signaler, slinger and tower crane operator for the operation;

d. Before the commencement of the special lifting operation, Site Agent shall ensure the associated risk assessment is completed and the safety procedures are developed by a risk assessment team of which Safety Officer, Site Agent and lifting coordinator are members;

e. Site Agents shall ensure the lifting coordinators, signalers, slingers and tower crane operators all have attended the training in safety procedures conducted by Safety Officers at least once for the whole Contract before the commencement of the special lifting operation;

f. The lifting coordinator shall apply for a permit to work from the responsible person as referred to in sub-clause (1)(e) when he has completed the lifting preparation work;
g. The responsible person shall only issue the permit to work to the lifting coordinator when he has inspected and is fully satisfied with the lifting preparation work. The duration of the permit to work should not be longer than one day and should not be extended beyond the end of the lifting coordinator's shift. The permit to work needs to be retained by the Contractor for future inspection by CM;

h. By-pass key for the anti-collision system shall be issued by the responsible person to lifting coordinator who should return it to the responsible person for custody when signing off the permit;

i. Check the following for lifting operation:
   i. Condition of the lifting gears before lifting operations and ensure that they are free from patent defects;
   ii. Ensure that a load has been correctly slung and well secured to prevent the movement or dislodgment of any part of the load and a tag line shall be used for controlling the load;
   iii. Monitor the lifting operation at all times until its completion.

j. The location of any proposed unloading area shall be confirmed by the Structural Quality Control Coordinator and checked by the lifting coordinator for suitability before lifting commences.

10. Provide a computerized system with monitor in Contractor's site office for full time surveillance of tower cranes as follows:
   a. The computer records of tower crane operations shall be kept for at least and be retrievable within a week of an operation;
   b. The monitor shall be a LCD colour display unit with a resolution of not lower than 752(H) x 582(V);
   c. In the event that there are overlapping zones of tower crane operations with adjoining site(s), the computerized system shall be compatible with similar system(s) of those site(s).

11. Maintain a log book with key records on special operations including implementation of safety precautionary measures for inspection by CM:
   a. Special operations shall include the following:
      i. Adjustment, maintenance and inspection of tower crane;
      ii. Emergency repairing during breakdown;
      iii. Temporary by-pass of anti-collision system.
   b. The special operations shall only be carried out by a working team with qualified and competent team members in electrical and mechanical works. The team leader shall be designated and instructed by Contractor's Site Agent and seek the permission from Site Agent for overall implementation of safety precautionary measures;
   c. Safety precautionary measures shall at least include the following:
      i. Inform all site personnel engaged in the tower crane operations about the safety precautionary measures in place before works commence;
      ii. Do not allow free suspension of loads on the hook;
      iii. If the tower crane is completely stopped for maintenance or repair, lock the main controls, place a warning plate over the main switch and the key to the lock shall be kept by the team leader as referred to in sub-clause (11)(b);
      iv. If the anti-collision system of tower cranes needs to be temporarily by-passed, the slinging of loads in the overlapping lifting zone and the guiding of tower crane operators shall only be carried out by the concerned lifting coordinators and not by the slingers or signallers;
      v. Audio-visual warning devices shall be installed at lifting locations on ground for clear indication of any by-pass effected and other effective communication systems must be in place;
vi. The team leader as referred to in sub-clause (11)(b) shall keep the by-pass key and the General Foreman shall monitor the usage of the by-pass key;

vii. The team leader as referred to in sub-clause (11)(b) shall keep the by-pass key and the Site Agent shall monitor the usage of the by-pass key.

d. Upon commencement of the special operations, the team leader as referred to in sub-clause (11)(b) shall ensure and the Site Agent shall endorse that all protection and safety devices are put into working condition.

PRE.B8.245.7 USE OF STATIC AND MOBILE CRANES
Ensure that:
1. All materials being fitted are safely tied;
2. Care is taken to avoid falling objects;
3. Material is not transported by crane outside the Site boundary where practicable;
4. Mobile cranes have outriggers full extended and securely supported before commencing operations;
5. A current test and examination certificate duly signed by a Registered Professional Engineer (Mechanical or Marine Discipline) for all lifting equipment is displayed: Forms 1, 2, 3 and 5 of Factories and Industrial Undertakings (Lifting Appliances and Lifting Gear) Regulations where appropriate.

PRE.B8.250.7 GUARDS TO LIFT WELL OPENINGS
Ensure that:
1. Temporary steel gates are provided for all lift well openings as specified in PRE.B10.1020;
2. The temporary steel gates are maintained in a proper, efficient and safe manner for operation;
3. The temporary steel gates are dismantled and cleared away properly and safely.

PRE.B8.255.7 PROTECTIVE STEEL RAILING AT SLABS EDGES
In addition to any obligations under GCC Clause 5.11 or any similar obligations under any enactment or regulation to provide guard rails, immediately after removal of slab table-forms or slab formworks, provide protective middle and top steel railings at heights of 600 mm and 1100 mm respectively at slab edges where parapet walls have not yet been constructed. Maintain the same in a proper and efficient manner until the parapet walls are constructed.

PRE.B8.260.7 REQUIREMENTS FOR PRECAST CONCRETE FACADES TO DOMESTIC BLOCKS
Where precast concrete facades are required or proposed for domestic blocks, comply with the following additional safety requirements for manufacture and erection of the precast concrete facades:
1. Provide sufficient safety harness, lifelines and all devices for the attachment of lifelines to all workers who are required to work in or at areas where they are liable to fall;
2. Before installation of the precast facades, barricade all the open sides of buildings where a worker is liable to fall. The barricade must be at least 1200 mm high and have sufficient strength and rigidity;
3. Display warning signs of size 900 mm x 600 mm at strategic locations around the periphery of the building where precast facades are to be installed. Such signs must have the words "DANGER - KEEP OUT" in both Chinese and English painted in red on a white background in gloss finished paint;
4. Provide and maintain a safety net system of sufficient size and strength to catch falling persons or objects located strategically to cover area of possible fall; reposition the safety net system from time to time but in no case more than 6 m below the working level;
5. Provide appropriate and adequate warning signs, guards, fence or barrier around potential places of danger at casting yard to prevent accidents;

6. Comply in general with CP 3010:1972 for safe use of cranes and lifting operation. Provide details of cranes regarding the following:
   a. Maximum allowable wind speed during lifting operation according to the manufacturer's recommendations;
   b. Safety margin for the safe working capacity of crane to allow for various forces acting on the crane during operation. Allowances for wind loading and dynamic forces due to wind specified in sub-clause (6)(a) above on the facade units shall also be included;
   c. Safety precautions to be adopted to secure the facade unit against swinging or spinning during lifting.

7. Provide wind speed measuring device at a suitably elevated position on the crane structure and a read-out unit fitted at the crane driver's cabin to monitor the wind speed during lifting operation. No lifting operation is allowed when the wind speed exceeds the maximum allowable wind speed for the crane;

8. Provide a safety catch to the crane hook to minimize the risk of the sling or facade unit becoming detached;

9. During lifting operations, comply with the followings:
   a. Give hand signals and any communication to the crane driver by one signaller at a time;
   b. Provide walkie-talkies for sole use between tower crane operator and the signaller for communication to ensure safe operation;
   c. Provide video surveillance for crane driver to monitor the lifting operations;
   d. Provide audio-visual warning device at lifting location(s) and operate such warning device during the lifting operations.

PRE.B8.262.7 REQUIREMENTS FOR LARGE PANEL FORMWORK AND WORKING PLATFORMS TO DOMESTIC BLOCKS

Notwithstanding clause PRE.B8.260, comply with the following additional safety requirements for large panel formwork and working platforms:

1. Submit details of the designated storage yard and storage device of accessories for large panel formwork for CM's approval, include but not be limited to the following:
   a. Layout of the designated storage yard with restricted access & warning signs/notices;
   b. Effective measures such as installation of vertical steel guard posts securely fixed on ground to avoid overturning of large panel formwork;
   c. Proper access to large panel formwork for slingers' operation;
   d. Proper device for secure storage of tie rods;
   e. Steel containers with covers and locking devices securely attached to the back of large panel formwork for storage of small parts such as bolts & nuts;
   f. Steel containers of adequate height securely attached to the back of large panel formwork for storage of long bolt and shaft;
   g. Minimum two supports for each panel formwork.

2. Periodical checking of large panel formwork
   Check, make good, clean and remove all loose concrete paste and debris from large panel formwork from time to time to achieve the required quality standard of finished concrete and to avoid falling objects during lifting and assembling of large panel formwork.

3. Requirements for working platforms shall include but not be limited to the following:
   a. Paint steel doors/gates in contrasting colour for clear identification;
   b. Add fall arrest device to prevent movable steel door from falling at height;
c. Seal up the gaps between the working platform and precast façade by openable metal plate attached to working platform;
d. Provide protective barrier such as fencing or equivalent at an effective height of 1100 mm with mesh infill panel along building edges and gable end wall.

PRE.B8.270.7 TRAFFIC CONTROL
Comply with all regulations concerning traffic control, signing, lighting and barriers including complying with the Road Traffic (Lighting and Guarding of Road Works) Regulations. Attention is drawn to the minimum requirements contained in the Government publication "Safe Road Working".

PRE.B8.280.7 TEMPORARY TRAFFIC SIGNS
1. Temporary traffic signs, including posts, backing plates and faces, shall comply with all requirements for traffic signs contained in Worksection EXT4;
2. The thickness of backing plates for temporary traffic signs which will be erected for use of less than 6 months may be reduced to 1.5 mm and the thickness requirement as stipulated in sub-clause (2) of EXT4.M320 may not be complied with; the posts for the signs may be constructed of timber or other material provided that in the opinion of the CM the traffic signs will be stable and safe;
3. In addition to the requirements for traffic signs contained in Worksection EXT4 and sub-clause (2) above, temporary traffic signs shall also comply with the following additional requirements:
   a. All corners of a sign plate shall be rounded to a radius of not less than 18 mm unless otherwise stipulated in the relevant standard drawing(s) published by the Transport Department or Highways Department;
   b. All edges of a sign plate shall be grounded to ensure that they are free from sharp edges, burrs, raggedness and tears;
   c. When a sign plate is located on a footway, it should be positioned so as to minimise inconvenience or hazard to pedestrians. Particular attention shall be paid to cater for safety of the children, the elderly and the disabled;
   d. The arrangement of information contained on sign faces for temporary traffic directional signs shall be designed by the Contractor. The details of the background, borders and legends, including letters, numerals, characters and symbols, shall comply with the requirements of the Commissioner for Transport.

PRE.B8.290.7 SAFETY OF SITE VEHICLES AND MOBILE PLANT
Comply with the requirements in the latest Publication on 'Guidelines on Safety of Site Vehicles and Mobile Plant' issued by the Construction Industry Council with special attention to the following:
1. Conduct risk assessment to identify any risks resulting from site vehicles and mobile plant;
2. Properly design site layout and traffic circulation routes;
3. Where reversing cannot be avoided, reversing vehicles or plant is not guided by a banksman, provide and install reversing video device (RVD) for vehicles/plant in accordance with the above mentioned Guidelines;
4. Formulate safe working procedures concerning operation of site vehicles and mobile plant;
5. Provide specific training to site personnel specific to site vehicles and mobile plant.
**HEALTH**

**PRE.B8.300.7 HEALTH CARE PLAN**

1. Prepare and submit to the CM for information a health care plan for workers within 3 months from the date for commencement of the Contract. Update the health care plan at half-yearly intervals;
2. The health care plan shall comprise the followings:
   a. Health check programme for workers on Site on worker's volunteer basis;
   b. Rest area for workers on Site completed with shelter, drinking facilities, chairs, tables, lighting and power, and good mechanical ventilation; and
   c. Health promotion and information support for the well being of workers on Site.
3. Execute the health care plan throughout the duration of the Contract.

**FIRE PRECAUTIONS**

**PRE.B8.310.7 FIRE REGULATIONS**

Comply with all regulations to prevent loss or damage from fire but have particular regard to the following clauses in this sub-section.

**PRE.B8.320.7 STREET FIRE HYDRANTS**

Ensure that any existing street fire hydrants are not obstructed by hoardings, vehicles, stockpiles, etc.

**PRE.B8.325.7 TEMPORARY FIRE SERVICES WATER TANK**

1. Within one month from the notified date for commencement of the Works to the certified date for completion of the Works in the last completion certificate or a date proposed by the Contractor and accepted by the CM, provide and maintain on the Site a temporary fire services water tank of 36 cu.m storage capacity with all necessary accessories and fitted with two 65 mm instantaneous coupling outlets or hydrants to supply water solely for fire fighting at all times;
2. Submit installation details of the temporary fire services water tank for the information of the CM and for the acceptance by the FSD Officer prior to commencement of the installation;
3. Make arrangements for storage, pumping and distributing the water for fire fighting about the Site;
4. Keep the temporary fire services water tank in full water storage capacity for fire fighting purpose at all times;
5. Provide enhanced fire fighting measures to the satisfaction of the FSD Officer and to the approval by the CM when the accommodation of a temporary fire services water tank of 36 cu.m storage capacity on Site is not feasible due to site constraints.

**PRE.B8.330.7 WATER RELAYING FACILITIES**

Provide electrical or portable pumps to supply water to all floors 30 m or more above ground level in accordance with FSD requirements.

**PRE.B8.340.7 DANGEROUS GOODS STORE**

1. Comply with all relevant regulations to prevent the occurrence of fire or damage from fire;

**PRE.B8.350.7 PORTABLE FIRE FIGHTING APPLIANCES**

Provide and properly maintain a sufficient number of portable fire fighting appliances for multi-storey buildings, carpentry workshop, paint stores for:
1. Domestic buildings: minimum 1 fire extinguisher and 2 buckets of sand in each staircase on alternate floors, i.e. one set per floor;
2. Non-domestic buildings: minimum 1 fire extinguisher and 2 buckets of sand in each staircase on each floor.

**PRE.B8.360.7 PROHIBITING SMOKING ON SITE**
1. Prohibit smoking on Site except in the designated smoking areas;
2. Provide the designated smoking areas with suitable fire-fighting appliances and clean the designated smoking areas daily;
3. Do not designate the following areas as a designated smoking area on Site:
   a. Any area where there is a risk of fire due to the use, intended use or storage of flammable liquid, mixture containing flammable liquid or substances/materials; and
   b. Any area where naked lights are prohibited.

**GENERAL NUISANCE**

**PRE.B8.410.7 COMPLIANCE WITH REGULATIONS**
Comply with all Regulations concerning the prevention of nuisance arising from noise, water, smoke, dust, accumulation of rubbish, mosquito breeding and all other causes.

**AIR POLLUTION CONTROL**

**PRE.B8.450.7 BONFIRE RESTRICTION**
Do not light bonfires on Site for the burning of debris, or of any other matters, arising out of the execution of the Works, or from any other sources.

**PRE.B8.455.7 DUST CONTROL**
1. Take all necessary steps to restrict and/or abate the nuisance caused by dust. Sprinkle dusty areas with water continually or other dust suppression method. Obtain prior Approval of the Director of Water Supplies Department for any proposal to use a dust suppression chemical in the immediate vicinity of water storage or gathering grounds of the Water Supplies Department. In particular, provide and maintain the water supply, including the installation of water tank, pump, or apparatus as necessary for the suppression of dust etc., to the points of action of the demolition works, to the satisfaction of the CM;
2. Cover stockpile of dusty materials entirely with impervious sheeting or place in an area sheltered on the top and the three sides. For stockpile over 50 m³, cover entirely with impervious sheeting and provide enclosure extending at least 1 m above and beyond the stored materials;
3. Any vehicle with an open load compartment used for transporting any material likely to generate dust while off the Site shall have properly fitted side and tail boards. Do not load dusty materials to a level higher than the tail or side boards. Cover dusty materials with a suitable tarpaulin or other Approved impervious material in good condition before the vehicle leaves the Site. The cover shall be securely tied down and extended at least 300 mm over the edges of the side and tail boards and be properly secured and maintained throughout the journey to the offloading destination;
4. Dump trucks for transporting C&D materials shall be installed with a mechanical cover system as specified in clause **PRE.B8.1838**;
5. No vehicle or engine driven movable equipment shall have its exhaust directed towards the ground;
6. Impose a vehicle speed limit of 8 km/hour within the Site and display signage showing the vehicle speed limit in a prominent position on Site;
7. Spray all dusty materials with water or a dust suppression chemical immediately prior to any loading, unloading or transfer operation except for cement and pulverized fuel ash and for cases where the moisture content of the dusty materials is a matter of concern;

8. Spray water or dust suppression chemical continuously on the surface where pneumatic or power-driven drilling, cutting, polishing or other mechanical breaking operation that causes dust emission is carried out, unless the process is accompanied by operation of an effective dust extraction and filtering device;

9. Dispose cement, pulverized fuel ash or any other dusty materials collected by fabric filters or other air pollution control system or equipment in totally enclosed containers;

10. Spray the working area for the uprooting of trees, shrubs, or vegetation or for the removal of boulders, poles, pillars or temporary or permanent structures with water or dust suppression chemical immediately before, during and immediately after the operation so as to maintain the entire surface wet;

11. Cover all demolished items including trees, shrubs, vegetation, boulders, poles, pillars, structures, debris, rubbish and other items arising from site clearance that may dislodge dust particles entirely by impervious sheeting or place the demolished items in an area sheltered on the top and the 3 sides within a day of demolition;

12. Operate or implement air pollution control system, equipment or measure properly and effectively. In the event of a malfunctioning or breakdown of any air pollution control system or equipment, stop the plant, process or activity concerned as soon as practicable until such time as the air pollution control system or equipment is restored to proper functioning;

13. Do not used compressed air jet for cleaning or clearing dust from any vehicle, equipment, other materials or person except for cleaning formwork or other surfaces receiving concrete prior to concreting or cleaning of slopes prior to shotcreting;

14. Shut down all vehicles and plant in intermittent use between work periods or throttle down to a minimum idling speed;

15. Spray the area at which demolition work takes place with water or dust suppression chemical immediately prior to, during and immediately after the demolition activities so as to maintain the entire surface wet;

16. For any wall of the building to be demolished that abuts or fronts upon a street, service lane or other open area accessible to the public, enclose the whole wall with impervious dust screens or sheeting to a height of at least 1 m higher than the highest level of the structure being demolished;

17. Wet dusty materials remaining after a stockpile is removed with water and cleared from the surface of roads or streets.

**DEBRIS CONTROL**

1. Do not allow debris to fall outside the protective screen;

2. Install debris chutes inside the building in Approved locations unless Approved by CM to be installed outside the building;

3. Openings on floor to convey debris shall not be larger than 25% of the total aggregate floor area. Each opening shall not be larger than 900 x 900 mm unless approved by CM. Do not cut through structural support elements that may affect the stability of any structural components;

4. Install the outlets of the debris chutes in Approved locations and enclose with impervious sheet or equivalent material in such a way that dust or debris escape is kept to a minimum during falling of debris to the satisfaction of the CM;

5. Spray debris with water or a dust suppression chemical to keep it wet before dumping into a refuse chute;

6. Cover debris entirely by impervious sheeting or store in a debris collection area sheltered on the top and the 3 sides;

7. Do not use lift wells as a refuse chute.
PRE.B8.465.7 SCREENS GENERALLY

1. Where work is carried out in, or adjacent to existing buildings, provide protection against the spread of dust and other nuisances by means of dust sheets, tarpaulins, boards and the like;

2. Where work is carried out on the superstructure of the building, provide protection against the spread of dust and other nuisances by means of dust screens, sheeting or netting securely enclosing scaffolding from first floor to the highest level of the scaffolding.

PRE.B8.470.7 AIR POLLUTION CONTROL (VOLATILE ORGANIC COMPOUNDS) REGULATION

Submit written confirmation of the following from suppliers or manufacturers for materials under the control of the Air Pollution Control (Volatile Organic Compounds) Regulation:

1. The types of regulated coatings/paints and their Volatile Organic Compounds (VOC) contents;

2. The VOC contents of the coatings/paints complied with the Air Pollution Control (Volatile Organic Compounds) Regulation.

PRE.B8.475.7 USE OF ULTRA-LOW-SULPHUR DIESEL

1. Ultra-low-sulphur diesel (ULSD) is defined as diesel fuel containing not more than 0.005% by weight of sulphur. All Constructional Plant powered by diesel fuel, whether they belong to the Contractor or his sub-contractors, shall only be replenished with ULSD when working on Site;

2. The Contractor shall maintain a summary record of all the delivery notes of ULSD delivered to Site, including those ordered by his sub-contractors, together with the details of consumption of such fuel by the individual Constructional Plant on Site and the date of arrival and departure of the Constructional Plant to and from the Site. The Contractor shall utilise the standard proforma in APPENDIX PRE.B8.APPEND5; and

3. All records of fuel deliveries shall be supported by the original delivery notes of the oil companies. All records and delivery notes shall be kept on Site and ready for inspection by the CM or the CM's representative upon request.

CONSTRUCTION DUST MONITORING

PRE.B8.510.7 BASELINE DUST MONITORING

1. Submit methodology, equipment, location of monitoring station(s) together with monitoring parameters and frequency meeting the latest requirements of BEAM Plus within 7 days prior to the carrying out of the baseline dust monitoring to CM for approval;

2. Proposed locations of monitoring station(s) shall be at nearby representative air sensitive receiver(s) and take into account the prevailing meteorological conditions and practicality;

3. Subject to sub-clause (5), conduct baseline dust monitoring at monitoring station(s) for at least 14 consecutive days prior to the commencement of construction works to obtain 1-hour Total Suspended Particulates (TSP) samples;

4. Carry out 1-hour TSP sampling in compliance with the latest requirements of BEAM Plus for at least 3 times per day including the three highest dust impact moments within each day as expected by the Contractor;

5. Subject to the approval of the CM, no major construction or dust generating activities shall be carried out in the vicinity of the monitoring station(s) during the baseline dust monitoring. However, site preparation activities such as site investigation, vehicle transportation and erection of site office etc, which may not significantly generating dust can be permitted on the days of the baseline dust monitoring subject to approval of the CM.
PRE.B8.520.7 IMPACT DUST MONITORING

1. Carry out impact dust monitoring during the course of the Works. The monitoring parameters and frequency shall meet the latest requirements of BEAM Plus. The minimum monitoring parameter and frequency are shown as below:

<table>
<thead>
<tr>
<th>Monitoring Parameter</th>
<th>Location</th>
<th>Frequency</th>
<th>Period</th>
</tr>
</thead>
<tbody>
<tr>
<td>1-hour TSP</td>
<td>At monitoring station(s)</td>
<td>At least three times per each 6-day rolling period and including the monitoring at the three highest impact moments during each 6-day rolling period</td>
<td>0700 – 1900</td>
</tr>
</tbody>
</table>

2. Record the results and weather conditions including temperature, wind strength and any other local atmospheric factors affecting or affected by Site conditions and operations (reference record sheet at PRE.B8.APPEND7);

3. Submit monthly construction dust monitoring report including the results and findings of the monitoring to CM within 7 days of the date of the expiry of each month (reference record sheet at PRE.B8.APPEND7).

PRE.B8.530.7 AIR SENSITIVE RECEIVERS (ASRS)

1. Any domestic premises, hotel, hostel, hospital, clinic, nursery, temporary housing accommodation, school, educational institution, office, factory, shop, shopping centre, place of public worship, library, court of law, sports stadium or arts performing centre within 500 m of the Site shall be considered to be an air sensitive receiver;

2. Any other premises or places with which, in terms of duration or number of people affected, has a similar sensitivity to the air pollutants as the above premises and places shall also be considered to be an air sensitive receiver.

PRE.B8.540.7 ACTIONS AND LIMIT LEVELS

The baseline dust monitoring results are to form the basis for determining the air quality criteria for the impact dust monitoring. The following table shows the air quality criteria, namely Action Level and Limit Level to be used.

<table>
<thead>
<tr>
<th>Monitoring Parameter</th>
<th>Action Level</th>
<th>Limit Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>1-hour TSP (Level in μg/m³)</td>
<td>For Baseline Level &lt; 384 μg/m³ Action Level = (Baseline Level x 1.3 + Limit Level)/2 μg/m³</td>
<td>500 μg/m³</td>
</tr>
<tr>
<td></td>
<td>For Baseline Level &gt; 384 μg/m³ Action Level = Limit Level</td>
<td></td>
</tr>
</tbody>
</table>

PRE.B8.550.7 DUST MONITORING EQUIPMENT

1. Use high volume sampler (HVS) or direct reading dust meter to measure 1-hour TSP level;

2. In using HVS to measure the 1-hour TSP level:
   a. The HVS shall be in compliance with the following specifications:
      i. 0.6-1.7 m³/min (20-60 SCFM) adjustable flow range;
ii. Equipped with a timing/control device with +/- 5 minutes accuracy for 24 hours operation;

iii. Installed with elapsed-time meter with +/- 2 minutes accuracy for 24 hours operation;

iv. Capable of providing a minimum exposed area of 406 cm²;

v. Flow control accuracy: +/- 2.5% deviation over 24-hour sampling period;

vi. Equipped with a shelter to protect the filter and sampler;

vii. Incorporated with an electronic mass flow rate controller or other equivalent devices;

viii. Equipped with a flow recorder for continuous monitoring;

ix. Provided with a peaked roof inlet;

x. Incorporated with a manometer;

xi. Able to hold and seal the filter paper to the sampler housing at horizontal position;

xii. Easy to change the filter; and

xiii. Capable of operating continuously for 1-hour period.

b. Conduct initial calibration of HVS upon installation and thereafter at bi-monthly intervals. The transfer standard shall be traceable to the internationally recognized primary standard and be calibrated annually. All data shall be converted into standard temperature and pressure condition;

c. A laboratory with constant temperature and humidity control and equipped with necessary measuring and conditioning instruments for handling the dust samples collected by HVS, and available for sample analysis, equipment calibration and maintenance. The laboratory shall be accredited by HOKLAS or other internationally accredited laboratories.

3. In using direct reading dust meter to measure the 1-hour TSP level:

a. Submit sufficient information such as job references, documents showing the direct reading dust meter is capable of producing comparable results as that by HVS etc. to the CM to prove that the direct reading dust meter is suitable for the 1-hour TSP sampling;

b. Calibrate annually the direct reading dust meter to ensure suitability for use.

4. Prior to carrying out of dust monitoring, all equipment to be used shall have valid certificate of calibration, be checked to be in good working condition and necessary power supply.

PRE.B8.560.7  NON-COMPLIANCE WITH LIMITS

In case of non-compliance with the air quality criteria as tabled in PRE.B8.540, more frequent monitoring exercise, as specified in the Action Plan of PRE.B8.570 shall be conducted within 24 hours after the non-complying result is obtained. Such additional monitoring shall be continued until the excessive dust emission has ceased to continue or the air quality has at least achieved the criteria as tabled in PRE.B8.540.

PRE.B8.570.7  ACTION PLAN

Action Plan for rectification and monitoring of excessive construction dust are given in the following should the 1-hour TSP Level exceeds the Action Level or Limit Level as stipulated in PRE.B8.540:

1. When Action Level is exceeded but below Limit Level:

   a. With the involvement of the Environmental Manager, the Contractor shall take the following actions:

      i. Identify source of dust emission;

      ii. Repeat measurement to confirm findings;

      iii. Carry out investigation;

      iv. Increase monitoring frequency to check effectiveness of remedial actions;
v. Assess effectiveness of remedial actions and keep Site Agent informed of results.

b. Contractor shall also take the following actions:
   i. Notify CM on the identification of the air quality failure;
   ii. Submit within 3 working days, proposals for remedial actions to CM;
   iii. Implement agreed proposal within the time scale as agreed with CM;
   iv. Ensure that remedial measures are properly implemented, and assess the effectiveness of those measures with the Environmental Manager;
   v. Report to CM that remedial measures properly implemented and effective in ceasing excessive dust emission.

2. When Limit Level is exceeded:
   a. With the involvement of the Environmental Manager, the Contractor shall take the following actions:
      i. Identify source of dust emission;
      ii. Repeat measurement to confirm findings;
      iii. Carry out investigation;
      iv. Increase monitoring frequency to check effectiveness of remedial actions;
      v. Assess effectiveness of remedial actions and keep Site Agent informed of results.
   b. Contractor shall also take the following actions:
      i. Notify CM on the identification of the air quality failure;
      ii. Take immediate action to cease the continuation of failure in air quality and assess the effectiveness of such action with the Environmental Manager;
      iii. Submit within 3 working days, an investigation report concerning air quality failure together with proposals for remedial actions to CM;
      iv. Implement agreed proposal within the time scale as agreed with CM;
      v. Should air quality failure re-occur, identify which portion(s) of the Works has/have caused the air quality failure;
      vi. Stop the execution of that portion(s) of the Works until the air quality failure is abated. Bear all the associated costs and time implication.

3. Any stoppage or reduction in output resulting from compliance with this clause will not entitle the Contractor to any extension of time for completion or to any additional costs whatsoever.

**MEASUREMENT OF INDOOR AIR QUALITY**

**PRE.B8.610.7 QUALIFIED AGENT FOR INDOOR AIR QUALITY (IAQ) MEASUREMENT**

The BEAM Plus Construction Coordinator specified in PRE.B8.2810 shall engage a Qualified Agent for IAQ Measurement (QAIM) 1 month prior to application for OP to measure the level for each of the airborne contaminants as specified in PRE.B8.620 in normally occupied spaces as specified in BEAM Plus for New Buildings (Version 1.2). Obtain CM and BEAM Plus Consultant's (BPC's) approval for the engagement.

1. General duties of QAIM:
   b. Provide a final report to summarize all the IAQ Measurement result;
   c. Coordinate with BPC to understand the strategies for the BEAM Plus accreditation;
d. Identify assessment points and mark all the points on the latest layout plan. Advise the locations for measurement, provide assessment report and photos to demonstrate compliance of BEAM Plus requirements;

e. Demonstrate in the assessment report that airborne contaminant(s) do not give rise to unacceptable levels of indoor air pollution as specified in PRE.B8.620 in normally occupied spaces;

f. Demonstrate in the assessment report the compliance of "Good Class" in Table 1 of the "HKSAR IAQ Certification Scheme" (the "IAQ Certification Guide") on the airborne contaminant(s) being tested.

2. Qualification of QAIM:
Accredited as HKIAS Inspection Body by the HKAS Executive and has been assigned registration number as the Accredited IAQ Certificate Issuing Body.

3. Specific duties of QAIM:

   a. Make an 8-hour continuous measurement or surrogate measurement (an intermittent measurement strategy based on the average of half-hour measurements conducted at four time-slots) for each sampling point in accordance to the IAQ Certification Guide;

      i. The minimum number of sampling points shall be calculated according to the table as below and the IAQ Certification Guide:

      | Total floor area to be certified (m²) | Minimum no. of sampling points |
      |--------------------------------------|-------------------------------|
      | < 3,000                              | 1 per 500 m²                  |
      | 3,000 to < 5,000                     | 8                             |
      | 5,000 to < 10,000                    | 12                            |
      | 10,000 to < 15,000                   | 15                            |
      | 15,000 to < 20,000                   | 18                            |
      | 20,000 to < 30,000                   | 21                            |
      | ≥ 30,000                             | 1 per 1,200 m²                |

      ii. The measurement methodologies shall be in accordance with PRE.B8.620 and the IAQ Certification Guide.

   b. Provide the resources planning, including but not limited to manpower, equipment and programme for BPC's approval prior to the carrying out of IAQ measurement;

   c. Prepare reports for BPC's acceptance which identify the measurement protocol, including the measuring equipment used, calibration, duration of measurements, number and details of the sampling points, the measurement results, and overall conclusions from the measurements survey.

PRE.B8.620.7 MEASUREMENT OF AIRBORNE CONTAMINANT(S)
The levels of the following airborne contaminant(s) shall be measured in accordance with PRE.B8.610:

<table>
<thead>
<tr>
<th>BEAM Plus Credit Reference</th>
<th>Airborne Contaminant(s)</th>
<th>Good Class objective in IAQ Certification Guide</th>
<th>Measurement Methodologies</th>
</tr>
</thead>
<tbody>
<tr>
<td>IEQ7(c)</td>
<td>Radon (Rn)</td>
<td>Less than 200 Bq/m³</td>
<td>By means of an electronic radon monitor complying with the device performance test described in the US Environmental Protection Agency National Radon Proficiency Program</td>
</tr>
</tbody>
</table>
CONTROL OF NOISE - STATUTORY REQUIREMENTS

PRE.B8.710.7 NOISE CONTROL REGULATIONS
Comply with the Noise Control Ordinance and all its subsidiary regulations.

PRE.B8.730.7 CONSTRUCTION NOISE PERMIT
1. Apply, if required, as soon as possible for a Construction Noise Permit under the Noise Control Ordinance. Display the Permit as required and submit to the CM a copy of the Construction Noise Permit. Ensure compliance with any conditions in the Construction Noise Permit in force, take note that neither the Employer nor the CM can influence the issue or terms or conditions of a Construction Noise Permit;
2. Conduct measurement of noise level which shall be taken over any 5-minutes period according to the relevant Technical Memoranda under the Noise Control Ordinance, if required under the Construction Noise Permit.

CONTROL OF NOISE - ADDITIONAL REQUIREMENTS

PRE.B8.750.7 ADDITIONAL REQUIREMENTS
In addition to statutory requirements, comply with the additional noise control requirements described in clauses PRE.B8.760 to PRE.B8.898.

PRE.B8.760.7 PNEUMATICALLY DRIVEN DRILLING RIGS
Do not use pneumatically driven drilling rigs.

PRE.B8.770.7 OPERATING RESTRICTIONS
Do not operate the ............ during the period from ............ to ............ in the following locations: ....................

PRE.B8.773.7 EQUIPMENT NOISE LEVEL LIMITS
1. This clause is not applicable to percussive piling works;
2. For construction activities other than percussive piling works, do not permit the noise level generated from equipment and tools used in any construction operations when measured at 1 metre from the most affected external facade of the nearby noise sensitive receivers during any 30-minute period to exceed:
   a. An equivalent sound level (Leq) of 75dB(A) if the noise levels as measured in the same locations due to ambient sound alone do not exceed 70dB(A);
   b. An equivalent sound level (Leq) of 70dB (A) during normal school hours in the event whereby the nearby noise sensitive receiver is a school;
   c. By a margin of 5dB(A) above the ambient noise level as measured in the same locations only during the periods when such ambient sound levels exceed 70dB(A).
SCHOOL EXAMINATION RESTRICTIONS
1. During school examination hours, do not permit the noise level measured over any 30-minute period due to the Contractor's equipment and construction operations as measured at 1 metre from the most affected external facade of the nearby schools to exceed the greater of the following:
   a. 65dB(A); or
   b. The ambient noise level when such ambient noise level exceeds 65dB(A).
2. Liaise with the schools to ascertain the exact dates and times of all examination periods during the course of the Contract.

SOUND LEVEL METER
Provide an Approved integrating sound level meter to IEC 61672 for the exclusive use of the CM at all times. Maintain in proper working order, calibrate as specified in PRE.B8.1490 and provide a substitute when the meter is out of order including when calibration is taking place or otherwise not available.

USE OF PERCUSSIVE PILING RIGS
If percussive piling is to be carried out on Site, submit to the CM a copy of the application for Construction Noise Permit and any other information in support to the application, which are to be submitted to the Environmental Protection Department.

EQUIPMENT/ACTIVITY AUTHORISATION
Notwithstanding the requirements and limitations set out above, the CM may, upon application in writing by the Contractor, allow the use of any equipment and the carrying out of any construction activities, for any duration, provided that it is not in contravention with Ordinances in any respect, adequate noise-mitigation measures have been provided to the noise sensitive receivers being affected, and that such application in the CM's opinion, is:
1. Of absolute necessity; or
2. Of emergency nature.

NOISE MITIGATION

NOISE SUPPRESSORS
In addition to complying with all the requirements of the Regulations on noise control, provide throughout the whole period of the Contract and extended period, if any, mufflers or other suitable noise suppressors on all pneumatic drills, compressors and other plant which may create a noise nuisance to the general public. Ensure that all plant and equipment is in good working order and properly maintained.

SOUND REDUCTION INSTALLATIONS
Provide, where necessary, sound reduction installations such as effective silencers, mufflers, acoustic linings or shields, acoustic shields or screens in order to reduce noise produced to the acceptable level.

MOVABLE NOISE BARRIER
1. Design, construct, operate and maintain movable noise barrier(s) of screen type or shed type or a combination of screen type and shed type to mitigate the noise generated by construction works including but not be limited to pile head trimming, rock/concrete breaking, metal hammering and the like. The design of the movable noise barrier shall be in the form of screen type or shed type as referred to in BS 5228:Part 1:2009:Noise - Code of Practice for Noise and Vibration Control on Construction and Open Sites;
2. The movable noise barrier(s) shall be located at positions such that the intensity of noise propagating to the noise sensitive receivers is attenuated on the spot by the noise barrier(s);
3. The movable noise barrier(s) shall also conform to the followings:
   a. Fire retardant and minimum 3 m in height for screen type, shed type and a combination of screen type and shed type;
   b. With covers at the top and at least on 3 sides for shed type;
   c. Made of sound insulation material of mean sound reduction index not less than 25 dB (100 Hz to 3150 Hz) unless otherwise approved by the CM, and lined with at least 25 mm (overall) thick sound absorbent material;
   d. With no gaps or openings at joints in the barrier material and the gaps between the sides and the ground shall be closed with a flap of a tough-graded polyethylene sheeting or other similar flexible material;
   e. Structurally stable to prevent overturn and collapse;
   f. For screen type, capable of achieving a minimum noise reduction of equivalent sound level (Leq) 5 dB(A) measured over any 5-minute period (5 min) on the side blocked from the noise source;
   g. For shed type, capable of achieving a minimum noise reduction of equivalent sound level (Leq) 5 dB(A) measured over any 5-minute period (5 min) on all covered sides. Design and provide additional noise reduction measures on the open side of the shed type movable noise barrier(s) to achieve a minimum noise reduction of Leq 5 dB(A) (5 min) or such other noise reduction value approved by the CM if the open side is facing the noise sensitive receiver;
   h. The sound levels described in sub-clauses (f) and (g) above shall be measured at 10 m away from the noise source and 1.2 m above ground unless otherwise approved by the CM. The noise reductions shall be determined by the noise measurements taken before and after placing of the movable noise barrier(s) with the noise generating source for construction works in operation; and
   i. Indicate on the outer face of the movable noise barrier(s) with contrast colour paint the Chinese characters "隔音屏障" and English characters "Noise Barrier". The minimum size of the Chinese characters shall be 450 x 450 mm and of the English characters shall be 450 mm high.

4. The movable noise barrier(s) shall be designed to cater for the wind load in accordance with the Code of Practice on Wind Effects in Hong Kong 2004, various ground level differences that may exist amongst the support(s) of the movable noise barrier(s) for blocking the noise produced by various noise sources and in particular, where the concrete/rock breaking machine operates;

5. Schematic sketch of a conceptual design of movable noise barrier is given in Drawing No. CPT/NB/S/SK001 in Appendix APC to this Specification. The sketch is for reference only and given in good faith without prejudice to the Contractor's responsibilities and liability under the Contract;

6. Submit the design, calculations and construction method statement certified by the Qualified Engineer as stipulated in PRE.B6.060 for the movable noise barrier(s) to the CM for approval not less than 4 weeks prior to the adoption of design and construction of the movable noise barrier(s) and commencement of the construction works which require noise mitigation measures under this clause;

7. Accept responsibility for the design of the movable noise barrier. The submission to the CM of such design or amendment shall not relieve the Contractor of any duty or responsibility under the Contract;

8. Carry out a trial to demonstrate to the CM the effectiveness of the proposed movable noise barrier(s) in complying with the requirements under sub-clauses (3)(f) and (3)(g) above before seeking CM's approval for its adoption on Site;

9. Submit an annotated layout plan to CM for information showing the compliance of the specification requirements above; and

10. Notwithstanding the compliance with the above sub-clauses, comply also with the noise control requirements as described in PRE.B8.710 to PRE.B8.898.
CONTRACTOR’S OBLIGATIONS

PRE.B8.860.7 NOISE ABATEMENT MEASURES
Provide noise abatement measures as follows:
1. ……No. of air-conditioners;
2. …………………

PRE.B8.865.7 HAND-HELD BREAKERS AND PORTABLE AIR COMPRESSORS
Hand-held breakers and portable air compressors to comply with Noise Control (Hand Held Percussive Breakers) Regulations and Noise Control (Air Compressors) Regulations and to be fitted with Noise Emission Labels when operated.

PRE.B8.870.7 GENERATORS FOR SITE’S TEMPORARY ELECTRICITY SUPPLY
1. Provide generators which shall meet with all relevant requirements under the EU or Japanese system and be certified by an approved body appointed by an European Member States under the European Council Directive 2000/14/EC, designated as Low Noise Emission Construction Equipment by the Ministry of Land, Infrastructure and Transport of Japan (MLIT), or equivalent or better standards with the result that the generators are qualified with the Quality Powered Mechanical Equipment (QPME) label;
2. Affix the generators for site's temporary electricity supply with valid QPME labels to facilitate inspection by CM’s representatives;
3. Locate the generators away from the noise sensitive receivers as far as practicable.

PRE.B8.875.7 SPECIAL SCREENS
Provide specially constructed dustproof or sound deadening screens, such as double layer of tarpaulin on substantial bamboo scaffolding, for the entire face of all buildings fronting on to road ……………….. at the ………………boundary of the Site.

PRE.B8.880.7 ADMINISTRATIVE NOISE CONTROL MEASURES
Adopt the administrative noise control measures at Section 6.9.4 of the Best Practice Guide for Environmental Protection on Construction Sites 2009 published by the Hong Kong Construction Association Ltd. as listed under "Noise Control During Construction" at PRE.B8.APPEND9.

CONSTRUCTION NOISE MONITORING

PRE.B8.890.7 BASELINE NOISE MONITORING
1. Submit methodology, equipment, location and photograph of monitoring station(s) together with monitoring parameter and frequency within 7 days prior to the carrying out of the baseline noise monitoring to CM for approval;
2. Conduct baseline noise monitoring at the monitoring stations for at least 7 consecutive days prior to the commencement of construction works to obtain 30-minute noise measurement results;
3. Carry out 30-minute noise measurement at least 2 times per day in covering the morning and afternoon sessions;
4. During the baseline noise monitoring, no major construction or noise generation activities shall be carried out in the vicinity of the monitoring stations unless otherwise approved by the CM. Site preparation activities such as site investigation, vehicle transportation and erection of site office etc, which may not significantly generating noise can be permitted on the days of the baseline noise monitoring subject to approval of the CM.

PRE.B8.892.7 IMPACT NOISE MONITORING
1. Carry out impact noise monitoring during the course of the Works. The monitoring parameter and frequency shall meet the latest requirements of BEAM Plus. The minimum monitoring parameter and frequency are shown as below:
2. Record the results and weather conditions including temperature, wind strength and any other atmospheric factors affecting or affected by Site conditions and operations (reference record sheet at PRE.B8.APPEND8);

3. Submit monthly construction noise monitoring report with the results and findings of the monitoring to CM within 7 days of the date of completion of each monitoring month (reference record sheet at PRE.B8.APPEND8).

PRE.B8.893.7 MONITORING STATIONS
1. At locations:
   a. close to the major site activities which are likely to have noise impacts;
   b. close to the noise sensitive receivers (any domestic premises, hotel, hostel, temporary housing accommodation, hospital, medical clinic, educational institution, place of public worship, library, court of law, performing art centre should be considered as noise sensitive receiver).

2. For monitoring stations located in the vicinity of the noise sensitive receivers, take care to cause minimal disturbance to the occupants during monitoring.

PRE.B8.894.7 SOUND LEVEL METER
1. Use sound level meter in compliance with the International Electrotechnical Commission Publications 651:1979 (Type 1) and 804:1985 (Type 1) specifications for carrying out the noise monitoring;

2. Immediately prior to and following each noise measurement, check the accuracy of the sound level meter using an acoustic calibrator generating known sound pressure level at a known frequency;

3. Accept the measurement as valid only if the calibration level from before and after the noise measurement agree to within 1.0 dB.

PRE.B8.896.7 ACTIONS AND LIMIT LEVELS
The following table shows the construction noise criteria, namely Action Level and Limit Level to be used.

<table>
<thead>
<tr>
<th>Monitoring Parameter</th>
<th>Action Level</th>
<th>Limit Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>$L_{Aeq}$ (30 minute)</td>
<td>When one documented complaint is received</td>
<td>75 dB(A) for schools and 65 dB(A) during school examination periods</td>
</tr>
</tbody>
</table>

PRE.B8.898.7 NON-COMPLIANCE WITH LIMITS
1. Should the limit(s) stated in PRE.B8.730, PRE.B8.773, PRE.B8.775 and PRE.B8.896 be exceeded, stop the construction operation(s) causing the excess(es) and do not recommence until whatever measures acceptable to the CM that are necessary to meet these limits for compliance have been taken;

2. Any stoppage or reduction in output resulting from compliance with PRE.B8.710 to PRE.B8.898 will not entitle the Contractor to any extension of time for completion or to any additional costs whatsoever.
PRESERVATION AND MAINTENANCE OF EXISTING FEATURES

PRE.B8.910.7 EXISTING FEATURES
Protect existing buildings, gates, walls and all other features of the Site, which are to be retained.

PRE.B8.920.7 ELECTRICITY SUPPLY HOUSING
Take over existing .......... (temporary transformer compound/transformer and switch room compound). Protect, repair and maintain in good condition. Remove from Site upon completion of the Works or when no longer required for the purposes of the Contract.

PRE.B8.930.7 EXISTING SLOPES AND EMBANKMENTS
1. Phase the Works as necessary to maintain the stability of all existing slopes and embankments and to prevent landslips; comply with all reasonable directions from the CM in this respect;
2. Accept responsibility for maintaining the integrity of all existing slopes and embankments in the periphery of the Site including, where applicable, the staircases thereon, railings to these staircases and along the top of the existing slopes and embankments;
3. Make good at own expense, any damage caused by landslips subsidence etc arising from the Contractor's negligence, omission or default.

PRE.B8.935.7 PROTECTION OF NATURAL STREAMS/RIVERS
1. Isolate the Site, such as by placing of sandbags, to prevent adverse impacts on the stream water qualities of natural streams/rivers in the proximity. Take protective measures to ensure that no pollution or siltation occurs to the water gathering grounds of the Site;
2. Locate and properly cover temporary storage of construction materials (e.g. equipment, filling materials, chemicals, fuel etc.) away from natural streams/rivers;
3. Cover up and properly dispose construction debris as soon as possible to avoid being washed into natural streams/rivers;
4. Locate discharge outlets of wastewater away from natural streams/rivers;
5. Obtain CM's approval prior to carrying out of any works which may cause disturbance to the natural bottom and existing flow in the river or removal of any existing vegetation alongside the riverbanks;
6. When disturbance to riverbed and/or existing vegetation alongside the riverbanks is unavoidable, reinstate all disturbed areas with suitable methods upon completions of works. Submit remedial proposal for CM's approval and bear the cost of all associated works and no extension of time shall be entertained.

PRE.B8.960.7 PROTECTION OF ROADS AND PAVED AREAS FROM OVERLOADING
1. Protect all hard surface areas and access ways to the work area from damage as a result of overloading and make good any damage caused thereby;
2. Obtain details of design loads of such areas from the CM prior to traversing them with plant or equipment;
3. Comply with all regulations and all requirements of Government Departments concerning the use and crossing of public roads. Obtain authorisation to cross pavements and similar areas;
4. When using estate roads and emergency vehicular access (EVA) for access purposes, co-operate with the Authority, Government Departments, public utility companies and others using such roads and to comply with any requirements for restriction on access;
5. Ensure that all vehicles, irrespective of size and use, are fitted with pneumatic tyres.

**PRE.B8.970.7 LOCATION OF EXISTING SERVICES**

1. Existing utilities and services that are known to be within the Site are referred to in PRE.B.060. The Contractor shall satisfy himself that such and any other information provided or available to him regarding existing utilities and services is correct and adequate;

2. Check and confirm the position of all existing utilities and services within the Site and outside the boundary of the Site in accordance with PRE.B.060 to verify the feasibilities of all proposed connections of utilities and services.

**PRE.B8.980.7 PROTECTION OF EXISTING SERVICES**

1. Protect and maintain existing electric or telephone cables, (including overhead wires), gas or water mains, sewers, live drains and the like;

2. Make all necessary arrangements for the temporary diversion or alteration of such services as required by and to the satisfaction of the relevant Authority;

3. Do not commence work adjacent to existing services until the necessary diversions or alterations have been completed.

**PRE.B8.983.7 WORKS IN THE VICINITY OF EXISTING SERVICES**

1. This specification clause applies to works carried out in all situations where electric or telephone cables, gas or water mains, sewers, live drains and the like may be found, with particular emphasis on situations where works are undertaken which involve excavation or any other means of penetrating the ground at or below surface level;

2. Ensure that all reasonable measures are taken to identify the existing services and protect them from damage arising out of the works in the vicinity that would be likely to prejudice safety as follows:
   a. Comply with the relevant requirements of the Regulations, codes of practice or guidelines of the relevant authorities and utility companies;
   b. Take all reasonable steps to ascertain the location and position of the existing services before commencing works in the vicinity;
   c. Obtain plans or other suitable information about the existing services in the vicinity of the works from the relevant authorities and utility companies. Check the information and record plans received to see if any existing services may be affected before commencement of any excavation works;
   d. Use suitable pipe locating devices, in conjunction with any available plans to determine as accurately as possible the alignment and depth of the existing services in or near the works area;
   e. Dig trial holes by hand tools to ascertain the exact position and depths of the existing services before road breaking and excavation. If it is necessary to use road breaking tools or mechanical plant they shall be used with great caution;
   f. Execute the excavation work safely by strictly observing the following requirements:
      i. Submit method statement for the excavation works including risk assessment, methodology, arrangement, programme and details together with precautionary measures on site safety prepared by Safety Officer for Approval before commencement of works;
      ii. Take special care in operating heavy mechanical plants, especially when digging above or close to the existing services;
      iii. All excavation works must be carried out carefully following recognized safe digging practices. Excavation close to or around the existing services shall be carried out by hand digging method;
iv. Maintain a safety distance clearance between any existing services and the point where a mechanical excavator is used as required by the relevant authorities or utility companies;

v. Implement all necessary protective measures and seek advice and agreement of the relevant authorities or utility companies on the measures necessary to adequately support and protect the exposed services;

vi. Provide adequate site supervision and control to ensure that all the above requirements are closely observed. Workers carrying out excavation near the existing services must be adequately trained, instructed and supervised.

g. Backfill the excavation with suitable materials in layers with adequate compaction to prevent ground settlement adjacent to or below the existing services.

**PRE.B8.990.7 DISCOVERY OF LIVE SERVICES**

In the event of the Contractor discovering any live drain or service line, immediately inform the CM, the relevant utility undertaking and relevant Government Department.

**PRE.B8.1000.7 RESPONSIBILITY FOR PUBLIC WORKS**

Accept responsibility for, and ensure that, no public road or public utility service is damaged during the execution of the Works. Should any damage occur, notify the CM and the relevant authorities immediately.

**PRESERVATION AND PROTECTION OF EXISTING TREES & SHRUBS**

**PRE.B8.1110.7 PROTECTION GENERALLY**

*Option 1*

There are no existing trees or shrubs on the site which are to be retained and protected.

*Option 2*

Preserve and protect existing trees and shrubs in accordance with **PRE.B8.1112** to **PRE.B8.1170**.

**PRE.B8.1112.7 DEFINITIONS**

1. "Tree" means a plant with diameter at breast height measuring 95 mm or more. Including plants growing on retaining structures;

2. "Old and Valuable Tree" (hereinafter referred to as OVT) means any tree included in the Register of Old and Valuable Trees posted at website: http://www.lcsd.gov.hk/LEISURE/LP/gc/tree;

3. "Diameter at breast height" means the diameter of the trunk of the plant measured at a height of 1.3 m above ground level;

4. "Tree crown spread" means the diameter of the tree crown defined by the outermost branches of the tree;

5. "Tree height" means the height from ground level to the top of the tree;

6. "Dripline" of a tree means the imaginary vertical plumb line that extends downward from the tips of the outermost tree branches and intersects the ground;
7. "Tree protection zone" for OVT (Tree No. Shown on drawing) means the zone encompassing the tree along its dripline and extending vertically to 2 m upward beyond the top of the tree and 2 m downward beyond the ground level at the trunk base of the tree. For an OVT growing on a retaining structure/wall/rock surface, the tree protection zone should encompass the body of the tree itself and 2 m above the tree crown, as well as the vertical and horizontal surfaces of the retaining structure/wall/rock surface covered by the tree roots together with the space up to 2 m behind those surfaces.

8. "Tree protection zone" for non-OVT (tree other than OVT) means an area within the perimeter that is defined by the dripline of the tree. For a non-OVT growing on a retaining structure/wall/rock surface, the tree protection zone should encompass the body of the tree itself, and the vertical and horizontal surfaces of the retaining structure/wall covered by the tree roots.

9. "Preserved tree" means an existing tree, including OVT, not earmarked to be felled, which may be a tree to be retained at its existing location, a tree at its existing location prior to transplanting, or a tree transplanted within the Site.

10. "Arboricultural work" means any work related to the cultivation and care of trees for any purpose other than timber production, including but not limiting to planting, replanting, transplanting, tree surgery work and control of pest and disease.

11. "Aftercare to Old and Valuable Trees" means the regular monitoring and other operations specified to be performed for Old and Valuable Tree (Tree No. Shown on drawing) during the period stated in the Contract for such regular monitoring and other operations.

PRE.B8.1113.7 INDEPENDENT TREE SPECIALIST

1. Employ a suitably qualified and experienced independent tree specialist (ITS) for the period stated in the Contract to carry out the duties as stipulated in EXT11.W062 in accordance with the followings:

   a. Qualification and experience of the ITS shall be as follows:

      i. A degree holder of any of the disciplines of agriculture, arboriculture, botany, forestry, horticulture, landscape architecture, landscape design, landscape management or landscape science or a discipline of equivalent subject acceptable to the CM;

      ii. Have specialised knowledge and training in the fields as specified in sub-clause (a)(i) above;

      iii. Have at least three (3) years' documented or demonstrable experience gained whether in Hong Kong or elsewhere in the physiology and care of major tree species commonly found in Hong Kong.

   b. Nomination and employment of the ITS:

      i. Within seven (7) days of the date of the Letter of Acceptance, nominate a candidate to be the ITS for the approval of the CM. Obtain ITS's declaration of "no conflict of interest" in the discharge of his duties specified under the Contract and submit it to CM;

      ii. Enter into a written contract of employment with the ITS and ensure that the employment of the ITS shall commence within seven (7) days of the date of the CM's approval of the employment of the ITS;

      iii. In the event that the Contractor fails to comply with any of the requirements in sub-clauses (b)(i) and (b)(ii) above, the Employer shall be entitled to employ an ITS forthwith and deduct all costs, charges and expenses arising from or in connection with the employment of an ITS in accordance with the provisions of General Conditions of Contract Clause 15.3 and/or recover such costs, charges and expenses as a debt from the Contractor.

   c. Nomination and employment of replacement ITS:
i. In the event that the ITS is unable or refuses to carry out such duties or is not performing satisfactorily in the opinion of the CM, the CM may withdraw his approval for employing the ITS at any time. If such approval is withdrawn, nominate a replacement ITS for the approval of the CM within seven (7) days of the notice of withdrawal by the CM. Obtain replacement ITS's declaration of "no conflict of interest" in the discharge of his duties specified under the Contract and submit it to CM;

ii. Enter into a written contract of employment with the replacement ITS and ensure that the employment of the replacement ITS shall commence within seven (7) days of the date of the CM's approval of the employment of the replacement ITS;

iii. In the event that the Contractor fails to comply with any of the requirements in sub-clauses (c)(i) and (c)(ii) above, the Employer shall be entitled to employ a replacement ITS forthwith and deduct all costs, charges and expenses arising from or in connection with the employment of a replacement ITS in accordance with the provisions of General Conditions of Contract Clause 15.3 and/or recover such costs, charges and expenses as a debt from the Contractor.

d. Wages for ITS:
   i. Pay wages direct to ITS for his services rendered;
   ii. As a condition precedent for entitlement to payment of the item(s) of works for which the services of the ITS are required under the Contract, submit satisfactory evidence, including but not limited to receipts for payment of wages to the ITS, to the CM proving that the ITS has already been paid for his services rendered.

2. Provide all reasonable facilities and attendance for the ITS to carry out his duties;

3. Ensure that the ITS has carried out his duties as specified in the Contract.

**PRE.B8.1114.7 SPECIALIST CONTRACTOR**

Engage a specialist contractor in accordance with the following:

1. Unless otherwise agreed by the CM, select such specialist contractor from the prevailing "Housing Authority List of Soft Landscape Contractors for New Works Groups 1 or 2";

2. Enter into a written sub-contract with the specialist contractor to carry out the arboricultural work to trees within and adjoining the Site, including but not limited to planting, replanting, transplanting, conduct tree risk assessment, tree surgery work and control of pest and disease;

3. Provided that without the written consent of the CM, do not enter into a written sub-contract with a specialist contractor on the prevailing "Housing Authority List of Soft Landscape Contractors for New Works Groups 1 or 2", who is then restricted from tendering in respect of the works in that category;

4. At least seven (7) days prior to entering into a written sub-contract with the specialist contractor, submit details of the specialist contractor to the CM for checking of compliance with sub-clauses (1) to (3) above.

**PRE.B8.1115.7 COMPETENT MEMBER OF SITE SUPERVISING STAFF TO OVERSEE TREE WORKS**

1. Assign a competent member of the site supervisory staff to oversee and supervise tree works related to horticultural operations and preservation of trees within the Site, including but not limited to planting, transplanting, tree surgery work and control of pest and disease affecting trees on the Site;

2. The assigned competent member shall comply with the following requirements:
   a. Be working full-time on the Site, but not necessarily working solely on trees;
   b. Have attended relevant training on the subject organised by the training institutes (such as Construction Industry Council), or similar courses as considered appropriate by the CM.
3. Within 28 days from the date of the Letter of Acceptance, submit to the CM for approval particulars of the assigned competent member (including his name, experience and position) together with a copy of the certificate issued by the training institute confirming his satisfactory completion of the relevant course.

PRE.B8.1116.7 PRESERVATION AND PROTECTION OF EXISTING TREES AND VEGETATION GENERALLY

Unless otherwise directed or agreed by the CM, comply with the following requirements:

1. Protect all existing trees and palms as shown on Drawing Nos. ............or as Instructed;
2. Protect the branch structure, crown and root zone and any overhanging vegetation;
3. Protect and preserve all existing trees and shrubs including any surrounding curbs/dwarf walls except those instructed to be removed;
4. Be fully acquainted with the location, size, canopy shape, and spread of the existing vegetation shown in Drawing Nos. ............to the extent that the location of existing trees may affect the programming, method or sequencing, and access to the Works;
5. Identify each tree or palm shown in the Drawing that is designated to be retained, transplanted or removed by affixing differently coloured labels printed with the number shown in Drawing Nos.................. as follows:
   a. Conduct initial tree survey to identify trees that are not recorded under the Contract and their treatment is yet to be instructed by the CM;
   b. Submit the survey record to the CM within 28 days of the date for commencement of the Works;
   c. Secure the labels by carefully tying with plastic string and avoid damage to the trunk or bark in accordance with Worksection EXT11;
   d. Provide additional labelling or marking to identify the OVT;
   e. Comply with the following in providing the identification labelling or marking systems:
      i. Labels shall be made of durable materials that are non-injurious to the trees, placed at a position visible but not easily accessible to the public, and attached in such a manner that allows for the growth of the trees and does not injure the trees;
      ii. The identification labelling or marking systems and the on-site status identification of trees, palms and bamboos shall be agreed by the CM and installed prior to the commencement of site clearance, demolition, earth moving, construction of permanent, or other temporary works, and any other site operations which may affect the trees, palms and bamboos;
      iii. Reinstate or replace where necessary the identification labelling or marking systems for the preserved trees, and remove these identification labelling or marking systems from the Site upon completion of the Works or earlier if so directed by the CM;
6. Ensure that the ITS shall carry out the following duties:
   a. Conduct an initial survey of the OVT and an initial site survey and initial soil tests of its tree protection zone and submit a report on the same comprising the details and within the time frames. The report shall be in the form of an A4-sized, bound document with a report cover indicating the Contract number, Contract title, and date of the report and shall be signed by the ITS. The format of the report shall be agreed by the CM prior to its submission;
   b. Prepare monitoring reports on OVT and submit each monitoring report comprising the details and within the time frames as stipulated in EXT11.W062;
c. Conduct a final survey of OVT and a final site survey and final soil tests of its tree protection zone, and submit a report on the same comprising the details and within the time frames as stipulated in EXT11.W062;
d. Provide arboricultural advice in the preparation of method statements and any reports on repair of damage, supervise arboricultural work, and provide on-site advice in relation to site control within the tree protection zone and at its adjacent areas, for the preservation and protection measures for OVT as stipulated in the Contract; and
e. Carry out any other services or duties specified in the Contract.

PRE.B8.1120.7 PROGRAMMING OF PROTECTION WORKS
Allow fully in the programme the effects of preservation and protection of existing trees, the method of operation and construction, and the vehicular access for the Works:
1. Exercise utmost care to avoid damage to all vegetation which is required to be protected throughout the Contract period;
2. Complete protection works before any site clearance, demolition, earth moving, construction of permanent, or other temporary works, and any other site operations that are to be carried out in the vicinity of any vegetation to be retained, and allow inspection of the protective works by the CM;
3. Make allowance for any required tree surgery or transplanting operations to be carried out by the Employer's Direct Contractor during works in the vicinity of the vegetation to be retained, including construction of any hoardings and gantries.

PRE.B8.1130.7 EXISTING PROTECTIVE FENCING
Where indicated on Drawings or as Instructed, accept responsibility for protective fencing erected by others for a previous contract. Replace damaged parts as necessary to ensure effective use.

PRE.B8.1140.7 PROTECTIVE BAMBOO FENCING
Where indicated on Drawings or as Instructed, surround existing trees and shrubs around the perimeter of the crown with a 1500 mm high ±50 mm bamboo fence, comprising:
1. 2500 mm long ±50 mm, 30 mm x 30 mm x 5 mm thick galvanized mild steel angle posts driven into the ground at 1500 mm centres ±50 mm and fitted with protective caps with;
2. Top, middle and bottom rails of 70 mm diameter ±5 mm bamboo poles, and
3. 1500 mm long ±50 mm 50 mm diameter ±5 mm bamboo vertical poles at 120 mm centres ±5 mm;
4. All firmly fixed with rot proof twine or wire.

PRE.B8.1150.7 PROTECTIVE CHAIN LINK FENCING
Where indicated on the Drawings or as Instructed, surround existing trees and shrubs around the perimeter of the crown with chain link fencing to BS 1722:Part 1:1986:
1. Fence type: GLS 180 (Table 1 of BS 1722:1986)
2. Height above ground: 1800 mm ±50 mm;
3. Materials:
   a. Zinc coated chain link, 1800 mm wide roll, 50 mm mesh size, 3 mm nominal wire diameter;
   b. Zinc coated mild steel line wire, 3.55 mm nominal wire diameter;
   c. Rolled mild steel angle iron posts and struts in accordance with Table 4 of BS 1722:1986:
      i. Intermediate posts:
         2600 mm long ±50 mm
         45 x 45 x 5 mm section
ii. Straining posts:
   2600 mm long ±50 mm
   60 x 60 x 6 mm section

iii. Struts:
   2000 mm long ±50 mm
   45 x 45 x 5 mm section

4. Erection:
   In accordance with Section 3 of BS 1722:Part 1:1986 drive posts or set in concrete as necessary to obtain firm base.

PRE.B8.1160.7 ALIGNMENT OF PROTECTIVE FENCING
Where indicated on the Drawings or as instructed, align the protective fencing along the outer limit of the canopy ("drip line") of all trees and palms to be retained, to protect from damage.

PRE.B8.1162.7 PROTECTION FROM CHANGE IN GROUND LEVEL
1. Unless explicitly required in the Contract, do not change the existing ground levels within the tree protection zones of the preserved trees without the prior approval of the CM;

2. Where it is necessary for the completion of the Works to reduce the existing ground level around a preserved tree which will result in a lowering of the existing ground level within the tree protection zone, comply with the following requirements:
   a. Construct a retaining wall as shown in Drawing No. ……. install tree supporting devices as shown in Drawing No.………. or similar measures as agreed by the CM to accommodate the reduction in the existing ground level around the tree;
   b. Before commencing the construction of the measures to accommodate reduction in the ground level pursuant to sub-clause (2)(a) above, submit method statements including construction details for the measures for the CM's approval;
   c. Commence the construction of the measures only after obtaining CM's approval for the method statements;
   d. Follow the requirements stipulated in sub-clause (2) of PRE.B8.1163, regarding excavation and cutting of tree roots and;
   e. Maintain balanced moisture content in the tree and in the soil after construction of the measures, by carrying out necessary precautionary measures such as crown thinning, watering and mulching.

3. Where it is necessary for the completion of the Works to raise the existing ground level around a preserved tree which will result in a rise in the existing ground level within the tree protection zone, comply with the following requirements:
   a. Construct a dry well and soil aeration system as shown in Drawing No.………. or similar measures as agreed by the CM to accommodate minor to moderate rise of up to 300 mm in the existing ground level around the tree;
   b. Construct a dry well and soil aeration system as shown in Drawing No.………. or similar measures as agreed by the CM to accommodate major rise of more than 300 mm in the existing ground level around the tree;
   c. Before commencing the construction of the measures to accommodate rise in the ground level pursuant to sub-clauses (3)(a) and (3)(b) above, submit method statements including construction details for the measures for the CM's approval; and
   d. Commence the construction of the measures only after obtaining CM's approval for the method statements.
PRE.B8.1163.7 PROTECTION FROM EXCAVATION INCLUDING TRENCHING

1. Unless explicitly required in the Contract, do not carry out excavation within the tree protection zones of the preserved trees without the prior approval of the CM;

2. For the Approved excavation work within the tree protection zones, comply with the following requirements:
   a. Obtain agreement from the CM to the detailed locations and extent of the excavations before commencing any excavation work;
   b. Carry out the following before commencing any cutting work to the aerial roots or underground roots of the preserved trees:
      i. Determine the locations of the major roots and the bulk of the their absorbing roots so as to keep the cutting of tree roots to a minimum and to preserve the tap roots, sinker roots and support roots of the trees in any circumstances;
      ii. Obtain agreement from the CM to the extent of root cutting on the Site;
      iii. Where the stability of the trees is likely to be jeopardised, comply with the requirements stipulated in sub-clauses (1) to (3) of PRE.B8.1165;
   c. Submit to CM the photographic records showing the condition of the affected trees and the agreed extent of excavations and root cuttings as marked on the Site prior to commencement of the excavation work and root cutting work. Thereafter, submit photographic records showing the condition of the affected trees and the progress of the excavation work and root cutting work at weekly intervals until backfilling of the excavations is complete;
   d. Excavate the service trench on the paved side of the tree if one exists;
   e. Pile the excavated materials outside the tree protection zones to reduce soil compaction;
   f. Carry out the excavations carefully so as not to damage the bark and root collars of the preserved trees;
   g. Maintain balanced moisture content in the trees and in the soil after backfilling of the excavations by carrying out necessary precautionary measures;
   h. Move the temporary protection fencing stipulated in PRE.B8.1130 to the edge of the intended excavation area, between the excavation area and the rest of the tree protection zone, during the duration of excavation work, and move back the same to its original location after backfilling.

3. Where the Approved excavation works within the tree protection zone will involve cutting of the roots of the preserved trees, take the following precautions:
   a. Carry out excavation by using only hand-held tools such as hoe and spade, but not mechanical diggers or bulldozers in any circumstances;
   b. Whenever roots are encountered and before root cutting is carried out, fork away soil from the roots carefully by using hand-held tools up to the edge along which root cutting is required;
   c. Carry out root cutting carefully by using sterilised hand-held pruning tools, and prune roots greater than 25 mm in diameter carefully so as not to result in shattered and frayed roots;
   d. Cut back cleanly with sharp tools to undamaged tissue of any roots damaged during excavation and treat it with an approved fungicidal dressing prior to backfilling;
   e. Prevent all cut and exposed roots from drying out during excavation by adopting the following measures until backfilling, unless otherwise agreed by the CM:
      i. Wrap the tap roots, sinker roots, support roots, and roots with diameter exceeding 50 mm, which shall not be cut with hessian, straw or other porous absorbent fabric once they are exposed;
      ii. Hang thick hessian or other porous absorbent fabric from top of the cut surface over the exposed roots and soil immediately after root cutting;
iii. Mist the hessian or fabric in a frequency that keeps the roots and the soil at the cut surface moist all the time.

f. Remove immediately before backfilling the hessian, straw or other porous absorbent fabric stipulated in sub-clause (3)(e)(i) above and the hessian or fabric stipulated in sub-clause (3)(e)(ii) above;

g. Backfill excavations with soil mix incorporated with slow release fertiliser at a rate of 500g/m³ or at a rate as directed by the CM to a level not higher than the original soil level at the root collar.

4. Based on the result of sub-clauses (2)(b)(i) & (2)(b)(ii) above, if in the opinion of the CM that the trenching works within the tree protection zone will involve cutting of a significant part of the roots of the preserved trees, adopt tunnelling in lieu of trench excavation in the following manner and as shown in the Drawing No……. close to the tree trunk on one side:

a. Excavate a trench as narrow as possible directly towards the tree along a radius to not closer than 1.0 m from the trunk or where roots larger than 25 mm in diameter are encountered, whichever distance is farther away from the trunk;

b. Tunnel straight beneath the tree at a depth of not less than 750 mm and in a way to avoid damaging any tap root, sinker roots or support roots;

c. Exit on the opposite side along another radius;

d. Sleeve the service where it passes beneath the tree to reduce the risk of damage to the service and facilitate future servicing and repair.

**PRE.B8.1164.7 PROTECTION FROM DRILLING**

1. Unless explicitly required in the Contract,, do not carry out drilling such as soil nailing and drilling for bore holes, rock bolts or dowels, within the tree protection zones of the preserved trees without the prior approval of the CM;

2. For the approved drilling work within the tree protection zones, comply with the following requirements:

a. Obtain agreement from the CM to the detailed locations and extent of the drill holes before commencing any drilling work, bearing in mind that the drill holes shall be located in such a way that the structures to be placed into the drill holes, including the surface elements of the structures such as soil nail heads, are at a minimum distance of 500 mm from the trunks of the preserved trees unless otherwise agreed by the CM in exceptional circumstances;

b. Carry out the following before commencing any cutting work to the aerial roots or underground roots of the preserved trees:

i. Determine the locations of their major roots and the bulk of the their absorbing roots so as to keep the cutting of tree roots to a minimum and to preserve the tap roots, sinker roots and support roots of the trees in any circumstances;

ii. Obtain agreement from the CM to the extent of root cutting on the Site;

iii. Where the stability of the trees is likely to be jeopardised, comply with the requirements stipulated in sub-clauses (1) to (3) of **PRE.B8.1165**.

c. Carry out the drilling work carefully so as not to damage the branches, foliage, trunk, bark and root collars of the preserved trees when gaining access for supporting, mobilising, positioning and operating the drilling rig;

d. Maintain balanced moisture content in the trees and in the soil after the drilling work by carrying out necessary precautionary measures such as crown thinning, watering and mulching.

3. Take the following precautions when carrying out drilling work that involves cutting of the roots of the preserved trees:

a. Carry out the drilling work and root cutting work carefully;

b. Prune roots greater than 25 mm in diameter carefully in order to prevent the roots from shattering and fraying;
c. Cut back cleanly with sharp tools to undamaged tissue of any roots damaged during drilling and treat it with an approved fungicidal dressing.

PRE.B8.1165.7 PROTECTION FROM INSTABILITY

1. Where the Works involve cutting of any major roots or other major parts of the preserved trees or any other works that may jeopardise the stability of the preserved trees, comply with the following:
   a. Install all necessary physical support for the preserved trees to ensure their stability;
   b. Pay particular attention to the stability of the OVT and all other preserved trees that grow on retaining structures in order to prevent the trees from being dislodged from their positions as a result of inadequate support.

2. Comply with the following in installing the physical support measures for the preserved trees:
   a. Before commencing the installation of the physical support, submit method statements for the support measures to the CM for approval;
   b. Commence the installation of the physical support only after obtaining CM's approval for the method statements;
   c. Install the physical support securely prior to commencement of the root cutting, tree pruning or any other works that may affect the stability of the trees;
   d. Securely found the physical support in footings independent of existing walls or building structures or in other supporting systems as appropriate, without interfering with other works, other existing features, and the preserved trees;
   e. Where the affected tree is an OVT or any other tree that grows on a retaining structure, make a detailed assessment to estimate the weight of the tree and to identify the best position of supporting the tree in relation to its overall spread and centre of gravity. The method statements for the support measures in respect of the OVT or other trees that grow on retaining structures shall include the following information:
      i. Details of the form of construction and where requested by CM structural design calculation for the support measures, demonstrating the bearing capacity of each element;
      ii. Details of the foundation of the support measures, demonstrating that the support measures shall not interfere with other works, other existing features, and the preserved trees and, in the case of the tree growing on a retaining structure, shall not affect the stability of the retaining structure;
      iii. Means of securing the tree to the structure of the support measures, including detail design of how cups and ties are adjusted to the form of the tree; and
      iv. Method of fabrication and erection on the Site.
   f. Remove the physical support for the preserved trees from the Site upon completion of the Works, or earlier if so directed by the CM. Do not remove or relocate the physical support for the trees without the prior agreement of the CM.

PRE.B8.1170.7 PRESERVATION AND TREATMENT/REPLACEMENT OF EXISTING TREES AND SHRUBS
As Worksection EXT11.
TREE RISK ASSESSMENT AND INSPECTION
AFTER INCLEMENT WEATHER

PRE.B8.1210.7 TREE RISK ASSESSMENT AND ARBORICULTURAL WORKS

Provide the following services in relation to tree risk assessment and arboricultural works:

1. Carry out tree risk assessment for the trees as shown on Drawing Nos. .................. and those as instructed by CM through on-the-ground or aerial inspections as approved by the CM;

2. Tree risk assessments shall include but without limitation to the following:
   a. assessment in accordance with the Guidelines For Tree Risk Management and Assessment Arrangement on An Area Basis and on A Tree Basis as issued by the Greening, Landscape and Tree Management Section of the Development Bureau (the latest version);
   b. assessment on internal decay of the main trunk and other locations being considered with structural defects; and
   c. conditions of installations, if any, such as cable, bracing road and propping structure so as to identify any visual damage and other irregularities.

3. Submit tree risk assessment reports, using Form 1 or Form 2, with recommendations of arboricultural works for risk abatement to the CM, details and format of the report have to be approved by the CM;

4. Carry out and complete the arboricultural works as recommended in the assessment reports and approved by the CM, and keep records of supervision and work done; and

5. Provide one Qualified Arborist ("QA") to carry out tree risk assessment, preparation and presentation of assessment reports, supervise the execution of the arboricultural works recommended in the assessment reports and approved by the CM including preparation of records on supervision and work done.

PRE.B8.1220.7 TIMING FOR CARRYING OUT OF TREE RISK ASSESSMENT AND ARBORICULTURAL WORK

1. Carry out and complete tree risk assessment and the related arboricultural work as approved by and to the satisfaction of the CM during the duration of the Contract as described below:

<table>
<thead>
<tr>
<th>Length of the service period</th>
<th>.......... months</th>
</tr>
</thead>
<tbody>
<tr>
<td>[modify to suit if the assessment is an one-off exercise]</td>
<td></td>
</tr>
</tbody>
</table>

| Covering period | From Date .......... to Date .......... |

2. In general, each tree as identified in PRE.B8.1210 or instructed by the CM shall be subject to tree risk assessment by QA within each twelve (12) months period commencing from the date of commencement of the Works with the exact date to be instructed by the CM; in any case no two assessments shall be separated by more than twelve (12) months within the duration of Contract;

3. Carry out additional tree risk assessments as instructed by the CM on trees which are subject to emergency situations including but not limited to failure of major branches or trunk, blooming of fungal fruiting bodies, accident causing tree injury, acute pest problem and other situation causing imminent danger.

4. Use either Tree Risk Assessment Form 1 or Form 2 as directed by the CM to conduct the above tree risk assessment exercise.

PRE.B8.1230.7 QUALIFICATION AND EXPERIENCE REQUIREMENTS OF THE QUALIFIED ARBORIST

1. Each QA shall possess the following academic training, professional qualifications and working experience in either Degree Entry or Non-Degree Entry respectively:
<table>
<thead>
<tr>
<th>Degree Entry</th>
<th>Non-Degree Entry</th>
</tr>
</thead>
<tbody>
<tr>
<td>Academic Training and Professional Qualification:</td>
<td>Academic Training and Professional Qualification:</td>
</tr>
<tr>
<td>Have obtained recognised degree or above in Arboriculture, Horticulture, Landscape Architecture, or equivalent to the standards of ‘Level 5’ or above in Hong Kong Qualifications Framework (HKQF).</td>
<td>a) Have successfully undertaken training programmes recognised by the Tree Management Office of DevB, such as Tree Risk Assessment Qualification (TRAQ) organised by the International Society of Arboriculture (ISA), or Professional Tree Inspection by Lantra Awards; OR</td>
</tr>
<tr>
<td></td>
<td>b) Have valid qualification or certification awarded by recognised institution or industry organisation on arboriculture, such as Certified Arborist of the ISA, Registered Arborist (‘Level 3’ or above) of Arboriculture Australia, Technician Member or above of the Arboriculture Association of the United Kingdom, Accredited Arboricultural Practitioner of the Hong Kong Institute of Landscape Architects (HKILA), Professional Diploma Programme in Arboriculture or Tree Risk Assessment and Management of the School of Continuing and Professional Studies, Chinese University of Hong Kong (CUSCS), Advanced Diploma in Tree Management and Conservation of the School of Professional and Continuing Education, University of Hong Kong (HKU SPACE), Certificate in Professional Tree Management of the Open University of Hong Kong (OUHK), Professional Diploma in Horticulture and Landscape Management of the Technological and higher Education Institute of Hong Kong (THEi), etc.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Working Experience:</th>
<th>Working Experience:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Have at least three(3) years of post-qualification work experience in tree care, and are familiar with tree risk assessment / management as approved by CM.</td>
<td>Have at least four(4) years of post-qualification work experience in tree care, and are familiar with tree risk assessment / management as approved by CM.</td>
</tr>
</tbody>
</table>

2. The employment of the QAr shall be approved by the CM. In case the employment of the QAr with the Contractor is terminated for whatever reasons, the Contractor shall further provide another QAr who satisfies with the above academic training, professional qualifications and working experience for replacement within fourteen (14) days of the termination.
PRACTICE ON TREE RISK ASSESSMENT

1. Practice and Procedures on Tree Risk Assessment
   a. The QAr shall use proper equipment such as wood decay detection equipment and drilling resistance measuring equipment, for checking internal decay and take photos for major defects or irregularities spotted;
   b. The QAr shall not cause any unnecessary damage to any tree parts or excessive soil compaction during assessment;
   c. The Contractor shall provide all necessary equipment and machineries for assessments to be conducted by the QAr;
   d. The Contractor shall cordon-off the Site during the aerial inspection and make all arrangements for site cordon-off or road closure, if necessary;
   e. The Contractor shall ensure that all their staff and the QAr are provided with and properly used all appropriate equipment and measures in carrying and assisting in carrying out of assessments; and
   f. The Contractor shall also take every safety precaution to avoid injury to its staff, the QAr, the general public and to avoid damage to property of others during tree assessments.

2. Tree risk Assessment Report
   a. The QAr shall complete and sign a full comprehensive assessment report for each tree as shown on Drawing No.………., using Form 1 or Form 2 as instructed and provided by the CM from time to time, which shall include but not limited to the following:
      i. General information of the tree(s);
      ii. Observations;
      iii. Views on risk caused by defects with justifications; and
   iv. Recommended measures for risk abatement which shall, without limitation, include:
      - A proposal of arboricultural works for risk abatement to each tree assessed. The proposal shall have taken into account avoidance of permanent blockage of vehicular or pedestrian traffic;
      - Annotated plans, photos, sketches, or drawings for clear indication in the proposal in respect of the following pruning works or installations may be provided in the report to illustrate or elaborate the recommended measures:

<table>
<thead>
<tr>
<th>Pruning/Installation</th>
<th>Required details</th>
</tr>
</thead>
<tbody>
<tr>
<td>i Crown Reduction</td>
<td>Overall crown reduction: recommended percentage; or Selected branch reduction: location of major limbs (direct connection to the trunk), position of the cut and percentage of reduction.</td>
</tr>
<tr>
<td>ii Crown thinning</td>
<td>Location of major limbs (if any) to be removed and position of the cut.</td>
</tr>
<tr>
<td>iii Crown lifting</td>
<td>Location of major limbs (if any) to be removed and position of the cut.</td>
</tr>
<tr>
<td>iv Cabling</td>
<td>Exact location of each limb involved. Position of each cable and its connection points on approximate position of related limbs. Submit fixing details / shop drawings of cable and end-connection between the limb and the cable for CM's approval. Exact location and the limb position of another tree if involved in cabling.</td>
</tr>
<tr>
<td>v</td>
<td>Bracing</td>
</tr>
<tr>
<td>----</td>
<td>----------------------------------</td>
</tr>
<tr>
<td>vi</td>
<td>Guying</td>
</tr>
<tr>
<td>vii</td>
<td>Propping</td>
</tr>
</tbody>
</table>

- As regards to chemical treatment for nutrition problem or pests and diseases, a proposal of the specific chemicals to be used together with potential chemical suppliers, application method and schedule; and

v. Attachments for witnessing the content of the report …………..

3. Presentation of proposal;
   a. After submission of the tree risk assessment report to the CM, using either Form 1 or Form 2, the QAr shall present the proposals as and when called upon to do so by the CM. The QAr shall, if necessary, revise the recommendations by incorporating further detailed elaboration as required by and up to the satisfaction of the CM. The amended proposals shall be re-submitted to the CM by one week.

#### PRE.B8.1250.7 INSPECTION AFTER INCLEMENT WEATHER

The QAr shall carry out inspection on trees as shown on Drawing Nos.……….. and those instructed by the CM within one week after cancellation of Typhoon No. 8 or above and Black Rainstorm Warning. The inspections shall focus on the damage, the stability and potential hazard. The QAr shall also propose recommendations for any arboricultural remedial works for Contractor's submission to the CM for approval, and supervise the execution of the arboricultural works as approved by the CM.

#### PRE.B8.1260.7 ARBORICULTURAL WORKS IN RELATION TO TREE RISK ASSESSMENT AND INSPECTION AFTER INCLEMENT WEATHER AS APPROVED BY THE CM

1. Schedule for Work Completion

   All arboricultural works in relation to tree risk assessment and inspection after inclement weather as approved by the CM shall be completed within the time limit as instructed by and to the satisfaction of the CM.
2. Pruning
   a. Pruning including crown cleaning, crown lifting, crown thinning and crown reduction shall comply with any one of the following standards (the latest version):
      i. American National Standard for Tree Care Operations (ANSI A300 (Part 1)) – Tree, Shrub, and Other Woody Plant Maintenance – Standard Practices (Pruning); or
      ii. British Standard for Tree Work (BS 3998:1989); or
      iii. Other international standards approved by the CM.
   b. As regards emergency pruning against imminent danger, prior verbal consent should be obtained by the QAr from the CM;
   c. The Contractor shall provide all necessary equipment and machineries including chainsaws, rigging ropes, lifting platform for carrying out and completion of the pruning works;
   d. The QAr shall arrange for secure lowering of cut limbs to avoid causing injury to person and damage to property when free falling onto the ground; and
   e. The pruning operation shall not cause damage to the nearby planting or structure. All cut branches carrying diseases or insects have to be bagged in a recyclable polythene bag and properly disposed to avoid contamination.

3. Cabling, Bracing and Guying
   a. Cabling, bracing and guying shall comply with any one of the following standards (the latest version):
      i. American National Standard for Tree Care Operations (ANSI A300 (Part 3)) – Tree, Shrub, and Other Woody Plant Maintenance – Standard Practices (Support Systems a. Cabling, Bracing, and Guying); or
      ii. British Standard for Tree Work (BS 3998:1989); or
      iii. Other international standards approved by the CM.
   b. In case the CM approve to connect a cable to another tree or object, the Contractor shall ensure the proper preparation of anchorage and the connection of cable;
   c. The Contractor shall provide all necessary equipment to facilitate the cabling, bracing and guying work as approved by the CM and comply with all safety requirements; and
   d. The CM may direct the removal by the Contractor of any equipment which is considered to be unsafe and unfit for the cabling, bracing and guying work, the Contractor shall bear all costs and expenses in relation to such removals and no time or monetary claims will be entertained under the Contract.

4. Tree Removal
   a. Do not remove any tree as approved by the CM before the confirmation of the CM that tree felling approval has been obtained from relevant government department(s);
   b. Rigging and removal of trees shall comply with any one of the following standards (the latest version):
      i. American National Standard for Arboricultural Operations (ANSI Z133) – Safety Requirements; or
      ii. British Standard for Tree Work (BS 3998:1989); or
      iii. Other international standards approved by the CM.
   c. Provide all necessary equipment and machineries including chainsaws, rigging ropes, lifting platform for removal of trees;
   d. Ensure that the QAr has arranged for secure lowering of cut limbs and stumps to avoid causing injury to person and damage to property;
   e. Clear away the remaining stump and removal of tree debris, cut pieces of limbs and refuse generated from the tree removal work; and
   f. Prepare a Tree Failure Report as required by the CM.
5. Application of Fertilizers and Pesticides
   a. Provide and apply fertilizers and pesticides in accordance with the recommendation approved by the CM;
   b. Application of fertilizers shall comply with any one of the following standards (the latest version):
      i. American National Standard for Tree Care Operations (ANSI A300 (Part 2)) – Tree, Shrub, and Other Woody Plant Maintenance – Standard Practices (Fertilization); or
      ii. British Standard for Tree Work (BS 3998:1989); or
      iii. Other international standards approved by the CM.
   c. Where chemical method is engaged for pest and disease control, only Approved equipment and chemicals shall be used, and could only be carried out by trained personnel. Pesticides could only be applied by trained personnel who possessed all relevant licence under statutory requirements. Detail records (including but not be limited to name of the pesticide, its formulation, registration number, time and location of application, the particulars of the applicator) shall be submitted to the CM for information prior to each operation;
   d. No application of pesticides shall be carried out unless with the prior approval of the CM on the time and location of application so as to reduce the disturbance to the public to the minimum; No chemical pest control shall be conducted unless under suitable weather condition and with safety measures implemented. The Contractor shall ensure that the Site is suitably cordoned off and warning notice is displayed to keep off people and animals when chemical is applied. Warning notices should be put up at prominent positions of the Site after each operation of pest control chemical has been applied;
   e. The Contractor shall ensure that all personnel in carrying out pesticide application is equipped with and wear the proper protective clothing and working gears during each operation;
   f. The Contractor shall ensure that all pesticides to be used shall be in compliance with the Pesticides Ordinance Cap. (133), amended by the Pesticides (Amendment) Ordinance 2013, and approved by the CM before use and application of pesticide shall be performed in accordance with the manufacturer's recommendations; and
   g. The Contractor shall dispose of any unwanted pesticides in accordance with the requirements laid down in the Waste Disposal Ordinance (Cap. 354).

6. Work Record
   Records on arboricultural works on each tree shall be signed by the QAr, the format of such records shall be as approved by the CM.

7. Safety Requirements
   a. The Contractor shall provide proper climbing equipment and protective clothing for its QAr and at all times ensure that all workers operating the chainsaws and other machineries shall have been trained properly and wear safety boots, goggles, protective clothing and reflective safety vests of a conspicuous colour;
   b. The Contractor shall remind all personnel working on highway structures (including footbridges, non-expressway bridges and bridge columns) that they have a statutory duty to take reasonable care of their own health and safety as well as that of others their actions or omissions at work may affect. The hazards associated with personnel working on highway structures shall include working at height, falling objects and traffic accidents. All personnel working on highway structures shall wear reflective belts, safety belts, safety harnesses or lifelines as appropriate which should be connected to stable anchorage points;
c. The Contractor shall carry out safety precautions to prevent injury to persons and damage to property as against its workers and the general public. The Contractor shall fulfil the safety requirements of at least one of the following standards (the latest version):
   i. American National Standard for Arboricultural Operations (ANSI Z133) – Safety Requirements; or
   ii. British Standard for Tree Work (BS 3998:1989); or
   iii. Other international standards approved by the CM.

d. Before commencing tree pruning or climbing works, the Contractor shall ensure that there is no overhead high voltage cable near the working area and that pruning operation will not cause damage to the nearby planting or structure. Safety measures must be taken to ensure the safety of the public. The Contractor shall ensure that neither unrelated person nor animal stays nearby during operation and coordinate with relevant authorities regarding any special pruning equipment and/or lighting requirements which may interrupt traffic. Warning signs shall be put up to keep public away from the pruning operation;

e. The Contractor shall ensure that all chainsaws or other machineries used have fulfilled the statutory safety requirements;

f. The CM may direct the removal by the Contractor of any equipment which is considered to be unsafe and unfit for arboricultural works, the Contractor shall bear all costs and expenses in relation to such removals and no time or monetary claims will be entertained under the Contract; and

g. The Contractor shall ensure arboricultural works are carried out in compliance with the Occupational Safety and Health Ordinance (Cap. 509) and its regulations.

8. Collection and Disposal of Refuse
   a. The Contractor shall be responsible for the picking up and removal of tree debris, cut pieces of wood, refuse generated from tree assessment/inspection and arboricultural works. The Contractor shall also clear away all debris or refuse, such as joss sticks, incensed idols, construction debris, etc. within the dripline;
   b. The Contractor shall provide recyclable polythene bags and transport the refuse collected to the controlled tips at its own cost using wheeled handcarts or any other appropriate equipment in properly covered containers;
   c. No damage should be caused to the planting in the working sites when carrying out cleansing duties by the Contractor; and
   d. The Contractor shall strictly prohibit its employees or agents from sweeping or dumping the refuses onto the adjoining pavements, surface channels or gullies, or other area or sites at which refuse dumping is not allowed.

9. Work Arrangement along Carriageways
   a. The Contractor shall at its own expense make all arrangements for road closure so as to carry out tree assessment/inspection and arboricultural works;
   b. Where lane closure is necessary, the Contractor shall liaise with lane closure sub-contractor from approved list of the Highways Department and obtain the necessary approvals from Commissioner for Transport, the Commissioner of Police, the Director of Highways and any other relevant authority for temporary traffic arrangements. The Contractor shall ensure that its workers shall strictly follow the requirements for temporary traffic arrangements as stipulated in the latest version of Code of Practice for the Lighting, Signing and Guarding of Road Works issued by the Highways Department; and
   c. The Contractor shall also comply with any other conditions and restrictions imposed by the Commissioner for Transport, the Commissioner of Police and the Director of Highways.
SITE ORGANISATION AND SITE SUPERVISION PLAN

SUBMISSIONS OF ORGANISATION CHART AND SSP

1. Submit to the CM for approval within seven days from the notified date for commencement of the Works, and re-submit any change for CM's further approval, the following:
   a. Site organisation chart including the names of the project director, the Contractor's superintendents as required in PRE.B6.060 and safety officer;
   b. Names of sub-contractors for foundation works, if any, including the names of the project directors, Authorized Signatory, Technical Director, TCPs and site representatives of the sub-contractors; and
   c. Written declaration together with supporting documents (e.g. employment contract, bank payroll record, MPF contribution record) stating that the Contractor's superintendents and the Contractor's Management Team as required in PRE.B6.060 and other personnel as shown on the site organisation chart are directly employed by the Contractor. The employment terms for the staff of the Contractor’s superintendents and the Contractor’s Management Team shall include a “consent to disclosure” clause in accordance with the data protection principles set out under the Personal Data (Privacy) Ordinance (Cap. 486). Personal data (e.g. HKID number, salary amount) within the supporting documents can be blanked out or covered up when submitted by the Contractor.

2. Within three days after the date of the Letter of Acceptance, the Contractor shall submit a SSP for Building Works to the CM as follows:
   a. The SSP shall comply in all respects with the requirements stated in the TMSP and CoPSS;
   b. Complete and submit Form ICU 206 for the SSP.

3. Submit a SSP for Building Works (except pile installation, pile cap and footing construction) to the CM at least 22 days before the commencement of the Building Works as follows:
   a. The SSP shall comply in all respects with the requirements stated in the TMSP and CoPSS;
   b. Complete and submit Form ICU 206 for the SSP.

4. Submit a SSP for foundation works to the CM at least 22 days before the commencement of the foundation works as follows:
   a. The SSP shall comply in all respects with the requirements stated in the TMSP and CoPSS;
   b. Complete and submit Form ICU 206 for the SSP;
   c. The supervision provided by the RSC stated in the SSP shall cover all stages of works stated in the above documents, including those works required to be carried out by the RSC(GIFW) as stated in PIL1.G460 & PRE.B9.250.

5. When the foundation work is executed by the Piling Sub-contractor as required by PIL1.G515, comply with the following requirement:
   a. Submit the following to the CM at least 22 days before the commencement of the foundation work:
      i. A SSP prepared by the Piling Sub-contractor. The SSP shall comply in all respects with the requirements stated in the TMSP and CoPSS;
      ii. Form ICU 206 for SSP which shall be completed by the Piling Sub-contractor.
   b. The supervision provided by the RSC stated in the SSP shall cover all stages of works stated in the TMSP and CoPSS, including those works required to be carried out by the RSC(GIFW) as stated in PIL1.G460 & PRE.B9.250.

6. Submit a SSP for ELSW to the CM at least 22 days before the commencement of the ELSW as follows:
a. The SSP shall comply in all respects with the requirements stated in the TMSP and CoPSS;
b. Complete and submit Form ICU 206 for the SSP.

7. Submit a SSP for Site Formation Works to the CM at least 22 days before the commencement of the Site Formation Works as follows:
a. The SSP shall comply in all respects with the requirements stated in the TMSP and CoPSS;
b. Complete and submit Form ICU 206 for the SSP.

8. Submit a SSP for Site Formation Works to the CM within three days after the date of the Letter of Acceptance:
a. The SSP shall comply in all respects with the requirements stated in the TMSP and CoPSS;
b. Complete and submit Form ICU 206 for the SSP.

9. When the construction of footing is executed by the Contractor, submit a SSP for construction of footing to the CM within three days after the date of the Letter of Acceptance as follows:
a. The SSP shall comply in all respects with the requirements stated in the TMSP and CoPSS;
b. Complete and submit Form ICU 206 for the SSP.

10. When the construction of footing is executed by the sub-contractor as stated in PIL1.G520, submit the following to the CM within three days after the date of the Letter of Acceptance:
a. A SSP prepared by the sub-contractor for construction of footing. The SSP shall comply in all respects with the requirements stated in the TMSP and CoPSS;
b. Form ICU 206 for the SSP, which shall be completed by the sub-contractor for the construction of footing.

11. Submit a SSP for demolition works to the CM at least 22 days before the commencement of the demolition works. Comply with the requirements for the submission as detailed in DEM1.W110.

SITE ADMINISTRATION

PRE.B8.1410.7 SITE MEETINGS
1. Attend site meetings when required by the CM. Inform Nominated Sub-contractors, Direct Contractors and utility undertaking when their presence is required. Report on items of work as directed by the CM;
2. Arrange regular site meetings with Nominated Sub-contractors, Direct Contractors and utility undertaking. Provide CM with a copy of the minutes of such meetings.

PRE.B8.1420.7 CO-ORDINATION OF SERVICES
1. Generally the Drawings for services are schematic and only indicate the approximate location of the various services;
2. Ensure the compatible integration and co-ordination of the works to be undertaken by Nominated Sub-contractors both with one another and with the remainder of the Works and the works by Direct Contractors and Utilities Undertakers, propose a solution for the CM's approval if there is any conflict or incompatibility discovered during the course of the above co-ordination process;
3. Supply to Nominated Sub-contractors, Direct Contractors, Utilities Undertakers all dimensions and other information necessary to ensure the correct and timely execution of the Works;
4. Co-ordinate with Nominated Sub-contractors, Direct Contractors and Utilities Undertakers in the preparation of the schedules of submissions for installation drawings and materials, the programme of works and the testing and commissioning programme;
5. Verify and endorse the installation drawings prepared by Nominated Sub-contractors before submitting them to the CM for approval;

6. Monitor and report the progress of Nominated Sub-contractors' submission and installation activities;

7. Prepare a delivery method statement for all items of plant and equipment provided by Nominated Sub-contractors, Direct Contractors and Utilities Undertakers, including the identification of all temporary access requirements;

8. Verify and endorse that the material delivered to Site and installed by the Nominated Sub-contractors are approved by the CM and in full compliance with the Contract requirements, in accordance with PRE.B12.280;

9. Verify and endorse the test reports prepared by the Nominated Sub-contractors upon completion of the Sub-Contract Works that the installations are completed and in compliance with the Sub-Contract requirements;

10. 
   a. For the following section(s) of the Works containing building/structures other than standard domestic blocks, prior to the commencement of the building services installation, prepare Combined Services Drawings for CM's approval to ensure that all services included in the Works, the Direct Contractors' Works and utilities installations are co-ordinated with each others and with the structural and architectural elements of the Works.
      i. Section of the Works: ........
   b. The Combined Services Drawings shall be completely co-ordinated with due regard to for the sequencing of works, constructability, the final equipment selection and future maintenance requirement. Details to be shown shall include but not be limited to:
      i. The size, type and location (setting out and level) of all services, utilities, including supporting brackets, and the interrelationships with the structure, architectural design and other systems provided by Direct Contractors;
      ii. Sections and elevations, where plan view alone cannot demonstrate spatial relationship between services, with setting out dimensions from finished floor/soffit/wall;
      iii. Fully dimensioned structural beams in all areas;
      iv. Structural and finished floor levels in all areas;
      v. Finished ceiling levels and dimensioned ceiling services zone in all false ceiling areas;
      vi. All air ducts and those piping, cable containment system with external dimension greater than 100 mm (including insulation where required) to be shown in double line to scale with direction of flow and fall. Outside dimensions to be shown for all services drawn;
      vii. Valves, strainers, pressure/flow measuring tappings, thermostats, sensors, switches, motors, actuators, dampers etc that require access;
      viii. Access panels allocated for installation, commissioning and testing, maintenance;
      ix. Light fittings, grilles, diffusers, heat/smoke detectors, sprinkler heads, PA speakers, CCTV cameras, access control & security equipment, EAS equipment etc;
      x. The drawing reference with the exact revision number of the architectural/structural drawing on which the Combined Services Drawings are based.
   c. The spatial design and alignment of services shall be parallel to the lines and levels of the building structure so as not to be visually unpleasant and shall be such as to facilitate the performance of maintenance work on any of the services;
d. The scale of the Combined Services Drawings shall be not less than 1:50 for layout plans while the scale of the sectional plans shall not be less than 1:25. Other drawing scales may be required as and when considered necessary for the purpose of clarity by the CM.

11. Verify against the Combined Services Drawings that the following conditions pertaining to safety and good engineering practice are met:
   a. Cable routes not to be accessible by public;
   b. Fresh air intake to be at least 1.5 m from generator/kitchen flue exhaust;
   c. Ventilation exhaust to be free from obstruction;
   d. Communal gas pipe to be separated from tenants' areas;
   e. Routing for internal gas pipe shall be well ventilated by natural means.

**PRE.B8.1425.7 QUALITY CONTROL SYSTEM**

1. Submit to CM for approval the setup of a Quality Control System (QCS) for ensuring the compliance of materials and tests with the Specifications and Drawings within 7 days from the notified date for commencement of the Works.

2. The QCS shall comprise of one Quality Control Manager (QCM) and the following Quality Control Coordinators (QCCs)
   a. …… Number of Architectural Quality Control Coordinator (AQCC);
   b. …… Number of Structural Quality Control Coordinator (SQCC);

3. Designations, qualifications, responsibilities and duties of the QCM and QCCs are specified in PRE.B6.060.

**PRE.B8.1430.7 PROGRESS AND RECORD PHOTOGRAPHS**

1. Provide at weekly intervals or as and when directed by the CM for the duration of the Contract one set of photographs showing progress of the Works taken from locations as directed by the CM;

2. Submit sample(s) for Approval prior to the submission of the first set of photographs;

3. Submit, within fourteen days after taking the photographs a set of photographs comprising a minimum of eight, or such number as may be required by the CM, 8R size colour prints together with their corresponding negatives. Before submission, mark or stamp on the reverse side of each print the layout of the Site, the title of the project, the date and the viewpoint from which the photograph was taken.

**PRE.B8.1435.7 PUBLIC RELATIONS PLAN**

1. Comply with PNAP APP-137 in devising the Public Relations (PR) Plan. The PR Plan aims to establish an effective communication system with the nearby occupants, concerned groups and district councillor etc. of the forthcoming site operations, to facilitate communication between the affected parties and the Contractor, to minimize possible complaints, and to enable the CM or his representatives and the Contractor to handle complaints in a timely and effective manner. Under the PR Plan, the Project Structural Engineers / Project Resident Engineers will be assigned as the PR Officers for carrying out the PR duties;

2. Provide all necessary personnel, resources, services and facilities for the implementation of PR Plan as required by the CM which shall include but not be limited to the followings:
   a. Provide all necessary assistance to the PR Officers to carry out their duties;
   b. Assign a responsible person and deploy facilities for assisting the PR Officers to handle all PR works and communication with the nearby occupants, concerned groups and district councillor etc.;
   c. The responsible person shall be Site Agent / Project Manager and has adequate training and experience on PR skills;
d. Inform the nearby occupants, concerned groups and district councillor etc. about the scope of project, operation type and extent, daily operation time, works programme, monitoring plan and pre-construction condition survey if applicable;

e. Inform the nearby occupants, concerned groups and district councillor etc. about the progress of works regularly;

f. In case of incidences of cracks, settlement of buildings or lands and the like causing complaints from the nearby occupants, concerned groups and district councillor etc., follow up the case with the complainant(s) by providing investigation report and remedial / rectification action plan (if any) to the affected parties;

g. Report the progress and completion of remedial / rectification works to the affected parties.

3. Attend meetings with the nearby occupants, concerned groups and district councillor etc. when required by the CM for handling of public enquiries and / or complaints. The Contractor's TCP T4 officer responsible for the works, Safety Officer and / or Environmental Manager shall attend the meetings if the nature of the complaints involving action related to their disciplines;

4. Produce internal Complaint Handling System for matching with the PR Plan.

PRE.B.1440.7 AS-BUILT DRAWINGS AND DOCUMENTATION

1. On completion of the Works or any Section and within 28 days from the date of completion of the Works or any Section unless otherwise instructed by CM, submit as-built drawings and documentation for architectural works which include but are not limited to the following certificates, warranties, user manuals and drawings with clearly shown dimensions and levels of the Works as it was constructed and at an appropriate scale as agreed with the CM:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>

### vi. Detailed drawings of the following components:
- Window showing the edge jointing of window frame and structure;
- Prefabricated components such as external cladding/ façade;
- Fire resistance door
- **Sets:** 3
- **Sets:** -

### vii. External work drawings including road, kerb and flower bed
- **Sets:** 3
- **Sets:** -

### viii. Underground pipe layout plan for fresh and flush water and fire services (including street hydrants) for whole estate
- **Sets:** 5
- **Sets:** 3

### b. User manuals
- **Copy of document**

#### i. Highlights on special precautions/procedures/methods required on the use, cleaning, servicing, maintenance, repair and replacement of any proprietary material and equipment/component (such as covered walkway and skylight) installed. Requirements on proper use, durability, safety and statutory side shall also be stated clearly.
- **Nos.:** 5

#### ii. Playground equipment user manual
- **Nos.:** 5

#### iii. Gondola/gantry user manual
- **Nos.:** 5

#### iv. Installation manual and method statement for uPVC lined G.I. water pipes
- **Nos.:** 5

#### v. Installation manual for panel wall partition system
- **Nos.:** 5

#### vi. Play/fitness equipment information including as-built layout plan, official catalogue and list of equipments, 3-dimensional technical drawings of all equipments, maintenance manual, and maintenance tools itemized etc.
- **Nos.:** 5

### c. Certificate / warranty / reports
- **Copy of document**

#### i. Certified true copy of fire certificate of fire resistance elements installed
- **No.:** 1

#### ii. CCTV survey reports & tapes, and pipe testing reports for underground drainage system
- **Nos.:** 3

#### iii. Work Completion Certificate for electrical installation
- **No.:** 1

#### iv. Deeds of Warranty as required in the Special Condition of Contract Clause SCC7.6 for the play/fitness equipment and impact absorbing and surfacing materials. As required under SCC7.6.
v. Warranty for any other proprietary materials, equipment and installation with warranty period longer than two years. Names, addresses and contact telephones of the suppliers shall be stated clearly. In case there is no such certificate, the CM shall be informed.  

vi. Inspection Certificate for the permanent anchorage(s) adjacent to lift landing doors at the lowest landing floor for access to lift pits in PRE.B12.430.

2. On completion of the Works or any Section and within 28 days from the date of completion of the Works or any Section unless otherwise instructed by CM, submit as-built drawings and documentation for structural works which include but are not limited to the following reports and drawings with clearly shown dimensions and levels of the Works as it was constructed and at an appropriate format and scale as agreed with the CM:

<table>
<thead>
<tr>
<th></th>
<th></th>

1. In addition to the requirements of GCC Clause 5.25, keep wage books for monitoring the payment of wages and MPF contribution paid by the Contractor and the sub-contractors of all tiers to all Site Personnel and identify each Site Personnel by the data as specified in PRE.B8.2650. The wage books shall give a full and up-to-date account of the payment of all wages and MPF contribution paid to all Site Personnel for the duration of the Contract, up to and including the month in which the operation of ACRS is terminated as stipulated in PRE.B8.2660. For Contracts with more than one Portion of the Site, the Contractor shall keep wage books for all Site Personnel of each particular Portion of the Site up to and including the month in which the operation of ACRS is terminated as stipulated in PRE.B8.2660, or up to an earlier date as otherwise agreed by CM, to be consisting of the following:
   a. A complete set of copy of the executed employment contracts of all Site Personnel on Site as required in PRE.B6.550;
   b. A complete set of signature specimens of all Site Personnel complying with the format similar to the prescribed forms attached to the latest "Contractor's Guideline on Wage Monitoring System" published by HA from time to time;
   c. A complete set of verified daily attendance records as required in PRE.B8.2610;
   d. A complete set of copy of the schedules of wages and the respective records of transactions for payment of wages and MPF contribution as required in PRE.B6.550;
   e. A complete set of copy of the written declaration that all wages of the Site Personnel have been paid and all MPF contributions have been made as required in PRE.B6.550.

2. Make wage books available on Site for inspection by the CM or LRO. Maintain and update an additional copy of wage books in the office of LRO for record;

3. All documents kept in the wage books shall be duly certified by the Contractor or the respective sub-contractors that they are the true copy of the original documents;

4. Provide information of daily wages on the daily returns submitted in accordance with GCC Clause 5.25(3). Provide information for each of the separate classes of labour and in accordance with any requirements of the CM and the Census and Statistics Department of the Hong Kong SAR Government;

5. Keep wage books in a secure place in the site office such as a room or cabinets with locking device during the whole contract period and keep in other secure place as agreed by CM after the date of terminating the operation of ACRS as stipulated in PRE.B8.2660, or up to an earlier date as otherwise agreed by CM. The respective keys shall only be held by the members of Contractor's management team as stipulated in PRE.B6.060. After at least 12 months from the date of terminating the operation of ACRS as stipulated in PRE.B8.2660 and with the consent of the CM, all the documents kept in the wage books including the additional copy in the office of LRO shall be destroyed and disposed properly without disclosing any information contained in them;

6. Provide cabinets with locking device in the office of Contractor to nominated sub-contractors for keeping their wage books;

7. The above requirements stipulated in sub-clauses (1) to (6) may be exempted subject to the compliance with all relevant criteria and procedures stipulated in the latest "Contractor's Guideline on Wage Monitoring System" published by HA from time to time or as Approved by the CM on individual case basis.

Option 2
1. In addition to the requirements of GCC Clause 5.25, keep wage books giving a full and up-to-date account of wages paid to each worker employed on the Works and identify each worker by his name, trade and serial number of Site Pass. Specify the dates on which each worker is employed on the Works and the amounts paid in wages and allowances in respect of each day’s work in accordance with any requirements of the CM and the Census and Statistics Department of the Hong Kong SAR Government;

2. Make wage books available on Site for inspection by the CM.

**PRE.B8.1460.7 RECORDS OF PLANT AND MATERIALS**

In compliance with GCC Clause 5.25(3) provide the CM with the following information to enable him to keep and maintain site records of plant and materials:

1. Daily records of all plant and materials delivered to Site, including plant, tools and materials delivered by Nominated Sub-contractors and Direct Contractors. Identify each item of plant by serial number, description, photograph or similar method;

2. Records of items of plant or materials removed from Site;

3. Copies of invoices, certificates, submissions, vouchers or receipted accounts for materials as specified or as requested by the CM;

4. Records of ownership details of the following piling plants, where applicable, together with documentary proof of ownership and indicate whether such piling plants have been registered with the Counterparty List Management Section of the Housing Department for the purpose of listing for the Housing Authority’s List of Piling Contractors:
   a. Crawler crane;
   b. Hammer grab;
   c. Oscillator/rotator;
   d. Rock chisel;
   e. Reverse circulation drill;
   f. Hydraulic hammer;
   g. Piling rig;
   h. Pre-boring rig.

**PRE.B8.1470.7 REMOVAL OF MATERIALS FROM SITE**

Where Approval is given in accordance with GCC Clause 13.2, or instructions issued pursuant to GCC Clause 7.5(1), to remove materials off-site:

1. Serve 24 hours advance written notice to the CM, quoting the Approval or instruction, as the case may be; and

2. Give details of the scheduled hour, lorry loads, etc. of the removal. Such scheduled hour shall be within the normal working hours of the CM on Site;

3. Allow the CM to check and record the loads of materials before removal off-site at the Site entrance;

4. Obtain the endorsement of the CM before the materials leave the Site.

**PRE.B8.1480.7 CALIBRATION OF EQUIPMENT**

1. Accept responsibility for the calibration of the equipment used for the Contract against the appropriate national standards upon commencement of the contract and at intervals as specified in PRE.B8.1490;

2. Provide evidence to demonstrate that any equipment used on Site for carrying out required test has not exceeded the calibration interval each time before use;

3. Ensure that the equipment is capable of the accuracy and precision necessary to carry out the inspection, measuring and test;

4. Carry out the calibration at own expense;

5. Attach an identification label and a calibration status label to each item of equipment;
6. Provide Calibration Certificates as required;
7. Make records of calibration results available at all times for retention or inspection when requested by the CM.

PROTECTION

PRE.B8.1510.7 PROTECTION FROM WEATHER
Cover up, protect and secure the Works and the Direct Works from damage by inclement weather, including providing sufficient staff, adequate plant and any other requirements necessary to ensure protection during typhoon and heavy rainstorm conditions.

PRE.B8.1520.7 EMERGENCY STANDBY TEAM
1. Provide emergency communication and standby team for the execution of any emergency work on Site warranted necessary by the Contractor for the safety of the Works and/or the public, in accordance with the following:
   a. Within seven days from the notified date for commencement of the Works establish an emergency contact telephone number and submit the said telephone number to the CM;
   b. Man the emergency contact telephone at all times during which the Tropical Cyclone Warning Signal No: 3 or above is hoisted, with a competent English-speaking person. All information received to be immediately conveyed to the Contractor;
   c. Make available the emergency standby team comprising suitable staff, labour and plant at all times during which the said signal is hoisted. The standby team to be sufficient in size for any emergency work required to be carried out on Site. In the event that the standby team is not stationed at the Site, ensure that the team can be mobilized within the shortest possible time.
2. The provision of the emergency contact telephone number and the emergency standby team will in no way relieve the Contractor of his obligations, responsibilities and liabilities under the Contract.

PRE.B8.1540.7 DRYING THE WORKS
Provide temporary equipment, fuel and attendance for drying and controlling the humidity of the Works for the following operations and demonstrate compliance when required:
1. .............................................................................................................
2. .............................................................................................................

PRE.B8.1550.7 PROTECTION FROM OVERLOADING
1. Protect the Works from damage due to overloading;
2. Obtain details of design loads from the CM;
3. Do not use areas in partially completed buildings for storage unless Approved;
4. Ensure that imposed loadings from storage of new or waste materials do not exceed the design loading of the supporting structural members;
5. Accept sole responsibility for making good any damage arising from the storage to the satisfaction of the CM, irrespective of whether Approval has been given or not.

PRE.B8.1560.7 PROTECTION TO LIFT LOBBIES
Provide and maintain plywood protective linings to the walls and floors of the ground floor lift lobbies as indicated in the Drawing No(s) ............. at Appendix C, from the completion of the internal building finishes of ground floor lift lobbies to certified completion of the Works in accordance with clause 53 of the General Conditions of Contract.
PROTECTION OF WORKERS FROM HEAT STROKE

In addition to any obligation under GCC Clause 5.11 or similar obligations under any enactment or Regulation, adopt the practices and/or measures in respect of working in hot weather as recommended in the latest edition of the Guidelines on Site Safety Measures for Working in Hot Weather issued by the Construction Industry Council. Examine critically the practices and/or measures as recommended in the above-mentioned Guidelines, especially their applicability and suitability to the Works on account of the actual site conditions and the specific safety hazards of the Works. Alternative practices and/or measures which should not be inferior to those recommended in the said Guidelines may be proposed for CM's approval before implementation. The following highlights of the crucial practices and/or measures, albeit not exhaustive, are extracted from the above-mentioned Guidelines:

1. In relation to PRE.B6.070, ensure that the risk of heat stroke to workers and the caring measures for prevention of heat stroke are incorporated in the Safety Plan;
2. Prohibit consumption of alcoholic drinks;
3. Provide sheltered rest stations close to the workplace;
4. Where working in enclosed area with poor ventilation, ventilate the workplace by means of fans/blowers/chillers or any other form as appropriate;
5. Where appropriate, use mechanical aids for execution of works to minimise workers' physical exertion;
6. Keep heat-generating machinery (e.g. diesel air compressors or generators) away from workers as far as reasonably practicable;
7. Provide potable water at easily accessible drinking points;
8. Pursuant to PRE.B8.235, encourage workers wear proper clothing and safety helmet with ventilation vents to suit the weather;
9. Provide relevant training and site safety information to supervisors and workers to recognize symptoms of heat-related disorders;
10. Establish administration control measures with trained supervisors to take heed of hot weather report and if necessary, to reschedule outdoor work or to arrange job rotation or suitable rest breaks to avoid prolonged working in hot environment;
11. Let workers cool down by arranging regular rest periods, which can also reduce their period of exposure to the hot environment. Apart from the regular 30-minute rest period during the afternoon work session, allow an additional 15-minute rest period during the hot summer months (from May to September every year).

CLEANLINESS

SITE PRESENTATION

1. Keep the Site and the Works clean and tidy. Remove rubbish and debris as they accumulate and at the end of each working day. Carry out a general tidying up at the end of each week;
2. Remove debris and rubbish in the vicinity of the Site, if the debris and rubbish are in connection with the Works or disposal of by the persons working on the Site.

STORAGE OF NEW MATERIALS AND PLANT

1. Stack and protect unused materials and plant properly and neatly;
2. Store materials in a properly designated area separated from waste;
3. Store permanent materials, including all proprietary components, off a levelled, well-drained and maintained hard-standing ground, and protect from damage and contamination;
4. Do not store materials in corridors or staircases or in other areas that cause obstructions.
DISPOSAL OF WASTE MATERIALS
1. Stack waste materials neatly and remove from Site within one day after completion of each operation and before next trade commences using refuse chutes specified at PRE.B10.060;
2. Avoid obstruction where more than one trade is operating simultaneously;
3. Do not permit accumulated waste material piles to exceed 2000 mm generally or to exceed 450 mm high adjacent to refuse chutes;
4. To maintain site cleanliness, provide sufficient waste disposal points and all necessary receptacles to store waste material prior to removal from site.

CLEANING WORKS ON COMPLETION
Option 1
Clean the Works thoroughly inside and out, without damage and ready for occupation on completion, including polishing floors, windows and similar finishes.

Option 2
Clean the Works thoroughly inside and out, without damage and ready for use.

DISPLAY OF POSTERS - PREVENTION OF MOSQUITO BREEDING
Provide and display prominently upon all structures or temporary huts on the Site throughout the construction period and remove on completion, posters, in both English and Chinese, drawing attention to the dangers of allowing the breeding of mosquitoes. These posters may be obtained free of charge from the Food and Environmental Hygiene Department, Health Education Exhibition and Resource Centre of the Government of the Hong Kong Special Administrative Region.

REMOVAL AND TREATMENT OF STANDING WATER
Prevent or remove standing water from disused tyres, uneven floors, lift wells and pits, refuse areas or any other water receptacle location. Where removal of water is not possible, treat any standing water on the Site with an Approved oil at least once per week.

TREATMENT OF WATER RECEPTACLES
Store, cover or treat all items on the Site, including Constructional Plant, capable of retaining water to prevent the collection of water in them.

PESTICIDES AND LARVACIDES
Only pesticides and larvacide that have been registered in Hong Kong may be used. To protect environmental and human impacts, pesticides and larvacides must be used in accordance with the manufacturers' instructions. For enquiries on the procurement and use of pesticides, contact the Agricultural, Fisheries and Conservation Department.

PROTECTION OF PERSONAL DATA
COMPLIANCE WITH PERSONAL DATA (PRIVACY) ORDINANCE
1. Comply with the provisions of the Personal Data (Privacy) Ordinance and any rule, regulation and code of practice made thereunder in respect of personal information held in connection with this Contract and in the collection, handling, use and processing of such personal data;
2. Indemnify the Employer in respect of any liability, loss or damages incurred arising out of or in connection with any non-compliance of the above provisions.
DISPOSAL OF CONSTRUCTION AND DEMOLITION (C&D) MATERIAL

PRE.B8.1810.7 DISPOSAL OF INERT C&D MATERIALS

1. Inert C&D materials refer to the inert portion (e.g., soil, broken rock and concrete, etc.) of the C&D materials that can be used as fill materials for reclamation and earth filling projects. In order to make use of inert C&D materials generated by the Site, use best endeavours to identify recycling facilities or other construction sites as alternative disposal grounds where such materials can be used. Obtain Approval where such a site has been identified, which can be used as an alternative disposal ground as specified in PRE.B8.1850. If there is no such a site as an alternative disposal ground, dispose inert C&D materials as specified in sub-clauses (2) and (3) below;

2. Subject to sub-clause (1) above on alternative disposal ground, dispose inert C&D materials at the public fill reception facilities as designated by Public Fill Committee (PFC) of CEDD, and comply with their acceptance requirements;

3. Subject to sub-clause (1) above on alternative disposal ground, the public fill reception facility as designated by CEDD is ....................... Allow for adoption of other public fill reception facility that may be subsequently designated by CEDD due to reasons such as closure of the designated public fill reception facility by CEDD. Bear all additional cost incurred due to switching to the alternative designated disposal facility and no extension of time will be granted; and

4. If it is confirmed by PFC that there is no public fill reception facility being available, submit a disposal plan for inert C&D materials for the CM's agreement. The disposal plan shall include information as specified in sub-clauses (1)(a) to (1)(f) of PRE.B8.1850.

PRE.B8.1820.7 DISPOSAL OF NON-INERT C&D MATERIALS

1. Non-inert C&D materials refer to the portion of the C&D materials other than the inert portion. In order to make use of non-inert C&D materials generated by the Site, use best endeavours to identify recycling facilities or other construction sites as alternative disposal grounds where such materials can be used. Obtain Approval where such a site has been identified, which can be used as an alternative disposal ground as specified in PRE.B8.1850. If there is no such a site as an alternative disposal ground, dispose non-inert C&D materials as specified in sub-clauses (2) and (3) below;

2. Subject to sub-clause (1) above on alternative disposal ground, dispose non-inert C&D materials at the landfill or outlying islands transfer facility as designated by EPD, and comply with their acceptance requirements;

3. Subject to sub-clause (1) above on alternative disposal ground, the landfill or outlying islands transfer facility as designated by EPD is ....................... Allow for adoption of other landfill or outlying islands transfer facility that may be subsequently designated by EPD due to reasons such as closure of the designated landfill or outlying islands transfer facility by EPD. Bear all additional cost incurred due to switching to the alternative designated disposal facility and no extension of time will be granted; and

4. If it is confirmed by EPD that there is no landfill or outlying islands transfer facility being available, submit a disposal plan for non-inert C&D materials for the CM's agreement. The disposal plan shall include information as specified in sub-clauses (1)(a) to (1)(f) of PRE.B8.1850.

PRE.B8.1830.7 TRIP-TICKET SYSTEM FOR DISPOSAL OF C&D MATERIALS AT PUBLIC FILL RECEPTION FACILITIES/LANDFILLS/OUTLYING ISLANDS TRANSFER FACILITIES

1. Provide the account number of the billing account for disposal of construction waste under the Waste Disposal (Designated Waste Disposal Facility) Regulation (Cap. 354L) for overall monitoring of the Trip Ticket System;
2. Maintain a daily record of disposal of C&D materials from the Site including CHIT numbers, vehicle registration numbers, approximate volume, C&D materials type, designated disposal ground, departure time from the Site, actual disposal ground and arrival time at disposal ground, using the Daily Record Summary (DRS) at Appendix PRE.B8/II;

3. Submit the duly completed Part 1 of the DRS in duplicate before departure of the truck;

4. When leaving the Site, each and every vehicle transporting C&D materials including both the inert and non-inert portion, must bear a CHIT. The CHIT shall be duly completed;

5. Carry the CHIT on board the vehicle at all times throughout the vehicular trip to the designated disposal ground as stipulated in the CHIT;

6. For each vehicular trip after disposal of C&D materials, obtain a Transaction Record Slip and a stamped return of the CHIT from the operator of the designated disposal facility;

7. Check the information recorded in the DRS against available information including the Contractor's own records and data from EPD's web-site, then complete Part 2 of the DRS form and submit it to the CM within 1 working day after the records are posted at the EPD's web-site; and

8. Where an irregularity is observed or where requested by the CM under special circumstances (e.g. a CHIT has been issued but there is no disposal record at the disposal ground), submit to the CM within 5 working days after the recorded date of disposal the supporting evidence such as duly stamped CHIT and/or the Transaction Record Slip (where relevant) to confirm proper completion of the delivery trip(s) in question, or within 2 working days after the CM has requested for such evidence, whichever is later.

---

**PRE.B8.1831.7**

**TRIP-TICKET SYSTEM FOR DISPOSAL OF C&D MATERIALS AT DISPOSAL FACILITIES OTHER THAN PUBLIC FILL RECEPTION FACILITIES/LANDFILLS/OUTLYING ISLANDS TRANSFER FACILITIES**

1. Maintain a daily record of disposal of C&D materials from the Site including Disposal Delivery Form (DDF) numbers, vehicle registration numbers, approximate volume, C&D materials type, Approved alternative disposal ground, departure time from the Site, actual disposal ground and arrival time at disposal ground, using the Daily Record Summary (DRS) at Appendix PRE.B8/II;

2. Submit the duly completed Part 1 of the DRS in duplicate before departure of the truck;

3. When leaving the Site, each and every vehicle transporting C&D materials including both the inert and non-inert portion, must bear a DDF. A sample of the DDF is at Appendix PRE.B8/III. The DDF shall be duly completed and authorized by the CM's Representative;

4. Carry the DDF on board the vehicle at all times throughout the vehicular trip to the Approved alternative disposal ground as stipulated in the DDF;

5. For each vehicular trip after disposal of C&D materials, ensure that the DDF is signed off by a competent person as agreed by the CM at the Approved alternative disposal ground to confirm completion of each trip. Keep a copy of the DDF for inspection by the CM upon request. Complete Part 2 of the DRS form and submit it to the CM within 3 working days after the date of disposal; and

6. Where an irregularity is observed or where requested by the CM under special circumstances (e.g. a DDF has been issued but there is no disposal record at the Approved alternative disposal ground), submit to the CM within 5 working days after the recorded date of disposal the supporting evidence such as the signed off DDF to confirm proper completion of the delivery trip(s) in question, or within 2 working days after the CM has requested for such evidence, whichever is later.
SITE VIDEO RECORDING SYSTEM

1. Provide, operate and maintain, including all necessary cables, wirings, lightings and other accessories, a video recording system, at each vehicular exit with gate(s), with the following essential features to record all trucks with C&D materials leaving the Site:
   a. The video cameras used in the system shall be suitable for external use, protected from adverse weather and of high resolution, lowlight and colour type;
   b. Power backup shall be provided to cater for accidental breakdown of the power supply to the system;
   c. Videos captured by the system shall be recorded continuously without break unless agreed by the CM;
   d. Videos shall be captured in a format acceptable to CM;
   e. The registration number of each dump truck leaving the Site shall be captured by the system; and
   f. The loading conditions of the dump trucks including those empty trucks shall also be captured by the system prior to opening of the gate.

2. Securely protect the video cameras from being damaged or blocked;

3. Design and construct all necessary temporary works, including any supporting frames and protections, for mounting the video cameras and their accessories;

4. Provide the software and hardware for capturing the vehicle registration number, the time and date, and the loading conditions of each truck with C&D materials including those empty trucks leaving the Site, and for the CM's immediate viewing and taking of their photographs or viewing the recorded videos and photographs when required. Keep the videos record for at least 60 days and the photographs until such time as required by the CM;

5. Post sufficient notices at conspicuous positions on Site to notify the workers, drivers and staff about the purpose of the video recording system (i.e. all collected personal information/data will be used by the CM to monitor the loading conditions of trucks with C&D materials leaving the Site only and will not be released/issued to irrelevant persons/parties without the permission of the persons/parties being monitored) in accordance with data protection principles set out in the Personal Data (Privacy) Ordinance.

MONITORING OF WEIGHT OF TRUCKS WITH C&D MATERIALS

1. Unless otherwise Approved by the CM, supply and install weighbridge(s) at the site entrance to monitor the weight of each truck with C&D materials leaving the Site;

2. The weighbridge(s) shall be installed and put into operation as soon as practicable, and in any case not later than 3 months after the notified date for commencement of the Works, unless otherwise proposed by the Contractor and Approved by the CM;

3. The weighbridge(s) shall be kept functioning till the completion of the Works as far as practicable, and in any case the weighbridge(s) shall not be dismantled in or before the month which is ……… month(s) prior to the date of completion of the Works and as consented by the CM, unless otherwise proposed by the Contractor and Approved by the CM;

4. The weight capacity of the weighbridge(s) shall be at least 24 metric tonnes;

5. The weighbridge(s) shall be calibrated in accordance with the manufacturer's manual/instructions and must be certified as complying with the manufacturer's manual by a Registered Professional Engineer in the Mechanical Engineering Discipline under the Engineers Registration Ordinance;

6. Provide and utilize software and hardware for capturing the weight of each truck with C&D materials, the vehicle registration number, the time and date of the truck leaving the Site. Summarize the collected data in a format to be agreed with the CM;
7. Keep the collected data for at least 60 days and submit the summary report of such data to the CM upon the CM’s request at any time during the Contract.

**PRE.B8.1838.7 MECHANICAL COVER SYSTEM FOR DUMP TRUCKS FOR TRANSPORTING C&D MATERIALS**

1. Use dump truck with mechanical cover system satisfying the requirements specified in sub-clauses (7) to (10) below;
2. Ensure all dump trucks, which are goods vehicles fitted with a dump bed and of gross vehicle weight equal to or over 16 tonnes for transportation of construction and demolition (C&D) materials, are installed with a mechanical cover system, which is in good service condition to cover the dump bed;
3. Dump truck may not be allowed entering into the Site if sub-clauses (2) and (7) to (10) of this clause have not been complied with;
4. Clean all dust or debris on top of the mechanical cover so as not to obstruct its operation;
5. Loaded dump truck may be required to unload its contents on Site before leaving the Site if the dump bed and the cover of the dump truck do not comply with the requirements specified in sub-clauses (2), (4) and (7) to (10) of this clause after loading;
6. The Approval of the CM for a loaded dump truck leaving the Site shall not relieve the Contractor’s obligation to comply with the relevant legislation. The Employer shall not be liable for any loss or damage sustained by the Contractor arising from or in connection with any offence committed by the Contractor or the dump truck drivers or dump truck owners in relation to the transportation of the C&D materials from the Site;
7. The mechanical cover system of a dump truck shall comply with the following requirements:
   a. The cover shall be made of durable material and constructed with suitable components;
   b. The mechanical cover system shall be effective in preventing dust emission from the dump bed of the truck;
   c. The system shall be able to withstand strong winds under normal circumstances;
   d. The system shall be power-operated inside the driving cabin and backup with manual operation outside;
   e. When the dump bed is covered by the mechanical cover, any gap between the cover and the dump bed shall not exceed 25 mm wide and shall be sealed up tightly with suitable materials as far as practicable; and
   f. The mechanical cover system shall be installed with the following control devices to ensure its safe operation:
      i. The mechanical cover shall be operated only when the dump truck has been stopped and the hand brake is engaged;
      ii. A warning system consisting of flashing amber lights and audible alarm shall be activated automatically when the mechanical cover is being operated inside the driving cabin;
      iii. The warning system shall be visible and audible from both inside (by an indicator light associated with alarm system or the like) and outside of the driving cabin;
      iv. A locking system shall be provided to prevent accidental opening of the mechanical cover, if applicable; and
      v. The associated electrical equipment shall comply with the commonly adopted safety standard.
8. The gross vehicle weight and maximum dimensions of the dump truck after installation of a mechanical cover system shall comply with the relevant legislation and such dump truck shall pass the annual inspection and examination by the Transport Department. Submit supporting evidence to the CM to prove that such annual inspection and examination has passed;
9. Unless otherwise Approved by the CM, the mechanical cover system of a dump truck shall be certified by a Registered Professional Engineer in the Mechanical Engineering Discipline under the Engineers Registration Ordinance that the system complies with the requirements as specified in sub-clauses (2), (7) and (8) above. The certification must include a certified true photograph of the mechanical cover in a closed configuration;

10. Dump trucks installed with a mechanical cover system and have been registered under the "Pay for Safety Scheme" or "Pay for Safety and Environment Scheme" of the CEDD are deemed to comply with the requirement of sub-clause (9) above;

11. Vehicles other than 'dump trucks' carrying dusty materials away from the Site may use means other than mechanical covers to cover their dusty materials, provided that the vehicle shall have properly fitted side boards and tailboards, with the dusty materials loaded to a height not exceeding the height of side boards and tailboards, and covered by a tarpaulin or suitably impervious covering materials (as Approved by the CM) in good condition. The covering shall be properly secured and extended at least 300 mm over the side boards and tailboards before leaving the Site.

PRE.B8.1850.7 ALTERNATIVE DISPOSAL GROUND

1. Use best endeavours to identify recycling facilities or other construction sites other than the designated public fill reception facilities/landfills/outlying islands transfer facilities, or other public fill reception facilities/landfills/outlying islands transfer facilities as may be required by CEDD/EPD, which can be used as an alternative disposal ground. Obtain Approval for adoption of such a site as the alternative disposal ground. In support of the request for such Approval, submit a disposal plan for the CM's agreement. The disposal plan shall include:

a. A detailed description of the alternative disposal ground, including location, lot number (where appropriate), location plan and photographs of the proposed alternative disposal grounds showing the surrounding environment and land use;

b. Where the alternative disposal ground is a private construction site, submit a letter from each of the relevant authorities, such as Agriculture, Fisheries and Conservation Department, Lands Department and Planning Department, providing comment on suitability of the site under their respective purview, and a letter from the Authorized Person (as defined under the Buildings Ordinance) of the private construction site to confirm:
   i. The C&D materials for use in the development is acceptable;
   ii. The land/pond filling in the proposed alternative disposal ground and the use of land so formed by the C&D materials is in conformity with the statutory Outline Zoning Plan and lease conditions; and
   iii. The CM or his representatives are allowed to enter the alternative ground to conduct inspections where necessary.

c. Where the alternative disposal ground is a private recycling facility, it shall be on the recyclers' list for C&D materials recognized by EPD, as well as a letter from the recycling facility operator to confirm the CM's staff are allowed to enter the recycling facility to conduct inspections where necessary;

d. Where the alternative disposal ground is a construction site of Government (other than a government contract quarry) including those of Housing Authority, or Mass Transit Railway Corporation, submit written consent from the contract/project manager of the alternative disposal ground to use the C&D materials generated from the Site;

e. Where the alternative disposal ground is a government contract quarry, submit written consent from the Mines Division of CEDD to import the C&D materials generated from the Site; and
f. The estimated quantity and type of C&D materials to be used/processed in the alternative disposal ground and the approximate delivery programme, together with the name, post and specimen signature of the competent person to sign the Disposal Delivery Form (DDF).

2. Dispose C&D materials at Approved alternative disposal ground. Disposal of C&D materials in particular on private land or on a private construction site which is not administered by an Authorized Person (as defined under the Buildings Ordinance) is prohibited; and

3. Bear all additional cost incurred due to the CM's Approval or disapproval of the Contractor's request for alternative disposal ground and no extension of time will be granted.

PRE.B.1860.7 REMOVAL OF C&D MATERIALS FROM UNAUTHORIZED DISPOSAL GROUNDS

1. Where C&D materials from the Site have been dumped at a place other than that designated under the Contract or as Approved, undertake the following remedial actions and bear all associated cost:
   a. Remove the dumped C&D materials from the unauthorized disposal ground to a disposal ground designated under the Contract or as Approved; and
   b. Reinstate the unauthorized disposal ground to the condition as before dumping of the C&D materials, or a condition considered satisfactory by the relevant Government authorities as required under the relevant legislation where appropriate.

2. Where the unauthorized disposal ground is a private property, obtain the landowner's consent before removal of the dumped C&D materials.

WASTE MANAGEMENT

PRE.B.1910.7 CONSTRUCTION WASTE MANAGEMENT - GENERAL

1. In executing the works, generate the minimum quantity of waste possible;

2. Of the inevitable waste that is generated, sort, salvage for re-use, or recycle on or off Site as much of the material as possible;

3. Minimise the disposal of waste material in landfills.

PRE.B.1920.7 SPECIAL WASTE MANAGEMENT RESPONSIBILITIES

Be responsible for the following:

1. To ensure that all relevant legislation and the Contractor's duty of care is complied with throughout the duration of the Contract;

2. To minimize waste:
   a. Adopt measures to ensure the proper planning of the Works;
   b. Avoid over ordering of materials;
   c. Avoid cross contamination of materials for use in the Works and for reuse or recycling;
   d. Minimize the use of timber in temporary work;
   e. Optimize the use of reusable metal formwork, falsework, trench supports and the like;
   f. Maximize the use of inert excavated material within the Site;
   g. Save paper and recycle waste paper;
   h. Coordinate the return of pallets used for delivering locally manufactured interlocking concrete blocks to their manufacturers for re-use and/or to recycling contractors.

3. To co-ordinate waste management on the Site, keep accurate records on waste movement on and off the Site;
4. To segregate and sort different type of waste such as inert waste, non-inert waste, recyclable materials, aluminium cans, plastic bottles, paper, general refuse etc. into different containers, skips or stockpiles to enhance reuse / recycling of materials and their proper disposal and ensure that all containers and storage areas are properly labelled;

5. To obtain a list of potential buyers or collectors of materials to be re-used or recycled;

6. Whenever possible (except when new materials are expressly specified), ensure re-use or recycling of material already on Site before it is carted away or new materials are imported;

7. To investigate potential re-use and recycling opportunities;

8. To maintain and clean regularly the waste storage areas.

**PRE.B8.1950.7**  
HAZARDOUS WASTE

1. Comply with legislation for the storage, collection, transport, treatment and disposal of hazardous materials such as oils, paints and chemicals. Keep these materials in separate secure storage areas in clearly labelled containers. Avoid spillage and waste by evaporation;

2. Disposal of hazardous wastes using licensed contractors in accordance with the manufacturers instructions in so far as that the instructions do not conflict with legislation described in sub-clause (1).

**PRE.B8.1960.7**  
PACKAGING MATERIAL

Unwrap materials only when they are needed. Separate and store packaging material immediately after unwrapping. Return packaging materials to the supplier or his agent as stated in the Waste Management Plan. Where this is not possible, arrange for collection of the material by a recycling company. Such material may only be disposed of at landfill when it is demonstrated that recycling facilities are either not available, impractical or cost effective.

**PRE.B8.1970.7**  
STORAGE AND REMOVAL OF WASTE MATERIAL

Neatly stack and remove from Site within one day after completion of each operation and before the next trade commences all waste material that will not be re-used or recycled.

**PRE.B8.1975.7**  
DISPOSAL OF WATER RECEPCTACLES

Provide throughout the construction period, an Approved central collection point on the Site for depositing of all empty cans, oil drums, packing and other receptacles capable of holding water and for the regular collection and removal of such articles from the Site.

**PRE.B8.1985.7**  
REMOVAL OF WASTE MATERIALS

*Option 1*

1. Stack waste materials neatly, and remove from Site as soon as is practical after completion of each operation and before next trade commences all material that will not be reused or recycled;

2. Avoid obstruction where more than one trade is operating simultaneously;

3. Do not permit accumulated waste material piles to exceed 2000 mm generally or to exceed 450 mm high adjacent to refuse chutes; and

4. Provide necessary receptacles to store waste tidily prior to removal from site.

*Option 2*

1. Stack waste materials neatly and remove from Site as soon as is practical after completion of each operation;

2. Avoid obstruction;

3. Do not permit accumulated waste material piles to exceed 2000 mm generally.
ON-SITE SORTING OF C&D MATERIALS

1. Sort all C&D materials arising from or in connection with the Works to recover the inert portion and other materials to be reused or collected or recycled prior to disposal off the Site. Unless otherwise stated all such materials shall become the property of the Contractor;

2. Devise a system to sort C&D materials on-site including the identification of the source of generation, estimated quantity, arrangement for on-site sorting and/or collection, sorting methodology, temporary storage areas, frequency of collection by the recovery/recycling contractors specified in DEM1.W520 or frequency of removal off the Site;

3. C&D materials shall be sorted into:
   a. Hard rocks and large broken concrete for re-use on the Site where appropriate or for disposal at a designated location as advised by CEDD;
   b. Metals;
   c. Paper, plastics and timber;
   d. Chemical wastes and containers for chemical;
   e. Materials suitable for disposal at public fill reception facilities, sorting facilities and landfills/outlying islands transfer facilities;
   f. General waste; and
   g. Materials to be collected or recycled other than materials listed in sub-clauses (3)(a) to (3)(f).

4. Segregate inert C&D materials that is suitable for recycling for aggregates to be used in concrete, sub-base or concrete based products for delivery to a designated recycling facility where specified;

5. Packaging material (cardboard, paper, plastics, foam etc) shall be properly sorted, segregated and stockpiled in a protected area to prevent contamination.

WASTE REDUCTION TARGETS

1. To facilitate assessment of waste management measures, the following minimum performance targets shall be adopted:
   a. The sorting targets described or specified in PRE.B8.1990;
   b. 100% recovery of inert portion of excavated material and demolition debris from demolition works;
   c. 100% recovery for metallic waste;
   d. 100% recovery for non-contaminated paper and cardboard;
   e. 100% recovery for non-contaminated timber of conditions which fit for construction purposes;
   f. 100% recovery of undamaged pallets used for delivering locally manufactured interlocking concrete blocks.

2. Other targets set for this Contract are as follows:

3. The Contractor may set higher recovery targets providing that such targets are realistic and achievable. The Contractor may add targets for other C&D waste material that may be applicable to the Contract.

GOOD HOUSEKEEPING PRACTICE FOR WASTE MANAGEMENT

CONTRACTOR'S OBLIGATIONS

PRE.B8

PRE.B8.1998.7 CONSTRUCTION & DEMOLITION MATERIALS DISPOSAL TRACKING SYSTEM (CMDTS)
1. Use the web-based Construction & Demolition Materials Disposal Tracking System (CMDTS) provided by the Direct Contractor of CMDTS to monitor the disposal of inert construction and demolition (C&D) materials by recording the timestamp when loaded dump truck leaves the weighbridge for CEDD's Public Fill Reception Facilities, type of C&D materials, disposal ground, total vehicle weight of dump with C&D materials, CHIT form number, images of loading conditions and plate number of dump trucks;
2. Liaise with and provide necessary information including net weight of the dump trucks to the Direct Contractor of CMDTS for implementation of CMDTS;
3. Install Radio Frequency Identification (RFID) Tags (provided by the Direct Contractor of CMDTS) on all dump trucks serving the Site for implementation of CMDTS.

DEFECTS RECTIFICATION

PRE.B8.2005.7 CUSTOMER SERVICE TEAM (FOR DOMESTIC PORTION OF DOMESTIC BLOCKS ONLY)
Assign the Defect Rectification Co-ordinator specified in PRE.B6.060 to be a member of the Customer Service Team which is established by CM's representatives to monitor the Contractor's performance on rectification of defects during the first six months of the Maintenance Period or where Sections are applicable to the Contract, the first six months of the individual Maintenance Period for each Section. The Customer Service Team shall comprise the following personnel:
1. Site representative(s) of the CM;
2. Representative(s) from the Employer's property management agent; and

PRE.B8.2010.7 STANDBY WORKFORCE (FOR DOMESTIC PORTION OF DOMESTIC BLOCKS ONLY)
Provide a standby workforce of trade tested workers on Site during the first six months of the Maintenance Period or where Sections are applicable to the Contract the first six months of the individual Maintenance Period for each Section, according to the following arrangement:
1. At the beginning of each month, the Contractor shall propose the composition and the strength of the standby workforce, including those from his Nominated Sub-contractor for Electrical Installation, on the basis of the anticipated Maintenance Works including any works of repair or rectification, or make good any defect, imperfection, shrinkage, settlement or other fault identified within the Maintenance Period for the CM's prior agreement;
2. The standby workforce shall be resident full time on Site under the direct control of the Defect Rectification Co-ordinator(s) and its presence shall be properly recorded for the verification of the site representative(s) of the CM; and
3. The Contractor may adjust the strength or composition of the standby workforce, including those from his Nominated Sub-contractor for Electrical Installation, to satisfy operational needs with the prior agreement of the CM.

PRE.B8.2020.7 INTAKE AMBASSADOR (FOR DOMESTIC PORTION OF DOMESTIC BLOCKS ONLY)
Employ ...... numbers of suitably qualified Intake Ambassador as instructed by the CM to enhance the customer services by coordinating defect rectification works and conducting resident survey during the tenant intake period:
1. The Intake Ambassador must hold the following minimum qualifications:
   a. Form 5 graduate with Grade 'E' or above in Chinese & English (Syllabus B) in Hong Kong Certificate of Education (HKCEE) or equivalent;
b. Holder of certificate in surveying/building/architecture/civil/structural/building services engineering from a Polytechnic/Technical Institute or equivalent. Candidate with relevant working experience in customer services is preferable;

c. Good command of both oral and written English and Chinese;

d. Knowledge of Putonghua and other dialects such as Hakka or Fukin is preferable; and

e. Hands-on experience in using Microsoft Office applications and Chinese word processing.

2. The Intake Ambassador shall be full time on Site. The Intake Ambassador shall be a member of the Customer Service Team and work independent of the Contractor or sub-contractors and is under the direct instruction and supervision of the CM or CM’s representatives;

3. The duties and responsibilities of the Intake Ambassador shall include but are not limited to the followings:

   a. Liaise with the Estate Management Office of Housing Department on the schedule for tenant intake;

   b. Promote effective communication with the tenants. Render assistance as and when necessary to the tenants in completing the Defect Rectification Forms;

   c. Collect Defect Rectification Forms from the tenants and coordinate with the site personnel for immediate actions on the reported defects;

   d. Coordinate, arrange and confirm with the tenants and the Contractor on the time schedule for carrying out the defect rectification works;

   e. Inform the tenants upon completion of defect rectification works and collect their feedbacks;

   f. Identify and remove any emerging defects due to long idling time since completion of project, including cleaning up of the movable parts of the water closet flushing cistern, lubrication of door ironmongery, etc. Where appropriate, inform the Contractor to rectify the defects before handing over the flats to the tenants;

   g. Receive complaints from tenants on any matters relating to defects in the domestic flats and the common areas and check the validity of the complaints with site personnel;

   h. Carry out random survey on tenants’ satisfaction level on the arrangement and the standard of the defect rectification works;

   i. Prepare and submit to the CM or CM’s representatives the monthly reports on the numbers of Defect Rectification Forms received and the rectification progress;

   j. Liaise with the Contractor to carry out adjustment of the fixing level of cooking bench for occupied domestic flats on the date requested by tenants and coordinate with the tenants for access to their flats for the level adjustment work;

   k. Carry out other duties as assigned by the CM or CM’s representatives.

4. Duration of Intake Ambassador’s service:

   Minimum six months or a longer period from the date of appointment of the Intake Ambassador as instructed by the CM.

5. Facilities for Intake Ambassador:

   Provide all necessary facilities including mobile phone, camera, work station at a location as instructed for the use of Intake Ambassador to carry out the duties.

6. Recruitment of Intake Ambassador:

   Post recruitment advertisement in the following media as instructed by the CM or the CM’s representatives with the contents agreed with the CM or the CM’s representatives:

   a. Local Chinese newspaper(s) and/or local English newspaper(s);

   b. Interactive Employment Service (iES) of Labour Department;

   c. Any other media as agreed by the CM or his representatives.
7. Terms of appointment of Intake Ambassador:
   Employ the Intake Ambassador selected and instructed by the CM with the following conditions:
   a. Period of employment: minimum six months or a longer period from the date of appointment of the Intake Ambassador as instructed by the CM;
   b. Place of duty: the areas located in the completed Works under this Contract or any locations as confirmed by the CM or the CM's representatives;
   c. Duties: in accordance with sub-clause (3);
   d. Working days & office hours: 6 days work per week and required to work on Saturday, Sunday and all statutory public holidays in accordance with the duty roster assigned by the CM. Day-off to compensate for working on statutory public holidays will be taken in weekdays and arranged within 60 days of that statutory public holiday. The office hours are 8:30 to 18:00 with one hour for lunch. There will be no extra pay for work outside the office hours;
   e. Leave: 3.5 working days upon completion of six months' full employment and the leave shall be taken within the period of employment. Leave shall be pro rata adjusted for period of employment that is shorter or longer than six months;
   f. Salary: a fixed amount of monthly salary as agreed by the CM and without bonus, salary adjustment, over time allowance and other fringe benefit such as medical attention, dental treatment, housing and education allowance, etc.. Once employed, the fixed amount of monthly salary will apply to the entire employment period and will be subject to local taxation and employee's contribution towards the Mandatory Provident Fund (MPF) all payable by the employee. On satisfactory completion of the contract and satisfaction of the CM or the CM's representatives on the Intake Ambassador's performance, the Intake Ambassador will receive a gratuity for the period of service. Such gratuity will be payable at the rate of 15% of total basic salary received during the period of employment;
   g. Termination: one month written notice or one month salary payment in lieu of the notice will be required by either party for termination of the employment.

8. Termination of Intake Ambassador's service:
   a. Do not terminate the employment of the Intake Ambassador without CM's agreement;
   b. The CM shall have the authority to order removal and replacement of the Intake Ambassador.

9. Deployment of Intake Ambassador:
   The CM shall have the authority to deploy the Intake Ambassador to the completed Works of other contracts to perform the duties and responsibilities as stated above, or any other duties as instructed by the CM.

PROTECTION AND DAMAGE MITIGATION

PRE.B8.2310.7 DAMAGE BY EROSION
1. Protect and contain the Site against erosion, wash down or collapse, and reinstate any parts of the Site so disturbed, including any adjacent land that may have been affected, and comply with Government requirements as to removal of spoil or debris;
2. Maintain protection and be liable for reinstatement until the issue of the Maintenance Certificate.
MAINTENANCE OF ROADS AND PAVED AREAS

1. Make good or accept responsibility for the cost of making good any damage caused by site traffic or site operations to public, estate or other roads, footpaths and bridges. Keep the aforementioned and the approaches to the Site, borrow site or dump site that is within 30 m of a discernible or designated vehicle entrance or exit clear of dust, mud, debris and all obstructions;

2. Fit vehicles with tight fitting and adequately secured side and tail boards;

3. Carefully and securely stack rock on the vehicle to prevent any dislodging and falling into the road during haulage;

4. Provide and employ at the vehicle exit point of the Site, borrow site and dump site, necessary labour and washing facilities including a high pressure water jet, to clean the wheels and undersides of lorries free from earth and dusty material prior to leaving the Site, borrow site or dump site and, for sweeping out all loose material remaining in all vehicles after dumping. Wash-water shall have sand and silt settled out or removed before discharging into storm drains. Pave the area between the vehicle washing facilities and the exit point with concrete, bituminous materials or hardcores, and with backfall to avoid site run-off from entering public road mains. Employ such labour also in keeping clean the approach roads to the Site, borrow site or dump site.

ADJOINING PROPERTIES

Protect, shore up and in all ways support all adjacent lands, buildings and services which are liable to be disturbed or damaged during the execution of the Works. Take adequate precautions to prevent excavated materials encroaching on to adjoining properties.

ADJOINING PAVING ETC

Protect all adjoining paving and surface channels, maintain the existing drainage system in good working order including providing temporary diversion channels, if necessary, and reinstate any damage caused.

WATER POLLUTION CONTROL AND WATER CONSERVATION

REMOVAL OF WATER

1. As far as is practicable, keep the Site and all trenches and excavations thereon free from all water arising from rain, springs, drains, percolating water by pumping or otherwise. Ensure that such removal of water has no detrimental effect on adjacent property. Discharge water via silt removal facilities into the site drainage system. Direct storm water to such silt removal facilities by channels, earth bunds or sandbag barriers. Handling and disposal of construction site discharges shall be in accordance with EPD Pro PECC PN 1/94;

2. Avoid contamination and blockage of association drains and provide measures to meet the Water Pollution Control Ordinance;

3. Provide, maintain and clean regularly temporary channels, ditches, catchpits, sumps, oil interceptors and drainage work to keep the Site clear of water, silt or mud and prevent nuisance due to run-off onto adjacent land;

4. Protect the Works and/or adjoining properties from being washed out by typhoon and/or rain, ensure effective diversion of stormwater and provide earth bunds or sandbag barriers and/or any other necessary temporary measure necessary;

5. 
   a. Comply with all instructions and requirements under the Water Pollution Control Ordinance (WPCO) for the discharge of waste water on Site;
   b. Obtain a WPCO Licence from EPD not later than three months from the notified date for commencement of the Works and comply with all terms and conditions stipulated in the Licence before waste water is discharged on Site;
c. Submit a copy of valid WPCO Licence to the CM for inspection as soon as it has been issued by EPD;
d. Install, operate and maintain a continuous flow measuring device to monitor the flow rate of waste water as stipulated in the WPCO Licence. The accuracy of the flow measuring device shall be certified by its manufacturer to be within plus or minus 3% of the actual flow and shall be calibrated regularly according to manufacturer's recommendations. If no such device is installed, the Contractor shall determine the flow rate through using calculation methods agreed by EPD, by making reference to the amount of water used on Site being served by mains supply and other sources, less process consumption and any other losses;
e. Collect samples of discharge at sampling points and measure the determinand in accordance with the sample type and measurement frequency as stipulated in the WPCO License:
   i. Determinand: pH value, Suspended Solids, Chemical Oxygen Demand (COD) and others as specified in the WPCO License;
   ii. Frequency: As stipulated in the WPCO Licence;
   iii. Limitations on discharge: As stipulated in the WPCO License.
f. Prepare and submit the following to the CM for inspection:
   i. monthly record for the daily flow rate of the waste water discharged from Site (reference proforma at PRE.B8.APPEND4); and
   ii. monthly record of the monitoring of the determinand of the waste water discharged (reference proforma at PRE.B8.APPEND6).
g. Provide temporary silt traps as may be required and keep from blocking.

6.
   a. Submit details of all proposed drainage diversion systems and temporary stormwater drainage system for Approval at least one month before the relevant work is due to commence;
   b. Remove diversions and temporary drains, including the removal of any obstructions to flow, as soon as practicable after the works are complete.

7. When heavy rain is anticipated, protect and cover stockpiles of construction material and exposed slope surfaces from erosion and storm wash off.

**PRE.B8.2415.7 WASTE-WATER RECYCLING FACILITIES**

1. Re-circulate and re-use as far as practicable site waste-water, excluding sewage effluent, for housekeeping operations such as dust-control and wheel-washing as detailed in PRE.B8.455 and PRE.B8.2320 respectively. Install waste-water recycling facilities to the satisfaction of CM that meets the following:
   a. Waste-water should be properly treated to meet the discharge standards (other than that for foul sewers discharge) as stipulated in the WPCO Licence issued by EPD before re-use for dust-control and wheel-washing;
   b. Warning signs should be displayed prominently upon all temporary storage tanks, drawing attention to the dangers of allowing the breeding of mosquitoes;
   c. Proper and adequate drainage facilities should be provided to discharge excess treated effluent; and
   d. Pump sump shall be provided with a standby pump of adequate capacity and with automatic alternating devices to prevent pollution from wastewater overflow.

2. Maintain the waste-water recycling facilities towards the end of the Contract as far as practicable. Obtain CM's approval prior to removal of the waste-water recycling facilities.
PRE.B8.2420.7 REUSE OF WATER FROM BORING AND DRILLING
Water used in ground boring and drilling for ground investigation or rock/soil anchoring should as far as practicable be re-circulated after sedimentation. When there is a need for final disposal, the waste water should be discharged into site drainage system via silt removal facilities.

PRE.B8.2430.7 REUSE AND DISPOSAL OF BENTONITE SLURRY
1. Bentonite slurry used in diaphragm wall and bored-pile construction shall be reused as far as practicable. If the disposal of a certain residual quantity cannot be avoided, the used slurry may be disposed of at designated marine dumping area subject to obtaining a marine dumping permit from EPD;
2. Disposal of used bentonite slurry into public drainage system, if intended, shall be treated to meet the discharge standards as stipulated in the WPCO Licence issued by EPD.

USE OF TIMBER FOR TEMPORARY WORKS DURING CONSTRUCTION

PRE.B8.2450.7 TIMBER FOR TEMPORARY WORKS DURING CONSTRUCTION
1. Where use of metal formwork system is not practicable, use sustainable timber for temporary works including formwork, protective canopy, catch fan, walkway, toe board, timber mock-up, signboards etc;
2. The timber to be regarded as sustainable shall be originated from a well-managed source which is governed under an internationally recognised, globally applicable, independent certification scheme for sustainable forest management;
3. All timber for temporary works shall carry the label of the following independent certification scheme:
   a. Forest Stewardship Council (FSC); or
   b. Programme for the Endorsement of Forest Certification Schemes (PEFC); or
   c. Other equivalent internationally recognized, globally applicable, independent certification scheme for sustainable forest management in terms of environmental, ecological, biodiversity, social and economic needs.
4. No virgin forest products shall be used for temporary works unless under exceptional circumstances and agreed with the CM;
5. Submit the following documents to demonstrate that the timber from a well-managed source and carrying the label in sub-clause (3) has been purchased and delivered to Site:
   a. Copies of Chain-of-Custody (COC) certification of the vendors;
   b. Shipping documents:
      i. Letter from the vendors stating the timber is originated from the well-managed sources;
      ii. Purchase order of the timber issued by the Contractor to the agent of the timber;
      iii. Invoice issued by the agent of the timber to the Contractor stated with the name and COC number of the vendors;
      iv. Delivery order from the agent stated with the name and COC number of the vendors and quantity delivered to the Site.
   c. Photographs taken at the Site showing arrival of the timber carrying the label of the independent certification scheme;
   d. Additional documents for timber bearing other label as specified in sub-clause (3)(c):
      i. The species and country of origin;
      ii. The name of the concessions or plantations from which these timbers originate;
iii. Copies of the forestry policies implemented by these concessions or plantations which confirm that the management of the timber resource is sustainable.

**PRE.B8.2460.7 REUSE OF TIMBER FOR TEMPORARY WORKS DURING CONSTRUCTION**

1. Reuse timber wherever possible;
2. Submit the proposed maintenance procedures to minimize wastage of timber including the method of recycling of timber etc. within at least four weeks prior to the date of commencement of the relevant work to CM for approval;
3. Submit on monthly basis, the following documentation to demonstrate the implementation of the maintenance procedures as approved by the CM:
   a. Photographs showing recycling of timber for reuse;
   b. Monthly waste flow table showing the quantity of recycled timber.

**ENVIRONMENTAL MANAGEMENT PLAN**

**PRE.B8.2510.7 ENVIRONMENTAL MANAGEMENT RESPONSIBILITIES**

1. For the duration of the Contract, instruct workers, oversee, and document the results of the Project Environmental Management Plan described hereafter. Be responsible and ensure that all Nominated Sub-contractors, Direct Contractors, utility undertaking and employees are aware of aims of and the contents of the Environmental Management Plan;
2. Ensure that all relevant legislation and the Contractor's duty of care is complied with throughout the duration of the Contract.

**PRE.B8.2515.7 SUBMISSION AND UPDATING OF ENVIRONMENTAL MANAGEMENT PLAN**

1. Prepare and submit to the CM within 21 days of the date of the Letter of Acceptance 3 copies of draft Environmental Management Plan (EMP) containing the information specified or required under PRE.B8.2520. Arrange and hold an ad hoc meeting (or meetings if necessary) with the CM or his representative to discuss the draft EMP within 7 days from the submission of such plan. If the CM is of the opinion that the draft EMP does not meet the requirements of the Contract, he can request for remedy of the deficiency. Comply with any such CM's request prior to submitting six copies of the EMP to the CM for endorsement within 35 days of the date of the Letter of Acceptance.
2. Throughout the duration of the Contract and any extended contract period, update the EMP at monthly intervals or when required by the CM so that it is at all times a comprehensive and contemporary statement of the policies, procedures and requirements to achieve the environmental management, waste management and site hygiene obligations and responsibilities under the Contract.
3. The CM may by notice in writing require the Contractor to supplement, revise or update the EMP if he is of the opinions that the EMP is insufficient or requires revision of modification in the interest of the environmental management, waste management and site hygiene, whether for the Site or adjacent to the Site or otherwise. Comply with such CM's notice within 7 days of such notice.

*Option 1*
4. Ensure the EMP has incorporated the Nominated Sub-contractor’s environmental management, waste management and site hygiene statement in respect of the Nominated Sub-contract Works. Request the Nominated Sub-contractor to prepare and submit an environmental management, waste management and site hygiene statement in respect of the Nominated Sub-contract Works within 14 days of the letter of acceptance of the Nominated Sub-contractor’s tender for agreement and incorporation into the EMP. Ensure consistency between the EMP and the environmental management, waste management and site hygiene statement in respect of the Nominated Sub-contract Works. Submit the agreed environmental management, waste management and site hygiene statement in respect of the Nominated Sub-contract Works to the CM for endorsement. Revise and update the EMP to incorporate the environmental management, waste management and site hygiene statement in respect of the Nominated Sub-contract Works endorsed by the CM when the EMP is due to be revised or updated.

5. Request the Nominated Sub-contractor to revise or update the environmental management, waste management and site hygiene statement in respect of the Nominated Sub-contract Works by virtue of a revision or update of the EMP pursuant to sub-clauses (2) and (3) above. Ensure the revised or updated environmental management, waste management and site hygiene statement in respect of the Nominated Sub-contract Works is consistent with the EMP and submit the revised or updated environmental management, waste management and site hygiene statement in respect of the Nominated Sub-contract Works to the CM for endorsement.

6. Submit and present the EMP to the Environmental and Site Hygiene Management Meetings for comment and endorsement.

7. The CM’s endorsement, comment or rejection of the EMP, the environmental management, waste management and site hygiene statement in respect of the Nominated Sub-contract Works, and of any proposed revision or update, and the implementation of the EMP by the Contractor including the environmental management, waste management and site hygiene statement in respect of the Nominated Sub-contract Works shall not relieve the Contractor from any obligations or responsibilities under the Contract or any statutory regulations.

8. Appoint on Site an Environmental Manager as stated in PRE.B6.060 to oversee the implementation of the EMP. Comply and ensure all personnel who are responsible for the environmental management, waste management and site hygiene and who are in a position of authority among sub-contractors including Nominated Sub-contractors have access to the EMP. Any Specialist Contractor and other entities (e.g. public utilities) working on the Site shall also be provided with a copy of the EMP and be required to comply with it, report to the CM any failure to do so on their part.

9. Provide all facilities, access and assistance to the CM to periodically check that the EMP is being implemented properly and fully. If the CM is of the opinion that the Contractor fails to implement properly and fully the EMP and the failure does or may adversely affect the environmental management, waste management and site hygiene, whether for the Site or adjacent to the Site or otherwise, the CM will notify the Contractor in writing of the failure. Take action to remedy the failure immediately.

Option 2

4. Submit and present the EMP to the Environmental and Site Hygiene Management Meetings for comment and endorsement.

5. The CM’s endorsement, comment or rejection of the EMP, and of any proposed revision or update, and the implementation of the EMP by the Contractor shall not relieve the Contractor from any obligations or responsibilities under the Contract or any statutory regulations.
6. Appoint on Site an Environmental Manager as stated in PRE.B6.060 to oversee the implementation of the EMP. Comply and ensure all personnel who are responsible for the environmental management, waste management and site hygiene and who are in a position of authority among sub-contractors have access to the EMP. Any Specialist Contractor and other entities (e.g. public utilities) working on the Site shall also be provided with a copy of the EMP and be required to comply with it, report to the CM any failure to do so on their part.

7. Provide all facilities, access and assistance to the CM to periodically check that the EMP is being implemented properly and fully. If the CM is of the opinion that the Contractor fails to implement properly and fully the EMP and the failure does or may adversely affect the environmental management, waste management and site hygiene, whether for the Site or adjacent to the Site or otherwise, the CM will notify the Contractor in writing of the failure. Take action to remedy the failure immediately.

**ENVIRONMENTAL MANAGEMENT PLAN**

All Environmental Management Plan (EMP) and draft EMP shall be signed by the Contractor's Managing Director or his representative before submission. Incorporate the Nominated Sub-contractors' input into the EMP and allow the Nominated Sub-contractors to access one copy of the EMP. The EMP shall be subdivided into the following sections containing:

All Environmental Management Plan (EMP) and draft EMP shall be signed by the Contractor's Managing Director or his representative before submission. The EMP shall be subdivided into the following sections containing:

1. General environmental management of the Contract:
   a. A signed environmental and site hygiene policy statement committing the Contractor to environmental protection for the project;
   b. A Contractor's staff organization chart with duties, responsibilities and accountability defined. The Environmental Manager shall oversee the implementation of the EMP. Also, appoint a senior staff member, designated person(s) and experienced person(s) for the implementation of the Trip Ticket System (TTS) as specified in sub-clause (3)(a) below;
   c. Staff awareness and training proposals for Contractors' and Sub-contractors' staff with auditable records of trained persons;
   d. Environmental impacts, targets and mitigation objectives to minimize impacts;
   e. Records containing licences, permits, complaints and record of corrective actions where non-compliance has been identified; and
   f. List of environmental and site hygiene regulations and description of methodology (including testing) to ensure compliance.

2. Waste Management Plan to reduce and minimize the generation of C&D materials in the execution of the Works stating:
   a. An analysis of waste likely to be generated from work processes with types of waste identified and quantified with list of each material proposed to be salvaged, and reused or recycled with quantities. The data shall be included in the Waste Flow Table at Appendix PRE.B8/I. The Waste Flow Table shall be reviewed and if necessary revised monthly;
   b. A statement of measures taken to reduce, salvage, reuse and recycle waste materials on and off Site;
   c. A description of the methods of sorting, segregation, labelling, storing, protecting and disposing of all the various types of waste materials generated. The materials shall be listed in the Waste Flow Table described previously. Various materials may include but are not limited to:
      i. Inert C&D materials generated from the Works;
      ii. Inert C&D materials to be reused in the Works;
      iii. C&D materials to be reused in other projects (including reclamations) or at Contractor's nominated Approved outlets;
iv. Inert C&D materials suitable for recycling into aggregates for concrete or sub-base to be disposed of at an Approved location;

v. Inert C&D materials to be disposed of at a public fill reception facility;

vi. Steel and other metals (including reinforcement bars) for collection by recycling contractors;

vii. Paper and cardboard for collection by recycling contractors;

viii. Plastics (i.e. plastic bottles, containers, sheets, foam);

ix. Timber (plywood boards, joist) for collection by recycling contractor;

x. Pallets used for delivering locally manufactured interlocking concrete blocks for collection by recycling contractors and/or for reuse by the manufacturers;

xi. A list of hazardous wastes (oils, paints and chemicals) together with details of the method of storage and proposals for collection and disposal arrangements for collection by specialist disposal company; and

xii. General refuse to be disposed of at a landfill or outlying islands transfer facility.

d. The location, layout and details of designated sorting and storage areas. Describe necessary adaptations as the works progress;

e. Method of handling and removing waste from buildings including details of refuse chutes and ground floor waste holding areas prior to leaving the Site;

f. A method statement of how the Site will be kept clean with debris minimised;

g. Details to minimize the use of timber in temporary works construction;

h. Control measures to ensure that the sorted recyclable materials such as metal, paper, plastics, timber, milled bituminous materials etc. are delivered to a proper recycling outlet for processing;

i. For materials delivered to Site, a statement that reusable and recyclable packaging materials and pallets will be reused, recycled or returned to the supplier. Identify those suppliers who will not accept the return of pallets and reusable and recyclable packaging materials; and

j. The Waste Management Plan may be revised from time to time to incorporate Nominated Sub-contractors, Direct Contractors and utility undertaking requirements and other party's requirements as and when they are appointed.

j. The Waste Management Plan may be revised from time to time to incorporate Direct Contractors and utility undertaking requirements and other party's requirements as and when they are appointed.

3. Site Management Plan for implementation of the TTS with the names of the designated or alternative disposal grounds identified. Submit the Site Management Plan within 45 days of the date of the Letter of Acceptance for the Works for Approval before disposing any C&D materials from the Site. If the CM is of the opinion that the Site Management Plan does not meet the requirements of this clause, he shall request the Contractor to revise the plan by notice in writing. Then revise the plan and resubmit it within 7 days of the date of the notice. Review the Site Management Plan on a monthly basis at the meeting with the discussion items as detailed in sub-clause (h) below. Submit the updated section of the plan (if any) for Approval. The plan shall include the following details in sub-clauses (a) to (g) below and the attention of all truck drivers engaged for removal of C&D materials from the Site shall be drawn to the following particular points in sub-clauses (i) and (j) below:

a. A site organizational chart showing the manpower resources and duties of each staff for implementation of the TTS. The following requirements shall be met:

i. Appoint a senior staff member (with at least two years experience in site management) fully responsible for implementing and overseeing the operation of the TTS;
ii. Appoint designated person(s) to fill in and sign Part 1 of the Daily Record Summary (DRS) properly before departure of the truck. A sample of the DRS is given at Appendix PRE.B8/II; and

iii. Appoint experienced person(s) to man each exit from the Site for the purpose of ensuring that every truck carrying C&D materials leaving the Site bears a duly completed CHIT or Disposal Delivery Form (DDF). The CHIT shall be used for disposal of C&D materials at a prescribed facility as defined under the Waste Disposal (Charges for Disposal of Construction Waste) Regulation (Cap. 354N). The DDF shall be used for disposal of C&D materials at other disposal grounds as designated in the Contract or as directed by the CM, or proposed recycling facilities/construction sites as Approved. The person(s) who man the exit(s) shall record the CHIT/DDF number, the vehicle registration number and the departure time of every truck carrying C&D materials leaving the Site.

b. Monthly programme for disposal of C&D materials off the Site, and indicate the estimated quantities, types of the C&D materials and corresponding disposal grounds. Update the programme on a monthly basis and submit it to the CM for information by 15th day of each month or the next working day if it is a public holiday, Sunday or Saturday, or a later date as agreed by the CM;

c. Site procedures to ensure that each truckload of C&D materials leaving the Site will bear a duly completed CHIT/DDF and that Part 1 of the DRS has been filled in and signed properly before departure of the truck. Establish also a recording system to ensure timely retrieval of the CHIT/DDF and/or receipt from the disposal grounds, and make it available for inspection by the CM's representative upon request or where irregularities are observed;

d. Surveillance system within the Site and at any alternative disposal grounds to check that the disposal activities comply with the requirements specified;

e. Recording system with a comprehensive register to ensure timely retrieval of the CHIT/DDF issued and receipt from the disposal grounds, and make it available for inspection by the CM's representative upon request or where irregularities are observed;

f. Control measures to prevent any unauthorized disposal of C&D materials, where trucks need to exit and re-enter the Site for delivery of C&D materials generated. Recyclable materials such as metal, paper, plastics, timber and milled bituminous materials etc., which have been sorted on the Site for the purposes of recycling, shall not be considered as C&D materials for the purposes of the Contract. For such sorted recyclable materials, devise appropriate control measures to ensure that the materials are delivered to a proper recycling outlet for processing. Highlight such control measures in the Environmental Management Plan;

g. A video recording system as specified in PRE.B8.1835;

h. The following items shall be included in the agenda for discussion at every Site Safety and Environmental Management Committee meeting, or other established channels for performance monitoring as agreed by the CM's Representative:

i. Review the Site Management Plan and implementation of the TTS, and identify areas for improvement;

ii. Audit the quantity of C&D materials removed from the Site (based on the DRS and survey records) against the quantities of C&D materials delivered to the disposal ground designated in the Contract (e.g. based on the EPD's web-site) or against the quantities of C&D materials delivered to the Approved alternative disposal ground;

iii. Review incidents of non-compliance and discuss the necessary follow-up actions; and

iv. Monitor the follow-up action on defects and deficiencies identified.
i. Each truck carrying C&D materials leaving the Site for a disposal ground must bear a duly completed CHIT/DDF, irrespective of the location and nature of the disposal ground; and

j. The C&D materials must be disposed of at the disposal grounds specified in the Contract or directed by the CM or at the Approved alternative disposal grounds.

4. Air quality:
   a. Measures and methods to control dust and debris on and off Site;
   b. Method of constructing screens and refuse chutes;
   c. Method of monitoring and reporting on air quality conditions on Site; and
   d. Method of monitoring and reporting on use of ultra-low-sulphur diesel.

5. Noise control:
   a. Acquisition of noise permits;
   b. Selection of quiet equipment to be used and their applications;
   c. Details of noise restrictions as they affect the Contract; and
   d. Description of noise mitigation measures which may include but are not limited to the followings:
      i. Scheduling of work carefully to maximize any required noisy work during less sensitive hours such as lunch time, outside school hours and avoiding examination periods;
      ii. Scheduling of work to avoid simultaneous operation of noisy equipment; retain temporary structures (e.g. site office) that can act as a noise barrier until the last phase; and erect as early as possible noise source screening structures;
      iii. Siting of facilities such that noisy equipment are sited as far as possible from noise sensitive receivers and temporary structures (e.g. site office) can act as noise barrier; and
      iv. Use of purpose-built acoustic panels and enclosures around Site boundaries.
   e. Method of monitoring and reporting on construction noise on Site.

6. Protection and damage mitigation:
   a. Mitigation method to prevent soil erosion, wash down or slope collapse and any method to carry out reinstatement work;
   b. Methods of protecting existing trees, shrubs and other vegetation including protecting fencing provided by others;
   c. Maintenance of roads and footpaths;
   d. Methods to protect adjoining properties, roads, paving, and boundary structures; and
   e. Methods to deal with chemical spillage.

7. Water pollution control and conservation:
   a. Measures to conserve water and record on water consumption;
   b. Methods of minimising water consumption including waste water recycling;
   c. Methods to avoid contamination and blockage of public drains and sewers and comply with the Water Pollution Control Ordinance;
   d. Method to prevent flooding and blocking of site drainage system;
   e. List and describe necessary permits, approvals to be obtained and complied with;
   f. Details of necessary drainage diversions and temporary drainage systems; and
   g. Method of monitoring and reporting on waste water discharged from Site.

8. Tropical hardwoods:
A description of proposed alternatives to tropical hardwood which will meet the same performance standards in the construction of all temporary works including site accommodation, storage sheds, covered walkways, hoardings, screens, signboards, excavation supports and formwork and falsework. Tropical hardwoods are not permitted to be used in temporary works without Approval.

9. Site cleanliness, tidiness and hygiene:
   a. Description of a proposed system to maintain cleanliness and tidiness of the Site including details of means to protect materials locations of stockpiles and on-site sorting and disposal areas;
   b. Measures to remove and prevent standing water and prevent mosquito breeding;
   c. Method of providing temporary latrine accommodation in multi-storey buildings under construction;
   d. Assign a specific number of dedicated workers for maintenance of site hygiene and amenities provisions on Site which are subject to the IPSEHS as referred to in PRE.B6.060. If required, provide the identity of such workers for verification by CM or his representatives.

10. Emergency procedures:
    Emergency procedures formulated to deal with any environmental emergency such as typhoons or rainstorms.

11. Environmental and site hygiene promotion
   a. The effort made by different sub-contractors or individuals to maintain cleanliness and tidiness of the Site, to reduce and minimize the generation of waste at work and to protect materials at locations of stockpiles and on-site sorting and disposal areas by the application of soundly based policies, procedures and disciplines to be recognised by the presentation of environmental protection awards. Adopt proactive attitude towards improving environmental management and site hygiene performance and to promote workers' awareness on environmental protection and site hygiene. The site as a whole is encouraged to participate in the following designated environmental protection awards:
      i. "The Hong Kong Awards for Environmental Excellence" [Environmental Labels (Wastewise or Energywise); Green Innovations; or Sectoral Awards] organized by the Environmental Campaign Committee with EPD; or
      ii. "Considerate Contractors Site Award Scheme" (Outstanding Environmental Management and Performance Award) organized by the Development Bureau and the Construction Industry Council.
   b. The Contractor is also encouraged to organize site-based awards and competitions to promote participation of his workers and teams in environmental protection and site hygiene theme competitions during the contract period. The adjudicating team shall comprise the site management team, environmental protection personnel and workers’ representatives, and shall act openly and fairly in such events.

**DISTRIBUTION OF ENVIRONMENTAL MANAGEMENT PLAN**

After CM's endorsement to the EMP, distribute copies of the same to CM's Representatives, Nominated Sub-contractors and all direct contractors and suppliers. Ensure compliance with the Environmental Management Plan and all relevant statutory regulations.

**ENVIRONMENTAL MANAGEMENT AND SITE HYGIENE PERFORMANCE**

Throughout the duration of the Contract carry out to the satisfaction of the Contract Manager all environmental protection/management and site hygiene measures including the discharge of duties as specified in the Environmental and Site Hygiene Checklist shown below:
### Environmental and Site Hygiene Issues - Site Management

<table>

### ENVIRONMENTAL MANAGEMENT AND SITE HYGIENE PERFORMANCE MONITORING AND REPORTING

Throughout the duration of the Contract:

1. Carry out environmental inspections to review, monitor and report monthly to the CM (or when so directed by the CM) on the effectiveness of the implementation of the Environmental Management Plan (EMP);

2. Report monthly to the CM for the followings received from Environmental Protection Department (EPD) or Food and Environmental Hygiene Department (FEHD) including items related to Nominated Sub-contracts when applicable:
   a. Warning letters or offences notifications;
   b. Convictions during the period under any environmental and site hygiene regulations or legislation; and
   c. Abatement Notice.

3. Take all necessary follow-up actions to ensure that any defects or deficiencies are made good and;

4. Conduct monthly Environmental and Site Hygiene Management Meetings or when directed by the CM. Submit minutes of the meetings to the CM for verification. The CM may also attend or nominate a representative to attend the meetings. Meetings shall cover the followings:
   a. Environmental and site hygiene matters, including disposal of C&D material and implementation of the Trip-ticket System, arising from the Contractor's obligations in executing the Works;
   b. The review on incidents of non-compliance with the EMP;
   c. Discussion and monitoring of the necessary follow-up actions on defects and deficiencies; and
d. Areas for improvement.

5. Report monthly to the CM for the followings:
   a. Particulars of workers specially trained and deployed to attend to site hygiene and amenities provisions during the day and have assisted in the tidying up of trade waste at the end of a working day;
   b. Date-marked photos of site amenities conditions before and after tidying up of loose ends on site; and
   c. Photographic evidence in chronological order of such maintenance work.

PRE.B.8.2560.7 PROVISION OF ENVIRONMENT AND HYGIENE TRAINING

1. Arrange for all skilled workers employed on the Works or in connection with the Contract whether in the employment of the Contractor or Sub-contractors to attend training on all aspects of environmental management organized by training institutions and/or the Environmental Protection Department (EPD);

2. Set out the level, frequency and estimated staff numbers to attend such training and state the same in the EMP;

3. Develop and provide site specific induction training and tool box talks on all appropriate aspects of environmental protection and site hygiene to promote workers' awareness on environmental management and state the same in EMP, such training and tool box talks are to be carried out by the Environmental Manager, and site specific induction training and tool box talks may be conducted as part of the site safety training regime;

4. At the end of each period of interim certificate, report to the CM the actual number of workers trained as specified and submit contractors' with certified attendance records;

5. A full statement of the Contractors training proposals shall be stated in the EMP.

PRE.B.8.2570.7 PAYMENT FOR PRE-DETERMINED AMOUNTS FOR SITE SAFETY, ENVIRONMENTAL MANAGEMENT AND SITE HYGIENE

1. The payment for the "environmental management and site hygiene performance" item in the Bill of Quantities or Schedule of Rates shall be subject to the Contractor's average score (A) of the items as specified in the checklist stipulated in PRE.B.8.2540 and this average score (A) is worked out by the CM's Representative as follows:

   a. Items of environmental management and site hygiene performance as specified in PRE.B.8.2540 are also subject to assessment at the frequency specified therein;

   b. The calculation of the average score (A) only applies to valuation of the items under environmental management and site hygiene performance as specified in PRE.B.8.2540. The average score (A) for each monthly valuation shall be derived from the results of the assessment as follows:

   \[
   (A) = \frac{A1 + A2 + A3 + A4 + A5 + A6}{6}
   \]

   whereas

   \[
   A1 = \frac{\text{Total No. of Items of Compliance under Noise Control}}{\text{Total No. of Items of Inspection under Noise Control}}
   \]

   \[
   A2 = \frac{\text{Total No. of Items of Compliance under Air Quality}}{\text{Total No. of Items of Inspection under Air Quality}}
   \]

   \[
   A3 = \frac{\text{Total No. of Items of Compliance under Removal of Water}}{\text{Total No. of Items of Inspection under Removal of Water}}
   \]

   \[
   A4 = \frac{\text{Total No. of Items of Compliance under Construction Waste Management}}{\text{Total No. of Items of Inspection under Construction Waste Management}}
   \]
Total number of items of compliance is referring to the number of compliance achieved for the respective item under the respective group for the checking made according to the checking frequency specified in the checklist stipulated in PRE.B8.2540 for a monthly valuation period.

Total number of items of inspection is referring to the number of inspection for the respective item under the respective group for the checking made according to the checking frequency specified in the checklist stipulated in PRE.B8.2540 for a monthly valuation period.

c. Criteria for payment are as follows:
   i. If (A) is below 85%, no payment for the environmental management and site hygiene performance item incorporated in the Bill of Quantities or Schedule of Rates will be made for that month;
   ii. If (A) is within the range of 85% to less than 90%, payment for that month for the environmental management and site hygiene performance item incorporated in the Bill of Quantities or Schedule of Rates will be valued at the pre-determined rate multiplied by 0.7;
   iii. If (A) is 90% or above, payment for that month for the environmental management and site hygiene performance item incorporated in the Bill of Quantities or Schedule of Rates will be valued at the pre-determined rate multiplied by 1.0.

2. The assessment of payment for the "Silver Card compliance" item in the Bill of Quantities or Schedule of Rates shall be subject to the principles as given below:
   a. The status of each category of workers of specified trades listed in PRE.B8.210 (4)(b) is subject to assessment on a monthly basis based on the records of the date of record checking as designated by the CM (hereinunder referred to as the 'designated date of record checking') for a month;
   b. The payment for the "Silver Card Compliance" item in the Bill of Quantities or Schedule of Rates shall be subject to the Contractor’s score (R). The score (R) for a monthly valuation shall be derived as follows:

\[
R = \frac{P}{Q} \times 100
\]

expressed as a percentage rounded to one decimal place

where \( P = P_1 + P_2 \)

and \( Q = Q_1 + Q_2 - Q_3 \)

with each parameter defined in sub-clauses (2)(c) to (2)(g) below.

c. \( P_1 \) denotes the number of workers of the specified trades (except for the trade of 'Lift Mechanic') who are on Site and in possession of valid Silver Cards on the designated date of record checking of the month;

d. \( P_2 \) denotes the number of workers of the specified trades (except for the trade of 'Lift Mechanic') with all of the following attributes:
   i. The worker was verified to be on Site on the designated date of record checking of a previous month;
   ii. The worker did not possess a valid Silver Card on the designated date of record checking of a previous month but the worker had enrolled in a Silver Card training course / re-validation course run by the CIC;
   iii. The worker is not on Site on the designated date of record checking of the month;
iv. The designated date of record checking of the month is more than 90 calendar days from the date of the worker’s first appearance on Site;

v. The worker had not been counted under the parameter Q2 in any designated date of record checking of any previous months;

vi. The worker has successfully obtained a valid Silver Card as required on or before the designated date of record checking of the month.

e. Q1 denotes the number of workers of the specified trades (except for the trade of 'Lift Mechanic') on Site on the designated date of record checking of the month;

f. Q2 denotes the number of workers of the specified trades (except for the trade of 'Lift Mechanic') with all of the following attributes:
   i. The worker was verified to be on Site on the designated date of record checking of a previous month;
   ii. The worker did not possess a valid Silver Card on the designated date of record checking of a previous month but the worker had enrolled in a Silver Card training course / re-validation course run by the CIC;
   iii. The worker is not on Site on the designated date of record checking of the month;
   iv. The designated date of record checking of the month is more than 90 calendar days from the date of the worker’s first appearance on Site;
   v. The worker had not been counted under this parameter Q2 in any designated date of record checking of any previous months.

g. Q3 denotes the number of workers of the specified trades (except for the trade of 'Lift Mechanic') with all of the following attributes:
   i. The worker is on Site on the designated date of record checking of the month;
   ii. The worker does not possess a valid Silver Card but has enrolled in a Silver Card training course / re-validation course run by the CIC;
   iii. The designated date of record checking of the month is not more than 90 calendar days from the date of the worker’s first appearance on Site.

h. For the avoidance of doubt, the 'date of the worker’s first appearance on Site' as referred to in sub-clause (2)(d) to (2)(g) above shall be the day on which the worker first enters into the Site to carry out the work of the specified trades and is regardless of whether or not the worker has left the Site and is returning to work again on the specified trades;

i. The score (R) shall be worked out by the Contractor in accordance with sub-clause (2)(b) above when completing the prescribed form (DASM-F6211) and is subject to verification by the CM’s Representative;

j. Criteria for payment for the 'Silver Card Compliance' item are as follows:
   i. Where score (R) turns out to be 0/0 for the designated date of record checking of the month, no payment will be made for the month in which the designated date of record checking falls;
   ii. Where score (R) is a percentage other than 0/0 for the designated date of record checking of the month, then payment for the month in which the designated date of record checking falls will be valued at the predetermined rate against this item multiplied by this score (R).

3. The assessment for payment of the items for "Safety Audit performance indicators" in the Bill of Quantities or Schedule of Rates shall be subject to the principles as given below:

a. Verified percentage scores for Part A "Safety Management", Part B "Safety Audit Checklist" and verified individual percentage score for designated critical items (collectively referred to as "Verified Safety Audit Percentage Score") are obtained from each safety audit conducted under the Housing Authority Safety Auditing System (HASAS) as specified in PRE.B8.210. These scores shall be verified by Occupational Safety and Health Council (OSHC) and confirmed by CM for official record and payment purpose;
b. The criteria for payment assessment in respect of "Safety Audit Performance indicator (overall score)" are as follows:
   i. If the verified percentage score for either Part A or Part B of a safety audit is below 70%, no payment shall be valued and made for this item in respect of that safety audit;
   ii. If the verified percentage scores for both Part A and Part B of a safety audit are each equal to or above 70% but with either one or both of them below 80%, the payment for this item in respect of that safety audit shall be valued at the pre-determined rate of this item as included in the Bill of Quantities or Schedule of Rates and by multiplying it with the quantity of work of this item in respect of this audit which shall be equal to 0.7 in respect of that safety audit;
   iii. If the verified percentage scores for both Part A and Part B of a safety audit are both equal to or above 80%, the payment for this item in respect of that safety audit shall be valued at the pre-determined rate of this item included in the Bill of Quantities or Schedule of Rates and by multiplying it with quantity of work of this item in respect of this audit which shall be equal to 1.0 in respect of that safety audit.

c. The payment assessment in respect of "Safety Audit Performance indicator (critical items)" shall take into account the following:
   i. The verified individual percentage score for designated critical items of the safety audit; and
   ii. The apportioned percentage for each individual designated critical item as included in the table below.

<table>
<thead>
<tr>
<th>Designated critical items</th>
<th>Element/Subsection and reference in safety audit</th>
<th>Apportioned percentage %</th>

</tbody>
</table>

Note: The apportioned percentage for each designated critical item shall be referred to as "effective apportioned percentage" when being applied for payment assessment.

d. The criteria for payment assessment in respect of "Safety Audit Performance indicator (critical items)" are as follows:
   i. If the verified individual percentage score of a designated critical item [in the table in sub-clause (c) above] of a safety audit below 70%, that critical item shall not be considered for the purpose of payment assessment in respect of that safety audit;
ii. If the verified individual percentage score of a designated critical item [in the table in sub-clause (c) above] of a safety audit is equal to or above 70%, the corresponding apportioned percentage as included in the table in sub-clause (c) above shall become an "effective apportioned percentage" and shall be used for the purpose of payment assessment in respect of that safety audit;

iii. The payment for this item in respect of a safety audit shall be valued at the pre-determined rate of the item included in the Bill of Quantities or Schedule of Rates and by multiplying it with the quantity of work of this item in respect of this audit which shall be equal to the sum of the "effective apportioned percentage" of the critical items of the table in sub-clause (c) above in respect of that safety audit;

iv. For the avoidance of doubt, the "effective apportioned percentage" for the critical item of "lifting" shall only become applicable for payment assessment in respect of a safety audit if each of the sub-items (namely, subsection 14.2.3, 14.4.1 and 14.4.2) available for assessment has acquired a verified individual percentage score of 70% or above in that safety audit; however, if any one of these sub-items available for assessment has acquired a verified individual percentage score of below 70%, the "effective apportioned percentage" for the whole critical item of "lifting" shall not be applicable in respect of that safety audit.

4. The assessment for payment of the items of "Regulatory Compliance Indicator - yearly record check", "Regulatory Compliance Indicator - residual period record check at completion" and "Regulatory Compliance Indicator – final record check" in the Bill of Quantities or Schedule of Rates shall be subject to the principles as given below:

**Option 1**

a. Payment for the item of "Regulatory Compliance Indicator – final record check" shall be valued at the pre-determined rate of the item included in the Bill of Quantities or Schedule of Rates and by multiplying it with the quantity of work of the item which shall be equal to 1.0 in respect of the record check if the Contractor has confirmed in writing that none of the following is received from the Labour Department (LD) within the assessment period:

i. One or more letters received subsequent to LD's inspection advising category Part I contravention particularly against Construction Site (Safety) Regulations or subsidiary regulations of the Factories and Industrial Undertakings Ordinance;

ii. Five or more letters received subsequent to LD's inspection advising category Part II contravention particularly against Construction Site (Safety) Regulations or subsidiary regulations of the Factories and Industrial Undertakings Ordinance;

iii. Suspension Notice.

b. For the purpose of establishing the Contractor's entitlement to payment for the item of "Regulatory Compliance Indicator – final record check", a one-off assessment irrespective of any extended contract period as defined in the Bill of Quantities or Schedule of Rates shall be carried out by the CM or CM's representative;

c. The assessment period shall be from the date for commencement of the Works up to and including the date of the certificate of completion of the Works (or where phased completion of Sections is specified, the last date of completion stated amongst the different certificates of completion for the Sections of the Works) issued by the CM under GCC Clause 8.7.

**Option 2**
a. Payment for the items of "Regulatory Compliance Indicator – yearly record check" and "Regulatory Compliance Indicator – residual period record check at completion" shall be valued at the pre-determined rate of the respective item included in the Bill of Quantities or Schedule of Rates and by multiplying it with the quantity of work of that item which shall be equal to 1.0 in respect of the record check if the Contractor has confirmed in writing that none of the following is received from the Labour Department (LD) within the respective assessment period:
   i. One or more letters received subsequent to LD's inspection advising category Part 1 contravention particularly against Construction Site (Safety) Regulations or subsidiary regulations of the Factories and Industrial Undertakings Ordinance;
   ii. Five or more letters received subsequent to LD's inspection advising category Part II contravention particularly against Construction Site (Safety) Regulations or subsidiary regulations of the Factories and Industrial Undertakings Ordinance;
   iii. Suspension Notice.

b. For the purpose of establishing the Contractor's entitlement to payment for the item of "Regulatory Compliance Indicator – yearly record check", an assessment shall be carried out by the CM or CM's representative at the end of each full 12-month period commencing from the date for commencement of the Works. However, no assessment (and hence no payment) shall be made for any full 12-month period which ends on a date beyond the contract/extended contract period as defined in Bill of quantities or Schedule of Rates;

c. For the avoidance of doubt, the remeasured quantity in adjustment of account for items of "Regulatory Compliance Indicator – yearly record check" shall not exceed the quantity as stated in the Bill of Quantities or Schedule of Rates;

d. For the purpose of establishing the Contractor's entitlement to payment for the item of "Regulatory Compliance Indicator – residual period record check at completion", a one-off assessment irrespective of any extended contract period as defined in the Bill of Quantities or Schedule of Rates shall be carried out by the CM or CM's representative. The assessment period shall be from the first day after the last assessed period of "yearly record check" in (b) above up to and including the date of the certificate of completion of the Works (or where phased completion of Sections is specified, the last date of completion stated amongst the different certificates of completion for the Sections of the Works) issued by the CM under GCC Clause 8.7.

5. The assessment for payment of the items of "Accident indicator - yearly record check" and "Accident indicator - final record check at completion" items in the Bill of Quantities or Schedule of Rates shall be subject to the principles as given below:

Option 1

a. Payment for the item of "Accident indicator – final record check at completion" shall be valued at the pre-determined rate of the item included in the Bill of Quantities or Schedule of rates and by multiplying it with the quantity of work of that item which shall be equal to 1.0 in respect of the record check if the Contractor has achieved the following results within the assessment period:
   i. No fatal accident; and
   ii. Annualized accumulative accident rate not more than 12 per 1,000 workers.

b. The annualized accumulative reportable accident occurrence rate per 1000 workers (AR) is derived from the following formula with the cut-off date applicable to all variables (i.e. D, N and W) being set at the last date of a quarter of the calendar year, i.e. 31st March, 30th June, 30th September or 31st December, immediately preceding the quarter in which the last date of the assessment period of the record check falls:
AR = \frac{N}{W} \times 1000 \times \frac{365}{D}

Where

N = Accumulative number of reportable site accidents as defined in the Factories and Industrial Undertakings Ordinance up to the cut-off date. A "reportable accident" shall refer to an accident arising from industrial activities leading to death(s) or injuries which have incurred incapacity of the person injured for more than 3 days.

W = Average daily number of workers on site reported on Labour Return Form GF527 starting from the notified date for commencement of the Works up to the cut-off date.

D = Number of calendar days from the notified date for commencement of the Works up to the cut-off date.

c. For the purpose of establishing the Contractor's entitlement to payment for the item of "Accident indicator – final record check at completion", a one-off assessment irrespective of any extended contract period as defined in the Bill of Quantities or Schedule of Rates shall be carried out by the CM or CM's representative;

d. The assessment period shall be from the date for commencement of the Works up to and including the date of the certificate of completion of the Works (or where phased completion of Sections is specified, the last date of completion stated amongst the different certificates of completion for the Section of the Works) issued by the CM under GCC Clause 8.7.

Option 2

a. Payment for the items of "Accident indicator – yearly record check" and "Accident indicator – final record check at completion" shall be valued at the pre-determined rate of the respective item included in the Bill of Quantities or Schedule of Rates and by multiplying it with the quantity of work of that item which shall be equal to 1.0 in respect of the record check if the Contractor has achieved the following results within the assessment period:

i. No fatal accident; and

ii. Annualized accumulative accident rate not more than 12 per 1,000 workers.

b. The annualized accumulative reportable accident occurrence rate per 1000 workers (AR) is derived from the following formula with the cut-off date applicable to all variables (i.e. D, N and W) being set at the last date of a quarter of the calendar year, i.e. 31st March, 30th June, 30th September or 31st December, immediately preceding the quarter in which the last date of the assessment period of the record check falls:

AR = \frac{N}{W} \times 1000 \times \frac{365}{D}

Where

N = Accumulative number of reportable site accidents as defined in the Factories and Industrial Undertakings Ordinance up to the cut-off date. A "reportable accident" shall refer to an accident arising from industrial activities leading to death(s) or injuries which have incurred incapacity of the person injured for more than 3 days.

W = Average daily number of workers on site reported on Labour Return Form GF527 starting from the notified date for commencement of the Works up to the cut-off date.

D = Number of calendar days from the notified date for commencement of the Works up to the cut-off date.
c. For establishment of the Contractor's entitlement to payment for the item of "Accident indicator – yearly record check", an assessment shall be carried out by the CM or CM's representative at the end of each full 12-month period commencing from the date for commencement of the Works. However, no assessment (and hence no payment) shall be made for any full 12-month period which ends on a date beyond the contract/extended contract period as defined in the Bill of Quantities or Schedule of Rates.

d. For the avoidance of doubt, the remeasured quantity in adjustment of account for item of "Accident indicator – yearly record check" is subject to the capping limit which is equal to the quantity as stated in the Bill of Quantities or Schedule of Rates. Therefore, in case where the remeasured quantity is larger than the quantity as stated in the Bill of Quantities or Schedule of Rates, the respective quantity stated in the Bill of Quantities or Schedule of Rates shall be taken as the remeasured quantity for adjustment of account.

e. For the purpose of establishing the Contractor's entitlement to payment for the item of "Accident indicator – final record check at completion", a one-off assessment irrespective of any extended contract period as defined in the Bill of Quantities or Schedule of Rates shall be carried out by the CM or CM's representative. The assessment period shall be from the date for commencement of the Works up to and including the date of the certificate of completion of the Works (or where phased completion of Sections is specified, the last date of completion stated amongst the different certificates of completion for the Section of the Works) issued by the CM under GCC Clause 8.7.

6. The assessment for payment of the item "Recognition of innovative and functional safety installation or safety measures" in the Bill of Quantities or Schedule of Rates shall be subject to the principles as given below:
   a. The Contractor has implemented innovative and functional safety installation or safety measures which are verified/supported by the Occupational Safety and Health Council (OSHC) as explicitly stated in the Safety Audit reports; and
   b. CM has verified the implementation merits to his satisfaction.

7. The assessment for payment of the item "Application of Building Information Modeling (BIM) for safety" in the Bill of Quantities or Schedule of Rates shall be subject to the principles as given below:
   a. The Contractor has implemented BIM technology in the hazard control process and training of frontline supervisors and workers;
   b. The application has been verified/supported by the Occupational Safety and Health Council as explicitly stated in the Safety Audit reports; and
   c. CM has verified the implementation merits to his satisfaction.

8. The assessment for payment of the item "Application of Radio Frequency Identification (RFID) for safety" in the Bill of Quantities or Schedule of Rates shall be subject to the principles as given below:
   a. The Contractor has implemented RFID technology to enhance site safety and health management in terms of hazard analysis, risk assessment, safety training, etc.;
   b. The application has been verified/supported by the Occupational Safety and Health Council as explicitly stated in the Safety Audit reports; and
   c. CM has verified the implementation merits to his satisfaction.

9. The assessment for payment of the items of "Compliance with regulations related to Environmental Protection and Site Hygiene - yearly record check", "Compliance with regulations related to Environmental Protection and Site Hygiene - residual period record check at completion" and "Compliance with regulations related to Environmental Protection and Site Hygiene – final record check" in the Bill of Quantities or Schedule of Rates shall be subject to the principles as given below:

Option 1
a. Payment for the item of "Compliance with regulations related to Environmental Protection and Site Hygiene – final record check" in respect of an assessment period shall be valued at the pre-determined rate of the item included in the Bill of Quantities or Schedule of Rates and by multiplying it with the quantity of work of the item which shall be equal to 1.0 in respect of the record check if none of the following criteria in respect of environmental and site hygiene legislation and regulations are received from the Environmental Protection Department (EPD) or the Food and Environmental Hygiene Department (FEHD) during the assessment period:

i. One or more warning letters received from the Contract Manager subsequent to inspections;

ii. One or more warning letters received from EPD or FEHD;

iii. One or more convictions under any environmental and site hygiene regulations or legislation;

iv. Abatement Notice.

Provided that where the criteria (a)(i) to (iv) above are satisfied but there are one or more offence notifications received from EPD or FEHD during any assessment period for which any conviction under any environmental and site hygiene regulations or legislations is yet to be confirmed by EPD or FEHD at the time when the payment assessment is being carried out, payment for this item shall be valued with the quantity provisionally set at zero and which will be adjusted to 1.0 upon confirmation from EPD or FEHD that there is no conviction.

b. For the purpose of establishing the Contractor's entitlement to payment for the item "Environmental Protection and Site Hygiene – final record check", a one-off assessment irrespective of any extended contract period as defined in the Bill of Quantities or Schedule of Rates shall be carried out by the CM or CM's representative;

c. The assessment period shall be from the date for commencement of the Works up to and including the date of the certificate of completion of the Works (or where phased completion of Sections is specified, the last date of completion stated amongst the different certificates of completion for the Sections of the Works) issued by the CM under GCC Clause 8.7.

Option 2

a. Payment for the items of "Compliance with regulations related to Environmental Protection and Site Hygiene – yearly record check" and "Compliance with regulations related to Environmental Protection and Site Hygiene – residual period record check at completion" shall be valued at the pre-determined rate of the respective item included in the Bill of Quantities or Schedule of Rates and by multiplying it with the quantity of work of that item which shall be equal to 1.0 in respect of the record check if none of the following in respect of environmental and site hygiene legislation and regulations are received from the Environmental Protection Department (EPD) or the Food and Environmental Hygiene Department (FEHD) during the assessment period:

i. One or more warning letters received from the Contract Manager subsequent to inspections;

ii. One or more warning letters received from EPD or FEHD;

iii. One or more convictions under any environmental and site hygiene regulations or legislation;

iv. Abatement Notice.
Provided that where the criteria (a)(i) to (iv) above are satisfied but there are one or more offence notifications received from EPD or FEHD during any assessment period for which any conviction under any environmental and site hygiene regulations or legislations is yet to be confirmed by EPD or FEHD at the time when the payment assessment is being carried out, payment for this item shall be valued with the quantity provisionally set at zero and which will be adjusted to 1.0 upon confirmation from EPD or FEHD that there is no conviction.

b. For the purpose of establishing the Contractor's entitlement to payment for the items of "Compliance with regulations related Environmental Protection and Site Hygiene - yearly record check". an assessment shall be carried out by the CM or CM's representative at the end of each full 12-month period commencing from the date for commencement of the Works. However, no assessment (and hence no payment) shall be made for any full 12-month period which ends on a date beyond the contract/extended contract period as defined in the Bill of Quantities or Schedule of Rates;

c. For the avoidance of doubt, the remeasured quantity in adjustment of account for item of "Compliance with regulations related to Environmental Protection and Site Hygiene - yearly record check" is subject to the capping limit which is equal to the quantity as stated in the Bill of Quantities or Schedule of Rates. Therefore, in case where the remeasured quantity is larger than the quantity as stated in the Bill of Quantities or Schedule of Rates, the respective quantity stated in the Bill of Quantities or Schedule of Rates shall be taken as the remeasured quantity for adjustment of account;

d. For the purpose of establishing the Contractor's entitlement to payment for the item of "Compliance with regulations related Environmental Protection and Site Hygiene - residual period record check at completion", a one-off assessment irrespective of any extended contract period as defined in the Bill of Quantities or Schedule or Rates shall be carried out by the CM or CM's representative. The assessment period shall be from the first day after the last assessed period of "yearly record check" in (b) above up to and including the date of the certificate of completion of the Works (or where phased completion of Sections is specified, the last date of completion stated amongst the different certificates of completion for the Sections of the Works) issued by the CM under GCC Clause 8.7.

10. The assessment for payment of the item of "Recognition of innovation in environmental management and site hygiene measures" in the Bill of Quantities or Schedule of Rates shall be subject to the principles as given below:
   a. The Contractor has implemented innovative environmental management and site hygiene measures;
   b. The measure has been supported by an independent vetting panel; and
   c. CM has verified the implementation merits to his satisfaction.

**SITE ACCESS CONTROL OF PERSONNEL**

**PRE.B8.2610.7 SITE ACCESS CONTROL AND RECORDING SYSTEM**

Provide and operate an Access Control and Recording System (ACRS) to record and verify the information of all personnel (including Site Personnel, Self-employed Workers, Direct Contractors' workers and visitors) entering and leaving the Site as specified in **PRE.B8.2612** to **PRE.B8.2660** and as per the requirements stipulated in the latest "Contractor's Guideline on Wage Monitoring System" published by HA from time to time:

1. Operate the ACRS within two weeks from the notified date for commencement of the Works;
2. After the ACRS is put into operation, issue smart cards to all personnel for identification;
3. Subject to sub-clause (2) above, do not allow any personnel without a smart card to work on the Site;
4. Compile a register for all issued smart cards with detail information of the card holders and submit it to the CM for records at regular intervals as confirmed by the CM. Both hard and soft copies of the register shall comply with the format similar to the prescribed forms attached to the latest "Contractor's Guideline on Wage Monitoring System" published by HA from time to time;

5. Compile and maintain daily attendance records of all personnel working on the Site and site access record of all visitors and keep a verified copy in the wage books as required in PRE.B8.1450 as per the timeframe confirmed by CM's representative;

6. Compile and maintain schedules of wages and MPF contribution as required in PRE.B6.550 and PRE.B8.1450;

7. Compile and print record forms of Silver Card Holders working on Site by respective trades on dates designated by the CM. The record form shall be in the format similar to the Record Form (DASM-F6211) and fields to be entered shall enable the information required in sub-clause (2) of PRE.B6.310 to be retrieved. The Record Form (DASM-F6211) can be obtained from the CM upon request in writing;

8. Provide training to at least three CM's representatives and LRO in using the ACRS;

9. At least 2 number of portable pocket personal computers complying with the system requirements as stipulated in PRE.B8.2620 shall be provided for the use of the CM or LRO during the operation period of ACRS.

**ARRANGEMENT FOR PRE-OPERATION OF ACRS**

1. Within 7 days from the notified date for commencement of the Works, submit to the CM for record the temporary arrangement for pre-operation of ACRS. The temporary arrangement shall include use of log books, card readers or portable pocket personal computers complying with the system requirements as stipulated in PRE.B8.2620 to record the time of entry and departure of all personnel, and issuing temporary passes or smart cards to them;

2. Implement the temporary arrangement to record and verify the information of all personnel as required in the ACRS and their entering and leaving the Site until the ACRS is ready to operate.

**DESIGN, OPERATION AND SUBMISSION REQUIREMENTS**

Submit the following of the ACRS to the CM for record within 14 days from the notified date for commencement of the Works:

1. Design and operation detail of the system;
2. Format and submission arrangement of the data;
3. Name and details of the service provider;
4. Emergency plan in the event of breakdowns, repairs or regular maintenance.

**SYSTEM REQUIREMENTS**

1. The ACRS shall include the following:
   a. Entrance/Exit Control Unit;
   b. Central Data Computer Unit;
   c. Portable pocket personal computer.

2. The ACRS shall be a system utilising biometric recognition technology for identifying the subject (person entering or leaving the site) in combination with a non-contact type smart card system complying with ISO 14443. The chip inside the smart card shall comply with ISO 14443. The biometric authentication shall be a Handkey II or other products having similar and equivalent functions and performances;
3. The smart card shall be compatible with the Construction Workers Registration Cards issued by the Construction Industry Council (CIC) under the Construction Workers Registration Ordinance (Cap. 583) to registered construction workers. The system's card readers shall be compatible with the smart card and shall be complete with a security access module (SAM) for cryptographic security slot. The Contractor shall obtain the SAM from the CIC;

4. The ACRS shall have sufficient memory to capture and record the information, and produce reports as specified in PRE.B8.2630 to PRE.B8.2650;

5. Adequate and secure backup system shall be provided. In the event of power failure, all memory contained in the data station computer shall be retained;

6. If a personnel (except visitor) is issued with a registration card by the CIC pursuant to the Construction Workers Registration Ordinance (Cap. 583), the card so issued is permitted to be used in lieu of the smart card required under this section;

7. All data stored in the ACRS shall be accessed and retrieved by the microcomputer provided to the LRO. The ACRS shall allow the retrieved data to be printed on paper and exported to electronic files in format of 'Portable Document Format' and 'Microsoft Excel', or other commonly available format acceptable to the CM;

8. The ACRS shall be able to assign an unique Site Personnel Number for each issued smart card complying with the format as stipulated in the latest "Contractor's Guideline on Wage Monitoring System" published by HA from time to time;

9. The ACRS shall be able to compile, print and export forms, schedules and register as required in PRE.B8.1450 and PRE.B8.2610 complying with the format similar to the prescribed forms attached to the latest "Contractor's Guideline on Wage Monitoring System" published by HA;

10. The portable pocket personal computer shall be able to synchronize with the data bank of the ACRS and be capable of recording, verifying and updating the information of the personnel (except visitors) including reading their smart cards and registration cards issued by CIC;

11. The ACRS shall be able to maintain all raw data of in/out records of all site personnel and highlight all the records input or edited by manual in reports compiled and printed by ACRS as stipulated in sub-clauses (9) for checking.

**PRE.B8.2630.7 ENTRANCE/EXIT CONTROL UNIT**

1. Install sufficient numbers of entrance/exit control unit at all ingress or egress points of the Site and submit the exact locations to the CM for agreement;

2. Each entrance/exit control unit shall be equipped with non-contact type smart card readers with biometric recognition device and access control device, e.g. turnstile;

3. Connect the smart card readers to a secured computer which shall record all personnel's signing in and out of the Site. Provide separate smart card readers with clear labels indicating "IN" and "OUT" for this purpose;

4. Ensure the system can display the photograph of the smart card holder saved in the central data computer unit and the smart card.

**PRE.B8.2640.7 CENTRAL DATA COMPUTER UNIT**

The secured computer unit must have high availability feature of at least 96% uptime or not more than five hours per month outage and shall be loaded with appropriate software to perform the following functions:

1. Automatic recording of the entry/exit information of the smart card holders passing the entry/exit gates;
2. Output and transmit the registration records and the daily entry and exit record, in a format stipulated by Housing Authority (HA), to HA's computer facility electronically on frequency prescribed by HA. The transmitted data including its Intellectual Property Right will be owned by HA. HA shall have the right to keep, analyse, compile and further disclose the transmitted data to any person in such form and manner as HA deems fit;

3. Entry and updating of information on smart card holders;

4. Instant retrieval of picture and information of smart card holder;

5. Automatic printout and alarm message in case of faulty operation.

PRE.B8.2650.7 INFORMATION TO BE CAPTURED AND SAVED IN ACRS

1. Provide clear plastic holders to all personnel (except visitors) for holding their smart cards or registration cards issued by CIC. The plastic holder shall be provided with a means to enable it to be displayed in a conspicuous position of the personnel and affixed with a label with the following information shown:
   a. Site Personnel Number;
   b. Name of personnel in Chinese and English;
   c. Name of personnel's employer in Chinese and English (except Self-employed Worker);
   d. Trade of personnel and, if applicable, the relevant trade no. (refer to the trade list issued by CIC);
   e. Photograph of personnel;

   Background colour of the label for the Contractor's direct employees shall be red, whilst that for all other Site Personnel shall be green, Self-employed Workers shall be blue and Direct Contractors' Workers shall be white.

2. Except for the smart cards which are issued to visitors, the following electronic data shall be contained in smart cards of personnel and the central data unit in encrypt form:
   a. Site Personnel Number;
   b. Name of personnel in Chinese and English;
   c. Hong Kong Identity Card number of personnel;
   d. Details of Construction Worker Registration Card and Trade Test / Intermediate Trade Test Certification Card including card no., expiry date, trade name and trade no., if available;
   e. Name of Personnel's employer in Chinese and English (except Self-employed Worker);
   f. Trade of personnel and, if applicable, the relevant trade no. (refer to the trade list issued by CIC);
   g. Photograph of personnel;
   h. Contract no. and Contract title;
   i. Employment contract details of Personnel/personal insurance policy details as agreed with CM (optional for smart card);
   j. Expiry date of the smart card and whether the smart card has been returned or voided;
   k. Signature specimen of personnel (optional for smart card);
   l. Details of Silver Card (if any) including the card no., expiry date and information required in the Record Form (DASM-F6211) and sub-clause (2) of PRE.B6.310. The Record Form (DASM-F6211) can be obtained from the CM upon request in writing;
   m. Details of Safety Card including the card no. and expiry date;
   n. Contact telephone no. of personnel.

3. The following information of all the visitors shall be captured and recorded in the ACRS:
   a. Name of visitor in Chinese or English;
b. Hong Kong Identity Card number of visitor;
c. Name of visitor's company/organization;
d. Contact telephone no. of visitor;
e. Particulars of staff to be visited:
   i. Name;
   ii. Telephone no.;
   iii. Name of company.
f. Purpose of the visit;
g. Site Personnel Number of the smart card issued;
h. Whether the smart card has been returned.

The smart card issued to a visitor shall be provided with a means to enable it to be displayed in a conspicuous position of the visitor and in yellow colour.

4. The smart card shall contain sufficient encrypted information for identification of the card holder and access to the master data bank of the system;

5. Comply with the requirements as stipulated in the Personal Data (Privacy) Ordinance for avoiding the abuse of the information collected. Adequate data security control shall be provided to limit the access right to the ACRS on need basis. The usage of the information collected by the ACRS shall be used exclusively for security control and supporting information as required by the Contract e.g. attendance checking;

6. Allow the LRO, CM's representative or any other persons authorized by the CM to check the accuracy of the records.

**SYSTEM RUNNING AND TERMINATION**

1. Operate the ACRS at all times before termination. Replace any component of the ACRS immediately in the event of breakdowns, repairs or regular maintenance;

2. Maintain the operation of ACRS up to and including at least two months after the month in which the date of the certificate of completion of the Works (or where phased completion of Sections is specified, the last date of completion stated amongst the different certificates of completion for the Sections of the Works) issued by the CM under GCC Clause 8.7. For Contracts with more than one Portion of the Site, and for those Portions with only one Section of the Works, maintain the operation of ACRS for each Portion up to and including at least two months after the month in which the date of completion of the Section of the Works in such Portion as issued by the CM under GCC Clause 8.7. For Contracts with more than one Portion of the Site, and for those Portions with more than one Section of the Works, maintain the operation of ACRS for each Portion up to and including at least two months after the month in which the last date of completion stated amongst the different certificates of completion for the Sections of the Works in the same Portion as issued by the CM under GCC Clause 8.7;

3. Seek CM's prior approval for terminating the operation of each ACRS without prejudice to the provisions as specified in sub-clause (2) above;

4. Seek CM's prior approval for dismantling and removal of each access control unit.

**WORKS ON STREET MAINTAINED BY THE HIGHWAYS DEPARTMENT**

1. Carry out works on Street Maintained by the Highways Department at ..................
2. Construct run-in and run-out in compliance with Highways Department's standards at the proposed site entrance and exit respectively. When no longer required, remove the run-in and run-out and reinstate the affected road and footpath to CM's satisfaction and bear all associated costs.

PRE.B8.2720.7   EXCAVATION PERMIT APPLICATION
1. Render all necessary assistance to the Employer in processing any application for an Excavation Permit or any extension in respect thereof including supplying all necessary information to the CM complying with Environment, Transport and Works Bureau "Practitioner's Guidelines" latest version for the application of an Excavation Permit;
2. The information required for processing the Excavation Permit is contained in the Excavation Permit Processing Manual issued by Highways Department. The information includes but not limited to excavation locations, detailed construction programme for permit period assessment, utilities coordination programme, temporary traffic measures and substantiations for extension of permit period etc;
3. Coordinate with the utilities undertakers in compiling the utilities coordination programme and obtain approval from relevant departments on the temporary traffic measures;
4. Allow sufficient time in the programme for the Employer to obtain the Excavation Permit and that should include all activities in the application process as outlined in the Excavation Permit Processing Manual issued by Highways Department and any proposed revisions from the Contractor to those proposals already submitted by the Employer to the Designated Authority for applying the Excavation Permit.

PRE.B8.2730.7   SAFETY PRECAUTION
1. Comply with the conditions of the Excavation Permit in the capacity of the Nominated Permittee and assist the Employer and the CM to comply with the same;
2. Ensure all safety precautions are carried out to protect the public and that all works are carried out in such a manner as to cause as little inconvenience as possible to the public;
3. Ensure that existing utilities are not damaged, temporary traffic arrangements are properly implemented, vehicular and pedestrian accesses are maintained, working sites are not left unattended, the Site is kept clean at all times, road works reinstatements and their maintenance are carried out in accordance with the conditions of the Excavation Permit;
4. Carry out all remedial works for road works reinstatements within 12 months from the date of submission of a Completion Notice under the Excavation Permit and bear all associated costs.

PRE.B8.2740.7   SITE SUPERVISION
1. Ensure that sufficient site supervising personnel are provided to supervise the works on Street Maintained by the Highways Department in particular on site safety;
2. At least 4 weeks before commencement of the works on Street Maintained by the Highways Department, submit a supervision plan documenting the supervision system which should include detail information on how to supervise, monitor and prevent the Contractor's personnel from committing an act or making an omission in contravention of the Land (Miscellaneous Provisions) Ordinance (CAP. 28) and the conditions of the Excavation Permit:
   a. The supervision plan shall outline all safety precautions including excavation support details to protect the public from any danger or injury during execution of works on Street Maintained by the Highways Department;
b. The supervision plan and the information contained in the plan shall be acceptable to the CM. The consent by the CM of any such particulars shall not relieve the Contractor of any duty or responsibility under the Contract and any liability under the Land (Miscellaneous Provisions) Ordinance (CAP. 28).

3. Appoint a competent person to supervise all works on Street Maintained by the Highways Department and to ensure that the supervision plan is adhered to. The competent person shall be:
   a. A registered professional or a safety officer as defined in Section 10T of the Land (Miscellaneous Provisions) Ordinance (CAP. 28);
   b. Full time on Site for supervision of the works on Street Maintained by the Highways Department.

## BEAM PLUS ASSESSMENT

**PRE.B8.2810.7**

### BEAM PLUS ASSESSMENT

1. Assist CM to conduct BEAM Plus assessment for the Works according to the "BEAM Plus for New Buildings (Version 1.2)" promulgated by the BEAM Society;

2. Satisfy all the target BEAM Plus prerequisites and credits listed in PRE.B8.2820 and provide relevant supporting documents;

3. Assign full time on site a BEAM Plus Construction Coordinator (BC) who is familiar with BEAM Plus assessment to coordinate all relevant works of BEAM Plus assessment. The Environmental Supervisor (ES) specified in PRE.B6.060 can be designated as the BC;

4. A BEAM Plus consultant will be appointed by Employer to monitor the implementation of BEAM Plus credits and prerequisites. Contractor shall coordinate with and provide necessary information to the BEAM Plus consultant to facilitate the BEAM Plus assessment;

5. Attend site inspection with the BEAM Assessor and provide necessary facilities, access and assistance to the BEAM Assessor for the BEAM Plus assessment.

### PRE.B8.2820.7 BEAM PLUS PREREQUISITES AND CREDITS

The target BEAM Plus prerequisites and credits relevant to the Works are as follows:

1. Carry out the following works:
   a. Environment Management Plan (BEAM Plus credit SA 10 refers)
      i. Prepare and implement the Environmental Management Plan covering all environmental monitoring specified in PRE.B8.2510 to PRE.B8.2560.
   b. Air Pollution During Construction (BEAM Plus credit SA 11 refers)
      i. Implement mitigation measures for dust and air emissions during construction. Comply with the Air Pollution Control Ordinance. Endeavour to ensure that there shall be no complaint about air pollution from the Site leading to the issue of a fine or prosecution by EPD;
      ii. Provide substantiation record for implementation of all air pollution mitigation measures. The substantiation shall cover the relevant items under "Air Pollution Control During Construction” at PRE.B8.APPEND9 where applicable;
      iii. Conduct and report on construction dust monitoring specified in PRE.B8.510 to PRE.B8.570.
   c. Noise During Construction (BEAM Plus credit SA 12 refers)
      i. Implement mitigation measures for construction noise. Comply with the Noise Control Ordinance. Endeavour to ensure that there shall be no complaint about noise from the Site leading to the issue of a fine or prosecution by the EPD or the Police;
ii. Provide substantiation record for implementation of all noise mitigation measures. The substantiation shall cover the relevant items under "Noise Control During Construction" at PRE.B8.APPEND9 where applicable;

iii. Conduct and report on construction noise monitoring specified in PRE.B8.890 to PRE.B8.898.

d. Water Pollution During Construction (BEAM Plus credit SA 13 refers)
   i. Implement measures to reduce water pollution during construction. Comply with the Water Pollution Control Ordinance. Endeavour to ensure that there shall be no complaint about water pollution from the Site leading to the issue of a fine and prosecution by the EPD;
   ii. Provide substantiation record for implementation of all water pollution mitigation measures. The substantiation shall cover the relevant items under "Water Pollution Control During Construction" at PRE.B8.APPEND9 where applicable;
   iii. Conduct and report on discharged water monitoring specified in PRE.B8.2410.

e. Construction and Demolition Waste Management Plan (BEAM Plus prerequisite MA P3 refers)
   i. Prepare and implement the Waste Management Plan specified in PRE.B8.2520;
   ii. Provide substantiation record for implementation of all measures for waste management. The substantiation shall cover the relevant items under "Waste Management" at PRE.B8.APPEND9 where applicable.

f. Indoor Sources of Air Pollution (BEAM Plus credit IEQ 7 refers)
   i. Carry out site measurement on Radon and prepare and submit report to show the Indoor Air Quality of normal occupied spaces specified in PRE.B8.610 and PRE.B8.620;

g. Water Quality Survey (BEAM Plus prerequisite WU P1 refers)
   i. Conduct water quality test specified in PLU1.T070 to demonstrate with record that quality of potable water meets the specified drinking water quality standards.

2. Use environmentally friendly materials and provide supporting documents and record on the use of the following materials for the Works:
   a. Timber Used for Temporary Works (BEAM Plus prerequisite MA P1 refers)
      i. Use sustainable timber for temporary works during construction as specified in PRE.B8.2450 and CON2.M080;
      ii. Provide supporting documents including Chain-of-custody certificate, purchase order, delivery order, site photos etc..

   b. Use of Non-chlorofluorocarbon Based Refrigerants (BEAM Plus prerequisite MA P2 refers)
      i. Use no chlorofluorocarbon-based refrigerants in Heating, Ventilation and Air Conditioning & Refrigerating (HVAC&R);
      ii. Provide supporting documents including equipment schedule, equipment catalogue etc..

   c. Prefabrication (BEAM Plus credit MA 3 refers)
      i. Use and demonstrate not less than 40% of the precast concrete components are fabricated off-site and the manufacturing factory located within 800 km from the Site;
      ii. Provide supporting documents including calculation showing the percentage of precast concrete components, map showing the distance between the manufacturing factory and the Site, site photos etc..

   d. Sustainable Forest Products (BEAM Plus credit MA 6 refers)
      i. Use timber doorsets and other timber product such that not less than 50% of the timber is originated from sustainable source;
ii. Provide supporting documents including calculation showing the percentage of timber products originated from sustainable source, Chain-of-custody certificate, purchase order, delivery order, site photos etc.

c. Ozone Depleting Substances (BEAM Plus credit MA 8 refers)
   i. Use zero ozone depleting potential products for thermal insulation and fire retardant materials in building fabrics and building services;
   ii. Provide supporting documents including catalogue of refrigerants used in HVAC&R, catalogue of thermal insulation materials etc.

d. Regional Manufactured Materials (BEAM Plus credit MA 9 refers)
   i. Ensure and demonstrate that not less than 20% of all the building materials are manufactured locally within 800 km from the Site;
   ii. Provide supporting documents including map showing the distance between the manufacturing plant and the Site, delivery order etc.

e. Annual Water Use (BEAM Plus credit WU 1 refers)
   i. Use water efficient devices specified in PLU2.M510 that lead to an annual saving of consumption of potable water of not less than 20% when calculated in accordance with the method described in BEAM Plus;
   ii. Provide supporting documents including catalogue of water efficient devices, calculation showing the percentage of water saving etc.

3. Liaise and coordinate with building services Nominated Sub-contractors to carry out their BEAM Plus related work according to the requirements in the nominated sub-contracts reproduced in Appendix W, monitor their work progress, and consolidate their documents as follows:

   a. Monitor the progress of the building services works in the nominated sub-contracts relevant to achieving the target BEAM Plus prerequisites and credits stipulated in the nominated sub-contracts;

   b. Liaise with the Commissioning Agents of the Nominated Sub-contractors, co-ordinate the testing and commissioning works for the building services nominated sub-contracts, and monitor the progress of their testing and commissioning works including the preparation of all necessary documentation;

   c. Consolidate the documents to be submitted by the Nominated Sub-contractors for BEAM Plus submission and submit same to the Contract Manager for approval.

4. Liaise, coordinate with Direct Term Contractors to carry out their BEAM Plus related work for BEAM Plus submission.

PRE.B8.2830.7 FILING SYSTEM FOR BEAM PLUS ASSESSMENT

1. Establish and maintain organized filing system to facilitate BEAM Plus assessment for BEAM Plus prerequisites and credits;

2. The filing system shall include supporting documents such as monitoring and implementation records, substantiation and demonstration documents etc. to justify satisfactory compliance with the BEAM Plus prerequisites and credit requirements.

PRE.B8.2840.7 MONTHLY BEAM PLUS MONITORING REPORT

1. Submit the format and framework of the BEAM Plus Monitoring Report within 14 days from the date of commencement of the Works for approval by the CM;

2. Submit monthly BEAM Plus Monitoring Report to CM and BEAM Plus consultant for review within 7 days after the end of each month;

3. The BEAM Plus Monitoring Report shall cover all BEAM Plus prerequisites and credits in PRE.B8.2820 and include the following:

   a. A summary of the key construction activities with record photos for the reporting month, project progress, and the latest construction program;
b. A site facility layout plan showing all the monitoring locations for construction dust and construction noise, and all the environmental mitigation facilities including waste-water recycling facilities, on-site sorting facilities, vehicle washing facilities etc.;

c. All environmental licenses for construction;

d. A summary of the mitigation measures for air pollution, noise pollution and water pollution implemented on Site and corresponding substantiation showing that these mitigation measures have been properly implemented;

e. Monitoring results of construction dust, construction noise and discharged water samples, and corresponding monthly monitoring reports, calibration certificates for equipments, certificates of analysis and remedial actions taken to comply with the specified limits;

f. A summary of the waste management measures implemented on Site and corresponding substantiation showing that these measures have been properly implemented;

g. Waste Flow Table specified in PRE.B8.2520 and all the CHIT/DDF and/or receipt from the disposal grounds;

h. Detailed report on water quality test;

i. Supporting documents showing the use of materials for the Works are in compliance with sub-clause (2) of PRE.B8.2820.

4. Consolidate and submit monthly BEAM Plus monitoring report submitted by Nominated Sub-contractors;

5. At completion of the Contract, consolidate all monthly BEAM Plus Monitoring Reports into a final report to facilitate the BEAM Plus assessment.

PRE.B8.2850.7 BEAM PLUS COORDINATION MEETING

1. Attend regular BEAM Plus Coordination Meeting arranged by BEAM Plus consultant to report, discuss, resolve and record BEAM Plus and its related issues;

2. The BC shall be present in the regular BEAM Plus Coordination Meeting;

3. Provide additional supporting information as requested by CM or BEAM Plus consultant to demonstrate the requirements of BEAM Plus prerequisites and credits are met;

4. Submit minutes of meeting to CM and BEAM Plus consultant within 7 days after the date of the meeting.
## Monthly Summary Waste Flow Table for Year / Year

| *28  | Provide separate compartments for inert (e.g. soil, rubble, sand, stone etc.) and non-inert (e.g. wood, glass, plastics, steel and metals, organics, etc.) wastes. | PRE.B8.1920 (4) |
| *29  | Use inert waste on-site before disposed of at public fill reception facilities. | PRE.B8.1990 (1) |
| *30  | Sort non-inert waste for re-use or recycling where possible before disposal at strategic landfills. | PRE.B8.1990 (1) |
| *31  | Reuse site fencing, scaffolding and timber for building work wherever possible. | PRE.B8.1920 (2)(e) |
| *32  | Maintain and clean waste storage area regularly. | PRE.B8.1920 (8) |
| *33  | Properly treat (re-used/disposed of) excavated materials according to specified procedures. | PRE.B8.1920 (2)(f) |
| *34  | Store general refuse in specified enclosed bins/compaction units, or reuse if possible. | PRE.B8.1920 (4) |
| *35  | Ensure waste collectors who have records of dumping comply with the waste management requirements. | -- |
| *36  | Provide a barge loading point to facilitate transfer of suitable material to public dumps. | -- |
| *37  | Keep records of reuse/recycling/disposal of construction waste. | PRE.B8.1920 (3) |

* Items 12 to 37 are from Appendix 8.2 Good Housekeeping Checklist of the Best Practice Guide for the Environmental Protection on Construction Sites 2009 published by the Hong Kong Construction Association Ltd. which is specified in clause PRE.B8.1997.
APPENDIX PRE.B8/X

PRE.B8.APPEND10.7 CERTIFICATE OF OVERHAUL OF MAJOR CONSTRUCTION PLANT ON SITE
CERTIFICATE OF OVERHAUL OF TOWER CRANE

Name of plant owner : 
Address of installation : 
Type of plant : 
Brand name : 
Model no. : 
Serial no. : 
Capacity : 
Country of manufacture : 
Year of manufacture : 
Date of inspection : 

I hereby certify that :

a) The above particulars of the tower crane are correct;
b) The tower crane described in this certificate has undergone overhaul and that the critical parts of the tower crane have been inspected by the method of inspection as stated in the Checklist on Critical Parts for Overhaul Maintenance and a copy of the Checklist is attached, with the exception of (state the deviation, if any, from the Checklist on Critical Parts for Overhaul Maintenance with full justification)
c) The tower crane is in a safe working condition.

I understand that the Checklist on Critical Parts for Overhaul Maintenance in the Contract is not exhaustive and compliance with which does not relieve any of my professional responsibilities.

Signature of Competent Examiner :
Name of Competent Examiner :
Qualification :
Discipline :
Person or firm by whom the person conducting the inspection is employed :

Date of certificate :

視乎吊重機的類型，選擇使用列表 1A 或 1B。
### Mobile Crane (excluding crawler crane)

**Critical parts for overhaul maintenances of mobile crane (excluding crawler crane)**

<table>
<thead>
<tr>
<th>Critical Parts</th>
<th>Method of checking</th>
</tr>
</thead>
</table>
| **1** Drive systems (including motors, winches, gearboxes and drive shafts)**

驅動系統（包括「摩 打」、絞盤、波箱和驅 動軸）

| **Inspect the drive systems for vibration, fluid leakage and correct operation**  | 就驅動系統有否振動、液體洩漏和正確操作進行檢查 |
| **Inspect and measure drum grooves** | 檢查和量度捲槽 |
| **Check line pull limitation using test weights** | 以重塊測試拉力上限 |
| **Check rope fixing clamps/ends** | 就纜索固定夾／末端進行檢查 |

*Additional checking as per items (a) to (c) below if failure of the drive system can result in dropping of a load:*

- **a) NDT parts of the drive system that may be prone to crack**
  就駕動系統容易出現破裂的部件進行無損測試

- **b) Remove and strip down the drive systems where practicable to check shafts, gears, valves, bearings and worn components**
  在切實可行的情況下，拆裝驅動系統的所有部件，以檢查驅 動軸、齒輪、閥門、「啤鈴」和磨損的部件

- **c) Conduct pressure and performance test to hydraulic motors and valves at maximum working pressure**
  在最大許可壓力下，就液壓「摩打」和閥門進行壓力和性能 測試

| **2** Limit switch/ASLI**  (automatic safe load indicator)/Safety devices**

限位開關/ ASLI（安全荷載自動顯示器）/安 全設備

| **Check for functionality (such as ASLI, anti-two block devices, cut-out devices, boom hoist limited switches, emergency stops, etc.) and calibrate ASLI by standard weights** | 進行功能檢查（例如安全荷載自動顯示器、防滑輪組碰撞裝置、 斷路設備、吊臂超重開關、緊急停止等），並利用標準砝碼校 準安全荷載自動顯示器 |
| **Slewing visual & audio warning device, CCTV** | 轉盤的影音警告設備及閉路電視 |

| **3** Braking systems**

剎車系統

| **Remove and dismantle hoist and luffing brakes to check pins, springs, valves and bearings** | 拆除並解裝吊機和變幅制動器，就檢軸、弾簧、閥門和「啤鈴」 進行檢查 |
| **Check oil leakage and replace rubber seals** | 檢查有否漏油並更換橡膠密封墊 |
| **NDT any welds in braking system that may be prone to crack** | 就駕動系統容易出現破裂的部件進行無損測試 |
| **Check braking mechanism (including brake linings, brake discs, brake pads, etc.) for wear, damage and adjustment** | 就剎車系統的磨損程度，破損和調校機制進行檢查（包括制動器 襯片、制動盤、剎車片等） |

| **4** Bearings**

「啤鈴」

| **Check any deformation and wear** | 檢查有否任何變形和磨損 |
| 5 | Hydraulic systems | Check the flow of hydraulic pumps and motors by a flow meter or a time check  
液壓系統 | 利用時間計或流量計檢查油壓泵的流量 |
|   |                   | Check pressure of hydraulic pumps  
                   | 檢查油壓泵的壓力 |
|   |                   | Inspect hydraulic cylinders and systems for leaks at maximum working pressure  
                   | 在最大許可壓力下，檢查液壓缸及其系統有否洩漏 |
|   |                   | Measure housing and ram for distortion, ovality, weardown  
                   | 量度外罩和推桿的扭曲度、橢圓度及磨蝕程度 |
|   |                   | Check and test the functionalities and settings of safety valves, non-return valves and holding valves of hydraulic fluids  
                   | 進行功能測試，以檢測液壓流體安全閥、止逆閥和保持閥的功能和設定 |
|   |                   | Check conditions of hydraulic hoses and replace them every six years from the date of manufacture unless otherwise specified by the manufacturer  
                   | 檢查液壓軟管的狀況，除非製造商另有規定，否則更換由製造日期開始年齡滿六年的軟管 |
|   |                   | Check leakage from hydraulic swivels  
                   | 檢查液壓旋轉接頭有否洩漏 |
| 6 | Outrigger          | Check hydraulic systems, hoses, oil leakage  
支架 | 檢查液壓系統、軟管有否漏油 |
|   |                   | Check proper extension and seating  
                   | 檢查有否適當伸展，以及是否坐落於適當地方 |
|   |                   | Inspect the levelling and physical conditions on slider pads/bearings  
                   | 就滑塊墊／啤鈴的平水和結構是否完好無損進行檢查 |
|   |                   | Check all pins, holes and bushes  
                   | 檢查所有栓釘、孔眼及軸套 |
|   |                   | Inspect outrigger floats  
                   | 檢查支架有否浮動 |
|   |                   | Structural NDT inspections at:  
                   | 就下列結構進行無損檢測 |
|   |                   | a) connection between outrigger beams and cylinder housings for outrigger jacks  
                   | 伸臂樑和支架插孔氣缸外罩之間的連接位 |
|   |                   | b) outrigger boxes and mounting  
                   | 支架箱及底座 |
| 7 | Slewing systems    | Check clearance in slew ring at a min. of 4 locations  
轉盤系統 | 在轉盤上選擇最少4個位置進行間隙檢查 |
|   |                   | Check torque or replace slew ring bolts  
                   | 檢查扭矩或更換轉盤螺栓 |
| 8 | Undercarriage and  | Visually check for wear and damage  
底盤和轉盤裝置 | 就磨蝕和破損情況進行目視檢查 |
|   | slewing device     | Check gear clearance and any abnormal function  
                   | 檢查齒輪間隙，並測試其功能有否異常 |
| 9 | Hooks and hook     | Check pins & bushes/bearings  
吊鈎及吊鈎組 | 檢查栓釘及軸套／「啤鈴」 |
<p>|   | blocks              | |</p>

**Specifications:**

1. **Hydraulic systems**
   - Check the flow of hydraulic pumps by a flow meter or a time check.
   - Check the pressure of hydraulic pumps.
   - Inspect hydraulic systems and components for leaks.
   - Conduct a sink rate test at 100% of SWL and at maximum hydraulic outreach (without manual extensions, if fitted).

2. **Slewing systems**
   - Check clearance in slew ring at a min. of 4 locations.

3. **Hooks and hook blocks**
   - Check pins & bushes/bearings.
   - Check throat dimensions of hooks.
   - Check safety latches.
   - Inspect side plates and axles.
   - Inspect and measure sheave grooves for wear.
   - Check bearings in sheaves.
   - Measure diameter of rollers.

PRE.B9  QUALITY STANDARDS

MATERIALS AND WORKMANSHIP

PRE.B9.010.7  GOOD PRACTICE
Materials and workmanship generally to be consistent with good practice in Hong Kong and to comply with this Specification and with the relevant BS or CP, except when specified otherwise, and/or Approved.

PRE.B9.020.7  MATERIALS
Materials for inclusion in the permanent works to be new except when specified otherwise.

PRE.B9.030.7  CONSISTENCY OF MATERIALS
1. When a choice of manufacturer is permitted for any material, obtain the entire quantity required to complete the work from one manufacturer. Unless otherwise Approved, also obtain such material from the same source of supply;
2. When a choice of type, colour or size of material is permitted (e.g. glazed wall tiles, mosaic tiles), use the same type, colour and size throughout for all work in like locations unless otherwise Approved.

PRE.B9.040.7  MIX PROPORTIONS
Unless otherwise specified, mix proportions to be by volume.

PRE.B9.050.7  MANUFACTURER'S RECOMMENDATIONS
Handle, store and fix each material in accordance with manufacturer's recommendations. Submit copies of these recommendations to the CM when requested before work is commenced.

PRE.B9.060.7  EQUIVALENT MATERIALS AND IMPERIAL SIZES
1. When materials or products to the appropriate standard are not available, materials or products conforming with equivalent standards will be acceptable subject to Approval;
2. When a material is available in Hong Kong in metric size, an imperial size equivalent will not be acceptable;
3. If a material is unobtainable in metric size, a material of an imperial size equivalent which will fully meet the specification may be substituted if prior Approval has been obtained, but the rates and prices will not be changed from those submitted for the materials specified.

PRE.B9.070.7  BRITISH STANDARDS
1. "British Standards" (BS) and "Codes of Practice" (CP) shall, except for head standards, be deemed to include for the latest revision and any amendments to that revision, that are listed in the BSI Standard Catalogue and its Supplements 42 days prior to the date for the return of tenders unless the year of revision is specified in this Specification;
2. "Head standards" to BS and CP shall be deemed to include for all dated revisions to their parts and amendments which are listed in the BSI Standards Catalogue and its Supplements 42 days prior to the date for the return of tenders unless otherwise specified;
3. "Head standards" are not dated because they do not contain any technical content. However reference to a head standard invokes all extant "parts" of that standard which are themselves dated. Reference to head standards is a practicable method of using a general BS reference in situations where detailed reference to each part would be cumbersome.
OTHER NATIONAL AND INTERNATIONAL STANDARDS

Hong Kong Construction Standards (CS), International Standards Organisation (ISO) Standards and standards issued by the American Society for Testing and Materials (ASTM) and similar standards shall be deemed to include for the latest revision and any amendments to that revision, that are published 42 days prior to the date for the return of tenders unless the year of revision is specified in this Specification.

EQUIVALENT STANDARDS

In the event of Approval being sought, pursuant to PRE.B9.010, for materials or workmanship, for which compliance is claimed to a standard, other than that specified, submit full details to the CM one month before such materials are required for manufacture or incorporation into the works.

PNAP & PNRC

PNAP and PNRC issued by BD shall be deemed to include the issue of the Practice Note and any amendments to that issue published 42 days prior to the date for the return of tenders unless otherwise specified.

CONSTRUCTION INDUSTRY COUNCIL (CIC)

CIC GUIDELINES

1. The Construction Industry Council (CIC) from time to time issues "Guidelines". Such "Guidelines" set out the recommendations on standards and procedures for all relevant industry participants to adopt and to adhere to all times. Industry participants have to prepare for justifying any course of action that deviates from these recommendations;
2. Comply with this specification and with the relevant guidelines promulgated by the CIC. This specification shall prevail if there is conflict between the specification and the CIC requirements.

PERFORMANCE ASSESSMENT SCORING SYSTEM (PASS)

PILINGPASS

Option 1

1. The performance of the Contractor under this Contract is to be assessed by the Piling Contractor's Performance Assessment Scoring System, abbreviated as PilingPASS, which is a means of comparing the performance of individual Piling Contractors in the Housing Authority List of Piling Contractors. It will also be used to guide the Contractor on aspects which require improvement and will be a practical and continuous assessment tool in persuading the Contractors to improve his performance;
2. The assessment shall be carried out quarterly unless the performance of the Contractor warrants a shorter assessment period as determined by the CM;
3. Attend site meetings to discuss the assessment as required;
4. Acknowledge the PilingPASS Assessment and Score Sheets when required by CM.

Option 2
1. The performance of the Piling Subcontractor under this Contract is to be assessed by the Piling Contractor’s Performance Assessment Scoring System, abbreviated as PilingPASS, which is a means of comparing the performance of individual Piling Contractors in the Housing Authority List of Piling Contractors. It will also be used to guide the Contractor and the Piling Subcontractor on aspects which require improvement and will be a practical and continuous assessment tool in persuading the Contractor and Piling Subcontractor to improve their performance;

2. The assessment shall be carried out quarterly unless the performance of the Contractor and/or the Piling Subcontractor warrants a shorter assessment period as determined by the CM;

3. The Piling Subcontractor shall acknowledge the PilingPASS Assessment and Score Sheets when required by CM;

4. Attend site meetings with the Piling Subcontractor to discuss the assessment as required.

PRE.B9.107.7 DEMOLITIONPASS

Option 1

1. The performance of the Contractor under this Contract is to be assessed by the Demolition Contractor’s Performance Assessment Scoring System, abbreviated as DemolitionPASS, which is a means of comparing the performance of individual Demolition Contractors in the HA List of Demolition Contractors. It will also be used to guide the Contractor on aspects which require improvement and will be a practical and continuous assessment tool in persuading the Contractor to improve his performance;

2. The assessment shall be carried out quarterly unless the performance of the Contractor warrants a shorter assessment period as determined by the CM;

3. Attend site meetings and site assessments as required and co-operate in the selection of samples of the works to be assessed;

4. Acknowledge the DemolitionPASS Assessment and Score Sheets when required by CM.

Option 2

1. The performance of the Demolition Subcontractor under this Contract is to be assessed by the Demolition Contractor’s Performance Assessment Scoring System, abbreviated as DemolitionPASS, which is a means of comparing the performance of individual Demolition Contractors in the HA List of Demolition Contractors. It will also be used to guide the Contractor and the Demolition Subcontractor on aspects which require improvement and will be a practical and continuous assessment tool in persuading the Contractor and Demolition Subcontractor to improve their performance;

2. The assessment shall be carried out quarterly unless the performance of the Contractor and/or the Demolition Subcontractor warrants a shorter assessment period as determined by the CM;

3. The Demolition Subcontractor shall attend site meetings and site assessments as required by the CM and co-operate in the selection of samples of the works to be assessed;

4. The Demolition Subcontractor shall acknowledge the DemolitionPASS Assessment and Score Sheets when required by CM;

5. Attend site meetings and site assessments with the Demolition Subcontractor to discuss the assessment as required.

PRE.B9.110.7 PASS

Option 1
1. The performance of the Contractor under this Contract is to be assessed by the Performance Assessment Scoring System, abbreviated as PASS, which is a means of comparing the performance of individual Contractors in the Housing Authority List of Building Contractors. It will also be used to guide the Contractor on aspects which require improvement and will be a practical and continuous assessment tool in persuading the Contractor to improve his performance;

2. Attend site meetings and site assessments as required and co-operate in the selection of samples of the works to be assessed;

3. Provide the following facilities for enabling Housing Department to carry out PASS assessment on the production of the precast concrete components at the casting factory for every interval of three months when the precast concrete components are cast off-Site in mainland China:
   a. A vehicle with driver in mainland China for any purpose in connection with the carrying out of the PASS assessment. The vehicle shall comply with the following requirements:
      i. Specification for vehicle as described in PRE.B10.610 (2)(a), unless otherwise agreed;
      ii. The insurance policy for the vehicle shall provide insurance protection to passengers of the vehicles and any third parties and to any use of the vehicle pursuant to sub-clause (3)(a) above.
   b. Attendance at locations of production and storage areas for the precast concrete components, including but not limited to the following:
      i. Assistance in the selection and examination of samples;
      ii. Lifting and transportation of samples;
      iii. Provision of calibrated measuring equipment and any other equipment as required.

Option 2

1. The performance of the Contractor under this Contract is to be assessed by the Performance Assessment Scoring System, abbreviated as PASS, which is a means of comparing the performance of individual Contractors in the Housing Authority List of Soft Landscape Contractors. It will also be used to guide the Contractor on aspects which require improvement and will be a practical and continuous assessment tool in persuading Contractors to improve their performance;

2. Attend site meetings and site assessments as required and co-operate in the selection of samples of the works to be assessed.

INDEPENDENT CHECKING UNIT (ICU)

PRE.B9.112.7 GENERAL
Obtain relevant ICU forms from CM and submit at time frame specified by CM.

PRE.B9.113.7 SERVICES AND FACILITIES REQUIRED BY ICU
1. In facilitating ICU’s inspection and checking:
   a. Provide facilities and labour to carry out Schmidt Hammer Tests on completed structures;
   b. Provide attendance on loading tests on curtain walls and tests on proprietary items;
   c. Provide attendance to facilitate the checking of personnel and attendance records of supervisory staff against the SSP;
   d. Provide attendance on any other site activities and tests for ICU’s inspection as and when necessary;
   e. Provide any other information as required by CM.

2. Inform CM at least 7 working days prior to carrying out the following tests:
a. Tests as described in sub-clause (1)(b) above; and
b. Any other tests to be specified by the CM for inspection by ICU.

PRE.B9.115.7 CHECKING BY ICU ON FOUNDATION WORK

1. Staff of ICU, in the presence of the CM or the CM’s representative, will carry out the following checking or inspection on Site:
   a. Witness pile installation and loading test, if any, of preliminary pile or first working pile;
   b. Check personnel and attendance records of supervisory staff against the SSP;
   c. Check third party safety audit reports against the Safety Plan required under GCC Clause 5.11 and PRE.B8.210;
   d. Witness pre-drilling of Types 3, 5 & 6 piles;
   e. Inspect bearing strata of footings;
   f. Witness core drilling process for Type 3 pile;
   g. Witness post construction proof drilling for Types 5 & 6 piles;
   h. Witness loading test of the piles selected by ICU;
   i. Witness or inspect any other site activities as and when necessary.

2. The CM will select certain piles to undergo loading tests, core tests or any other tests as necessary for the ICU’s inspection;

3. Inform the CM at least 7 working days before:
   a. The preliminary pile or first working pile is ready to be installed or load tested; and
   b. The testing of the piles selected by CM for the ICU’s inspection is ready to be performed.

4. Attend inspection and checking with the ICU and provide information to the ICU to facilitate the inspection and checking;

5. Programme the Works by taking into account of the checking or inspection by ICU.

PRE.B9.116.7 DOCUMENTATION

Submit documentation for structural, geotechnical and building works which include but are not limited to the following certificates, material test reports, method statements, calculations, A4/A3 sketches and monitoring records in both hard and soft copies. The soft copy shall be in Adobe Portable Document Format (PDF) with search function by typing key words to find their locations and at an appropriate size as agreed with the CM. The search function shall be provided for the PDF files as far as practicable:

### CHECKING AND SURVEYING ON FOUNDATION WORKS

**PRE.B9.130.7** CHECKING AND SURVEYING ON FOUNDATION WORKS

1. The CM or his representatives will carry out the following checking or surveying works on Site:
   a. Check setting out of site boundaries;
b. Check site formation levels and profiles at contract commencement and completion;
c. Check survey control points for piles and structures;
d. Check pile location markers before pile installation;
e. Check locations and levels of selected piles after pile installation;
f. Check founding level of bored piles before concreting;
g. Check locations and levels of selected piles and/or bored holes in connection with the following works or tests, as appropriate:
   i. Predrilling and post-drilling;
   ii. Confirmatory core tests;
   iii. Concrete core tests;
   iv. Loading tests;
   v. Non-destructive tests on piles.
h. Check locations and levels of pile caps;
i. Carry out any other checking and surveying works as may be considered necessary.

2. Programme the Works by taking into account of the checking and surveying works carried out by the CM or his representatives.

3. When instructed by the CM:
   a. Carry out a joint survey with the subsequent building contractor after completion of the Works and upon award of the subsequent building contract in the presence of the CM or his representatives to record the site topography and the setting out and levels of piling, pilecaps, etc. which are to be handed over to the subsequent building contractor;
   b. Allow access to and within the Site for the subsequent building contractor to carry out the joint survey;
   c. Check the draft survey drawings produced by the subsequent building contractor from the joint survey;
   d. Co-sign on the finalized survey drawings with the subsequent building contractor to signify mutual agreement to the survey records.

APPROVED CONTRACTORS AND SUPPLIERS

PRE.B9.210.7

LISTS OF APPROVED CONTRACTORS FOR SPECIALIST WORKS

Option 1

There are no specialist works forming part of this Contract to be carried out by firms included in the Lists of Approved Contractors.

Option 2

Carry out the following specialist work forming part of the Contract by a contractor whose name is included on the appropriate list of Approved Contractors included or specified in the Contract:

1. Ground investigation work and works required to be carried out by RSC(GIFW) under the Contract: see EAR1.D060 & PRE.B9.250;
2. Removal of asbestos: see DEM2.W020;
3. Play equipment: see EXT10.M010;
4. Footbridge bearings : see ..................
6. Water supply connection works outside of the boundary of the Site: see PLU1.G010;

7. Site Formation Works: see PRE.B9.260;

PRE.B9.220.7 AVAILABILITY OF CONTRACTORS APPROVED FOR SPECIALIST WORKS

Accept responsibility for establishing the availability of contractors approved for specialist works forming part of the Contract. In the event that one or more of the named contractors is not available, employ one of the remaining contractors included in the appropriate approved list. Where the specialist works has been partially completed before a contractor becomes unavailable, seek Approval to any change of contractor before employing him. Bear any additional costs arising from the non-availability of any of the named contractors.

GROUND INVESTIGATION WORKS

PRE.B9.250.7 GROUND INVESTIGATION WORKS

1. For all ground investigation works required under the Contract, employ a Ground Investigation Contractor, who shall have been registered under the Housing Authority List of Ground Investigation Contractors and the BDs List of RSC(GIFW), to carry out the works. Alternatively, the Ground Investigation Contractor may be employed by the Piling Subcontractor to carry out ground investigation works relating to foundation works;

2. Unless otherwise specified, the Ground Investigation Contractor shall carry out all ground investigation works in accordance with the following requirements:
   a. Carry out the works in accordance with the recommendations, methods and procedures described in 'Geoguide 2: Guide to Site Investigation', Hong Kong Government, 1987, unless otherwise specified;
   b. In the logging and reporting of the works, adopt all material descriptions, classifications, symbols and definitions of terms in accordance with 'Geoguide 3: guide to Rock and Soil description', Hong Kong Government, 1988, unless otherwise specified;
   c. Provide Technically Competent Persons (TCPs) for ground investigation field works (GIFW), who shall comply with the minimum requirements on the qualifications and experience required for each grade of TCP for GIFW set out in the TMSP and the CoPSS, to carry out supervision of the GIFW in accordance with the supervision requirements stated in TMSP and the CoPSS regarding RSC (GIFW);
   d. Engage a Competent Person (Logging), who shall comply with the minimum requirements on the qualifications and experiences required for the Competent Person (Logging) set out in the CoPSS, to carry out logging of samples and preparation of borehole logs;
   e. Comply with the administration procedures for GIFW set out in the CoPSS, including completing and submitting prescribed plans and relevant ICU Forms to be specified by the CM;
   f. The reports on the works shall contain a certificate signed by the Authorized Signatory of the Ground Investigation Contractor confirming the standards of works carried out. Detailed requirements for the certification shall comply with the CoPSS;
   g. Store all drill hole cores and samples properly in core boxes/containers and protected them from the weather to the satisfaction of the CM and in such a manner that inspection of the cores can easily be made.

3. The number of Ground Investigation Contractor shall be limited to one unless otherwise approved by the CM;
4. Submit to the CM the name of the Ground Investigation Contractor and the names of the personnel provided in accordance with sub-clauses (2)(c) and (2)(d) above;

5. Incorporate the following conditions into the contract between the Contractor and the Ground Investigation Contractor or in the contract between the Piling Subcontractor and the Ground Investigation Contractor, as appropriate:
   a. Assignment of ground investigation works by the Ground Investigation Contractor is forbidden;
   b. A probity clause which shall be drafted for the respective contract in similar wording as given in the following sample clause:
      "If the Ground Investigation Contractor or any of his agents or employees are found to have offered or given advantage, gratuity, bonus, discount, bribe or loan of any sort to any agent or employee of the Employer (i.e., the Contractor or Piling Sub-contractor, as appropriate), agents or employees or members of Hong Kong Housing Authority, or employees of Hong Kong Special Administrative Region working in the Housing Department, the Employer shall be at liberty forthwith terminate the employment of the Ground Investigation Contractor under the Contract and to hold the Ground Investigation Contractor liable for any loss or damage which the Employer may thereby sustain."

SITE FORMATION WORKS

SITE FORMATION WORKS

1. For all Site Formation Works required under the Contract, employ a Site Formation Contractor, who shall have been registered under the BD's List of RSC(SF) and DEVB's List of LANP, to carry out the works;

2. The Site Formation Contractor shall:
   a. Complete and submit SSP for Site Formation Works in accordance with PRE.B8.1405;
   b. Complete and submit Form ICU 10 in accordance with PRE.B4.065;
   c. Carry out supervision of the Site Formation Works in accordance with the submitted supervision plan, relevant PNAPs, PNRCs and etc.;
   d. Complete and submit Form ICU 14 together with all test/assessment reports, monitoring results and as-built record plans for the Site Formation Works as required under the Contract upon completion of the Site Formation Works.

3. The number of Site Formation Contractor employed shall be limited to one unless otherwise approved by the CM;

4. Submit to the CM the name of the Site Formation Contractor and the names of the personnel provided in accordance with the Contract for Site Formation Works;

5. Incorporate the following conditions into the contract between the Contractor and the Site Formation Contractor:
   a. Assignment of Site Formation Works by the Site Formation Contractor is forbidden;
   b. A probity clause which shall be drafted for the respective contract in similar wording as given in the following sample clause:
      "If the Site Formation Contractor or any of his agents or employees are found to have offered or given advantage, gratuity, bonus, discount, bribe or loan of any sort to any agent or employee of the Employer, agents or employees or members of Hong Kong Housing Authority, or employees of Hong Kong Special Administrative Region working in the Housing Department, the Employer shall be at liberty forthwith terminate the employment of the Site Formation Contractor under the Contract and to hold the Site Formation Contractor liable for any loss or damage which the Employer may thereby sustain."
TOLERANCES

PRE.B9.310.7 TOLERANCES IN GENERAL CONSTRUCTION

Option 1
Unless otherwise specified, or indicated on the Drawings execute work within the
tolerance limits defined in Appendix H to this Specification.

Option 2
Execute the work within the tolerance limits specified.

SAMPLES

PRE.B9.410.7 SAMPLES OF MATERIALS - GENERAL REQUIREMENTS
Submit samples of materials as requested by the CM and do not confirm orders until
Approval has been obtained. Keep Approved samples at the place agreed by the CM
for comparison with materials used in the Works, which must conform with the
samples set aside. Where there is a choice of material, colour or texture, submit
samples for Approval. When Instructed, submit technical literature for materials
specified.

PRE.B9.415.7 SAMPLES OF MATERIALS - APPROVAL
CM shall have the discretion to make reference to and take account of the track
records of materials or components as maintained by Housing Department within the
three year period prior to the date of commencement of the Works in his decision for
Approval or not of the Contractor's sample submissions for the following materials
or components:
1. Aluminium windows;
2. uPVC windows;
3. Timber doorsets;
4. Anti-mould internal emulsion paint;
5. Anti-mould external emulsion paint;
6. Shower handsets;
7. Lever handle furniture and locks;
8. Multi-layer acrylic paint with texture coat and without texture coat;
9. Overhead door closers;
10. Panel wall partitions;
11. Precast concrete structural elements;
12. Bath/Shower mixers, basin mixers and kitchen sink mixers;
13. Synthetic paint;
14. Tile adhesive;
15. Tile grout;
16. uPVC pipes and fittings;
17. Galvanized mild steel gatesets;
18. Ready-mixed mortars and ready-to-use mortars;
19. WC suites;
20. Plastic folding doors;
21. Tactile homogeneous floor tiles;
22. Tactile interlocking concrete blocks;
23. Tactile precast concrete paving slabs.

PRE.B9.420.7 SAMPLES OF MATERIALS - PARTICULAR REQUIREMENTS

Option 1
Submit samples of materials as listed in Appendix ............. to this Specification.

**Option 2**

1. Particular attention is drawn to the following which applies to domestic blocks only:
   a. The requirements for provision of samples of the proposed filler, undercoat and finishing coats in two sets of the upper half of the finished doorsets for kitchens, bathrooms, flat entrances and exit staircases are described in FIN7.W2120;

2. Particular attention is drawn to the following which applies to commercial centres:
   a. .............................................................

**Option 3**

When instructed by CM, submit samples of materials for hoarding, covered walkway and gantry.

**PRE.B9.430.7** SAMPLES OF FINISHED WORK - GENERAL REQUIREMENTS
Make samples of finished work as specified or as required by the CM and obtain Approval before proceeding with the work. Unless otherwise specified retain samples on the Site for comparison with the completed work.

**PRE.B9.440.7** SAMPLES AND CONSTRUCTION MOCK-UP OF FINISHED WORK - PARTICULAR REQUIREMENTS
Particular attention is drawn to the following requirements:
1. Provision of sample wing, sample flats (and sample classrooms) and a construction mock-up as described in PRE.B4.080;
2. Provision of samples and trial panels for finishes and for concrete as described in CON2.W710;
3. Provision of full scale mock-up for precast units as described in CON4.T010;
4. Provide a construction mock-up demonstrating the workmanship of the wall, floor and ceiling construction in the living room, bathroom, kitchen, lift lobby and corridor as described in the relevant Worksections. Details of bathroom and kitchen mock-up are given in Appendix PRE 9/I and details of lift lobby and corridor shall follow the same principle.
5. .............................................................

**PRE.B9.450.7** SAMPLES OF FINISHED WORK - PARTICULAR REQUIREMENTS
Particular attention is drawn to the following which applies to domestic blocks only:
1. Where precast concrete facades are required or proposed, provide a full size trial sample of the Type 1 precast facade unit complete with joints, windows and glazing and all finishings as described in CON7.W710;

**TESTING**

**PRE.B9.510.7** TESTING - COSTS BORNE BY THE CONTRACTOR
In addition to the requirements of GCC Clause 7.1, make tests on materials and workmanship to ensure conformity with the Specification or as instructed as follows:
1. Propose testing laboratory that complies with PRE.B9.570 for carrying out the tests for the CM's approval and confirm no affiliation with the proposed testing laboratory using the standard template at Appendix PRE.B9.APPEND2. Ensure the sub-contractors responsible for the materials and workmanship have no affiliation with the proposed testing laboratory and confirm the same in the standard form;
2. Provide test samples under the supervision of the CM and where required submit samples to the Approved testing laboratory and unless otherwise specified, pay all fees and charges;
3. Mark samples, and clearly indicate on test records, the location or delivery from which the test was taken;

4. Request the Approved testing laboratory to submit the original of test certificates to the CM and the contractor at the same time and keep a copy of all records on Site;

5. Submit samples of materials, carry out tests and obtain Approval, before the materials are used in the Works;

6. When requested by the CM provide test certificates or obtain guarantees from the manufacturers, that materials specified to a BS or other specified standard, conform to the relevant standard.

**PRE.B9.520.7**

**PARTICULAR TESTING FOR DOMESTIC BLOCKS - COSTS BORNE BY THE CONTRACTOR**

1. Where precast concrete components are required or proposed for domestic blocks, carry out compression tests on concrete cubes made from concrete for casting the precast concrete components as described in CON7.T110;

2. Propose testing laboratory that complies with PRE.B9.570 for carrying out the tests for the CM's approval and confirm no affiliation with the proposed testing laboratory using the standard template at Appendix PRE.B9.APPEND2. Ensure the sub-contractors responsible for the materials and workmanship have no affiliation with the proposed testing laboratory and confirm the same in the standard form;

3. Carry out all tests for the above in the Approved testing laboratory to be provided as described using qualified technicians. The Approved testing laboratory shall certify and submit all test results to the CM and the contractor at the same time for Approval;

4. The requirements of this sub-clause shall in no way relieve the Contractor of his obligations to carry out other tests under the Contract, including sampling and testing under CON1.T210 - CON1.T820 inclusive.

**PRE.B9.530.7**

**TESTING - COSTS BORNE BY THE AUTHORITY**

The following tests will be carried out by Direct Testing Contractor(s) and/or by the Housing Department Material Testing Laboratory:

1. Non-destructive tests on piles including Pile Driving Analyser Test, Pile Integrity Test and Sonic Logging Test;

2. Non-destructive test on welds;

3. Coring of concrete and testing of concrete cores;

4. Tests on concrete and its constituent materials excluding coring of concrete and testing of concrete cores;

5. Tests on reinforcement steel, structural steelwork and steel piles samples;

6. Repair mortar and its constituent materials;

7. Asbestos monitoring and testing;

8. Non-destructive test on waterproofing of roof;

9. Static pile loading tests on working piles;

10. Confirmatory core test of founding strata of Type 3 piles (this test is also required to be carried out by approved Ground Investigation Contractor employed by the Contractor);

11. Proving bedrock after installation of Types 5 & 6 piles;

12. Ultrasonic Echo Sounder Test for Type 3 piles (this test is also required to be carried out by approved Laboratory employed by the Contractor).

**PRE.B9.540.7**

**PARTICULAR TESTING FOR DOMESTIC BLOCKS - COSTS BORNE BY THE AUTHORITY**

The following tests which apply to domestic blocks only will be carried out by CM's Representative, a Direct Contractor or by the Housing Department Material Testing Laboratory:
1. Where precast concrete components (as defined in CON7.D010) are required or proposed:
   a. Schmidt hammer tests and covermeter tests on construction quality at casting yard as described in CON7.T030;
3. Material verification test for tile adhesive delivered to Site as described in FIN5.T105.
4. Material verification test for tile adhesive delivered to manufacturer's factory of precast concrete components as described in FIN5.T108.
5. Surveillance tests for the following:
   a. Aluminium windows as described in COM2.T405;
   b. uPVC windows as described in COM3.T050;
   c. Timber doorsets as described in COM5.T1605;
   d. Galvanized mild steel gatesets as described in COM7.T010;
   e. Ready-mixed mortars and ready-to-use mortars as described in FIN1.T010;
   f. Tile grout as described in FIN5.T110;
   g. Tactile homogeneous floor tiles as described in FIN5.T130;
   h. Anti-mould internal emulsion paint, anti-mould external emulsion paint, synthetic paint, multi-layer acrylic paint with texture coat and multi-layer acrylic paint without texture coat as described in FIN7.T050;
   i. Overhead door closers as described in IRO1.T030;
   j. Lever handle furniture and locks as described in IRO1.T040;
   k. Panel wall partitions as described in MAS1.T105;
   l. WC suites as described in PLU2.T110;
   m. Bath/shower mixer, basin mixer, kitchen sink mixer and shower handset as described in PLU2.T310;
   n. uPVC pipes and fittings as described in DRA1.T310;
   o. Tactile interlocking concrete blocks as described in EXT3.T510;
   p. Tactile precast concrete paving slabs as described in EXT3.T520;
   q. On-site operation tests - movement of sash as described in COM2.T410;

PRE.B9.550.7 TEST RECORDS
1. Test reports and certificates issued either by the Direct Testing Contractor or the Housing Department Materials Testing Laboratory related to testing carried out by them as provided for in the Contract will be available to the Contractor as follows:
   a. A printed copy of all test reports and certificates will be kept on Site by the CM for the Contractor's inspection and photocopying;
   b. If an electronic copy of the test reports and certificates as referred to in sub-clause (a) above is available for advance information, the Contractor will be allowed to inspect them at CM's site office;
   c. Where any ambiguity, discrepancy or conflict arises between the electronic copy and the printed copy, the latter shall take precedence.
2. When notified by CM, the SQCC shall within 7 days:
   a. Prepare a summary of test results in a prescribed format based on the test reports and certificates provided by the CM;
   b. Submit a material testing booklet comprising the summary of test results and the test reports and certificates stipulated in sub-clause (2)(a) above.
PRE.B9.560.7 WITNESSING TESTING
The Contractor or his authorised representative is at liberty to be present at all stages of the sampling, making and testing of materials and workmanship but failure to attend will not invalidate the test results.

PRE.B9.570.7 TESTING LABORATORIES
When submission of test reports or certificates are required to be made, the laboratories for carrying out the tests and issuing the test reports or certificates shall be one of the followings:
1. Laboratories approved by Housing Authority; or
2. Laboratories accredited either by Hong Kong Laboratory Accreditation Scheme (HOKLAS) or an equivalent organization which has signed a mutual recognition agreement with HOKLAS; or
3. Laboratories that had issued test reports or certificates which were previously accepted by the Housing Authority.

QUALITY MANAGEMENT SYSTEM

PRE.B9.610.7 GENERAL
1. When the Contractor has not achieved ISO 9001 certification or whose ISO 9001 certification has been withdrawn by the certification body during the progress of the Works, establish and implement a quality management system, complying with PRE.B9.610 to PRE.B9.690 so as to ensure completion of the Works in accordance with the requirements of the Contract. The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS;
2. Within 14 days of the date of the Letter of Acceptance, submit for Approval a quality assurance plan for the execution of all elements of the Works, including those carried out by sub-contractors;
3. Upon obtaining Approval to the quality assurance plan, adhere to the principles and procedures contained therein and submit for further Approval any revisions subsequently made to this document;
4. Include in but do not restrict the quality assurance plan to the requirements specified in PRE.B9.620 to PRE.B9.690.

PRE.B9.620.7 ORGANISATION AND RESPONSIBILITY
1. Clearly define the quality assurance organisation for the Works under the Contract and the responsibilities of the main participants;
2. Produce an organisation chart to illustrate the sub-division of the work into elements for effective technical and management control, the reporting structure and the interface relationships between all parties involved;
3. List the names, addresses, telephone and fax numbers of all principal contacts.

PRE.B9.630.7 DESIGN CONTROL
Adopt the following procedures for the control and verification of the design to ensure they comply with the requirements of the Specification:
1. Employ qualified personnel to plan and carry out the design and verification activities employing qualified personnel with suitable resources;
2. Identify and document the design input requirements;
3. Ensure the design output satisfies the design input requirements;
4. Ensure any changes and modifications to the design are identified, actioned, documented, reviewed and approved by the appropriate personnel;
5. Properly control design documents such as calculations, drawings, reports, bar schedules, Buildings Department approved design software, etc.
PRE.B9.640.7  **PURCHASING OF MATERIALS AND SERVICES**

Adopt the following procedures for the procurement of materials and services to ensure that they comply with the requirements of the Specification:

1. Select sub-contractors and suppliers of materials and technical services on the basis of their ability to satisfy the requirements of the Specification;
2. Maintain records of suitable sub-contractors and suppliers;
3. Ensure purchasing documents clearly describe the material or service being ordered;
4. Retain purchasing documents as records.

PRE.B9.650.7  **CONSTRUCTION PROCESS CONTROL**

Adopt the following procedures for the control of the construction processes to ensure compliance with the requirements of the Specification:

1. Produce documented work instructions to cover the construction processes which directly affect the quality of work;
2. Monitor and control these processes to ensure that the work is carried out in accordance with the requirements of the Specification and quality plans with the use of suitable equipment.

PRE.B9.660.7  **INSPECTION, MEASURING AND TESTING EQUIPMENT**

Adopt the following procedures for the control, calibration and maintaining the inspection, measuring and testing equipment:

1. Use inspection, measuring and testing equipment in such a way that the accuracy is known and within the required limit;
2. Maintain and calibrate inspection, measuring and testing equipment against certified equipment having a known relationship to nationally recognized standards. Where no such standards exist, the basis used for calibration must be acceptable to the CM;
3. Keep calibration and maintenance records for inspection, measuring and testing equipment.

PRE.B9.670.7  **CONTROL OF NON-CONFORMING MATERIALS AND WORKS**

Adopt the following procedures for the identification and control of non-conforming materials and work:

1. Positively identify and segregate non-conforming materials and works;
2. Keep records of all non-conforming materials and works and of the subsequent corrective actions taken;
3. Notify all personnel concerned that a non-conformance exists;
4. Inspect reworked/rectified items in accordance with documented procedures.

PRE.B9.680.7  **TRAINING**

The procedures for identifying training requirements and for the provision of training to all personnel performing activities which affect the quality of work must ensure:

1. Personnel carrying out specific assigned tasks are suitably qualified (i.e. with formal qualifications, training or suitable experience);
2. Records of staff training and qualifications are maintained.

PRE.B9.690.7  **QUALITY ASSURANCE PLAN REVIEW**

Institute procedures for the regular evaluation and updating of the quality assurance plan to safeguard the continuing effectiveness of the quality management system.
PROJECT SPECIFIC PARTNERING

PRE.B9.810.7 START-UP WORKSHOP
1. The Director's representative shall convene a start-up workshop preferably:
   a. Within 60 days after the notified date for commencement of the Works for piling contract; or
   b. Within 90 days after the notified date for commencement of the Works for building contract; or
   c. Within 60 days each after the notified date for commencement of the piling work and after the CM's written permission to commence the building work for combined building and piling contract.
2. To be facilitated by an independent professional facilitator so as to promote free communication, and a culture of co-operation and teamwork for the management of the Contract.

PRE.B9.820.7 REGULAR PARTNERING MEETING
1. The parties must meet regularly to evaluate and monitor performance of the Contract and identify priority for improvement;
2. Arrange regular meetings between CM in-person and senior management from the Contractor at either quarterly or 6-monthly intervals to reinforce the partnering platform.

PRE.B9.830.7 ADDITIONAL WORKSHOP
1. Where in his opinion the working relationship of the parties concerned is not developed in a healthy manner and is likely to affect the timing, cost and quality of the Works, the party holding this opinion may request the agreement of the other parties to conduct an additional partnering workshop to reinstate the performance of the process, identify opportunities for improvement and to resolve problems;
2. To be facilitated by an independent professional facilitator.

PRE.B9.840.7 CLOSE-OUT MEETING
Option 1
The Director's representative shall, with the engagement of an independent professional facilitator, convene a close-out meeting to review the performance of the partnering arrangement within 3 months after the completion of the whole of the Works.

Option 2
The Director's representative shall, with the engagement of an independent professional facilitator, convene a close-out meeting to review the performance of the partnering arrangement within 21 days after the completion of the whole of the Works.

PRE.B9.850.7 FACILITATOR FOR THE WORKSHOPS
1. The facilitator shall be
   a. An independent professional; and
   b. Knowledgeable of the partnering process, value management and preferably experienced in construction industry.
2. The selection and appointment of the facilitator shall be initiated by Director's representative and agreed by the major external stakeholders (Consultant, where appropriate, and Contractor).
PARTIES FOR THE PARTNERING WORKSHOP/MEETING

1. The Contractor, Director's representative and Contract Manager must attend the workshops / meetings. The workshop /meeting shall be attended by representatives of the Employer and Contractor, together with others concerned with the Works. This may include the ultimate users of the Works (if appropriate, persons such as local community representatives), Consultants, Sub-contractors, Suppliers and any other persons that the Contractor and the Director's representative deemed necessary. Participation in workshops / meetings does not give the participants any additional rights or responsibilities;

2. Each party must meet its own costs for attendance at the start-up workshop, any subsequent workshops / meetings, and close-out meeting and share equally all other costs such as direct expenses for the venue and procurement services of the facilitator.

HONORARY PLAQUE

Provide and install honorary plaques as shown on Drawings with one plaque for each individual building in recognition of the partnering spirit and concerted effort of all stakeholders of the Works.

COMMUNITY ENGAGEMENT - ACTION SEEDLING ACTIVITIES

1. The Contractor shall engage an ………………. (eg. Event Manager/Facilitator), who must be a public relation (PR) veteran with experience on conducting PR event for at least 100 persons, to arrange and coordinate Action Seedling Activities as described in sub-clauses (2) to (5) below with the participation of all stakeholders including but not limited to the Contractor, ……………………………. (eg. adjacent neighbourhoods, residents, schools students, community organizations, District Council members) and HA's representatives.

2. The Action Seedling Activities comprising not more than (two) nos. of events as detailed below and will be conducted as directed by the CM:

Option 1

3. The seedlings/pot plants shall be supplied by the Contractor unless otherwise approved by the CM. For the second event of the Action Seedling Activities, the Contractor shall facilitate the planting works and activities by the participants. Establishment works of the seedlings/pot plants transplanted to the planting area in the second event shall be carried out by the Direct Contractor(s) of the Employer;

Option 2

3. The seedlings/pot plants shall be supplied by the Direct Contractor(s) of the Employer. For the second event of the Action Seedling Activities, the Direct Contractor(s) of the Employer shall facilitate the planting works by the participants. The Contractor shall facilitate and provide attendance for the two events of the activities;

4. Submit proposal and plan of the coordination and arrangement of the Action Seedling Activities for CM's prior approval at least nine months before the date for completion of the Works (or if there is any Section of the Works, before the latest date for completion among the Sections);

5. The Contractor shall provide public relation services for the events, including planning, coordination, implementation and overall management of Action Seedling Activities in accordance with the proposal as approved by the CM and the instructions of the CM;

6. Allow the times for submission/resubmission, planning, coordination and the execution of the Action Seedling Activities in the time for completion of the Works or any Section thereof. No extension of time shall be granted for any delay caused by the Contractor's failure to comply with the requirements described in this clause and the direction as may be given by the CM in connection with the Action Seedling Activities;
7. The Contractor and Employer must meet its own costs for attendance of the events for Action Seedling Activities and share equally the direct expenses for the engagement of the event facilitator, provision of seedlings/pot plants, the holding of events of distribution of seedling/pot plants and the subsequent collection and the planting activities.
APPENDIX PRE.B9/I

PRE.B9.APPEND1.7 CONSTRUCTION MOCK-UP

MATERIALS FOR MOCK UP

KEY PLAN

CONSTRUCTION LAYERS FOR BATHROOM & KITCHEN FLOOR

NOTE:
1. MATERIAL NOTATIONS STATED IN THE PLAN AND ELEVATIONS SHOW THE TOPMOST CONSTRUCTION LAYER ONLY; ALL WORKS BUILDING UP TO THE STATED LAYER ARE ALSO REQUIRED TO BE INSTALLED.
2. REFER TO THE RELEVANT WORKSECTIONS FOR DETAILS OF THE WORKS INVOLVED.
3. CEILING TO BATHROOM TO HAVE NO FINISH, APPLY SKIM COAT TO KITCHEN ONLY.
CONSTRUCTION LAYERS FOR WALLS OF BATHROOM, KITCHEN & LIVING AREA
APPENDIX PRE.B9/II

PRE.B9.APPEND2.7 APPLICATION FORM FOR APPROVAL OF TESTING LABORATORY

Application for Approval of Testing Laboratory (Original) *Note 1

Contract No. : __________________________
Contract Title : __________________________

To Contract Manager,
(Attn: )

I apply for your approval the commissioning of ____________________________________________
(Name of testing laboratory)
that complies with PRE.B9.570 to carry out the following test(s):

<table>
<thead>
<tr>
<th>Description of the test(s)</th>
<th>Relevant specification clauses</th>
</tr>
</thead>
<tbody>
<tr>
<td>_________________________</td>

The original copy shall be submitted to the CM.
The Duplicate copy shall be forwarded to CSE/DC for record.
PRE.B10 TEMPORARY WORKS AND FACILITIES

TEMPORARY WORKS

PRE.B10.010.7 TEMPORARY WORKS

Option 1

1. At commencement of Contract, take over, maintain/obtain approval prior to modification of the temporary works and allow for the following restrictions in the works sequence:
   a. Temporary earth retaining structure located at .......... is as shown in Drawing No. ..........;
   b. Limitation of works area / no-dig zone are as shown in Drawing No. ..........;
   c. Drainage reserve area is as shown in Drawing No. ..........;
   d. Other works ...........

2. Obtain Approval for the location of spoil heaps, temporary roads, services, hoists, temporary passenger lifts, temporary buildings, toilet accommodation and the like;

3. Where necessary, modify and/or provide additional support measures on these temporary works to ensure the safety and stability of these structures. Submit relevant design proposals and method statements to CM and relevant Government Departments for approval prior to commencement of such works;

4. Handover the temporary works to CM at completion of the Contract. Submit as built records and calculations of the temporary works to CM before handover of the contract;

5. Dismantle and remove temporary works after completion of the permanent works unless otherwise agreed by the CM.

Option 2

1. Obtain Approval for the location of spoil heaps, temporary roads, services, hoists, temporary lifts, temporary buildings and the like;

2. Dismantle and remove temporary works after completion of the permanent works unless otherwise Approved.

PRE.B10.020.7 ACCESS AND ROADS

1. Provide and maintain temporary access to the Site and working areas and provide and maintain temporary roads, tracks, crossings and hardstandings, with adequate drainage, required for use by those engaged upon or in connection with the Works. Divert and subsequently reinstate permanent drainage systems as necessary;

2. Pave the main haul road with concrete, hardcore or rugged metal plates with adequate skid resistance for trafficking. Keep clear of dusty materials and maintain the entire road surface wet by either spraying with water or a dust suppression chemical.

3. Obtain Approval of the CM for the proposed alignment and levels of temporary roads;

4. In addition to the requirements of GCC Clause 5.11(6), comply with all regulations and all requirements of Government Departments concerning the use and crossing of public roads. Obtain authorisation to cross pavements and similar areas;
5. When using estate and/or public roads for access purposes, co-operate with the Authority, Government Departments, public utility Companies and others using such roads to ensure that they are kept free from obstruction at all times and comply with any requirements for restriction on access.

PRE.B10.030.7 TEMPORARY PASSENGER LIFTS
1. Provide temporary passenger lifts to the following blocks:

<table>
<thead>
<tr>
<th>Blocks</th>
<th>-</th>
<th>No</th>
</tr>
</thead>
</table>

2. Comply with all current regulations for use of persons engaged in the execution of the Works and for all Specialist Works and for the use of the CM:
3. Install the lifts in agreed and unobstructed locations, not in any permanent lift well and ready for use in all respects;
4. a. Provide access starting at first floor level and then at the 6th floor level immediately when the structural slab is cast at the 12th floor level;
   b. Provide access landing, at every six floors thereafter as construction work progresses, with the top access landing to the floor not exceeding more than three floors below roof level;
   c. Once the temporary security metal gate and fence are installed as PRE.B8.160, prohibit access at ground level and allow access to temporary passenger lift at the 1st floor level.
5. Provide for each lift:
   a. All power and maintenance;
   b. A competent full time operator;
   c. Test and examination certificate required under current legislation for CM's inspection.
6. Do not dismantle any lift earlier than six months from the anticipated completion of each block;
7. Do not use passenger lifts for the movement of materials.

PRE.B10.040.7 OTHER LIFTING APPLIANCES
1. Provide, maintain and operate lifting appliances properly;
2. Enclose hoist shafts with nylon mesh;
3. Operate all gondola by 4 wire system with arrestors;
4. Display current valid test and examination certificates duly signed by a Registered Profession Engineer (Mechanical or Marine Discipline) for each hoist:
   a. Material or skip hoists: Forms 1, 2 and 3 of Construction Sites (Safety) Regulations (CSSR) where appropriate;
   b. Others: (e.g. Gondola) Forms 1, 3, 4 or 5 of Factories and Industrial Undertakings (Lifting Appliances and Lifting Gear) Regulations where appropriate.
5. Provide all hoist openings with complete nylon mesh and timber boarding to prevent falling objects;
6. Install lockable metal gates at all hoist openings;
7. Keep hoist gates closed at all times except where hoist is at rest at the landing place and material is to be loaded or unloaded from the hoist;
8. Enclose skip hoist for material transport shafts with impervious sheeting.

PRE.B10.050.7 USE OF LIFTS
Access to podia and/or upper floors of domestic blocks by way of passenger lifts is restricted to materials which are carried by hand. All other goods and materials must be carried up the stairs or by a specially erected hoist.
PRE.B10.060.7 TEMPORARY REFUSE CHUTES
1. Provide and maintain temporary refuse chutes for buildings over 3 storeys extended below 1/F canopy;
2. Install at 5 floors below working floor or up to roof level when structural work is completed;
3. Construct temporary refuse chutes properly braced and secured, fully enclosed without hole or gap;
4. Use materials of good quality, adequate strength and stability;
5. Provide hoppers at each entry point to refuse chute with adequate falls and with secured closing device to cover entire opening;
6. Provide secure screens and barriers of minimum height 600 mm on the sides to prevent waste material falling outside the chute and to protect operatives using the chute;
7. Ensure that discharge point is not higher than the barrier;
8. Post warning notices in Chinese and English characters;
9. Do not use lift well as refuse chute.

PRE.B10.070.7 MAINTENANCE OF TEMPORARY WORKS
Maintain, alter, adapt and move temporary works as necessary. Clear away when no longer required and make good.

PRE.B10.080.7 TEMPORARY STAIRCASES
When permanent staircases are unavailable, provide secure temporary staircase with top railings at a height of 900 mm to 1100 mm and middle railings at a height of 450 mm to 500 mm.

PRE.B10.090.7 BUILDING SETTLEMENT AND VERTICALITY MONITORING
Supply and install stainless steel settlement markers and verticality markers at locations as directed by the CM in accordance with Drawing No. .......... and the following:
1. Provide markers of a coupling type comprised of a portion to be fixed rigidly, truly horizontally and entirely in the structural walls and another portion to be screwed in or inserted into left-in portion each time a levelling exercise is being carried out. Provide a sample for Approval prior to installation;
2. Install the markers horizontally at locations indicated in sketch No. .......... and at positions about 500 mm from the ground such that the markers are at least 2200 mm clear from any obstruction vertically above;
3. Install verticality markers at locations indicated in sketch No. ................. at positions specified by CM. Ensure that the markers are clear from obstructions for survey purposes.
4. Affix the markers to the structural walls or columns of each individual block including the commercial centre/carpark as soon as these structural members are built;
5. Attend upon a Chartered Land Surveyor appointed by the Authority to carry out levelling at times and in phases decided by the Authority;
6. Retain these markers throughout the Contract; accept responsibility for the maintenance of the markers including providing covering caps and preventing the holes being blocked by any construction materials or debris, and keeping all metal parts fully greased and free from rust and damage;
7. Provide clear and unobstructed access to the markers and to the 2.20 metres space above each marker, at the time of each survey;
8. At end of Maintenance Period or when being instructed, take out the settlement and verticality markers and make good work disturbed to the satisfaction of the CM, unless otherwise instructed by the CM.
GREENING ON SITE

PRE.B10.100.7 TEMPORARY GREENING ON SITE
1. Provide temporary greening such as planting at-grade with vegetation and pre-grown trees and/or features such as plotted plants, hoarding with decorative plants, vertical green panels, roof greening on site office buildings etc. with CM’s consent. The total greening area shall not be less than the roof area of all external site office buildings;
2. Submit temporary site greening proposal at the commencement of the Contract to the CM for approval. The proposal shall take into account the extent, timing and location for temporary soft landscaping provisions on Site with due consideration of the site activities throughout the duration of the Contract;
3. Maintain and replace when perished the temporary greening on Site according to the Contractor’s submitted proposal.

SITE ACCOMMODATION FOR THE CONTRACTOR

PRE.B10.110.7 ACCOMMODATION GENERALLY
In addition to the requirements of GCC Clause 5.31, provide all necessary offices, mess rooms, toilet accommodation, washing facilities and the like for all workers engaged in the execution of the Works. Provide lighting, power, telephones, cleaning etc and maintain toilet accommodation in a sanitary condition at all times. Temporary site accommodation shall be constructed from prefabricated, demountable, reusable components unless otherwise approved by the CM. The use of tropical hardwoods in the construction of temporary site accommodation is expressly prohibited.

PRE.B10.120.7 MINIMUM TOILET ACCOMMODATION AND WASHING FACILITIES

Option 1
1. Provide the minimum toilet accommodation and washing facilities on Site as follows:

<table>
<thead>
<tr>
<th></th>
<th>Contract Sum ($m)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Under 100</td>
</tr>
<tr>
<td>1. Toilets etc for Male Workers:</td>
<td></td>
</tr>
<tr>
<td>WC</td>
<td>3</td>
</tr>
<tr>

</tr>
<tr>
<td>Shower with hot water supply</td>
<td>1</td>
</tr>
</tbody>
</table>
2. Provide hot water to the shower facilities for workers on Site as required in PRE.B10.125.

**Option 2**

1. Provide the minimum toilet accommodation and washing facilities on Site as follows:

<table>
<thead>
<tr>
<th>Contract Sum ($m)</th>
<th>Toilets etc for Male Workers:</th>
<th>WC</th>
<th>Urinal</th>
<th>Washhand basin</th>
<th>Shower with hot water supply</th>
<th>Changing room including showers (Size in m²)</th>

</tr>
<tr>
<td></td>
<td></td>
<td>4</td>
<td>4</td>
<td>2</td>
<td>2</td>
<td>13</td>
</tr>
</tbody>
</table>

2. Provide hot water to the shower facilities for workers on Site as required in PRE.B10.125.

**PRE.B10.125.7 ELECTRICAL/SOLAR WATER HEATER SYSTEM**

1. Provide hot water to the shower facilities by electrical/solar water heater system for workers on Site within 3 months from the notified date for commencement of the Works until the Contractor's site office is moved to the permanent structure;
2. Design and construct all necessary temporary works, including any supporting frames for the electrical/solar water heater system and the accessories;
3. Design, supply, install and maintain the electrical/solar water heater system including solar thermal collection system, water pipework system, automatic controls, thermal insulation, electric water heater with hot water storage calorifier, electrical supply system, water circulation pumps, valves and accessories where necessary;
4. The solar thermal collection system shall comprise with solar thermal collector panel(s) of approximate 2 m² face area of solar reception for every 150 litre hot water storage and installed on appropriate supporting framework;
5. Electric water heater with thermal insulated hot water storage calorifier shall be able to withstand the designed temperature and pressure with the support of a valid working and test pressure certificate. The system shall comprise of:
   a. Heating back-up for hot water from the solar thermal collection system;
   b. A minimum of 20 litres hot water storage per shower;
c. Timer control for daily operation;

d. Thermostatic control system to maintain water temperature inside the calorifier and able to heat up the water inside the calorifier from 20°C to 60°C within two hours;

e. Safety temperature and pressure relief valves.

PRE.B10.130.7  ADDITIONAL TOILET ACCOMMODATION FOR MULTI-STOREY BUILDING

In addition to the minimum toilet accommodation set out in PRE.B10.120 provide, in Approved locations, one male and one female temporary latrine accommodation including hand washing facilities on or adjacent to the ground floor and on every third floor of all multi-storey buildings and maintain in a sanitary condition at all times.

PRE.B10.135.7  FOOD WASTE COMPOSTER

1. Submit food waste composting proposal at the notified date for commencement of the Works to the CM for approval. The proposal shall take into account the food waste generated on Site, the potential amount of compost to be produced and the recommended use of the compost;

2. Provide the Approved food waste composter to transform food waste on Site into compost for use in on-site planters or other environmentally friendly applications as recommended by the Contractor within 3 months after the notified date for commencement of the Works until three months prior to the last certified date for completion of the Works.

PRE.B10.140.7  STORAGE SHEDS

1. Provide, for the Contractor's own use, temporary sheds of weatherproof construction with raised floors, and with racks, for storage of materials. Where areas in partially completed buildings are allocated for storage, make these areas weatherproof and provide racks;

2. Attention is drawn to PRE.B12.840 regarding erection of sheds by Nominated Sub-contractors, Direct Contractors, etc.

PRE.B10.150.7  SECURE STOREROOMS

1. The Employer will endeavour to provide for the Contractor's own use, a secure storeroom with a minimum floor area of 10 m² for storing, tools and materials;

2. Take possession of all keys, keep the storeroom clean, neat and tidy and return it to the Housing Manager at the completion of the works in the same condition as received at the outset;

3. Pay all rents and hire charges to the Housing Manager for the use of the storeroom.

SITE ACCOMMODATION FOR BUILDING SERVICES NOMINATED SUB-CONTRACTORS

PRE.B10.160.7  ACCOMMODATION GENERALLY

Provide on-site lockable weatherproof office accommodation of sufficient strength, adequately braced and anchored to resist typhoon conditions for each building services Nominated Sub-contractor during construction period.

PRE.B10.170.7  ACCOMMODATION SIZES

Provide the accommodation with sufficient area for office work for each building services Nominated Sub-contractor.
ACCOMMODATION FACILITIES

The accommodation for each building services Nominated Sub-contractor shall be fitted with the following facilities:

1. Two office desks;
2. Four chairs;
3. One file cabinet.

ACCOMMODATION SERVICES

The accommodation for each building services Nominated Sub-contractor shall be fitted with the following accommodation services. Such services shall be provided at the same time as the Contractor provides the accommodation services stipulated in PRE.B10.250.

1. Lighting and power;
2. Full air conditioning;
3. One telephone line.

SITE ACCOMMODATION FOR THE CM AND THE CM'S REPRESENTATIVES

ACCOMMODATION GENERALLY

1. Provide weatherproof office accommodation of sufficient strength, adequately braced and anchored to resist typhoon conditions;
2. A site office is not required for this Contract. Provide suitable accommodation on the ground floor of ............... Provide attendance.

ACCOMMODATION SIZES

Provide the following accommodation of the areas shown:

1. Office for 3 persons - 24 m² ....... No.
2. Office for 2 persons - 16 m² ....... No.
3. Office for 1 person - 8 m² ....... No.
4. Sample room with lock - 12 m² ....... No.
5. Conference room - 24 m² ....... No.
6. Computer room with security lock - 8 m² ....... No.

ACCOMMODATION FACILITIES

Provide the accommodation with the following facilities:

1. Separate lock-up male and female toilet accommodation each complete with wash-hand basin, shower and flushing facilities;
2. A hot and cold water dispenser with a continuous supply of drinking water.

ACCOMMODATION FURNITURE AND FITTINGS

Fit accommodation with the following:

<table>
<thead>
<tr>
<th>Accommodation</th>
<th>Furniture and Fittings</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Office for CM/CM's representatives</td>
<td>One desk per person with lock-up drawers, plan chests, plan benches, filing cabinets, cupboards, pinboards, chairs, stools, whiteboard and full air conditioning;</td>
</tr>
<tr>
<td>2. Conference room</td>

| Shelves. |

**PRE.B10.250.7 ACCOMMODATION SERVICES**

Provide the following services to accommodation:
1. Lighting and power;
2. Separate telephone line for fax machine;
3. One telephone line for every one or two person office;
4. Two telephone lines for every office intended for three or more persons;
5. Make available telephone connections on commencement. If connections are not available, provide one mobile telephone and related consumables for the use of the CM until lined telephone is installed;
6. Burglar alarm system.

**PRE.B10.255.7 BURGLAR ALARM SYSTEM FOR SITE ACCOMMODATION**

The Contractor shall provide and maintain the following burglar alarm system for each site office accommodation till the completion of the Works and for other longer period as instructed by CM for the necessary completion of additional works within the Maintenance Period. The Contractor shall engage a licensed security company with employee who possesses valid security personnel permit for the provision and maintenance of the system fulfilling statutory regulations.

1. The burglar alarm system shall be an integrated system providing reliable security detection to prevent illegal intrusion into the site accommodation. The system shall be designed to allow easy operation by the security staff;
2. The burglar alarm system shall consist of the following main components:
   a. Volumetric motion detector;
   b. Magnetic door contacts;
   c. Burglar alarm panel and repeater panel;
   d. Alarm annunciator.
3. System Requirement
   a. The burglar alarm panel shall be installed near the main entrance inside the protected area of the site accommodation connecting to peripheral equipment including the volumetric motion detectors, magnetic door contacts;
   b. The burglar alarm panel shall also be connected to the repeater alarm panel located inside a 24 hours manned site security office;
   c. The burglar alarm system shall be activated or deactivated at the burglar alarm panel by using a designated smart card and keying in secret code via the panel keypad on the burglar alarm panel;
   d. The Contractor shall assign dedicated security staff for the activating and deactivating the burglar alarm system in the presence of site staff when being notified by the last leaving and first arriving site staff of the site accommodation respectively;
   e. Upon detection of intrusion after activation of the system, audio and visual alarm shall be displayed at both the burglar alarm panel and the repeater security control panel with additional alarm signal automatically sending to a designated mobile phone of the security staff assigned by the Contractor.
4. Volumetric motion detector
   a. Volumetric detectors used shall make use of dual technology, including passive infra red and microwave/ultrasonic wave, such that the possibility of false alarm will be reduced to the minimum;
   b. The detectors shall be provided to cover the entire site accommodation including windows and exit doors. There shall be at least one detector installed covering each separate room.
5. Magnetic door contact
Surface-mounted magnetic door contacts shall be installed on the inner door frame of all exit doors. It will be used to detect door open.

6. Burglar alarm panel and repeater alarm panel
   a. The burglar alarm panel shall have real time clock display and alarm latching display and shall be used to activate or deactivate the burglar alarm system by using a designated smart card and keying in secret code via the panel keypad. The card reader and smart card should utilise proven technology of industrial standard. The panel shall also be built-in with entry and exit delay timer, such that the timer will be triggered by the entry, exit route sensors;
   b. The burglar alarm panel shall be able to store all alarm logs including system arming / disarming time, alarm triggering time and devices, alarm resetting time, etc. at a minimum period of 30 days. The log shall be viewed from display on the alarm panel;
   c. The burglar alarm panel shall be powered by AC mains from continuous power supply source within site accommodation and backed up by stand-by battery sufficient for minimum 8 hours operation. The burglar alarm panel shall raise an indication alarm and repeated to repeater alarm panel upon the absence of AC main power supply or the stand-by battery voltage goes below the threshold limit;
   d. The repeater alarm panel shall be installed inside the site security office to repeat the status of the burglar alarm panel including the on/off of the burglar alarm system and alarms, etc..

7. Alarm annunciator
   a. Self-activated alarm bells shall be installed at prominent location on the outer wall of the protected site accommodation and the site security office. The bell shall be housed in strong steel housing with anti-corrosion finishing and are tamper protect against removal of the lid, the bolt or attempted removal of the housing from the wall. The bell shall be self-powered by rechargeable battery. If input circuit is cut off, it shall give out annunciation. Upon activation it shall give out alarm sound level not less than 100 dBA at 1 metre distance. There shall also be a strobe light on the bell to provide visual warning;
   b. A cut off timer adjustable from 1 minute to 15 minutes shall be provided. Should the bell ring for the pre-set period, it shall be cut off by the timer. However, the strobe light shall remain flashing. Should the built-in battery voltage goes below the threshold limit, the bell shall give intermittent audio and visual warning to signify the need for battery replacement.

8. Cables
   All cables shall be properly installed to avoid damages and alarm shall be activated on the alarm panel when the cable is under open/short circuit conditions.

9. Submission and testing
   a. The Contractor shall submit the system design, drawings and materials together with the submission of layout of site accommodation for approval by Contract Manager prior to commencement of the installation;
   b. The Contractor shall complete the installation of the system within 3 months after the approval of system design and materials by CM;
   c. The Contractor shall carry out performance tests on each month and submit reports to ensure the system be capable to cover the entire site accommodation to the satisfaction of the Contract Manager.

10. Operating cost
    All operating and maintenance costs for the burglar alarm system, including the rental charges for the lease-line, mobile phone charges, etc. shall be borne by the Contractor.
PRE.B10.260.7 ACCOMMODATION CLERICAL SERVICES

Option 1

1. Provide two clerical assistants, with experience in using PC such as word and data processing etc., for the exclusive use of the CM and CM's representative(s) from the notified date for Commencement of the Works to four months after the date stated in the certificate of Completion of the Works, or the last of such certificates where a certificate is issued for a part or parts of the Works before completion of the whole, including such additional periods as may be necessary for the completion of any outstanding work within the Maintenance Period;

2. Arrange for the clerical assistant to work full time on Site in the CM's accommodation or upon completion of the Works, in such Estate Management Office as directed by the CM and to be available to provide typing services and computer data input during normal working hours. Provide the replacement if, in the opinion of the CM, the standard of work is unsatisfactory.

Option 2

1. Provide a typist for the exclusive use of the CM and CM's representative(s) from the notified date for Commencement of the Works to the date stated in the Certificate of Completion of the Works, or the last of such certificates where a certificate is issued for a part or parts of the Works before completion of the whole, including such additional periods as may be necessary for the completion of any outstanding work within the Maintenance Period;

2. Arrange for the clerical assistant to be based on Site in the CM's accommodation and to be available to provide typing services during normal working hours;

3. Provide a replacement if, in the opinion of the CM, the standard of work is unsatisfactory.

PRE.B10.270.7 ACCOMMODATION MAINTENANCE

Provide attendance to clean accommodation daily and maintain in good working order.

PRE.B10.280.7 VEHICLE ACCOMMODATION

Provide sufficient hardstanding and covered vehicle spaces as required by the CM.

PRE.B10.290.7 TEMPORARY ACCOMMODATION FOR THE CM'S REPRESENTATIVES AT OCCUPATION PERMIT STAGE & DURING MAINTENANCE PERIOD

Option 1

1. Provide a temporary accommodation comprising building works (BW) workstations, building services (BS) workstations and separate lock up material stores by fitting out the minimum 2 nos. of Mutual Aid Committee (MAC) Office in Blocks …. & …. as the BW workstations and BS workstations and by setting up separate lock up material store(s) of approximate floor area of 18 m² at location as shown on the Drawing no. ........ listed in Appendix C. Partition off each MAC Office with light-weighted partitions to provide a reduced floor area of approximate 15 m² for use as BW and BS workstations when instructed by the CM;

2. Provide the temporary accommodation with the following:
   a. Lighting and power;
   b. Two telephone lines (one for each BW workstation and BS workstation);
   c. One separate telephone line for facsimile in each BW workstation and BS workstation;
   d. Broadband line service for totally 2 nos. of personal computers in each BW workstation and BS workstation.

3. Provide furniture and fittings to the temporary accommodation as follows:
   a. A hot and cold water dispenser with a continuous supply of drinking water;
b. Plan chests, plan benches, filing cabinets cupboards, pin boards, chairs, stools, whiteboard and 4 nos. of desks with lock up drawers for each BW workstation and BS workstation;

c. Only shelves, lighting and power for lock up material stores;

d. Full air-conditioning for BW and BS workstations.

4. Bear all charges including deposits etc., in connection with the use of electricity;

5. Provide attendance and clean the temporary accommodation daily to maintain it in good condition for working;

6. Dismantle the BW workstation, BS workstation and material store(s), and restore the space disturbed to their original condition as far as reasonable and acceptable when instructed by the CM.

**Option 2**

1. Provide a temporary accommodation comprising a combined building works (BW) and building services (BS) workstation and a lock up material store by partitioning off with light-weighted partitions and by fitting out the Maintenance Service / Store Room to make a combined BW and BS workstation with floor area of approximate 30 m² and to set up a lock up material store floor area of approximate 18 m² as shown on the Drawing no. ………………… listed in Appendix C;

2. Provide the temporary accommodation with the following:
   a. Lighting and power;
   b. Two telephone lines;
   c. One separate telephone line for facsimile;
   d. Broadband line service for 4 nos. of personal computers.

3. Provide furniture and fittings to the temporary accommodation as follows:
   a. A hot and cold water dispenser with a continuous supply of drinking water;
   b. Plan chests, plan benches, filing cabinets cupboards, pin boards, chairs, stools, whiteboard and 8 nos. of desks with lock up drawers for the combined BW and BS workstation;
   c. Only shelves, lighting and power for lock up material store;
   d. Full air-conditioning for the combined BW and BS workstation.

4. Bear all charges including deposits etc., in connection with the use of electricity;

5. Provide attendance and clean the temporary accommodation daily to maintain it in good condition for working;

6. Dismantle the combined BW and BS workstation and material store, and restore the space disturbed to their original condition as far as reasonable and acceptable when instructed by the CM.

**Option 3**

1. Provide a temporary accommodation comprising a combined building works (BW) and building services (BS) workstation or separate BW and BS workstations, with a separate lock up material store. Set up the following in the space allocated at the location as shown on the Drawing no. ………………… listed in Appendix C:
   a. A combined BW and BS workstation with floor area of approximate 30 m² or separate BW and BS workstations with floor area of approximate 15 m² for each workstation;
   b. A lock up material store with floor area of approximate 18 m².

2. Provide the temporary accommodation with the following:
   a. Lighting and power;
   b. Two telephone lines for combined BW and BS workstation, or one telephone line for each BW and BS workstation;
   c. Two telephone lines for facsimile for combined BW and BS workstation, or one telephone line for facsimile for each BW and BS workstation;
d. Broadband line service for 4 nos. of personal computers for combined BW and BS workstation, or broadband line service for 2 nos. of personal computers in each BW and BS workstation.

3. Provide furniture and fittings to the temporary accommodation as follows:
   a. A hot and cold water dispenser with a continuous supply of drinking water;
   b. Plan chests, plan benches, filing cabinets cupboards, pin boards, chairs, stools and whiteboard;
   c. 8 nos. of desks with lock up drawers for combined BW and BS workstation, or 4 nos. of desks with lock up drawers for each BW and BS workstation;
   d. Only shelves, lighting and power for lock up material store;
   e. Full air-conditioning for combined BW and BS workstation or separate BW and BS workstations.

4. Bear all charges including deposits etc., in connection with the use of electricity;

5. Provide attendance and clean the temporary accommodation daily to maintain it in good condition for working;

6. Dismantle the combined BW and BS or separate BW and BS workstations and separated material store(s), and restore the space disturbed to their original condition as far as reasonable and acceptable when instructed by the CM.

SITE ACCOMMODATION FOR THE CM’S LAND SURVEY TEAM

PRE.B10.300.7 ACCOMMODATION GENERALLY FOR THE CM’S LAND SURVEY TEAM
Provide an 8m² on-site lockable weatherproof office accommodation of sufficient strength, adequately braced and anchored to resist typhoon conditions for the CM’s Land Survey Team during the period of piling works.

PRE.B10.303.7 ACCOMMODATION FURNITURE AND FITTINGS FOR THE CM’S LAND SURVEY TEAM
Fit accommodation with the following:

<table>
<thead>
<tr>
<th>Accommodation</th>
<th>Furniture and Fittings</th>
</tr>
</thead>
<tbody>
<tr>
<td>Office for CM’s Land Survey Team</td>
<td>1. One notice board (size : 600mm x 450mm);</td>
</tr>
<tr>
<td></td>
<td>2. One edged cork display board (size : 2000mm x 1200mm);</td>
</tr>
<tr>
<td></td>
<td>3. One lockable desk (size : 1500mm x 800mm x 760mm);</td>
</tr>
<tr>
<td></td>
<td>4. One office desk (size : 1300mm x 800mm x 760mm);</td>
</tr>
<tr>
<td></td>
<td>5. Four chairs;</td>
</tr>
<tr>
<td></td>
<td>6. One cabinet with door lock facility (min. size : 1780(H) x 890(W) x 460(D) mm.)</td>
</tr>
</tbody>
</table>

PRE.B10.306.7 ACCOMMODATION SERVICES FOR THE CM’S LAND SURVEY TEAM
Provide the following services to the accommodation for the CM’s Land Survey Team at the same time as the Contractor provides the accommodation services stipulated in PRE.B10.250:

1. Lighting and power;
2. Full air conditioning;
3. One telephone line.
SITE ACCOMMODATION ASSOCIATED WITH IN-SITU CONCRETING WORK

PRE.B10.310.7 SITE TESTING LABORATORY
1. Where the Contractor has proposed other minimum periods before striking formwork or has proposed any modification to the Drawings and/or Specification to suit his method of construction, erect and equip a testing laboratory on Site of adequate size with facilities for carrying out the following tests:
   a. Cube tests to confirm that the concrete has obtained the minimum crushing strengths where minimum periods other than those specified in CON2.W630 have been proposed by the Contractor and Approved. The equipment to include a concrete crushing machine of adequate strength;
   b. All other in-situ tests as required by this Specification and as required by the CM in connection with the Contractor’s proposed method of construction.
2. Provisions for testing are included in Worksection PRE.B9.

PRE.B10.320.7 CONTAINER OFFICE
Where in-situ concreting work is to be carried out on Site and which forms part of the permanent Works, provide a standard steel container office of nominal size 6000 x 2500 x 2350 mm (as and when required by the CM) for exclusive use of the CM or his appointed Direct Contractor. Equip the container with the following:
1. A security door lock;
2. Windows with security metal grilles;
3. Fluorescent lighting;
4. Reversible air conditioner;
5. Work bench 2500 x 900 x 850 mm high;
6. Direct line telephone;
7. Desk with lock-up drawers;
8. Pin board;
9. Chair and stool.

PRE.B10.322.7 CONTAINER STOREROOMS
1. Provide sufficient numbers of steel container storerooms, to the satisfaction of the CM, for storing the following core samples:
   a. Samples obtained from sampling and testing founding levels for Type 3 Piles as described in PIL1.T210 & PIL1.T220;
   b. Samples obtained from core testing of Type 3 Piles as described in PIL1.T1220;
   c. Samples obtained from confirmatory core tests of founding strata of Types 3 piles as described in PIL1.T1710;
2. Hand over the steel container rooms and the core samples contained therein to the CM upon completion of the Contract;
3. When Instructed, dispose of the core samples and core boxes upon completion of the Contract.

PRE.B10.324.7 TAKING OVER OF CONTAINER STOREROOMS
1. Take over …… No. existing steel container storerooms and the core samples contained therein;
2. When Instructed, dispose of the core samples and core boxes upon completion of the Contract.
CONTAINER CURING ROOMS AND TANKS

Where in-situ concreting works is to be carried out on Site and forms part of the permanent Works, provide sufficient numbers of steel container rooms and steel curing tanks for storing and curing test cubes to the satisfaction of the CM. Take note that:

1. A standard curing tank of nominal size 1650 x 860 x 510 mm will be deemed to have a capacity to accommodate one hundred eighty 100 mm concrete cubes;
2. For curing tanks with different nominal sizes, the number of required curing tanks may be estimated on the basis of the capacity for a standard curing tank of equivalent volume at the discretion of the CM, who will require appropriate adjustments in the pump and heater capacities;
3. A standard steel container room of nominal size 6000 x 2500 x 2350 mm may accommodate up to a maximum of five standard curing tanks;
4. Each curing tank must be accessible, and at least one spare curing tank must be provided at all times for cleaning purpose;
5. Concreting work will not be allowed to commence until curing tanks and steel container rooms have been completed and accepted by the CM;
6. A wall mounted switch panel on the external face of each curing room, with indication light and due protection against inclement weather and accidental damage, must be provided for ensuring the proper functioning of all electrical curing facilities at all times.

STEEL CONTAINERS FOR TEST SAMPLES OF BAR REINFORCEMENT/FABRIC REINFORCEMENT

When instructed by the CM, provide ................. lockable steel containers, ................. of nominal size 1500 x 600 x 600 mm high and ................. of nominal size 1500 x 150 x 1500 mm high, securely adhered to the curing room, for the exclusive use of the CM or his appointed Direct Testing Contractor.

STEEL CONTAINER ROOM SPECIFICATION

Equip each steel container room with the following:
1. A security door lock;
2. Windows with security metal grilles;
3. Fluorescent lighting;
4. Reversible air-conditioner. Keep the air temperature kept at 27°C ± 5°C for curing test cubes in moulds.

STEEL CURING TANK

1. Construct each curing tank of galvanized sheet steel to BS EN ISO 1461:2009 for hot-dip galvanized coating, fully welded on all seams and equip with the following accessories:
   a. A lockable insulated lid or cover properly numbered;
   b. A recirculating water pump and a standby pump both of waterproof types and with capacities not less than 1000 litres per hour, earthed and fitted internally at one end of the tank drawing the water through a pipe from the bottom to the diagonally opposite top of the tank at least 25 mm above the water level to stimulate efficient mixing of the water by free falling;
   c. A thermostatically controlled electric immersion heater and a standby heater both with wattage of not less than 3 kW and connected with a temperature sensor for continual monitoring of the water temperature at 27°C ± 3°C;
   d. A set of three removable lower racks;
   e. Two layers of removable racks (ten removable racks per layer) suspending from the sides of the tank;
   f. A drainage valve and an overflow system;
   g. A steel stand supporting the water tank;
   h. Minimum/maximum thermometers for both air and water temperatures;
i. A thermograph for continual recording of the water temperature; and
j. Comply with all other requirements for a curing tank as stated in Appendix A of CS1:2010 (Construction Standard for Testing Concrete).

2. Notwithstanding sub-clause (1)(i) above, if a thermograph is proposed for two or more curing tanks, submit for Approval:
   a. Details of the water circulating system including the provision of a central water closet to the curing tanks; and
   b. Measurement records by an Approved laboratory showing efficient mixing of the water to attain a temperature of 27°C ± 3°C in the circulating system under working environment.

**PRE.B10.360.7 CURING TANK MAINTENANCE**
Clean each tank at regular intervals and change the water in each tank at least once a month in accordance with CS1:2010 and as directed by the CM. In order to provide adequate circulation of water and to facilitate the removal of test cubes from the curing tank, provide at least 15 mm of water horizontally between test cubes and the sides of the tank.

**PRE.B10.370.7 CURING RECORDS**
Record the daily maximum and minimum moist air and water curing temperatures and keep the records on site at all times for the inspection of the CM.

**PRE.B10.380.7 ACCESS BY DIRECT TESTING CONTRACTOR**
Where directed by the CM, allow Direct Testing Contractor's sole access and use of the curing room and curing tanks together with all the equipment provided under the Contract.

**PRE.B10.390.7 ACCOMMODATION MAINTENANCE**
Provide attendance including regular cleaning, lighting and power and maintenance to container rooms and curing tanks.

**SITE EQUIPMENT FOR THE CM AND CM'S REPRESENTATIVES**

**PRE.B10.410.7 EQUIPMENT GENERALLY**

1. Take note that, unless otherwise specified, the equipment described in this sub-section must be new and is required from the notified date for commencement of the Works to the date stated in the certificate of completion of the Works, or the last of such certificates where a certificate is issued for a part or parts of the Works before completion of the whole, including such additional periods as may be necessary for completion of any work within the Maintenance Period, after which the equipment shall revert to the Contractor;

2. Provide maintenance by the original supplier and equivalent substitute equipment during any period when the equipment so provided is taken out of service for calibration, maintenance, repair or similar servicing;

3. Provide all consumables necessary to the function and operation of each item of equipment during the period specified in sub-clause (1) above.

4. The equipment (including hardware and/or software) shall conform to Year 2000, meaning that neither performance nor functionality is affected by dates prior to, during and after the Year 2000. In particular:
   a. No value for current date will cause any interruption in operation;
   b. Date-based functionality must behave consistently for dates prior to, during and after Year 2000;
   c. In all interfaces and data storage, the century in any date must be specified either explicitly or by unambiguous algorithms or inferencing rules;
   d. Year 2000 must be recognised as a leap year.
PRE.B10.420.7  BASIC OFFICE EQUIPMENT

1. Provide all necessary office equipment, including but not limited to the following:
   a. One electric typewriter;
   b. .......... colour copier-printer-scanner equipment with adequate supply of paper and other consumables like printer ink cartridges.

2. The colour copier-printer-scanner equipment shall be networked with driver installed in networked PCs to provide functions of printer and scanner in addition to photocopying function. The specification for the colour copier-printer-scanner equipment is as follows:
   a. Copier:
      i. Copy speed: not less than 20 copies per minute;
      ii. Resolution: up to 600 dpi;
      iii. Multiple copies: up to 999;
      iv. Zoom: 25 - 400%;
      v. Paper input capacity: 2 x 500-sheet paper trays, 1 x 100-sheet bypass trays;
      vi. Paper output capacity: not less than 1,500 sheets;
   b. Printer:
      i. Print speed: not less than 20 prints per minute;
      ii. Resolution: 600 dpi minimum.
   c. Scanner:
      i. Scan speed: not less than 40 originals per minute;
      ii. Resolution: up to 1,200 dpi;
      iii. Original size: A3 to A5;
      iv. Output format: PDF, JPEG, TIFF & high compression PDF.

PRE.B10.430.7  FACSIMILE MACHINE

Provide one facsimile machine to the following specification:
1. Communicate rate: 9600/7200/4800/2400 bps
   (with automatic fallback);
2. Document size: at least up to A4;
3. Automatic document feeder;
4. Single-key and 2-key dialling;
5. Automatic redialling;
6. An indicator for broken transmission or malfunction;
7. Compatibility with Group 2 and 3 faxes;
8. Multi-addressed polling;
9. ID number/password;
10. Transmission log or report;
11. Pre-timed/delayed transmission;
12. Call-back key;
13. Maintenance by original supplier.
PASS EQUIPMENT

1. Within 6 weeks from the notified date for commencement of the Works, provide for the use of the CM and his representative a set of new equipment as scheduled below for the duration of the Contract plus six months commencing from the date of the certificate of completion of the Works (or where phased completion of Sections is specified, the last date of completion stated amongst the different certificates of completion for the Sections of the Works) or the date of completion of all the outstanding works including variations thereon as ordered by the CM, whichever is the later;

2. Attach to the equipment an Identification Label and a Calibration Status Label;

3. Provide Calibration Certificates as listed below so as to satisfy the equipment calibration requirements of the ISO 9001;

4. Maintain and calibrate the equipment against the appropriate national and international standards at the interval as specified below;

5. Schedule of equipment:

<table>
<thead>
<tr>
<th>Description</th>
<th>Calibration Certificate</th>
<th>Calibration Interval</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. 1 No. Portable Dial Thermometer, model ELE EL45-5342, stem length 300 mm, measuring range 0 to 250 degrees Celsius, graduate in 5 degrees division.</td>
<td>Required</td>
<td>1 year</td>
</tr>
<tr>
<td>b. 1 No. Anodising Meter, model ELCOMETER 300SP (Stats/Printer) A300FNP23 for ferrous and non-ferrous bases with Standard Probe, T30076531 9 volt rechargeable Battery and charger, 240V 13 Amp BS Plug, model T96086030 Elcometer Data Collection Software 3.5 inch English, model T3007892 300 to IBM interface lead.</td>

### EQUIPMENT FOR CONSTRUCTION MOBILE INSPECTION SYSTEM

1. Provide all necessary equipment and sufficient wireless network (3G or LTE) and mobile broadband internet access including service plan charges to fulfil the function requirements for Construction Mobile Inspection System (CMIS) maintained by the Employer for inspection of piling works for Type 3 or Type 6 piles for the following:
   a. ........ tablet personal computers (tablet PCs), each fitted with a suitable microfiber and synthetic leather cover case; and
   b. ........ padded carry case bags for tablet PCs made from durable and weather proof materials such as synthetic leather, nylon, etc., each with suitable size to accommodate the tablet PC and with adjustable shoulder strap.

2. The tablet PC equipment shall be installed with a 3G or LTE SIM card and networked with wireless connection to the server for CMIS at the Hong Kong Housing Authority Headquarters. The specification for the tablet PC equipment is tabled as follows:

<table>
<thead>
<tr>
<th>Item</th>
<th>Specification</th>

**UNINTERRUPTIBLE POWER SUPPLY**

1. Provide ……… No. Uninterruptible Power Supply (UPS) for CM or his representative to protect the computer equipment installed in the site office for the duration of the Contract plus six months commencing from the date of the certificate of completion, and for other longer period as instructed by CM for the necessary completion of the Works and /or additional works within the Maintenance Period;

2. The UPS shall comply with the following minimum requirements:
   a. Output Power Capacity: 700 Watts/1000VA;
   b. Nominal Input/Output Voltage: 230V;
   c. Backup Time: able to support 15 minutes or more at half load.

**CAMERAS**

1. Provide …… No. of new digital camera for the use of CM and his representative for the duration of the Contract plus six months commencing from the date of the certificate of completion, or any other longer period as may be instructed by variation order for the necessary completion of the Works and/or additional works within the Maintenance Period;

2. The new digital camera shall comply with the followings:
   a. Be equipped with memory card of not less than 2G and flashes together with batteries and any other consumables required for the cameras and flashes;
   b. Size of the camera: small;
   c. Optical resolution of the camera: 5M pixels or above.

**BROADBAND LINE AND NETWORKING**

1. Provide …….No. of broadband line for the use of CM and his representative for the duration of the Contract plus six months commencing from the date of the certificate of completion, or any other longer period as may be instructed by variation order for the necessary completion of the Works and/or additional works within the Maintenance Period;

2. The broadband line shall comply with the following:
   a. Unlimited 24 hours internet service access through Internet Service Provider (ISP) via broadband line with minimum 3M connected individually to each of the computer systems provided by CM, equipped with security hardware/software systems to protect the computer systems from hackers/unauthorized intruders. The internet service shall be solely used by the computer systems provided by CM only;
   b. Networking to connect each of the computer equipment provided by CM. The broadband router or switch used to connect the network to the ISP must support Virtual Private Network (VPN) using IPSec technology;
   c. Maintenance and support under an agreement between the Contractor and the original supplier for all equipment so provided for the internet service;
   d. All necessary training, manuals and instructions for operating the internet service as directed by CM or his representative.

**COVER METER**

Provide one cover meter of Approved make for the exclusive use of the CM and his representatives.
**PRE.B10.500.7 REBOUND HAMMER AND ACCESSORIES**

1. Provide and maintain ............ set of rebound hammer and accessories, all complying with BS EN 12504-2:2001 or ASTM C805-02 and comprise the following:
   a. Rebound hammer:
      i. Be spring driven steel hammer manufactured by PROCEQ SA or equivalent Approved;
      ii. Of a type suitable for testing normal concrete of strength up to 70N/mm² unless otherwise instructed by CM.
   b. Abrasive stone;
   c. Steel reference anvil:
      i. Be hardened steel material weighing at least 16kg;
      ii. To have a guide tube which is compatible with the rebound hammer in hardness and dimension provided in sub-clause (a).

2. Carry out calibration and submit the calibration certificate in accordance with PRE.B8.1480 and PRE.B8.1490.

**PRE.B10.520.7 EQUIPMENT MAINTENANCE**

Provide attendance, consumables and bear all running costs, maintenance and repair charges and all other expenses in connection with the use of equipment provided for the CM and the CM's representatives.

**SITE EQUIPMENT FOR THE CM'S LAND SURVEY TEAM**

**PRE.B10.530.7 PROVISION OF SURVEY EQUIPMENT**

1. Within 6 weeks from the notified date for commencement of the Works, provide and maintain instruments and equipment for the CM’s Land Survey Team as follows:
   a. Survey Equipment

Specification Library 2014 Edition
i. Plumb bobs, red clothes, pegs, stakes, strings, paints, chart paper, etc. as necessary for field surveying work.

ii. Stationery items and computer consumable items, e.g. CD-ROM and DVD ROM, printer toner cartridges and printer papers etc. as necessary for data processing and storage.

c. One new digital camera as per PRE.B10.480.

2. The survey equipment listed in sub-clause (1)(a) shall be:
   a. not necessarily new so long as a valid calibration certificate of the instrument issued by an approved laboratory is provided;
   b. of specified source or equivalent;
   c. compatible with each other;
   d. covered by valid calibration certificate issued by approved laboratory;
   e. maintained by the service agent and calibrated by an approved laboratory annually;

   The Contractor shall be responsible for payment of all costs for maintenance of equipment and instruments listed in this clause.

3. Provide equivalent replacements when the equipment listed in sub-clause (1)(a) is out of services.

4. The survey equipment shall be reverted to the Contractor at the completion of the Contract or the completion of the piling works as appropriate.

PRE.B10.540.7 COMMUNICATION SYSTEM

1. Provide 4 sets of portable transceivers and accessories, including batteries and chargers, and hand free speaker microphone with spring belt clip for transmission and reception of clear messages between the transmitter/receiver in the CM’s principal office and all parts of the Site;

2. The portable transceivers shall have a range suitable for use on Site and be subject to CM’s approval;

3. Maintain all licences and permissions for the portable transceivers necessary for use with the radio communication system.

SERVICES FOR THE CM AND CM'S REPRESENTATIVES

PRE.B10.580.7 CONTRACT TECHNICAL ASSISTANTS

1. When Instructed, employ the following Contract Technical Assistant(s) (hereinafter referred to as CTA) for the exclusive use of the CM or the CM’s Representatives:
   a. __ (No.) full time Contract Technical Assistant(s) (Structural) (hereinafter referred to as CTA(S));
   b. __ (No.) full time Contract Technical Assistant(s) (Architectural) (hereinafter referred to as CTA(A));
   c. __ (No.) full time Contract Technical Assistant(s) (Building Services) (hereinafter referred to as CTA(BS));
   d. __ (No.) full time Contract Technical Assistant(s) (Building Works) (hereinafter referred to as CTA(BW));
   e. __ (No.) full time Contract Technical Assistant(s) (Building Services Site) (hereinafter referred to as CTA(BSS));

2. CTA should not be considered as an employee or agent of the Government of the Hong Kong Special Administrative Region or the Hong Kong Housing Authority. The deployment of any CTA by the Contractor with the Hong Kong Housing Authority shall in no way relieve the Contractor from any liability as the employer of the CTA, either under this Contract or at law;
3. When Instructed, submit the recruitment advertisement for Approval, place the recruitment advertisement, check qualifications of the candidate(s), obtain previous employers' references and provide all related administrative support and submit to the CM within 21 days from date of Instruction a shortlist of suitable candidate(s) with all associated information. The number of candidate(s) to be shortlisted shall be decided by the CM. The shortlisted candidate(s) shall be considered by representatives of the CM. The candidate(s) to be employed shall be those as instructed by the CM;

4. Qualification and Experience:
   a. The CTA(S) shall possess at least a Diploma or Higher Certificate in either Civil or Structural Engineering from the Hong Kong Polytechnic University or an institute of vocational education which acceptability is subject to the CM's confirmation, or equivalent as accepted by the CM, and with good knowledge of Building Regulations and Code of Practices. Possession of proficient skill in AutoCAD and EXCEL applications is preferred;
   b. The CTA(A) shall possess at least a Diploma or Higher Certificate in either Building Studies or Architectural Studies from the Hong Kong Polytechnic University or an institute of vocational education which acceptability is subject to the CM's confirmation, or equivalent as accepted by the CM, and with good skill and experience in AutoCAD drafting and preparation of architectural drawings together with good knowledge of Building Regulations and Code of Practices. Possession of proficient skills in Photoshop, 3D and PowerPoint applications are preferred;
   c. The CTA(BS) shall possess at least a Diploma or Higher Certificate in either Building Services, Electrical or Mechanical Engineering from the Hong Kong Polytechnic/Polytechnic University or an institute of vocational education which acceptability is subject to the CM's confirmation, or equivalent as accepted by the CM, and with good skill and experience in AutoCAD drafting, preparation of building services drawings, carrying out design calculations together with good knowledge of statutory Regulations and Code of Practices relating to building services trades;
   d. The CTA(BW) shall possess at least a Diploma or Higher Certificate in either Building Studies, Civil or Structural Engineering from the Hong Kong Polytechnic University or an institute of vocational education which acceptability is subject to the CM's confirmation, or equivalent as accepted by the CM, and with experience in construction field. Possession of proficient skill in WORD, EXCEL applications are preferred;
   e. The CTA(BSS) shall possess at least a Diploma or Higher Certificate in either Building Services, Electrical or Mechanical Engineering from the Hong Kong Polytechnic/Polytechnic University or an institute of vocational education which acceptability is subject to the CM's confirmation, or equivalent as accepted by the CM, and with experience in inspection of building services works. Possession of good knowledge in personal computer applications is preferred.

5. Conditions of Employment:
   a. Duration - The period of employment of the CTA and the probationary period of employment shall be determined by the CM. The period of employment shall be normally within the period between the notified date for commencement of the Works to the expiry of the Maintenance Period unless otherwise Instructed;
   b. Place of duty - The CTA shall work in the Housing Authority Headquarters or in any other office of the Housing Department/ Hong Kong Housing Authority or in any site office or other locations at the discretion of the CM or the CM's Representatives;
   c. Duties:
      i. The duties of the CTA(S) shall be in accordance with Clause PRE.B10.581 of the Specification;
ii. The duties of the CTA(A) shall be in accordance with Clause PRE.B10.582 of the Specification;

iii. The duties of the CTA(BS) shall be in accordance with Clause PRE.B10.583 of the Specification;

iv. The duties of the CTA(BW) shall be in accordance with Clause PRE.B10.584 of the Specification;

v. The duties of the CTA(BSS) shall be in accordance with Clause PRE.B10.585 of the Specification.

d. Office Hours - The normal office hours of the CTA(S), CTA(A) and CTA(BS) are either (i) from 08:30 to 17:18 or (ii) from 08:57 to 17:45, Monday to Friday as determined by the CM. The normal office hours of the CTA(BW) and CTA(BSS) are from 08:00 to 18:00 Monday to Friday. The office hours may be subject to changes to follow the general office hours of the Housing Department upon the CM's written instruction;

e. Annual Leave with Pay - The CTA shall be entitled to annual leave of a total of 14 working days with pay for every 12 month period of continuous employment or part thereof on a pro rata basis. Where the period of employment is less than 12 months, the CTA shall be entitled to the same benefit of annual leave on a pro-rata basis to the period of employment except that if the CTA is being dismissed within the probationary period, the CTA shall not be entitled to any annual leave with pay;

f. Leave - For any anticipated leave of a CTA longer than 14 consecutive working days, whether annual leave, sick leave, maternity leave or study leave, etc., provide a temporary CTA to take up the role of CTA during the leave period if it is required by the CM. The temporary CTA shall be subject to Approval;

g. Performance - The Housing Department/Housing Authority officers supervising the works of the CTA may provide feedback/comments on the performance of the CTA to the Contractor. Such officer may give suitable counselling and advice if the performance of a CTA is considered unsatisfactory. The CTA will be warned of the consequence of failing to improve within a specified period. The CM shall inform the Contractor of any persistent unsatisfactory performance of the CTA for remedial action or replacement if the situation so warrants. For a CTA who has neglected or wilfully refused to perform his duties, the CM may instruct the Contractor to replace the CTA in accordance with sub-clause (5)(n) below. Do not replace any CTA without the prior consent of the CM;

h. Insurance, MPF & Others for CTA of disciplines described in PRE.B10.580 (1)(a) or (1)(b) or (1)(c) - Comply with the statutory requirements such as those stipulated in the Employment Ordinance and Employee's Compensation Ordinance and bear all costs and expenses in connection with the employment of the CTA including but not limited to administration charges, financial charges, arrangement of and paying premium for employees' compensation insurance policy, the monthly contribution for the employee's selected scheme registered under the Mandatory Provident Fund (MPF) Schemes Ordinance, arrangement of and paying premium for medical insurance scheme, etc.. Detailed insurance requirements are set out at APPENDIX.PRE.B10/III;

i. Insurance, MPF & Others for CTA of disciplines described in PRE.B10.580 (1)(d) or (1)(e) - Comply with the statutory requirements such as those stipulated in the Employment Ordinance and Employee's Compensation Ordinance and bear all costs and expenses in connection with the employment of the CTA including but not limited to administration charges, financial charges, arrangement of and paying premium for employees' compensation insurance policy and public liability insurance policy, the monthly contribution for the employee's selected scheme registered under the Mandatory Provident Fund (MPF) Schemes Ordinance, arrangement of and paying premium for medical insurance scheme, etc.. Detailed insurance requirements are set out at APPENDIX.PRE.B10/III;
j. Remuneration - A fixed monthly salary, which shall not be changed, unless otherwise Instructed, within the employment period of a CTA, shall be designated and instructed by the CM at the time of employment of the CTA. The CTA shall also be entitled to payment for the designated extra hours of overtime working, which fall outside the normal office hours in sub-clause (d), pursuant to sub-clause (k) below. The fixed monthly salary shall be exclusive of bonuses, gratuities, payment for the designated extra hours of overtime working pursuant to sub-clause (k) below and other fringed benefits such as medical attention, dental treatment, housing and education allowances, etc. For the avoidance of doubt, the fixed monthly salary and the payment for the designated extra hours of overtime working pursuant to sub-clause (k) below shall be subject to local taxation and is inclusive of the employee's monthly contribution but exclusive of the employer's monthly contribution to the employee's selected scheme registered under the Mandatory Provident Fund (MPF) Schemes Ordinance;

k. Working Outside Stipulated Working Hours - The number of extra hours of working, if any, required from the CTA shall be notified by the CM or the CM's Representative from time to time in consideration of the workload requirements. Such designated extra hours of overtime working as notified by the CM or the CM's Representative shall be either for a total of 20, 30 or 40 hours and be paid for at rates designated and instructed by the CM at the time of employment of the CTA. There shall be no extra payment to the CTA for any work rendered outside the office hours as stipulated in sub-clause (d) and the designated extra hours of overtime working as notified by the CM or the CM's Representative. When further extra hours of overtime working of the CTA are required by the CM or the CM's Representatives to meet project requirements and programme, such further extra hours of overtime working worked by the CTA may be compensated by time off in lieu subject to Approval;

l. Work other than the employment under this Contract - The CTA must not engage in any work or employment other than in performance in connection with this Contract, with or without remuneration, which could create or potentially give rise to a conflict or a perceived conflict between their personal/financial interests with the interest of the Housing Department/Hong Kong Housing Authority. Any infringement of this sub-clause shall be a valid ground for replacement of the CTA;

m. Code of Conduct - As a particular application of the principles set out in GCC Clauses 4.4 and 5.30 in respect of a CTA's services, the CTA must comply with the Code of Conduct and the Confidentiality Undertaking set out at Appendices APPENDIX.PRE.B10/I and APPENDIX.PRE.B10/II respectively and sign the appropriate declarations and forms at Appendices PRE.B10.APPEND2, PRE.B10.APPEND3, PRE.B10.APPEND4 and PRE.B10.APPEND5 as Instructed. The Contractor shall make sure that, as his employee, the CTA must not disclose any such information related to his work with the Housing Department/ Hong Kong Housing Authority to any person including but not limited to the Contractor. Information in this context refers to, but is not limited to, public housing development programmes, project/construction programmes, design, drawing information, etc. This provision shall survive the termination of CTA's employment. Any infringement of this sub-clause shall be a valid ground for replacement of the CTA;

n. Replacement of CTA - Do not replace any CTA without the prior consent of the CM. Replace the CTA when Instructed. The Contractor shall arrange for the recruitment and employment of a replacement CTA in accordance with sub-clauses (1) to (5) immediately after the Instruction for replacement of the CTA, unless otherwise Instructed. Inform the CM immediately when the employment is terminated by the CTA. Any payment in lieu of notice shall be deducted from or added to, as the case may be, the Contract Sum.

o. 
i. The Contractor shall, before entering into an employment contract with the prospective Resident Site Staff, require the prospective Resident Site Staff to submit a declaration (sample attached at Appendix PRE.B10.APPEND10) to declare whether or not the prospective Resident Site Staff has been convicted of offences under the Prevention of Bribery Ordinance, Cap 201 and the Theft Ordinance, Cap 210, the offence of conspiracy to defraud, and the offence of misconduct in public office, and whether or not he/she has been terminated for employment as a Resident Site Staff. Such submission by the prospective Resident Site Staff shall be a condition precedent for employment;

ii. The Contractor shall make clear to the prospective Resident Site Staff that the information contained in the declaration shall be disclosed to the Hong Kong Housing Authority, Government policy bureaux and departments and obtain the consent of the prospective Resident Site Staff;

iii. The Contractor shall submit the declaration made by the prospective Resident Site Staff to the CM at least one week prior to offering employment to the prospective Resident Site Staff. The information in the declaration shall be taken into account in considering whether the Contractor's proposal for the Resident Site Staff employment should be approved;

iv. The Contractor shall terminate the employment of the Resident Site Staff who has given false information in the declaration or is convicted of offences under the Prevention of Bribery Ordinance, Cap 201 and the Theft Ordinance, Cap 210, the offence of conspiracy to defraud, and the offence of misconduct in public office, during employment. Such provision for termination should be included in the employment contract of the Resident Site Staff.

6. After the employment of the CTA, deliver to the CM a copy of his employment contract, certified true by a director of the Contractor, to substantiate that the employment conditions in sub-clause (5) above, including in particular the fixed monthly remuneration and the rates for the designated extra hours of overtime working receivable by the CTA, are fully complied with;

7. At the end of each period of interim certificates stated in the Appendix to the Form of Tender, deliver to the CM:

   a. a "Monthly Statement for Payment of CTA" for endorsement by the CM based on the sample at Appendix PRE.B10.APPEND9 showing all CTA employed under the Contract, with details of each CTA's working period, extra hours of overtime working required by the CM and information of leaves taken by the CTA; and

   b. other information as required by the CM for the relevant items in the Bills of Quantities for CTA.

8. Interim payments for the relevant items in the Bills of Quantities for CTA shall be valued and certified by the Surveyor only upon written confirmation and/or endorsement by the CM of the statement as referred to in sub-clause (7)(a).

PRE.B10.581.7 JOB SPECIFICATION FOR CONTRACT TECHNICAL ASSISTANT (STRUCTURAL)

1. Duties and Responsibilities - The CTA(S) is responsible to the CM or the CM's Representatives for the following duties:

   a. To prepare, check and update structural drawings, sketches and details;

   b. To undertake the design of minor structural elements manually or by means of computer under the direction of the CM or the CM's Representatives;

   c. To prepare site sketches for construction and amend structural drawings under the direction of the CM or the CM's Representatives;

   d. To assist the CM or the CM's Representatives in carrying out tests and inspection of structural works on Site;
e. To co-ordinate structural, civil, geotechnical, architectural and building services drawings;
f. To liaise with professionals, technical officers and site staff of the Housing Department, consultants and contractors where appropriate, on matters related to the design and construction of the project;
g. To prepare estimates, site instructions for construction for the CM or the CM's Representatives;
h. To assist with the research of building materials for use in the Contract and where applicable, their costs and sources of supply;
i. To arrange for printing and distribution of drawings among Housing Authority Headquarters, ICU, other offices outside Headquarters and site offices to ensure smooth transmission of drawings;
j. To assist in updating as-built record drawings;
k. To assist in processing application for Excavation Permit;
l. To perform other duties as directed by the CM or the CM's Representatives.

2. Problem-solving and Decision-making - The CTA(S) must be capable of handling technical problems arising from site difficulties and / or discrepancies in drawings and where appropriate referring such matters to the CM or the CM's Representatives for direction. He shall also be capable of making decisions to resolve simple technical matters that do not require professional expertise;

3. The CTA(S) shall be for exclusive and sole use of the CM or the CM's Representatives for any project at the discretion of the CM or the CM's Representatives.

---

**JOB SPECIFICATION FOR CONTRACT TECHNICAL ASSISTANT (ARCHITECTURAL)**

1. Duties and Responsibilities - The CTA(A) is responsible to the CM or the CM's Representatives or other personnel as appointed by the CM for the following duties:
   a. To prepare, check and update working drawings, submission drawings, presentation drawings, survey plans and schedules;
   b. To update drainage disposal plans;
   c. To check shop drawings and as-fitted drawings submitted by contractor, suppliers and utility companies;
   d. To co-ordinate architectural, building services, structural, site formation, drainage, geotechnical and other drawings as necessary;
   e. To liaise with professionals, technical officers and site staff of the Housing Department and contractor's representatives where appropriate, on matters related to the project;
   f. To assist in the research of architectural/ building materials for use in the contract and where applicable, their costs and sources of supply;
   g. To prepare, update record drawings and programme charts;
   h. To compute site areas, plot ratio, etc.;
   i. To take on-site measurement and prepare survey drawings;
   j. To be responsible for the issue and receipt of drawings and to maintain a proper record of such;
   k. To construct study models;
   l. To arrange printing of drawings;
   m. To perform other duties as directed by the CM or the CM's Representatives.

2. Problem Solving and Decision Making - The CTA(A) must be able to handle technical problems arising from drawing preparation and site construction, and to refer such matters to the CM or CM's Representatives for direction. The CTA(A) must be able to make decisions on resolving simple technical matters which do not require professional expertise;
3. Co-ordination and Contact - The CTA(A) must be able to handle frequent contact with professional and technical staff of his team, staff of allied professions in the Housing Department, consultants and contractors;

4. The CTA(A) shall be for exclusive and sole use of the CM or the CM's Representatives for any project at the discretion of the CM or the CM's Representatives.

**PRE.B10.583.7 JOB SPECIFICATION FOR CONTRACT TECHNICAL ASSISTANT (BUILDING SERVICES)**

1. Duties and Responsibilities - The CTA(BS) is responsible to the CM or CM's Representatives or other personnel as appointed by the CM for the following duties:
   a. To prepare and update drawings for site variations;
   b. To undertake minor design work and to prepare sketches/drawings under the direction of the CM or the CM's Representatives;
   c. To check shop drawings and as-fitted drawings submitted by contractors, suppliers and utility companies;
   d. To co-ordinate architectural, building services, structural and utility drawings;
   e. To liaise with professionals, technical officers and site staff of the Housing Department and contractor's representatives where appropriate, on matters related to the design and construction of the project;
   f. To assist with the research of building services materials for use in the contract and where applicable, their costs and sources of supply;
   g. To update record drawings and prepare management and programme charts;
   h. To be responsible for the issue and receipt of drawings and to maintain a proper record of such;
   i. To arrange printing and transfer of drawings;
   j. To direct, supervise and control other junior CTA(BS)s, if any, under his charge and to responsible for the checking of drawings prepared by them to ensure compliance with instructions;
   k. To handle technical problems arising from site difficulties and/or discrepancies in drawings and to refer such matters to the Contract Manager or his representatives for direction;
   l. To resolve simple technical matters which do not require professional expertise;
   m. To perform other duties as directed by the CM or the CM's Representatives.

2. Problem Solving and Decision Making - The CTA(BS) must be able to handle technical problems arising from site difficulties and/or discrepancies in drawings and to refer such matters to the CM or the CM's Representatives for direction. The CTA(BS) must be able to make decisions on resolving simple technical matters which do not require professional expertise;

3. Co-ordination and Contact - The CTA(BS) must be able to handle frequent contact with professional/technical/site staff of his team, staff of allied professions in the Housing Department, consultants and contractors;

4. The CTA(BS) shall be for exclusive and sole use of the CM or the CM's Representatives for any project at the discretion of the CM or the CM's Representatives.

**PRE.B10.584.7 JOB SPECIFICATION FOR CONTRACT TECHNICAL ASSISTANT (BUILDING WORKS)**

1. Duties and Responsibilities - The CTA(BW) is responsible to the CM or the CM's Representatives for the following duties:
   a. To assist in the survey and inspection duties to identify defects & compile survey/inspection reports/records;
b. To assist the CM or the CM's Representatives in carrying out tests and inspection of structural works on Site;

c. To check site safety, security and environmental protection measures performed by contractors and report non-conformities;

d. To check drawing and other documents required for the execution of construction works;

e. To assist in co-ordination with Contractor for the arrangement of repairs of defects;

f. To assist in the reporting of progress and inspecting of defects rectification;

g. To assist in updating and keeping of site inspection records;

h. To assist in co-ordination with contractor and Estate Management Division etc. for defect rectification after intake of building/ flats;

i. To perform other duties as directed by the CM or CM's representatives.

2. Problems Solving and Decision Making - The CTA(BW) must be capable of handling technical problems arising from site difficulties and/or discrepancies in drawings and where appropriate referring such matters to the CM or the CM's Representatives for direction. He shall also be capable of making decisions to resolve simple technical matters that do not require professional expertise;

3. The CTA(BW) shall be for exclusive and sole use of the CM or the CM's Representatives for any project at the discretion of the CM or the CM's Representatives.

---

b. To carry out site supervision and inspection of all building services installations under construction and/or maintenance stages;

c. To liaise with other parties including utility undertakings and the public for the necessary execution and completion of the building services installations;

d. To perform routine and ad hoc inspection of all building services installations including trouble shooting and site matter recording;

e. To supervise and monitor site progress, quality and quantity of work and to feedback the performance of contractors to the CM or CM's representatives;

f. To check sample boards and materials for compliance with specifications and monitor the correct use of materials on Site;

g. To check drawings, programme against site condition and contract specifications;

h. To keep site drawings and documents updated;

i. To take measurement on Site and prepare survey drawings as necessary;

j. To perform other duties as directed by the CM or CM's representatives.

2. Problem Solving and Decision Making - The CTA(BSS) must be able to handle technical problems arising from site difficulties and/or discrepancies in drawings and to refer such matters to the CM or the CM's Representatives for direction. The CTA(BSS) must be able to make decisions on resolving simple technical matters which do not require professional expertise;

3. Co-ordination and Contact - The CTA(BSS) must be able to handle frequent contact with professional/technical/site staff of his team, staff of allied professions in the Housing Department, consultants and contractors;

4. The CTA(BSS) shall be for exclusive and sole use of the CM or the CM's Representatives for any project at the discretion of the CM or the CM's Representatives.
SERVICES FOR THE CM AND CM'S LAND SURVEY TEAM

PRE.B10.590.7 SURVEY SUPPORT

1. Provide attendance including all labour, part-time experienced survey assistants, staging, ladders, wire ropes and the survey equipment, information and assistance required by the CM’s representatives for checking or surveying works when required by CM under PRE.B9.130. When CM or his representatives are carrying out checking or surveying works, there should be at least 3 part-time and having at least 2 years construction site engineering survey experienced survey assistants supporting their works;

2. Programme the Works by taking into account the checking and surveying on foundation works carried out by the CM or his representatives.

TRANSPORT FACILITIES FOR THE CM, THE CM'S REPRESENTATIVES AND SITE STAFF

PRE.B10.610.7 VEHICLE AND DRIVER

Option 1

A vehicle for the use of the CM and CM’s representatives is not required for this Contract. The CM or CM's representatives may direct vehicles provided under other Housing Authority contracts to visit this Site. Allow the entrance of such vehicles into the Site and provide suitable parking spaces within the Site for these vehicles.

Option 2

1. Provide ................. (no.) petrol vehicle(s) and ................. (no.) electric vehicle with driver(s) for the use of the CM, CM's representatives, any officials, employees, consultants or agents of the Housing Authority or the Housing Department or any persons authorized or permitted by the CM or CM's representatives. The vehicle(s) will be used for any purposes in connection with this Contract or otherwise. The vehicle(s) shall revert to the Contractor upon the expiration of the period defined in sub-clause (2)(b) below;

2. Comply with the following requirements:
   a. Specification for petrol vehicle:
      i. Must be environmental-friendly petrol private cars (EPPC) which are type-approved by Environmental Protection Department (EPD) or for which EPD has issued "Environmental-friendly Private Car Certificates";
      ii. Air conditioning: fitted;
      iii. Body type: saloon/estate;
      iv. Drive: two wheel/four wheel;
      v. Seating capacity: not less than 5 (including driver);
      vi. Engine capacity: not less than 1600 cc;
      vii. Age of vehicle: not more than 30 months with certificate of good condition issued by an approved Car Examination Centre;
      viii. Mobile phone: to be issued to and carried by the driver.
   b. Specification for electric vehicle:
      i. Air conditioning: fitted;
      ii. Body type: saloon/estate/hatchback;
      iii. Seating capacity: not less than 4 (including driver);
      iv. Maximum Power: not less than 45kW;
      v. Maximum Torque: not less than 180 N-m;
      vi. Driving Distance in a single charge: not less than 100 km;
      vii. Charging method: standard charging using 220V, 13A plug, able to fully charge the battery within 8 to 10 hours;
viii. Battery performance: able to deliver the specified driving distance in a single charge during the whole contract period;

ix. Age of vehicle: not more than 30 months with certificate of good condition issued by an approved Car Examination Centre;

x. Mobile phone: to be issued to and carried by the driver.

c. Period of provision:

From the notified date for commencement of the Works to the date stated in the certificate of completion of the Works, or the last of such certificates where a certificate is issued for a part or parts of the Works before completion of the Works, but in the event that there are works remaining uncompleted after such date stated in the certificate of completion of the Works, or the last of such certificates where a certificate is issued for a part or parts of the Works before completion of the Works, the said period of provision shall be extended until all of the said outstanding works have been completed in accordance with this Contract within the Maintenance Period.

d. Availability:

Make the vehicle(s) available for use during the following periods:

i. Normal working hours and such other times when the Contractor is working;

ii. Outside the times stated in sub-clause (2)(d)(i) above when requested by the CM or CM's representatives for emergency situations, for the discharge of his or her duties, or for other purposes as may be authorized or permitted by the CM or CM's representatives.

e. Licence and insurance:

i. The vehicle(s) shall be properly licensed;

ii. Provide a fully comprehensive insurance policy for the vehicle(s) as private car(s) under the ownership of the Contractor. The insurance policy shall provide insurance protection to passengers of the vehicle(s) and any third parties and to any use of the vehicle(s) pursuant to sub-clause (1) and sub-clause (2)(d) above;

iii. Present the insurance policy and submit a written confirmation of compliance of the insurance policy of the vehicle(s) with this specification clause from the insurer or the insurance broker/agent, to the Surveyor, as soon as practicable but in any event no later than the notified date for commencement of the Works.

f. Records of vehicle journeys:

i. Ensure that the driver for each vehicle institutes and maintains a record of the use of the vehicle. Such a record, in the form of a log book, shall include, inter alia, details, times and purpose of journeys together with appropriate meter readings and distances travelled. The driver is required to ensure that the person using the vehicle or authorising the journey signs his name and title against the entries;

ii. Obtain log books from the CM or CM's representatives. Ensure the driver presents current log books for inspection when so required by the CM or CM's representatives and hand over all completed log books to the CM or CM's representatives for safe keeping.

g. Vehicle maintenance:

i. Maintain vehicle(s) in clean and roadworthy condition and bear costs of fuel, electricity, running cost, maintenance and repair charges and other incidental items;

ii. Provide an equivalent substitute or form of transport during any period when the vehicle(s) above is/are not available, or out of service for maintenance or repair.

Option 3
1. Provide a vehicle with driver for the use of the CM, CM's representatives, any officials, employees, consultants or agents of the Housing Authority or the Housing Department or any persons authorized or permitted by the CM or CM's representatives. The vehicle will be used for any purposes in connection with this Contract or otherwise. The vehicle shall revert to the Contractor upon the expiration of the period defined in sub-clause (2)(b) below;

2. Comply with the following requirements:
   a. Specification:
      i. Must be environmental-friendly petrol private cars (EPPC) which are type-approved by Environmental Protection Department (EPD) or for which EPD has issued "Environmental-friendly Private Car Certificates";
      ii. Air conditioning: fitted;
      iii. Body type: saloon/estate;
      iv. Drive: two wheel/four wheel;
      v. Seating capacity: not less than 5 (including driver);
      vi. Engine capacity: not less than 1600 cc;
      vii. Mobile phone: optional;
   v. Age of vehicle: not more than 30 months with certificate of good condition issued by an approved Car Examination Centre.

   b. Period of provision:
      From the notified date for commencement of the Works to the date stated in the certificate of completion of the Works, or the last of such certificates where a certificate is issued for a part or parts of the Works before completion of the Works, but in the event that there are works remaining uncompleted after such date stated in the certificate of completion of the Works, or the last of such certificates where a certificate is issued for a part or parts of the Works before completion of the Works, the said period of provision shall be extended until all of the said outstanding works have been completed in accordance with this Contract within the Maintenance Period.

   c. Availability:
      Make the vehicle available for use during the following periods:
      i. Normal working hours and such other times when the Contractor is working;
      ii. Outside the times stated in sub-clause (2)(c)(i) above when requested by the CM or CM's representatives for emergency situations, for the discharge of his or her duties, or for other purposes as may be authorized or permitted by the CM or CM's representatives.

   d. Licence and insurance:
      i. The vehicle shall be properly licensed;
      ii. Provide a fully comprehensive insurance policy for the vehicle as private car under the ownership of the Contractor. The insurance policy shall provide insurance protection to passengers of the vehicle and any third parties and to any use of the vehicle pursuant to sub-clause (1) and sub-clause (2)(c) above;
      iii. Present the insurance policy and submit a written confirmation of compliance of the insurance policy of the vehicle with this specification clause from the insurer or the insurance broker/agent, to the Surveyor, as soon as practicable but in any event no later than the notified date for commencement of the Works.

   e. Records of vehicle journeys:
      Obtain log sheets, DLAP-F046, from the CM at the commencement of the Contract, keep a record of the use of the transport and return the completed log sheets at completion of each Section of the Works.

   f. Vehicle maintenance:
i. Maintain the vehicle in clean and roadworthy condition and bear costs of fuel, running cost, maintenance and repair charges and other incidental items;

ii. Provide an equivalent substitute or form of transport during any period when the vehicle above is not available, or out of service for maintenance or repair.

**PRE.B10.620.7 BOAT AND BOATMAN**

1. Provide boat and boatman for the exclusive use of the CM and the CM's representatives to revert to the Contractor upon expiration of the period defined in sub-clause (2)(b) below;

2. Comply with the following requirements:

   a. Specification:
      
      i. Seating capacity ........................................
      
      ii. Engine capacity ........................................
      
      iii. Mobile phone: fitted;
      
      iv. Canopy to provide weather protection;
      
      v. Pager: to be issued to and carried by boatman.

   b. Period of provision:
      
      From the notified date for Commencement of the Works to the date stated in the Certificate of Completion of the Works, or the last of such certificates where a certificate is issued for a part or parts of the Works before completion of the whole, including such additional periods as may be necessary for the completion of any outstanding work within the Maintenance Period.

   c. Availability:
      
      Make the boat available for use at reasonable times during the following periods:

      i. Normal working hours and such other times when the Contractor is working;

      ii. When requested by the CM or the CM's representatives for emergency situations, or for the discharge of his or her duties outside the times stated in sub-clause (2)(c)(i) above;

   d. Licence and insurance: comply with maritime regulations properly licence and cover the boat by a fully comprehensive insurance policy with an endorsement in the policy expanding the definition of the passengers to include the CM and the CM's representatives and all personnel from the Housing Department or from Consultants engaged by the Authority in connection with official visits to the Authority's sites. Present this policy to the Surveyor, when requested, for verification;

   e. Records of boat journeys:
      
      i. Ensure that the boatman institutes and maintains a record of the use of the boat. Such a record, in the form of a log book, shall include, inter alia, details, times and purpose of journeys together with appropriate meter readings and distances travelled. The boatman is required to ensure that the person using the boat, or authorising the journey, signs his name and title against the entries;

      ii. Obtain log sheets AL-F046 from the CM or the CM's representatives. Ensure the boatman presents current log sheets for inspection when so required by the CM or the CM's representatives and hand over all completed log books to the CM or the CM's representatives for safe keeping.

   f. Boat maintenance:
      
      i. Maintain boat in clean and seaworthy condition and comply with any relevant maritime regulation;

      ii. Bear costs of fuel and other incidental items;
iii. Provide an equivalent substitute form of transport during any period when the boat above is not available, or taken out of service for maintenance or repair.

PRE.B10.630.7 SHUTTLE BUS AND DRIVER

1. Provide ……… (no.) vehicle(s) with driver(s) for the CM’s representatives, Labour Relations Officer (LRO), Site Staff, and other person as authorized by the CM commuting between Site………………and the designated point(s) ……………..The location of the designated point(s) may be subject to change as directed by the CM to suit the actual usage and any site constraints. The Contractor is to make due allowance for such change;

2. Comply with the following requirements:
   a. Specification:
      i. Must be environment-friendly commercial vehicles which are type-approved by Environmental Protection Department (EPD) or for which EPD has issued “Environment-friendly Commercial Vehicle Certificates”, or other commercial vehicle subject to approval by the CM if the environment-friendly commercial vehicle is not readily available in the market;
      ii. Air conditioning: fitted;
      iii. Seating capacity: ………… seaters (not including driver);
      iv. Age of vehicle: not more than 30 months with a certificate of good condition issued by an approved Vehicle Examination Centre acceptable to the Transport Department.
   b. Period of provision:
      From the date which shall be a day within the period of two months from the notified date for commencement of the Works to the date stated in the certificate of completion of the Works, or the last of such certificates where a certificate is issued for a part or parts of the Works before completion of the Works, but in the event that there are works remaining uncompleted after such date stated in the certificate of completion of the Works, or the last of such certificates where a certificate is issued for a part or parts of the Works before completion of the Works, the said period of provision shall be extended until all of the said outstanding works have been completed in accordance with this Contract.
   c. Availability:
      Make the vehicle(s) available for use during the following periods excluding travelling time:
      i. 7:30am to 8:30am; (Monday to Saturday);
      ii. 12:00 noon to 1:30pm; (Monday to Saturday);
      iii. 5:00pm to 7:00pm; (Monday to Saturday).
   d. Licence and insurance:
      i. The vehicle(s) shall be registered under the Transport Department with a ‘passenger service licence – public bus service (employees’ service)’ with respect to the seating capacity stipulated in sub-clause (2)(a)(iii) above. Submit a copy of the receipt/acknowledge slip for the licence application issued by the Transport Department to the CM within two weeks from the notified date for commencement of the Works;
      ii. The vehicle(s) shall possess the valid passenger service licence certificate(s) and the employees’ service (A04) endorsement(s);
      iii. The driver(s) shall be holder(s) of a valid passenger service licence with minimum 2 years passenger driving experience, no major misconduct in driving in the past 2 years and not more than 5 points deduction in driving-offence point at the time of enrolment. A replacement driver with equivalent licence and experience shall be made available when necessary;
iv. Provide a fully comprehensive insurance policy for the vehicle(s), which shall provide insurance protection to passengers of the vehicle(s) and any third parties and to any use of the vehicle(s) pursuant to clause (1) and sub-clause (2)(c) above. Present this policy to the Surveyor, when requested, for verification.

e. Record of vehicle journeys:
Ensure that the driver for each vehicle institutes and maintains a record of the use of the vehicle. Obtain log books, from the CM or CM's representatives on the date of commencement of the Works and present for inspection when so required by the CM or CM's representative.

f. Vehicle maintenance:
i. Maintain vehicle(s) in clean and roadworthy condition and bear costs of fuel, running cost, maintenance and repair charges and other incidental items;
ii. Provide an equivalent substitution or form of transport during any period when the vehicle(s) above is/are not available, or out of service for maintenance or repair.

HOARDINGS, ANDGANTRIES

HOARDINGS AND GANTRIES GENERALLY

Option 1

In addition to the requirements of GCC Clause 5.11(3):
1. Provide temporary fencing, barriers, guard rails, gangways, walkways, fans, lighting, and the like for protecting the public and others during the proper execution of the Works including warning notices in English and Chinese characters;
2. Where excavation works are undertaken in occupied estates, protect the public by Approved interlocking steel barriers and signs reading "Danger - Keep away" in English and Chinese characters.

Option 2

In addition to the requirements of GCC Clause 5.11(3):
1. Prepare trial trenches as directed by the CM to ensure that the existing underground utilities and fence wall footings are not in conflict with the hoarding erection;
2. Employ a Registered Structural Engineer to prepare the design and construction details for the hoardings which shall include the footings, catch platforms, and covered walkways where appropriate for submission to CM for approval. The member sizes and dimensions as given under the standard Drawings No.…….. shall be deemed to be the minimum standard. The footings shall be so designed to suit the site conditions as revealed by the trial trenches;
3. Provide temporary fencing, barriers, guard rails, gangways, walkways, fans, lighting, and the like for protecting the public and others during the proper execution of the Works including warning notices in English and Chinese characters;
4. a. Ensure that there are no gaps or holes in hoardings etc which would allow illegal entry;
   b. Ensure that the number of entrances and exits to the Site are kept to a minimum or as indicated on the Drawings;
   c. Provide gates to all entrances and exits and ensure that all gates are locked outside working hours.
5. Completely erect all hoardings, covered walkways, etc prior to the commencement of any demolition work. Do not commence any asbestos removal work until approved by the CM and the entire Site is fully enclosed by fencing, hoardings or covered walkway, etc. from unauthorized entry;
6. Upon the commencement of the Works, provide and maintain temporary external lighting including electricity supply along the hoardings, fencing and covered walkways to the periphery of the Site;

7. Where excavation works are undertaken in occupied estates, protect the public by Approved interlocking steel barriers and signs reading "Danger - Keep away" in English and Chinese characters;

8. When any section of the works is nearing completion or a certificate of completion has been given for any section of the Works, provide all necessary additional special hoardings, temporary fencing, barriers, guard rails, gangways, walkways, fans, lighting, and the like including warning notices and direction signs in English and Chinese characters;

9. Repair, maintain and alter if necessary all the hoardings, covered walkway, etc. for the duration of the Contract and leave in position in good condition for use by subsequent contractors;

10. Paint all new and existing perimeter hoardings, covered walkways, gantries and fencing and provide sign writing and graphics in gloss finish all as directed by the CM;

11. In the event that the special hoardings, covered walkways or gantries are removed to suit the works progress:
   a. Provide continuous temporary hoarding or chain-link fence of sufficient strength and of height not less than 2 metres high at the outer periphery of the Site or at suitable locations to prohibit unauthorised entry;
   b. Where there is the need for the special hoardings etc. to be temporarily dismantled or opened up to allow works to progress:
      i. Re-erect special hoardings etc. to close all gaps or openings, so as to reinstate the continuity and integrity of the same; or
      ii. If re-erection of special hoardings as described in sub-clause (11)(b)(i) above is not possible and/or where gap in hoarding or fencing must exist, the gap should not be wider than 4 metres. Post security guard to station at all these locations to keep close surveillance of the entire area at all times, and provide adequate flood lights to light up the aforesaid areas at night time; or
      iii. Any other measures proposed by the Contractor and approved by the CM.

12. In the event that any modification to the details of Drawings provided in PRE.B10.730 sub-clause (2), which shall include but not be limited to the alignment or the structural details of the existing and/or new hoardings, covered walkways and gantries, is required to suit the Contractor's programme, site condition or any work to be executed by other Government Departments or utility companies:
   a. Submit the revised details and drawings, which shall be certified by the RSE, showing the modification for CM's approval;
   b. In addition to sub-clause (a), whenever larger span, smaller structural member size or similar changes imposing heavier loadings to and/or reducing structural capacity or integrity of the existing and/or new hoardings, covered walkways and gantries are involved in the modification, submit design calculations duly certified by the RSE for CM's approval;
   c. Apply for CM's permission to commence modification works at least 14 days before commencement of modification works. CM's permission shall not be granted before the submissions mentioned in sub-clauses (a) and (b) if applicable have been Approved;
   d. Bear all time and cost associated with such modification.

13. In the event that any amendment to the design submission for hoardings and gantries in sub-clause (2), which shall cover but not be limited to the alignment or the structural details of the existing and/or new hoardings, covered walkways and gantries, is required to suit the Contractor's programme, site condition or any work to be executed by other Government Departments or utility companies:
a. Submit the revised details and drawings, which shall be certified by the RSE, showing the details of amendment for CM's approval;

b. In addition to sub-clause (a), whenever larger span, smaller structural member size or similar changes imposing heavier loadings to and/or reducing structural capacity or integrity of the existing and/or new hoardings, covered walkways and gantries are involved in the amendment, submit design calculations duly certified by the RSE for CM's approval;

c. Apply for CM's permission to commence hoardings and gantries works affected by amendment at least 30 days before commencement of hoardings and gantries works affected by amendment. CM's permission shall not be granted before the amendment submission mentioned in sub-clauses (a) and (b) if applicable has been Approved;

d. Bear all time and cost associated with such amendment.

PRE.B10.720.7 TAKING OVER EXISTING HOARDINGS, COVERED WALKWAYS AND GANTRIES

1. Take over existing hoardings, covered walkways and gantries including necessary lighting erected by previous contractor around the area of .................... as indicated in the layout Drawing No. ....................;

2. a. Relocate to correct positions. Where necessary, provide new sections of hoardings and covered walkways in accordance with the drawings provided in sub-clause (3);
   b. Repair and maintain hoardings and covered walkways in good condition for the duration of the Contract;
   c. Leave them on Site for use by subsequent contractors or remove them when instructed by the CM.

3. Where provision of new sections of hoardings and covered walkways become necessary, construct them in accordance with Drawing Nos. ....................;

4. In the event that any modification to the details of Drawings provided in sub-clause (3), which shall include but not be limited to the alignment or the structural details of the existing and/or new hoardings, covered walkways and gantries, is required to suit the Contractor's programme, site condition or any work to be executed by other Government Departments or utility companies:
   a. Submit the revised details and drawings, which shall be certified by the RSE, showing the modification for CM's approval;
   b. In addition to sub-clause (a), whenever larger span, smaller structural member size or similar changes imposing heavier loadings to and/or reducing structural capacity or integrity of the existing and/or new hoardings, covered walkways and gantries are involved in the modification, submit design calculations duly certified by the RSE for CM's approval;
   c. Apply for CM's permission to commence modification works at least 14 days before commencement of modification works. CM's permission shall not be granted before the submissions mentioned in sub-clauses (a) and (b) if applicable have been Approved;
   d. Bear all time and cost associated with such modification.

5. Hoarding and walkway components such as the structural steel posts, beam sections, channel sections, angle bracings, saddle rings, railings, corrugated metal sheets dismantled from other of the Authority's contracts can be renewed and reused in the construction of hoardings subject to Approval and compliance with the following conditions:
   a. Corrugated metal sheets to be reused are to be free of excessive burrs, dents and qualified by the squareness and rigidity of the sheets ready to be affixed to the structural frames;
   b. Structural steel members to be reused are to be free from distortion. Assembling of components is to be verified true and square for the plumbing, levelling and alignment of the hoarding system;
c. Metal parts to be reused are to be adequately protected from excessive rusting, ready to be cleaned, repainted for the provision of new sign writing where necessary.

PRE.B10.730.7 NEWLY ERECTED HOARDINGS, COVERED WALKWAYS AND GANTRIES
1. Provide hoardings, covered walkways and gantries including all necessary lighting around the area of ................. as indicated on the layout Drawing No ...................;
2. Construct hoardings and covered walkways ............... in accordance with Drawings Nos. .................;
3. a. Relocate to correct positions and provide new sections of hoardings and covered walkways where necessary. In the event that any modification to the details of the Drawings provided, submit revised details, drawings, and where necessary calculations as well, certified by the Contractor’s RSE as described in PRE.B10.710 sub-clause ............;
   b. Repair and maintain hoardings and covered walkways in good condition for the duration of Contract and upon completion of the Works;
   c. Leave them on Site for use by subsequent contractors or remove them when instructed by the CM.
4. Hoarding and walkway components such as the structural steel posts, beam sections, channel sections, angle bracings, saddle rings, railings, corrugated metal sheets dismantled from other of the Authority’s contracts can be renewed and reused in the construction of hoardings subject to the CM’s Approval and compliance with the following conditions:
   a. Corrugated metal sheets to be reused are to be free of excessive burrs, dents and qualified by the squareness and rigidity of the sheets ready to be affixed to the structural frames;
   b. Structural steel members to be reused are to be free from distortion. Assembling of components to be verified true and square for the plumbing, levelling and alignment of the hoarding system;
   c. Metal parts to be reused are to be adequately protected from excessive rusting, ready to be cleaned, repainted for the provision of new sign writing where necessary.

SCAFFOLDING AND SCREENS

PRE.B10.810.7 SAFETY REGULATIONS AND REQUIREMENTS FOR SCAFFOLDING ETC
In addition to complying with the requirements of GCC Clause 5.11 and the statutory regulations concerning safety on the Site, comply with the following:
1. Code of Practice for Bamboo Scaffolding Safety issued by the Labour Department;
2. Specification clauses in connection with the provision of bamboo scaffolding and its associated walkways, sloping catch-fans, safety nets, protective canopy and the like;
3. Code of Practice for Metal Scaffolding Safety issued by the Labour Department;
4. Specification clauses in connection with the provision of metal scaffolding and its associated working platform, ganway, run, ladder together with guard-rail, toe-board and the like in lift well.

PRE.B10.820.7 DESIGN OF SCAFFOLDING SYSTEM
1. Accept responsibility for the design of the scaffolding system. The submission to the CM of such design or amendment shall not relieve the Contractor of any duty or responsibility under the Contract;
2. Refer to Guidelines on the Design and Construction of Bamboo Scaffolds issued by the Buildings Department and the Drawings provided under the Contract in connection with the provisions of the scaffolding system. The supporting system, structural layout, connections, and the like, as shown therein, are indicative only and only serve as guidelines in the design of such works;

3. Refer to Code of Practice for Metal Scaffolding Safety issued by the Labour Department for the design, technical, management, inspection and maintenance requirements for safety in metal scaffolding;

4. Prior to commencing installation, submit design calculation and detailed drawings to justify the arrangement of supporting brackets, steel ties and main members of the scaffolding;

5. Prior to commencing dismantling, submit method statement to justify the stability of the scaffolding system at different stages of dismantling.

PRE.B10.830.7 ERECTION OF SCAFFOLDING
1. Erect bamboo scaffold as soon as such erection does not obstruct the removal of table-forms, large panel formwork components or small panel metal formwork components;

2. At locations where the facade walls are pre-fabricated and clad with finishing, scaffold may not be required, but maintain provisions of protective canopy (PRE.B10.860) and overhead protection (PRE.B10.870).

PRE.B10.840.7 SUPPORTS TO SCAFFOLDING
Provide firm and adequate supports to the scaffolding at appropriate locations. If steel brackets are used as scaffold supports, their spacing should not exceed 6 floors. Alternatively the brackets spacing should not exceed 8 floors if not more than 5 tiers of walkways/overhead covers are installed at any time between two layers of brackets.

PRE.B10.850.7 ACCESS TO/EGRESS FROM SCAFFOLD
1. Provide access/egress to and from the walkway to each wing at every floor of the building at locations to be agreed with the CM;

2. Fit the access/egress with middle and top railings at heights of 600 mm and 1100 mm respectively;

3. Provide steps or ramp where the level difference between top of access and walkway is more than 300 mm.

PRE.B10.860.7 PROTECTIVE CANOPY
1. Design, build, maintain and remove after use temporary protective canopy of horizontal projected width 3600 mm (minimum) at the first floor level around the edges of the building except in locations where the concrete canopy is of width 3000 mm or more for the following buildings:
   a. Block ..........;
   b. Block ..........; and
   c. Carport ............

2. Refer to Sketch no. STD/TPC/S/SK-001 for the indicative design of the temporary protective canopy. Such Sketch shows a plan of the canopy and typical sections consisting of timber boardings 20 mm (minimum) thick covered by a layer of galvanized metal sheeting 0.8 mm (minimum) thick as minimum requirements for the canopy;

3. Design the protective canopy in accordance with the Building (Construction) Regulations in Hong Kong and design codes satisfying such regulations, which shall be capable of sustaining the loadings as specified in sub-clauses (a) to (c) below. Submit the calculations and construction method statements, certified by the Qualified Engineer as stipulated in PRE.B6.060, to the CM:
   a. Live load of 1.5 kPa (minimum);
b. Wind load calculated in accordance with the "Code of Practice on Wind Effects in Hong Kong 2004" published by the Buildings Department of the Government of the Hong Kong Special Administrative Region; and
c. Any other loads as appropriate.

4. Accept responsibility for the design of the protective canopy. The submission to the CM of such design or amendment shall not relieve the Contractor of any duty or responsibility under the Contract;
5. Complete the erection of the protective canopy no later than the seventh floor slabs have been cast;
6. Keep the temporary protective canopy clear of debris and do not overload it;
7. If scaffolding is used, do not remove the temporary protective canopy before the removal of scaffolding.

PRE.B10.870.7 OVERHEAD PROTECTION
Provide overhead protection 500 mm wide at edges of slab immediately after removal of slab table-forms or slab formworks where overhead covers associated with the bamboo scaffold have not yet been erected.

PRE.B10.880.7 WALKWAY AND COVER FOR FINISHING WORKS
1. Where finishing or fitting work along sections of the external building facade is in progress, provide:
a. 450 mm (minimum) wide walkway and overhead cover, continuous along the area being worked on, formed by 225 mm x 25 mm thick closed timber boardings;
b. Toe-boards 200 mm (minimum) high at the side of the walkway from which a person or any object is liable to fall for more than 2 metres; and
c. 25 mm thick timber boardings for closing gaps of more than 25 mm width between edges of walkway and walls/slabs;
d. Ensure that each board has a minimum of three supports and is adequately restrained at both ends.
2. Provide a full overhead cover at the floor immediate above the walkway on which work or inspection is being carried out. The overhead cover may be temporarily removed to facilitate the ease of work execution, provided that a fully installed overhead cover is maintained immediate above the overhead cover that is wholly or partly removed.

PRE.B10.890.7 ACCESS/PROTECTION FOR CM AND CM'S REPRESENTATIVES
Notwithstanding PRE.B10.880, provide and install walkway/overhead cover, at levels as directed by the CM for occasional inspection by the CM's representative.

PRE.B10.900.7 GUARD RAILS
Provide 2 No. bamboo guard-rails spaced at 750 mm and 900 mm above the top of walkway at the side from which a person is liable to fall for more than 2 metres.

PRE.B10.910.7 SAFETY NETS
1. For a building under construction which is under 30 metres in height or is set back from the site boundary such that an inclined projection plane from the top outer edge of the building at 10 degree from the vertical does not go beyond the site boundary at ground floor, provide safety nets comprising nylon mesh of minimum 15 core threads with grids not more than 12 mm or equivalent covering the entire face of the building. Tautly fix the safety nets with a minimum lap of 300 mm to outer face of scaffolding;
2. For buildings under construction excepting those stipulated in sub-clause (1), provide safety nets which shall generally follow PNAP APP-102. Fine nylon netting shall comply with GB 16909-1997.
TEMPORARY WORKS AND FACILITIES

OBSTRUCTION OF WALKWAY AND GANGWAY
Do not stack any materials or debris on the walkway and gangway at any time.

CLEARANCE OF DEBRIS
1. Keep the bamboo scaffolding and its associated walkways, sloping catch-fans, safety nets, protective canopy and the like clear of debris and do not overload them;
2. Keep the metal scaffolding and its associated working platform, gangway, run, ladder and the like clear of debris and do not overload them.

SLOPING CATCH FAN
1. When the structure has reached the ninth floor provide sloping catch-fan at not more than 6 floors intervals to give a minimum horizontal coverage of 1500 mm;
2. The sloping catch-fan to consist of 3 mm (minimum) thick timber boardings covered by layer of galvanized metal sheeting 0.2 mm (minimum) thick;
3. Fit 400 mm wide x 200 mm (minimum) deep receptacle at the bottom of catch-fan.

RETENTION OF PROTECTIVE MEASURES
Retain the sloping catch-fans, safety nets and protective canopy in place until all works to the external building facades are completed.

DISMANTLING
1. Clear all debris in mesh and catch fans before dismantling;
2. Fence off ground below scaffolding;
3. Post warning notices;
4. Dismantle scaffolding, mesh, fans and platforms carefully and lower by a safe, controlled method without throwing or dropping any item.

TEMPORARY SAFETY FENCES, RAILS AND BARRIERS

EXTERNAL OPENINGS AND FLOOR OPENINGS
1. Provide secure top railings at a height of 900 mm to 1100 mm and
2. Provide secure middle railings at a height of 450 mm to 500 mm and
3. Provide a secure toeboard 200 mm high where no permanent upstand exists or
4. Provide secure close boarding over entire floor openings in lieu of sub-clauses (1), (2) and (3) above.

OPEN EXCAVATIONS
Protect the public from all excavations by providing:
1. Secure bamboo fencing as SLW1.M420 but 1100 mm high; or
2. Secure close boarding over entire excavation.

TEMPORARY PROTECTION TO LIFT WELL OPENINGS
1. Provide temporary steel barrier to all lift well openings. The temporary steel barrier shall comply with all statutory requirements and the following performance requirements:
   a. Function as protection against fall of persons and falling objects through lift well openings from the respective floor levels;
   b. Be closed at all time and be lockable from outside, and be readily openable from the inside of lift wells at any time without the need of separate key operations;
c. Steel barrier shall consist of four-leaf doors with an upper pair and a lower pair of doors;
d. Height of steel barrier: full height to cover the lift well opening;
e. Mesh size for steel barrier: maximum 50 mm x 50 mm.

2. Refer to Drawing No. STD/HC/A/662/AS – 001(C) in Appendix U to this Specification for reference only. Submit detail drawings of the temporary steel barrier for CM's approval;

3. Maintain the temporary steel barrier to operate in a proper, efficient and safe manner;
4. Dismantle and clear away the temporary steel barrier properly and safely when they are not required anymore; and
5. Ensure that no part of the temporary steel barrier shall obstruct the installation of the permanent lift doors and architraves.

PRE.B10.1030.7 PERMANENT STAIRCASES
When secure permanent railings are not available:
1. Provide secure top railings at a height of 900 mm to 1100 mm;
2. Provide secure middle railings at a height of 450 mm to 500 mm.

PRE.B10.1040.7 OPENINGS AT TOWER CRANES
1. Provide secure top railings at a height of 1100 mm;
2. Provide secure middle railings at a height of 600 mm; and
3. Provide secure toeboards of 200 mm high.

SIGNBOARDS

PRE.B10.1110.7 SIGNBOARDS
1. Provide as detailed on Drawing(s) Nos. .............., maintain and update the information of the following publicity board(s) as necessary or as required by the CM for the duration of the Contract and leave in position in good condition for use by subsequent contractors:
   a. ............ No. publicity board(s);
   b. ............ No. accident statistic board(s) at the Site;
   c. ............ No. publicity board(s) for motorists and .......... No. publicity board(s) for pedestrians at prominent locations as agreed by the CM, where works are carried out on carriageway or footway.
2. Take over the following existing publicity board(s) from previous contractor, provide as detailed on Drawing(s) Nos. .............., maintain and update the information of the publicity board(s) as necessary or as required by the CM for the duration of the contract and clear away on completion:
   a. ............ No. publicity board(s);
   b. ............ No. accident statistic board(s) at the Site;
   c. ............ No. publicity board(s) for motorists and .......... No. publicity board(s) for pedestrians at prominent locations as agreed by the CM, where works are carried out on carriageway or footway.

PRE.B10.1130.7 PAINTING AND SIGNWRITING
1. Paint signboards at commencement of Contract;
2. Provide sign writing in multi-coloured gloss finish over the completed board or print signage on recyclable plastic banner, including English letters and Chinese characters, artist's impressions or diagrammatic plans and logos;
3. Submit draft drawings for Approval before painting;
4. Re-paint, provide new sign writing or print signage on new recyclable plastic banner when necessary as directed by the CM;
5. Provide new sign writing to update the accident statistics at monthly intervals.

PRE.B10.1140.7 DISPLAY SIGNS FOR SLOPE/RETAINING WALL REGISTRATION NUMBERS
Provide, fabricate and install display signs for slope/retaining wall registration numbers at the locations and to the details and requirements specified on the Drawings. Maintain for the duration of the Contract and handover in good condition for subsequent use by the Hong Kong Housing Authority.

SERVICES FOR THE EXECUTION OF THE WORKS

PRE.B10.1210.7 WATER SUPPLY

Option 1
Provide an adequate temporary water supply for the Works and all Direct Contractor’s Works, obtain water by metered supply from Government mains where possible.

Option 2
Water will be supplied free of charge for the work provided there are not imposed restrictions by the Water Supplies Department.

PRE.B10.1220.7 WATER SUPPLY RESTRICTIONS
1. In the event of water restrictions, ensure there is sufficient water storage capacity on Site, to supply water in accordance with the detailed requirements of the specification, to maintain the general good health of the plants, and to ensure the progress of the work is not adversely affected;
2. In the event of the water restrictions imposing a total ban on the use of the Water Supplies Department’s mains supply for watering of plants, make arrangements for the supply of non-toxic water in sufficient quantities to comply with the requirements in the immediately preceding paragraph. Take samples from every 1,000 cu.m delivered to Site and produce Certificates of Analysis of the water, from the Approved Laboratory within seven (7) calendar days of taking the sample. Each Certificate to state pH and salinity.

PRE.B10.1230.7 TESTING WATER SUPPLY
If water is taken from a source other than Government mains supply, test it at an Approved laboratory in accordance with BS 3148:1980 when required by CM.

PRE.B10.1240.7 WATER DISTRIBUTION
Provide temporary pipe lines and make arrangements for storage, pumping and distributing the water about the Site.

PRE.B10.1250.7 PROVISION OF WATER DISTRIBUTION DETAILS
Submit installation details and routing of the water supply for the information of the CM prior to commencement of the installation.

PRE.B10.1260.7 TESTING WATER DISTRIBUTION
Provide for testing of the water distribution installation when Instructed.

PRE.B10.1270.7 ELECTRICITY SUPPLY
Provide an adequate temporary electricity supply and equipment for lighting and power for the Works and all Direct Contractor’s Works where and when specified.

PRE.B10.1280.7 PROVISION OF ELECTRICITY SUPPLY INFORMATION
Submit installation details and routing of the electricity supply for the information of the CM prior to the commencement of the installation.
PRE.B10.1290.7 USE OF TEMPORARY ELECTRICITY SUPPLY FACILITIES

Option 1

1. Do not use the ................... for any purpose other than the provision of a temporary electricity supply;
2. When using the ................... liaise and co-ordinate with and comply with all requirements of the public utility Company;
3. The provision of the ................... shall in no way relieve the Contractor of his obligations, responsibilities and liabilities under the Contract.

Option 2

Not provided.

PRE.B10.1300.7 TELEPHONE

Option 1

Provide a separate direct-line telephone for own use.

Option 2

Provide a mobile telephone for own use and the use of the CM and his representatives when they are on Site.

PRE.B10.1310.7 TEMPORARY ELECTRICAL INSTALLATION

1. Fixing and precautions:
   a. Properly fix all wiring, switchgears and distribution boards above ground and inaccessible to general public;
   b. Provide minimum protection of cables in PVC/PVC sheath; ensure that all electrical joints are properly made. Where likely to be subject to damage, use conduits, armour or trunking systems;
   c. Support overhead cables by earthed steel catenary wires not lower than 5.8 m across public road and 5.2 m at other locations. Ensure that poles are of adequate strength and properly earthed (for metal poles and stay wires);
   d. Position installations away from wet areas and do not expose to weather unless they are of water-proof type;
   e. Display a circuit diagram at the main incomer;
   f. Provide circuit labels at all sub mains and distribution boards.

2. Protection against electrical shock and danger:
   a. Properly insulate or protect installations against direct contact to IP3X;
   b. Properly earth all circuits and exposed conductive parts;
   c. Provide main switch (or sub-main switches if adjacent) with RCCB. Protect socket outlets by a RCCB operating at 30mA. Connect portable equipment by socket and plug.

3. Circuit isolation and protection:
   a. Provide an isolation switch for each circuit in an accessible location;
   b. Provide proper circuit protective device against excess current and earth faults;
   c. Provide switches or emergency stop devices adjacent to operator of motor driven machines. Machines not to re-start automatically when supply resumes after power failures.

4. Temporary lighting:
   a. Provide all hoardings, covered walkways etc. with temporary lighting;
   b. Provide adequate level of illumination during all hours of site operation to all circulation areas, dangerous openings, places with lifting and lowering operation and areas where work is being carried out;
   c. In normal circumstances, provide all staircases with temporary lighting;
ii. Where only one staircase is lit, provide illuminated directional signs on every floor to indicate access to this staircase;

iii. Where structural works are still in progress, provide temporary lighting up to at least three floors below working floor (WF-3).

d. Securely fix all wiring and non-portable lights above floor. (Generally mounted at a height not less than 2 m above floor level except under special circumstance);

e. Provide lamp holders of all insulated type capable of withstanding rough usage;

f. Provide hand lamps made of insulated material with lamp bulb guarded against breakage;

g. Do not use incandescent light bulbs (GLS) or tungsten lamps. Use other lamp types with higher luminous efficacy. Provide only electronic ballast for all types of fluorescent fittings.

5. Power supply:

a. Provide a power supply at a voltage of 110V or less from a step-down transformer with its output winding centre-tapped to earth including supply to the following:
   i. Portable and hand-held tools;
   ii. Temporary lighting.

b. Provide a power supply at a voltage in excess of 110V only for the following:
   i. Heavy equipment such as hoists, tower cranes, etc. with an earth leakage circuit breaker installed and in proper function;
   ii. Site office and workshop.

REMOTE SITE MONITORING SYSTEM (RSMS)

PRE.B10.1410.7 MOUNTING POST FOR RSMS

Option 1

1. Provide ………… sets of mounting posts and necessary footings or supporting structures for RSMS control units and cameras at locations as shown on the layout Drawing No. …………;

2. Construct the mounting posts and necessary footings or supporting structures with reference to Drawing Nos. RSMS/SITE/S/SK-01 and RSMS/SITE/S/SK-03. Liaise and co-ordinate with the RSMS Direct Contractor on the provision of builder's works. Submit design proposals and method statements for the following to CM for approval to ensure that the mounting posts and necessary footings or supporting structures are safe and stable for supporting the RSMS control units and cameras on the posts and also for proper maintenance:
   a. Details of the mounting posts including footings or supporting structures;
   b. Fixing details of the mounting posts;
   c. Painting for the posts.

3. Repair, maintain and alter if necessary the mounting posts and necessary footings or supporting structures for the duration of the Contract;

4. Ensure that the installed cameras are clear from obstructions;

5. Leave the mounting posts and footings or supporting structures on the Site in good conditions for use by subsequent contractors or dismantle and remove them from Site when instructed by CM;

6. When instructed, relocate the mounting posts and necessary footings or supporting structures to new locations;

7. Make good and reinstate the affected areas to their original conditions after the relocation or removal of the mounting posts and footings or supporting structures, or when instructed by CM;

8. Provide notice in English and Chinese characters as shown in Drawing No. RSMS/SITE/S/SK-04. Exact location shall be directed by CM.
Option 2

1. Take over existing mounting posts and necessary footings or supporting structures for RSMS control units and cameras erected by previous contractor at locations as shown on the layout Drawing No. ..............;

2. Relocate existing mounting posts to new locations or provide new mounting posts and necessary footings or supporting structures at locations as shown on the layout Drawing No. ..............;

3. When new mounting posts are to be erected, construct the mounting posts and necessary footings or supporting structures with reference to Drawing Nos. RSMS/SITE/S/SK-01 and RSMS/SITE/S/SK-03. Liaise and co-ordinate with the RSMS Direct Contractor on the provision of builder's works. Submit design proposals and method statements for the following to CM for approval to ensure that the mounting posts and necessary footings or supporting structures are safe and stable for supporting the RSMS control units and cameras on the posts and also for proper maintenance:
   a. Details of the mounting posts including footings or supporting structures;
   b. Fixing details of the mounting posts;
   c. Painting for the posts.

4. Submit method statements of relocation for CM's approval prior to relocating the existing mounting posts;

5. Repair, maintain and alter if necessary the mounting posts and necessary footings or supporting structures for the duration of the Contract;

6. Ensure that the installed cameras are clear from obstructions;

7. Dismantle and remove the mounting posts and necessary footings or supporting structure from the Site upon completion of the Works or when instructed by CM;

8. Make good and reinstate the affected areas to their original conditions after the relocation or removal of the mounting posts and footings or supporting structures, or when instructed by CM;

9. Provide notice in English and Chinese characters as shown in Drawing no. RSMS/SITE/S/SK-04. Exact location shall be directed by CM.

RSMS TO BE MOUNTED ON WALLS OR OTHER SUPPORTING STRUCTURES

1. For the RSMS to be mounted on walls or other supporting structures, provide fixing holes for the installation as shown on Drawing no. RSMS/SITE/S/SK-02. Liaise and co-ordinate with the RSMS Direct Contractor on the number, position and depth of the holes;

2. Make good and reinstate the affected areas to their original conditions after the relocation or removal of the RSMS or any parts of the RSMS;

3. Provide notice in English and Chinese characters as shown in Drawing no. RSMS/SITE/S/SK-04. Exact location shall be directed by CM.

CONSTRUCTION & DEMOLITION MATERIALS DISPOSAL TRACKING SYSTEM (CMDTS)

MOUNTING POST FOR CMDTS

1. Provide the mounting posts and necessary footings or supporting structures for cameras, RFID readers & other accessories for CMDTS adjacent to the weighbridge. The exact location shall be confirmed with the Direct Contractor of CMDTS on Site;
2. Construct the mounting posts and necessary footings or supporting structures with reference to Drawing No. CMDTS/SITE/S/SK-01. Liaise and co-ordinate with the Direct Contractor of CMDTS on the provision of builder’s works. Submit design proposals and method statements for the following to CM for approval to ensure that the mounting posts and necessary footings or supporting structures are safe and stable for supporting the CMDTS control units and cameras on the posts and also for proper maintenance:
   a. Details of the mounting posts including footings or supporting structures;
   b. Fixing details of the mounting posts;
   c. Painting for the posts (if any).

3. Repair, maintain and alter if necessary the mounting posts and necessary footings or supporting structures for the duration of the Contract;

4. Ensure that the installed cameras are clear from obstructions;

5. Leave the mounting posts and footings or supporting structures on the Site in good conditions for use by subsequent contractors or dismantle and remove them from Site when instructed by CM;

6. When instructed by CM, relocate the mounting posts and necessary footings or supporting structures to new locations;

7. Make good and reinstate the affected areas to their original conditions after the relocation or removal of the mounting posts and footings or supporting structures;

8. Provide notice in English and Chinese as shown in Drawing No. CMDTS/SITE/S/SK-02. Exact location shall be directed by CM.

**PRE.B10.1520.7 TAKING OVER EXISTING MOUNTING POST FOR CMDTS**

1. Take over existing mounting posts and necessary footings or supporting structures for cameras, RFID readers & other accessories for CMDTS erected by previous contractor;

2. Relocate existing mounting posts to new locations if necessary;

3. When instructed, dismantle and remove the existing mounting posts and footings and replace with new mounting posts and necessary footings or supporting structures in locations if necessary;

4. When new mounting posts are to be erected, construct the mounting posts and necessary footings or supporting structures with reference to Drawing No. CMDTS/SITE/S/SK-01. Liaise and co-ordinate with the Direct Contractor of CMDTS on the provision of builder’s works. Submit design proposals and method statements for the following to CM for approval to ensure that the mounting posts and necessary footings or supporting structures are safe and stable for supporting the RFID readers, cameras and other accessories of CMDTS on the posts and also for proper maintenance:
   a. Details of the mounting posts including footings or supporting structures;
   b. Fixing details of the mounting posts;
   c. Painting for the posts (if any).

5. Submit method statements of relocation for CM's approval prior to relocating the existing mounting posts;

6. Repair, maintain and alter if necessary the mounting posts and necessary footings or supporting structures for the duration of the Contract;

7. Ensure that the installed cameras are clear from obstructions;

8. Dismantle and remove the mounting posts and necessary footings or supporting structure from the Site upon completion of the Works;

9. Make good and reinstate the affected areas to their original conditions after the relocation or removal of the mounting posts and footings or supporting structures;

10. Provide notice in English and Chinese as shown in Drawing No. CMDTS/SITE/S/SK-02. Exact location shall be directed by CM.
APPENDIX PRE.B10/I

PRE.B10.APPEND1.7  CODE OF CONDUCT FOR CONTRACT TECHNICAL ASSISTANTS WORKING FOR HOUSING AUTHORITY/HOUSING DEPARTMENT

Code of Conduct for

Contract Technical Assistants working for Housing Authority/Housing Department

This Code is to provide guidelines on the standard of conduct expected of Contract Technical Assistants (CTA) employed by the Contractor to work for HA/HD. It is by no means exhaustive and comprehensive. In case of doubt over any part of this Code, CTA should seek advice from their direct supervisors in Housing Authority (HA)/Housing Department (HD).

2. The CTA employed by the Contractor shall be well aware of and comply with the statutory obligations under the Official Secrets Ordinance (Cap. 521) (http://www.legislation.gov.hk/index.htm), the Prevention of Bribery Ordinance (POBO) (Cap. 201) (http://www.legislation.gov.hk/index.htm) and the relevant guidelines on acceptance of advantages and entertainment, and conflict of interests (paragraphs 3 to 8 below). The CTA shall sign a declaration form at PRE.B10.APPEND2 upon request by the Contractor before their deployment to the HA/HD and submit it to the CM.

General Principle

3. CTA shall uphold the highest standard of integrity and probity by helping ensure that HA/HD's reputation is not placed in question by any misconduct or corrupt activities they commit or are implicated in. They shall refrain from engaging in conduct or behaviour that may bring disrepute and embarrassment to HA/HD. They shall avoid or declare at all times, by conscious effort as appropriate, any real, apparent or potential conflict of interest and circumstances of perceived conflict that may arise or has arisen. Failure to avoid or declare a conflict of interest may result in the termination of his employment and, in certain circumstances, even his prosecution under the related common law offence.

Acceptance of Advantages

4. "Advantage" as defined in Section 2 of the POBO refers to anything of value other than entertainment. Common examples are gifts of all forms (both of money and in kind), loan, employment, contract, service, favour etc..
5. CTA shall as far as possible decline to accept any advantages or gifts offered/presented to him by virtue of his duties in HA/HD. Where this cannot be done owing to protocol reasons or the need to avoid causing great offence or embarrassment, such as where a gift/a souvenir is offered when attending a social/ceremonial occasion on duty, he shall take it back to his office and seek from his direct supervisor in HA/HD for a decision on how to dispose of the gift and comply with such decision.

6. CTA shall seek approval from the Contractor via his direct supervisor in HA/HD as follows before acceptance of any gift(s) by using the form at PRE.B10.APPEND3.

<table>
<thead>
<tr>
<th>Category</th>
<th>Value of each gift item</th>
<th>Arrangement</th>
</tr>
</thead>
<tbody>
<tr>
<td>(a)</td>
<td>Not exceeding $400</td>
<td>Approval from the Contractor is required for personal retention on recommendation of the respective direct supervisor in HA/HD.</td>
</tr>
<tr>
<td>(b)</td>
<td>Above $400</td>
<td>No personal retention shall be permitted. The gift shall be returned to the donor.</td>
</tr>
</tbody>
</table>

**Conflict of Interest (including Acceptance of Entertainment)**

7. A conflict of interest situation arises where the "private interests" of a CTA compete or conflict with the interests of HA/HD or his duties in HA/HD. "Private interests" include the financial and other interests of the CTA himself with those of the following relations –

   (a) the Contractor and other contractors or sub-contractors;

   (b) his family and other relations;

   (c) his personal friends;

   (d) the clubs and association to which he belongs;

   (e) any other groups of people with whom he has personal or social ties; or

   (f) any persons to whom he owes a favour or is obligated in any way.

8. CTA shall be honest, impartial and objective in carrying out their duties and in their official dealings with members of the public, staff of HA/HD, and contractors of HA/HD alike. They shall not promote their private interests or
those of family, friends, associates or put themselves in a position giving rise to suspicion or perception of having done so, in the course of delivering their duties in HA/HD. In particular, CTA shall observe the following principles -

(a) refrain from taking part in the deliberation, decision-making, investigation or enforcement process in connection with any matter in which he has a private interest;

(b) avoid putting himself in a position of obligation to any person who has or may have official dealings with HA/HD;

(c) decline to provide assistance, advice or information to any person including but not limited to the Contractor relating to his work whereby giving the recipient an unfair advantage over other persons. Legitimate requests for assistance, advice and information shall be referred to the proper subject officer of HA/HD for handling in the normal way according to established procedures;

(d) decline to accept lavish or unreasonably generous or frequent entertainment or any entertainment that is likely to lead to embarrassment in the discharge of his duties or to bring him or HA/HD into disrepute; and

(e) report to his direct supervisor in HA/HD on the proforma at PRE.B10.APPEND4 any private interests that might be seen or perceived to compromise personal judgement in the discharge of his duties.

9. CTA shall seek advice from his direct supervisor in HA/HD if he is doubtful whether a situation will give rise to potential or real conflict of interest.
PRE.B10.APPEND2.7 DECLARATION FORMS

Declaration Form

Contract Technical Assistant working for
Housing Authority/Housing Department

(To be completed in duplicate; a copy each to be kept by the CM and the Contractor)

I have read and understood the provisions of the Official Secrets Ordinance (Cap. 521) and the Prevention of Bribery Ordinance (Cap. 201), and the relevant guidelines on acceptance of advantages and entertainment, and conflict of interests including the Code of Conduct (PRE.B10.APPEND1 of the Specification) circulated to me by the Contractor. I confirm that I will comply with the relevant provisions and guidelines in the discharge of my duties as a result of my working for the Housing Authority/Housing Department.

PRE.B10.APPEND5.7 CONFIDENTIALITY UNDERTAKING

Confidentiality Undertaking

Contract Technical Assistant working for
Housing Authority/Housing Department
(To be completed in duplicate; a copy each to be kept by the CM and the Contractor)

I understand and agree that any information and documents, including but not limited to personal data, which have or may come into my possession in the course of or as a result of my secondment to the Housing Authority (HA)/Housing Department (HD) must be held in confidence. I will not, without written permission from my supervisor in HA/HD, disclose or make use of such information or documents or produce or retain photocopies and softcopies of such information or documents for any purpose other than purpose which is pursuant to the performance of my service in the HA/HD.

Further, I understand that, where such information or documents, including but not limited to personal data, are protected against disclosure under the Official Secrets Ordinance or the Personal Data (Privacy) Ordinance, I may be prosecuted for an offence under the Official Secrets Ordinance or may have contravened the provisions of the Personal Data (Privacy) Ordinance should I disclose, without lawful authority, or fail to take care to prevent the unauthorised disclosure of, any or any part of such information or documents.

APPENDIX PRE.B10/III

PRE.B10.APPEND6.7 INSURANCE REQUIREMENT

INSURANCE REQUIREMENT

1.1 Without limiting the Contractor's obligations and responsibilities of indemnifying Housing Authority (HA)/Housing Department (HD) under any indemnification clauses of the Conditions of Contract, the Contractor shall, at his own costs and expenses, effect and maintain throughout the period of employment of a Contract Technical Assistant (CTA) –

(a) an Employees' Compensation Insurance to cover all the liabilities in respect of all CTA who are employed by the Contractor in connection with the Contract in accordance with the latest statutory requirements, ordinance and at common law. This Policy shall be extended to include –

(i) HA/HD as the Insured Principal;

(ii) an "Indemnity to Principal Clause" and an "Indemnity to Principal Contractor Clause", where applicable, wordings as per the sample provided in the PRE.B10.APPEND7; and

(iii) an endorsement to cover the employees being deployed to HA/HD and engaged in HA/HD's business/activities anywhere in Hong Kong [including but not limited to construction sites] ; and

(b) a Public Liability Insurance to cover the liability in respect of personal injury or death to any person and loss or damage to any property real or personal (including the property owned by HA/HD or for which they are responsible for) arising out of or in the course of or by reason of the carrying out of the CTA's services with –

(i) HA/HD jointly named as Insured;

(ii) a "Cross Liability Clause"; and

(iii) the Situation of Premises & Geographical Area being stated as "Anywhere in Hong Kong" without any exclusion of working at construction site.
1.2 Notwithstanding that the liability to indemnify HA/HD is absolute, the limit of the Public Liability Policy shall not be less than [HK$ _________] any one accident and unlimited in the aggregate any one period of insurance.

1.3 If the Contractor considers the limit of indemnity mentioned in Clause 1.2 above for any one accident is inadequate to cover these contractual obligations, he is at liberty to take out a policy with an increased limit of indemnity.

1.4 The Contractor shall continue such insurance during the whole period in which the CTA shall remain employed for this Contract. If the Contractor shall fail to effect and keep in force the insurance aforementioned or any other insurance which the Contractor may be required to effect pursuant to this Contract for the CTA, then the HA may effect and keep in force any such insurance and pay such premium or premiums as may be necessary for that purpose and from time to time deduct the amount so paid by the HA as aforesaid from any monies due or which may become due to the Contractor or recover the same as a debt due from the Contractor.

1.5 The Contractor shall bear the cost of all excesses (deductibles), exclusions or limitations applying under all the insurance policies (in so far as they concern risks for which they are responsible under the terms of the Contract) whether in respect of claims made against the Contractor and/or HA/HD.

1.6 The Contractor shall when required deposit with the CM for safe keeping the policy of insurance as mentioned in Clause 1.1 (a) and (b) together with the receipt of payment of the current premium within 7 days from the first date of employment of a CTA and thereafter, in case where the insurance policy effected pursuant to this Clause does not cover his entire period of employment or period of insurance requirement, within 7 days of the insurance being effected upon the expiry of the current policy. The Contractor shall also submit "Confirmation on Compliance" from their insurers/brokers within the same timeframe. Sample confirmation letters are at PRE.B10.APPEND8.

1.7 The Contractor shall not take or omit to take any step the taking or omission of which may result in any insurance policy or the cover under such policy becoming void or voidable.
Indemnity to Principal Clause and Indemnity to Principal Contractor Clause under Employees' Compensation Insurance

Indemnity to Principal Clause

It is hereby understood and agreed that this Policy is extended to indemnify the Housing Authority/Housing Department (hereinafter called the Principal) against liability at law (including liability under the Legislation set out in the Schedule) in like manner to the Insured but only so far as concerns the liability of the Principal to employees of the Insured engaged in connection with a contract undertaken by the Insured for the Principal.

Provided always that –

(a) The Principal shall as though he were the Insured observe fulfill and be subject to the Terms of this Policy insofar as they can apply;

(b) The Company shall have full conduct and control of all claims in respect which indemnity is granted by this Endorsement.

Subject otherwise to the Terms of this Policy.

Indemnity to Principal Contractor Clause

It is hereby understood and agreed that this Policy is extended to indemnify [please insert Name of the Contractor] (hereinafter called the Principal Contractor) against liability at law (including liability under the Legislation set out in the Schedule) in like manner to the Insured but only so far as concerns the liability of the Principal Contractor to employees of the Insured engaged in connection with a contract undertaken by the Insured for the Principal Contractor.

Provided always that

(a) The Principal Contractor shall as though he were the Insured observe fulfill and be subject to the Terms of this Policy insofar as they can apply;

(b) The Company shall have full conduct and control of all claims in respect which indemnity is granted by this Endorsement.

Subject otherwise to the Terms of this Policy.

Submitted by __________________________
Contractor: __________________________
Date: __________________________

Endorsed by __________________________ (______)
Contract Manager/Contract Manager’s Representatives
Date: __________________________
Notes:

1. The Statement shall be submitted to the Contract Manager (CM) for endorsement on a monthly basis.

2. Separate page(s) shall be used for each discipline of CTA to include all CTA of the same discipline employed under the Contract.

3. Upon endorsement by the CM, a copy of the Statement shall be provided by the CM to the PQS for payment assessment.

4. The entry in the column "Approved Overtime Working with Extra Payment" shall be either a total of 20, 30 or 40 hours as designated and required by the CM for the CTA. Put in 'N/A' if there is no such designation by the CM for the month. When the designated extra hours of overtime working required by the CM for a total of 20, 30, or 40 hours in a month cannot be fully completed by the CTA, the extra hours of overtime working completed by the CTA in that month will be compensated by time off in lieu and shall not be included in the column "Approved Overtime Working with Extra Payment".

5. Total No. of days of leaves taken on working days (including but not limited to annual leave, sick leave, maternity leave and absence from works) of the CTA shall be stated in Column 5. This total number of leave days shall not take into account any approved time off granted under Clause PRE.B10.580 (5)(k) in lieu of extra payment of overtime working or any leave in which a temporary CTA has been provided according to Clause PRE.B10.580 (5)(f) to take up the role of a CTA during the CTA's leave period.

6. Any 'Maternity leave' taken by a CTA shall be stated as such in Column 6 with the leave period indicated.
APPENDIX PRE.B10/V

PRE.B10.APPEND10.7 SAMPLE DECLARATION FORM

Sample Declaration of Convictions for Offences and Information on Termination of Resident Site Staff Employment Contract

To: (the Contractor) ("the Company")

In consideration of your processing my application for the post of Resident Site Staff:

I hereby declare that I have not been convicted of any offence(s) @ for the period _____ to _____* / I have been convicted of an offence(s) @ for the period _____ to _____*#, details are as follows:

<table>
<thead>

PRE.B11.030.7 WORKS BY NOMINATED SUB-CONTRACTORS

1. The following parts of the Works will be carried out by Nominated Sub-contractors:
   a. Supply and installation of irrigation system;
   b. Supply and place artificial plants;
   c. Lift installation/lift and escalator installation;
   d. Electrical installation including CCTV and door phone installation;
   e. Fire services installation/water pump installation and water feature installation;
   f. Air conditioning and mechanical ventilation installation;
   g. Kitchen and catering equipment installation;
2. In accordance with GCC Clause 5.15, the design requirements for each of the above Nominated Sub-contract works for which the Contractor will be responsible, are referred to in PRE.B6 of this Specification.

PRE.B11.040.7 SUPPLY ONLY OF MATERIALS BY NOMINATED SUB-CONTRACTORS
Supply only of the following materials for incorporation in the Works by Nominated Sub-Contractors:
Kitchen fitments.

PRE.B11.050.7 SUB-CONTRACTING
In accordance with GCC Clause 3.2(1) the Contractor is expressly prohibited from sub-contracting more than twenty-five percent (25%) of the Works.

PRE.B11.070.7 CONCURRENT ADJOINING WORKS
Other contracts that are being carried out concurrently on adjoining sites are described in Worksection PRE.B2 of this Specification.
PRE.B12 ATTENDANCE

GENERAL ATTENDANCE ON ALL TRADES

PRE.B12.010.7 GENERAL ATTENDANCE ON ALL TRADES
Provide general attendance on all trades of workers and sub-contractors working on the Site.

GENERAL ATTENDANCE ON TENDERING CONTRACTORS

PRE.B12.110.7 FACILITIES FOR TENDERING CONTRACTORS
Provide attendance on Contractors tendering for Direct Contracts/Nominated Sub-contract Work/building contract work/piling contract work including every facility to inspect the Site and the Works in the legitimate pursuit of their submission of a tender.

PRE.B12.120.7 INFORMATION FOR TENDERING CONTRACTORS
Provide such information as can reasonably be requested as to method of construction, programme of Works, and the like.

PRE.B12.130.7 REMEDIAL WORKS OR EXPENSES
Carry out all work necessitated by any failure in the arrangements specified in PRE.B12.110 and PRE.B12.120 or pay to the Authority all expenses properly incurred as a result of such failure.

GENERAL ATTENDANCE ON NOMINATED SUB-CONTRACTORS, DIRECT CONTRACTORS, GOVERNMENT DEPARTMENTS AND UTILITY UNDERTAKING

PRE.B12.210.7 PROVISION FOR ATTENDANCE
1. Provide for attendance to all Nominated Sub-contractors, Direct Contractors, Government Departments and utility undertaking and co-ordinate and sequence work programmes as specified in the following clauses in this Section;
2. Carry out all work necessitated by any failure in the above arrangements or pay to the Authority all expenses properly incurred as a result of such failure.

PRE.B12.220.7 PLANNING AND PROGRAMMING
Plan the time and manner of the execution of the work, delivery of materials and the time and manner of the submission of drawings or schedules of builder's work requirements. In compliance with GCC Clause 5.7, submit to the CM additional programmes in respect of each Nominated Sub-contractor within 14 days of the acceptance of each Nominated Sub-contract.
Plan the time and manner of the execution of the work, delivery of materials and the time and manner of the submission of drawings or schedules of builder's work requirements.
**PRE.B12.230.7 BUILDER'S WORK**

1. Submit for the agreement of full particulars of all necessary builder's work to enable Nominated Sub-contractors, Direct Contractors and utility undertaking to execute their work;

2. On receipt of CM's agreement, execute all such builder's work;

3. Grout all voids between sleeves/cable ducts/pipeworks/equipment and openings/sleeves where required in reinforced concrete members and grout up with concrete of the same crushing strength and structural performance as the members (unless otherwise specified) after the sleeves/cable ducts/pipeworks/equipment are properly fixed in position;

4. Fill up and seal with an Approved waterproof non-shrinking cement/sand mortar unless otherwise specified. Make good gaps between wall openings and all equipment and pipework passing through structural members;

5. Provide all necessary materials for grouting in equipment, brackets and bolts;

6. Provide full ducting system with either unplasticized polyvinyl chloride (uPVC) or galvanized iron (GI) pipes and draw pits for the street lighting installation in accordance with the latest edition of Highways Department's Technical Circulars and other requirements;

7. For all underground and lead-in cable ducts entering the building, seal up cable ducts with Approved materials to form a gas, water and fire barrier and grout voids between cable ducts and openings as follows unless otherwise specified:
   a. Within 14 days after the cable ducts have been installed, seal up ends of cable ducts with the Approved materials and grout all voids between cable ducts and openings in reinforced concrete members with concrete of the same crushing strength and structural performance as the members;
   b. On completion of the cabling works by utility undertaking, seal up ends of cable ducts with the Approved materials;
   c. Ensure that all ends of spare installed cable ducts are sealed with either the Approved materials or duct plug as specified in ELE9.1.150.

8. Produce a set of Co-ordinated Builder's Works Drawings as follows:
   a. For the following section(s) of the Works containing building/structure other than standard domestic blocks, produce a set of Co-ordinated Builder's Works Drawings for CM's approval prior to commencement of such work:
      i. Section of the Works: ……
   b. This set of drawings shall indicate all the necessary provisions to satisfy the builder's works requirements of Nominated Sub-contractors, Direct Contractors and utilities undertaking to enable them to carry out their works. The Building Services Co-ordinator shall be responsible for the preparation of the Co-ordinated Builder's Works Drawings and gather the necessary information from Nominated Sub-contractors, Direct Contractors and utilities undertaking and resolve any conflicts and incompatibilities that may arise during the consolidation process. This set of Co-ordinated Builder's Works Drawings shall contain but not be limited to:
      i. The size, type and location (setting out and level) of permanent openings, penetrations, recesses and chases etc. in the structure, blockwork wall and cladding;
      ii. The size, type and location (setting out and level) of equipment foundations, supporting plinths etc., including details of fixing for equipment;
      iii. Details of the items (puddle flanges, sleeves, fixings etc.) to be cast into the structure;
      iv. Details of the temporary openings to be left in the structure to facilitate the delivery and installation of equipment;
      v. Details of the permanent lifting facilities required for the maintenance of the equipment;
      vi. Details of the temporary lifting facilities required for the delivery and installation of the equipment;
vii. Details of any other items of a similar nature which may have an effect on the structure;
viii. All the above items to be labelled to indicate the requesting party of each item;
ix. The drawing reference with the exact revision number of the architectural/structural drawing on which the Co-ordinated Builder’s Works Drawings are based.
c. The scale of the Co-ordinated Builder’s Works Drawings shall be not less than 1:100 for layout plans while the scale of the sectional and elevation plans shall not be less than 1:50. Other drawing scales may be required as and when considered necessary for the purpose of clarity by the CM.

PRE.B12.235.7 GENERAL ATTENDANCE FOR BUILDING SERVICES INSTALLATIONS

Provide all General Attendance to the requirements of the Nominated Sub-contractors and Direct Contractors of building services installations to execute their work in accordance with the Contract. This includes but is not limited to:

1. Provide access, including temporary openings, for transportation of equipment to the location of installation in plant rooms and plant areas;
2. Provide access to the location as required during testing and commissioning;
3. Provide adequate propping to roof and floor slabs required for transportation of heavy equipment to plant rooms and plant areas; and
4. Provide attendance for delivery of equipment and materials.

PRE.B12.240.7 RESOLUTION OF CONFLICTING BUILDER'S WORK REQUIREMENTS

Check submitted builder’s work requirements for conflict between all services. Submit full particulars of builder’s work requirements to the CM for Approval, together with a report detailing any ambiguity, discrepancy or conflict between all services.

PRE.B12.250.7 ROUTING OF SERVICES

Take note that the location, size and routing of pipes and conduits shown on the Drawings are for indication only and must be followed as far as practicable. Notwithstanding that, obtain full particulars of any additional builder’s work requirements and report any discrepancy or conflict to the CM as described in PRE.B12.240.

PRE.B12.260.7 PROVISION OF DETAILS OF METHOD OF CONSTRUCTION

Supply details of the method of construction including all dimensions and other information necessary to ensure that work by others is correctly executed or correct goods or materials are supplied.

PRE.B12.270.7 INSPECTION AND CERTIFICATION

Inspect building services Nominated Sub-contractors work and certify in writing that it is in accordance with the Specification and Drawings before seeking approval to covering up under GCC Clause 7.3(2).

PRE.B12.280.7 ENDORSEMENT OF CONFORMITY

1. Endorse all delivery vouchers and testing procedures from building services Nominated Sub-contractors; state with the endorsement that the materials and equipment delivered and incorporated in the Works and/or testing conform with the Specification and Drawings for building services Nominated Sub-contracts;
2. Endorse all delivery vouchers from Direct Contractors for building services works.
PRE.B12.290.7  REVIEW OF SITE SECURITY PLAN
Hold regular meetings to review adequacy of the Site Security Plan from time to time, and specifically in advance of each programmed work stage, to ensure compliance with specified requirements and continued adequacy of the Site Security Plan.

GENERAL ATTENDANCE ON MATERIALS SUPPLIED BY THE AUTHORITY
PRE.B12.310.7  GENERAL ATTENDANCE ON MATERIALS SUPPLIED BY THE AUTHORITY

Option 1
Where items are to be obtained from the Authority accept responsibility for any loss or damage and:
1. Take delivery at Housing Department Store or Government Store, as directed;
2. Load, transport to the Site, unload, check, examine, take to store and protect;
3. Take from store, distribute, hoist and fix in position;
4. Return surplus items to Housing Department Store and/or Government Stores; and
5. Return all crates and other packing as required to Housing Department Store and/or Government Stores.

Option 2
Where trees, plants and other materials are to be obtained from the Authority, accept responsibility for any loss, damage or replacement and:
1. Take delivery at Housing Department Estates, other designated nurseries, or locations as instructed;
2. Load, transport to the Site, unload, check, examine and protect;
3. Transplant and secure trees and plants in position as Worksections SLW2 and SLW3;
4. Accept responsibilities as Worksection EXT11.

SPECIAL ATTENDANCE ON NOMINATED SUB-CONTRACTORS
PRE.B12.410.7  ELECTRICAL INSTALLATION
Provide the following Special Attendance:
1. Draw wires to all underground ducts;
2. Lubrication of all inaccessible ducts with graphite powder;
3. Street lighting;

PRE.B12.430.7  LIFT AND ESCALATOR INSTALLATION
Provide the following Special Attendance:
1. Preparation of entrances in lift wells suitable to accommodate requirements for landing doors or gates and filling the gaps between structure and door lining, indicator and control station with fire resisting material in accordance with the requirements in the Code of Practice for Fire Safety in Buildings. Complete the filling of fire resisting material within 3 days after the respective lift well is handed over by the Sub-contractor to the Contractor to carry out such work;
2. Provision of suitable metal scaffolding to Sub-contractor's requirements and protection to work in progress. Dismantle metal scaffolding and remove in around 5 days after the lift well is handed over back to the Contractor to carry out such work;

3. Provision and maintenance of protective linings to the frames and architraves of lift openings on each and every floor, and to the internal walls, floors and ceilings of lift cars as indicated in the Drawings at Appendix C, from completion of lift installation to the certified completion of the Works in accordance with the General Conditions of Contract;

4. Provision of temporary protection for lift well openings;

5. Provision of storage areas for lift and escalator equipment at least 12 months before the due date for completion of each block or Section;

6. Provision of two extra reinforcement bars for connection to each lift architrave to fulfil Sub-contractor's requirement on equipotential bonding. Tie the extra reinforcement bars securely to the nearby reinforcement bars to maintain electrical continuity;

7. Provision of temporary electricity at voltage 110V with circuits equipped with waterproof sockets for use by the Sub-contractor;

8. Installation of at least 3 sets of independent lifelines anchored to eyebolts inside a lift well before handing over to the Sub-contractor;

9. Provision of anchorage near lift well openings at the lowest landing floor for use by worker to lock fall arrestor and safety harness when required to access lift pit and provision of anchorage at other landing floors if necessary for use by worker to lock fall arrestor and safety harness when working near or in the lift well;

10. Provision of permanent anchorage adjacent to lift landing door (at the side of the cat ladder) at the lowest landing floor of every lift, for use by worker to lock fall arrestor and safety harness when required to access lift pit, in accordance with the approved drawing. On completion of the Works, provide Inspection Certificate issued by a Registered Professional Engineer in building, civil or structural discipline certifying that satisfactory visual inspection and check has been carried out by the Registered Professional Engineer on the permanent anchorage(s).

SPECIAL ATTENDANCE

PRE.B12.510.7 TESTING CONCRETE AND CONSTITUENT MATERIALS

Provide the following Special Attendance:

1. Provision of all facilities for the Direct Testing Contractor in the taking of samples;

2. Provision of a labourer for full attendance during the sampling and in-situ testing of fresh concrete on Site;

3. Submission of all samples and materials as the Direct Testing Contractor may demand to enable the required tests to be made;

4. Provision of sufficient curing tanks and rooms for the exclusive use of the CM, in accordance with PRE.B10.330 to PRE.B10.390 inclusive to be made available before any concreting works are carried out on Site;

5. Provision of transportation of test samples and materials within the Site area, including loading and unloading of test samples;

6. Provision of office accommodation for one technician of the Direct Testing Contractor in accordance with PRE.B10.320 to be made available before any concreting works are carried out on Site;

7. Provision of access to the location of sampling or Site testing, including access to supply sources of concrete, including ready-mixed concrete, and its constituent materials;

8. Provision of water and electricity as required 24 hours a day for the sampling and Site testing;
9. Provision of spoil areas for disposal of surplus concrete and samples and arrange to cart away;

PRE.B12.515.7 ATTENDANCE ON DIRECT TESTING CONTRACTORS OF PILING WORKS
1. Provide information for the preparation of the report, all as required by the Direct Testing Contractors and/or Housing Department Materials Testing Laboratory;
2. Be responsible for the co-ordination of testing and for ensuring that the appropriate piles and materials are made available for such testing and commence early enough in the foundation contract and avoid subsequent delays in performing the pile load test.

PRE.B12.516.7 ATTENDANCE ON DIRECT TESTING CONTRACTOR FOR AIR MONITORING TESTS
1. Allow for co-ordination of the air monitoring tests in the programme;
2. Provision of all facilities for the Direct Testing Contractor in the taking of samples;
3. Provision of water and electricity as required 24 hours a day for the sampling and site testing.

PRE.B12.520.7 NON-DESTRUCTIVE TESTS ON PILES & ULTRASONIC ECHO SOUNDER TEST FOR TYPE 3 PILE
1. Provide the following Special Attendance:
   a. Compliance with all the requirements of PIL1 - Testing;
   b. Provision of all necessary power including electricity, labour, materials, plant and equipment including welding facilities as required;
   c. Provision of access to the test pile including access to pile when pitched;
   d. Provision of all necessary water at the locations as required by the Direct Testing Contractor and/or Housing Department Materials Testing Laboratory, and a labourer for full attendance during the testing period, and ladder(s) as required in carrying out the test;
   e. Expose and prepare pile heads for non-destructive tests such that the pile heads are level, clean and free from soil and debris and able to accommodate the testing equipment on the pile heads;
   f. Provision of preliminary Pile Testing information to Direct Testing Contractor and/or Housing Department Materials Testing Laboratory;
   g. Provision and installation of sonic access tubes in the Type 3 piles for sonic logging tests; details of the sonic access tubes shall be in accordance with PIL1.T1610 and Drawing No. .........................;
   h. Provision of driving equipment for piles selected for pile driving analyser test;
   i. Extend the test pile to a level as and when required so that pile driving analyser tests can be carried out;
   j. Fill sonic tubes solid with non-shrinkage grout of at least the same crushing strength as the pile tested.
2. Non-destructive tests on piles shall include Pile Driving Analyser Test, Pile Integrity Test and Sonic Logging Test.

PRE.B12.530.7 CONCRETE CORING AND TESTING EXCLUDING CORE TESTING OF TYPE 1(C) & TYPE 3 PILES
Provide the following Special Attendance:
1. Additional materials for coring and testing and making good after coring.
CORE TESTING OF TYPE 1(C) & TYPE 3 PILES
Provide the following Special Attendance:
1. Compliance with all the requirements of PIL1 - Testing;
2. Provision of access to the test pile;
3. Expose and prepare pile heads for the tests such that the pile heads are level, clean and free from soil and debris and able to accommodate the testing equipment on the pile heads;
4. Provision of suitable working platforms for supporting the coring equipment in the execution of coring;
5. Provision of water and electricity as required 24 hours a day for the coring and site testing;
6. Fill cored holes solid with non-shrinkage grout of at least the same crushing strength as the pile cored.

CONFIRMATORY CORE TESTING OF FOUNDING STRATA OF TYPE 3 PILES
Provide the following Special Attendance:
1. Compliance with all the requirements of PIL1 - Testing;
2. Provision of access to the test pile;
3. Expose and prepare pile heads for the tests such that the pile heads are level, clean and free from soil and debris and able to accommodate the testing equipment on the pile heads;
4. Provision of suitable working platforms for supporting the coring equipment in the execution of coring;
5. Provision of water and electricity as required 24 hours a day for the coring and site testing;
6. Fill cored holes and sonic tubes solid with non-shrinkage grout of at least the same crushing strength as the pile cored.

NON-DESTRUCTIVE TESTS ON WELDS OF PILES
Provide the following Special Attendance:
1. Compliance with all the requirements of PIL1 - Testing;
2. Provision of electricity as required for the weld tests;
3. Provision of welders and welding facilities when required.

LOADING TESTS OF WORKING PILES
Provide the following Special Attendance:
1. Compliance with all the requirements of PIL1 - Testing;
2. Provision of electricity as required 24 hours a day for the loading tests;
3. Provision of access to the test piles;
4. Provision of reactions by means of kentledge, anchor piles or other anchorage with adequate stability and safety and approved by the CM;
5. As and when required by the CM, carry out the following:
   a. Extend the test pile to a suitable level for the carrying out of the test; and/or
   b. Design and construct a suitable pile cap and/or adequate lateral supports to the test pile;
   c. Construct a suitable pile cap and/or adequate lateral supports to the test pile as specified or instructed by the CM;
   d. Demolish the pile cap or lateral supports, as necessary, when they are no longer required for the loading test.
6. Expose and prepare pile heads such that the pile heads are level, clean and free from soil and debris and able to accommodate the testing equipment on the pile heads;
7. Provision of transportation of the testing equipment within the Site. Place the testing equipment at the location as required by the CM or the Direct Testing Contractor;
8. Throughout the period of the test, make observations of the settlement of the pile being tested by a suitable surveyor's level;
9. On completion of the test, remove the kentledge, anchor piles or other anchorage, demolish the test pile cap, make good the test pile and the Site back to their original condition and remove all debris arising from the test from the Site.

**PRE.B12.538.7 PROVING BEDROCK AFTER INSTALLATION - TYPES 5 & 6 PILES**
Provide the following Special Attendance:
1. Compliance with all the requirements of PIL1 - Testing;
2. Provision of access to the test pile;
3. Provision of suitable working platforms for supporting the coring equipment in the execution of coring;
4. Provision of water and electricity as required 24 hours a day for the coring and site testing;
5. Backfill the drillholes with clean sand.

**PRE.B12.540.7 GAS WATER HEATER INSTALLATION / FITTING OUT GAS PIPEWORK**
Provide the following Special Attendance:
1. Provide new scaffolding as appropriate or retain scaffolding in place and maintain protection whilst work is in progress;
2. Storage areas for water heater equipment and material at least 6 months before the due date for completion of each building.

**PRE.B12.560.7 TURFING AND PLANTING WORKS**
Provide the following Special Attendance:
1. Attendance on this Work during the Maintenance Period including provision of water for daily watering required to be carried out during this period.
   Note: The turfing and planting contract includes a twenty four month maintenance period for daily watering, care of the work etc. This maintenance period may extend into the Maintenance Period of the Main Contract.

**PRE.B12.565.7 ATTENDANCE ON THE ENVIRONMENTAL PROTECTION DEPARTMENT'S DIRECT CONTRACTOR**
1. The scope of work of EPD's direct contractor is limited to the supply and delivery of soil conditioning products based on animal manure as shown on Drawings and Schedules, or as Instructed;
2. The EPD's direct contractor shall undertake the supply, and delivery to site, of these materials in bulk and/or packaged form;
3. Liaise with the EPD's direct contractor and arrange for these materials to be delivered to Site at appropriate intervals to suit own operatives;
4. Co-ordinate timing of own soiling and backfilling operations to allow incorporation of the materials supplied by the EPD's direct contractor;
5. Permit vehicular access to the location where the delivery is to be made. Clear away obstructions or otherwise make allowance for vehicular access;
6. Take delivery and arrange temporary storage of the supplied materials as necessary before incorporation with own soiling works.

**PRE.B12.570.7 ATTENDANCE ON THE EMPLOYER'S DIRECT CONTRACTOR**
1. The scope of work of this contractor is limited to horticultural and arboricultural operations in relation to the vegetation designated to be protected or transplanted as shown in the Contract Drawings, or as Instructed;
2. Co-ordinate timing of own operations with those of the Employer's Direct Contractor as required;
3. Permit vehicular access to the location where the Employer's Direct Contractor works are to be undertaken. Clear away obstructions or otherwise make allowance for access;
4. Allow for temporary removal or relocation of plant materials as needed in planting areas where access is required by the Employer's Direct Contractor as necessary for the execution of his work;
5. The Employer's Direct Contractor shall carry out:
   a. Tree surgery, rootball preparation, and other arboricultural works, related to the removal of trees or palms required to be retained or transplanted;
   b. The transplanting of trees, palms or shrubs from or within the Site in accordance with Contract Drawings or as Instructed, including all excavation and backfilling operations;
   c. The supply and installation, of all Approved materials required during the transplanting operations and for backfilling, staking and guying.

**PRE.B12.580.7 REMOTE SITE MONITORING SYSTEM (RSMS)**

Provide the following Special Attendance:
1. Provision of all necessary facilities for the Direct Contractor for RSMS to carry out the installation, relocation, maintenance and dismantling of the RSMS;
2. Provision of power supply and power points for the RSMS;
3. Provision of security and regular cleaning for the RSMS control unit and camera;
4. Take due care to protect the RSMS control unit and camera from damage. In the event of failure to perform such due care resulting in damaging the RSMS control unit and camera, pay to the Authority all expenses incurred by the Authority for rectifying the damage.

**PRE.B12.590.7 CONSTRUCTION & DEMOLITION MATERIALS DISPOSAL TRACKING SYSTEM (CMDTS)**

Provide the following Special Attendance:
1. Provision of all necessary facilities for the Direct Contractor of CMDTS to carry out the installation, relocation, maintenance and dismantling of the CMDTS;
2. Provision of power supply and power points for the CMDTS;
3. Provision of security and regular cleaning for the RFID readers, cameras and other accessories for CMDTS;
4. Provision of shelter for housing of the notebook, router, 2D bar code reader, other IT equipment and accessories for CMDTS (The shelter shall be in weatherproof construction with sufficient strength, adequately braced and anchored to resist typhoon conditions. The shelter shall be lockable, and be equipped with adequate lighting, power supply and windows overseeing the weighbridge operations. Minimum area of the shelter shall be 1.5 m² for the Direct Contractor of CMDTS to carry out the monitoring works.);
5. Take due care to protect the RFID readers, cameras and other accessories for CMDTS from damage. In the event of failure to perform such due care resulting in damaging the RFID readers, cameras and other accessories for CMDTS, pay to the Authority all expenses incurred by the Authority for rectifying the damage.

**SPECIAL ATTENDANCE ON UTILITY UNDERTAKING**

**PRE.B12.620.7 FIXED TELECOMMUNICATION NETWORK SERVICES INSTALLATION**

Provide the following Special Attendance:
1. Draw wires to all telecommunication underground and lead-in ducts;
2. Attendance at "pass-thro" test including any remedial work.

**PRE.B12.630.7 ELECTRICITY SUPPLY COMPANY**

Provide the following Special Attendance:

1. Take delivery of emergency exit deadlock set with panic bar at store of electricity supply company and fix in position as directed and to the satisfaction of the electricity supply company. Return surplus items to the store of electricity supply company.

**PRE.B12.640.7 DOMESTIC PAY TELEVISION PROGRAMME SERVICES INSTALLATION**

Provide the following Special Attendance:

1. Provision of draw wires to all domestic pay television programme services underground and lead-in ducts;
2. Attendance at "pass-thro" test including any remedial work.

**SPECIAL REQUIREMENTS FOR PHASING THE WORKS**

**PRE.B12.710.7 NOMINATED SUB-CONTRACTORS**

Co-ordinate with Nominated Sub-contractors, to enable the proper and timely execution of their installation works in accordance with the Contract. Particular attention is drawn to the following requirements:

<table>
<thead>
<tr>
<th>Nominated Sub-Contract</th>
<th>Requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td>Electrical installation</td>
<td>Make available to Nominated Sub-contractor the transformer room at least 4 months prior to completion of each block. Make available to Nominated Sub-contractor the generator room at least 3 months prior to completion of each block. Make available to Nominated Sub-contractor the meter rooms at ground floor and lower zone of the block at least 6 months prior to completion of each block. Complete the whole of the main switch room in each building and make available to Nominated Sub-contractor 6 months after the completion of the structural frame and the ceiling slab of the respective main switch room or 4 months prior to the completion of each building, whichever is the earlier, together with wall and floor finishing, door and other internal finishing works as specified. Make available to Nominated Sub-contractor the meter room at upper zone of the block at least 4 months prior to completion of each block. Make available to Nominated Sub-contractor the underground cable ducts and draw pits at least 4 months prior to completion of each block. Vehicular access for transportation of equipment to the main switch room and generator room during the last 5 months prior to completion of each block.</td>
</tr>
<tr>
<td><strong>Fire services and water pump installation/water pumps and water features installation</strong></td>
<td>Make available to Nominated Sub-contractor the fire tank and fire pump room at ground floor and intermediate floor at least 5 months prior to completion of each block. Make available to Nominated Sub-contractor the fire tank and fire pump room at roof at least 4 months prior to completion of each block. Make available to Nominated Sub-contractor the pump room, sump and tank at least 6 months prior to completion of each block. Make available to Nominated Sub-contractor the pump room and ancillary builder's works provisions at least 4 months prior to completion of water feature.</td>
</tr>
<tr>
<td><strong>Air-conditioning/mechanical ventilation Installation</strong></td>
<td>Make available to Nominated Sub-contractor the central plant room, pump room and space for outdoor equipment at least 6 months prior to completion of each block. Make available to Nominated Sub-contractor the Air-Handling Unit (AHU) rooms and fan rooms at least 5 months prior to completion of each block.</td>
</tr>
<tr>
<td><strong>Kitchen and catering equipment installation</strong></td>
<td>Make available to Nominated Sub-contractor the kitchen area with all finishing works completed and ready for the installation of the equipment at least 3 months prior to completion of the building containing the kitchen.</td>
</tr>
<tr>
<td><strong>Lift installation</strong></td>
<td>Complete the corresponding lift wells with metal scaffolding, builder's work and machine rooms ready for handover to the Nominated Sub-contractor on or before a date which is 110 calendar days prior to the respective date(s) for completion of the Nominated Sub-contract Works as specified in the written acceptance of the Nominated Sub-contractor's tender, or any re-scheduled date(s) in accordance with Clause 6.1(4) of the General Conditions of Nominated Sub-contract. N.B.: Provided that if the hand-over of the lift well and machine room has been or is likely to be delayed by the matters referred to in Clauses 6.1(3)(a) and 6.1(3)(b) of the General Conditions of Nominated Sub-contract beyond such date or dates of hand-over as specified, the Contractor shall determine a fair and reasonable re-scheduling of the respective date(s) for completion of the Nominated Sub-contract Works, and shall notify the same to the Nominated Sub-contractor in writing as soon as reasonable. Give the Nominated Sub-contractor not less than 21 day's advance notice in writing of the actual date(s) on which the lift well and machine room for the Nominated Sub-contract Works shall be handed over by the Contractor to the Nominated Sub-contractor.</td>
</tr>
</tbody>
</table>
Escalator installation

Complete the corresponding ............... ready for handover to the Nominated Sub-contractor on or before a date which is 110 calendar days prior to the respective date(s) for completion of the Nominated Sub-contract Works as specified in the written acceptance of the Nominated Sub-contractor’s tender, or any re-scheduled date(s) in accordance with Clause 6.1(4) of the General Conditions of Nominated Sub-contract.

N.B.: Provided that if the hand-over of the ............... has been or is likely to be delayed by the matters referred to in Clauses 6.1(3)(a) and 6.1(3)(b) of the General Conditions of Nominated Sub-contract beyond such date or dates of hand-over as specified, the Contractor shall determine a fair and reasonable re-scheduling of the respective date(s) for completion of the Nominated Sub-contract Works, and shall notify the same to the Nominated Sub-contractor in writing as soon as reasonable.

Give the Nominated Sub-contractor not less than 21 day’s advance notice in writing of the actual date(s) on which the ............... for the Nominated Sub-contract Works shall be handed over by the Contractor to the Nominated Sub-contractor.

PRE.B12.720.7

DIRECT CONTRACTORS

Option 1

Co-ordinate with Direct Contractors to enable the proper and timely execution of their installation works in accordance with the Contract. Particular attention is drawn to the following requirements:

<table>
<thead>
<tr>
<th>Direct Contracts</th>
<th>Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gas water heater installation / fitting out gas pipework</td>
<td>Make available to Direct Contractor all associated builder’s work and completion of finishing works ready for the installation of gas water heaters / fitting out gas pipework at least 3 months prior to completion of each block.</td>
</tr>
<tr>
<td>LPG installation (separate bulk supply contract)</td>
<td>Clearance and handover of site for central LPG compound within 1 month of notification by the CM. Make available to the Direct Contractor at least 3 months prior to completion of each block and within 2 weeks of notification by the CM or the Direct Contractor, all necessary underground and above ground service routes and openings as required by the Direct Contractor to properly execute their installations. Co-ordinate with Direct Contractor for installation of surface mounted gas pipes before subsequent finishing work such as painting, plastering and tiling. Co-ordinate with Direct Contractor for installation of cast-in gas pipes and conducting pressure and soundness tests for all concealed gas pipes before concreting, and testing and commissioning of all installed gas pipes after concreting.</td>
</tr>
<tr>
<td>Turfing and planting</td>
<td>Completion of formation of planting areas at least 2 months prior to completion of each Section of the Works.</td>
</tr>
</tbody>
</table>
Refuse Handling System Installation

Make available to Direct Contractor the refuse collection point and refuse storage & material recovery chamber in each building 3 months prior to completion of the refuse collection point and the building, together with wall and floor finishes, doors, louvres and other internal provisions and finishing works as specified.

Complete the whole of the upper floor refuse rooms of the buildings and make available to the Direct Contractor at least 2 months prior to completion of each building together with wall and floor finishes, door, louvre and other internal provisions and finishing works as specified.

Make available to Direct Contractor vehicular access for transportation of equipment to the refuse collection point and individual refuse storage & material recovery chamber 3 months prior to completion of the corresponding Sections or buildings.

Remote Site Monitoring System (RSMS)

Make available to Direct Contractor all associated builder’s work ready for the installation and relocation of Remote Site Monitoring System (RSMS) within 2 weeks of notification by the CM.

Construction & Demolition Materials Disposal Tracking System (CMDTS)

Make available to Direct Contractor all associated builder’s work ready for the installation and relocation of Construction & Demolition Materials Disposal Tracking System (CMDTS) within 2 weeks of notification in writing by the CM.

Option 2

Co-ordinate with Direct Contractor(s) to enable the proper and timely execution of their installation works in accordance with the Contract. Particular attention is drawn to the following requirements:

<table>
<thead>
<tr>
<th>Direct Contracts</th>
<th>Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Remote Site Monitoring System (RSMS)</td>
<td>Make available to Direct Contractor all associated builder’s work ready for the installation and relocation of Remote Site Monitoring System (RSMS) within 2 weeks of notification by the CM.</td>
</tr>
<tr>
<td>Construction &amp; Demolition Materials Disposal Tracking System (CMDTS)</td>
<td>Make available to Direct Contractor all associated builder’s work ready for the installation and relocation of Construction &amp; Demolition Materials Disposal Tracking System (CMDTS) within 2 weeks of notification in writing by the CM.</td>
</tr>
</tbody>
</table>

PRE.B12.730.7

UTILITY UNDERTAKING

Co-ordinate with utility undertaking to enable the proper and timely execution of their installation works. Particular attention is drawn to the following requirements:
<table>
<thead>
<tr>
<th>Utility Undertaking</th>
<th>Requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td>Electricity supply connection</td>
<td>Handover of transformer rooms to the electricity supply company at least three and a half months prior to completion of each block. Make available to the electricity supply company within the period commencing from the date 4 months prior to the programmed completion date of the earliest block to the programmed completion date of the last block in the project, and with 2 weeks of notification by the CM or the Power Company an area 1.5 m wide along the electricity supply company’s external underground cable route for the power supply. Vehicular access for transportation of transformer and switchgear to the transformer rooms during the last 4 months prior to completion of each block.</td>
</tr>
<tr>
<td>Town gas installation</td>
<td>Make available to the Town Gas Company at least 3 months prior to completion of each block and within 2 weeks of notification by the CM or the Town Gas Company, all necessary underground and above ground service routes and openings as required by the Town Gas Company to execute their installation. Co-ordinate with Town Gas Company for installation of surface mounted gas pipes before finishing works such as painting, plastering and tiling. Co-ordinate with Town Gas Company for installation of cast-in gas pipes and conducting soundness tests for all concealed gas pipes before concreting, and testing and commissioning all installed gas pipes after concreting.</td>
</tr>
<tr>
<td>Street lighting installation</td>
<td>Make available to the utility undertaking within the period commencing from the date 5 months prior to the programmed completion date of the earliest block to the programmed completion date of the last block in the project, and within 2 weeks of notification by the CM or the utility undertaking an area 1.5 m wide along the utility undertaking’s external underground cable route for the street lighting.</td>
</tr>
<tr>
<td>Fixed telecommunication network services (FTNS) installation</td>
<td>Make available to FTNS Operators the Telecommunication and Broadcasting Equipment (TBE) room and meter/communication rooms and other facilities at least 5 months prior to completion of each block. Arrange the provision of permanent electricity power supply installation within two weeks after energisation of the main switchboard and make available to FTNS Operators the permanent electricity power supply inside TBE rooms at least 1 month prior to completion of each block. Make available to FTNS Operators at least 5 months prior to completion of each block and within 2 weeks of notification by the CM or the FTNS Operator, the lead-in ducts and the area along the external cable route for FTNS installation.</td>
</tr>
</tbody>
</table>
Domestic pay television programme services (DPTPS) installation

Make available to the DPTPS Operators the TBE rooms and meter/communication rooms and other facilities at least 5 months prior to completion of each block.

Arrange the provision of permanent electricity power supply installation within two weeks after energisation of the main switchboard and make available to DPTPS Operators the permanent electricity power supply inside TBE rooms at least 1 month prior to completion of each block.

Make available to the DPTPS Operators at least 5 months prior to completion of each block and within 2 weeks of notification by the CM or the DPTPS Operator, the lead-in ducts and the area along the external cable route for DPTPS installation.

<table>
<thead>
<tr>
<th>Government Department</th>
<th>Requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hong Kong Police Force</td>
<td>Fitting out work to Police Posts</td>
</tr>
<tr>
<td></td>
<td>Provide completion of Police Reporting Centre/Police Neighbourhood Unit for complete handover to Government for fitting out work at least three months before the completion date for Block No.</td>
</tr>
</tbody>
</table>
3. Provide a minimum floor area of 48 m² for each block for the erection of special secure store rooms by Nominated Sub-contractors, Direct Contractors etc.;

4. Such sheds are to be provided, erected and cleared away by the Nominated Sub-contractors, Direct Contractors, Government Departments and utility undertaking;

5. Provide security to all storage areas and illuminate all surrounding areas to any storage sheds erected.

**PRE.B12.850.7 TEMPORARY SERVICES**

1. Provide adequate temporary water and electrical supplies at convenient positions throughout the Works under construction and to work and storage areas within the Site for lighting, operation of power tools and testing and commissioning up to and including final acceptance of the installation by the CM;

2. In compliance with GCC Clause 5.11(4), ensure that all Nominated Sub-contractors, Direct Contractors, Government Departments and Utility Undertakings are provided with sufficient lighting where any of their work is carried out in darkness;

   Note 1: Special requirement for the provision of temporary electrical supply for testing installations are set out in PRE.B12.920.

   Note 2: The temporary electrical supply and a permanent water supply for testing to be made available for each installation at least 1 month before the completion date of each building.

3. In compliance with GCC Clause 5.11(4), ensure that all Direct Contractors, Government Departments and Utility Undertakings are provided with sufficient lighting where any of their work is carried out in darkness.

**PRE.B12.860.7 SITE CONVENIENCES**

Provide the use of the telephone, drinking water, mess rooms, latrines and the usual conveniences of a building site.

**PRE.B12.870.7 UNLOADING ETC**

Provide such assistance as is necessary in the unloading of plant, goods and materials brought onto the Site.

Take delivery at the Site, unload, check, examine, store and protect, remove from store, distribute and hoist and deliver to position. Return all crates and other packing as required.

**PRE.B12.880.7 WATCHMAN/SECURITY GUARDS**

Provide such watchmen or security guards as are reasonably necessary to safeguard the Site. In this connection, Direct Contractors will be required to provide reasonable access to or knowledge of their materials stored on the Site in order that an adequate service can be provided for the safe custody of such materials.

**PRE.B12.890.7 CLEARING AWAY RUBBISH**

Provide such service as is necessary for the clearing away of rubbish as it accumulates and at the end of each working day. Carry out a general tidying up at the end of each week.

**PRE.B12.900.7 MAKING GOOD**

Make good on completion any work disturbed by the use or removal of the above facilities.

**PRE.B12.910.7 SPECIAL BONDING**

Provide special bonding to blockwork or brickwork as MAS1.W850 where blockwork or brickwork is discontinued by conduit installation.

PRE.BS1 PRELIMINARIES

PRE.BS1.010.7 PRELIMINARY ITEMS

1. The Preliminary Items included hereunder apply to the whole of the Sub-contract Works contained in the Specification and the amounts inserted by the Sub-contractor in the Summary of Tender shall be inclusive of such Preliminary Items and shall be deemed to apply to the whole of the Sub-contract Works carried out under this Sub-contract;

2. Where the word "allow" occurs, the cost of the items shall be at the risk of the Sub-contractor and no adjustment shall be made at the settlement of accounts except where such adjustment is expressly provided for in the Conditions of Sub-contract;

3. All the materials to be used in the Sub-contract Works shall be new.

PRE.BS1.020.7 SITE OF THE WORKS

1. The Site of the Works is as stated in the Specification;

2. The Site may be inspected by applying to the responsible Housing Department (HD) officer as indicated in the Special Conditions of Tender. The Sub-contractor will be deemed to have inspected the Site and taken necessary measurements prior to tendering.

PRE.BS1.030.7 EXTENT OF SUB-CONTRACT

1. The Sub-contract Works are described in the Specification, and shall comprise the supply, off-loading, storing, assembly, installation, testing, adjustment, commissioning and maintenance of the complete installation to the satisfaction of the Contract Manager;

2. The words "complete installation" shall mean not only the major items of plant and apparatus conveyed by the Specification, but all the incidental sundry components necessary, for the complete execution of the Sub-contract Works and for the proper operation of the installation, with their labour charges, whether or not these sundry components are mentioned in detail in the tender documents issued in connection with the Sub-contract.

PRE.BS1.040.7 LUMP SUM TENDER

1. The tender shall be a "lump sum tender" for executing the Sub-contract Works in accordance with the Sub-contract. The Sub-contract Sum shall be subject to adjustments for any Prime Cost, Provisional and Contingency Sums, for any variations and for any other adjustments provided for under the Sub-contract;

2. The Sub-contractor's prices shall be deemed to include for the cost of all labour, material, all cutting and waste, duties, royalties, packing, freight, shipping, insurance, godown, or other storage costs, delivery to site, hoisting and fixing in the required position, plant, supervision, profit and all things and matters necessary for the carrying out of all the Sub-contract Conditions and the timely and satisfactory completion of the entire Sub-contract Works contained in the Sub-contract whether in the Drawings or Specification such be expressed or not;

3. The tender shall be fixed priced. There will be no adjustment to the Sub-contract Sum for any changes in the Index Figures under Clause 20.2 of the General Conditions of Main Contract or for rises or falls in the cost of freight, insurance, money exchange rate fluctuations, or any other item occurring after submission of tender;
4. There will be no adjustment to the Sub-contract Sum for any changes in the Index Figures under Clause 20.2 of the Main Contract Conditions or for rises or falls in the cost of freight, insurance, money exchange rate fluctuations, or any other item occurring after submission of the tender;

5. The Sub-contract shall be subject to adjustment for price fluctuations in accordance with Clause NS13.1 of the Special Conditions of Sub-contract;

6. The Sub-contract shall be subject to adjustment for price fluctuations in accordance with Clause NS13.1 of the Special Conditions of Sub-contract and Appendix "R" to the Specification;

7. The Employer or the Main Contractor will not be liable for any expenses incurred by the Sub-contractor in connection with the measurement of variations or the adjustment and settlement of accounts.

**PRE.BS1.050.7 COPIES OF PRICES**

The Sub-contractor shall permit the requisite number of copies of his prices, extensions and costs be made for the purposes of the Sub-contract.

**PRE.BS1.060.7 DEFINITIONS AND INTERPRETATION**

This clause provides additional definitions and supplementary information to the definitions in the Sub-contract Conditions.

1. **Contractor:**
   a. May also be described herein as the "Main Contractor";
   b. May also be described herein as the "Main Contractor". The Main Contractor is .................................................................

2. **Contract Manager:**
   a. The Contract Manager is the officer holding the post of Chief Architect/.........of Housing Department;
   b. The Contract Manager shall be Messrs ........................................

3. **Engineer:**
   a. The Engineer shall be the officer holding the post of Building Services Engineer duly appointed by the Contract Manager as a Contract Manager's Representative and to whom the Contract Manager has delegated certain of the powers and duties vested in him in respect of this Sub-contract and in his absence the person designated to fulfil his duties and whose directions and approvals shall be deemed to be those of the Contract Manager;
   b. The Engineer shall be Messrs ........................................

4. **Surveyor:**
   a. The Surveyor is the officer holding the post of Chief Quantity Surveyor of Housing Department;
   b. The Surveyor shall be Messrs. .........................

5. **Building Services Inspector:**
   The Building Services Inspector shall be the officer duly appointed by the Contract Manager to be a Contract Manager's Representative in respect of this Sub-contract.
6. **BS and CP:**

BS and CP shall mean British Standards Specification and British Standard Codes of Practice respectively, and shall be deemed to include all amendments, revisions and standards superseding the standards listed herein, which are listed in the BSI catalogue current at the date 42 days prior to the date for return of tenders unless otherwise specified. Copies of these documents are available from the British Standards Institution, U.K..

7. **Approved or Approval:**

a. To mean to the approval in writing of the Contract Manager;

b. In the context of design responsibility, such approval shall be taken to mean the confirmation of the Contract Manager that the requirements of the Employer appear to have been met but shall not be taken to relieve the Sub-contractor or the Main Contractor from the responsibilities imposed by the Sub-contract.

**PRE.BS1.070.7 MAIN CONTRACT CONDITIONS**

1. The Sub-contractor's attention is particularly drawn to the Hong Kong Housing Authority General Conditions of Contract for Building Works (2013 Edition) together with the Special Conditions of Contract for the Main Contract issued by Housing Department of the Hong Kong Housing Authority which may be inspected at the office of the Contract Officer, 8th floor, Housing Authority Headquarters;

2. The Sub-contractor shall comply with all the provisions of the Main Contract in so far as they apply to the Sub-contract Works and are not inconsistent with the express provisions of the Sub-contract. The Sub-contractor's particular attention is drawn to the requirements of Clause 4.1 of the General Conditions of Sub-contract;

3. The particulars inserted in the Appendix to the Form of Tender for the Main Contract are shown in Appendix "Q" to the Specification;

4. The Main Contract provides for Retention Money Held in respect of the Nominated Sub-contractor of five per cent (5%) of any estimated sums payable in respect of works carried out by the Sub-contractor until the total of any such monies reaches the limit of $......................

**PRE.BS1.080.7 SUB-CONTRACT**

The Sub-contractor carrying out the Sub-contract Works described in these documents will be required to enter into a Sub-contract with the Main Contractor in accordance with the Hong Kong Housing Authority Articles of Agreement and General Conditions of Nominated Sub-contract to Building Works Contracts (2013 Edition) for use with the Hong Kong Housing Authority General Conditions of Contract for Building Works (2013 Edition).

**PRE.BS1.090.7 APPENDIX TO THE GENERAL CONDITIONS OF SUB-CONTRACT**

Appendix to the General Conditions of Sub-contract will be filled in as follows:

Part I

First Recital

Particulars of the works (being a part of the Main Works comprised in the Main Contract) in this Sub-contract referred to as "The Sub-contract Works" viz.:—
Part II

Clause 1.1

Sub-contract Sum:-

Dollars

($                       )

Part III

Clause 6.1(2) of the General
Conditions of Sub-contract

To be completed on or before

the date (or the dates)

which is (or are)

Sections of the
Main Works

a. Blocks ..........  (   ) months from and including the notified date
    for commencement of the Main Works
b. Blocks ...........  (   ) months from same

c. Remaining works  (   ) months from same

d. Whole Main Works  (   ) months from same

PRE.BS1.100.7    SCHEDULE OF RATES

1. The Sub-contractor shall complete the attached Schedule of Rates in compliance
with the Specification and Drawings in full detail and submit together with the
relevant documents as specified. The use of "lump sums" in the Schedule of Rates is to be avoided wherever possible. The total of quantities multiplied by
unit rates shall equal the tendered price. The unit rates will be used for the
purpose of tender assessment. Ascertainment of the price of variations and
calculation of the amounts of interim payments shall be in accordance with the
Sub-contract Conditions;

2. The Sub-contractor shall complete the attached Schedule of Rates in compliance
with the Specification and Drawings in full detail and submit together with the
relevant documents as specified. The completion of the Schedule of Rates shall
be in accordance with the principles laid down in the Preambles included therein.
The use of "lump sums" in the Schedule of Rates is to be avoided wherever possible. The total of quantities multiplied by unit rates shall equal the tendered
price. The unit rates will be used for the purpose of tender assessment. Ascertainment of the price of variations and calculation of the amounts of
interim payments shall be in accordance with the Sub-contract Conditions.
SUB-CONTRACT DRAWINGS

1. The Sub-contract Drawings are as listed in Appendix "P" of the Specification;
2. Sub-contract Drawings are diagrammatic and indicate the general arrangement of the system and work included in the Sub-contract. In addition, the architectural and structural drawings and details supplied for information purposes shall be examined for exact location of fixtures and equipment. Where they are not definitely located, this information shall be obtained from the Contract Manager. Architectural and structural drawings will be made available on application to the Engineer and subject to a charge for copying;
3. All the Specification Notes contained on the Drawings are to be read in conjunction with the Specification.

PROVISION OF EVERYTHING NECESSARY

The Specification and the Drawings are to be used jointly and anything not specifically mentioned in either but necessary for fulfilment of the guarantees and requirements called for under this Sub-contract, or necessary for the proper working of the system to the satisfaction of the Contract Manager is to be provided under the Sub-contract.

DISCREPANCIES

Any discrepancy or ambiguity between or amongst the Drawings and the Specification found after the date of the Letter of Acceptance shall be queried, through the Main Contractor, with the Contract Manager, who shall issue to the Main Contractor instructions clarifying such ambiguities or discrepancies.

RESPONSIBILITY

The Sub-contractor shall be responsible for the proper working of the installation to produce the specified requirements in compliance with the Sub-contract documents to the entire satisfaction of the Contract Manager and shall be responsible for compliance with all tests called for herein or required through the Main Contractor by the Contract Manager. In the event of anything described in the Specification or shown on the Drawings being, in the Sub-contractor’s opinion, unsuitable or inconsistent with his warranties or responsibilities, the Sub-contractor shall draw the attention of the Contract Manager to these matters at the time of tendering. The Sub-contractor is responsible to the Main Contractor for any design undertaken by him as required by the Specification including but not limited to the choice of material, plant equipment and detailed layout is to be made by the Sub-contractor.

SITE CONDITION, SITE ACCOMMODATIONS

1. The Sub-contractor shall be deemed to have inspected, at the offices of the Contract Manager, drawings showing the extent of the Site and type of building to be erected on that Site and to have visited the Site, and held discussions with the Main Contractor, if appointed, so as to satisfy himself as to the local condition, access, method of construction, extent and character of the Works;
2. No subsequent claim whatsoever will be considered on the ground of ignorance of the conditions under which the Works are to be carried out;
3. The Sub-contractor’s employees and workers shall observe all rules and regulations of the Government, the Employer, or the Main Contractor, in regard to access to the Site, security thereof, issuing of passes and the like;
4. The Sub-contractor shall be provided with a reasonable working space within the Site for the use of his site staff and for storage of his materials, all as detailed in Appendix "Q" to the Specification - "Extracts from the Main Contract". The Sub-contractor must allow in his Tender for moving his allocated work area and stores and also his plant, etc. from time to time as may be required to enable the Main Contractor and other trades to proceed with their work in accordance with the building programme;

5. Work people will not be permitted to live on Site.

**PRE.BS1.160.7 NOTIFIED DATE FOR COMMENCEMENT OF MAIN WORKS AND THE LETTER OF ACCEPTANCE OF SUB-CONTRACT TENDER**

1. The notified date for commencement of Main Works under Clause 8.1 of the General Conditions of Main Contract shall occur within the period of time after the date of the Main Contract Letter of Acceptance as stated in the appendix to the Form of Tender of the Main Contract;

2. The Letter of Acceptance of the Sub-contract Tender shall give the following information:

   a. The notified date(s) for commencement of the Main Works or Sections thereof, the date(s) for completion of the Main Works or Sections thereof, and of the respective date(s) for completion of the corresponding Sub-contract Works in accordance with Clauses 6.1(1) and 6.1(2) of the General Conditions of Sub-contract; and

   b. The date(s) on or before which the Main Contractor shall hand-over to the Sub-contractor the lift wells/machine rooms/escalator pits/working areas* for the Sub-contract Works, as determined in accordance with the above dates and clause LTE1.3.035.

3. The anticipated notified date for commencement of the Main Works is ..........................................................................................................................

4. The notified date for commencement of the Main Works was ..........................................................................................................................

5. The Letter of Acceptance of the Sub-contract Tender shall give the following information:

   The notified date(s) for commencement of the Main Works or Sections thereof, the date(s) for completion of the Main Works or Sections thereof, and of the respective date(s) for completion of the corresponding Sub-contract Works in accordance with Clauses 6.1(1) and 6.1(2) of the General Conditions of Sub-contract.

**PRE.BS1.165.7 PHASED ISSUANCE OF WORKING DRAWINGS AND DETAILS**

1. Main Contract working drawings and details will be available for issue to the Main Contractor for construction purposes in phases. Phased issuance of these working drawings and details are listed in Specification clause PRE.B4.030 of the Main Contract;

2. The Sub-contractor is required to programme his Sub-contract Works to suit and allow for any additional costs in connection with the above restrictions.

**PRE.BS1.170.7 PHASED POSSESSION OF SITE/AND COMMENCEMENT OF THE MAIN WORKS**

1. There are no special provisions in the Main Contract for phased possession of the Site;

2. In accordance with Clause 8.2 of the General Conditions of Main Contract the extent of Portions to which the Main Contractor will be given possession from time to time, and the order in which such Portions shall be made available, are as follows:
a. Area ........ for Blocks ...... and ...... - available at the notified date for commencement of the Main Works;

b. Area ........ for Blocks ...... and ...... - available within ...... months after the notified date for commencement of the Main Works;

c. Area(s) ......... available at the commencement date specified in the Excavation Permit issued by Highways Department or other duly constituted authority;

d. ........................................

3. In the Main Contract there are no special requirements for phased commencement of the Main Works in Sections;

4. In accordance with Clause 8.1 of the General Conditions of Main Contract, the dates for commencement of the following Sections of the Main Works are not the same as the notified date for commencement of the Main Works. The notified dates for commencement of such Sections of the Main Works are as follows:

a. Section ....... of the Main Works for Blocks ........ and .......... shall have a date for commencement within ........months of the notified date for commencement of the Main Works. The date for commencement of the Section of the Main Works shall be as notified in writing by the CM;

b. Section ....... of the Main Works for Blocks ........ and .......... shall have a date for commencement within ........months of the notified date for commencement of the Main Works. The date for commencement of the Section of the Main Works shall be as notified in writing by the CM.(Guidance Note: For sub-clause (5), delete or complete with relevant details or amend as appropriate. Details will be found in Specification clauses PRE.B4.040, PRE.B4.050, PRE.B4.060 and PRE.B4.065 of the Main Contract.).

5. The Main Contract imposes certain restrictions on commencement of parts of the Main Works as follows:

a. Commencement of those Sections of the Main Works which are "Works Subject to Excision" in accordance with Clause 9.1 of the General Conditions of Contract for the Main Contract are listed in Specification clause PRE.B6.200 of the Main Contract (see also Specification clause PRE.B2.020 of the Main Contract). Further details are included in Appendix "Q" to the Specification - "Extracts from the Main Contract";

b. Restrictions on commencement of the following parts of the Main Works are listed in Specification clause PRE.B4.040 of the Main Contract:

   i. Laying of pipes in the open area/roads;

   ii. Building Works (except pile installation, pile cap and footing construction);

   iii. Excavation and Lateral Support Works (ELSW);

   iv. Curtain walling works;

   v. ........................................

   c. Restrictions on commencement of the Main Contract pile installation and/or footing construction and/or ELSW works are listed in Specification clause PRE.B4.050 of the Main Contract;

   d. Restrictions on commencement of the Main Contract pile caps construction works are listed in Specification clause PRE.B4.060 of the Main Contract;

   e. Restrictions on commencement of the Main Contract Site Formation Works are listed in Specification clause PRE.B4.065 of the Main Contract.

6. The Sub-contractor is required to programme his Works to suit.
Option 1

1. There are no special provisions in the Main Contract for phased completion of the Main Works in Sections.

Option 2

1. The Main Contractor is required to phase the completion of the Main Works in the following Sections:

<table>
<thead>
<tr>
<th>Section of Main Works</th>
<th>Time for completion (from and including the notified date for commencement of the Main Works unless otherwise stated)</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Section 1: Block ...........</td>
<td>................ months;</td>
</tr>
<tr>
<td>b. Section 2: Block ...........</td>
<td>................ months;</td>
</tr>
<tr>
<td>c. Section 3: .......... at Area ...........</td>
<td>................ months from the date of possession of Area ..........;</td>
</tr>
<tr>
<td>d. Section 4: Primary School</td>
<td>................ months;</td>
</tr>
<tr>
<td>e. Section 5: Remaining Works</td>
<td>................ months.</td>
</tr>
</tbody>
</table>

Completion of each Section shall be deemed to include completion of all associated services, emergency vehicular access roads, drainage, external works and the like.

Completion of the Section shall be conditional upon the passing of final tests and inspections prescribed by the Specification of the Main Contract and the completion of any remedial works arising from such tests and inspections.

2. Special requirements for phasing the Main Works to suit Nominated Sub-contractors and Direct Contractors, Utility Undertaking and Government Departments are given in specification clauses PRE.B12.710 to PRE.B12.740 of the Main Contract inclusive;

3. The Main Contractor is required to complete the placement of fill in the open area/roads to the required finished levels within six months from the notified date for commencement of the Main Works as stated in specification clause PRE.B2.010 sub-clause .......... of the Main Contract;

4. The Main Contractor is required to provide the following sample wing, sample flats and construction of mock-up on the location of the typical floor at 4th floor or above of the appropriate blocks to be proposed by the Main Contractor and agreed with the CM, no later than two months after completion of the tenth floor concrete frame including the eleventh floor slab:

<table>
<thead>
<tr>
<th>Block ...........</th>
<th>Entire wing of ...........</th>
</tr>
</thead>
<tbody>
<tr>
<td>Block ...........</td>
<td>........... floor 1 No. flat type</td>
</tr>
<tr>
<td>Block ...........</td>
<td>........... floor 1 No. construction mock-up as described in Specification Clause PRE.B9.440 of the Main Contract.</td>
</tr>
</tbody>
</table>

The Main Contractor is required to conform with the following requirements for the sample wing, sample flats and construction mock-up:

a. Completion to include all finishes and fittings, including all utility connections and building services item, and passing all necessary tests including watertightness and equipotential bonding tests;
b.Externally, complete with external finishes, services pipes, windows with glazing and drying racks;

c. Externally finishes to extend to the level of the floor immediately above and below the floor of the sample wing;

d. Keep clean and clear access to sample wing, sample flats and construction mock-up at all times and allow for access by parties authorized by the CM;

e. Provide security and maintain the Approved sample wing and sample flats until completion of the Main Works, including provision of all necessary temporary lighting inside the flats and at corridors and provide lockable gates at strategic locations to prevent unauthorized entry but not obstructing fire escape routes;

f. Provide security and maintain the Approved construction mock-up including provision of all necessary lighting inside the flats and at corridors and provide lockable gates at strategic locations to prevent unauthorized entry but not obstructing fire escape routes;

g. Obtain the CM’s Approval for the removal of the installed finishes and fittings at the construction mock-up and to complete the Works in accordance with Clause 8.3 of the General Conditions of the Main Contract.

5. The Main Contractor is required to provide exhibition and/or show flats in accordance with Clause SCC22.6 of the Special Conditions of the Main Contract and specification clause PRE.B6.830 of the Main Contract;

6. The Main Contractor is required to execute and/or provide works and/or services in relation to the taking care of the Main Works after completion during such times after certified completion as instructed by the CM under the Conditions of the Main Contract;

7. The Sub-contractor shall closely co-ordinate his programme with that of the Main Contractor and shall complete the installation to suit the phased completion of the Main Works.

PRE.BS1.190.7 PROGRAMME OF WORK

1. The Main Contractor shall submit to the Contract Manager a programme showing the sequence, method and timing, including the Sub-contract Works, giving the dates for commencement and completion of the Main Works and Sub-contract Works, and the dates on or before which the lift well and machine rooms (* and other major building services plant rooms like transformer rooms, main switch rooms, meter rooms, pump rooms etc.) shall be handed over by the Main Contractor to the Sub-contractor, in accordance with the Sub-contract provisions;

2. As soon as possible after the submission of the programme by the Main Contractor in accordance with sub-clause (1) above and after the date of the Letter of Acceptance of the Sub-contract Tender, the Main Contractor shall supply to the Sub-contractor the said programme. The Sub-contractor shall within two weeks thereafter submit to the Main Contractor and the Contract Manager through the Main Contractor a detailed Sub-contract programme, which shall be in compliance with the programme of the Main Works supplied by the Main Contractor, showing the Sub-contractor's intended method, stages, deliveries of materials and equipment, and order of proceeding with the Sub-contract Works, together with the period of time he has estimated for each and every stage of progress for information;

3. Any comment made by the Main Contractor or the Contract Manager in respect of such programme or particulars shall not relieve the Sub-contractor of any of his duties or responsibilities under the Sub-contract;
4. In accordance with Clause 4.5 of the General Conditions of Sub-contract, the Sub-contractor shall closely co-ordinate his detailed Sub-contract programme with that of the Main Contractor and revise his detailed Sub-contract programme in conjunction with any revisions to the programme of the Main Works as may be supplied by the Main Contractor from time to time;

5. The Sub-contractor shall arrange delivery of the equipment and carry out the installation work with all speed in accordance with the Main Contractor's programme or revised programme and to suit the progress of the Main Works. The Sub-contract Works including testing and commissioning shall be completed on or before the respective date(s) or re-scheduled date(s) for completion in accordance with the Conditions of Sub-contract;

6. Should the Sub-contractor consider that it may become necessary to cause overtime to be worked in order to complete the Sub-contract Works by the respective date(s) or re-scheduled date(s) for completion due to any delay for which no extension of time under the Main Contract or for which no further re-scheduling of respective date(s) for completion under the Sub-contract shall be determined, he should allow for such a contingency in his tender price. No claim for any extra in this connection will be considered.

**PRE.BS1.200.7**  
**TECHNICAL LITERATURE TO BE PROVIDED**

Unless otherwise specified in other parts of the Specification or instructed by CM, the Sub-contractor shall provide, within three months from the date of completion of the Sub-contract Works or any part thereof, two copies of each of the following:

1. Operation and maintenance manuals for the system and equipment installed;

2. Manufacturer's spare parts catalogue of the equipment offered together with a priced schedule for the supply of the manufacturer's recommended spare parts against a separate order. The prices quoted must include for the clear labelling of each item;

3. A priced schedule for the supply of any special tools against a separate order, if these are required for the operation and maintenance of the installation;

4. Testing and commissioning reports on the system and equipment installed (both hard copies and electronic copy in PDF format stored on recordable compact disc shall be provided);

5. Other documents as detailed and specified in other parts of the Specification.

**PRE.BS1.210.7**  
**INSTALLATION DRAWINGS**

1. The Sub-contractor shall, before the relevant work proceeds, prepare and submit, for review and Approval by Contract Manager, all Installation Drawings showing details of his proposal for the execution of the Sub-contract Works. Unless otherwise specified, four copies of the installation drawings are required for each submission;

2. The Sub-contractor shall develop a drawing submission schedule detailing the type, number, programme and contents of all Installation Drawings to be submitted. The drawing submission programme shall be in line with the Contractor's programme for the Main Works and in accordance with the progress of the Main Works and no work shall commence before Approval of the relevant installation drawings is given by Contract Manager. The Sub-contractor shall make due allowance in the submission programme for the need to re-submit a drawing for Approval, shall the previous submission be found unsatisfactory and hence rejected by Contract Manager and under no circumstance, shall a drawing be first submitted for Approval less than 4 weeks before the commencement of the relevant work;

3. The drawing submission schedule shall be prepared and submitted to the Contract Manager through the Main Contractor for Approval within one month after the award of the Sub-Contract;
4. In the event that any of the Sub-contractor's installation drawings are identical to any of the Sub-contract Drawings and the Sub-contractor wishes to use such Sub-contract Drawings as installation drawings he shall submit a list of such Sub-contract Drawings to the Contract Manager through the Main Contractor for Approval within one month after the award of the Sub-Contract. If Approved, the submission of installation drawings, in respect of such works, will not be required;

5. The Installation Drawings shall be prepared to a scale of 1:100 for all services in the building and 1:50 for plant rooms, meter rooms, riser ducts and similar spaces. Other drawing scales may be required as and when considered necessary by the Contract Manager;

6. After Approval, four copies of the Approved Drawings shall be supplied to the Contract Manager through the Main Contractor by the Sub-contractor without additional charge;

7. Approval of installation drawings, including those identical to Sub-contract Drawings, shall not be considered as a guarantee of measurements or building conditions and will not relieve the Sub-contractor of his obligation to perform the Sub-contract Works in strict accordance with the Drawings and Specification or for the proper matching and fitting of his work with contiguous work.

PRE.BS1.220.7 STANDARD DETAILS
All standard installation details shall conform, where applicable and in the following order of priority, to the standard drawings included in the Specification, and the standard drawings prepared by the Building Services Sections, Housing Department.

PRE.BS1.230.7 FAILURE TO SUBMIT INSTALLATION DETAILS AND LAYOUT DRAWINGS IN TIME
1. Failure of the Sub-contractor to submit the installation details and layout drawings in ample time shall not entitle him to any time extension and no claim for extension of the period for completion of the Sub-contract Works by reason of such default will be allowed;

2. Should the Main Contractor be delayed or incur additional costs due to the Sub-contractor's failure to submit the required information in due time then any expense arising will be the liability of the Sub-contractor.

PRE.BS1.240.7 MAIN CONTRACTOR'S RELATIONSHIP WITH AND ATTENDANCE ON SUB-CONTRACTORS
1. The Main Contractor shall be responsible for the whole of the Main Works including works carried out by Nominated Sub-contractors contracting with him. All instructions given by the Contract Manager to the Main Contractor referring to the work of the Nominated Sub-contractors shall be forwarded to the Nominated Sub-contractors without delay, and the Main Contractor shall ensure that the instructions are carried out promptly;

2. The Main Contractor shall provide general attendance to all Nominated Sub-contractors all as detailed in Appendix "Q" to the Specification - "Extracts from the Main Contract";

3. The Main Contractor shall make working arrangements with all Nominated Sub-contractors all as detailed in Appendix "Q" to the Specification - "Extracts from the Main Contract";

4. The Main Contractor shall also provide special attendance on the Sub-contractor all as detailed in Appendix "Q" to the Specification - "Extracts from the Main Contract";

5. The Main Contractor is required to co-ordinate the programme of works to suit the special requirements for phasing the Main Works all as detailed in Appendix "Q" to the Specification - "Extracts from the Main Contract".
PRE.BS1.250.7  **SUB-CONTRACTOR TO INFORM MAIN CONTRACTOR OF "BUILDER'S WORK"**

1. The Sub-contractor shall inform the Main Contractor of all "Builder's Works" required to be carried out as early as possible so that all chases, holes, openings, recesses, etc. may be formed or cut as the work proceeds. The Sub-contractor shall mark out on Site the position of all holes and chases, and shall supervise that the works are carried out to his requirements;

2. Should the Sub-contractor fail to give the Main Contractor reasonable notice and full particulars of the "Builder's Work" required, all additional costs shall be at the Sub-contractor's expense.

PRE.BS1.260.7  **BUILDER'S WORK DRAWINGS**

1. Unless otherwise specified, the Sub-contractor shall submit ten copies of drawings or schedules showing details of all builder's work requirements in connection with his installation to the Main Contractor for subsequent transmission to and Approval by the Contract Manager;

2. Such drawings or schedules shall contain the following information:
   a. All openings through walls, beams and slabs, with sizes and exact dimensions relative to floors and walls clearly indicated;
   b. Exact locations, details and sizes of all standard Builder's Work provisions which are included as part of the Main Contract Drawings or Sub-contract Drawings, such as cable ducts, cable pits, lamp pole foundations, etc.;
   c. Exact locations and sizes of all other Builder's Work provisions, such as equipment foundations, which may not be shown on the Main Contract Drawings or Sub-contract Drawings but which may be required to suit the Sub-contract installation.

3. Where preliminary Builder's Work provisions have already been included in the Main Contract or Sub-contract Drawings, such provisions are to be checked by the Sub-contractor;

4. Where deviations to these preliminary provisions are required, the Sub-contractor shall incorporate such provisions in his own drawings or schedules and list a schedule of these deviations on his drawings together with the reasons for such deviations and/or addition;

5. In the event that any of the Sub-contractor's drawings are identical to any of the Main Contract or Sub-contract Drawings, he shall submit a list of such Main Contract or Sub-contract Drawings to the Main Contractor for subsequent transmission to and Approval by the Contract Manager. If Approved, the submission of drawings in respect of such builder's work, as detailed in the first paragraph of this clause, will not be required;

6. It is the intention that all holes, chases, etc., shall be left in structural building work as it proceeds and not cut out subsequently, except in so far as may be necessary due to subsequent authorised variations to the scheme. The Sub-contractor shall, therefore, acquaint himself throughout the construction period of the Main Works with the Main Contractor's detailed construction programme and shall prepare his Builder's Work drawings in such order and at such times and in accordance with a programme agreed with the Main Contractor, as to enable them to be checked and Approved by the Contract Manager and enable instructions to subsequently be issued to the Main Contractor in good time before the actual construction is planned to take place.

PRE.BS1.270.7  **CHECKING DRAWINGS OF OTHER TRADES**

1. The Sub-contractor shall follow drawings in laying out work and check drawings of other trades to verify spaces in which work will be executed. Where space conditions appear inadequate, the Contract Manager shall be notified before proceeding with the installation;
2. If directed by the Contract Manager, the Sub-contractor shall, without extra charge, make reasonable modifications in the layout as necessary to prevent conflict with work of other trades or for proper execution of the work.

**PRE.BS1.280.7 DRAWINGS SUBMITTED AFTER INSTALLATION COMPLETED**

Unless otherwise specified in other parts of the Specification or instructed by CM, the Sub-contractor shall provide, within three months from the respective date(s) of completion of the Sub-contract Works or any part thereof, two copies of 'as-fitted' drawings to the Contract Manager and a framed drawing to each switch room, pump room and/or the like showing the schematic diagram(s) of connections and operation of the installed system(s). The framed drawing shall be fixed to the wall in such a way that it can easily be removed for reference.

**PRE.BS1.290.7 CUTTING AWAY AND MAKING GOOD GENERALLY**

Any cutting away of building structure and builder's work, and making good, which is necessary or required for the Sub-contract Works will be carried out by the Main Contractor, with the exception of the cutting away for the fixing of screws, philplugs, redhead bolts, etc. which shall be completed by the Sub-contractor.

**PRE.BS1.300.7 SLEEVES/SLOTS/HOLES**

The sleeves, slots, holes, etc. through walls/slabs provided for the Sub-contract Works will be cleared and cleaned by the Main Contractor where required. The slots or holes shall be backfilled and finished by the Main Contractor with the same building materials surrounding the sleeve. The sleeve should be provided by the Sub-contractor and placed to have projection of 100 mm above floor level. The annular space between the sleeve and the cable, trunking, water pipe and/or the like will be sealed up by the Sub-contractor with Approved non-inflammable materials.

**PRE.BS1.310.7 WORKS BY MAIN CONTRACTOR AND OTHERS**

1. For Electrical Installation (including CABDS Installation or CABDS/CCTVS Installation, Security Alarm/EAS/Public Address Installation and Door Phone System Installation):

   a. All foundations, footings, pits, chases, ducts, meter rooms, switchrooms, transformer rooms, generator rooms, trenches, holes, drains, hooks for ceiling fans, and similar builder’s works required for the installation will be provided by the Main Contractor. The Sub-contractor shall supply, in good time, full particulars of these requirements together with the weights of the various pieces of equipment when installed and operating;

   b. Cable ducts will be laid by the Main Contractor but the Sub-contractor shall ensure that the ducts are adequate in number and size and are in the correct position. Long ducts which are not accessible shall be lubricated with graphite powder supplied by the Main Contractor. Prior to drawing-in, cylindrical ducts shall be kept clean by the Main Contractor. All ducts provided by the Main Contractor will be complete with draw wires. Sealing of the duct ends subsequent to completion of cable installation shall be carried out by the Sub-contractor;

   c. Excavation and backfilling of cable trenches and holes and concreting for lamp pole foundation will be carried out by the Main Contractor, but the Sub-contractor shall be responsible for the installation of cable, bedding and covering with layers of fine sand, cable tile and supervision of the backfilling of cable trenches and supervision of construction of lamp pole foundations;

   d. Construction of earth pits, draw-in pits and cable turning pits will be carried out by the Main Contractor but the Sub-contractor shall ensure that the positions and dimensions of the pits shall comply with the Specification and Drawings;
e. Provision of necessary holes, chases, earth pits, underground PVC or G.I. duct and making good thereafter will be carried out by the Main Contractor but the Sub-contractor shall supply, in good time, full particulars of these requirements and shall ensure that the positions and dimensions of these provisions shall comply with the Specification and Drawings;

f. Touching up of plaster after wiring work will be carried out by the Main Contractor;

g. Water connection for sink water heaters, water and drain connections for macerators, air ducts in transformer rooms, concrete cowls for fans, etc., will be provided by the Main Contractor for the installation;

h. The openings on slabs or walls or window glazing for mounting roof extractors and/or exhaust fans respectively will be carried out by the Main Contractor, but the Sub-contractor shall submit detail drawings to indicate the setting-out dimensions and sizes of the openings and the proposed method of mounting for approval prior to installation. Such information enabling the Main Contractor to carry out his work shall be submitted in good time by the Sub-contractor;

i. Self-closing doors at main entrances will be provided by the Main Contractor but the associated electric lock shall be supplied, installed and connected by the Sub-contractor.

2. For Fire Services and Water Pump Installation:

a. All foundations, footings, pits, chases, ducts, trenches, holes, drains, PVC shields for control switches and similar builder's works required for the installation will be provided by the Main Contractor. The Sub-contractor shall supply, in good time, full particulars of these requirements together with the weights of the various pieces of equipment when installed and operating;

b. Excavation and backfilling of trenches for underground fire services pipes will be carried out by the Main Contractor, but the Sub-contractor shall provide and lay the underground F.S. pipes and shall be responsible for the supervision of the backfilling of the trenches;

c. Provision of necessary holes and chases will be carried out by the Main Contractor. The Sub-contractor shall supply, in good time, full particulars of these requirements and shall ensure that the positions and dimensions of these shall comply with the Specification and Drawings;

d. Construction of fire services pump rooms and water pump rooms with doors and louvers, sump tanks and/or roof storage tanks each with puddle flanges, drains, air vents and overflows, will be carried out by the Main Contractor. The Sub-contractor shall make any necessary pipe extension from the tank outlets to ensure non-turbulent suction into the pumps;

e. Water pipes/pipe risers from periphery of the water pump room, or from the valve pit above the well, up to the roof storage tanks will be carried out by the Main Contractor. The ultimate connection of the water pumps to puddle flanges of the water tanks and to the bottom end of the pipe riser shall be carried out by the Sub-contractor, as shown on the Drawings. The Sub-contractor shall check that the pipe circuit of the Main Contractor will have no adverse effect on the water pumping installation and ensure that the provisions are adequate in size and appropriate in position, including the detailed check-up of the rising main routes for any risk of air lock and/or water hammer;

f. Construction of the roof storage tanks each with puddle flanges, drains and overflow pipes will be carried out by the Main Contractor and the Sub-contractor shall ensure that the construction is adequate in size and to his requirements and shall make connection of the Fire Services Installation to the puddle flanges of the storage tanks as shown on the Drawings;
g. Providing and fixing of water supply pipe risers up to the roof storage tanks will be done by the Main Contractor as shown on the Drawings;

h. Construction of reinforced concrete pump bases, hoisting beams, etc., in accordance with the Drawings will be carried out by the Main Contractor. The details of the pump bases and the associated Builder’s Work requirements shall be furnished by the Sub-contractor within three weeks or a reasonable period as instructed by the Contract Manager after the date of the Letter of Acceptance;

i. Enclosures for fire service inlets, for sprinkler control valves and for hose reels will be done by the Main Contractor;

j. 380 Volts 3-phase 50 Hz electricity supply terminating at isolators in each fire services pump room and water pump room and the lighting therein will be provided by the Sub-contractor;

k. All the exit signs shown on the Drawings will be supplied and installed by the Sub-contractor for electrical installation.

3. For Air Conditioning/Mechanical Ventilation Installation:

a. All foundations, footings, pits, holes, chases, ducts, trenches, drains and similar builder’s works required for the installation will be provided by the Main Contractor. The Sub-contractor shall supply, in good time, full particulars of these requirements together with the weights of the various pieces of equipment when installed and operating;

b. All slots/enclosures for chilled water rising mains, holes and chases for supply air ducts, water pipes, plants, etc., including making good after installation of equipment will be provided by the Main Contractor. The Sub-contractor shall ensure that the positions and dimensions of these shall comply with the Specification and Drawings;

c. Construction of all A.H.U. rooms, main A/C plant room and supervisors room together with trenches, covers, plinths, etc., will be carried out by the Main Contractor;

d. Construction of reinforced concrete slabs and machine plinths, concrete supports, hoisting beams, etc. necessary for the installation of the main plant and machinery in accordance with the Drawings will be carried out by the Main Contractor. The details and the associated Builder’s Work requirements shall be furnished by the Sub-contractor within three weeks, or such reasonable period as instructed by the Contract Manager, after the date of the Letter of Acceptance;

e. Furnishing of all necessary cement and/or concrete for "grouting-in" brackets, bolts, etc. will be carried out by the Main Contractor;

f. Provision of fresh water connections and drain to make-up tank will be carried out by the Main Contractor;

g. Fresh water connections for testing will be provided by the Main Contractor;

h. Louvers on doors will be provided by the Main Contractor where necessary;

i. Adequate access for the transportation of equipment to plant room, A.H.U. rooms, etc. will be provided by the Main Contractor;

j. 380 Volts 3-phase 50 Hz electricity supply terminating at isolator in each plant room and A.H.U. room and the lighting therein will be provided by the Sub-contractor for electrical installation.

4. For Lift Installation:

a. Construction of the lift well and enclosures with pit and machine room will be carried out by the Main Contractor;
b. Provision of holes, chases, openings, plinths, vents, other facilities and Builder's work required for the installation will be provided by the Main Contractor. The Sub-contractor shall submit, in good time, full particulars of these requirements together with the operating weight of various piece of equipment for approval prior to installation;

c. Provision of scaffolding in lift wells for the erection of lift machinery and accessories, will be carried out by the Main Contractor. The Sub-contractor shall submit, in good time, full particulars of these requirements;

d. Provision of concrete fill and/or grouting in for brackets, bolts, etc. will be carried out by the Main Contractor;

e. Provision of fill and/or grouting in with fire resisting material for architraves, landing door sills, indicator and control stations will be carried out by the Main Contractor;

f. Provision of a cat ladder giving access to each lift pit will be carried out by the Main Contractor but the design and exact location of such cat ladder shall be determined by the Sub-contractor;

g. Provision of lifting beams for the erection of lift machinery in the machine room and/or lift well will be provided by the Main Contractor. Exact safe working load and locations required shall be advised by the Sub-contractor;

h. Provision of a cat ladder and removable railing to the raised platform of the lift machinery supports in the lift machine room, where required, will be carried out by the Main Contractor;

i. 380V 3-phase 50Hz electricity supply terminating at an isolator in each lift machine room will be provided by Sub-contractor for electrical installation;

j. Concealed conduits as shown on the Drawings for the lift alarm system, where required, will be provided by the Sub-contractor for electrical installation;

k. Machine room lighting, sockets and exhaust fans will be provided by the Sub-contractor for electrical installation;

l. A pair of voltage-free contacts terminated inside a surface mounted box inside the lift machine room will be provided by the Sub-contractor for electrical installation for the operation of lifts upon the actuation of the emergency generator;

m. A layer of dust proof paint to the lift machine room floor and lift pit floor will be applied by the Main Contractor;

n. Provision of permanent anchorage adjacent to lift landing doors at the lowest landing floor for use by worker to lock fall arrestor and safety harness when required to access lift pit.

5. For Escalator Installation:

a. Construction of the escalator pits, wells and concrete supporting beams will be carried out by the Main Contractor;

b. Provision of holes, chases, openings, plinths, vents, other facilities and Builder's work required for the installation will be provided by the Main Contractor. The Sub-contractor shall submit, in good time, full particulars of these requirements together with the operating weight of various piece of equipment for approval prior to installation;

c. The external cladding of the undersides and sides of the escalator covering truss, machine space other than the exterior panelling and balustrade decking, where required, will be provided by the Main Contractor;

d. Solid triangular vertical obstruction guards will be provided by the Main Contractor in the intersection of the angle of the outside balustrade and the ceiling or soffit. The exact locations of such guards shall be determined by the Sub-contractor;
e. A canopy or other similar structure, where shown on the Drawings, for the protection of the weather-proof escalator will be provided by the Main Contractor;

f. A permanent drain point at the bottom escalator pit, where required, will be provided by the Main Contractor for the weather-proof escalator drainage.

PRE.BS1.320.7 SUPERVISING ENGINEER

1. Unless otherwise specified, the Sub-contractor is to employ for the supervision of all works on Site, at least one qualified English and Cantonese speaking Supervising Engineer to be approved by the Contract Manager;

2. The Supervising Engineer shall have attained the following mandatory safety training qualification:

   a. Safety Training Course for Site Management Staff (nominal course duration 27 hours) provided by the Construction Industry Council or Occupational Safety & Health Council or equivalent training provided by other organizations subject to verification that the equivalent training is based on course contents of equivalent or higher standard.

3. The Supervising Engineer can be exempted from certain modules of the Safety Training Course for Site Management Staff by fulfilling the exemption criteria laid down by the Construction Industry Council or Occupational Safety & Health Council.

4. If the Supervising Engineer in sub-clause (2) above cannot comply with the safety training qualification stipulated therein but have attained the following qualification on or before the date of the Employer’s letter of nomination of the Nominated Sub-contractor, such appointed superintendent is allowed to attain the safety training qualification of the Safety Training Course for Site Management Staff (with exemption of Modules 1, 2 and 3 for attainment of the qualification) or the equivalent training as referred to in sub-clause (2)(a) above within six months from the date of the Employer’s letter of nomination of the Nominated Sub-contractor:

   a. Basic Safety Management course (nominal course duration 12 hours) provided by the Occupational Safety & Health Council or equivalent course provided by the Construction Industry Council or equivalent training provided by other organizations subject to verification that the equivalent training is based on course contents of equivalent or higher standard; and

      Basic Accident Prevention course (nominal course duration 12 hours) provided by the Occupational Safety & Health Council or equivalent training provided by other organizations subject to verification that the equivalent training is based on course contents of equivalent or higher standard;

   or

   b. Safety Supervisor (Construction) course (nominal course duration 43 hours) provided by the Occupational Safety & Health Council or Construction Safety Supervisor course (nominal course duration 42 hours) provided by the Construction Industry Council.

PRE.BS1.330.7 SITE SUPERVISOR AND LABOUR STRENGTH REPORT

1. The Sub-contractor is to employ full time a competent, technically qualified, English and Cantonese speaking Site Supervisor, approved by the Contract Manager, with power to receive, via the Contractor, the instructions of the Contract Manager or his Representative. Whenever there is work supervision required, the Site Supervisor shall be available on Site to provide adequate supervision and liaison to the satisfaction of the Contract Manager;
2. The Site Supervisor shall have attended and completed the Safety and Health Supervisor (Construction) Course (nominal course duration 43 hours) provided by the Occupational Safety and Health Council or Construction Safety Supervisor Course (nominal course duration 42 hours) provided by the Construction Industry Council. Acceptance of training provided by other organizations is subject to verification that the training is based on course contents of equivalent or above standards and the appointed superintendent has attained the associated qualification;

3. The Sub-contractor shall submit to the satisfaction of the Contract Manager's Representative via the Main Contractor the on site deployment schedule of the Site Supervisor having regard to the programme and progress of works within one month after issuance of letter of acceptance. The Sub-contractor shall revise the schedule from time to time to suit the supervision and liaison need arising from the progress of works;

4. The Sub-contractor shall submit to the Contract Manager's Representative via the Main Contractor in the morning of every working day the daily labour strength report. Such report shall indicate the number of workers and their deployment on site on that day. Labour strength report is not required when there is no installation works on site.

PRE.BS1.340.7 ORDERING
Immediately on his appointment the Sub-contractor shall obtain Approval of all particulars and details necessary for the placing of orders and thereafter shall, as soon as possible, place orders for all equipment and materials. In placing such orders it shall be the Sub-contractor's responsibility to ensure that his suppliers are fully acquainted with, and work strictly to, the requirements and time limits of the Sub-contract.

PRE.BS1.350.7 MATERIALS AND WORKMANSHIP
All materials supplied and work carried out shall be the "best" of their respective kinds and to the Approval of the Contract Manager.

PRE.BS1.360.7 SAMPLES
A sample board containing samples of materials and accessories shall be supplied by the Sub-contractor, via the Main Contractor, to the Contract Manager for Approval before the commencement of the installation work. A label bearing the name of the Sub-contractor, the title of the Sub-contract and a list of materials and their manufacturers, shall be attached to the sample board. The Approved sample board shall be displayed in the site office throughout the whole of the Sub-contract period. The Sub-contractor shall supply sufficient samples of materials as required for testing purpose.

PRE.BS1.370.7 TESTING OF MATERIALS
1. The Sub-contractor shall include in his rates for the cost of material testing stipulated in the Specifications or Drawings. For test not stipulated in the Specifications or Drawings but instructed by the Contract Manager, the expense of the test shall be valued by the Surveyor pursuant to Clause 7.1 of the General Conditions of Main Contract. However, if the test result shows that the material cannot meet the requirements stipulated in the Specifications or Drawings or pre-agreed standards, the expense of such test shall be borne by the Sub-contractor. The Sub-contractor shall propose and carry out at his own expense further or any other tests as necessary and approved by the Contract Manager to substantiate compliance;
2. For compliance tests required to be conducted by accredited laboratories as stipulated in the Specifications or Drawings or instructed by the Contract Manager, the Sub-contractor shall submit their applications for engagement of accredited laboratories together with confirmation of no affiliation between the Sub-contractor and the laboratories using the standard template at Appendix PRE.BS1.APPEND1 for approval by the Contract Manager;

3. The Sub-contractor shall instruct the engaged laboratories to send the test reports, once available, to the Contract Manager and the Sub-contractor at the same time;

4. The requirements in sub-clauses (2) and (3) above are not applicable to equipment type tests or tests conducted by laboratories engaged by material/equipment manufacturers.

PRE.BS1.380.7 CARE AND PROTECTION OF THE MAIN WORKS AND THIRD PARTY OBLIGATIONS

1. For the avoidance of doubt, the Main Contract incorporates provisions requiring the Main Contractor to take overall responsibility for safety and security of the Main Works, care of the Main Works, and injury or damage to third parties arising out of or in consequence of the Main Works. The Main Contract further provides that the Main Contractor takes out insurances in respect of care of the Main Works and third party claims. The Main Works means the Works as defined in the Main Contract and include works or services to be carried out by Nominated Sub-contractors. The Main Contractor's responsibilities and insurances will likewise include works or services to be carried out by Nominated Sub-contractors. The Sub-contractor is referred to the Main Contract wherein the scope of the Main Contractor's obligations is more fully described;

2. The Sub-contractor is expected to generally co-operate with the Main Contractor in performance of his obligations and in this respect his attention is particularly drawn to Clause 4.8 and Sub-clauses 4.1(1) (b), (c) and (d) of the General Conditions of Sub-contract. He shall furthermore be responsible for taking the following specific measures of co-operation:
   a. Any storage shed constructed on space provided by the Main Contractor is to be of sound, weatherproof construction and provided with a secure locking device;
   b. Where goods are placed in other storage areas, the Sub-contractor is to take such precautionary measures within the areas as are necessary and practical;
   c. Goods are to be stored appropriately;
   d. The Sub-contractor shall complete the proforma of Building Services Material Delivery Inventory Record as shown on Appendix "S" and submit to the Main Contractor with all supporting documents to enable him to carry out his obligations under Specification clause PRE.B8.1460 of the Main Contract;
   e. The Sub-contractor shall close open ends of work with temporary covers or plugs during storage and construction to prevent entry of foreign materials.

PRE.BS1.390.7 REGULATIONS AND GOVERNMENT LAWS

The Sub-contractor shall comply with all regulations and enactments including those of the Government of the Hong Kong Special Administrative Region, the Fire Services Department, the Buildings Department, the Electrical and Mechanical Services Department, the Water Supplies Department, and other utility undertaking and shall be responsible for giving notifications to the appropriate duly constituted authority and for paying all fees as required under this Sub-contract, such fees shall be included in the Tender.
PRE.BS1.400.7 SUB-CONTRACTOR TO GIVE NOTICE OF INJURY
In the event of any workers or other persons employed on the Sub-contract Works or in connection with the Sub-contractor suffering any personal injury and whether there be a claim for compensation or not, the Sub-contractor shall, without delay, notify the Commissioner of Labour through the Main Contractor in such form as the Commissioner of Labour may require and shall forward two copies of such notification to the Contract Manager.

PRE.BS1.410.7 FIRE HAZARD
Where it is necessary for the Sub-contractor to use any naked flame in the carrying out of his work, adequate protection shall be given to all other materials and to the structure. Suitable fire extinguishers shall be made readily available at the position where such work is proceeding.

PRE.BS1.420.7 CLEARING UPON COMPLETION
1. On completion of the Sub-contract Works the Sub-contractor is to clear away all temporary plant and materials and to make good or reimburse the Main Contractor for any damage caused to the building fabric or services during the execution of the Sub-contract Works;

2. The Sub-contractor shall be responsible for reinstating at his own cost any structural or superficial damage to the Main Contractor's or other Specialists' works caused by the Sub-contract Works under this Sub-contract. This reinstating of damaged work will be carried out from time to time as required by the Contract Manager to co-ordinate with other contracts and Sub-contracts.

PRE.BS1.430.7 MAINTENANCE PERIOD
1. In accordance with Clause 7.1 of the General Conditions of Sub-contract, the Sub-contractor shall be responsible for maintaining, upon the completion of the Sub-contract Works or part thereof, the Sub-contract Works or parts thereof, free of charge, until the completion of the Main Works or any Section thereof as certified under the Main Contract, and for maintaining the same for the Maintenance Period of twenty-four* months commencing on the day following the certified completion date of the Main Works or any Section thereof. The Retention Money Held in respect of the Nominated Sub-contractor shall become due for certification by the Surveyor and release by the Employer in the manners as provided for in the Main Contract;

2. During the Maintenance Period, the Sub-contractor shall attend to all faults and complaints, remedy all defects, replace all malfunctioning items and maintain the entire installation all in accordance with the relevant Main Contract and Sub-contract provisions, and in particular, in accordance with Clause 10.1 of the General Conditions of Main Contract;

3. For maintenance works on energised electrical installation excluding extra low voltage system, the Sub-contractor shall provide at least two maintenance personnel to attend emergency call and at least one of the maintenance personnel shall be REW (registered electrical worker) of the appropriate grade. Safety measures as stipulated in clause PRE.BS1.435 shall be applied.

PRE.BS1.435.7 WORK ON ENERGISED ELECTRICAL INSTALLATION DURING MAINTENANCE PERIOD
1. The Sub-contractor shall strictly follow Code 4 (General Safety Requirement), Appendix 15 (Safety for Live Work) and Appendix 16 (Permit-to-work) of the CoP for the Electricity (Wiring) Regulations in carrying out work on energised electrical system/installation;
2. Where practicable, work on the electrical installation should be carried out after the concerned part of electrical installation or equipment has been isolated and verified dead with a voltage indicator; the Sub-contractor shall establish safety procedures with a responsible person to issue a permit-to-work and a person in-charge to handle the required maintenance works;

3. Where work is to be done on dead electrical installation/equipment, controlled by a circuit breaker or switch, the circuit breaker or switch should be locked off and a warning notice for repair affixed. The keys for locks used to lock off circuit breaker or switch should be kept under the control of the responsible person;

4. Live work should not be performed unless:
   a. It is necessary in the interests of safety, whether or not electrical safety, for the work to be performed while the electrical equipment is energised; or
   b. A supply of electricity is essential for the proper performance of the electrical measurement (e.g. testing and fault finding); or
   c. There is no reasonable alternative to perform the electrical work by live work (e.g. widespread outages of a building would occur if live work is not allowed); or
   d. It is justified and approved by the registered electrical worker, registered electrical contractor and owner of the installation (e.g. serious public inconvenience would arise from isolating the circuits).

5. Where live work is unavoidable, adequate precautions should be taken to avoid danger for work involving the handling of energised parts or working within touchable distance, direct or indirect, of energised parts at low voltage. The following precautions are to be taken:
   a. Work on energised low voltage electrical equipment should be done only by registered electrical workers who are by virtue of knowledge and training competent to be allowed to carry out live work;
   b. Prior risk assessment should be carried out by the registered electrical contractor, registered electrical worker or a registered safety officer on the performance of the live work;
   c. Personal protective equipment (including insulating gloves, safety shoes and insulating mat) and testing equipment appropriate to the performance of the live work should be properly used by the person performing the electrical work;
   d. Screen or other means to avoid danger from inadvertent contact with energised conductors should be provided;
   e. Fixing of warning notices for repair, barriers and screens;
   f. The duration and the extent of the live work should be minimized as far as practicable; and
   g. The isolation point of the electricity supply for the subject electrical equipment has been clearly identified.

PRE.BS1.440.7 METHOD OF CONSTRUCTION FOR THE MAIN CONTRACT

1. The Sub-contractor's attention is drawn to the method of construction for the Main Contract wherein large panel formwork, small panel metal formwork, semi-precast slabs including lattice girder semi-precast slabs, and precast concrete facades may be used as opposed to conventional methods of construction. In addition, the Main Contractor may be employing other mechanised methods of construction, e.g. precasting of structural and/or non-structural elements;
2. The Sub-contractor must check the details of the method of construction with the Main Contractor and his tender shall be deemed to include all costs and expense in connection therewith;

3. The Sub-contractor shall closely co-ordinate his programme with that of the Main Contractor and shall inform the Main Contractor of all "Builder's Works" required as early as possible so that all chases, holes, openings, recesses, etc. are formed, modified as necessary to suit the Main Contractor's method of construction, or cut as the works proceed;

4. Should the Sub-contractor fail to give the Main Contractor reasonable notice and full particulars of the "Builder's Works" required all additional costs shall be at the Sub-contractor's expense.

PRE.BS1.450.7 GREEN AND SILVER CARD

In relation to the requirements of Clause 4.7 of the General Conditions of Sub-contract, the Sub-contractor shall comply with all current Regulations concerning safety on the Site in particular the Factories and Industrial Undertakings Regulations and the requirements specified in sub-clauses (1) to (4) of this clause.

1. The Sub-contractor shall provide and employ such technical personnel and such skilled, semi-skilled and unskilled labour who, upon their first appearance in the Site and throughout their working in the Site, are a holder of either a valid Green Card issued by an organisation or institution recognized by the Labour Department or a valid Construction Workers Registration Card. The Green Card referred to in this sub-clause is a statutory identification document issued to a person by an organization or institution recognized by the Labour Department upon completion of the training on Green Card;

2. The following trades shall be carried out by workers holding Silver Cards issued by the Construction Industry Council upon their first appearance in the Site and throughout their working in the Site:
   a. Painter and Decorator;
   b. Carpenter;
   c. Demolition Worker (Building);
   d. Plumber;
   e. Bar Bender and Fixer;
   f. Plasterer and Tiler;
   g. Bamboo Scaffolder and Metal Scaffolder;
   h. Construction Materials Rigger;
   i. Curtain Wall Installer;
   j. Tower Crane Worker (Erecting, Dismantling, Telescoping & Climbing);
   k. Lift Mechanic and worker for lift installation (installation and maintenance).

3. The Sub-contractor for lift installation shall arrange and release workers of the trade listed in sub-clause (2)(k) to attend Silver Card training or revalidation training. The Sub-contractor for lift installation shall bear the fees for the training courses and pay workers the wages which they would otherwise earn during that period of attending the training courses had the Sub-contractor for lift installation not released the workers to attend the training courses;

4. Keep record of payment for the fees of the training courses and, if applicable, payment of wages to workers who have attended Silver Card training, with workers' signed acknowledgement of receipt;
5. Keep record of card numbers, card holders' names and expiry dates of the cards, for the inspection of the CM. Ensure that the Green Cards or Silver Cards held by all workers are valid;

6. Provide the Main Contractor for his submission to the CM with a record of Silver Card holders for all workers engaged for the specified trades in the prescribed form and in such time and manner as stipulated therein.

PRE.BS1.460.7 CONTRACTOR'S EMPLOYEES

1. The minimum number of Trade Tested Workers, which include Skilled Workers and Semi-skilled Workers to be employed by the Sub-contractor in accordance with Clause 5.9(1)(c) of the General Conditions of Main Contract, shall be calculated in accordance with the stated percentages of the total workforce on Site at any one time in the following scheduled trade:

<table>
<thead>
<tr>
<th>Trade</th>
<th>Minimum Percentage of Trade Tested Workers as compared to all workers employed in the same trade</th>
</tr>
</thead>
<tbody>
<tr>
<td>Skilled Workers</td>
<td>Skilled Workers plus Semi-skilled Workers</td>
</tr>
<tr>
<td>Electrical Fitter</td>
<td>40%</td>
</tr>
<tr>
<td>Control Panel Assembler</td>
<td>40%</td>
</tr>
<tr>
<td>Electrical Wireman</td>
<td>40%</td>
</tr>
<tr>

<td>30%</td>
</tr>
<tr>
<td>Communication System Mechanic</td>
<td>30%</td>
</tr>
<tr>
<td>Mechanical Fitter (For standby generator)</td>
<td>30%</td>
</tr>
</tbody>
</table>

2. Pursuant to Clause 5.9(1) of the General Conditions of Main Contract, the Trade Tested Workers shall have acquired the following qualifications:

a. Skilled Workers shall be either one of the followings:
   i. A registered skilled worker or registered skilled worker (provisional) as respectively defined in section 2(1) of the Construction Workers Registration Ordinance (Cap 583);
   ii. Holder of a trade test certificate issued by an institution (e.g. Construction Industrial Council (CIC) or Vocational Training Council (VTC)), or other qualifications as recognised by the Construction Workers Registration Ordinance.

b. Semi-skilled Workers shall be either one of the followings:
   i. A registered semi-skilled worker or registered semi-skilled worker (provisional) as respectively defined in section 2(1) of the Construction Workers Registration Ordinance (Cap 583);
   ii. Holder of an intermediate trade test certificate issued by an institution (e.g. Construction Industrial Council (CIC) or Vocational Training Council (VTC)), or other qualifications as recognised by the Construction Workers Registration Ordinance.

3. The Sub-contractor shall complete and deliver a return for the Trade Tested Workers to the Main Contractor for submission to the Contract Manager in accordance with Clause 5.25(3) of the General Conditions of Main Contract:
   a. The format of the return shall be obtained from the Contract Manager;
b. A return is to be completed in respect of the Trade Tested Workers which include Skilled Workers and Semi-skilled Workers employed on the fifteenth (15) day of each month, or in the event of the fifteenth (15) day being a General Holiday on the day immediately following the General Holiday.

4. The minimum number of Trade Tested Workers, which include Skilled Workers and Semi-skilled Workers to be employed by the Sub-contractor in accordance with Clause 5.9(1)(c) of the General Conditions of Main Contract, shall be calculated in accordance with the stated percentages of the total workforce on Site at any one time in the following scheduled trade:

<table>
<thead>
<tr>
<th>Trade</th>
<th>Minimum Percentage of Trade Tested Workers as compared to all workers employed in the same trade</th>
</tr>
</thead>

<td>30%</td>
</tr>
<tr>
<td>Electrical Fitter</td>
<td>40%</td>
</tr>
<tr>
<td>Electrical Wireman</td>
<td>40%</td>
</tr>
</tbody>
</table>

5. Pursuant to Clause 5.9(1) of the General Conditions of Main Contract, the Trade Tested Workers shall have acquired the following qualifications:

   a. Skilled Workers shall be either one of the followings:
      i. A registered skilled worker or registered skilled worker (provisional) as respectively defined in section 2(1) of the Construction Workers Registration Ordinance (Cap 583);
      ii. Holder of a trade test certificate issued by an institution (e.g. Construction Industrial Council (CIC) or Vocational Training Council (VTC)), or other qualifications as recognised by the Construction Workers Registration Ordinance.

   b. Semi-skilled Workers shall be either one of the followings:
      i. A registered semi-skilled worker or registered semi-skilled worker (provisional) as respectively defined in section 2(1) of the Construction Workers Registration Ordinance (Cap 583);
      ii. Holder of an intermediate trade test certificate issued by an institution (e.g. Construction Industrial Council (CIC) or Vocational Training Council (VTC)), or other qualifications as recognised by the Construction Workers Registration Ordinance.

6. The Sub-contractor shall complete and deliver a return for the Trade Tested Workers to the Main Contractor for submission to the Contract Manager in accordance with Clause 5.25(3) of the General Conditions of Main Contract:

   a. The format of the return shall be obtained from the Contract Manager;
b. A return is to be completed in respect of the Trade Tested Workers which include Skilled Workers and Semi-skilled Workers employed on the fifteenth (15) day of each month, or in the event of the fifteenth (15) day being a General Holiday on the day immediately following the General Holiday.

7. The minimum number of Skilled Workers for Lift/Escalator Installation to be employed by the Sub-contractor in accordance with Clause 5.9(1)(c) of the Special Conditions of Contract shall be calculated in accordance with the stated percentages of the total workforce on Site at any one time in the following scheduled trade for the installation period:

<table>
<thead>
<tr>
<th>Trade</th>
<th>Minimum Percentage of Skilled Workers for Lift/Escalator Installation as compared to all workers employed in the same trade for the installation period</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lift Mechanic / Escalator Mechanic</td>
<td>10%</td>
</tr>
<tr>
<td>At Installation Stage (e.g. the first 65% of the installation period)</td>
<td></td>
</tr>
<tr>
<td>Lift Mechanic / Escalator Mechanic</td>
<td>50%</td>
</tr>
<tr>
<td>At Testing and Commissioning Stage (e.g. the remaining 35% of the installation period)</td>
<td></td>
</tr>
</tbody>
</table>

8. For the purpose of this clause, the installation period starts from commencement of on-site installation works until the completion of testing and commissioning. The Sub-contractor shall submit to the Contract Manager the labour forecast including the percentages of the Registered Lift/Escalator Workers / Competent Lift/Escalator Workers throughout the installation period before commencement of the installation works;

9. Pursuant to Clause 5.9(1) of the General Conditions of Main Contract, the Skilled Workers shall be Registered Lift/Escalator Workers or Competent Lift/Escalator Workers as defined in the Lifts and Escalators Ordinance (Cap. 618). The Sub-contractor shall present documentary evidence of the Registered Lift/Escalator Workers / Competent Lift/Escalator Workers for inspection by the Contract Manager or Contract Manager's representative;

10. The Sub-contractor shall complete and deliver a return for the Skilled Workers to the Main Contractor for submission to the Contract Manager in accordance with Clause 5.25(3) of the General Conditions of Main Contract:

   a. The format of the return shall be obtained from the Contract Manager;

   b. A return is to be completed in respect of the Skilled Workers employed on the fifteenth (15) day of each month for the installation period, or in the event of the fifteenth (15) day being a General Holiday on the day immediately following the General Holiday.

11. The minimum number of Trade Tested Workers, which include Skilled Workers and Semi-skilled Workers to be employed by the Sub-contractor in accordance with Clause 5.9(1)(c) of the General Conditions of Main Contract, shall be calculated in accordance with the stated percentages of the total workforce on Site at any one time in the following scheduled trade:

Notes:

Skilled workers from the trade of "Refrigeration/Air-conditioning/Ventilation Mechanic" shall be considered as an equivalent substitution to the skilled workers from those trades marked with * in the above schedule.

12. Pursuant to Clause 5.9(1) of the General Conditions of Main Contract, the Trade Tested Workers shall have acquired the following qualifications:

a. Skilled Workers shall be either one of the followings:
   i. A registered skilled worker or registered skilled worker (provisional) as respectively defined in section 2(1) of the Construction Workers Registration Ordinance (Cap 583);
   ii. Holder of a trade test certificate issued by an institution (e.g. Construction Industrial Council (CIC) or Vocational Training Council (VTC)), or other qualifications as recognised by the Construction Workers Registration Ordinance.

b. Semi-skilled Workers shall be either one of the followings:
   i. A registered semi-skilled worker or registered semi-skilled worker (provisional) as respectively defined in section 2(1) of the Construction Workers Registration Ordinance (Cap 583);
   ii. Holder of an intermediate trade test certificate issued by an institution (e.g. Construction Industrial Council (CIC) or Vocational Training Council (VTC)), or other qualifications as recognised by the Construction Workers Registration Ordinance.

13. The Sub-contractor shall complete and deliver a return for the Trade Tested Workers to the Main Contractor for submission to the Contract Manager in accordance with Clause 5.25(3) of the General Conditions of Main Contract:

a. The format of the return shall be obtained from the Contract Manager;
b. A return is to be completed in respect of the Trade Tested Workers which include Skilled Workers and Semi-skilled Workers employed on the fifteenth (15) day of each month, or in the event of the fifteenth (15) day being a General Holiday on the day immediately following the General Holiday.

PRE.BS.1.465.7 WORKERS FOR HANDLING REFRIGERANT

When Hydrofluorocarbon (HFC) and blend type refrigerants are installed in the air-conditioning system, tested and commissioned after the installation work, the Sub-contractor shall employ workers for handling refrigerant in accordance with the following requirements:

1. A minimum 25% of the total workforce on Site for handling HFC and blend type refrigerants shall be holders of a valid certificate of having satisfactorily completed the relevant refrigerant handling training courses organized and recognized by The Hong Kong Air Conditioning and Refrigeration Association Limited (HKACRA);

2. Details and particulars of these workers shall be submitted to the Contract Manager for approval when instructed by the Contract Manager.

PRE.BS.1.468.7 PROTECTION OF WORKERS FROM HEAT STROKE

In addition to any obligation under Clause 5.11 of the General Conditions of Main Contract or similar obligations under any enactment or Regulation, adopt the practices and/or measures in respect of working in hot weather as recommended in the latest edition of the Guidelines on Site Safety Measures for Working in Hot Weather issued by the Construction Industry Council. Examine critically the practices and/or measures as recommended in the above-mentioned Guidelines, especially their applicability and suitability to the Works on account of the actual site conditions and the specific safety hazards of the Works. Alternative practices and/or measures which should not be inferior to those recommended in the said Guidelines may be proposed for CM's approval before implementation. The following highlights of the crucial practices and/or measures, albeit not exhaustive, are extracted from the above-mentioned Guidelines:

1. In relation to PRE.BS.1.600, ensure that the risk of heat stroke to workers and the caring measures for prevention of heat stroke are incorporated in the Safety Plan in respect of the Sub-contract Works;

2. Prohibit consumption of alcoholic drinks;

3. Provide sheltered rest stations close to the workplace;

4. Where working in enclosed area with poor ventilation, ventilate the workplace by means of fans / blowers / chillers or any other form as appropriate;

5. Where appropriate, use mechanical aids for execution of works to minimise workers' physical exertion;

6. Keep heat-generating machinery (e.g. diesel air compressors or generators) away from workers as far as reasonably practicable;

7. Provide potable water at easily accessible drinking points;

8. Pursuant to PRE.BS.1.700, encourage workers wear proper clothing and safety helmet with ventilation vents to suit the weather;

9. Provide relevant training and site safety information to supervisors and workers to recognize symptoms of heat-related disorders;

10. Establish administration control measures with trained supervisors to take heed of hot weather report and if necessary, to reschedule outdoor work or to arrange job rotation or suitable rest breaks to avoid prolonged working in hot environment;
11. Let workers cool down by arranging regular rest periods, which can also reduce their period of exposure to the hot environment. Apart from the regular 30-minute rest period during the afternoon work session, allow an additional 15-minute rest period during the hot summer months (from May to September every year).

**PRE.BS1.470.7**  
**FIXING HEAVY PLANT AND EQUIPMENT, ETC.**

1. When heavy plant and equipment etc. are to be installed in the Commercial Centre prior to the commencement of the relevant parts of the Works, the Sub-contractor shall submit drawings showing the proposed fixing details to Contract Manager for Approval. The drawings shall be supported by necessary calculations to demonstrate the structural/mechanical adequacy of the proposed fixing details. Method statement and erection procedures shall also form part of the submission;

2. Before the submission, drawings and calculations shall be vetted, endorsed and signed by the Sub-contractor's Supervising Engineer;

3. The requirement of submission shall apply to the following items of equipment:
   a. Luminaires exceeding 10 kg in weight;
   b. Loudspeakers for Atrium;
   c. Split type air conditioning units;
   d. Air handling units mounted at high level;
   e. In-line fans;
   f. Air curtains;
   g. Air diffusers;
   h. Glass balustrade of escalators.

4. The Sub-contractor shall include other items not shown above but deemed necessary by the Contract Manager in the submission.

**PRE.BS1.480.7**  
**DEFECT RECTIFICATION CO-ORDINATOR(S) (FOR DOMESTIC PORTION OF DOMESTIC BLOCKS ONLY)**

Defect Rectification Co-ordinator(s) will be assigned by the Main Contractor to co-ordinate, programme, supervise and monitor the execution of Maintenance Works carried out by the Sub-contractor to ensure that the work is fully in compliance with the provisions of the Sub-contract. The Maintenance Works shall include but not limit to any work of repair or rectification of defects/faults identified within the Maintenance period. The Sub-contractor shall render co-operation and provide necessary input and resources to facilitate the Defect Rectification Co-ordinator(s) in discharging his duties.

**PRE.BS1.490.7**  
**STANDBY WORKFORCE (FOR DOMESTIC PORTION OF DOMESTIC BLOCKS ONLY)**

The Sub-contractor shall provide a standby workforce on Site during the first six months of the Maintenance Period or where Sections are applicable to the Contract the first six months of the individual Maintenance Period for each Section, according to the following arrangement:

1. Prior to the commencement of Maintenance Period and at the end of each subsequent month, the Sub-contractor shall propose the strength of the standby workforce on the basis of the anticipated Maintenance Works including any works of repair or rectification of defects/faults identified within the Maintenance Period to the Main Contractor’s Defect Rectification Co-ordinator(s) for his onward submission to the Contract Manager for prior agreement;
2. The standby workforce shall be resident on Site under the direct supervision of the Main Contractor's Defect Rectification Co-ordinator(s) and its presence shall be properly recorded for the Contract Manager's verification;

3. The Sub-contractor may adjust the strength of the standby workforce to satisfy operational needs with prior agreement of the Contract Manager obtained through the Defect Rectification Co-ordinator(s).

PRE.BS1.500.7 ENVIRONMENTAL MANAGEMENT RESPONSIBILITIES

1. The Sub-contractor shall comply with the followings:
   a. Undertake all necessary measures to reduce the environmental impacts and pollution arising from the execution of the Sub-contract Works;
   b. Observe and comply with all the legislation relating to environmental protection, pollution control and site hygiene; and
   c. Co-ordinate with the Main Contractor in the preparation, updating and implementation of a Contractor's Environmental Management Plan (EMP) as described hereafter.

2. The Sub-contractor shall undertake all necessary measures to reduce the environmental impacts and pollution arising from the execution of the Sub-contract Works, observe and comply with all the legislation relating to environmental protection, pollution control and site hygiene;

3. In addition to statutory and regulatory requirements, the Sub-contractor shall comply with the noise control requirements stipulated in the Preliminaries clauses of the Main Contract;

4. The Sub-contractor shall co-ordinate with the Main Contractor in the preparation of the Environmental Management Plan (EMP). The Sub-contractor shall handle and dispose waste materials in accordance with the EMP approved by the Contract Manager and the other requirements stipulated in the relevant Preliminaries clauses of the Main Contract;

5. The Sub-contractor shall follow up on the advice of the Main Contractor's Environmental Manager and Environmental Supervisor in respect of:
   a. Complying with the environmental management plan; and
   b. Completing and updating as necessary the Sub-contractor's environmental management, waste management and site hygiene statements.

PRE.BS1.510.7 APPROVAL OF MATERIALS IN CONSTRUCTION STAGE

In construction stage, the equipment and material should be submitted for approval as required by the Specification or as requested by the Contract Manager. Origin of manufacture of the equipment and material should also be submitted for approval. The Sub-contractor shall supply materials from the proposed offers listed in the "Information to be Supplied by Tenderer" submitted with the tender as far as practicable. If subsequent changes of any approved materials or origin of manufacture of materials are necessary, the alternative materials or origin of manufacture shall comply with the Specification and shall also be submitted to the Contract Manager for consideration and approval together with the reason(s) of change.

PRE.BS1.515.7 AVOIDANCE AND RESOLUTION OF DISPUTES

1. The dispute avoidance and resolution procedures as set forth in Clause 12.1 of the General Conditions of Sub-contract is for the following purposes:
   a. Foster co-operation between the Main Contractor and the Sub-contractor;
   b. Minimize the volume of claims, disputes and disruptions to the Sub-contract Works;
c. Ensure the cost-effective and expeditious resolution of disputes that arise between the Main Contractor and the Sub-contractor excepting disputes arising between the Main Contractor and the Employer over the Sub-contract Works which shall be subject to Clause 17.1 of the General Conditions of Main Contract.

2. Pursuant to Clause 12.1(3) of the General Conditions of Sub-contract, the DARA shall be the same personnel appointed from time to time as the DARA for the Main Contract.

PRE.BS1.520.7 SUB-CONTRACTING OF THE SUB-CONTRACT WORKS

1. Pursuant to Clause 2.1(5) of the General Conditions of Sub-contract, the Sub-contractor shall within 30 days of the date of the Letter of Acceptance submit a Sub-contractors Management Plan to the Main Contractor for his submission to the CM for information and comment, if any. Update such Sub-contractors Management Plan on a quarterly basis until the date of certified completion of the Main Works. The first quarter shall commence from the expiry of the month in which such Sub-contractors Management Plan was submitted to the Contractor. Submit any updated Sub-contractors Management Plan within one month from the expiry of the quarter;

2. Should there be any changes in the sub-contracting arrangements at any time before the next quarterly submission is due, notify the Main Contractor forthwith of such changes in writing. Such notification shall not affect the obligation to submit an updated Sub-contractors Management Plan under sub-clause (1) above. In the event that there are no changes to the sub-contracting arrangements in any one quarter, notify the Main Contractor of the same and no updated submission for such quarter will be required to be made;

3. Any Sub-contractors Management Plan or updated Sub-contractors Management Plan submitted under sub-clause (1) above shall contain such detailed information as required by the "Guidelines on Scope and Contents of the Sub-contractors Management Plan" in APPENDIX PRE.B6/II of the Main Contract, and the latest "Contractor's Guideline on Wage Monitoring System" published by HA;

4. The CM may, upon receipt of any Sub-contractors Management Plan or updated Sub-contractors Management Plan, provide his comments on such plan. Amend or revise forthwith such Sub-contractors Management Plan or updated Sub-contractors Management Plan upon receipt of such CM comments, to the satisfaction of the CM. The CM shall have no obligation to comment or approve any Sub-contractors Management Plan or updated Sub-contractors Management Plan;

5. Further to Clause 2.1 of the General Conditions of Sub-contract, the following prohibition on sub-contracting the Sub-contract Works or any part thereof shall apply:

a. Do not sub-contract the provision of management/site supervision team as specified in the Sub-contract;

b. Do not sub-contract to a single sub-contractor for the provision of labour and materials or labour only to the Sub-contract Works after excepting the provision of management/site supervision team. For the purpose of this clause, separate sub-contracting of works on a piece-work basis to the same sub-contractor will be considered as a whole.
6. In the event that any part of the Sub-contract Works is to be sub-contracted, the Sub-contractor shall ensure that no more than two tiers of sub-contractors are to be engaged to carry out that part of the Sub-contract Works. For the purpose of sub-clause (6) where any part of the Sub-contract Works is to be sub-contracted, the first tier of sub-contracting means the sub-contract between the Sub-contractor and his sub-contractor and the first tier sub-contractor refers to the sub-contractor of the first tier of sub-contracting. The second tier of sub-letting means the sub-contract between the first tier sub-contractor and his sub-contractor;

7. The Sub-contractor shall provide the Main Contractor with full particulars of the sub-contractors employed or to be employed on the Sub-contract Works complying with the format similar to the prescribed forms attached to the latest "Contractor's Guideline on Wage Monitoring System” published by HA from time to time. Submit the table in both printed and electronic copies to the CM and LRO at regular intervals as confirmed by the CM;

8. When CM has instructed the replacement of the Sub-contractor's sub-contractor in the event of non-performance of his sub-contractor, or any of his staff who is not performing to the entire satisfaction of the CM, the Sub-contractor shall comply with the following:
   a. The Sub-contractor shall submit particulars of his other sub-contractor or replacement staff of his sub-contractor for CM's approval within two weeks after receipt of the CM's instruction;
   b. The Sub-contractor shall bear all associated costs and no extension of time will be allowed.

9. The Sub-contractor shall submit the following documents immediately upon the award of the Sub-contract and re-submit any subsequent change via the Main Contractor for CM's further approval:
   a. Written declaration together with supporting documents (e.g. copies of employment contract, bank payroll record and MPF contribution record) stating that the Sub-contractor's Management Team as required in PRE.BS1.570 is directly employed by the Sub-contractor. The employment terms for members in the Sub-contractor's Management Team shall include a "consent to disclosure" clause in accordance with the data protection principles set out under the Personal Data (Privacy) Ordinance (Cap. 486). Personal data (e.g. HKID number, salary amount) within the supporting documents can be blanked out or covered up when submitted by the Sub-contractor.

10. For the purpose of this clause, the term "sub-contractors" means sub-contractors irrespective of tiers unless otherwise specified.

PRE.BS1.530.7 HOUSING CONSTRUCTION MANAGEMENT ENTERPRISE SYSTEM (HOMES)

1. Pursuant to Clauses NS1.1 and NS14.1 of the Special Conditions of Sub-contract, upon CM's notification of the Sub-contract HOMES Start Date, follow the HOMES accounts creation procedures, which will be provided with the CM's notification, to obtain the security tokens, and activate the authorized nominated sub-contractor submission account (ANSCSA) and nominated sub-contractor data operation account (NSCDOA) before the Sub-contract HOMES Start Date;

2. Use the HOMES as the electronic communication media for the Sub-contract from the Sub-contract HOMES Start Date onward. When the Sub-Contract requires that a specified person is responsible for the submission of specific Forms to certify specified activities, such person shall sign the specific Forms as proper record. The signed Forms shall be scanned in 'pdf' format and submitted via the Main Contractor to the CM through the HOMES accordingly. Original of the signed Forms shall be submitted via the Main Contractor to the CM as proper record;
3. Upon issue of the Partial Maintenance Certificate for the Sub-contract Works, only the ANSCSA will remain active for access to HOMES until the End Date unless otherwise determined by the CM;

4. Train staff up for operating the computer system to input and submit the required information through HOMES. While self-learning training kit CD is distributed to the Sub-contractor free of charge at the Sub-contract HOMES Start Date, the Authority will be organizing training courses for HOMES from time to time and the Sub-contractor may arrange their staff to attend the training course where considered appropriate on payment of the relevant cost and fees;

5. Follow the 'Guide for Housing Construction Management Enterprise System (HOMES) for Hong Kong Housing Authority (for Contractors' use only)' for any necessary process available/required by the HOMES;

6. Ensure the availability of computer systems that can fulfil the minimum requirement as specified in the Guide for HOMES, and bear all costs for the computer systems and the connection of the computer systems to the HOMES through web browser (internet connection);

7. Co-ordinate with Main Contractor and other contractors directly appointed by HA who are HOMES users for proper and timely execution of the functions in HOMES.

**PRE.BS1.540.7 OBLIGATIONS PERTAINING TO WAGES PAYMENT**

1. The Sub-contractor shall comply with the requirements stipulated in Clauses 2.1, 4.6, 5.1, and NS5.1 of the Conditions of Sub-contract and the Specification Clauses PRE.BS1.550 to PRE.BS1.580 mentioned below;

2. The Sub-contractor shall render co-operation and provide necessary input and resources to facilitate the Main Contractor in discharging his duties in accordance with Clauses 5.8, 6.2, and 6.3 of the General Conditions of Main Contract, Clauses SCC1.1, SCC3.1, SCC3.2, and SCC6.1 of the Special Conditions of Main Contract and the Specification Clauses PRE.B6.290, PRE.B6.430, PRE.B6.440, PRE.B8.1450 and PRE.B8.2610 to PRE.B8.2660 of the Main Contract.

**PRE.BS1.550.7 PAYMENT OF WAGES OF SITE PERSONNEL**

In accordance with Clause NS5.1 of the Special Conditions of Sub-contract, the Sub-contractor shall comply with the following:

1. The Sub-contractor shall comply with the following for monitoring the payment of wages and Mandatory Provident Fund (MPF) contribution to Site Personnel:
   a. Employment contract:
      i. The Sub-contractor shall keep a copy of the complete set of the executed employment contracts of all Site Personnel in the wage books as required in PRE.BS1.560. Each copy of the executed employment contracts together with an updated register of the employment contracts shall be kept in the wage books within two days from the date that the Site Personnel commences to work on Site;
      ii. Deliver the original executed employment contracts of any Site Personnel to the office of the CM's representatives for inspection by the CM within one day when requested by the CM;
      iii. Seek written approval from the CM before a Site Personnel without an executed employment contract executes any work on the Site;
      iv. The terms of the employment contract shall not be less favourable to the terms provided in the "Specimen Employment Contract" in the latest "Guidelines on Wage Payment Monitoring and Reimbursement of Contractor's and Sub-contractors’ Contributions to the Mandatory Provident Fund for their Site Personnel" published by Development Bureau of HKSAR from time to time.
b. Wage payment and mandatory provident fund ("MPF") arrangement for Site Personnel:

i. The Sub-contractor shall ensure that sufficient funds have been reserved in the designated bank account for the payment of all wages and MPF contribution to all Site Personnel employed or engaged by the Sub-contractor. The Sub-contractor shall instruct promptly the designated bank to effect the timely payment to the respective wage payment accounts, employee MPF contribution accounts and the employer MPF contribution accounts of all Site Personnel employed or engaged by the Sub-contractor according to the schedule as prepared in sub-clause (c)(ii);

ii. The Sub-contractor shall ensure that his sub-contractors of all tiers have sufficient funds available in the designated bank accounts for the payment of all wages and MPF contribution to all Site Personnel employed or engaged by them. The Sub-contractor shall also ensure that his sub-contractors of all tiers shall promptly instruct the designated banks to effect the timely payment to the respective wage payment accounts, employee MPF contribution accounts and the employer MPF contribution accounts of all Site Personnel employed or engaged by them according to the schedule as prepared in sub-clause (c)(ii);

iii. The Sub-contractor shall pay, and require his sub-contractors of all tiers to pay the wages to all the Site Personnel by bank's autopay service and make the MPF contribution as stipulated in sub-clause (c);

iv. The Sub-contractor shall require each of the Site Personnel to provide a bank account and an employee MPF contribution account via which wage payment will be paid by bank's autopay service.

c. Wage payment and MPF contribution records:

i. Within 14 days from the date of Letter of Acceptance of the Sub-contract Tender by the Main Contractor, the Sub-contractor shall submit to the CM the name of the designated bank and all related arrangement details for the payment of wages and MPF contribution to all the Site Personnel;

ii. The Sub-contractor shall prepare schedules of wages and corresponding MPF contribution of all the Site Personnel employed or engaged by him based on the verified daily record as required in PRE.BS1.580. The Sub-contractor shall also keep a copy of such schedules in the wage books as required in PRE.BS1.560 within 14 days from the end of the corresponding wages period;

iii. The Sub-contractor shall require his sub-contractors of all tiers to prepare the respective schedules of wages and the corresponding MPF contribution of all the Site Personnel employed or engaged by them based on the verified data from the ACRS as required in PRE.BS1.580. The Sub-contractor shall also keep a copy of such schedules in the wage books as required in PRE.BS1.560 within 14 days from the end of the corresponding wages period;

iv. The Sub-contractor shall keep a copy of the records of transactions in the wage books as required in PRE.BS1.560 within 21 days from the end of the corresponding wages period;

v. The Sub-contractor shall submit and require his sub-contractors of all tiers to submit to CM for each workers' payment cycle a written declaration that all wages of the Site Personnel have been paid and all MPF contribution have been made. For the records of payment of wages and MPF contribution of the Site Personnel in the managerial grade shown on the latest site organization chart, it is optional to keep them in the wage books as required in PRE.BS1.570 provided that they are directly employed by the Sub-contractor and the CM has no objection to the site organization chart.
2. Labour Relations Officer(s) (LRO) shall be authorized by the Employer and notified to the Main Contractor by the CM to work on Site. The LRO shall monitor the payment of wages of all Site Personnel who are employees of the Main Contractor or any of his sub-contractors of all tiers including Specialist Sub-contractors and Nominated Sub-contractors, and to handle complaints on wages arrears raised by the Site Personnel. Duties and responsibilities of the LRO are listed in the Specification Clause PRE.B6.550 of the Main Contract. To enable the LRO to duly discharge his duties, the Sub-contractor shall provide all necessary assistance in the handling of complaints on arrears of wages raised by all Site Personnel in connection with the Sub-contract Works including but are not limited to the following:

   a. The Sub-contractor shall assign a designated staff to respond to issues raised by the LRO in connection with the discharge of his duties;
   b. Provide to a Site Personnel free of charge a copy of his daily attendance records whenever his written request for same is received. The daily attendance records shall be verified by the Sub-contractor or employer of the Site Personnel;
   c. Address immediately the enquiries and/or complaints lodged by Site Personnel and reply to them the outcome or the follow-up actions taken or to be taken within two days upon receipt of the enquiries and/or complaints.

3. The requirements stipulated in sub-clauses (1) and (2) above may be exempted subject to the compliance with all relevant criteria and procedures stipulated in the latest "Contractor's Guideline on Wage Monitoring System" published by HA from time to time or as Approved by the CM on individual case basis.

PRE.BS1.560.7 WAGE BOOKS

1. The Sub-contractor shall keep wage books for monitoring the payment of wages and MPF contribution paid by the Sub-contractor and the sub-contractors of all tiers to all Site Personnel and identify each Site Personnel by the data as specified in PRE.BS1.580. The wage books shall give a full and up-to-date account of the payment of all wages and MPF contribution paid to all Site Personnel for the duration of the Main Contract, up to and including the month in which the operation of ACRS is terminated as stipulated in PRE.B8.2660 of the Main Contract. For Main Contract with more than one Portion of the Site, the Sub-contractor shall keep wage books for all Site Personnel of each particular Portion of the Site up to and including the month in which the operation of ACRS is terminated as stipulated in PRE.B8.2660 of the Main Contract, or up to an earlier date as otherwise agreed by CM, to be consisting of the following:

   a. A complete set of copy of the the executed employment contracts of all Site Personnel on Site as required in PRE.BS1.550;
   b. A complete set of signature specimens of all Site Personnel complying with the format similar to the prescribed forms attached to the latest "Contractor's Guideline on Wage Monitoring System" published by HA from time to time;
   c. A complete set of verified daily attendance records as required in PRE.BS1.580;
   d. A complete set of copy of the schedules of wages and the respective records of transactions for payment of wages and MPF contribution as required in PRE.BS1.550;
   e. A complete set of copy of the written declaration that all wages of the Site Personnel have been paid and all MPF contributions have been made as required in PRE.BS1.550.

2. The Sub-contractor shall make wage books available for inspection by the CM or LRO. The Sub-contractor shall also maintain and update an additional copy of wage books in the office of LRO for record;
3. All documents kept in the wage books shall be duly certified by the Sub-contractor or the respective sub-contractors that they are the true copy of the original documents;

4. The Sub-contractor shall keep wage books in a secure place as provided by the Contractor and agreed by CM such as a room or cabinets with locking device during the whole contract period of the Main Contract and after the date of terminating the operation of ACRS as stipulated in PRE.B8.2660 of the Main Contract, or up to an earlier date as otherwise agreed by CM. The respective keys shall only be held by the members of Sub-contractor's management team as stipulated in PRE.BS1.570. After at least 12 months from the date of terminating the operation of ACRS as stipulated in PRE.B8.2660 of the Main Contract and with the consent of the CM, all the documents kept in the wage books including the additional copy in the office of LRO shall be destroyed and disposed properly without disclosing any information contained in them;

5. The above requirements stipulated in sub-clauses (1) to (4) may be exempted subject to the compliance with all relevant criteria and procedures stipulated in the latest "Contractor's Guideline on Wage Monitoring System" published by HA from time to time or as Approved by the CM on individual case basis.

PRE.BS1.570.7 SUB-CONTRACTOR'S MANAGEMENT TEAM

1. In accordance with Clause 4.6 of the General Conditions of Sub-contract, the Sub-contractor's management team shall comprise sufficient number of staff in the following disciplines:
   a. Supervising Engineer;
   b. Site Supervisor.

2. The Site Supervisor shall be full time on Site during site working hours.

PRE.BS1.575.7 ON-DEMAND BOND

In accordance with Clause NS4.1 of the Special Conditions of Sub-contract, procure an on-demand bond in favour of the Employer in an amount of 3 per cent of the Sub-contract Sum. Submit the on-demand bond to the Main Contractor within 21 days of the date of the Letter of Acceptance of the Sub-contract Tender by the Main Contractor.

PRE.BS1.580.7 SITE ACCESS CONTROL

Access Control and Recording System (ACRS) will be provided by the Main Contractor in accordance with the Specification Clauses PRE.B8.2610 to PRE.B8.2660 of the Main Contract for recording and verifying the information of all personnel entering and leaving the Site. The Sub-contractor shall render cooperation and provide necessary input and resources to facilitate the Main Contractor in discharging his duties.

PRE.BS1.600.7 SITE SAFETY

1. Safety Supervisor:
   a. The Sub-contractor is to provide a Safety Supervisor for the Sub-contract. The person designated as Safety Supervisor shall be competent, technically qualified, English and Cantonese speaking and approved by the Contract Manager, with power to receive, via the Main Contractor, the instructions of the Contract Manager. This Safety Supervisor and the Site Supervisor referred to in PRE.BS1.330 may be the same person;
b. The designated Safety Supervisor shall have attended the Safety and Health Supervisor (Construction) Course (nominal course duration 43 hours) provided by the Occupational Safety and Health Council or Construction Safety Supervisor Course (nominal course duration 42 hours) provided by the Construction Industry Council. Acceptance of training provided by other organizations is subject to verification that the training is based on course contents of equivalent or above standards and the appointed superintendent has attained the associated qualification;

c. In addition to those duties as imposed by the Factories and Industrial Undertakings (Safety Officers and Safety Supervisors) Regulations, CAP 59, Laws of Hong Kong, the Safety Supervisor shall from time to time perform the safety functions including:

i. Site inspection:
   - Carry out safety inspections on the Sub-contractor's activities on Site. The safety inspection shall identify any unsafe operation or potential hazards;
   - Prepare safety inspection reports;
   - Liaise with the Safety Officers and Safety Supervisors of the Main Contractor.

ii. Safety Plan:
   - Monitor implementation and updating of the Safety Plan;
   - Promote awareness and compliance with the Safety Plan to all Sub-contractor's workers on Site.

iii. Accident/Incident report and investigation:
   Co-operate with the Safety Officers employed by the Main Contractor in the collection of accident data, investigation, determination of the cause and recommendation on means of prevention and improvement in respect of the Sub-contract works.

iv. Training:
   - Coordinate and supervise the conduct of trade specific safety training and pre-work activities;
   - Identify those workers in the specified trades as detailed in PRE.BS1.450 without valid Silver Card and coordinate their enrolment in requisite Silver Card training provided by the Construction Industry Council;
   - At the end of each period of relevant interim certificates report, report to the CM and Main Contractor the actual number of workers trained in each of the safety courses and pre-work activities.

v. Site Safety Committee:
   - Attend site safety committee meetings and other safety-related meetings organized by the Main Contractor;
   - Follow up on necessary actions arising from the Site Safety Committee.

vi. Assessment report:
   Prepare risk assessment reports before commencement of a new trade and recommend measures for hazard removal or minimisation.

vii. Action on Labour Department contravention notices:
   - When called upon by the Safety Officer employed by the Main Contractor, attend to the notices issued by the Labour Department to the Main Contractor associated with contravention made by the Sub-contractor;
- Take all necessary actions to ensure full compliance with statutory requirements;
- Liaise with and report to the Main Contractor on notices received which are associated with contravention made by the Sub-contractor.

viii. Safety audit:
Implement the recommendations of the external Safety Audit Report.

ix. Safety Supervisor's report:
Compile and report the above duties to the Contract Manager via Main Contractor at monthly site meetings.

2. Safety plan in respect of the Sub-contract Works:
   a. The Sub-contractor's attention is drawn to the provisions of Clause 5.11 of the General Conditions of Main Contract and without prejudice to the generality of the Sub-contractor's responsibilities under the Sub-contract or any statutory regulation with respect to safety and health, the Sub-contractor shall comply with the respective obligations set out in the Safety Plan throughout the whole progress of the Sub-contract Works and shall comply with the provisions of this Clause;
   b. A "safety plan in respect of the Sub-contract Works" means a safety plan including any supplemental or revised or updated version, submitted by the Sub-contractor and agreed by the Contractor, and endorsed by the Contract Manager in writing all in accordance with the provisions under this Clause;
   c. Pursuant to Clause 4.7(2) of the General Conditions of Sub-contract, prepare and submit within 14 days from the date of the Letter of Acceptance a draft safety plan in respect of the Sub-contract Works to the Main Contractor for his agreement and incorporation into the Safety Plan. If the Main Contractor is of the opinion that the draft safety plan in respect of the Sub-contract Works does not meet the requirements of the Sub-contract he shall request the Sub-contractor to remedy the deficiency and submit a revised safety plan in respect of the Sub-contract Works for his agreement. The Main Contractor shall submit the agreed safety plan in respect of the Sub-contract Works to the Contract Manager for endorsement. The Main Contractor shall revise or update the Safety Plan to incorporate the safety plan in respect of the Sub-contract Works endorsed by the Contract Manager prior to submitting the Safety Plan to the Contract Manager;
   d. Compile and submit the necessary subsequent updating of the safety plan in respect of the Sub-contract Works to suit the site progress, as determined by the Main Contractor, or the Contract Manager, so that it is at all times a comprehensive and contemporary statement of the Sub-contractor's policies, procedures and requirements to achieve the safety and health requirements of the Sub-contract;
   e. If the Contract Manager is of the opinion that the safety plan in respect of the Sub-contract Works is insufficient and requires revision or modification in the interest of the safety, whether for the Sub-contract Works and/or the safety and health of persons on or adjacent to the Site or protection of any property on or adjacent to the Site or otherwise, the Contract Manager may notify the Sub-contractor in writing and the Sub-contractor shall submit a revised or updated safety plan in respect of the Sub-contract Works for the Contractor's agreement and submission of the agreed safety plan in respect of the Sub-contract Works to the Contract Manager for endorsement within 7 days from the date of the Contract Manager's notice;
   f. The Contractor's agreement to or the Contract Manager's endorsement of the safety plan in respect of the Sub-contract Works or any proposed revision or update thereof shall not relieve the Sub-contractor from his obligation or responsibility under the Sub-contract;
g. The safety plan in respect of the Sub-contract Works and its subsequent updates shall be based on guidelines prescribed by the Occupational Safety and Health Council (OSHC) and shall contain, but not be limited to details in the following aspects:

i. Company safety policy;

ii. Safety organisation;

iii. Safety training;

iv. In-house safety rules and regulations;

v. Safety Committee;

vi. Programme for inspection of hazardous conditions;

vii. Job hazard analysis;

viii. Personal protection programme;

ix. Accident/Incident investigation;

x. Emergency preparedness;

xi. Safety promotion;

xii. Health assurance programme;

xiii. Evaluation, selection and control of sub-contractor;

xiv. Process control programme;

xv. Non-smoking policy.

xvi. Lift installation work plan including the following:

- Provisions agreed by the Main Contractor such as details of the positions of floor openings in lift machine room, structural links in the ceiling of lift well, independent lifelines, design plan for modification of scaffolding sections to facilitate lift installation work in lift well, etc.;

- The administration mechanism and details of permit-to-work system on hazardous trade processes;

- Risk assessment report, similar to Annex C of Volume 2 of CIC Guidelines;

- Pre-work check reference table, similar to Annex D of Volume 2 of CIC Guidelines;

- The content, frequency and duration of safety and health training for lift workers;

- Lift well handover checklist, similar to Annex E of Volume 2 of CIC Guidelines. The responsibilities for the subsequent management and maintenance of lift well protection measure until removal shall be clearly defined and properly recorded in the Safety Plan;

- Measure/protection to inhibit fire spread between floor compartments through lift well and openings and within lift wells;

- Effective communication system for lift installation work.

3. Housing Authority Safety Auditing System (HASAS):

The Sub-contractor shall comply with the followings:

a. Deploy his most senior site representative to attend each safety audit to be conducted by Accredited Safety Auditor nominated by the Contract Manager and under the management of the OSHC once every three months;
b. Provide all necessary attendance for the safety audit including fully facilitating the inspection of the works and all certificates, records and reports relating to safety and health matters, and fully co-operate with the Accredited Safety Auditor in the carrying out of the safety audit;

c. Read the Safety Audit Report prepared by the Accredited Safety Auditor and get his Managing Director/Project Manager to sign the report. Submit a copy of signed report to the Contract Manager and another copy to OSHC for record;

d. Implement the recommendations of the Accredited Safety Auditor within the time frame specified in the Safety Audit Report and report the implementation to the Contract Manager and the Main Contractor;

e. Allow for all work undertaken in preparation for the Safety Audit or in the implementation of the Safety Auditor’s recommendations. Neither of which shall entitle the Sub-contractor to any extension of time for the completion of the Sub-contract Works.

4. Site Safety Committee:

a. The Sub-contractor shall assign his Safety Supervisor or other staff as may be considered necessary to attend the Site Safety Committee meetings and other safety-related meetings organized by the Main Contractor, at an interval as determined by the Main Contractor;

b. The Sub-contractor shall co-operate with the Main Contractor to follow up on remedial action against deficiencies as revealed by the Site Safety Committee. The Sub-contractor shall arrange submission of forms GF527 and GF527A or other pertinent forms on the employment statistics of the Contract to the Census and Statistics Department with copy to the CM or CM’s representative on a monthly basis.

5. Trade Specific Training:

a. The Sub-contractor shall provide adequate trade specific safety training to all its site workers in accordance with a training plan provided in the safety plan in respect of the Sub-contract Works or separately submitted to the Contract Manager, via the Main Contractor, for prior approval if the proposed training has not been included in the safety plan in respect of the Sub-contract Works. The training duration shall not be less than half a day;

b. The Sub-contractor shall provide regular safety and health training to its workers and brief them on the risk assessment report, the safety procedural steps of method statements and the implementation of permit-to-work system. The safety and health training shall include drills on steps and procedures to be followed in case of emergency or accident;

c. The Sub-contractor shall perform the following in connection with the trade specific training:

i. Allow the CM or CM’s representative to attend any of the training courses to verify that they are conducted according to Specification;

ii. Maintain all safety attendance records on site for all training conducted or arranged. These records shall include the topics and dates of the events, the names of the trainers, names and trades of the persons receiving the training and their signatures. Make them available for CM’s inspection upon request by CM;

iii. The Safety Supervisor shall certify the accuracy of attendance records of the training before they are submitted to the CM.

6. Trade Specific Pre-work Activities:

a. The Sub-contractor shall conduct pre-work activities including Hazard Identification Activity (HIA) meetings and Pre-work Safety Checks for all his workers;
b. Hazard Identification Activity (HIA) meetings can be held in small groups according to the trades, work teams or works areas set out by the Sub-contractor for the Site. If so, the Sub-contractor shall ensure that the assigned persons are competent to lead the HIA meetings. Persons who have attended one-day training course on HIA leadership provided by OSHC are considered competent to lead the HIA meetings. The issues discussed at the HIA meetings shall cover, but not be limited to, hazards and control measures specific to the works or trades, special safety concerns, assurance of safety requirements and measures, reprimand of repeated irregularities and malpractices etc.;

c. The Pre-work Safety Checks shall be carried out by foremen, gangers, Safety Supervisors or the Safety Representatives of the attendees according to the trades, work teams or works areas. The Pre-work Safety Checks shall include the checking of personal protective equipment worn by attendees before they start working on that day such as safety helmet, reflective vest, ear protectors, eye protectors, safety harness, safety footwear etc.;

d. HIA meetings are to be held prior to the commencement of a particular type of work, but in any case the frequency shall not be less than once every two weeks. HIA meetings shall be attended by the workers prior to their carrying out of the associated particular work on site;

e. Pre-work Safety Checks are to be held prior to the commencement of a particular type of work, but in any case the frequency shall not be less than once a week. For routine work, Pre-work Safety Checks shall be conducted on a half-day basis;

f. Records of HIA meetings and Pre-work Safety Checks, including the names and trades of workers attended/checked, are to be certified by the Safety Supervisor and submitted for inspection by the CM.

7. Site Safety Regulations:

The Sub-contractor shall, throughout the duration of the Sub-contract, report monthly to the CM for the followings attributable to him from Labour Department:

a. Warning letters or offences notifications;

b. Convictions during the period under any site safety regulations or legislation;

c. Abatement/Improvement/Suspension Notice.

8. Trade Specific Site Safety Item:

For Lift Installation:

In addition to any obligation under relevant clauses of the General Conditions of Sub-contract and Special Conditions of Sub-contract or similar obligations under any enactment or Regulation, the Sub-contractor shall adopt the practices and/or measures in respect of lift well works as recommended in the latest edition of the Guidelines on Safety of Lift Shaft Works issued by the Construction Industry Council and as stated in this sub-clause (8). All references to "lift shaft" in the Guidelines shall mean "lift well" for the purpose of this sub-clause (8). Examine critically the practices and/or measures as recommended in the above-mentioned Guidelines, especially their applicability and suitability to the Sub-contract Works on account of the actual site conditions and the specific safety hazards of the Sub-contract Works. Alternative practices and/or measures which should not be inferior to those recommended in the said Guidelines may be proposed for Contract Manager’s approval before implementation. In addition, the Sub-contractor shall carry out the trade-specific precautionary site safety measures including but not limited to the following which are highlights of the above-mentioned Guidelines with more specific or stringent requirements:

a. Provision and Maintenance of Temporary Work, Services and Protective Measures:

i. Keep proper inspection records for safety provisions;
ii. Properly use and maintain the scaffolding in lift well in good conditions at all times and timely report to the Main Contractor for any identified damage on scaffolding for immediate repair or replacement. The Sub-contractor shall not alter any members of scaffolding;

iii. Keep keys and locks of lift well protection cages in a neatly and orderly manner. The locations of the door keys or the person-in-charge for holding such keys shall be registered in a log;

iv. Be responsible for erection, testing, examination, maintenance and dismantling of winches, chain block systems and other lifting appliances and lifting gears used inside lift well for lift installation work. A competent lift worker or a competent worker who has received training of installation of anchor bolts organised by the anchor bolts provider under the supervision of a competent lift worker shall be employed to install anchor bolts of the lifting appliances;

v. For anchorages which are installed by the Sub-contractor for any use, appoint a registered professional engineer to check the design and method statement for the construction and to certify the load bearing capacity and the fixing details of the anchorages. Anchorage near the lift well openings at the lowest landing floor will be provided by the Main Contractor for use by worker to lock fall arrestor and safety harness when required to access lift pit. Anchorage near the lift well openings at other landing floors will be provided by the Main Contractor if necessary for use by worker to lock fall arrestor and safety harness when working near or in the lift well;

vi. Provide a switch lock on the inspection/operation switch at the lift car top or similar device for workers working on lift car top of an assembled lift during the lift installation work. Engage a registered lift engineer to examine the assembled lift before it is used to carry lift workers inside its lift car or on its car top for the first time. The examination shall be properly documented in an examination form similar to Annex G of Volume 2 of CIC Guidelines;

vii. Ensure adequate illumination by 110V temporary lighting connected to an isolated transformer having the centre tap of the secondary winding earthed, ventilation and effective communication systems are provided inside the lift well during the whole lift installation period;

viii. Effectively earth all electric appliances including portable electric tools, lighting devices and mechanical ventilation equipment used unless it is an approved type that does not require earthing. Lighting devices shall be properly protected against impact damage;

ix. Install safety nets inside lift well against falling objects. The catching nets shall be made of fire retardant material with net eyes not more than 20 mm x 20 mm. String diameter of the catching net shall be adequately sized or selected for the intended impact load of falling objects as advised by registered safety officer employed by the Sub-contractor. The nets shall be installed at not more than 20 m intervals throughout lift well and fixed with adequate fire retardant strings or other means with sufficient strength on the scaffolding or other fixed secured means/anchorage as advised by registered safety officer employed by the Sub-contractor. Gaps between the nets and the lift well walls shall be fully protected against falling objects. The Sub-contractor shall inspect the safety nets and the provisions against falling objects on daily basis to ensure safety and proper functioning of the nets, including clearance of debris trapped by the nets and repairing any damaged portion of the nets;

x. Allow no lift worker and other trade worker to work simultaneously inside a lift well;
xi. Keep to a minimum the number of workers working within a lift well at the same time to the extent that simultaneous working at different levels is strongly not advisable. If simultaneous working at different levels is practically unavoidable, it shall only be limited to one work activity and prior approval from Contract Manager shall be obtained;

xii. For access to lift pits through cat ladder installed inside the lift well at the wall adjacent to the lift landing, provide a retractable type fall arrestor for use by workers to lock to the anchorage provided by the Main Contractor near the lift well opening at the lowest landing floor. The retractable type fall arrestor shall comply with EN 360:2002 or equivalent, complete with a retractable lanyard of suitable length according to the depth of the lift pits and manufacturer’s recommendation. All manufacturer’s instructions regarding usage, inspection, maintenance and storage of the equipment shall be followed. Suitable training shall be provided to the workers before they are allowed to use the system;

xiii. Do not allow hot work and electric arc process inside lift well generally. If it is practically unavoidable, provide adequate measure/protection to inhibit fire spread to or between floor compartments through the lift well and openings and within the lift well. Fire retardant sheet shall be used to prevent sparks of hot work or electric arc process from falling onto combustible materials or suspension/safety ropes. At the work spot, suitable protective screen of fire retardant nature, such as tarpaulin, shall be used. If tarpaulin is being used as protective screen, its fire retardant characteristics shall meet the requirements of BS 5867-2:2008 (Type B performance requirements) or other equivalent standards;

xiv. Do not allow hot or electric arc cutting of guide rail sections on Site generally. If it is practically unavoidable, obtain Contract Manager’s prior approval. Provide adequate measure/protection to prevent spread of sparks. At the work spot, suitable protective screen of fire retardant nature, such as tarpaulin, shall be used. If tarpaulin is being used as protective screen, its fire retardant characteristics shall meet the requirements of BS 5867-2:2008 (Type B performance requirements) or other equivalent standards.

b. Risk Assessment and Method Statement:

i. Conduct risk assessment for hazards relevant to lift installation works such as falling objects, fall-from-height, collapse of platform/supporting structures for lifting appliances, defective lifting appliance and lifting gear, improper rigging, absence of lighting and ventilation, electrocution, fire etc. With reference to each operation involved in the lift installation process, the assessment shall recommend safety precautions and state the person responsible to execute the safety measures;

ii. Develop the risk assessment report similar to Annex C of Volume 2 of CIC Guidelines;

iii. Prepare method statement for each lift installation process, taking into consideration of all safety measures from the risk assessment report.

c. Implementation of Permit-to-work System:

i. Endorse together with the Main Contractor permits of the permit-to-work system for hazardous trade processes for lift installation work;

ii. Hazardous trade processes for lift installation work shall include but are not limited to the following:
   - working in a lift pit;
   - hot work or electric arc process conducted inside or near a lift well;
   - working on the car top of an assembled lift car;
   - setting templates and plumb lines;
- installing guide rail brackets and guide rails;
- electrical equipment, wiring and trunking installation in lift well;
- installing architraves, landing sills, landing doors and accessories;
- installing lift traction machine and control panel;
- installing counterweight assembly;
- installing car cage assembly;
- adjustment, testing and commissioning at lift well.

iii. Each permit of the permit-to-work system shall specify details of its length of validity in terms of shift and the type of trade workers who are required to work inside the lift well;

iv. The permit of permit-to-work system shall be similar to the sample form at Annex C of Volume 1 of CIC Guidelines.

d. Provision of Effective Communication System and Personal Protective Equipment:

i. Provide adequate and effective communication means/equipment, such as walkie-talkie, layout plan showing the designated work area for different work groups, etc., for use by the working personnel during the lift installation work. Key words/signals shall be specified for clarity of use during communication. Mobile phones shall not be considered an effective communication for workers working inside a lift well;

ii. Do not allow lift workers to work alone inside a lift well generally. If it is practically unavoidable, provide sufficient communication/warning devices such as motion sensor to generate alarm in addition to walkie-talkie for the worker to communicate with a near-by co-worker;

iii. Inform the Main Contractor of the required position of independent lifelines inside lift well to be installed and fixed by the Main Contractor. At least 3 sets of independent lifelines anchored to eyebolts will be installed by the Main Contractor inside a lift well before handing over to the Sub-contractor;

iv. Provide workers with suitable safety harnesses and fall arrestors when they are required to work inside a lift well.

For Electrical Installation:

In addition to any obligation under relevant clauses of the General Conditions of Contract and Special Conditions of Sub-contract or similar obligations under any enactment or Regulation, the Sub-contractor shall adopt the practices and/or measures in the latest edition of the Code of Practice for the Electricity (Wiring) Regulations in respect of electrical works and as stated in this sub-clause (8).

e. Temporary Provision of Residual Current Operated Circuit Breakers (RCCBs) for Lighting Circuits:

i. Provide a temporary RCCB at the main incoming supply of each Miniature Circuit Breaker (MCB) distribution board connected with lighting circuits during construction stage;

ii. The RCCB shall have a rated residual operating current not exceeding 30mA and comply with requirement as stipulated in ELE3.6;

iii. The RCCBs shall be properly housed within an enclosure;

iv. Adequate cable length should be allowed to re-instate to permanent connection to the MCB board after the removal of temporary RCCBs. Trunking and conduit provision should also be installed in such a way to allow easy dismantle and re-instatement after the removal of temporary RCCB enclosures;
v. The temporary RCCBs and associated accessories shall be dismantled and removed at a time just prior to the final testing and handover of electrical installation;

vi. The temporary RCCB can be re-used from previous project subject to the RCCB shall be properly functional and fully comply with the requirement in paragraph (ii) as stated above.

9. Where a Safety Supervisor shall have to be designated by the Sub-contractor by reason of the Factories and Industrial Undertakings (Safety Officers and Safety Supervisors) Regulations, CAP 59, Laws of Hong Kong, the personnel of the Sub-contractor so designated shall, in addition to those duties as imposed by the said Regulations, have to perform the additional safety functions of liaising with the Safety Officers and Safety Supervisors of the Main Contractor and attending the Site Safety Committee Meetings chaired by the Main Contractor, on all site safety matters;

10. Where there is no requirement for a Safety Supervisor to be designated by the Sub-contractor, the said additional safety functions will have to be performed by the Site Supervisor;

11. The Sub-contractor is to designate one of his personnel on Site as the Safety Supervisor within the meaning of the Factories and Industrial Undertakings (Safety Officers and Safety Supervisors) Regulations, CAP 59, Laws of Hong Kong, notwithstanding that there might not be such a requirement imposed on the Sub-contractor by the said Regulations on the basis of the total number of persons employed by the Sub-contractor on the Site;

12. Further to those duties as imposed on a Safety Supervisor by the said Regulations, the Safety Supervisor employed by the Sub-contractor shall from time to time liaise with the Safety Officers and Safety Supervisors of the Main Contractor and attend the Site Safety Committee Meetings chaired by the Main Contractor, on all site safety matters;

13. Safety Awareness

Subject to the consent of the Main Contractor as may be required, the Sub-contractor is encouraged to participate in the following designated safety campaigns:

a. "Construction Safety Day", "Construction Safety Promotional Campaign" or "Good Housekeeping Promotion Campaign" led by the Occupational Safety and Health Council; or

b. "Construction Industry Safety Campaign" led by the Labour Department; or

c. "Considerate Contractors Site Award Scheme" led by the Development Bureau with the Construction Industry Council.

14. During the construction stage (including testing and commissioning) or Maintenance Period with works to be carried out in the vicinity of work areas where required to ensure safe working condition, the Sub-contractor should coordinate with the responsible person of the respective electrical installation for isolation of electrical supply for equipment and/or energised electrical installation. During the construction stage, the Sub-contractor shall also strictly follow the same requirements for Maintenance Period as stipulated in PRE.BS1.435.

**PRE.BS1.605.7**  
CARING OF NEW WORKERS

Provide caring programme for new workers including but not limited to the following:

1. Probationers (workers who newly join the construction industry)
   a. Provide identification with "P" labels;
b. Assign mentors (with a ratio of 1 mentor to not more than 4 probationers) who possess good experience on the Site to take care of the Probationers and provide guidance on site safety with a caring period not less than 3 months;

c. Provide a safety orientation programme covering the essential safety aspects related to the Site, guidance for work and arrangement for familiarization of the Site;

d. Subject to the mentor being satisfied with the Probationer’s safety performance, remove identification label from safety helmet after the 3 months’ caring period.

2. New Comers (workers with relevant job experience but newly arrive at the Site)

a. Provide identification with "N" labels;

b. The display of "N" labels shall not be less than two weeks;

c. Provide a safety orientation programme covering the essential safety aspects related to the Site, guidance for work and arrangement for familiarization of the Site.

3. Requirements of labels for Probationers and New Comers

a. Each label shall be adhered on a conspicuous part of a safety helmet;

b. The size of label shall not be less than 50 mm (L) x 50 mm (H);

c. The name and telephone number of the mentor shall be shown on the label.

PRE.BS1.610.7 ENVIRONMENTAL MANAGEMENT PLAN

1. The Sub-contractor shall within 14 days from the date of the Letter of Acceptance prepare and submit to the Main Contractor with a copy to the CM the environmental management, waste management and site hygiene statements in respect of the Sub-contract Works. The Sub-contractor shall co-ordinate with the Main Contractor and compile and submit the necessary subsequent updating of the environmental management, waste management and site hygiene statements to suit the site progress, as determined by the Main Contractor, or the CM, so that it is at all times a comprehensive and contemporary statement of the Sub-contractor's policies, procedures and requirements for the implementation and fulfilment of the Sub-contractor's obligations as to environmental management, waste management and site hygiene in the Sub-contract Works. The Main Contractor shall have liberty to amend or modify the Sub-contractor's environmental management, waste management and site hygiene statements in respect of the Sub-contract Works as necessary in his preparation of the Environmental Management Plan including any subsequent revision or update thereto;

2. The environmental management, waste management and site hygiene statements in respect of the Sub-contract Works and its subsequent updates shall contain, but not be limited to the following items:

a. General environmental management of the Sub-contract:

i. A signed environmental and site hygiene policy statement committing the Sub-contractor to environmental protection for the project;

ii. A Sub-contractor's staff organisation chart with duties, responsibilities and accountability defined together with the name and position of the person to oversee the discharge of Sub-contractor's duties under the environmental management, waste management and site hygiene statements in respect of the Sub-contract Works. Such person shall work full time on Site and be designated to co-ordinate with the Main Contractor in this respect;

iii. Staff awareness and training proposals for Sub-contractor's staff with auditable records of trained persons;
iv. Environmental impacts, targets and mitigation objectives to minimize impacts;

v. Records containing relevant licences, permits, complaint and record of corrective actions where non-compliance has been identified; and

vi. List of environmental and site hygiene regulations and description of methodology to ensure compliance.

b. Input to the Main Contractor's waste management plan:

i. An analysis of construction waste likely to be generated from Sub-contractor's work processes with types and quantity of each waste material identified to be salvaged and reused or recycled;

ii. A statement of measures taken to reduce, salvage, reuse and recycle waste material;

iii. A description of the methods of sorting, segregation, labelling, storing, protecting and disposing of all the various types of waste materials generated;

iv. A method statement of how debris could be minimized;

v. Control measures to ensure that the sorted recyclable materials such as metal, paper, plastics, etc. are delivered to the designated sorting and storage areas on site for disposal by the Main Contractor for recycling process; and

vi. For materials delivered to site, a statement that reusable and recyclable packaging materials and pallets will be reused, recycled or returned to the supplier. Identify those suppliers who will not accept the return of pallets and reusable and recyclable packaging materials.

c. Air quality (if applicable):

i. Measures and methods to control dust and debris on and off site;

ii. Method of monitoring and report on air quality conditions on site.

d. Noise control (if applicable):

i. Type of noise reduction equipment to be used and their applications;

ii. Details of noise restrictions as they affect the Sub-contract; and

iii. Description of noise mitigation measures.

e. Water pollution control and conservation (if applicable):

i. Measures to conserve water and record on water consumption;

ii. Methods of minimising water consumption;

iii. Methods to avoid contamination and blockage of public drains and sewers and comply with the Water Pollution Control Ordinance;

iv. Method to prevent flooding and blocking of site drainage system;

v. List and describe necessary permits, approvals to be obtained and complied with; and

vi. Details of necessary drainage diversions and temporary drainage systems.

f. Site cleanliness, tidiness and hygiene:

Description of proposed measures to maintain cleanliness and tidiness of the site including details of means to protect materials, locations of stockpiles and on-site sorting and disposal areas.

g. Emergency procedures:

Emergency procedures formulated to deal with any environmental emergency such as typhoons or rainstorms.
3. The Sub-contractor shall re-submit the environmental management, waste management and site hygiene statements in respect of the Sub-contract Works within 14 days from the date of receiving comments on the submitted environmental management, waste management and site hygiene statements in respect of the Sub-contract Works from the Contract Manager.

**PRE.BS1.620.7 ENVIRONMENTAL MANAGEMENT AND SITE HYGIENE PERFORMANCE AND REPORTING**

The Sub-contractor shall, throughout the duration of the Sub-contract:

1. Carry out to the satisfaction of the Contract Manager, all environmental protection/management and site hygiene measures as described in the EMP;

2. Carry out environmental inspections to review, monitor and report monthly to the Contract Manager (or when directed by the Contract Manager), via the Main Contractor, on the effectiveness of the implementation of the EMP;

3. Report monthly to the Contract Manager via the Main Contractor for the followings attributable to him from Environmental Protection Department (EPD) or Food and Environmental Hygiene Department (FEHD):
   a. Warning letters or offences notifications;
   b. Convictions during the period under any environmental and site hygiene regulations or legislation; and
   c. Abatement Notice.

4. Take all necessary follow-up actions in collaboration with the Main Contractor to ensure that any defects or deficiencies are made good; and

5. Attend monthly Environmental and Site Hygiene Management Meetings or when directed by the Contract Manager.

**PRE.BS1.630.7 MEASURING INSTRUMENTS FOR CONTRACT MANAGER**

1. Provide for the sole use of the CM and the CM’s representatives (CMRs) a set of measuring instruments as given in the schedule below at the time specified in the schedule;

2. This set of measuring instruments will primarily be used for the BSPASS. The Sub-contractor may be responsible for the operation of the measuring instrument(s) and the testing, etc. as required by the assessment;

3. In addition to sub-clause (2) above, this set of measuring instruments will also be used for any purposes by the CM, CMRs or their delegated personnel in connection with this Contract or otherwise;

4. The set of measuring instruments shall be reverted to the Sub-contractor three months after the issue of the certificate for completion of the last Section of the Main Works;

5. The instruments shall be in good condition, suitable for the intended purpose under the operation range and conditions of the installations. The instruments shall be of age not more than 3 years, freshly calibrated and with valid calibration certificates (of near one year validity from the date of provision);

6. Maintain and calibrate the instruments against the appropriate national and international standards at the intervals as specified below;

7. Provide Calibration Certificates (issued by independent accredited laboratories) as listed in the schedule below so as to satisfy the instrument calibration requirements of the ISO 9001;

8. Attach to each instrument an indelible Identification Label and an indelible Calibration Status Label;

9. Arrange to repair any of the instrument(s) at the Sub-contractor’s own cost for normal wear and tear, and as required by the CM;
10. Provide an equivalent substitute for any measuring instrument(s) when the instrument(s) is/are not available, or out of service for maintenance, calibration or repair;

11. The schedule for measuring instruments is as follows:

<table>
<thead>
<tr>
<th>Description</th>
<th>Time of Provision</th>
<th>Calibration Certificate</th>
<th>Calibration Interval</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. No. Insulation Resistance Tester</td>
<td>One year before the date for completion of the earliest Section as specified in the Main Contract</td>
<td>Required</td>
<td>1 year</td>
</tr>
<tr>
<td>b. 1 No. Earth-fault Loop Impedance Tester</td>
<td></td>
<td>Required</td>
<td>1 year</td>
</tr>
<tr>
<td>c. 1 No. RCCB Tester</td>
<td></td>
<td>Required</td>
<td>1 year</td>
</tr>
<tr>
<td>d. 1 No. Digital Multimeter</td>
<td></td>
<td>Required</td>
<td>1 year</td>
</tr>
<tr>
<td>e. 1 No. Steel Measuring Tape, 3 m long.</td>
<td>Six weeks from the notified date for commencement of the Main Works</td>
<td>Required if the measuring tape is not brand new</td>
<td>-</td>
</tr>
<tr>
<td>f. 1 No. Vernier Calliper</td>
<td></td>
<td>Required if the vernier calliper is not brand new</td>
<td>-</td>
</tr>
</tbody>
</table>

12. The schedule for measuring instruments is as follows:

<table>
<thead>
<tr>
<th>Description</th>
<th>Time of Provision</th>
<th>Calibration Certificate</th>
<th>Calibration Interval</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Pressure Gauges</td>
<td>Provide adequate pairs of pressure gauges for the fire services and water pump system(s). Each pair of gauges shall be suitable for the system pressure of the system where the pressure gauges are put to measure, be calibrated in kPa to a maximum of not less than 1-1/3 times and not more than 2 times the operating pressure.</td>
<td>Six months before the date for completion of the earliest Section as specified in the Main Contract</td>
<td>Required 1 year</td>
</tr>
<tr>
<td>b. 1 No. Dial Gauges for shaft coupling alignment measurement</td>
<td></td>
<td>Required</td>
<td>1 year</td>
</tr>
<tr>
<td>c. Magnet stand for item (b) above</td>
<td></td>
<td>-</td>
<td>-</td>
</tr>
<tr>
<td>d. 1 No. Steel Measuring Tape, 3 m long.</td>
<td>Six weeks from the notified date for commencement</td>
<td>Required if the measuring tape is not brand new</td>

</table>

PRE.BS1.700.7  PROVISION OF SAFETY EQUIPMENT AND CLOTHING FOR PERSONAL PROTECTION OF OPERATIVES AND SITE SUPERVISORY STAFF

Pursuant to PRE.B8.235 (1) and (2) of the Main Contract, the Sub-contractor shall co-ordinate with the Main Contractor for collection of the safety helmet with ventilation vents and Y-type chin strap, with sunshade accessories such as brim and neck protector where appropriate, clothing and footwear for personal protection and ensure that their operatives and site supervisory staff wear safety helmets on site. Notwithstanding the above, provision and wearing of safety helmet with I-type chin strap up to 31 December 2015 is permitted.

Notwithstanding the above, the Sub-contractor may propose his corporate uniform for construction works to replace the items of clothing in PRE.B8.235 (2)(a) and (b) of the Main Contract, subject to CM’s approval.

PRE.BS1.710.7  CONSTRUCTION INDUSTRY COUNCIL GUIDELINES

1. The Construction Industry Council (CIC) from time to time issues “Guidelines”. Such “Guidelines” set out the recommendations on standards and procedures for all relevant industry participants to adopt and to adhere to all times. Industry participants have to prepare for justifying any course of action that deviates from these recommendations;

2. Comply with this Specification and with the relevant guidelines promulgated by the CIC. This Specification shall prevail if there is conflict between the Specification and the CIC requirements.
BEAM PLUS ASSESSMENT

BEAM PLUS ASSESSMENT

BEAM Plus means the Hong Kong's comprehensive and voluntary environmental assessment scheme to enhance environmental sustainability of buildings. The assessment shall be based on the "BEAM Plus for New Buildings (Version 1.2)" promulgated by the BEAM Society, and shall be deemed to include all subsequent amendments, revisions, standards and circular letters issued by the BEAM Society at the date 42 days prior to the date for return of tenders unless otherwise specified. Copy of the document is available from the BEAM Society. The Sub-contractor shall:

1. Assist CM to conduct BEAM Plus assessment for the Sub-contract Works according to the BEAM Plus for New Buildings;
2. Assist CM to satisfy all the target BEAM Plus prerequisites and credits listed in PRE.BS1.760 and PRE.BS1.800 and provide relevant supporting documents;
3. Carry out site measurements, consolidate the design criteria provided by the CM as appropriate and prepare the reports as detailed in PRE.BS1.760 and PRE.BS1.800 for CM's submission to BEAM Assessor;
4. Assist CM to provide substantiation for the enquiries raised by BEAM Assessor in relation to the Sub-contractor's submissions for BEAM Plus as detailed in PRE.BS1.760 and PRE.BS1.800;
5. Assign a BEAM Liaison Officer (BLO) who is familiar with BEAM Plus assessment to liaise, co-ordinate and perform all relevant works of BEAM Plus assessment as detailed in PRE.BS1.760 to PRE.BS1.800. Such person can be the Commissioning Agent (Cx Agent) specified in PRE.BS1.800;
6. Take note of the requirements for the Main Works for BEAM Plus Assessment as detailed in Appendix Q;
7. Co-ordinate with and provide necessary information to the BEAM Plus consultant who is appointed by the Employer for monitoring the implementation of BEAM Plus credits and prerequisites;
8. Attend site inspection with the BEAM Assessor and provide necessary facilities, access and assistance to the BEAM Assessor for BEAM Plus assessment.

BEAM PLUS PREREQUISITES AND CREDITS

The target BEAM Plus prerequisites and credits relevant to the Sub-contract Works are as follows:

1. Carry out the following works:
   a. Environmental Management Plan (BEAM Plus credit SA 10 refers)
      i. Prepare and implement the Environmental Management Plan including environmental monitoring and reporting specified in PRE.BS1.610 to PRE.BS1.620.
   b. Light Pollution (BEAM Plus credit SA 15 refers)
      i. Prepare and submit report using recognised software to demonstrate that the exterior lighting would not create unwanted and unnecessary light pollution for the environmental zone in which the building development is located.
   c. Ventilation System in Car Parks (BEAM Plus credit EU 4 refers)
      i. Carry out site measurement and prepare and submit report including design criteria, calculation, operation patterns, energy use prediction, report of air leakage test, equipment specification etc. to show the actual electricity consumption of the ventilation system based on BEAM Plus's requirements.
d. Lighting System in Car Parks (BEAM Plus credit EU 5 refers)
   i. Carry out site measurement and prepare and submit report including
design criteria, calculation, operation patterns, energy use prediction,
lighting fitting nos., equipment specification etc. to show the actual
electricity consumption of the lighting systems (including lamps and
ballasts) based on BEAM Plus's requirements.

e. Testing and Commissioning (BEAM Plus credit EU 10 refers)
   i. Carry out testing and commissioning work and provide the
documentation as detailed in PRE.BS1.800.

f. Operation and Maintenance (BEAM Plus credit EU 11 refers)
   i. Provide training and prepare and submit documentation as detailed in
PRE.BS1.800.

g. Metering and Monitoring (BEAM Plus credit EU 12 refers)
   i. Prepare and submit documentation such as equipment, catalogue,
schematic, commissioning record for the monitoring meters, instruments
and control equipment.

h. Biological Contamination (BEAM Plus credit IEQ 3 refers)
   i. Prepare and submit report to demonstrate the compliance with the
recommendations given in the Code of Practice - Prevention of
Legionnaires Disease for the air-conditioning and ventilation systems.

i. Construction Indoor Air Quality Management (BEAM Plus credit IEQ 5
refers)
   i. Prepare and submit report to detail the procedures and actual dates of
building flush-out, and the technical information for the filtration media
used during construction and installed immediately prior to occupancy.
Arrange to have the report certified by a Registered Professional
Engineer.

j. Indoor Air Quality in Car Parks (BEAM Plus credit IEQ 8 refers)
   i. Carry out site measurement and prepare and submit report to show the
actual air quality of the car park based on ProPECC PN 2/96;
   ii. Arrange to have the report certified by a Registered Professional
Engineer.

k. Increased Ventilation (BEAM Plus credit IEQ 9 refers)
   i. Carry out site measurement and prepare and submit report to show that
the outdoor ventilation rate complies with BEAM Plus's requirements;
   ii. Arrange to have the report certified by a Registered Professional
Engineer.

l. Localised Ventilation (BEAM Plus credit IEQ 11 refers)
   i. Carry out site measurement and prepare and submit report to show the
provision of an adequate ventilation system for rooms/areas where
significant indoor pollution sources are generated based on BEAM
Plus's requirements;
   ii. Arrange to have the report certified by a Registered Professional
Engineer.

m. Ventilation in Common Areas (BEAM Plus credit IEQ 12 refers)
   i. Carry out site measurement and prepare and submit report to show the
ventilation rates of all enclosed common areas in a building based on
BEAM Plus's requirements;
   ii. Arrange to have the report certified by a Registered Professional
Engineer.
n. Thermal Comfort in Air-conditioned Premises (BEAM Plus credit IEQ 13 refers)
   i. Carry out site measurement and prepare and submit report to show the performance indices for air-conditioning systems such as air temperature, air diffusion performance index etc. based on BEAM Plus's requirements;
   ii. Arrange to have the report certified by a Registered Professional Engineer.

o. Thermal Comfort in Naturally Ventilated Premises (BEAM Plus credit IEQ 14 refers)
   i. Carry out site measurement and prepare and submit report to show the performance indices for air-conditioning units such as air temperature, Predicted Mean Vote, acceptability range etc. based on BEAM Plus's requirements;
   ii. Arrange to have the report certified by a Registered Professional Engineer.

p. Interior Lighting in Normally Occupied Areas (BEAM Plus credit IEQ 16 refers)
   i. Prepare and submit report to include specification of lighting and control equipment and to demonstrate either by measurement and/or by using recognised software on compliance with the design criteria including achievement of:
      - Prescribed lighting performance in respect of maintained illuminance and illuminance variation;
      - Within the unified glare rating limit;
      - Light sources have an appropriate colour rendering index.
   ii. Arrange to have the report certified by a Registered Professional Engineer.

q. Interior Lighting in Areas Not Normally Occupied (BEAM Plus credit IEQ 17 refers)
   i. Prepare and submit report to demonstrate that the prescribed lighting performance in each type of common or service space in respect of light output and lighting quality is achieved;
   ii. Arrange to have the report certified by a Registered Professional Engineer.

2. Comply with the following requirements for the supply and use of materials / equipment for the Sub-contract Works. Provide supporting documents that the requirements are complied with:
   a. Noise from Building Equipment (BEAM Plus credit SA 14 refers)
      i. Use equipment (e.g. pump, fan, motor, generator) with acceptable noise level such that the level of the intruding noise caused by the equipment at the façade of the potential noise sensitive receivers is in compliance with the criteria recommended in the Hong Kong Planning Standards and Guidelines. Prepare and submit report in the form of calculation, measurements and analysis to show the actual level of intruding noise at the façade of the potential noise sensitive receivers.
   b. Use of Non-CFC Based Refrigerants (BEAM Plus credit MA P2 refers)
      i. Use no chlorofluorocarbon-based refrigerants in the air-conditioning or refrigeration equipment;
      ii. Provide supporting documents including equipment schedule, equipment catalogue etc..
c. Ozone Depleting Substances (BEAM Plus credit MA 8 refers)
   i. Use refrigerants with a value less than or equal to the threshold of the
      combined contribution to ozone depletion and global warming potentials
      as specified in the BEAM Plus;
   ii. Use zero ozone depleting potential products for thermal insulation and
       fire retardant materials in the installation works;
   iii. Provide supporting documents including catalogue of refrigerants used
       in air-conditioning and refrigeration equipment, catalogue of thermal
       insulation materials etc..

3. Provide the following supporting documents
   a. Minimum Energy Performance (BEAM Plus credit EU P1 refers)
      i. Provide necessary information and document including equipment
         catalogues, data sheets, calculation and measurement results, etc., which
         are required to be quoted in the submissions under the Building Energy
         Efficiency Ordinance, for BEAM Plus submission;

   Option 1:

   b. Reduction of CO2 Emissions (BEAM Plus credit EU 1 refers)
      i. Provide necessary information and document such as catalogue to
         substantiate the actual energy consumption of the equipment.

   Option 2 (Not applicable to non-residential buildings):

   b. Passive Design (BEAM Plus credit EU 1 - Option 2 refers)
      i. Provide necessary information and document such as catalogue to
         substantiate the actual energy consumption of the equipment.
   c. Peak Electricity Demand Reduction (BEAM Plus credit EU 2 refers)
      i. Provide necessary information and document such as catalogue to
         substantiate the actual peak electricity demand of the equipment.
   d. Indoor Vibration (BEAM Plus credit IEQ 21 refers)
      i. Provide necessary technical information for the vibration characteristic
         of the equipment.

PRE.BS1.770.7 FILING SYSTEM FOR BEAM PLUS ASSESSMENT
1. Establish and maintain organized filing system to facilitate BEAM Plus
   assessment for BEAM Plus prerequisites and credits;
2. The filing system shall include supporting documents to justify satisfactory
   compliance with the BEAM Plus prerequisites and credit requirements.

PRE.BS1.780.7 MONTHLY BEAM PLUS MONITORING REPORT
1. Submit monthly BEAM Plus Monitoring Report to the Main Contractor before
   end of each month for their consolidation and submission to CM and BEAM
   Plus consultant for review;
2. The format and framework of the BEAM Plus Monitoring Report shall follow
   the one prepared by the Main Contractor as far as practicable;
3. The BEAM Plus Monitoring Report shall cover all BEAM Plus credits and
   prerequisites in PRE.BS1.760 and PRE.BS1.800 and report the progress of tasks
   and anticipated commencement dates and completion dates of the task.

PRE.BS1.790.7 BEAM PLUS COORDINATION MEETING
1. Attend regular BEAM Plus Coordination Meeting arranged by BEAM Plus
   consultant to report, discuss, resolve and record BEAM Plus related issues;
2. The BLO shall be present in the monthly BEAM Plus Coordination Meeting;
3. Provide additional supporting information as requested by CM or BEAM Plus consultant to demonstrate the requirements of BEAM Plus credits and prerequisites have been met.

**PRE.BS1.800.7 BEAM PLUS REQUIREMENTS ON TESTING, COMMISSIONING, OPERATION AND MAINTENANCE**

1. Definitions
   a. Commissioning Authority
      Commissioning Authority (CxA) shall be the HKHA’s officers duly appointed by the Employer or his representative.
   b. Commissioning Team
      Commissioning Team (Cx Team) shall be the team comprising of Employer or his representative, Project Architect, Project Building Services Engineer, Project Building Services Inspector, Main Contractor, Sub-contractor or his Cx Agent, sub-contractors of other trade and equipment suppliers and be responsible for the testing and commissioning (T&C) of the project works including the Sub-contract Works.
   c. Commissioning Agent
      i. Commissioning Agent (Cx Agent) shall be the Supervising Engineer or Site Supervisor or other project staff at Site Supervisor level or above nominated by the Sub-contractor and approved by CM to perform all T&C tasks of the Sub-contract Works and fulfil the duties of "Commissioning Agent" as stipulated in the BEAM Plus;
      ii. The Cx Agent shall have basic understanding of the T&C requirements of BEAM Plus. In general, the Cx Agent shall perform the following duties:
         - Join the Cx Team and attend the Cx Team's meeting;
         - Support and co-ordinate with other members of the Cx Team to perform the T&C works and achieve the BEAM Plus credits;
         - Incorporate activities of commissioning process in the Sub-contractor's installation programme;
         - Provide all necessary submittals as required for the BEAM Plus accreditation;
         - Provide information and documentation to facilitate the commissioning process;
         - Prepare and submit method statements for pre-functional tests and functional performance tests to the CM for review and his submission to the CxA for approval;
         - Develop the checklists for pre-functional tests and functional performance tests;
         - Notify the CM when systems and equipment are ready for testing;
         - Complete the pre-functional checklists as the work progresses and submit the completed checklists to the CM for review and his submission to the CxA for information;
         - Co-ordinate and carry out local and overseas factory tests as stipulated in the Specification;
         - Carry out start-up and field inspection for equipment and systems on-site as stipulated in the Specification;
         - Conduct the commissioning tasks and tests as specified;
d. Commissioning Management Plan (CxM Plan)

Commissioning Management Plan (CxM Plan) is a plan developed by the CxA and lists out all systems and equipment to be commissioned, all commissioning tasks, all functional performance tests to be performed, all related reference documents and all responsible parties involved in the commissioning process. The CxM Plan is attached in Appendix Z for information.

2. General

a. The Sub-contractor shall provide all necessary information including T&C specifications and reports, operation and maintenance manuals, and details of noise and vibration sources from various building services systems/components and noise and vibration attenuation provisions, etc. to the CM for the purpose of BEAM Plus assessment;

b. The Sub-contractor and his Cx Agent shall carry out the T&C works in accordance with the requirements stipulated in this clause and the requirements stipulated in other parts of the Sub-contract documents;

c. The Sub-contractor and his Cx Agent shall carry out the T&C works meeting all the requirements of target credits as stipulated in EU10, EU11 and Section 8.5 of the BEAM Plus and provide necessary supporting documents including but not limited to those stipulated in this clause and the Specification in order to achieve the BEAM Plus accreditation;

d. Documents relating to T&C works shall be submitted by the Cx Agent to the Contract Manager’s Representative (CMR) for review and his submission to the CxA for approval;

e. The Cx Agent shall document and provide substantiation information as required by the BEAM Plus and the CMR to facilitate the BEAM Plus final submission;

f. The Cx Agent shall timely collect, prepare and consolidate all the reports and documents used for the BEAM Plus final submission for CMR's review and his submission to CxA for approval. The reports and documents referred herein shall include but not limited to the following:

i. Commissioning report (EU 10 of the BEAM Plus refers);

ii. Operation and maintenance manual (EU 11 of the BEAM Plus refers);

iii. Energy management manual (EU 11 of the BEAM Plus refers);

iv. Operator training record (EU 11 of the BEAM Plus refers);

v. Records of operation and maintenance facilities (EU 11 of the BEAM Plus refers).

g. Should there be any discrepancies between the BEAM Plus requirements and the T&C requirements stipulated in this clause and other parts of the Sub-contract documents, the Sub-contractor or his Cx Agent shall in the first instance report the discrepancies to the CM and seek the CM’s directive.

3. Responsibility of All Parties Involving in Commissioning Process

Responsibilities of CxA in sub-clause (1)(a) above and members of Cx Team in sub-clause (1)(b) above are detailed in the CxM Plan;

4. Commissioning of Systems and Equipment for BEAM Plus Submission
The Sub-contractor shall commission all the energy related building services systems in accordance with the BEAM Plus requirements. For the purpose of achieving the BEAM Plus accreditation, the Sub-contractor shall timely complete the T&C works of the following systems and components to meet the BEAM Plus submission schedule. The T&C works for other systems, equipment and components of the Sub-contract Works shall be carried out according to the requirements as stipulated in other parts of the Sub-contract documents as appropriate.

a. Lighting systems and components include but not limited to:
   i. Lighting fixtures and control devices;
   ii. Daylight control and sensing devices.

b. ACMV systems and components include but not limited to:
   i. Ventilation fans (both supply and exhaust);
   ii. Ducts and associated dampers;
   iii. Unitary and split-air conditioners;
   iv. Piping and associated valves.

c. Renewable energy systems and components include but not limited to:
   i. PV panel;
   ii. Wind turbines;
   iii. Batteries, inverters, capacitor and associated electrical components and wirings;
   iv. Sensors and actuators;
   v. Control panel; etc.

d. Water supply and conservation systems include but not limited to:
   i. Pumps;
   ii. Variable frequency drives;
   iii. Piping and associated valves;
   iv. Sensors and actuators;
   v. Control Panels;
   vi. Rainwater harvest system;
   vii. Greywater harvest system;
   viii. Other water treatment plant; etc.

e. ACMV systems and components include but not limited to:
   i. Chillers;
   ii. Cooling Towers;
   iii. Control for ACMV systems, including central plant, energy management system (EMS) and building automation system (BAS), if applicable;
   iv. Unitary and split-air conditioners;
   v. Ventilation fans (both supply and exhaust);
   vi. Chilled water pumps and condensing water pumps;
   vii. Variable frequency drives;
   viii. Heat exchangers;
   ix. Boilers;
x. Domestic hot water and hot water heaters;
xi. Ducts and associated dampers;
xii. Piping and associated valves;
  xiii. Waste heat recovery, thermal storage, etc..

f. Renewable energy systems and components include but not limited to:
   i. Solar hot water system;
   ii. Pumps;
   iii. Control panel etc..

g. Energy conservation systems and components include but not limited to:
   i. Demand control ventilation system using sensors (e.g. NO2/ CO2/ CO sensors), etc..

h. Energy conservation systems include but not limited to:
   i. Lifts incorporated with regenerative feature.

5. Scope of commissioning work and deliverables

The Cx Agent shall document and submit the start-up and inspection checklist to
the CMR for comment and his submission to the CxA for review. The
submittals applicable to the commissioned systems shall comply with the design,
meet the operation and maintenance requirements and facilitate functional
performance testing.

a. Preparation of Method Statement for Testing and Commissioning Work

i. The Cx Agent shall develop Method Statement for each system and
major equipment and components to be commissioned in order to fulfil
the "Commissioning Plan" requirements of the BEAM Plus. Content of
the Method Statement shall include but not limited to:
   - Start-up and inspection checklists and procedures;
   - Functional performance testing procedures and checklists;
   - Testing, adjustment, and balancing procedures;
   - Safety precautions;
   - Organization chart of the commissioning team for the Sub-contract
     Works;
   - Emergency contact persons and any other essential contact points
     for safety issues.

ii. For each system to be commissioned, the Method Statement shall
   provide details of the following information:
   - An overview of the tasks to be executed during commissioning;
   - A list of all features to be commissioned;
   - A list of reference documents related to commissioning, including
     Specification references, drawing list, and submittal drawings;
   - A list of parties involved in the commissioning process and their
     responsibilities;
   - Description of checklists and tests to be performed, with reference to
     Specification;
   - Pre-start and start-up checklists;
   - List of the functional performance tests to be performed;
   - Description of the training to be provided to the operation and
     maintenance personnel.
iii. The Method Statement shall be consistent with those stipulated in the CxM Plan and be updated from time-to-time whenever required. Finalized Method Statement shall be endorsed by the Employer or his representative.

b. Start-up and Check-out

i. Start-up and inspection checklist shall comprise of all necessary tests and checks to determine that all components, equipment, subsystems, systems, and interfaces between systems operate in accordance with the Specification and construction documents. It shall cover all modes and sequences of control operation, interlocks and conditional control responses, and specified responses to abnormal or emergency conditions;

ii. The results of the start-up and check-out shall be documented and must be performed according to the manufacturer’s written instructions for the systems and equipment being commissioned, and the as-fitted construction documents;

iii. Certificates of readiness shall be prepared by the Cx Agent verifying that start-up and inspections have been successfully completed and that all equipment, systems, and control are complete and ready for functional performance testing.

c. Commissioning Process

i. The Cx Agent shall perform site acceptance test according to the Method Statement and the T&C specification as stipulated in the Sub-contract documents. The Cx Agent shall develop checklists or forms for all the systems or equipment and components to be commissioned;

ii. After initial inspection and checking has been verified, each operating sequence of systems shall be tested. The operating sequences to be tested shall at least include the following ones, if applicable:
   - Start-up;
   - Shutdown;
   - Unoccupied and manual modes;
   - Modulation up and down the unit’s range of capacity, if applicable;
   - Staging, if applicable;
   - Power failure/power down;
   - Alarms;
   - Backup upon failure;
   - Interlocks with other equipment.

iii. To facilitate verification work by the CM or the CxA, the Cx Agent shall ensure completion of checking and carry out verification work as detailed in the CxM Plan;

iv. The Cx Agent shall set the sampling size for the verification test of T&C works for each type of system, equipment, and component as detailed above and seek the CM’s approval for the proposed sampling size;

v. As far as practicable, equipment shall be tested to verify their performance at near-design conditions. If seasonal variation in environmental conditions causes it unsuitable for carrying out the test at project completion stage, deferred testing of equipment can be proposed as an alternative;

vi. The efficiency of central plant shall be recorded for reference by operation staff;
vii. Functional performance testing can be carried out using manual methods, control system trend logs, stand-alone data loggers, etc., as considered appropriate;

viii. The Cx Agent shall prepare all the checklists and summaries for each test, and submitted to the CM and the CxA for their review and for the approval of Employer or his representative. All the commissioning items shall be consistent with the BEAM Plus requirements;

ix. The Cx Agent shall also be required to submit the schedule of commissioning tests to the Cx Team as and when directed by the CM and give advance notifications for necessary witness of the tests by the Cx Team.

d. Preparation of Commissioning Report

i. The Cx Agent shall prepare the final commissioning report in compliance with the requirements stipulated in Section 8.5 of the BEAM Plus. The final commissioning report shall be submitted to the CM for approval;

ii. If any tests need to be carried out after contract completion due to seasonal variation in environmental conditions, the Cx Agent shall prepare the records for these tests in the format same as that for the commissioning report submitted at the project completion and issue an addendum to the commissioning report to cover these records.

i. The Cx Agent shall prepare the O&M Manual and Energy Management Manual in compliance with the requirements stipulated in Section 8.5 of the BEAM Plus. The O&M Manual and Energy Management Manual shall be submitted to the CM for review and his submission to the CxA for approval.

f. Coordination of Operator Training and Facilities

i. The Sub-contractor shall provide training for operation and maintenance staff in compliance with the requirements stipulated in Section 8.5 of the BEAM Plus and other requirements as stipulated in the Specification. Adequate facilities shall be provided for operations and maintenance works.
APPENDIX PRE.BS1

PRE.BS1.APPEND1.7 APPLICATION FORM FOR APPROVAL OF TESTING LABORATORY

Application for Approval of Testing Laboratory (Original)

Contract No. : _______________________
Contract Title : _______________________

To Contract Manager,
(Attn: )

I apply for your approval the commissioning of _______________________
(Name of testing laboratory)
to carry out the following test(s):

<table>
<thead>
<tr>
<th>Description of the test(s)</th>
<th>Relevant specification clauses</th>
</tr>
</thead>
<tbody>
<tr>

## APPENDIX PRE.C9/IV

- PRE.C9.APPEND4.7 DISPOSAL DELIVERY FORM | 163 |

## APPENDIX PRE.C9/V

- PRE.C9.APPEND5.7 MONTHLY RECORDING OF DAILY FLOW RATE OF WASTE WATER DISCHARGED ON SITE | 164 |

## APPENDIX PRE.C9/VI

- PRE.C9.APPEND6.7 MONTHLY RECORDING DELIVERY AND CONSUMPTION OF ULTRA LOW SULPHUR DIESEL ON SITE | 165 |

## PRE.C10 TRAFFIC ARRANGEMENTS

### TRAFFIC CONTROL

- PRE.C10.010.7 SITE TRAFFIC | 166 |
- PRE.C10.020.7 COMPLIANCE WITH REGULATIONS | 166 |
- PRE.C10.030.7 COMPLIANCE WITH AUTHORITIES' REQUIREMENTS | 166 |
- PRE.C10.040.7 COMPLIANCE WITH PROCEDURES AND REQUIREMENTS | 166 |
- PRE.C10.050.7 CONTRACTOR'S PROPOSALS | 166 |

### TEMPORARY TRAFFIC ARRANGEMENTS AND CONTROL

- PRE.C10.110.7 CONTRACTOR'S RESPONSIBILITY | 167 |
- PRE.C10.120.7 COMPLIANCE WITH AUTHORITIES' REQUIREMENTS | 167 |
- PRE.C10.130.7 OBTAINING AUTHORITIES' APPROVALS | 167 |
- PRE.C10.140.7 APPLICATION | 167 |
- PRE.C10.150.7 COMPLIANCE WITH CODE OF PRACTICE | 167 |
- PRE.C10.160.7 INSPECTION AND MAINTENANCE | 167 |
- PRE.C10.170.7 SUBMISSION FOR CM'S APPROVAL | 167 |

### TRAFFIC CONTROL EQUIPMENT

- PRE.C10.210.7 MAINTENANCE OF EQUIPMENT | 168 |
- PRE.C10.220.7 CHECKING EQUIPMENT | 168 |
- PRE.C10.230.7 REPAIRING/REPLACING EQUIPMENT | 168 |
- PRE.C10.240.7 ELECTRIC LAMPS | 168 |
- PRE.C10.250.7 TEMPORARY TRAFFIC LIGHT SIGNALS | 168 |
- PRE.C10.260.7 TEMPORARY TRAFFIC SIGNS | 168 |
- PRE.C10.270.7 TEMPORARY CONCRETE PROFILE BARRIERS | 169 |
- PRE.C10.280.7 SAFETY OF SITE VEHICLES AND MOBILE PLANT | 169 |

## WORK IN ROADS AND FOOTWAYS

- PRE.C10.310.7 WORK IN SECTIONS | 169 |
- PRE.C10.320.7 DEFINING AREAS OF EXCAVATION | 169 |
- PRE.C10.330.7 STORING EXCAVATED MATERIAL | 170 |
- PRE.C10.340.7 BRIDGING EXCAVATIONS | 170 |
- PRE.C10.350.7 REMOVAL OF TEMPORARY EQUIPMENT | 170 |
- PRE.C10.360.7 ADJUSTING THE ROAD HARDWARE LEVELS | 170 |
- PRE.C10.370.7 EXISTING STREET LIGHTING | 170 |

## PRE.C11 TEMPORARY WORKS AND FACILITIES

### TEMPORARY WORKS

- PRE.C11.010.7 PRIOR APPROVAL | 171 |
- PRE.C11.020.7 EARTH SUPPORT TO RETAINING WALL EXCAVATIONS | 171 |
- PRE.C11.030.7 PROVISION OF ACCESS ROADS | 171 |
- PRE.C11.040.7 TUNNELLING | 171 |
- PRE.C11.050.7 APPROVAL OF ACCESS POINTS | 171 |
- PRE.C11.060.7 DIVERSION OF STREAMS OR DRAINS | 172 |
- PRE.C11.070.7 NEW SIGNBOARDS | 172 |
- PRE.C11.080.7 PAINTING AND SIGNWRITING ON SIGNBOARDS | 172 |
- PRE.C11.090.7 SUPPLY OF WATER | 172 |
- PRE.C11.095.7 TEMPORARY LIGHTING | 173 |

THE PROJECT

1. The Hong Kong Housing Authority is implementing the construction of a Public Housing Development at ..........................................................
2. This Contract comprises the .................................................. for the project.

THE CONTRACT MANAGER

Option 1

The Contract Manager (CM) shall be the Chief Civil Engineer/…………… of the Housing Department.

Option 2

The Contract Manager (CM) shall be the Chief Geotechnical Engineer/…………… of the Housing Department.

Option 3

The Contract Manager (CM) shall be Messrs .................................
THE WORKS

The Works included in this Contract comprise:

1. The following preparatory works:
   a. Demolition of all existing building structures within the site boundary and
disposal of debris;
   b. Removal and disposal of all asbestos-containing material contained in
existing building structures and other parts of the site;
   c. Ground investigation works including drillholes and installation and
monitoring of ground instruments;
      Note: In accordance with GCC Clause 9.1, this Section is "Works Subject to
Excision".
2. The following temporary works:
   a. Design, construction, maintenance and removal of a temporary conveyor
system and associated foundation works;
   b. Taking over, modification, maintenance and removal of a barge loading area,
jetty and associated works.
3. The following earthworks:
   a. Excavation and removal of materials for the formation of
approximately ......... hectare of cut platform and approximately .........
hectare of associated cut slopes;
   b. Formation of approximately ......... hectare of fill platform and road area and
associated fill slopes;
   c. Disposal of surplus materials to designated and/or instructed disposal areas
and/or Contractor’s tip.
4. The following slope/retaining works:
   a. Stabilisation works on slopes;
   b. Stabilisation works for boulders;
   c. Slope reinstatement and stabilisation works;
   d. Construction of boulder barriers;
   e. Construction of gabion boulder barriers;
   f. Construction of retaining walls;
   g. Construction of seawall and disposal of dredged material.
5. The following roadworks:
   a. Construction of carriageway, footpaths, lay-bys and associated road and
drainage works;
   b. Realignment and widening of existing carriageways, roads, footpaths and
associated drainage works.
6. Works to the following services:
   a. Construction of storm water and foul drains and sub-soil, slope and platform
drainage;
   b. Construction of fresh and flushing water mains;
   c. Laying of fresh and flushing water mains.
7. Soft Landscaping Works:
   a. Protection, transplanting and maintenance of trees;
   b. Planting of trees and shrubs and associated establishment works.
8. All such works and/or services in relation to the taking care of the Works after
completion as may be instructed by the CM in accordance with Clause SCC8.4
and PRE.C6.200;
9. Work outside the boundary of the Site, including:
a. Soil and surface water drainage connection works. Area .......... refers;
b. Water supply connection works. Area .......... refers;
c. Road run-in and footpath works. Area .......... refers.

10. Other Works:
All other works required under the Contract, or which may be ordered by the CM in accordance with the terms of the Contract.

PRE.C2.020.7 WORKS SUBJECT TO EXCISION
Sections which are "Works Subject to Excision" in accordance with GCC Clause 9.1 are listed in PRE.C6.120.

PRE.C2.030.7 PREPARATORY WORKS

Option 1
There are no preparatory works for this project.

Option 2
The following preparatory work has been (is being) executed under (a) previous separate contract(s):

PRE.C2.040.7 CONCURRENT WORKS
1. The site is in ....... new town development area and a number of separate general infrastructure and housing development contracts are expected to be carried out concurrently with this one. The following works are scheduled to be carried out adjacent to the Site:

<table>
<thead>
<tr>
<th>Contract</th>
<th>Anticipated Period</th>
</tr>
</thead>
</table>

2. Existing squatter areas around the Site are expected to be cleared progressively during the course of the Contract.

PRE.C2.050.7 CO-ORDINATION WITH CONCURRENT WORKS
1. Other contracts are being carried out concurrently on adjoining sites as follows:

2. In accordance with GCC Clause 5.27, liaise with and co-ordinate and sequence the Works with the contractors for these separate contracts and with the Specialist Contractors, Government Departments and Utility Undertaking engaged in the development of this and the adjoining sites, and allow for necessary time and costs in connection. The adjoining sites may include parts/Sections already completed and handed over by the Employer to following contractors. In particular, follow the following requirements:
   a. The works in this Contract connect directly with and/or have interdependent phasing with the Works for the ................. contract. Allow for all time taken in liaison, co-ordination planning and programming with the separate contractors;
   b. Works by others will be carried out on and adjacent to the site boundary. Allow for providing access for these works and for temporary shifting and reinstatement of fencing and site hoardings to suit the requirements of separate contracts.
3. Programme the works including the above utilities and services installation to suit the construction programme of adjacent ......................... building contracts. Completion of the aforesaid utilities and services installations shall be deemed to be ready for connection, final inspection, testing and commissioning of the respective services/utilities serving adjacent ......................... redevelopment.
WORKS ON STREET MAINTAINED BY THE HIGHWAYS DEPARTMENT

1. Carry out works on Street Maintained by the Highways Department at ........................;

2. Render all necessary assistance to the Employer in processing any application for an Excavation Permit or any extension in respect thereof including supplying all necessary information to the CM. The information required for processing the Excavation Permit is contained in the Excavation Permit Processing Manual issued by Highways Department. The information includes but is not limited to excavation locations, detailed construction programme for permit period assessment, utilities coordination programme, temporary traffic measures and substantiations for extension of permit period etc. Coordinate with the Utility Undertaking in compiling the utilities coordination programme and obtain approval from relevant departments on the temporary traffic measures;

3. Allow sufficient time in the programme for the Employer to obtain the Excavation Permit and that should include all activities in the application process as outlined in the Excavation Permit Processing Manual issued by Highways Department and any proposed revisions from the Contractor to those proposals already submitted by the Employer to the Designated Authority for applying the Excavation Permit;

4. Comply with the conditions of the Excavation Permit in the capacity of the Nominated Permittee and assist the Employer and the CM to comply with the same. Ensure all safety precautions are carried out to protect the public and that all works are carried out in such a manner as to cause as little inconvenience as possible to the public. Ensure that existing utilities are not damaged, temporary traffic arrangements are properly implemented, vehicular and pedestrian accesses are maintained, working sites are not left unattended, the Site is kept clean at all times, road works reinstatements and their maintenance are carried out in accordance with the conditions of the Excavation Permit. Carry out all remedial works for road works reinstatements within 12 months from the date of submission of a Completion Notice under the Excavation Permit and bear all associated costs;

5. Ensure that sufficient site supervising personnel are provided to supervise the works on Street Maintained by the Highways Department in particular on site safety. At least 4 weeks before commencement of the works on Street Maintained by the Highways Department, submit a supervision plan documenting the supervision system which should include detailed information on how to supervise, monitor and prevent the Contractor's personnel from committing an act or making an omission in contravention of the Land (Miscellaneous Provisions) Ordinance (CAP. 28) and the conditions of the Excavation Permit. The supervision plan shall outline all safety precautions including excavation support details to protect the public from any danger or injury during execution of works on Street Maintained by the Highways Department. The supervision plan and the information contained in the plan shall be acceptable to the CM. The consent by the CM of any such particulars shall not relieve the Contractor of any duty or responsibility under the Contract and any liability under the Land (Miscellaneous Provisions) Ordinance (CAP. 28);

6. Appoint a competent person to supervise all works on Street Maintained by the Highways Department and to ensure that the supervision plan is adhered to. The competent person shall be a registered professional or a safety officer as defined in Section 10T of the Land (Miscellaneous Provisions) Ordinance (CAP. 28). The competent person shall be full time on Site for supervision of the works on Street Maintained by the Highways Department;

7. Construct run-in and run-out in compliance with Highways Department's standards at the proposed site entrance and exit respectively. When no longer required, remove the run-in and run-out and reinstate the affected road and footpath to the CM's satisfaction and bear all associated costs.
WORKS BY NOMINATED SUB-CONTRACTORS

The following parts of the Works will be carried out by Nominated Sub-contractors:

1. Electrical installation;
2. Fire services installation;
3. Fresh and Flush water pump installation;
4. Air conditioning and ventilation installation.

MATERIALS BY NOMINATED SUB-CONTRACTORS

The following materials for incorporation in the Works will be supplied by Nominated Sub-contractors:

1. Play Equipment.

SPECIALIST WORKS BY SPECIALIST CONTRACTORS

The following Specialist Works will be carried out by Specialist Contractors employed direct by the Employer and/or Housing Department Materials Testing Laboratory:

<table>

SPECIALIST WORKS BY GOVERNMENT DEPARTMENTS AND UTILITY UNDERTAKING

The following Specialist Works will be carried out by Government Departments and Utility Undertaking:
### GROUND INVESTIGATION WORKS

1. For all ground investigation works required under the Contract, employ a Ground Investigation Contractor, who shall have been registered under the Housing Authority List of Ground Investigation Contractors and the BD's List of RSC(GIFW), to carry out the works;

2. Unless otherwise specified, the Ground Investigation Contractor shall carry out all ground investigation works in accordance with the following requirements:
   a. Carry out the works in accordance with the recommendations, methods and procedures described in 'Geoguide 2: Guide to Site Investigation', Hong Kong Government, 1987, unless otherwise specified;
   b. In the logging and reporting of the works, adopt all material descriptions, classifications, symbols and definitions of terms in accordance with 'Geoguide 3: Guide to Rock and Soil description', Hong Kong Government, 1988, unless otherwise specified;
   c. Provide Technically Competent Persons (TCP) for ground investigation field works (GIFW), who shall comply with the minimum requirements on the qualifications and experience required for each grade of TCP for GIFW set out in the TMSP and the CoPSS, to carry out supervision of the GIFW in accordance with the supervision requirements stated in the TMSP and CoPSS regarding RSC(GIFW);
   d. Engage a Competent Person (Logging), who shall comply with the minimum requirements on the qualifications and experiences required for the Competent Person (Logging) set out in the CoPSS, to carry out logging of samples and preparation of borehole logs;
   e. Comply with the administration procedures for GIFW set out in the CoPSS, including completing and submitting prescribed plans and relevant ICU Forms to be specified by the CM;
   f. The reports on the works shall contain a certificate signed by the Authorized Signatory of the Ground Investigation Contractor confirming the standards of works carried out. Detailed requirements for the certification shall comply with the CoPSS;
   g. Store all drill hole cores and samples properly in core boxes/containers and protected them from the weather to the satisfaction of the CM and in such a manner that inspection of the cores can easily be made.

3. The number of Ground Investigation Contractor shall be limited to one unless otherwise approved by the CM;

4. Submit to the CM the name of the Ground Investigation Contractor and the names of the personnel provided in accordance with sub-clauses (2)(c) and (2)(d) above;

5. Incorporate the following conditions into the contract between the Contractor and the Ground Investigation Contractor:
   a. Assignment of ground investigation works by the Ground Investigation Contractor is forbidden;
   b. A probity clause which shall be drafted for the respective contract in similar wording as given in the following sample clause:
"If the Ground Investigation Contractor or any of his agents or employees are found to have offered or given advantage, gratuity, bonus, discount, bribe or loan of any sort to any agent or employee of the Employer (i.e. the Contractor), agents or employees or members of Hong Kong Housing Authority, or employees of Hong Kong Special Administrative Region working in the Housing Department, the Employer shall be at liberty forthwith to terminate the employment of the Ground Investigation Contractor under the Contract and to hold the Ground Investigation Contractor liable for any loss or damage which the Employer may thereby sustain."

SITE FORMATION WORKS

SITE FORMATION WORKS

1. For all Site Formation Works required under the Contract, employ a Site Formation Contractor, who shall have been registered under the BD's List of RSC(SF) and DEVB's List of LANP, to carry out the works;

2. The Site Formation Contractor shall:
   b. Complete and submit Form ICU 10 in accordance with PRE.C9.2010;
   c. Carry out supervision of the Site Formation Works in accordance with the submitted supervision plan, relevant PNAPs, PNRCs and etc.;
   d. Complete and submit Form ICU 14 together with all test/assessment reports, monitoring results and as-built record plans for the Site Formation Works as required under the Contract upon completion of the Site Formation Works.

3. The number of Site Formation Contractor employed shall be limited to one unless otherwise approved by the CM;

4. Submit to the CM the name of the Site Formation Contractor and the names of the personnel provided in accordance with the Contract for Site Formation Works;

5. Incorporate the following conditions into the contract between the Contractor and the Site Formation Contractor:
   a. Assignment of Site Formation Works by the Site Formation Contractor is forbidden;
   b. A probity clause which shall be drafted for the respective contract in similar wording as given in the following sample clause:

   "If the Site Formation Contractor or any of his agents or employees are found to have offered or given advantage, gratuity, bonus, discount, bribe or loan of any sort to any agent or employee of the Employer, agents or employees or members of Hong Kong Housing Authority, or employees of Hong Kong Special Administrative Region working in the Housing Department, the Employer shall be at liberty forthwith to terminate the employment of the Site Formation Contractor under the Contract and to hold the Site Formation Contractor liable for any loss or damage which the Employer may thereby sustain."
PRE.C3 THE SITE

PRE.C3.010.7 SITE LOCATION
The Site is at ................................................................., as indicated on Drawing No. ..........................................................

PRE.C3.020.7 SITE DEFINITION
1. The boundary of the Site as defined by the Conditions of Contract is delineated on Drawing No. ..............................................;
2. The boundaries of the Site and each Portion and Section shown on the Drawings are approximate only;
3. The exact boundaries will be confirmed on site by the CM;
4. The Site includes the "works areas" and "borrow areas", if any, indicated on the Drawings and includes such other areas of roads, footpaths and lands which, in the opinion of the CM are necessary for the execution of the works.

PRE.C3.030.7 SITE AVAILABILITY
The Site will be made available to the Contractor free of charge for the purpose of the Contract.

PRE.C3.040.7 ADDITIONAL AREAS

Option 1
1. The Contractor may apply to the CM in writing for an additional area to be included in the Site;
2. If, in the opinion of the CM, such an additional area is required to meet special circumstances which have arisen due to a change in the extent or nature of the works then if a suitable area is available, the CM shall arrange for the area to be allocated to the Contractor free of charge;
3. Other than in accordance with the provisions of this sub-clause, the Contractor shall make his own arrangement for any additional area he requires.

Option 2
1. Additional Works Area and/or Borrow Area(s) as delineated on Drawing No. .............................................. will be made available to the Contractor, if required, free of charge but availability cannot be guaranteed beyond .................;
2. The Area(s) must be cleared and returned to the Employer within two weeks of the CM's instruction to that effect.

PRE.C3.050.7 LIMITATIONS OF WORKING AREAS
1. Limitations of working area and storage spaces are as shown on Drawing No. ..............;
2. Confine material storage, plant, equipment and stockpiles of excavated materials and any other temporary works to the working areas of the Site. No dumping of debris, stockpiling of excavated materials, nor any other temporary structures, huts, workshops, etc. shall be allowed outside the working areas of the Site;
3. Make allowance in the programme and work sequence to cater for these limitations.

PRE.C3.060.7 GEOLOGICAL INFORMATION
1. Tenderers may make preliminary investigations as they require and at their own cost. Arrangements can be made as noted in the Special Conditions of Tender on an application to the CM;
a. Certain logs of exploratory boreholes previously made on site and reports of laboratory soil test results are available for inspection by appointment at the CM's office during normal working hours;

b. Copies of the logs may be made available to tenderers upon their application to the CM in writing and subject to payment of a charge for photocopying;

c. In either case, such information as is contained in the borehole logs and reports is given in good faith but without prejudice to the Contractor's liabilities under the Contract.

3. Furthermore, no warranty either expressed or implied can be given as to the accuracy of the information related to the logs and reports themselves, nor as to the extent to which the information is representative of the whole or any part of the Site;

4. The onus is on the Contractor to satisfy himself as to the nature of the Site sub-soil conditions and to make any site investigation to obtain all information which may affect the Works. No claim whatsoever will be considered arising from the Contractor pleading ignorance of the Site;

5. Where specific additional soil investigation work is required by the CM, these will be part of the Works.

PRE.C3.070.7 HIGH WATER LEVELS

1. This Site is close to the sea waterfront and works for ............ may be required to be carried out below high water levels;

2. The Contractor will be required to obtain a copy of the times and heights of high and low water for Hong Kong, adjusted as necessary for .............;

3. Notwithstanding the published tide tables, which indicate the maximum high water level, the Contractor should also satisfy himself of the abnormal high tide build up above these levels that can occur in this area due to extreme weather conditions.

PRE.C3.080.7 EXISTING FACILITIES

1. The existing facilities (carriageway, footpaths, drainage) of ........................................ area for the Works are shown on Drawings No. ........................................ These drawings are given in good faith and the Contractor shall satisfy himself as to the accuracy of these Drawings;

2. Any such facilities as indicated are to be maintained in operation at all times during the Contract. The Contractor is to ensure that any temporary diversion complies with relevant Regulations and is to obtain the CM's Approval of the proposed routing before any diversion works are carried out.

PRE.C3.090.7 EXISTING RIGHTS OF WAY

Option 1

1. There is an existing right-of-way between ........................................ and ........................................... Maintain at all times, either the existing or approved diverted right-of-way in a safe and clean condition;

2. Do not use the right-of-way, except when carrying out the works in connection with it.

Option 2

1. The portions of ........................................ Street, ........................................ Street, ........................................ Path, ........................................ Street ........................................ Street and ........................................ Street are public roads within the Site which will be used by others;

2. Provide and maintain at all times for the duration of the Contract a safe and clean pedestrian and vehicular access on these roads;

3. Provide all necessary lighting, hoarding, pedestrian crossing points and the like;

4. The Contractor shall have no exclusive right to the use of these roads;
5. Free access shall be made available at all times for the public and for staff and/or contractors of Government Departments and/or utility companies and/or parties authorised by the CM to carry out operation, maintenance and repair works to existing utility services along these roads.

PRE.C3.100.7 **EXISTING BUILDINGS**

Attention is drawn to the following buildings adjacent to or abutting on the site: .......................................................... ..........................................................

PRE.C3.110.7 **EXISTING SERVICES**

*Option 1*

1. The following utilities services, drains etc. are known to be within the Site (See also PRE.C9.1610 to PRE.C9.1700) ............................................

*Option 2*

1. A plan indicating known existing underground services may be viewed at the CM's office during normal office hours by prior appointment (See also PRE.C9.1610 to PRE.C9.1700);

2. The Contractor shall satisfy himself that any information given to him regarding existing utility services is correct and adequate.

PRE.C3.120.7 **ACCESS TO THE SITE**

1. Access route, access points, entry into and exit from the Site and the suitability of such shall be the responsibility of the Contractor;

2. The Contractor's attention is drawn to Worksection MAR as regards marine access.
**PRE.C4 POSSESSION AND COMPLETION**

**PRE.C4.010.7 PHASED POSSESSION OF THE SITE**

*Option 1*

There are no special provisions for phased possession of the Site in Portions for this Project.

*Option 2*

1. In accordance with GCC Clause 8.2, possession of the Site will be given in Portions at the following times and in the following order:
   a. Portion A for ......... - available at the notified date for commencement of the Works;
   b. Portion B for ......... - available no later than ......... months after the notified date for commencement of the Works;
   c. Portion C for ......... - available upon completion of ......... by the Contractor but no earlier than ......... months after the notified date for commencement of the Works;
   d. The Portions are approximately indicated on Drawing No. ........;
   e. Area(s) ........ - available at the commencement date specified in the Excavation Permit issued by Highways Department or other duly constituted authority.

2. Existing squatter areas within Portion........... as shown on Drawing No. ......... will be vacated progressively prior to handover of that Portion to the Contractor for commencement of relevant Works.

**PRE.C4.015.7 DATES FOR COMMENCEMENT OF SECTIONS**

*Option 1*

There are no special requirements for phased commencement of the Works in Sections for this Contract.

*Option 2*

In accordance with GCC Clause 8.1, the dates for commencement of the following Sections are not the same as the notified date for commencement of the Works. The notified dates for commencement of such Sections shall be as follows:

1. Section................ for ......................... shall have a date for commencement within ...........months of the notified date for commencement of the Works. The date for commencement of the Section shall be as notified in writing by the CM;

2. Section................ for ......................... shall have a date for commencement within ...........months of the notified date for commencement of the Works. The date for commencement of the Section shall be as notified in writing by the CM.

**PRE.C4.020.7 RESTRICTIONS ON COMMENCEMENT**

The Contractor's attention is drawn to the following restrictions on commencement of parts of the Works:

1. The ......................... Works as in Section ................. are "Works Subject to Excision" and commencement will be subject to an instruction given in accordance with GCC Clause 9.1 no later than ......................... months after the notified date for commencement of the Works;

2. Do not commence the ......................... in the ......................... until at least ......................... months after the notified date for commencement of the Works;

3. Design and complete the temporary boulder barrier fence in ......................... of the Site in accordance with clause PRE.C......................... before the stabilisation works are commenced;
4. Working drawings for the construction of the fresh and flushing water mains included in this Contract will be issued to the Contractor not later than .................. months after the notified date for commencement of the Works. No work including ordering of materials or anything in connection with this part of the Works shall be carried out until such Drawings have been issued by the CM;

5. Reinforced concrete detailed drawings for any reinforced concrete structures will be issued to the Contractor at times to suit the Contractor’s programme and progress of the Works, but in any event no sooner than ................ months after the notified date for commencement of the Works.

**PRE.C4.021.7 RESTRICTIONS ON COMMENCEMENT OF SITE FORMATION WORKS**

Attention is drawn to the following restrictions on commencement of Site Formation Works:

1. Commencement of the Site Formation Works is subject to CM's written permission, which shall be obtained as follows:
   a. Submit SSP for the Site Formation Works in accordance with PRE.C9.2010;
   b. Apply for CM's written permission to commence the Site Formation Works at least 22 days before the commencement of the Site Formation Works. CM's written permission will not be granted before the SSP mentioned in sub-clause (a) has been submitted;
   c. Complete and submit Form ICU 10 for commencing the Site Formation Works to CM at least 14 days prior to the commencement of the Site Formation Works.

2. Programme the Works by taking into account of the submissions required under the above sub-clauses.

**PRE.C4.028.7 REPORT ON COMPLETION OF SITE FORMATION WORKS**

Complete and submit Form ICU 14 together with all test/assessment reports, monitoring results and as-built record plans for the Site Formation Works as required under the Contract upon completion of the Site Formation Works.

**PRE.C4.030.7 RESTRICTIONS ON COMMENCEMENT OF PILE INSTALLATION AND/OR FOOTING CONSTRUCTION AND/OR ELSW**

1. Commencement of pile installation and/or footing construction is subject to CM's written permission which shall be obtained as follows:
   a. Submit the piling and/or footing design in accordance with PIL1.D210;
   b. Submit Site Supervision Plan (SSP) in accordance with PRE.C9.2010;
   c. Apply for CM's written permission to commence pile installation and/or footing construction at least 22 days before the commencement of pile installation and/or footing construction. CM's written permission will not be given before:
      i. The piling and/or footing design mentioned in sub-clause (a) has been Approved;
      ii. The conditions imposed by the CM in the approval of the piling and/or footing design have been fulfilled;
      iii. The SSP mentioned in sub-clause (b) has been submitted;
      iv. The hoarding and gantries works specified in the Specification have been completed.
   d. Complete and submit Form ICU 10 for commencing the pile installation and/or footing construction to CM at least 14 days prior to the commencement of the pile installation and/or footing construction.

2. Commencement of pile installation and/or footing construction is subject to CM's written permission which shall be obtained as follows:
   a. Submit Site Supervision Plan (SSP) in accordance with PRE.C9.2010;
b. Submit proposal of method statement for pile installation and/or footing construction for Approval;

c. Apply for CM's written permission to commence pile installation and/or footing construction at least 22 days before the commencement of pile installation and/or footing construction. CM's written permission will not be given before:
   i. The SSP mentioned in sub-clause (a) has been submitted;
   ii. The proposed method statement mentioned in sub-clause (b) has been Approved;
   iii. The hoarding and gantries works specified in the Specification have been completed.

d. Complete and submit Form ICU 10 for commencing the pile installation and/or footing construction to CM at least 14 days prior to the commencement of the pile installation and/or footing construction.

3. Commencement of the part(s) of piling and/or footing works affected by amendment of piling and/or footing design is subject to CM's written permission which shall be obtained as follows:
   a. Submit the amendment of piling and/or footing design in accordance with PIL1.D220;
   b. Apply for CM's written permission to commence the part(s) of piling and/or footing works affected by amendment of piling and/or footing design at least 22 days before the commencement of such works. CM's written permission will not be given before the amendment of piling and/or footing design mentioned in sub-clause (a) has been Approved.

4. Commencement of the ELSW is subject to CM's written permission which shall be obtained as follows:
   a. Submit ELSP in accordance with EAR1.D030;
   b. Submit SSP in accordance with PRE.C9.2010;
   c. Apply for CM's written permission to commence ELSW at least 22 days before the commencement of ELSW. CM's written permission will not be granted before:
      i. The ELSP mentioned in sub-clause (a) has been Approved;
      ii. The conditions imposed by the CM in the approval of the ELSP have been fulfilled;
      iii. The SSP mentioned in sub-clause (b) has been submitted;
      iv. The hoarding and gantries works specified in the Specification have been completed.
   d. Complete and submit Form ICU 10 for commencing ELSW to CM at least 14 days prior to the commencement of ELSW.

5. Programme the Works by taking into account of the submissions that may be required under the above sub-clauses.

PRE.C4.040.7 RESTRICTIONS ON COMMENCEMENT OF CONSTRUCTION OF PILE CAPS

1. Commencement of pile caps construction is subject to CM's written permission which shall be obtained as follows:
   a. Make all necessary submissions in accordance with ……… including Form ICU14;
   b. Submit the pile cap design in accordance with PIL1.D830;
   c. Submit Site Supervision Plan (SSP) in accordance with PRE.C9.2010;
   d. Apply for CM's written permission to commence pile caps construction at least 22 days before the commencement of pile caps construction. CM's written permission will not be given before:
      i. The submissions mentioned in sub-clause (a) have been Approved and the proof test results comply with the specification’s requirements;
ii. The pile cap design mentioned in sub-clause (b) have been Approved;
iii. The conditions imposed by the CM in the approval of the pile cap design have been fulfilled;
iv. The SSP mentioned in sub-clause (c) has been submitted.

e. Obtain CM's written permission to proceed with the construction of pile caps on a block by block basis unless otherwise agreed by the CM.

2. Commencement of the part(s) of pile cap works affected by amendment of pile cap design is subject to CM's written permission which shall be obtained as follows:

a. Submit the amendment of pile caps design to CM at least 42 days before the commencement of the part(s) of pile cap works affected by the amendment of pile cap design. Allow a further 42 days for each re-submission;
b. Apply for CM's written permission to commence the part(s) of pile cap works affected by the amendment of pile cap design at least 22 days before the commencement of such works. CM's written permission will not be given before the amendment of pile cap design mentioned in sub-clause (a) has been Approved.

3. Bear all expenditure involved by reason of the progress of the Works or any part thereof having been materially affected by the time taken by the Contractor for making submissions and/or re-submissions in connection with applying for CM's written permission for commencement of pile cap construction. Any delay so caused will not be accepted as a cause for granting extension of time under GCC Clause 8.4.

PRE.C4.050.7 RESTRICTIONS ON COMMENCEMENT OF GROUND INVESTIGATION FIELD WORKS

1. Commencement of ground investigation field works (GIFW) is subject to CM's written permission which shall be obtained as follows:

a. Submit Site Supervision Plan (SSP) for the GIFW in accordance with PRE.C9.2010;
b. Apply for CM's written permission to commence the GIFW at least 22 days before the commencement of the GIFW. CM's written permission will not be given before the SSP mentioned in sub-clause (a) has been submitted;
c. Complete and submit Form ICU 10 to the CM for commencement of ground investigation field works at least 14 days before the commencement of the ground investigation field works.

2. Programme the GIFW by taking into account the submissions required under the above sub-clauses.

PRE.C4.060.7 TIME FOR COMPLETION

In accordance with GCC Clause 8.3 the time for completion of the whole of the Works is ........ weeks.

PRE.C4.070.7 SECTIONS FOR PHASED COMPLETION

Option 1

There are no special provisions for phased completion of the Works in Sections for this Contract.

Option 2

Phase the completion of the Works in the following Sections as indicated on Drawing No ........

<table>
<thead>
<tr>
<th>Section</th>
<th>Time for completion</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>(from and including the notified date for commencement of the Works unless otherwise stated)</td>
</tr>
<tr>
<td>1. Section 1</td>
<td>- ........ weeks</td>
</tr>
</tbody>
</table>
2. Section 2 comprising .......... - .......... weeks
3. Section 3 comprising .......... - * from and including the date of possession of Area .......... and for the validity period specified in the Excavation Permit
4. Section 4 comprising .......... - .......... weeks from and including the notified date for commencement of Section 4
5. Remaining Works - .......... weeks

Completion of any Section shall be required to include completion of associated drainage and other ancillary works and satisfactory testing as necessary for handover to the Employer for commencement of work by the following Contractor.

* Completion of the Section shall be conditional upon the passing of final tests and inspections prescribed by the Specification and the completion of any remedial work arising from such tests and inspections.

**PRE.C4.080.7 PARTS FOR PHASED COMPLETION**

The Contractor's attention is drawn to the following requirements for phasing and completion of parts of the Works:

1. The Contractor is required to complete the .......... in the .......... within .......... weeks from and including the notified date for commencement of the Works;
2. Special requirements for phasing the Works to suit Nominated Sub-contractors and Specialist Contractors are given in PRE.C12.

**PRE.C4.090.7 RELEASE OF SITE ON COMPLETION**

The Contractor will not be permitted to retain possession of any area within the Site after the issue of the certificate of completion unless otherwise specified in the Contract.
PRE.C5  THE CONTRACT

CONDITIONS OF CONTRACT

PRE.C5.010.7  GENERAL CONDITIONS OF CONTRACT
The General Conditions of Contract are "The Hong Kong Housing Authority General Conditions of Contract for Civil Engineering Works (2013 Edition)".

PRE.C5.020.7  SPECIAL CONDITIONS OF CONTRACT
The Special Conditions of Contract are as scheduled and detailed in the "Contract booklet" for this Contract.

CONTRACT TERMINOLOGY

PRE.C5.110.7  CONTRACT DEFINITIONS
All definitions in the General Conditions of Contract and Special Conditions of Contract also apply to this Specification unless otherwise defined.

PRE.C5.115.7  EMPLOYER
The Employer is the Hong Kong Housing Authority, as defined in the Conditions of Contract, and may be referred to in this Specification as "The Authority" or "Housing Authority".

PRE.C5.120.7  CONTRACT MANAGER (CM)
Where any reference is made in the Contract Documents to 'Engineer', it shall have the same meaning as 'Contract Manager'.
PRE.C6  INFORMATION REQUIRED BY CONDITIONS OF CONTRACT

GENERAL CONDITIONS OF CONTRACT

PRE.C6.010.7  STATUS
The information given in clauses PRE.C6.030 and PRE.C6.130 is to be read in conjunction with the General Conditions of Contract and is to form part of the Contract.

PRE.C6.020.7  LOCATION OF INFORMATION PROVIDED
A quick reference to key information detailed elsewhere in the Contract is given below:

Form of Tender = Appendix to Form of Tender

PRE.C6.030.7  GCC 3.1 - ASSIGNMENT
Submit details to support an application for the assignment of the Contractor's financial benefit in the Contract in accordance with GCC Clause 3.1(2) as follows:
1. Written confirmation that the assignment is for financing the execution and completion of the Works under the Contract;
2. Written confirmation from the financial institution to which the benefit is to be assigned that it is a bank with a Full Banking Licence in Hong Kong under the Banking Ordinance and its Full Banking Licence number;
3. Written confirmation that the Contractor and the financial institution will enter into a Deed of Assignment in the terms and conditions approved by the Employer.

**PRE.C6.040.7 GCC 3.2 - SUB-CONTRACTING**

1. The Contractor shall submit a Sub-contractors Management Plan to the CM within 30 days of the date of the Letter of Acceptance. Update such Sub-contractors Management Plan on a quarterly basis during the currency of the Works until the date of certified completion of the Works. The first quarter shall commence from the expiry of the month in which such Sub-contractors Management Plan was submitted to the CM. Submit any updated Sub-contractors Management Plan within one month from the expiry of the quarter;

2. Should there be any changes in the sub-contracting arrangements at any time before the next quarterly submission is due, notify the CM forthwith of such changes in writing. Such notification shall not affect the obligation to submit an updated Sub-contractors Management Plan under sub-clause (1) above. In the event that there are no changes to the sub-contracting arrangements in any one quarter, notify the CM of the same and no updated submission for such quarter will be required to be made;

3. Any Sub-contractors Management Plan or updated Sub-contractors Management Plan submitted under sub-clause (1) above shall contain such detailed information as required by the "Guidelines on Scope and Contents of the Sub-contractors Management Plan" in APPENDIX PRE.C6/I to this Worksection, and the latest "Contractor's Guideline on Wage Monitoring System" published by HA;

4. The CM may, upon receipt of any Sub-contractors Management Plan or updated Sub-contractors Management Plan, provide his comments on such plan. Amend or revise forthwith such Sub-contractors Management Plan or updated Sub-contractors Management Plan upon receipt of such CM comments, to the satisfaction of the CM. The CM shall have no obligation to comment or approve any Sub-contractors Management Plan or updated Sub-contractors Management Plan;

5. For the purpose of sub-clauses (1) to (4), the term "sub-contractor" means all types of sub-contractors irrespective of the tiers and including but not limited to Nominated Sub-contractors.

6. The following prohibition on sub-contracting the Works or any part thereof shall apply:
   a. Do not sub-contract the provision of management/site supervision team as specified in the Contract;
   b. Do not sub-contract to a single sub-contractor for the provision of labour and materials or labour only to the Works after excepting the works undertaken by the Nominated Sub-contractors and the provision of management/site supervision team. For the purpose of this clause, separate sub-contracting of works on a piece-work basis to the same sub-contractor will be considered as a whole.

7. In the event that any of the following parts of the Works is to be sub-contracted, ensure that no more than two tiers of sub-contractors are to be engaged to carry out that part of the Works and such sub-contractors must be registered under the respective trades of the Primary Register of the Subcontractor Registration Scheme where applicable:
   a. Scaffolding;
   b. Mechanical handling and lifting (for tower crane only);
   c. Mechanical plant and equipment (for tower crane only);
   d. Demolition.
8. For the purpose of sub-clause (7) where any part of the Works is to be sub-contracted, the first tier of sub-contracting means the sub-contract between the Contractor and his sub-contractor and the first tier sub-contractor refers to the sub-contractor of the first tier of sub-contracting. The second tier of sub-contracting means the sub-contract between the first tier sub-contractor and his sub-contractor;

9. The following parts of the Works are to be executed by the contractors included on the appropriate approved lists:
   a. Landscaping (Hydroseeding and Tree Transplanting);
   b. Ground Investigation Field Work;
   c. Asbestos Removal;
   d. Land Piling Works (including foundation design);
   e. Supply of Bituminous Pavement Materials and Construction of Special Bituminous Surfacing;
   f. Site formation works.

10. a. The works listed in sub-clauses (9)(a) and (9)(b) above shall be carried out by approved listed contractors in the appropriate category in the Works Branch Development Bureau List of Approved Suppliers of Materials and Specialist Contractors for Public Works;
   b. The works listed in sub-clause (9)(c) above shall be executed by contractors included in the Register of Asbestos Contractors kept by Environmental Protection Department;
   c. The works listed in sub-clause (9)(d) above shall be carried out by a contractor who is on the appropriate Category of Housing Authority List of Piling Contractors as follows:
      i. Type 1, 2 & 4 Piles - Percussive Piles Category;
      ii. Type 3 Pile - Large Diameter Bored Piles Category;
      iii. Any acceptable pile types other than Type 1, 2, 3 & 4 Piles - Large Diameter Bored Piles Category or Percussive Piles Category.
   d. The works listed in sub-clause (9)(e) above shall be carried out by approved listed contractors in the Highways Department Specialist Contractors List of Supply of Bituminous Pavement Materials and Construction of Special Bituminous Surfacing;
   e. The works listed in sub-clause (9)(f) above shall be carried out by approved listed contractors in the Building Department's List of Registered Specialist Contractor in the Site Formation Works Category and the Development Bureau’s List of Approved Suppliers of Materials and Specialist Contractors for Public Works – Landslip Preventive/Remedial Works to Slopes/Retaining Walls.

11. If the Contractor is not included in the List of Approved Contractors for Public Works in Group A, B or C for Waterworks, then he shall enter into written sub-contracts with approved listed contractors, in the relevant Group, for the execution of the respective part of the Works;

12. If the Contractor is not included in the appropriate Category of Housing Authority List of Piling Contractors, then he shall enter into written sub-contracts with contractors from the appropriate Category of Housing Authority List of Piling Contractors for the execution of the respective part of the Works;

13. The Contractor shall submit for the approval of the CM, the names, experience, company profiles and all other details of the approved listed contractors/piling contractor/waterworks contractor. Approval by the CM on engaging the approved listed contractors/piling contractor/waterworks contractor shall under no circumstances relieve the Contractor's responsibility whatsoever under the Contract;
14. In the event of non-performance of the approved listed contractors/piling contractor/waterwork contractor, or any of their staff who is not performing to the entire satisfaction of the CM, he may instruct the replacement of the approved listed contractors/piling contractor/waterworks contractor, or any of their staff. In this event, the Contractor shall submit within two weeks of receipt of the CM's instruction another approved listed contractor/piling contractor/waterwork contractor or replacement staff of the approved listed contractors/piling contractor/waterworks contractors for the approval of the CM. The Contractor is deemed to have made provision for all costs and time to be incurred in this respect;

15. Provide particulars of the sub-contractors of all tiers employed or to be employed on the Works including those for the associated Nominated Sub-contracts complying with the format similar to the prescribed forms attached to the latest "Contractor's Guideline on Wage Monitoring System" published by HA from time to time. Submit these particulars in both printed and electronic copies to the CM and Labour Relations Officer (LRO) within 14 days from the date for commencement of the Works, and thereafter within 2 days of any change thereon or within the time frames as stated in the aforesaid Contractor’s Guideline.

**PRE.C6.045.7 GCC 5.3 - ON-DEMAND BOND**

1. Procure an on-demand bond in favour of the Employer in an amount of 6 per cent of the Contract Sum excluding the Prime Cost Sums for works by Nominated Sub-contractors. Submit the on-demand bond to the Employer within 21 days of the date of the Letter of Acceptance;

2. Obtain from each Nominated Sub-contractor an on-demand bond in favour of the Employer in an amount of 6 per cent of the sub-contract sum and to the requirements of the sub-contract between the Contractor and the Nominated Sub-contractor. Submit the on-demand bond to the Employer within 42 days of the acceptance of the Nominated Sub-contractor's tender by the Contractor.

**PRE.C6.050.7 GCC 5.7 - PROGRAMME TO BE FURNISHED**

1. In addition to the programme to be submitted to the CM in accordance with GCC Clause 5.7 submit, within a further 2 weeks, a programme showing a detailed breakdown of the work to be carried out in the first 3 months, and an outline for the remainder of the work. A programme showing the work completed to date, a detailed breakdown of the work to be carried out in the next 3 months and an update outline for the remainder of the work shall be submitted to the CM no later than 4 weeks before the commencement of each subsequent 3-monthly period. This programme shall be immediately revised and submitted to the CM in accordance with the requirements of GCC Clauses 8.4(3) and 8.5(1);

2. The programme shall be divided into time intervals of no longer than 1 week and shall be in the form of a network from which shall be derived a series of bar charts. The critical path shall be supplied listing the earliest and latest start and finish times, the total float and free float for each activity. The completion time of each Section shall be shown on the network as a milestone;

3. The breakdown of the work to be shown for each Section on the programme shall be comprehensive. It shall include the key activities and key dates from the programme submitted under GCC Clause 5.7, the information required under GCC Clause 4.2 and the effects of the matters listed in GCC Clause 11.5, together with the following, where appropriate:
   a. Commencement and completion of the Works;
   b. Approval for ELSP;
   c. Submission of SSP;
   d. Work to be carried out, including testing and commissioning;
   e. Fabrication, delivery and installation of materials to be fabricated off the Site;
   f. Delivery of critical materials originating from outside Hong Kong;
g. Activities for which the Authority or CM is responsible, including the issue of critical drawings and other information and approval of drawings and proposals and delivery of materials to be supplied by the Authority; and

h. Work to be carried out by Utility Undertaking and other contractors.

4. Be responsible for arranging, co-ordinating and agreeing with the Utility Undertaking a programme for their works. Make full allowance for time and provision of facilities for the Utility Undertaking in the preparation of his programmes;

5. Submit detailed analysis of those items or programme which the CM may request.

PRE.C6.060.7 GCC 5.8 - CONTRACTOR’S SUPERINTENDENCE

Set up a Contractor's Management Team as in sub-clause (1) of this clause, and provide the services of superintendents as specified in the other sub-clauses of this clause. Submit the names, qualifications, experience and documentary proof of employment status of the superintendents for approval of the CM. Such superintendents shall be approved by the CM before in service, or shall be deemed to be approved if not expressly disapproved by the CM in writing within 14 days of the submission for approval.

1. Within 14 days from the notified date for commencement of the Works, submit to the CM with all necessary details a list of sufficient number of staff in the following disciplines for the Contractor’s Management Team:
   a. Project Manager;
   b. The following superintendents as specified in sub-clause (3) of this clause:
      i. Authorised Representative;
      ii. Quality Control Engineer;
      iii. Environmental Manager;
      iv. Environmental Supervisor;
      v. General Foremen.

2. Except for the following personnel, all members of the Contractor's Management Team shall be full time on Site when they are deployed to the Site:
   a. Project Manager;
   b. Environmental Manager.

3. Provide the services of the following superintendents and submit, within 14 days from the date of the Letter of Acceptance, their names, qualifications, experience and documentary proof of employment status for approval of the CM:
   a. Authorised Representative;
   b. Land Surveyor;
   c. Engineering Geologist(s);
   d. Blast Control Engineer;
   e. Diving Specialist;
   f. Environmental Consultant;
   g. Quality Control Engineer;
   h. Compaction Control Engineer;
      i. Registered Structural Engineer (RSE);
      j. Registered Geotechnical Engineer (RGE);
      k. General Foreman;
      l. Authorized Signatory (AS);
      m. Design Certifying Consultant;
      n. Technically Competent Persons (TCP) for SSP;
      o. Environmental Manager (EM);
      p. Environmental Supervisor (ES);
      q. Contractor’s Labour Officer (CLO).
4. Full details of duties and qualifications necessary for the superintendents are specified in PRE.C9.

**PRE.C6.065.7 GCC 5.9 - CONTRACTOR'S EMPLOYEES**

The requirements on the minimum number of Trade Tested Workers to be employed by the Contractor or his sub-contractors in accordance with GCC Clause 5.9(1)(c) are specified in PRE.C9.1910.

**PRE.C6.070.7 GCC 5.11 - SAFETY, SECURITY AND ENVIRONMENTAL MANAGEMENT OF THE WORKS**

1. The safety and security requirements in respect of the Works and all operations on the Site are specified in PRE.C9.110 to PRE.C9.350 and elsewhere in Worksection PRE.C9;
2. The environmental management and site hygiene requirements in respect of the Works and all operations on the Site are specified in PRE.C9.410 to PRE.C9.1700, PRE.C9.2310 to PRE.C9.2460 and elsewhere in Worksection PRE.C9;
3. Pursuant to GCC Clause 5.11, the Contractor shall submit the Safety Plan and the Environmental Management Plan and their subsequent revisions or updates to the CM in accordance with the requirements as specified in PRE.C9.205 and PRE.C9.2415 respectively.

**PRE.C6.080.7 GCC 5.14 - THIRD PARTY INSURANCE**

1. The list of insurers approved by the Employer shall be the "List of authorised insurance companies published by the Office of the Commissioner of Insurance under the Financial Services and the Treasury Bureau, Government Secretariat". Any insurer not on this list will not be approved. The Insurer must provide, together with the insurance policy, a covering letter undertaking to inform the Authority of any cessation of the insurance policy due to any reason whatsoever. No insurance shall be approved without such a covering letter;
2. The minimum amount of third party insurance is stated in the Appendix to the Form of Tender. The amount stated is deemed to be in respect of any one accident and unlimited in the aggregate amount for the period of insurance;

The expression "accident" means any one accident, or series of accidents, arising out of any one event irrespective of the number of claims that may arise therefrom but unlimited in number for the period of insurance.

**PRE.C6.090.7 GCC 5.15 - DESIGN RESPONSIBILITY**

Accept liability for:

1. The suitability of purpose of the materials and equipment incorporated in the Works by any Nominated Sub-contractor;
2. All design responsibilities included in Nominated Sub-contracts. The design requirements for each of the Nominated Sub-contracts are generally set out in the typical sub-contract documents, available for inspection at the Housing Department Office, and the Contractor must satisfy himself of these responsibilities;
   The Nominated Sub-contracts which carry a design responsibility and for which the Contractor is responsible are:
   a. ........;
   b. ........;
3. Other permanent works for which the Contractor is responsible for the design as provided for in the Contract. Particular attention is drawn to the following:
   a. ........;
   b. ........;
4. The principles of design will be as set out in the Contract documents and the Contractor shall not vary these without first obtaining the written permission of the CM; and
5. Any design for which the Contractor is responsible shall be submitted to the CM prior to execution of any work in accordance with the design for the CM’s written confirmation that the requirements of the Employer appear to have been met, and after the CM’s confirmation the Contractor shall not vary such design without the written consent of the CM. The submission to the CM of such design and the CM’s confirmation shall not relieve the Contractor of any duty or responsibility under the Contract.

PRE.C6.100.7 GCC 5.27 - FACILITIES FOR OTHER PERSONS

1. Facilities required to be provided to others under the Contract are specified in PRE.C11 and PRE.C12;
2. Further services required to be provided include:
   a. ....................................;
   b. ....................................

PRE.C6.110.7 GCC 6.3 - PASSES

The requirements of Passes shall conform to the smart cards as stipulated in PRE.C9.2510 and PRE.C9.2550.

PRE.C6.120.7 GCC 9.1 - WORKS SUBJECT TO EXCISION

Option 1

1. The following Sections are "Works Subject to Excision":
   a. .......... The written instruction either to proceed or to excise pertaining to the Section shall be given within .......... months from the notified date for commencement of the Works;
   b. .......... The written instruction either to proceed or to excise pertaining to the Section shall be given within .......... months from the notified date for commencement of the Works.
2. There are no provisions specified for any adjustments. In the event of any work being excised in respect of this clause, there will not be any adjustment to the prices in Bill No. 2 - Preliminaries.

Option 2

1. The following Sections are "Works Subject to Excision":
   a. .......... The written instruction either to proceed or to excise pertaining to the Section shall be given within .......... months from the notified date for commencement of the Works;
   b. .......... The written instruction either to proceed or to excise pertaining to the Section shall be given within .......... months from the notified date for commencement of the Works.
2. In accordance with Clause SCC9.1 the following adjustment shall apply. In the event of any works being omitted in respect of this clause, the prices in Bill No. 2 - Preliminaries shall be reduced by a percentage (the adjustment percentage) represented by the ratio of the following values included in the Contract Sum:
   "the value of Works omitted to the value of the total of Works in the Contract Sum", where Works are the works included in the contract excluding the Preliminaries, the Day Works and the Prime Cost and Provisional Sums including profit and attendance on Nominated Sub-contractors and Specialist Contractors, if any.
   The Contractor’s attention is drawn to Preambles items .......... which detail provisions for the payment of Preliminaries.
In addition to the foregoing, Preliminaries will be certified in interim certificates and paid at the rates entered by the Contractor LESS the adjustment percentage. In the event that the Works Subject to Excision are not excised by the CM, the shortfall between the full value of the Preliminaries that ought to be due at that point and the certified value of Preliminaries after deduction by the adjustment percentage to that point will be paid to the Contractor by way of a lump sum in the next interim certificate, and also, Preliminaries will then be certified in interim certificates and paid at the rates entered by the Contractor without deduction of the adjustment percentage.

PRE.C6.130.7 GCC 20.2 - CONTRACT PRICE FLUCTUATIONS
1. The "Schedule of Proportions" to be used in calculating the "Price Fluctuation Factor" is included at Schedule I to the Form of Tender;
2. The list of items of labour and selected materials included in the "Schedule of Proportions" is pre-determined and shall not be changed during the currency of the Contract;
3. The "Schedule of Proportions" shall be completed in accordance with the instructions contained in the Schedule I;
4. The "Price Fluctuation Factor" for each payment certificate shall be calculated by the CM. The following shall apply to such calculations:
   a. The figure of 0.1500 given in the column (4) of the "Schedule of Proportions" represents 15% of the "Effective Value" that will not be subject to fluctuation adjustment. The figure of 0.1500 will therefore not be used in the calculation of the "Price Fluctuation Factor";
   b. The products obtained by multiplying each of the calculated proportions given in column (4) of the "Schedule of Proportions" by the (index) fractions shall be to eight decimal places. Decimal places in excess of eight shall be rounded up or down to the nearest eight decimal place;
   c. The final calculated "Price Fluctuation Factor" shall be to six decimal places. Decimal places in excess of six shall be rounded up or down to the nearest sixth decimal place.

SPECIAL CONDITIONS OF CONTRACT

PRE.C6.140.7 STATUS
The information given in clauses PRE.C6.150 to PRE.C6.230 is to be read in conjunction with the Special Conditions of Contract and is to form part of the Contract.

PRE.C6.150.7 SCC5.1 - ENHANCED SITE CLEANLINESS AND TIDINESS
1. Perform Daily Cleaning and Weekly Tidying of the Site including Public Cleaning Areas. The extent of the Public Cleaning Areas required for cleaning are delineated in the Drawing No. ................../deemed to be within ............. metres on the periphery outside the barriers or hoardings, or determined by the Contract Manager's Representative on site for each work location based on the requirements in the Specification, and taking into account the actual site condition before work commences;
2. Draw up, in the Environmental Management Plan where appropriate, a system on waste management, and maintenance of cleanliness and tidiness of the Site including, but is not limited to, the methods and provisions including the proposed areas for on-site sorting, separation, storage and disposal of waste materials, and the proposal of how to maintain the Site in clean and tidy condition. Provide the necessary facilities, receptacles and transport for the temporary storage, disposal and removal of different types of wastes;
3. Daily Cleaning
a. "Daily Cleaning" shall include cleaning and tidying up after work of tools, equipment, unused materials, storage areas and common areas such as passageways, daily removal of waste materials from works areas, removal of any rubbish and debris dumped into the Site by the public and, without derogating from the generality of the foregoing, shall include, but is not limited to, all the items subject to checking as listed in sub-clause (3)(b);

b. Develop inspection checklist for Daily Cleaning for the approval of the Contract Manager's Representative. The inspection checklist shall be reviewed and updated whenever there is a change in work nature or work location and re-submitted for approval by the Contract Manager's Representative. The inspection checklist shall include an assessment on the cleanliness and tidiness of all work locations, plus the Public Cleaning Areas. Items to be checked against for each work location shall include, but are not limited to, the following:

i. Maintenance of passageways, common accesses and public areas free of obstruction;

ii. Proper storage and stacking of materials;

iii. Proper placement and storage of tools and equipment after work;

iv. Proper sorting, storage and/or disposal of waste materials, in accordance with the Environmental Management Plan where appropriate;

v. Proper securing of hoarding, barriers, guarding, lighting, and signing of works;

vi. Prevention and removal of water ponds and flooding;

vii. Clearing of stockpiling and wastes arising from the Works;

viii. Conditions of cleanliness and tidiness of the Site including Public Cleaning Areas in the perspective of the general public; and

ix. Other cleaning requirements as instructed by the Contract Manager's Representative.

c. Assign person(s) to inspect the Site after each Cleaning Day's work. The assigned person shall check and ensure the cleanliness and tidiness of the Site, complete the inspection checklist, record the areas requiring improvements, and take photographs of areas where cleaning and tidying up works have been done and where improvement actions are required;

d. Notify the Contract Manager's Representative the time schedule for Daily Cleaning on every Cleaning Day and the name of the assigned person as referred to in sub-clause (3)(c) above responsible for inspection and checking after each Cleaning Day;

e. Submit, in the morning of the day (which is not a General Holiday) following a Cleaning Day, the inspection checklist, records and photographs prepared pursuant to sub-clause (3)(c) above to the Contract Manager's Representative for checking and recording;

f. The Contract Manager's Representative may carry out inspections and surprise checks to verify the Contractor's performance on cleanliness and tidiness of the Site before the noon of the day (which is not a General Holiday) following a Cleaning Day. The Contractor shall not be entitled to any payment for the item for "Daily Cleaning" for a Cleaning Day if the performance of the Contractor on cleanliness and tidiness for any part of the Site on that Cleaning Day is not carried out to the satisfaction of the Contract Manager's Representative. The Contract Manager's Representative shall notify the Contractor and record in the Site Diary for any non-payment of the item for "Daily Cleaning" on a Cleaning Day and the areas of dissatisfaction for improvement by the Contractor;

g. In the morning of every Cleaning Day before work commences, inspect and remove any rubbish and debris that may be littered by the public over the night within any area of which the Contractor is required to maintain cleanliness and tidiness under this Contract before the inspection by the Contract Manager’s Representative.

4. Weekly Tidying
a. "Weekly Tidying" shall include the cleansing and tidying up of the common areas and accesses, cleansing and/or re-conditioning of hoardings, barriers, guarding, lighting, signage and/or traffic cones, cleansing of external covers for plant and equipment, removal of waste and debris etc. so as to ensure that the plant and equipment, hoardings, as well as the Site as a whole, to be clean and tidy in the perspective of the general public and, without derogating from the generality of the foregoing, shall include, but is not limited to, all the items subject to checking as listed in sub-clause (4)(b);

b. Develop inspection checklist for Weekly Tidying for the approval of the Contract Manager's Representative. The inspection checklist shall be reviewed and updated whenever there is a change in work nature or work location and re-submitted for approval by the Contract Manager's Representative. The inspection checklist shall include an assessment on the cleanliness and tidiness of the Site conditions at various work locations, plus including the Public Cleaning Areas. Items to be checked against for each work location shall include, but are not limited to, the following:

   i. Thorough cleansing of passageways, common accesses and public areas;
   ii. Re-organizing of storage materials for better utilization of storage spaces and safe stacking if appropriate;
   iii. Maintenance and re-conditioning of tools and equipment;
   iv. Cleansing of external covers for plant and equipment;
   v. Collection and removal of disposed waste materials off site in accordance with the Environmental Management Plan;
   vi. Cleansing, re-conditioning and/or replacement of hoarding, barriers, guarding, lighting and signage of works to good working conditions;
   vii. Clearing of drains and channels to prevent flooding; and
   viii. Other cleansing requirements as instructed by the Contract Manager's Representative in the perspective of the general public.

c. Assign person(s) to inspect the Site after each Cleaning Week Day's work. The assigned person shall check and ensure the overall cleanliness and tidiness of the Site, complete the inspection checklist, record the areas requiring improvements, and take photographs of areas where overall site cleaning and tidying up actions have been done and where improvement actions are required;

d. Notify the Contract Manager's Representative the time schedule for Weekly Tidying on every Cleaning Week Day, and the name of assigned person as referred to in sub-clause (4)(c) above responsible for inspection and checking after each Cleaning Week Day;

e. Submit, in the morning of the day (which is not a General Holiday) following the Cleaning Week Day, the inspection checklist, records and photographs prepared pursuant to sub-clause (4)(c) above to the Contract Manager's Representative for checking and recording;

f. The Contract Manager's Representative shall, together with the Site Agent, check and inspect the overall cleanliness and tidiness of the Site on the day (which is not a General Holiday) following the Cleaning Week Day. The Contract Manager's Representative shall advise the Contractor whether his performance is to his/her satisfaction, or if not, where improvement actions are required;

g. Promptly rectify the defects identified by the assigned person as referred to in sub-clause (4)(c) above, and/or the Contract Manager's Representative. The Contractor shall not be entitled to any payment for the item for "Weekly Tidying" for a Cleaning Week Day if the Contractor fails to rectify the identified defects pursuant to sub-clauses (4)(c) and (4)(f) above to the satisfaction of the Contract Manager's Representative before the end of the day (which is not a General Holiday) following the Cleaning Week Day;
h. In the morning of every Cleaning Week Day before work commences, inspect and remove any rubbish and debris that may be littered by the public over the night within any area of which the Contractor is required to maintain cleanliness and tidiness under this Contract before the inspection by the Contract Manager's Representative.

PRE.C6.170.7 SCC6.1 - PAYMENT OF WAGES OF SITE PERSONNEL

1. Labour Relations Officer (LRO):
   a. One LRO shall be authorized by the Employer and notified to the Contractor by the CM to work on Site. The LRO shall be responsible to CM and accommodated in the office of CM's representatives;
   b. The duties and responsibilities of the LRO shall include but not necessarily be limited to the following:
      i. Check and verify the proper operation of the ACRS;
      ii. Conduct checking of the records as required in PRE.C9.140;
      iii. Prepare and submit directly to the CM a monthly report on the payment of the wages and MPF contribution, and the daily records of ACRS based on the wage books prepared by the Contractor;
      iv. Conduct random inspection on Site to verify the identity of the Site Personnel and to promote effective communication with the Site Personnel;
      v. Be responsible for receiving complaints from the Site Personnel on any matters relating to the payment of wages and other employment conditions;
      vi. Check the validity of the complaints based on the compiled records;
      vii. Provide all necessary assistance to the Site Personnel for referring the complaint cases to the Labour Department if necessary and work in collaboration with the Labour Department to investigate and verify the validity of the complaints;
      viii. Inform the CM of anomalies and to refer the same to the Contractor for investigation and appropriate follow-up actions;
      ix. Witness the surveys of Site Personnel on behalf of the CM pursuant to sub-clause 2(d) below.
   c. Provide all necessary facilities including direct telephone lines, office accommodation and furniture for the use of LRO working on Site to carry out his/her duties;
   d. Provide all necessary assistance to the LRO for carrying out his/her duties on Site.

2. Comply with the following for monitoring the payment of wages and Mandatory Provident Fund (MPF) contribution to Site Personnel:
   a. Employment contract:
      i. Keep a copy of the complete set of the executed employment contracts of all Site Personnel in the wage books as required in PRE.C9.140. Each copy of the executed employment contracts together with an updated register of the employment contracts shall be kept in the wage books within two days from the date that the Site Personnel commences to work on Site;
      ii. Deliver the original executed employment contracts of any Site Personnel to the office of the CM's representatives for inspection by the CM within one day when requested by the CM;
      iii. Seek written approval from the CM before a Site Personnel without an executed employment contract executes any work on the Site;
iv. The terms of the employment contract shall not be less favourable to the terms provided in the "Specimen Employment Contract" in the latest "Guidelines on Wage Payment Monitoring and Reimbursement of Contractor's and Sub-contractors' Contributions to the Mandatory Provident Fund for their Site Personnel" published by Development Bureau of HKSAR from time to time.

b. Wage payment and mandatory provident fund ("MPF") arrangement for Site Personnel:
   
i. Ensure that sufficient funds have been reserved in the designated bank account for the payment of all wages and MPF contribution to all Site Personnel employed or engaged by the Contractor. Instruct promptly the designated bank to effect the timely payment to the respective wage payment accounts, employee MPF contribution accounts and the employer MPF contribution accounts of all Site Personnel employed or engaged by the Contractor according to the schedule as prepared in sub-clause (c)(ii);
   
ii. Ensure that sub-contractors of all tiers have sufficient funds available in the designated bank accounts for the payment of all wages and MPF contribution to all Site Personnel employed or engaged by them. Also ensure that sub-contractors of all tiers shall promptly instruct the designated banks to effect the timely payment to the respective wage payment accounts, employee MPF contribution accounts and the employer MPF contribution accounts of all Site Personnel employed or engaged by them according to the schedule as prepared in sub-clause (c)(ii);
   
iii. Pay, and require the sub-contractors of all tiers to pay the wages to all the Site Personnel by bank's autopay service and make the MPF contribution as stipulated in sub-clause (c);
   
iv. Require each of the Site Personnel to provide a bank account and an employee MPF contribution account via which wage payment will be paid by bank's autopay service.

c. Wage payment and MPF contribution records:
   
i. Within 14 days from the notified date for commencement of the Works, submit to the CM the name of the designated bank and all related arrangement details for the payment of wages and MPF contribution to all the Site Personnel;
   
ii. Prepare schedules of wages and the corresponding MPF contribution of all the Site Personnel employed or engaged by the Contractor based on the verified daily record as required in PRE.C9.2510. Keep a copy of such schedules in the wage books as required in PRE.C9.140 within 14 days from the end of the corresponding wages period;
   
iii. Require the sub-contractors of all tiers to prepare the respective schedules of wages and the corresponding MPF contribution of all the Site Personnel employed or engaged by them based on the verified data from the ACRS as required in PRE.C9.2510. Keep a copy of such schedules in the wage books as required in PRE.C9.140 within 14 days from the end of the corresponding wages period;
   
iv. Keep a copy of the records of transactions in the wage books as required in PRE.C9.140 within 21 days from the end of the corresponding wages period;
   
v. Submit and require sub-contractors of all tiers to submit to the CM for each worker's payment cycle a written declaration that all wages of the Site Personnel have been paid and all MPF contribution have been made. For the records of payment of wages and MPF contribution of the Site Personnel in the managerial grade shown on the latest site organization chart, it is optional to keep them in the wage books as required in PRE.C9.140 provided that they are directly employed by the Contractor and the CM has no objection to the site organization chart;

d. Wage payment status survey:
Assign designated staff (not less than 2 persons and one of them shall be at Site Foreman grade or above) to conduct surveys with Site Personnel on Site under the witness of the LRO for checking their status of wage payment at least at monthly interval commencing from the second month from the notified date for commencement of the Works up to and including the month in which the operation of ACRS is terminated as stipulated in PRE.C.6. For Contracts with more than one Portion of the Site, the survey on each Portion of the Site shall be conducted at least at monthly interval commencing from the second month from the commencement of the works of that particular Portion of the Site up to and including the month in which the operation of ACRS is terminated as stipulated in PRE.C.9.2560. The number of Site Personnel to be surveyed in each month shall not be less than the percentage agreed with CM of the total number of Site Personnel who have or had worked on Site, irrespective of duration, for the monthly period preceding the date of commencement of the survey, or otherwise a smaller number if agreed by the CM. The outcome of these surveys shall be submitted to the CM and LRO for record no later than 1 week from the first day of each monthly survey exercise. Prior agreement on detailed arrangement of the surveys is required from the CM.

3. Provide all necessary assistance in the handling of complaints on arrears of wages raised by all Site Personnel:
   a. Provide site office telephone lines or other off-Site contact telephone lines installed with voice mail system solely for receiving workers’ enquiries or complaints about wages arrears and provide the telephone numbers to the LRO;
   b. Assign designated staff (not less than 2 persons) to receive the calls. Record workers’ enquiries or complaints and report the same to the CM, LRO and other relevant parties as instructed by the CM;
   c. Display the posters provided by the LRO at workstations for reminding workers about the hotlines for enquiring or complaining arrears of workers’ wages;
   d. Display notices on Site at prominent locations notifying the Site Personnel to seek assistance from the LRO on matters concerning wages arrears and disputes, and showing the contact details of the LRO;
   e. Assign a designated staff to respond to issues raised by the LRO in connection with the discharge of his duties;
   f. Provide to a Site Personnel free of charge a copy of his daily attendance records whenever his written request for same is received. The daily attendance records shall be verified by the Contractor or employer of the Site Personnel;
   g. Address immediately the enquiries and/or complaints lodged by Site Personnel to the Contractor, CM or LRO and reply to them the outcome or the follow-up actions taken or to be taken within two days upon receipt of the enquiries and/or complaints.

4. The requirements stipulated in sub-clauses (2) and (3) above may be exempted subject to the compliance with all relevant criteria and procedures stipulated in the latest "Contractor’s Guideline on Wage Monitoring System" published by HA from time to time or as Approved by the CM on individual case basis.
PRE.C6.180.7  SCC8.1 - POSSESSION OF THE SITE (FIXED RATE FOR DELAY)
The specified rate inserted by the Contractor related to SCC8.1 of the Special Conditions of Contract is deemed to have included any costs and expenditure incurred by the Contractor as a result of delay in giving possession of Portions of the Site and such costs and expenditure shall include, inter alia, the cost of any prolonged obligations on the part of the Contractor under the Contract including any prolonged maintenance, protection and insurance etc. of the completed parts of the Works; any uneconomical use of labour, plant and materials; disruption to progress of the Works; and fluctuations in the cost of labour and materials for the remaining works.

PRE.C6.185.7  SCC8.2- USE OF THE SITE BY POLICE AND OTHER DISCIPLINED SERVICES

1. Allow the Hong Kong Police Force or other disciplined services of the Government to use part(s) or area(s) of the Site for tactical training(s) for a period not more than five days or for periods not more than five days in total upon written notice of the Employer or the Hong Kong Police Force or such other disciplined services provided that such training(s) shall be carried out within one month of the taking possession of the Site;
2. Such training(s) will include but not be limited to tactical movement through the part of the Site and the use of mechanical breaking equipment and methods to practise operational techniques;
3. Liaise and coordinate with the representatives of the Hong Kong Police Force or such other disciplined services regarding such use of the Site. Agree on the part of the Site and the amount or period(s) of time required for such training(s), and provide all necessary assistance and support;
4. Include due and adequate allowance for such use of the Site and such training(s) in the programme of the Works;
5. Allow for time and additional costs to be incurred or expended as a result of or arising from such use of the Site and such training(s).

PRE.C6.190.7  SCC8.3 - ADDITIONAL LIQUIDATED DAMAGES FOR DELAY

1. In accordance with Clause SCC8.3(1) the Specified Section(s) is/are:
   a. Section ..........;
   b. Section ...........
2. In accordance with Clause SCC8.3(1) the rate per day for Additional Liquidated Damages (ALD) shall be as follows:
   
<table>
<thead>
<tr>
<th>Relevant Section</th>
<th>$ per day</th>
</tr>
</thead>
<tbody>
<tr>
<td>Section ..........</td>
<td>(Insert rate)</td>
</tr>
<tr>
<td>Section ..........</td>
<td>Nil</td>
</tr>
</tbody>
</table>

   Total ALD for the works (Insert Total)

PRE.C6.200.7  SCC8.4 - TAKING CARE OF THE WORKS AFTER COMPLETION

In accordance with Clause SCC8.4 of the Special Conditions of Contract and where instructed by the CM, execute the following works and/or provide the following services for the purpose of the taking care of the Works after completion:

1. The Site Security Services which shall include, in respect of the parts of the Works and the Site specified in the notice (hereinafter referred to as the Property), the following:
   a. Take full responsibility for the care of the Property. In case of any damage, loss or any injury from any cause whatsoever, except the "excepted risks" as defined in GCC Clause 5.12, the Contractor shall at his own expense and with all possible speed make good or at the option of the Employer shall pay to the Employer the cost of making good any damage to the Property;
b. Indemnify and keep indemnified the Employer against all losses and claims for injury or damage to any person including any employee of the Employer or property including the Property or any other property of the Employer whatsoever which may arise from any incident occurring on, in, or arising from the Property;

c. Take out and maintain an insurance policy with an insurer approved by the Employer to cover the risks described at 1.b. above. The insurance shall be in the joint names of the Contractor and the Employer and shall contain a Cross-Liability clause as between the Contractor and the Employer, and shall provide insurance cover for any third party liability. Provided that the insurance to be effected and maintained under this Special Condition shall conform to all requirements as are applicable to the insurance for the purpose of the Works as GCC Clause 5.14, and shall be for an amount no less than the respective sums insured under such insurance;

d. Take all legally valid available means of preventing trespassers entering the Site;

e. Supply, on Site at all times, at least one security guard;

f. Operate (including provision of electricity supply), at any time whenever it is dark, lighting associated with walkways, hoardings, and accesses;

g. Keep the Site closed with all accesses locked; and

h. Do not permit visitors to enter the Site unless approved by the CM.

2. For each day of the Site Security Services Period, the Contractor shall be paid at the respective tendered daily rates included in the Contract in respect of the Works and the Site or part thereof as appropriate. Such payments shall be included in the statement to be delivered under GCC Clause 14.1 and certified under GCC Clause 14.2.

PRE.C6.210.7

SCC14.1 - PAYMENT FOR PRE-DETERMINED AMOUNTS FOR SITE SAFETY, ENVIRONMENTAL MANAGEMENT AND SITE HYGIENE

The payment for pre-determined amounts for site safety, environmental management and site hygiene is specified in PRE.C9.2470.

PRE.C6.220.7

SCC22.3 - EXCAVATION PERMIT FOR WORKS

1. Without limiting the areas subject to Clause SCC22.3(11) possession of the actual area for the following Portion(s) are to be given by Designated Authority and are subject to the conditions of the Excavation Permits to be applied for by the Employer:

   a. Area .................;
   b. Area .................;

2. Refer to PRE.C2.060 for detailed requirements for Works on Street Maintained by the Highways Department;

3. For Works on land other than Street Maintained by the Highways Department that require an Excavation Permit, apply the Excavation Permit in accordance with Clauses SCC22.3(1)(b) and SCC22.3(5).

PRE.C6.230.7

SCC22.4 - HOUSING CONSTRUCTION MANAGEMENT ENTERPRISE SYSTEM (HOMES)

1. Follow the HOMES accounts creation procedures, which will be provided to the Contractor when CM informs the Start Date, for obtaining the authorized main contractor submission account (AMCSA) and the associated security token for HOMES before the Start Date, and the quality control account (QCA) and main contractor data operation account (MCDOA) upon approval to the appointment of QCE;

2. Ensure the availability of computer systems that can fulfil the minimum requirements as specified in the Guide for HOMES, and bear all costs for the computer systems and the connection of the computer systems to HOMES through web browser (internet connection);
3. Use the HOMES as the electronic communication media for the Contract from the Start Date onward. In the event the Contract stipulates that a specified personnel except QCE, is responsible for the submission of the specified documents or certification of specified activities, such personnel should sign on the required documents as proper record. The signed documents shall be scanned in 'pdf' format and submitted to CM through HOMES via the AMCSA. Original of the signed documents shall be submitted to the CM for proper record;

4. The QCE shall use the quality control account (QCA) for submissions in HOMES;

5. Upon issue of the maintenance certificate of the Works, only the AMCSA will remain active for access to HOMES until the End Date unless otherwise determined by the CM;

6. Train staff up for operating the computer system to input and submit the required information through HOMES. While self-learning training kit CD is distributed to the Contractor free of charge at the Start Date, the Authority will be organizing training courses for HOMES from time to time and the Contractor may arrange their staff to attend the training course where considered appropriate on payment of the relevant cost and fees;

7. Follow the 'Guide for Housing Construction Management Enterprise System (HOMES) for Hong Kong Housing Authority (for Contractors’ use only)' for any necessary process available/required by the HOMES;

8. Co-ordinate with other contractors directly appointed by HA who are HOMES users for proper and timely execution of the functions in HOMES.
APPENDIX PRE.C6/I

PRE.C6.APPEND1.7 GUIDELINES ON SCOPE AND CONTENTS OF SUB-CONTRACTORS MANAGEMENT PLAN

1. Scope of works to be sub-contracted including the form and extent of sub-contracting arrangement such as labour only, labour and plant, labour and material, plant only, lump sum or any other combination of types;

2. Details of sub-contracts (irrespective of tiers) including the names of sub-contractors and proposed form of sub-contracts;

3. The Contractor’s approach to demand/ensure his sub-contractors to:
   a. abstain from sub-contracting the whole of the works sub-contracted to them; and
   b. report upwards their sub-contracting arrangement and any subsequent changes with written declarations of no "hidden" sub-contracts for any part of the Works sub-contracted to him.

4. The Contractor’s proposed measures for supervision of the works and monitoring of the performance of sub-contractors, particularly the aspects of the works programming, quality and safety of the works and environmental protection;

5. The Contractor’s approach to ensure all his sub-contractors (irrespective of tiers) to adopt written contracts in their sub-contracting and that all the sub-contracts comply with the requirements as stipulated in Clause SCC3.2 of the Special Conditions of Contract "Sub-contract conditions”;

6. Details of the Contractor’s superintendence and management team as required in Clause 5.8 of the General Conditions of Contract "Contractor’s superintendence", employed on direct supervision and management of sub-contractors. An organization chart showing the responsibilities of the Contractor's direct staff in supervision and management of his sub-contractors should be submitted;

7. Declaration that members of staff on the Contractor’s management team are prohibited to be given a sub-contract to any part of the Works or to have a vested interest in any of the sub-contractors irrespective of tiers;

8. The Contractor's proposed measures to ensure the compliance with the implementation of the system of payment of wages to the Site Personnel as stipulated in Clause SCC6.1 of the Special Conditions of Contract "Payment of wages of Site Personnel". The Contractor's proposed measures for ensuring timely payments to sub-contractors and payments by sub-contractors to sub-contractors of lower tiers.
PRE.C7 DOCUMENTATION AND RECORDS

DEFINITIONS AND ABBREVIATIONS

PRE.C7.010.7 ABBREVIATIONS
Abbreviations, where used, have the following meanings:

ASTM - American Standard of Testing Materials
BS - British Standard
BS EN - European Standard adopted as British Standard
BS EN ISO - European Standard and International Organization for Standardization Standard adopted as British Standard
B of Q - Bill of Quantities (or Schedule of Prices where applicable)
GCC/ - General Conditions of Contract
CEDD - Civil Engineering and Development Department of the Government of Hong Kong Special Administrative Region.
CM - Contract Manager
CoPSS - Code of Practice for Site Supervision 2009 (issued by Buildings Department)
CP - Code of Practice
CS - Hong Kong Construction Standard
DG - Decomposed Granite
ELSP - Excavation and Lateral Support Plan
ELSW - Excavation and Lateral Support Works
EPD - Environmental Protection Department of the Hong Kong Special Administrative Region.
ETWB - Environment, Transport and Works Bureau
GEO - Geotechnical Engineering Office
GIFW - Ground Investigation Field Works
HA - Hong Kong Housing Authority
HD - The Housing Department of the Government of Hong Kong Special Administrative Region
HKCA - Hong Kong Construction Association
HOKLAS - Hong Kong Laboratory Accreditation Scheme
Hong Kong Government - Government of the Hong Kong Special Administrative Region
ICU - Independent Checking Unit, Housing Department
LANP - DEVB's List of Approved Suppliers of Materials and Specialist Contractors for Public Works – Landslip Preventive/Remedial Works to Slopes/Retaining Walls.
NSC - Nominated Sub-contractor
OSHC - Occupational Safety and Health Council
OVT - Old and Valuable Tree
**PRE.C7.020.7 SPECIFICATION**

1. This Specification is applicable to the whole of the Works in so far as it is not overridden by the General Conditions of Contract, Special Conditions of Contract, Contract Drawings or the Instructions of the Contract Manager;

2. Materials and Workmanship specified in one Section of the specification will apply to the same items in other Sections unless particularly stated otherwise.

**PRE.C7.030.7 MAINTENANCE PERIOD**

Where the words "Period of Maintenance" or "Defects Liability Period" occur in the Specification these shall be read as "Maintenance Period" as defined in the Contract.

**PRE.C7.040.7 APPROVAL**

"Approval" or "Approved" means the approval in writing by the CM as required under the Contract. "Approval" or "Approved" shall not relieve the Contractor from any responsibility imposed by the Contract and shall not be relied upon by the Contractor to alter, transfer or otherwise change, diminish or void any liability or obligation imposed on him by the Contract.

**PRE.C7.050.7 INSTRUCTED**

"Instructed" means an instruction in writing by the CM, but shall not relieve the Contractor from his responsibilities imposed by the Contract.

**PRE.C7.055.7 PROPRIETARY NAMES**

1. The phrase "or products having equivalent functions or performance" is deemed to be included whenever materials are specified by using
   a. Proprietary names;
   b. Proprietary names in conjunction with the phrases "or Approved equivalent", "or equivalent", "equivalent and approved", "equal or equivalent", "equal and approved" and other similar phrases.

2. When the phrase "or products having equivalent functions or performance" is deemed to be included or is used in conjunction with the name of a proprietary material, materials of different manufacture but having equivalent functions or performance may be substituted if prior Approval has been obtained, provided that:
a. Proof of equivalent functions or performance including details of functions or performance standards of the specified product and the proposed alternative is provided to CM for comparison; and
b. Rates and prices will not be changed from those for the proprietary materials specified.

3. If the Contractor intends to use the intellectual property rights of another party in performing his obligations under the Contract, appropriate licences should be obtained from relevant owners.

PRE.C7.060.7 SPECIFIED
“When specified” or “or specified” means the incorporation of a particular clause or alternative by specific reference in the Drawings or Specifications. When alternatives are given in this Specification the Contractor is at liberty to make his own choice from the alternatives listed.

PRE.C7.065.7 MANUFACTURER'S RECOMMENDATIONS
"Manufacturer's recommendations" means those recommendations or instructions, printed or in writing and produced by the manufacturer of any specified product, current at the date of tender.

PRE.C7.070.7 REGULATIONS
"Regulations" means any Ordinance or Regulation published by Government, bylaws of any local or duly constituted authority and rules or regulation of public bodies and companies which may be applicable to the Works.

PRE.C7.075.7 INDEPENDENT CHECKING UNIT
"Independent Checking Unit" means the Independent Checking Unit of the Housing Department of the Hong Kong Special Administrative Region.

PRE.C7.080.7 BUILDING WORKS
The words 'Building Works' means 'building works' referred under 'Interpretation', Section 2 of Buildings Ordinance, Chapter 123.

PRE.C7.085.7 SITE FORMATION WORKS
The words 'Site Formation Works' means 'site formation works' referred under 'Interpretation', Section 2 of Buildings Ordinance, Chapter 123.

DRAWINGS

PRE.C7.110.7 DRAWING LIST
The Drawings are listed in Appendices APA, APB and APC to this Specification.

PRE.C7.120.7 ADDITIONAL/AMENDED DRAWINGS
The CM may issue such additional and amended Drawings as he considers necessary during the progress of the works, and all such Drawings shall form part of the Contract.

PRE.C7.130.7 APPLICATION OF REVISIONS
Where reference is made in the Specification to a drawing, it refers to the revision of the drawing given in Appendices APA, APB and APC.

PRE.C7.140.7 CHECKING DRAWINGS
Carefully check all Drawings and advise the CM of any discrepancies, omissions, errors or ambiguities should any be found.
SCALING OF DIMENSIONS

Although the Drawings are prepared to scale, all works must be set-out from dimensions given in the Drawings and scaled dimensions must not be used. No claim resulting from scaling of dimensions by the Contractor will be considered.

SURVEYS FOR 'AS-builtin' PLANS

1. Carry out as-built surveys, prepare and submit the original of the as-built survey record plans at scale 1:500 within 30 calendar days when a section of the work is completed or as required by the CM. When directed by the CM, submit soft digitised copies of the as-built survey record plans in Microstation*.DGN format;

2. These plans shall include details of all works but not limit to drainage systems, platform levels, cuttings and embankments, retaining structures, roads and street furniture, manhole position and cover/invert levels, utilities etc. constructed by the Contractor and other parties within and adjacent to the Site;

3. Upon the completion of Contract, the CM shall compile from these records a final as-built survey record plan(s) at 1:500 or any other scale determined by the CM;

4. The plan(s) shall be signed by the CM and the Contractor and become the record plan for documentation purpose;

5. When directed by the CM, make arrangement for a representative of the CM to be present at all these surveys, and for the field documents to be initialled by the Contractor and representative of CM;

6. The field data shall be recorded by the Contractor in structured digital data files in ASCII code on 3.5 inch high density double sided diskette in MS-DOS format suitable for direct input to the MOSS programme;

7. The field data shall be captured in accordance with the Standard Feature Code for Engineering Survey (see PRE.C14 Appendix 2);

8. The work standard of the as-built surveys shall be in accordance with the Technical Specification for Topographical Survey attached in PRE.C15 Appendix 3;

9. All planimetric details shall be in terms of Hong Kong Geodetic Datum 1980;

10. All levels, heights, depths and contours shall be in terms of Hong Kong Principal Datum.

AS-CONSTRUCTED DRAWINGS FOR HIGHWAY STRUCTURES

1. When directed by the CM, submit a set of microfilms, negatives and digital data files in the form of CD-ROM for the highway structures;

2. Microfilms shall be 35 mm in size with the image mounted on the lower right hand side of a 188 mm x 83 mm aperture card. Details such as Project Title, Contract Number, Drawing Number, etc. shall be typed on the aperture card for reference and indexing purposes;

3. The digital data files shall be prepared in Workstation*.DGN format with settings and details as directed by the CM.

SURVEY DATUM LEVELS

DATUM REFERENCES

1. Survey Datum levels are referred to either:
   a. Principal Datum which is used as the reference datum for all heights and contours on land. It is 0.146 metres above Chart Datum; or
   b. Chart Datum which is used for all soundings and submarine contours.

2. All setting out and surveys are to be based on the Hong Kong 1980 Geodetic Datum, and all plans produced are to be presented on local grid.
REFERENCES FOR SETTING OUT THE WORKS

1. At the commencement of the Works the CM shall give the Contractor a Bench Mark level and survey control points close to the Site for his use in setting out the Works;

2. Carry out all survey and levelling work necessary for the setting out of the Works in fulfilment of his obligation under GCC Clause 5.10.

RESPONSIBILITY FOR SURVEY CONTROL INFORMATION

The survey control information is given to the Contractor for information only, and the Contractor is responsible for the maintenance of the survey control points used for the Contract. Before construction of any part of the Works is undertaken, carry out a proving survey to check and verify the accuracy of the given information. The survey record has to be agreed by the CM and shall form the basis for the setting out of the Works.
PRE.C8 QUALITY STANDARDS

QUALITY MANAGEMENT SYSTEM

PRE.C8.010.7 ESTABLISHMENT OF QUALITY ASSURANCE PLAN
1. The Contractor who has not achieved ISO 9001 certification or whose ISO 9001 certification has been withdrawn by the certification body during the progress of the works, shall establish and implement a quality assurance plan to ensure completion of the Works in accordance with the requirements of the Contract;
2. The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.

PRE.C8.020.7 APPROVAL OF QUALITY ASSURANCE PLAN
Within 14 days of the date of the Letter of Acceptance or within 14 days of withdrawal of the ISO 9001 certification by the certification body, submit for Approval a quality assurance plan for the execution of all elements of the Works, including those carried out by his sub-contractors.

PRE.C8.030.7 COMPLIANCE WITH QUALITY ASSURANCE PLAN
Upon obtaining the Approval to the quality assurance plan, adhere to the principles and procedures contained therein and submit for further Approval any revisions subsequently made to this document.

PRE.C8.040.7 MINIMUM CONTENT OF QUALITY ASSURANCE PLAN
The quality assurance plan shall include, but not be limited to, the items specified in the following clauses PRE.C8.050 to PRE.C8.120.

PRE.C8.050.7 ORGANIZATION AND RESPONSIBILITY
1. The quality assurance organization for the Works under the Contract and the responsibilities of the main participants shall be clearly defined;
2. An organization chart shall be produced to illustrate the sub-division of the work into elements for effective technical and management control, the reporting structure and the interface relationships between all parties involved;
3. Names, addresses, telephone and fax numbers of all principal contacts shall be listed.

PRE.C8.060.7 DESIGN CONTROL
The procedures for the control and verification of the design of the Contractor's design work, including the design of Temporary Works so specified, to ensure their compliance with the requirements of the Specification, which, inter alia, meet the following requirements:
1. The design and verification activities are planned and carried out by qualified personnel with suitable resources;
2. The design input requirements relating to the Contractor's design work, including the design of Temporary Works so specified, are identified and documented;
3. The design output satisfies the design input requirements;
4. Any changes and modifications to the design are identified, actioned, documented, reviewed and approved by the appropriate personnel;
5. Design documents such as calculations, drawings, reports, bar schedules, etc. are properly controlled.
PRE.C8.070.7 PURCHASING OF MATERIALS AND SERVICES
The procedures for the procurement of materials and services to ensure that they comply with the requirements of the Specification, which, inter alia, meet the following requirements:
1. Sub-contractors and suppliers of materials and technical services are selected on the basis of their ability to satisfy the requirements of the Specification;
2. Records of suitable sub-contractors and suppliers are maintained;
3. Purchasing documents clearly describe the material or service being ordered;
4. Purchasing documents are retained as records.

PRE.C8.080.7 CONSTRUCTION PROCESS CONTROL
The procedures for the control of the construction processes to ensure their compliance with the requirements of the Specification, which, inter alia, meet the following requirements:
1. Documented work instructions are produced to cover the construction processes which directly affect the quality of work;
2. These processes are monitored and controlled to ensure that the work is carried out in accordance with the requirements of the Specification and quality plans with the use of suitable equipment.

PRE.C8.090.7 INSPECTION, MEASURING AND TESTING EQUIPMENT
The procedures for the control, calibration and maintaining the inspection, measuring and testing equipment, which, inter alia, meet the following requirements:
1. Inspection, measuring and testing equipment is used in such a way that the accuracy is known and within the required limit;
2. Inspection, measuring and testing equipment is maintained and calibrated against certified equipment having a known relationship to nationally recognised standards. Where no such standards exist, the basis used for calibration is to be acceptable to the CM;
3. Calibration and maintenance records for inspection, measuring and testing equipment are kept.

PRE.C8.100.7 CONTROL OF NON-CONFORMING MATERIALS AND WORKS
The procedures for the identification and control of non-conforming materials and works, which, inter alia, meet the following requirements:
1. Non-conforming materials and works are positively identified and segregated;
2. Records are kept of all non-conforming materials and works and of the subsequent corrective actions taken;
3. All personnel concerned are notified that a non-conformance exists;
4. Reworked/rectified items are inspected in accordance with documented procedures.

PRE.C8.110.7 TRAINING
The procedures for identifying training requirements and for the provision of training to all personnel performing activities which affect the quality of work, which, inter alia, meet the following requirements:
1. Personnel carrying out specific assigned tasks shall be suitably qualified (i.e. with formal qualifications, training or suitable experience);
2. Records of staff training and qualifications are maintained.

PRE.C8.120.7 QUALITY ASSURANCE PLAN REVIEW
The procedures for the regular evaluation and updating of the quality assurance plan to safeguard the continuing effectiveness of the quality management system.
ALTERNATIVE DESIGNS

PRE.C8.210.7 BASIS OF ASSESSMENT

1. Any proposal by the Contractor involving modifications to design will be assessed on its merits and, if considered viable by the CM, may be accepted;
2. A decision to adopt a technically modified design will be governed by the amount of the overall saving which can be reliably expected to accrue;
3. In assessing the overall saving, account will be taken of the effect of any change to the Contract programme, and the cost to Housing Authority of additional engineering and administrative resources involved in assessing the alternative design and in implementing it through to completion of the Contract.

PRE.C8.220.7 DESIGN RESPONSIBILITY

Drawings or other documents provided by the Contractor shall be deemed to come within the provisions of GCC Clause 4.3 and the Contractor shall accept responsibility for his own design as provided for under GCC Clause 5.15.

PRE.C8.230.7 DESIGN STANDARDS

1. Any alternative designs must conform with standards prescribed by the CM;
2. An alternative design which appears viable will be Approved in principle prior to detailed design;
3. Final Approval will be given after an independent check of the detailed design arranged by the CM has shown it to be satisfactory;
4. The cost of any amendments shown by this check to be necessary must be borne by the Contractor.

PRE.C8.240.7 COSTS ARISING FROM DESIGN NON-VIABILITY

1. In the event of the CM's check of the detailed design showing that the design is not viable, then the Contractor shall pay to the Housing Authority the costs of the CM's check by way of deductions by the Housing Authority from any monies due, or which may become due, to the Contractor;
2. In the event that the CM's fees for checking the detailed design exceed the saving of constructional cost, then the excess shall be paid by the Contractor to the Housing Authority by a similar deduction.

MATERIALS AND WORKMANSHIP

PRE.C8.310.7 GOOD PRACTICE

Materials and workmanship generally to be consistent with good practice in Hong Kong and to comply with this specification and with the relevant BS, BS EN, BS EN ISO or CP, except when specified otherwise, and/or Approved.

PRE.C8.320.7 MATERIAL

Material for inclusion in the permanent works to be new or other material as stated in the Contract or approved by the CM.

PRE.C8.330.7 CONSISTENCY OF MATERIALS

1. When a choice of manufacturer is permitted for any material, obtain the entire quantity required to complete the work from one manufacturer. Unless otherwise Approved, also obtain such material from the same source of supply;
2. When a choice of proprietary material is permitted from a List of Approved Proprietary Names for any specified materials, use the same brand of material throughout unless otherwise Approved;
3. When a choice of type, colour or size of material is permitted (e.g. glazed wall tiles, mosaic tiles), use the same type, colour and size throughout for all work in like locations unless otherwise Approved.
PRE.C8.340.7 MIX PROPORTIONS
Unless otherwise specified, mix proportions to be by volume.

PRE.C8.350.7 MANUFACTURER'S RECOMMENDATIONS
Handle, store and fix each material in accordance with manufacturer's recommendations. Submit copies of these recommendations to the CM, when requested, before work is commenced.

PRE.C8.360.7 EQUIVALENT MATERIALS AND IMPERIAL SIZES
1. When materials or products to the appropriate standard are not available, materials or products conforming with equivalent standards will be acceptable subject to Approval;
2. When a material is available in Hong Kong in metric size, an imperial size equivalent will not be acceptable;
3. If a material is unobtainable in metric size, a material of an imperial size equivalent which will fully meet the specification may be substituted if prior Approval has been obtained, but the rates and prices will not be changed from those submitted for the materials specified.

PRE.C8.370.7 BRITISH STANDARDS
1. BS, BS EN, BS EN ISO and CP shall, except for head standards, be deemed to include for the latest revision and any amendments to that revision that are listed in the BSI Standards Catalogue and its Supplements 42 days prior to the date for the return of tenders unless the year of revision is specified in this Specification;
2. "Head standards" to BS, BS EN, BS EN ISO and CP shall be deemed to include for all dated revisions to their parts and amendments which are listed in the BSI Standards Catalogue and its Supplements 42 days prior to the date for the return of tenders unless otherwise specified;
3. "Head standards" (HS) are not dated because they do not contain any technical content. However reference to a head standard invokes all extant "parts" of that standard which are themselves dated. Reference to head standards is a practicable method of using a general BS, BS EN or BS EN ISO reference in situations where detailed reference to each part would be cumbersome.

PRE.C8.380.7 OTHER NATIONAL AND INTERNATIONAL STANDARDS
Hong Kong Construction Standards (CS), International Standards Organization (ISO) Standards and standards issued by the American Society for Testing and Materials (ASTM) and similar standards shall be deemed to include for the latest revision and any amendments to that revision, that are published 42 days prior to the date for the return of tenders unless the year of revision is specified in this Specification.

PRE.C8.390.7 EQUIVALENT STANDARDS
In the event of Approval being sought, pursuant to PRE.C8.310, for materials or workmanship, for which compliance is claimed to a standard, other than that specified, submit full details to the CM one month before such materials are required for manufacture or incorporation into the works.

TESTING

PRE.C8.510.7 LABORATORY TESTING
1. With the exception of testing for concrete and steel reinforcement which should comply with Worksections CON1 and CON3 of this Specification, laboratory testing required shall be carried out by the Contractor using laboratories listed on the Development Bureau's List of Approved Suppliers of Materials and Specialist Contractors for Public Works: Soil and Rock Testing, or Government Public Works Laboratory and which are accredited by HOKLÄS and Approved by the CM;
2. The Contractor shall appoint at least four such Approved laboratories on a three
months roster system to carry out the tests;

Option A

3. The Contractor shall submit for Approval the names of the laboratories four
weeks before any testing work is carried out on the Contract.

Option B

3. The Contractor shall submit for Approval the names of the laboratories four
weeks before any testing work is carried out on the Contract and in conjunction
with the sub-contractor to confirm no affiliation with the proposed testing
laboratory using the standard template at Appendix PRE.C8.APPEND1;

4. Provide test samples under the supervision of the CM and where required submit
to the Approved testing laboratory and unless otherwise specified, pay
all fees and charges;

5. Mark samples, and clearly indicate on test records, the location or delivery from
which the test was taken;

6. Request the Approved testing laboratory to submit the original of test certificates
to the CM and the Contractor at the same time and keep a copy of all records on
Site;

7. Submit samples of materials, carry out tests and obtain Approval, before the
materials are used in the Works;

8. When requested by the CM provide test certificates or obtain guarantees from
the manufacturers, that materials specified to a BS or other specified standard,
conform to the relevant standard.

PRE.C8.520.7 QUALITY ASSURANCE SCHEMES
Tests stated in the Contract may be omitted or reduced in number as agreed by the
CM if such materials or articles delivered to Site satisfy the following conditions:

1. To bear the stamps of the registered certification trade mark of the BA Institution,
known as the BS Kitemark; or

2. To be covered by a manufacturer's quality assurance scheme stated in the
Contract or approved by the CM.

INDEPENDENT CHECKING UNIT (ICU)

PRE.C8.602.7 GENERAL
Obtain relevant ICU forms from CM and submit at time frame specified by CM.

PRE.C8.603.7 SERVICES AND FACILITIES REQUIRED BY ICU
1. In facilitating ICU’s inspection and checking:
   a. Provide attendance to facilitate the checking of personnel and attendance
      records of supervisory staff against the SSP;
   b. Provide attendance on any other site activities and tests for ICU’s inspection
      as and when necessary;
   c. Provide any other information as required by the CM.

2. Inform the CM at least 7 working days prior to carrying out any tests to be
specified by the CM for inspection by ICU.

PRE.C8.610.7 INDEPENDENT CHECKING UNIT (ICU)
1. Staff of ICU of the Housing Department, in the presence of the CM or the CM's
representative, will carry out the following checking or inspection on Site:
   a. Foundation Work
      i. Witness pile installation and loading test, if any, of preliminary pile or
         first working pile;
      ii. Witness pre-drilling of Types 3, 5 & 6 piles;
ii. Inspect bearing strata of footings;
iii. Witness core drilling process for Type 3 pile;
iv. Witness post construction proof drilling for Types 5 & 6 piles;
v. Witness loading test of the piles selected by ICU;
vii. Witness or inspect any other site activities as and when necessary.

b. Witness any works carried out on Site as and when necessary;
c. Check personnel and attendance records of supervisory staff against the SSP;
d. Check third party safety audit reports against the Safety Plan required under GCC Clause 5.11 and PRE.C9.220.

2. The CM will select certain piles to undergo loading tests, core tests or any other tests as necessary for the ICU’s inspection;
3. Inform the CM at least 7 working days before:
   a. The preliminary pile or first working pile is ready to be installed or load tested; and
   b. The testing of the piles selected by CM for the ICU's inspection is ready to be performed.
4. Attend inspection and checking with the ICU and provide information to the ICU to facilitate the inspection and checking;
5. Bear all additional expenditure incurred by reason of the progress of the Works or any part thereof having been materially affected by the time taken by ICU’s inspection and checking. Any delay caused thereby will not be accepted as a justification for granting an extension of time.
**APPENDIX PRE.C8/I**

**PRE.C8.APPEND1.7 APPLICATION FORM FOR APPROVAL OF TESTING LABORATORY**

Application for Approval of Testing Laboratory (Original) *Note 1

<table>
<thead>
<tr>
<th>Contract No.</th>
<th>:</th>
<th>Contract Title</th>
<th>:</th>
</tr>
</thead>
</table>

To Contract Manager,

(Attn: )

I apply for your approval the commissioning of (Name of testing laboratory) that complies with **PRE.C8.510** to carry out the following test(s):

<table>
<thead>
<tr>
<th>Description of the test(s)</th>
<th>Relevant specification clauses</th>
</tr>

The original copy shall be submitted to the CM.
The duplicate cop shall be forwarded to CSE/DC for record.
**PRE.C9 CONTRACTOR'S OBLIGATIONS**

**USE OF SITE**

**PRE.C9.010.7 PURPOSE**
Except if, and to the extent otherwise provided for in the Contract, the Site shall not be used for any purpose other than carrying out the Works.

**PRE.C9.020.7 RESTRICTIONS ON ADVERTISING**
No advertising notice boards of any kind are to be erected on the Site without prior Approval. The proposed advertising board design shall be submitted for Approval well in advance of the intended erection.

**PRE.C9.030.7 RESTRICTIONS ON STOCKPILING**
Areas inside the Site may be used as stockpile areas only with prior Approval.

**PRE.C9.040.7 WORKERS**
Do not allow workers to live on the Site with the exception of guards and watchmen.

**SECURITY**

**PRE.C9.110.7 WATCHMEN/SECURITY GUARDS**
1. Employ capable watchmen or security guards on the Site and on the Works, day and night;
2. At commencement of the Contract, provide a minimum of .......... security guards at all times;
3. The CM may approve a lesser number of security guards when any Section of the Works has been completed, or increase the number as is considered necessary for the Works;
4. Provide each security guard with a walkie-talkie and make suitable arrangements for regular patrolling and reporting by security guards and for a key system check on each store.

**PRE.C9.120.7 ACCOMMODATION FOR SECURITY GUARDS**
1. Provide secure huts or rooms for security guards, each fitted with a direct exchange line telephone, and an internally operated lock;
2. There shall be adequate illumination for the huts or rooms and all surrounding areas and site entrances.

**PRE.C9.130.7 INTEGRITY OF SITE PERIMETER**
1. All site hoardings and gantries shall be repaired and maintained in good condition for the duration of the Contract;
2. The number of entrances and exits to the Site shall be kept to a minimum or as specified;
3. All entrances and exits shall be provided with gates and all such gates shall be locked outside working hours.
**PRE.C9.140.7 WAGE BOOKS**

1. In addition to the requirements of GCC Clause 5.25, keep wage books for monitoring the payment of wages and MPF contribution paid by the Contractor and the sub-contractors of all tiers to all Site Personnel and identify each Site Personnel by the data as specified in PRE.C9.2550. The wage books shall give a full and up-to-date account of the payment of all wages and MPF contribution paid to all Site Personnel for the duration of the Contract, up to and including the month in which the operation of ACRS is terminated as stipulated in PRE.C9.2560. For Contracts with more than one Portion of the Site, the Contractor shall keep wage books for all Site Personnel of each particular Portion of the Site up to and including the month in which the operation of ACRS is terminated as stipulated in PRE.C9.2560, or up to an earlier date as otherwise agreed by CM, to be consisting of the following:
   a. A complete set of copy of the executed employment contracts of all Site Personnel on Site as required in PRE.C6.170;
   b. A complete set of signature specimens of all Site Personnel complying with the format similar to the prescribed forms attached to the latest "Contractor's Guideline on Wage Monitoring System" published by HA from time to time;
   c. A complete set of verified daily attendance records as required in PRE.C9.2510;
   d. A complete set of copy of the schedules of wages and the respective records of transactions for payment of wages and MPF contribution as required in PRE.C6.170;
   e. A complete set of copy of the written declaration that all wages of the Site Personnel have been paid and all MPF contributions have been made as required in PRE.C6.170.

2. Make wage books available on Site for inspection by the CM or LRO. Maintain and update an additional copy of wage books in the office of LRO for record;

3. All documents kept in the wage books shall be duly certified by the Contractor or the respective sub-contractors that they are the true copy of the original documents;

4. Provide information of daily wages on the daily returns submitted in accordance with PRE.C9.2220;

5. Keep wage books in a secure place as agreed by CM such as a room or cabinets with locking device during the whole contract period and after the date of terminating the operation of ACRS as stipulated in PRE.C9.2560, or up to an earlier date as otherwise agreed by CM. The respective keys shall only be held by the members of Contractor's management team. After at least 12 months from the date of terminating the operation of ACRS as stipulated in PRE.C9.2560 and with the consent of the CM, all the documents kept in the wage books including the additional copy in the office of LRO shall be destroyed and disposed properly without disclosing any information contained in them;

6. Provide cabinets with locking device to Nominated Sub-contractors for keeping their wage books;

7. The above requirements stipulated in sub-clauses (1) to (6) may be exempted subject to the compliance with all relevant criteria and procedures stipulated in the latest "Contractor's Guideline on Wage Monitoring System" published by HA from time to time or as Approved by the CM on individual case basis.

**PRE.C9.170.7 SITE SECURITY PLAN**

1. Submit a Site Security Plan to the CM for information and comment at the following occasions:
   a. Within 14 days of the date of the Letter of Acceptance;
   b. Necessitated by revisions of programme in accordance with GCC Clauses 8.4 or 8.5 of the Conditions of Contract;
   c. When the Site Security Plan is revised by the Contractor.
2. The Site Security Plan comprises but is not restricted to the following:
   a. Policy Statement for security on the Site;
   b. Security staff organizational structure which shows:
      i. Duty list of the responsible officers;
      ii. Chain of responsibility;
      iii. Details of the resources allocated on the Site;
      iv. Emergency contact telephone numbers for security aspects of the Works.
   c. Means of compliance on the following aspects of Works at various stages of construction which are to be programmed into the programme or revised programme furnished pursuant to GCC Clauses 5.7, 8.4 and 8.5:
      i. Proposed number, qualification and surveillance check on the performance of security guards;
      ii. Control for the care of personal security and safety of all people on site;
      iii. Control for the care and storage of any Constructional Plant, temporary buildings and materials and anything whatsoever on the Site or delivered to or placed on the Site in connection with or for the purpose of the Works or any Specialist Works;
      iv. Control over hoardings, gantries, fencings, etc.;
      v. Control of accessibility at Site entrance(s) and individual building blocks;
      vi. Control of entry and exit of visitors and vehicles to and from the Site with records;
      vii. Control over delivery and removal of materials, goods, equipment and plant with records;
      viii. Control over unused materials, goods, plant and equipment;
      ix. Control over storage of concrete cubes;
      x. Adequacy of temporary lighting inside the buildings, within the Site and around the Site boundary especially during night time.
   d. Procedures and records for security control and patrolling services on building blocks, storage areas for materials, goods, equipment and plant and the Site for the times/periods as follows:
      i. At day and night time;
      ii. At and within 6 months of the date for completion of each Section and the Works;
      iii. For the period 28 days after CM has certified completion of each Section and the Works pursuant to GCC Clause 5.12.
   e. Emergency procedures in case of crime e.g. theft, burglary etc. or fire, including systems of reporting, recording and remedial measures;
   f. Site security reports submitted at monthly site meetings to include, but not restricted to, the following information:
      i. Site security measures implemented on the Site;
      ii. Designated site security personnel for implementing and monitoring the plan;
      iii. Cases of failure;
      iv. Feedback from Nominated Sub-Contractors, Suppliers or others.
   g. Proposal for security training to the concerned personnel including Site Agent, General Foremen, and other concerned site staff;
   h. Programme for reference to the local regional Crime Prevention Unit of the Hong Kong Police Force.
3. Accept full responsibility under the Contract. The obligation for site security is not relieved by:
   a. CM's consent to the Site Security Plan and any proposed revision or update;
   b. CM's rejection of the Site Security Plan and any proposed revision or update;
4. Do not impose any obligation or responsibility on the Employer or CM with regard to site security;

5. Hold regular meetings to review adequacy of Site Security Plan from time to time, and specifically in advance of each programmed work stage, to ensure compliance with specified requirements and continued adequacy of the Site Security Plan.

SAFETY

PRE.C9.205.7 COMPLIANCE WITH SAFETY REGULATIONS AND CONTRACT REQUIREMENTS

In relation to the requirements of GCC Clause 5.11 and PRE.C6.070, comply with all current Regulations concerning safety on the Site in particular the Factories and Industrial Undertakings Regulations and the requirements specified in the Contract as follows.

1. Safety Officers:
   a. Employ Safety Officer(s) and Safety Supervisor(s) in accordance with the Factories and Industrial Undertakings (Safety Officers and Safety Supervisors) Regulations, with specific detailed requirements as follows, and employ any other safety personnel in excess of the followings as may be required by any enactments, regulations, by-laws or rules that may be in force at any time during the progress of the Works:
      i. The number of Safety Officer(s) to be employed shall depend on the total number of persons employed on Site as indicated below:

<table>
<thead>
<tr>
<th>No. of persons employed on Site</th>
<th>No. of Safety Officer(s) required</th>
</tr>
</thead>
<tbody>
<tr>
<td>Less than 200</td>
<td>1</td>
</tr>
<tr>
<td>201 to 700</td>
<td>2</td>
</tr>
<tr>
<td>701 to 1200</td>
<td>3</td>
</tr>
<tr>
<td>1201 and above</td>
<td>4</td>
</tr>
</tbody>
</table>

   ii. The number of Safety Supervisor(s) to be employed shall depend on the total number of persons employed on Site and comply with the abovesaid regulation;

   iii. The total number of persons employed on Site as referred to in sub-clauses (a)(i) and (a)(ii) shall include the workforce of the Contractor, the Contractor's sub-contractors and Nominated Sub-contractors but shall exclude the workforce of those separate contractors employed directly by the Employer;

   iv. The Safety Officer(s) and Safety Supervisor(s) must be employed full time solely and designated for the Contract. The Safety Officer(s) shall be registered by the Commissioner for Labour under the Factories and Industrial Undertakings (Safety Officers and Safety Supervisors) Regulations;

   b. Do not commence any construction work on the Site without the appointment of the required number of Safety Officer(s) and Safety Supervisor(s) unless expressly permitted by the CM in writing;

   c. At the end of each period of interim certificates, report to the CM a written confirmation that Safety Officer(s) are employed in accordance with the Contract. Such written confirmation shall append with the following documents:
      i. The name and a copy of the written notification of registration from the Commissioner of Labour for each Safety Officer;
      ii. A signed statement by each Safety Officer declaring that he is registered as a Safety Officer and he will advise the CM in writing immediately if he is no longer so registered.
d. The duties of Safety Supervisor shall be as stipulated in the Factories and Industrial Undertakings (Safety Officers and Safety Supervisors) Regulations;

e. The duties of the Safety Officer shall be solely directed towards safety and health matters. In addition to the duties stipulated in the Factories and Industrial Undertakings (Safety Officers and Safety Supervisors) Regulations, the Safety Officer's duties include:

i. Site inspection:
Carry out comprehensive safety inspections on all activities on the Site including temporary works and scaffolding at weekly intervals. The safety inspection shall identify any unsafe operation or potential hazards. Give prior notice to the CM of the date and time of the weekly inspection and allow the CM to attend the inspection;

The Safety Officer shall be clearly identified on the Site by wearing an armband or a safety helmet appropriately marked in Chinese and English;

The Contractor shall empower the Safety Officer to order any person working on the Site to suspend any unsafe operation or to take urgent action to make safe the Site or the Works or to disallow any practice which may infringe the Safety Plan or any statutory safety requirement;

Prepare safety inspection reports.

ii. Safety Plan:
Supervise and monitor implementation of the Safety Plan;
Ensure that sub-contractors and all persons working on the Site are made aware of and comply with the Safety Plan.

iii. Accident/Incident report, investigation and follow-up actions:
Carry out the duties relating to accident/incident report, investigation and follow-up actions as specified in Safety Plan.

iv. Training:
Include in the Safety Plan or its monthly update the programme and the number of workers to receive training including site specific induction training, tool-box talks and Silver Card training for the coming month;
Conduct general induction training, site specific induction training as specified. Supervise the conduction of tool-box talks specified;
Identify those workers in the specified trades without valid Silver Card and coordinate their enrolment in requisite Silver Card training provided by the Construction Industry Council (CIC);
At the end of each period of interim certificates report, report to the CM the actual number of workers trained as specified.

v. Site Safety Committee:
Arrange and coordinate Site Safety Committee.

vi. Assessment report:
Prepare risk assessment reports for the following month and recommend measures to remove or minimize hazards.

vii. Action on Labour Department contravention notices:
Attend to the notices issued by the Labour Department to the Contractor advising that safety related regulations are contravened, in particular:
- Construction Site (Safety) Regulations;
- Subsidiary regulations of the Factories and Industrial Undertaking Ordinance.

Take all necessary actions to ensure full compliance with all statutory requirements;
Report monthly to the CM the following Labour Department's notices received:
- Labour Department’s Construction Site Inspection Report with category Part I or Part II contravention;
- Labour Department’s Improvement Notice;
- Labour Department’s Suspension Notice.

viii. Safety audit:
Implement the recommendations of the external Safety Audit Report in case Safety Audit is required by Contract.

ix. Safety Officer’s report:
Compile and report the above duties to the CM at the monthly site meetings.

x. Safety diary:
Maintain a safety diary which shall record all matters related to safety and health, including Safety Supervisors’ reports, details of safety inspections and audits, accidents, dangerous occurrences, safety related incidents, etc. Check to ensure that all unsafe situations are promptly rectified and the dates of their completion duly recorded in the safety diary. The safety diary shall be made available for inspection by the CM upon request and copy thereof shall be submitted to the CM upon request.

xi. Keep a register of the names, telephone numbers, addresses and qualifications of any competent persons and competent examiner as defined in the Construction Sites (Safety) Regulations, who has carried out duties on this Contract. Keep a register of the names of safety supervisors and their duties discharged as required under the Factories and Industrial Undertakings (Safety Officers and Safety Supervisors) Regulations. Keep examination reports and certificates required by legislation or contract.

2. Safety Plan:

a. Prepare and submit to the CM three copies of a draft Safety Plan within 14 days of the date of the Letter of Acceptance. Arrange and hold an ad hoc meeting (or meetings if necessary) with the CM or his representative to discuss the draft Safety Plan within 7 days from the submission of such plan. If the CM is of the opinion that the draft Safety Plan does not meet the requirements of the Contract, he can request for remedy of the deficiency. Comply with any such CM’s request prior to submitting six copies of the Safety Plan to the CM for endorsement within 35 days of the date of the Letter of Acceptance;

b. Update the Safety Plan at monthly intervals or when required by the CM so that the Safety Plan is at all times a comprehensive and contemporary statement of the Contractor’s safety and health policies, procedures and requirements to achieve the safety and health obligations and responsibilities under the Contract. In the circumstance that there is no amendment of the Safety Plan in the monthly updating, submit such update Safety Plan to the CM with explicit reasons why there is no amendment;

c. The CM may by notice in writing require the Contractor to supplement, revise or update the Safety Plan if he is of the opinion that the Safety Plan is insufficient or requires revision or modification in the interest of the safety, whether for the Works and/or the safety and health of persons on or adjacent to the Site or protection of any property on or adjacent to the Site or otherwise. Comply with the CM’s requirements within 7 days of such notice;
d. Ensure the Safety Plan has incorporated the Nominated Sub-contractor’s safety plan in respect of the Nominated Sub-contract Works. Request the Nominated Sub-contractor to prepare and submit a safety plan in respect of the Nominated Sub-contract Works within 14 days of the Letter of Acceptance of the Nominated Sub-contractor’s tender for agreement and incorporation into the Safety Plan. Ensure consistency between the Safety Plan and the safety plan in respect of the Nominated Sub-contract Works. Submit the agreed safety plan in respect of the Nominated Sub-contract Works to the CM for endorsement. Revise and update the Safety Plan to incorporate the safety plan in respect of the Nominated Sub-contract Works endorsed by the CM when the Safety Plan is due to be revised or updated;

e. Request the Nominated Sub-contractor to revise or update the Safety Plan in respect of the Nominated Sub-contract Works by virtue of a revision or update of the Safety Plan pursuant to sub-clauses (2)(b) and 2(c) above, Ensure the revised or updated safety plan in respect of the Nominated Sub-contract Works is consistent with the Safety Plan and submit the revised or updated Safety Plan in respect of the Nominated Sub-contract Works to the CM for endorsement;

f. The CM’s endorsement, comment or rejection of the Safety Plan, and of any proposed revision or update, and the implementation of the Safety Plan by the Contractor shall not relieve the Contractor from any obligations or responsibilities under the Contract or any statutory regulations.

g. The Safety Plan and subsequent monthly updated Safety Plan shall contain, without limitation, details of the followings:

i. Company safety policy:
A safety policy is a written statement produced by the Contractor, signed by a senior member of the management board, in which it sets out its aims and objectives for securing safety and the means whereby the objectives can be met. It is the Contractor’s statement of intent on matters of safety;

ii. Safety organisation.
The safety staff organisational structure including an organisation chart which shows the chain of responsibility and accountability from managing director, project manager, safety manager, site agent, safety officer and safety supervisors. Responsibilities and duties of these safety personnel shall be defined.

iii. Safety training:
Provide all employees and others with adequate information, instruction and training on health and safety. State in the safety and health policy the detail arrangements for providing safety and health training. The safety training shall include but not be limited to the followings:
- General induction training;
- Site specific induction training;
- Tool box talks;
- Silver Card training.

iv. In-house safety rules and regulations:
Activities which are complex or inherently hazardous must be accompanied by detailed written procedures to clearly identify the hazards and/or potential risks, and to clearly identify steps to be taken to minimise risks. These procedures may take the form of method statements and/or written instructions;
Attention to strictly control access to particularly hazardous areas or operations. The activities identified as demanding permits to work to be listed, and the person identified by job title to be responsible for the design/preparation of permits;
A lock-off involves the physical isolation or locking-off to danger areas. A permit to work procedure involves written authorization by a specified responsible person for an individual to enter a danger area, or period of time.

v. Safety Committee as specified;

vi. Programme for inspection of hazardous conditions:

Effective arrangements to closely monitor by formal inspection the implementation of the safety and health legal requirements, policies and procedures. This function must be allocated to suitably trained and experienced individuals. Reports highlighting actions to be taken following an inspection will be speedily prepared and issued to the appropriate manager;

Inspections should include but not be limited to:
- Excavation, shafts, earthworks and tunnels;
- Cofferdams and caissons, and suspected dangerous atmospheres;
- All lifting appliances;
- All scaffolding;
- Local exhaust;
- Pressure system and gas containers;
- Breathing apparatus, revival and other safety and rescue equipment;
- Electrical equipment and appliances;
- Fire fighting equipment;
- First-aid box provisions.

vii. Job hazard analysis:

Risk assessment to identify hazards in the workplace and assess the risk to employees and others who may be affected. Assessments to be carried out by competent persons. When a risk assessment has indicated that a task poses a significant risk to safety and health, a written safety system of work to be produced. A safe system of work must include not only procedures, equipment, materials and environment that is safe, but also safe work-force i.e. adequately trained, informed and supervised. Where appropriate, the safety system should also specify and checks to be made before the task is carried out.

viii. Personal protection programme:

The type of personal protective equipment [PPE] to be worn in particular situations and any specific requirement related thereto, to be established as a result of a risk assessment which will be the first step towards ensuring compatibility between the risk and correct personal protective equipment. Correct procedures for PPE issue, maintenance and reporting defects.

ix. Accident/Incident report, investigation and follow-up actions:

Report accidents and dangerous occurrence as defined in the Factories and Industrial Undertakings Regulations to the Labour Department in the prescribed Form 2 with Supplementary Information Sheet on Accidents on Construction Sites & Dangerous Occurrence Report Form;

Copy such reports to the CM according to GCC Clause 5.21;

Notify the CM of all ‘reportable accidents’ as defined under the Factories and Industrial Undertakings Regulations and of the accident/incident to be reported under the ‘accident/incident reporting procedures’ of the HD. Download the accident/incident reporting form from HD’s Site Safety Website;

Notify the HD site staff immediately (i.e. within the day of the accident/incident) of accident/incident on Site, including:
- Serious accident/incident;
- Reportable accidents, dangerous occurrence and near miss/incidents (if the accident/incident, though not serious by immediate effect, may have potentially serious consequence, such as those involving but not limited to falling from height, falling object, being struck by moving object, tower crane lifting, public safety etc.) on site;
- Tree failure incident of any of the following nature occurs:
  • Loss of human life;
  • Major injury where the injured is admitted or to be admitted to hospital;
  • Substantial damage to properties;
  • Serious/complete blockage to main pedestrian/vehicular access; and
- Death of person.

Provide statistics and analysis of accidents, investigate and ascertain the contributory factors and root causes, identify the trends and recommend means of prevention and improvement;

Provide necessary information to the Nominated Sub-contractors' Safety Supervisors for preparing Nominated Sub-contractors' accident report and investigation;

Provide means to communicate accident statistics information, recommendation to prevent recurrences and lessons learnt from previous accidents to all persons working on the Site.

x. Emergency preparedness:
An emergency situation means a situation requiring emergency assistance of fire services/police/ambulance etc. It includes:
- An accident which results in death or serious injury;
- A fire breaking out which requires rescue crews from Fire Services Department to effect control;
- A flood that causes or threatens life on site;
- A leakage of dangerous goods or chemicals; and
- Any other accident/incident which creates a dangerous situation.

Evacuation plans to be drawn for all areas. The procedures are to be reviewed and revised periodically, especially when the work-site configuration is altered or changes in some way.

xi. Safety promotion:
The effort made by different sub-contractors or individuals to reduce accidents at work by the application of soundly based policies, procedures and disciplines to be recognised by the presentation of safety and health award. Adopt proactive attitude towards improving health and safety performance and/or the best related achievement in reducing number of accidents. The site as a whole is encouraged to participate in the following designated safety campaigns:
- "Construction Safety Day", "Construction Safety Promotional Campaign" or "Good Housekeeping Promotion Campaign" led by the Occupational Safety and Health Council; or
- "Construction Industry Safety Award Scheme" led by the Labour Department; or
- "Considerate Contractors Site Award Scheme" led by the Development Bureau and the Construction Industry Council.

The Contractor is also encouraged to organize site-based safety awards and competitions to promote participation of his workers and teams in safety theme competitions during the contract period. The adjudicating team shall comprise the site management team, safety personnel and workers' representatives, and shall act openly and fairly in such events.

xii. Health assurance programme:
The health of employees and others affected by the Contractor's activities must form an important part of the Contractor's safety and health policy. Work related health aspects, such as pre-employment and routine medical examination of employees engaged in specific jobs, are to be considered. Similarly, health related matters which may affect the workplace such as fumes or vapours from hazardous or toxic substances, pollution, noise, radiation etc., are to be reviewed; Health surveillance is to be used to detect adverse health effects at an early stage. Appropriate risk assessment to identify the circumstances in which health surveillance becomes necessary.

xiii. Evaluation, selection and control of sub-contractors:

The means by which to ensure sub-contractors of all levels including Nominated Sub-contractors and specialist sub-contractors comply with the Safety Plan and statutory requirements on safety and health.

xiv. Process control programme:

Safety rules, regulations and working procedures covering all safety and health aspects, and in particular method statements and permit-to-work systems for identified high risk operations are to be addressed.

xv. Non-smoking policy

Mandate a non-smoking policy including the rules adopted by the Contractor with respect to prohibition of smoking on Site. In the event that the Contractor does not fully prohibit smoking on Site, include a site plan showing the number and sizes of the designated smoking areas and describe the associated requirements of provisions of fire fighting appliances and cleaning services in the policy.

h. Comply with the Safety Plan and ensure all Safety Officers, Safety Supervisors and all personnel who are in a position of authority among sub-contractors have access to the Safety Plan and made aware of their obligation to comply with the Safety Plan. Any Specialist Contractor and other entities (e.g. public utilities) working on the Site shall be provided with a copy of the Safety Plan and be required to comply with it, and report to the CM for any non-compliance on their part;

i. Provide all facilities, access and assistance to the CM to periodically check that the Safety Plan is being implemented properly and fully. If the CM is of the opinion that the Contractor fails to implement the Safety Plan properly and fully and the failure does or may adversely affect the safety, whether for the Works and/or the safety and health of persons on or adjacent to the Site, or protection of any property on or adjacent to the Site or otherwise, the CM shall notify the Contractor in writing of the failure. The Contractor shall take action to remedy the failure immediately. The CM may suspend the Works, or any part of it, until such time the failure has been rectified.

3. Housing Authority Safety Auditing System (HASAS):

   a. Safety Auditor:

      i. To be nominated by the CM. More than one Safety Auditor may be nominated for each safety audit and Safety Auditors may be nominated on rotation by the CM for safety audits;

      ii. Must be from the Occupational Safety and Health Council (OSHC)'s list of Accredited Safety Auditors immediately after the date of the Letter of Acceptance;

      iii. Must have no current commercial dealings with the Contractor;

      iv. Clear of any conflict of interest in exercising his role as safety auditor.

   b. The Contractor may agree or reject such nomination with valid reason. Re-nominate by the CM within 7 days from the date of the rejection if the nominee is rejected;

   c. Once nomination is agreed:
i. The Accredited Safety Auditor shall conduct safety audit with the Contractor's representatives under the management of the OSHC once every three months;

ii. CM may instruct the Accredited Safety Auditor to commence the Safety Audit at any time, but not later than the end of the third month from the notified date for commencement of the Works;

iii. Provide attendance of most senior site representative at each safety audit;

iv. Provide all necessary attendance for the safety audit including fully facilitating the inspection of the Site and the Works and all certificates, records and reports relating to safety and health matters, and fully cooperate with the Accredited Safety Auditor in the carrying out of the safety audit;

v. Report to the Accredited Safety Auditor innovative and functional safety installation or safety measures, application of Building Information Modeling for safety and application of Radio Frequency Identification for safety implemented for this Contract for onward payment assessment.

d. The Project Director/Heads of Projects of the Contractor shall sign an acknowledgement of receipt of the Safety Audit Report prepared by the Accredited Safety Auditor and submit to OSHC for record;

e. Implement the recommendations of the Accredited Safety Auditor within the time frame specified in the Safety Audit Report;

f. The Safety Officer shall report on the implementation of Accredited Safety Auditor's recommendations in the monthly site meeting;

g. Allow for all work undertaken in preparation for the safety audit or in the implementation of the Accredited Safety Auditor's recommendations. Neither shall entitle the Contractor to any extension of time for completion of the Works.

4. Green Card and Silver Card:

a. The Contractor, and any of his sub-contractors including Nominated Sub-contractors, shall provide and employ for the purposes of the Works such technical personnel and such skilled, semi-skilled and unskilled labour who, upon their first appearance in the Site and throughout their working in the Site, are a holder of either a valid Green Card issued by an organisation or institution recognized by the Labour Department or a valid Construction Workers Registration Card. The Green Card referred to in this sub-clause is a statutory identification document issued to a person by an organization or institution recognized by the Labour Department upon completion of the training on Green Card;

b. The following trades shall be carried out by workers holding Silver Cards issued by the Construction Industry Council upon their first appearance in the Site and throughout their working in the Site:

i. Painter and Decorator;

ii. Carpenter;

iii. Demolition Worker (Building);

iv. Plumber;

v. Bar Bender and Fixer;

vi. Plasterer and Tiler;

vii. Bamboo Scaffolder, Metal Scaffolder;

viii. Construction Materials Rigger;

ix. Curtain Wall Installer;

x. Tower Crane Worker (Erecting, Dismantling, Telescoping & Climbing);

xi. Lift Mechanic and worker for lift installation (installation and maintenance).
c. Arrange and release workers of the trades listed in sub-clauses (4)(b)(i) to (4)(b)(x) to attend Silver Card training or revalidation training. Bear the fees for the training courses and pay workers the wages which they would otherwise earn during that period of attending the training courses had the Contractor not released them to attend the training courses;

d. The Nominated Sub-contractor for lift installation shall arrange and release workers of the trade listed in sub-clause (4)(b)(xi) to attend Silver Card training or revalidation training. The Nominated Sub-contractor for lift installation shall bear the fees for the training courses and pay workers the wages which they would otherwise earn during that period of attending the training courses had the Nominated Sub-contractor for lift installation not released the workers to attend the training courses;

e. Keep record of payment for the fees of training courses and, if applicable, payment of wages to workers who have attended Silver Card training, with workers' signed acknowledgement of receipt;

f. Keep record of card numbers, card holders' names and expiry dates of the cards, for the inspection by the CM. Ensure that the Green Cards or Silver Cards held by all workers are valid;

g. Submit to the CM a duly completed prescribed form (DCEI-F14) for the record of Silver Card holders for all workers engaged in the specified trades as listed in sub-clause(4)(b);

h. The Contractor shall ensure that all such personnel and workers shall at all times put on the appropriate Silver Card or Green Card or a valid Construction Workers Registration Card with a printed statement indicating that the holder has a valid Green Card and that such Green Card has not yet expired while they are within the Site. The CM shall, pursuant to GCC Clause 5.9(2), have the power to require the Contractor to remove forthwith any person employed by the Contractor, or by any of his sub-contractors from the Works who has not complied with the requirements prescribed by sub-clauses (4)(a) and (4)(b) above.

5. Induction Training, Tool-box talks and other training:

The training material shall cover critical items, namely working at height, housekeeping, prevention against falling objects, lifting operations, tower crane, mobile crane among other site activities in the form of audio-visual medium. The training will be subject to verification by safety auditor managed by OSHC.

a. Site specific induction training:

All persons employed on the Works or in connection with the Contract whether in the employ of the Contractor or his sub-contractor shall receive site specific induction training. The induction training shall cover contents to alert persons new to the site to know specific hazards related to the site or works nature and activities in operation, and necessary precautionary measures. This training should be carried out within 2 working days of any such employee commencing work on the Site. Thereafter, he/she shall be given refresher training at intervals of about 6 months depending on the amount of changes to the site condition. The course shall be conducted by Safety Officers.

b. Tool-box talks:

i. Provide tool-box talks to workers once per week. The talks shall be attended by workers who are working on the Site and engaged in activities relevant to the topic of that training. The topics and contents of tool-box talks shall be proposed by the Safety Officer having regard to the activities of the Site and the prevailing safety concern at that time;

ii. Tool box talks shall be conducted based on training kits published by the Hong Kong Construction Association Ltd. (HKCA). If the proposed topic is not amongst one of those published by HKCA kits, the Contractor shall then develop training kits of comparable standard for approval by the CM;
iii. The Contractor's Safety Officer shall ensure that tool-box talks are carried out by safety supervisors, foreman or gangers who have received training organised by the Hong Kong Construction Association Ltd. or other approved training organisations.

c. Allow the CM or the CM's representative to attend any of the training courses viz. general induction training, site specific induction training, and tool-box talks to verify that they are conducted according to specification;

d. Maintain attendance records on site specific induction training and tool-box talks, the names of the trainers, names and trades of the persons receiving the training and their signatures; maintain electronic photo records taken during the training and talks that show the attendants attending such training and talks. These records shall be made available for CM's inspection upon request by CM;

e. The Contractor's Site Agent or Safety Officer shall certify the accuracy of attendance records on site specific induction training and tool box talks before they are submitted monthly to the CM;

f. Management and other staff, other than workers, employed on the Works or in connection with the Contract whether in the employ of the Contractor or his sub-contractors shall have received appropriate training on safety and health commensurate with their duties;

g. Maintain attendance records on site for all safety training conducted or arranged. These records shall include the topics and dates of the events, the names of trainers, names and trades of the persons receiving the training and their signature. Make them available for CM’s inspection upon request.

6. Site Safety Committee:

a. Establish a Site Safety Committee which shall be responsible for ensuring the implementation of the Safety Plan, reviewing and monitoring the effectiveness of the safety and health measures taken and seeking the cooperation and commitment of staff at all levels;

b. The Site Safety Committee shall be chaired by the Site Agent with members comprising the Contractor’s project manager, Safety Officers, all Safety Supervisors, selected Safety Representatives and other staff of the Contractor or sub-contractors as may be considered necessary. It shall meet at least monthly discussing all matters relating to the implementation of the Safety Plan. The first meeting shall be held no later than 28 days from and including the date for commencement of the Works notified by the Contract Manager in accordance with GCC Clause 8.1. The Contractor may invite any other party such as the Labour Department, Police or representatives of Utility Undertaking to attend the meeting and provide advice as necessary;

c. Give advance notice of every Site Safety Committee meeting to the CM who will attend the meeting in person or nominate a representative to attend the meeting as an observer;

d. The following items shall, amongst others, be reported and discussed at the Site Safety Committee meeting:

i. Review of the Safety Plan, update risk assessment for the work scheduled at least for the next two months, review and establish safety and health provisions, safe working procedures and method statements, update the emergency and rescue procedure;

ii. Update of the safety organisation chart and review of the adequacy of safety personnel;

iii. Review of the safety performance of sub-contractors;

iv. Any unsafe practices and conditions identified during safety inspections/audits and any follow up action;

v. Advisory/warning or contravention notices letters issued by Labour Department and any Improvement/Suspension Notices received;

vi. Review of accident frequency rates and statistics of the Contractor and sub-contractors and identification of trends;
vii. Details of the Contractor's accident and dangerous occurrence experience;
viii. Safety and health training undertaken in the previous month and the proposed training programme for the following month;
ix. Details of safety promotional activities;
x. Safety co-ordination among various sub-contractors working in close proximity to each other;
xi. Submission of forms GF527 and GF527A or other pertinent forms on the employment statistics of the Contract to the Census and Statistics Department with copy to CM or CM's representative on a monthly basis;
xii. Compilation and submission to the Commissioner for Labour the Supplementary Information on Accidents on Construction Sites for the purpose of analysis in addition to the statutory forms and the requirements of GCC Clause 5.21; and
xiii. Updated Safety Plan.
e. Prepare minutes of the Site Safety Committee meeting and copy it to the CM within 5 working days of the meeting.

7. Safe Working Cycle:
a. Practise 'Safe Working Cycle' (SWC) to improve and promote the safety and health of the Site. Safe Working Cycle should begin when there are workers working on the Site, and shall cease by the date of substantial completion of the Works. The activities of SWC are classified into three categories. They are Daily Cycle, Weekly Cycle and Monthly Cycle. Details of the each category of SWC are given below:
i. Daily Cycle:
   - Pre-work Exercise and Safety (PES) meeting;
   - Hazard Identification Activity (HIA) meeting;
   - Pre-work Safety Checks;
   - Safety inspection by Site Agent or his representatives;
   - Guidance and supervision during work;
   - Safety co-ordination meeting;
   - Daily cleaning and tidying up of the Site;
   - Checking of the Site after each day's works.
   
   ii. Weekly Cycle:
   - Weekly safety inspection by Site Agent and Safety Officer;
   - Weekly safety co-ordination meeting;
   - Weekly overall cleaning and tidying up of the Site.
   
   iii. Monthly Cycle:
   - Site Safety Committee meeting and pre-meeting inspection.

b. The first three items under Daily Cycle described in sub-clause (7)(a)(i), namely, Pre-work Exercise and Safety (PES) meeting, Hazard Identification Activity (HIA) meeting and Pre-work Safety Checks, are collectively referred to as the "Pre-work Activities". Pre-work Activities are to be held for attendance by persons employed on the Works (excluding clerical and administrative staff in site office), irrespective of whether they are in the employment of the Contractor or sub-contractors. Detail requirements for the Pre-work Activities are:
i. Arrange and hold Pre-work Exercise & Safety (PES) meeting of about 10 to 15 minutes for all persons employed on the Works. The PES meeting shall be led by the Site Agent or senior staff of site management of the Contractor, who has attended the training course on Safe Working Cycle of the Occupational Safety & Health Council (OSHC) or CIC. The PES meeting shall start with physical exercise, followed by a briefing to workers on the prevailing safety and health matters related to the Site, such as common hazards and control measures, safety precautions, specific safety concerns etc.;

ii. Arrange and hold Hazard Identification Activity (HIA) meeting of about 10 minutes for the attendees immediately after the PES meeting. Alternatively, the HIA meetings can be held in small groups according to the trades, work teams or works areas set out by the Contractor for the Site. If so, the Contractor shall ensure that the assigned persons are competent to lead the HIA meetings. Persons who have attended one day training course on HIA leadership provided by OSHC are considered competent to lead the HIA meetings. The issues discussed at the HIA meetings shall cover, but not limited to, hazards and control measures specific to the works or trades, special safety concerns, assurance of safety requirements and measures, reprimand of repeated irregularities and malpractice etc.;

iii. Arrange and hold Pre-work Safety Checks for the attendee immediately after the HIA meeting. The Pre-work Safety Checks shall be carried out by foremen, gangers, Safety Supervisors or Safety Representatives of the attendees according to the trades, work teams or works areas. The Pre-work Safety Checks shall include the checking of personal protective equipment worn by attendees before they start working on that day such as safety helmet, reflective vest, ear protectors, eye protectors, safety harness, safety footwear etc.

c. Pre-Work Activities are to be held daily, but in any case the frequency of Pre-work Activities for attendance by each person employed on the Works shall not be less than once a week. The Pre-work Activities shall be carried out prior to any work carried out by the persons attending the Pre-work Activities on that day;

d. Maintain attendance records of the workers participating in the Pre-Work Activities including their names and trades. Such attendance records are to be certified by Site Agent. Maintain electronic photo record showing the attendants during such activities. These records shall be made available for CM's inspection upon request.

8. Safety Representatives:

a. Appoint the ganger of each labour group or team working on the site to act as Safety Representative. The Safety Representatives shall be clearly identified on the Site by wearing an armband or a safety helmet appropriately marked in Chinese and English;

b. The Safety Representatives shall attend Safety and Health Supervisor (Construction) Course (nominal course duration 43 hours) provided by the Occupational Safety and Health Council or Construction Safety Supervisor Course (nominal course duration 42 hours) provided by the Construction Industry Council. Acceptance of training provided by other organizations is subject to verification that the training is based on course contents of equivalent or above standards and the appointed superintendent has attained the associated qualification;

c. In respect of underpinning safety management, the Safety Representative shall be responsible for ensuring that:

i. The directives on safety and health matters from the Contractor, the Safety Officer, Safety Supervisors, Site Agent and Foremen are duly carried out;

ii. Safety practices are adopted by the workers; and
iii. Protective clothing and equipment are used by the workers at all times on the Site.

d. Ensure that the Safety Representatives and the workers on the Site under supervision of the Safety Representatives are aware of the roles and responsibilities of the Safety Representatives on safety and health matters.

9. Other Safety Requirement:

In addition to any obligation under GCC Clause 5.11 or any similar obligations under any enactment or resolution, comply with the following requirements for temporary platform on the slope or berm of the slope:

a. Do not erect temporary platform on the slope or on the berm of the slope, unless under exceptional circumstances, and approved by the CM. Under such circumstances, obtain approval of the CM, demonstrate compliance with the special precautions issued from time to time under Section 7(4) of the Factories and Industrial Undertakings Ordinance in all respects. Such Approval shall not relieve the Contractor from the responsibilities imposed by the Contract. The special precautions include, but are not limited to, the followings:

i. Commission a registered professional engineer, whose name is registered under the relevant statutes, to properly design every temporary platform on the slope or on the berm of the slope. Submit the name of the registered professional engineer to the CM for information. The plan shall contain all the specifications approved by such engineer. Keep plan available on the Site for inspection by the occupational safety officer of Labour Department;

ii. Construct every temporary platform on the slope or on the berm of the slope in accordance with the approved plan and under the supervision of a competent person. Keep record of the date of erection of each platform and the name of the person who supervised the work. Keep records available on the Site for inspection by the occupational safety officer of Labour Department;

iii. Conduct risk assessment through a competent person within the meaning of the Factories and Industrial Undertakings Ordinance before work is commenced to dismantle a temporary platform on the slope or on the berm of the slope. The dismantling work shall be supervised by a competent person;

iv. Take all necessary steps to ensure that no material is thrown, tipped or shot down into a temporary platform on the slope or on the berm of the slope unless the platform has been designed for such purpose in sub-clause (9)(a)(i) above;

v. Remove materials accumulated on a temporary platform on the slope or on the berm of the slope regularly; and

vi. Provide suitable fall arresting system used by workers while they are engaged in removing of any materials accumulated on a temporary platform on the slope or on the berm of the slope or in dismantling of the platform.

10. Surprise Safety Inspection Programme (SSIP):

a. Professional Safety Inspectors (SI) appointed by Occupational Safety & Health Council (OSHC) will conduct surprise safety inspection;

b. The surprise safety inspection may be conducted at any time after the date for commencement of the Works till the certified date of completion of the Works;

c. Provide all necessary attendance for the surprise safety inspection including fully facilitating the inspection of the Site, the Works and all necessary supporting documents such as certificates, records and reports relating to safety and health matters, and fully co-operate with the Safety Inspector in the carrying out of the surprise safety inspection;

d. A Contractor’s representative must accompany the Safety Inspector throughout the inspection;
e. The Contractor's representative shall acknowledge the result of the inspection by signing in the presence of Housing Department resident site staff and submit a copy of signed report to the Contract Manager and another copy to OSHC for record;

f. Rectify the non-conformance items recorded by the Safety Inspector;

g. The Site Agent shall report the results of surprise safety inspection and the respective follow up rectification actions for non-conformance items in the monthly site meeting.

PRE.C9.210.7 GENERAL REQUIREMENTS

1. Be responsible for the safety of all workers and other persons entering or in the Works and, to the Approval of the CM, take measures necessary to ensure their safety;

2. In particular such measures shall include:
   a. Provision of apparatus for dealing with casualties due to fire, gas and electric shock including stretchers and first aid equipment and personnel trained in their use;
   b. Safe supporting for all excavations;
   c. Safe control of water including provision of ample standby generating and pumping plant;
   d. Provision and maintenance of safe, sound mechanical equipment, each item of plant having an up-to-date testing certificate where applicable;
   e. Provision of good and safe access to all parts of the Site.

PRE.C9.230.7 PROVISION OF SAFETY REGULATIONS

Keep on Site a copy of the 'Construction Sites (Safety) Regulations 1997' and a copy of the booklet 'A Guide to the Construction Site (Safety) Regulations' which shall be available for the reference of the CM.

PRE.C9.240.7 SAFETY TRAINING

The Contractor shall ensure that all his employees are fully conversant with the emergency and rescue procedures and regulations and shall ensure that any employee committing a serious breach of such regulations shall be dismissed instantly and shall not be re-employed.

PRE.C9.245.7 CARING OF NEW WORKERS

Provide caring programme for new workers including but not limited to the following:

1. Probationers (workers who newly join the construction industry)
   a. Provide identification with "P" labels;
   b. Assign mentors (with a ratio of 1 mentor to not more than 4 probationers) who possess good experience on the Site to take care of the Probationers and provide guidance on site safety with a caring period not less than 3 months;
   c. Provide a safety orientation programme covering the essential safety aspects related to the Site, guidance for work and arrangement for familiarization of the Site;
   d. Subject to the mentor being satisfied with the Probationer's safety performance, remove identification label from safety helmet after the 3 months' caring period.

2. New Comers (workers with relevant job experience but newly arrive at the Site)
   a. Provide identification with "N" labels;
   b. The display of "N" labels shall not be less than two weeks;
   c. Provide a safety orientation programme covering the essential safety aspects related to the Site, guidance for work and arrangement for familiarization of the Site.

3. Requirements of labels for Probationers and New Comers
a. Each label shall be adhered on a conspicuous part of a safety hamlet;
b. The size of label shall not be less than 50 mm (L) x 50 mm (H);
c. The name and telephone number of the mentor shall be shown on the label.

PRE.C9.250.7 SAFETY OF CRANES, HOISTS ETC.
1. All crane hooks and other lifting gear used on or around the Site shall be fitted with a safety catch or similar device;
2. All crane and hoists used on the Site shall be fitted with automatic overload warning devices;
3. All materials being lifted shall be safely tied;
4. Material shall not be transported by crane outside the Site boundary where practicable;
5. Mobile cranes shall have outriggers fully extended and securely supported before commencing operations;
6. A current test and examination certificate duly signed by a Registered Professional Engineer (Mechanical or Marine Discipline) for all lifting equipment shall be displayed: Forms 1, 2, 3 and 5 of Factories and Industrial Undertakings (Lifting Appliances and Lifting Gear) Regulations where appropriate.

PRE.C9.260.7 SAFETY HELMET, CLOTHING, FOOTWARE, EQUIPMENT FOR THE PERSONAL PROTECTION OF OPERATIVES AND SITE SUPERVISORY STAFF
1. Provide each of the operatives and site supervisory staff with a safety helmet with ventilation vents and Y-type chin strap and sunshade accessories such as brim or neck protector where appropriate and ensure that each of them wears the safety helmet on Site. Notwithstanding the above, provision and wearing of safety helmet with I-type chin strap up to 31 December 2015 is permitted;
2. Provide the following items of clothing and footwear to each of the operatives and site supervisory staff and ensure that each of them wears on Site these items of clothing and footwear:
   a. Polo shirt made with CVC fabric or such other fabric as appropriate, in short sleeves and long sleeves to suit the weather, with reflective strips and imprinted with a logo of the construction industry;
   b. Wind breaker with reflective strips and imprinted with a logo of the construction industry;
   c. Safety boots (except for bamboo scaffolders, plasterers and tilers).
Notwithstanding the above, the Contractor may propose his corporate uniform for construction works to replace the items of clothing in sub-clauses (a) and (b) above, subject to CM's approval.
3. When working in drains and sewers, adequate safety equipment shall be provided and maintained to the satisfaction of the CM;
4. The Contractor's attention is drawn to the minimum requirements contained in the publications "Safety Precautions in Sewers, Drains and Other Enclosed Spaces";
5. When work is being carried out over water, adequate life saving equipment shall be provided and maintained, all to the satisfaction of the CM.

PRE.C9.270.7 SAFETY HELMET, CLOTHING, FOOTWARE, EQUIPMENT FOR THE PERSONAL PROTECTION OF CM, CM'S REPRESENTATIVES AND VISITORS
1. Provide sufficient safety helmets with ventilation vents and Y-type chin straps and sunshade accessories such as brim or neck protector, protective and waterproof clothing, safety harness and lines, reflective vests, safety rubber boots, safety leather boots, breathing respirators (of Approved proprietary type), ear mufflers, protective glasses, torches and the like where appropriate for the use of the CM, CM's representatives, and authorised persons visiting the site;
2. The reflective vests provided shall conform to the following:
   a. Background material: fluorescent orange-red, mesh knitted;
   b. Retroreflective strips:
      i. 50 mm in silver gray with fabric backing, conforming to photometric performance requirements as mentioned in EN471-2003 (Class 2);
      ii. Be durable and can still comply with the requirement in sub-clause 2(b)(i) after washing for a minimum of 25 cycles;
      iii. The supplier shall submit test reports on retroreflective materials for demonstrating compliance with the following requirements under EN471-2003 (Class 2): photometric performance (initial), abrasion, flexing, folding at cold temperatures, exposure to temperature variations, washing and influence of rainfall.
3. Keep the safety helmet, clothing, footwear and equipment in (1) and (2) above in good conditions.

FIRE PRECAUTIONS

PRE.C9.310.7 FIRE REGULATIONS
Comply with all regulations to prevent loss or damage from fire but have particular regard to the following clauses in this sub-section.

PRE.C9.320.7 STREET FIRE HYDRANTS
Ensure that any existing street fire hydrants are not obstructed by hoardings etc.

PRE.C9.330.7 DANGEROUS GOODS STORE
1. Comply with all relevant regulations to prevent the occurrence of fire or damage from fire;

PRE.C9.340.7 PORTABLE FIRE FIGHTING APPLIANCES
Provide and properly maintain a sufficient number of portable fire fighting appliances.

PRE.C9.350.7 PROHIBITING SMOKING ON SITE
1. Prohibit smoking on Site except in the designated smoking areas;
2. Provide the designated smoking areas with suitable fire-fighting appliances and clean the designated smoking areas daily;
3. Do not designate the following areas as a designated smoking area on Site:
   a. Any area where there is a risk of fire due to the use, intended use or storage of flammable liquid, mixture containing flammable liquid or substances/materials; and
   b. Any area where naked lights are prohibited.

GENERAL NUISANCE

PRE.C9.410.7 AVOIDANCE OF NUISANCE
1. Carry out the Works in such a manner as to cause the minimum inconvenience and annoyance to adjoining residents and the general public;
2. Undertake environmental protection measures to reduce the environmental impacts arising from the execution of the Works. Arrange the method of working to minimise the effects on the air, noise, water quality as well as nuisance of waste within and outside the Site, on transport routes and at the loading, dredging and dumping areas;
3. Be responsible for any claims which may arise from such inconvenience.
CONTRACTOR'S OBLIGATIONS

COMPLIANCE WITH REGULATIONS

1. Observe and comply with relevant environmental protection and pollution control ordinances which shall include but not be limited to the followings:
   a. Air Pollution Control Ordinance (Cap 311);
   b. Waste Disposal Ordinance (Cap 354);
   c. Water Pollution Control Ordinance (Cap 358);
   d. Noise Control Ordinance (Cap 400);
   e. Dumping at Sea Ordinance (Cap 446);
   f. Environmental Impact Assessment Ordinance (Cap 499);
   g. Factories and Industrial Undertakings Ordinance (Cap 59);
   h. Buildings Ordinance (Cap 123);
   i. Buildings Ordinance (Application to New Territories) Ordinance (Cap 121);
   j. Public Health and Municipal Services Ordinance (Cap 132);
   k. Public Cleansing and Prevention of Nuisances (Regional Council) By-Laws (Cap 132);
   l. Public Cleansing and Prevention of Nuisances (Urban Council) By-Laws (Cap 132);
   m. Summary Offences Ordinance (Cap 228);
   n. Merchant Shipping (Oil Pollution) (Hong Kong) Order 1975;
   o. Waste Disposal (Chemical Waste) (General) Regulation;
   p. Air Pollution Control (Open Burning) Regulation;
   q. Air Pollution Control (Construction Dust) Regulation;
   r. Air Pollution Control (Furnaces Ovens and Chimneys) Installation and Alteration Regulation;
   s. Air Pollution Control (Smoke) Regulation;
t. Air Pollution Control (Volatile Organic Compounds) Regulation.

2. Design, construct, operate and maintain pollution control measures to ensure compliance with the contract provisions as well as the environmental ordinances and their regulations. Conduct compliance monitoring following a programme as agreed with the CM, and submit the monitoring results to the CM;

3. Make due allowance in the rates and in the programme for the carrying out of the Works in compliance with the environmental protection control requirements under the Contract.

BONFIRE RESTRICTIONS

Do not light bonfires on site for the burning of debris, or of any other matter, arising out of the execution of the Works, or from any other source.

AIR POLLUTION REGULATIONS

1. Observe and comply with the Air Pollution Control Ordinance and its subsidiary regulations, particularly the Air Pollution Control (Open Burning) Regulation, Air Pollution Control (Construction Dust) Regulation, Air Pollution Control (Smoke) Regulation and Air Pollution Control (Volatile Organic Compounds) Regulation;

2. For materials under the control of the Air Pollution Control (Volatile Organic Compounds) Regulation, submit written confirmation of the following from suppliers or manufacturers:
   a. The types of regulated coatings/paints and their VOC content; and
   b. The VOC contents of the coatings/paints complied with the Air Pollution Control (Volatile Organic Compounds) Regulation.

POLLUTION BY VEHICLES

1. Construction vehicles must be well maintained so that they will not generate excessive exhaust fumes or noise;
2. Drivers shall be instructed to drive slowly so as to keep traffic noise to a minimum;
3. Upon the Instruction of the CM, cease to employ any vehicles or drivers that are considered not meeting the above requirements.

PRE.C9.460.7 WATER POLLUTION
1. Observe and comply with the Water Pollution Control Ordinance (WPCO) and the Technical Memorandum on Standards for Effluents Discharged into Drainage and Sewerage Systems, Inland and Coastal Waters and any additions or amendments thereto during the continuance of the Works;
2. Obtain a WPCO Licence from Environmental Protection Department (EPD) before discharging any waste water from the Site and comply with all terms and conditions stipulated in the Licence including the installation of a continuous flow measuring device as stipulated therein. Submit a copy of valid WPCO Licence to the CM for record as soon as it has been issued by EPD. Prepare and submit monthly record for the daily flow rate of the waste water discharged from Site (reference proforma at PRE.C9.APPEND5) to the CM for inspection;
3. Carry out the Works in such a manner as to minimise adverse impacts on the water quality during execution of the Works. In particular, arrange the method of working to minimise the effects on the water quality within and outside the Site, on the transport routes and at the loading, dredging and dumping areas. Observe strictly the water pollution and monitoring requirements during reclamation and seawall construction as specified in the Contract;
4. Follow the practices, and be responsible for the design, construction, operation and maintenance of all the mitigation measures as specified in the Professional Persons Environmental Consultative Committee Practice Note (ProPECC PN) 1/94 "Construction Site Drainage" issued by the Director of Environmental Protection, or any additions or amendments thereto during continuance of the Works. Submit the design of the mitigation measures to the CM for approval.

DISPOSAL OF CONSTRUCTION AND DEMOLITION (C&D) MATERIALS

PRE.C9.470.7 DISPOSAL OF INERT C&D MATERIALS
1. Subject to sub-clause (1) above on alternative disposal ground, the public fill reception facility as designated by CEDD is .......... and the corresponding acceptance criteria are as follows:
   a. ....................................................;
   b. ....................................................
2. Allow for adoption of other public fill reception facilities that may be subsequently designated by CEDD due to reasons such as closure of the designated public fill reception facility by CEDD. Bear all additional cost incurred due to switching to the alternative designated disposal facility and no extension of time will be granted;
3. Implement a Trip Ticket system (TTS) as specified in PRE.C9.490;
4. Unless separate Approval is obtained, disposal of inert C&D materials from the Site shall not commence before the Environmental Management Plan required in PRE.C9.2420 is endorsed by the CM; and
5. If no public fill reception facility is available, as confirmed by the PFC, submit a disposal plan for inert C&D materials for the CM’s agreement. The disposal plan shall include information as specified in sub-clauses (1)(a) to (1)(f) of PRE.C9.500.
DISPOSAL OF NON-INERT C&D MATERIALS

1. Non-inert C&D materials refer to the portion of the C&D materials other than the inert portion. In order to make use of non-inert C&D materials generated by the Site, make best endeavours to identify recycling facilities or other construction sites as alternative disposal grounds where such materials can be used. Obtain Approval for such a site which has been identified as an alternative disposal ground in accordance with PRE.C9.500. If there is no such a site as an alternative disposal ground, dispose of non-inert C&D materials as specified in sub-clauses (2) and (4) below;

2. Subject to sub-clause (1) above on alternative disposal ground, dispose of non-inert C&D materials at the landfill or outlying islands transfer facility as designated by PEPO (FM) of EPD and to comply with their acceptance criteria;

3. Subject to sub-clause (1) above on alternative disposal ground, the landfill or outlying islands transfer facility as designated by EPD is .......... and the corresponding acceptance criteria are as follows:
   a. .............................................;
   b. .............................................

4. Allow for adoption of other landfills or outlying islands transfer facilities that may be subsequently designated by EPD due to reasons such as closure of the designated landfill or outlying islands transfer facility by EPD. Bear all additional cost incurred due to switching to the alternative designated disposal facility and no extension of time will be granted;

5. Implement a Trip Ticket System (TTS) as specified in PRE.C9.490;

6. Unless separate Approval is obtained, disposal of non-inert C&D materials from the Site shall not commence before the Environmental Management Plan required in PRE.C9.2420 is approved by the CM; and

7. If no landfill or outlying islands transfer facility is available, as confirmed by EPD, submit a disposal plan for non-inert C&D materials for the CM's agreement. The disposal plan shall include information as specified in sub-clauses (1)(a) to (1)(f) of PRE.C9.500.

TRIP TICKET SYSTEM FOR DISPOSAL OF C&D MATERIALS AT PUBLIC FILL RECEPTION FACILITIES/LANDFILLS/OUTLYING ISLANDS TRANSFER FACILITIES

1. Provide the account number of the billing account for disposal of construction waste under the Waste Disposal (Designated Waste Disposal Facility) Regulation (Cap. 354L) for overall monitoring of the Trip Ticket System;

2. Maintain a daily record of disposal of C&D materials from the Site including CHIT numbers, vehicle registration numbers, approximate volume, C&D materials type, designated disposal ground, departure time from the Site, actual disposal ground and arrival time at disposal ground, using the Daily Record Summary (DRS) at Appendix PRE.C9/II;

3. Submit the duly completed Part 1 of the DRS in duplicate before departure of the dump truck;

4. When leaving the Site, each and every vehicle transporting C&D materials including both the inert and non-inert portion, must bear a CHIT. The CHIT shall be duly completed;

5. Carry the CHIT on board the vehicle at all times throughout the vehicular trip to the designated disposal ground as stipulated in the CHIT;

6. For each vehicular trip after disposal of C&D materials, obtain a Transaction Record Slip and a stamped return of the CHIT from the operator of the designated disposal facility;

7. Check the information recorded in the DRS against available information including the Contractor's own records and data from EPD's web-site, then complete Part 2 of the DRS form and submit it to the CM's Representative within 1 working day after the records are posted at the EPD's web-site;
8. Where an irregularity is observed or where requested by the CM under special circumstances (e.g. a CHIT has been issued but there is no disposal record at the disposal ground), submit to the CM within 5 working days after the recorded date of disposal the supporting evidence such as duly stamped CHIT and/or the Transaction Record Slip (where relevant) to confirm proper completion of the delivery trip(s) in question, or within 2 working days after the CM has requested for such evidence, whichever is later; and

9. All C&D materials shall become the property of the Contractor when they are removed from the Site.

PRE.C9.493.7 TRIP TICKET SYSTEM FOR DISPOSAL OF C&D MATERIALS AT DISPOSAL FACILITIES OTHER THAN PUBLIC FILL RECEPTION FACILITIES/LANDFILLS/OUTLYING ISLANDS TRANSFER FACILITIES

1. Maintain a daily record of disposal of C&D materials from the Site including Disposal Delivery Form (DDF) numbers, vehicle registration numbers, approximate volume, C&D materials type, Approved alternative disposal ground, departure time from the Site, actual disposal ground and arrival time at disposal ground, using the Daily Record Summary (DRS) at Appendix PRE.C9/II;

2. Submit the duly completed Part 1 of the DRS in duplicate before departure of the dump truck;

3. When leaving the Site, each and every vehicle transporting C&D materials including both the inert and non-inert portion, must bear a DDF. A sample of the DDF is at Appendix PRE.C9/IV. The DDF shall be duly completed and authorized by the CM's Representative;

4. Carry the DDF on board the vehicle at all times throughout the vehicular trip to the Approved alternative disposal ground as stipulated in the DDF;

5. For each vehicular trip after disposal of C&D materials, ensure that the DDF is signed off by a competent person as agreed by the CM at the Approved alternative disposal ground to confirm completion of each trip. Keep a copy of the DDF for inspection by the CM upon request. Complete Part 2 of the DRS form and submit it to the CM's Representative within 3 working days after the date of disposal;

6. Where an irregularity is observed or where requested by the CM under special circumstances (e.g. a DDF has been issued but there is no disposal record at the Approved alternative disposal ground), submit to the CM within 5 working days after the recorded date of disposal the supporting evidence such as the signed off DDF to confirm proper completion of the delivery trip(s) in question, or within 2 working days after the CM has requested for such evidence, whichever is later; and

7. All C&D materials shall become the property of the Contractor when they are removed from the Site.

PRE.C9.495.7 SITE VIDEO RECORDING SYSTEM

1. Provide, operate and maintain, including all necessary cables, wirings, lightings and other accessories, a video recording system, at each vehicular exit with gate(s), with the following essential features to record all trucks leaving the Site:
   a. The video cameras used in the system shall be suitable for external use, protected from adverse weather and of high resolution, lowlight and colour type;
   b. Power backup shall be provided to cater for accidental breakdown of the power supply to the system;
   c. Videos captured by the system shall be recorded continuously without break unless agreed by the CM;
   d. Videos shall be captured in a format acceptable to CM;
   e. Registration number of each dump truck leaving the Site shall be captured by the system; and
f. Loading conditions of dump trucks including empty trucks shall be captured by the system prior to opening of the gate.

2. Securely protect the video cameras from being damaged or blocked;

3. Design and construct all necessary temporary works, including any supporting frames and protections, for mounting the video cameras and their accessories;

4. Provide the software and hardware for capturing the vehicle registration number, the time and date, and the loading condition of each dump truck including empty truck leaving the Site, and for the CM's immediate viewing and taking of photograph of the trucks, and for viewing the recorded videos and photographs. Keep the videos record for at least 60 days and the photographs until such time as agreed by the CM; and

5. Post sufficient notices at conspicuous positions to notify the workers, drivers and staff about the purpose of the video recording system (i.e. all collected personal information/data will be used by the CM to monitor the loading conditions of trucks with C&D materials leaving the Site only and will not be released/issued to irrelevant persons/parties without the permission of the persons/parties being monitored) in accordance with data protection principles set out in the Personal Data (Privacy) Ordinance.

MECHANICAL COVER SYSTEM FOR DUMP TRUCK FOR TRANSPORTING CONSTRUCTION AND DEMOLITION (C&D) MATERIALS

1. Use dump truck with mechanical cover system satisfying the requirements specified in either sub-clauses (7) to (10) below;

2. Ensure all dump trucks, which are goods vehicles fitted with a dump bed and of gross vehicle weight equal to or over 16 tonnes for transportation of C&D materials, are installed with a mechanical cover system, which is in good service condition to cover the dump bed;

3. Dump truck may not be allowed to enter the Site if sub-clauses (2) and (7) to (10) of this clause have not been complied with;

4. Clean all dust or debris on top of the mechanical cover so as not to obstruct its operation;

5. Loaded dump truck may be required to unload its contents on Site before leaving the Site if the dump bed and the cover of the dump truck do not comply with the requirements specified in sub-clauses (2), (4) and (7) to (10) of this clause after loading;

6. The Approval of the CM for a loaded dump truck leaving the Site shall not relieve the Contractor's obligation to comply with the relevant legislation. The Employer shall not be liable for any loss or damage sustained by the Contractor arising from or in connection with any offence committed by the Contractor or the dump truck drivers or dump truck owners in relation to the transportation of the C&D materials from the Site;

7. The mechanical cover system of a dump truck shall comply with the following requirements:
   a. The cover shall be made of durable material and constructed with suitable components;
   b. The mechanical cover system shall be effective in preventing dust emission from the dump bed of the truck;
   c. The system shall be able to withstand strong winds under normal circumstances;
   d. The system shall be power-operated inside the driving cabin and backup with manual operation outside;
   e. When the dump bed is covered by the mechanical cover, any gap between the cover and the dump bed shall not exceed 25 mm wide and shall be sealed up tightly with suitable materials as far as practicable; and
   f. The mechanical cover system shall be installed with the following control devices to ensure its safe operation:
CONTRACTOR’S OBLIGATIONS

i. The mechanical cover shall be operated only when the dump truck has been stopped and the hand brake is engaged;

ii. A warning system consisting of flashing amber lights and audible alarm shall be activated automatically when the mechanical cover is being operated inside the driving cabin;

iii. The warning system shall be visible and audible from both inside (by an indicator light associated with alarm system or the like) and outside of the driving cabin;

iv. An locking system shall be provided to prevent accidental opening of the mechanical cover, if applicable; and

v. The associated electrical equipment shall comply with the commonly adopted safety standard.

8. The gross vehicle weight and maximum dimensions of the dump truck after installation of a mechanical cover system shall comply with the relevant legislation and such dump truck shall pass the annual inspection and examination by the Transport Department. Submit supporting evidence to the CM to prove that such annual inspection and examination has passed;

9. Unless otherwise Approved by the CM, the mechanical cover system of a dump truck shall be certified by a Registered Professional Engineer in the Mechanical Engineering Discipline under the Engineers Registration Ordinance that the system complies with the requirements as specified in sub-clauses (2), (7) and (8) above. The certification must include a certified true photograph of the mechanical cover in a closed configuration;

10. Dump trucks installed with a mechanical cover system and have been registered under the "Pay for Safety Scheme" or "Pay for Safety and Environment Scheme" of the CEDD are deemed to comply with the requirement of sub-clause (9) above;

11. Vehicles other than ‘dump trucks’ carrying dusty materials from the Site may use means other than mechanical covers to cover the dusty materials, provided that the requirements stipulated in sub-clause (3) of PRE.C9.720 are complied with.

PRE.C9.500.7  ALTERNATIVE DISPOSAL GROUNDS

1. Make best endeavours to identify recycling facilities or construction sites other than the designated public fill reception facilities/landfills/outlying islands transfer facilities, or other public fill reception facilities/landfills/outlying islands transfer facilities as may be required by CEDD/EPD, which can be used as an alternative disposal ground. Obtain Approval for adoption of such a site as an alternative disposal ground. In support of the request for such Approval, submit a disposal plan for the CM’s agreement. The disposal plan shall include:

a. A detailed description of the alternative disposal ground, including location, lot number (where appropriate), location plan and photographs of the proposed alternative disposal ground showing the surrounding environment and land use;

b. Where the alternative disposal ground is a private construction site, a letter from each of the relevant authorities, such as Agriculture, Fisheries and Conservation Department, Lands Department and Planning Department, providing comment on suitability of the site under their respective purview, and a letter from the Authorized Person (as defined under the Buildings Ordinance) of the private construction site to confirm that:

i. The C&D materials for use in the development are acceptable;

ii. The land/pond filling in the proposed alternative disposal ground and the use of land so formed by the C&D materials is in conformity with the statutory Outline Zoning Plan and lease conditions; and

iii. The CM’s Representatives are allowed to enter the alternative disposal ground to conduct inspections where necessary.
c. Where the alternative disposal ground is a private recycling facility, it shall be on the recyclers’ list for C&D materials recognized by EPD, as well as a letter from the recycling facility operator to confirm that the CM's Representatives are allowed to enter the recycling facility to conduct inspections where necessary;

d. Where the alternative disposal ground is a construction site of Government (other than a government contract quarry) including those of Housing Authority, or Mass Transit Railway Corporation, a written consent from the contract/project manager of the alternative disposal ground to use the C&D materials generated from the Site;

e. Where the alternative disposal ground is a government contract quarry, a written consent from the Mines Division of CEDD to import the C&D materials generated from the Site; and

f. The estimated quantity and type of C&D materials to be used/processed in the alternative disposal ground and the approximate delivery programme, together with the name, post and specimen signature of the competent person to sign the Disposal Delivery Form (DDF).

2. Dispose of C&D materials at Approved alternative disposal ground. Disposal of C&D materials at private land or a private construction site which is not administered by an Authorized Person (as defined under the Buildings Ordinance) is prohibited; and

3. Bear all additional cost incurred due to the Approval or disapproval by the CM on the Contractor's request for alternative disposal ground and no extension of time will be granted.

PRE.C9.510.7 REMOVAL OF C&D MATERIALS FROM UNAUTHORIZED DISPOSAL GROUND

1. Where C&D materials from the Site have been dumped at a place other than that designated under the Contract or as Approved, undertake the following remedial action and bear all associated cost:
   a. Remove the dumped C&D materials from the unauthorised disposal ground to a disposal ground designated under the Contract or as Approved; and
   b. Reinstate the unauthorized disposal ground to the condition as before dumping of the C&D materials or a condition considered satisfactory by the relevant Government authorities as required under the relevant legislation where appropriate.

2. Where the unauthorised disposal ground is private property, obtain the landowner’s consent before removal of the dumped C&D materials.

PREVENTION OF MOSQUITO BREEDING

PRE.C9.610.7 DISPLAY OF POSTERS

Provide and display prominently upon all structures or temporary huts on the Site throughout the construction period and remove on completion, posters, in both English and Chinese, drawing attention to the dangers of allowing the breeding of mosquitoes. These posters may be obtained free of charge from the Food and Environmental Hygiene Department, Health Education Exhibition and Resource Centre of the Government of the Hong Kong Special Administrative Region.

PRE.C9.620.7 REMOVAL AND TREATMENT OF STANDING WATER

Prevent or remove standing water from disused tyres, uneven floors, pits or any other water receptacle location. Dispose of the water through a petrol interceptor and not directly into the stormwater drainage system. Where removal of water is not possible, treat any standing water on the Site with an Approved oil at least once per week.
**TREATMENT OF WATER RECEPTACLES**

Store, cover or treat all items on the Site, including Constructional Plant, capable of retaining water to prevent the collection of water in them.

**DISPOSAL OF WATER RECEPTACLES**

Provide throughout the construction period, an Approved central collection point on the Site for depositing of all empty cans, oil drums, packings and other receptacles capable of holding water and for the regular collection and removal of such articles from the Site.

**PESTICIDES AND LARVICIDES**

Only pesticides and larvicides that have been registered in Hong Kong may be used. To protect environmental and human impacts, pesticides and larvicides must be used in accordance with the manufacturers’ instructions. For enquiries on the procurement and use of pesticides, contact the Agricultural, Fisheries and Conservation Department.

**CONTROL OF DUST AND DEBRIS**

**DUST CONTROL GENERALLY**

1. Undertake at all times to prevent dust nuisance and smoke as a result of his activities;
2. In the process of material handling, any material which has the potential to create dust shall be treated with water or wetting agent sprays. Obtain prior approval of the Director of Water Supplies for any proposal to use a dust suppression chemical in the immediate vicinity of water storage or gathering grounds of the Water Supplies Department;
3. Frequently clean and water the Site to minimize the fugitive dust emissions. Ensure that there will be adequate water supply/storage for dust suppressions;
4. Devise, arrange methods of working and carrying out the works in such a manner so as to minimize dust impacts on the surrounding environment, and provide experienced personnel with suitable training to ensure that these methods are implemented;
5. Before the commencement of any work, the CM may require the methods of working, plant, equipment and air pollution control system to be used on the Site to be made available for inspection and approval to ensure that they are suitable for the Contract.

**VEHICLE PREPARATIONS**

1. Restrict all motorised vehicles to a maximum speed of 8 km per hour and confine haulage and delivered vehicle to designed roadways inside the Site. These roadways shall be paved with concrete, bituminous materials or hardcore to the satisfaction of the CM;
2. All trucks for delivery of concrete are to be effectively washed down after loading and prior to leaving the Site. Concrete waste material must not enter any drains. Water recycling should be practised as far as practicable to minimize water use;
3. Without prejudice to the generality of GCC Clause 5.23, any vehicle with an open load compartment used for transferring dusty materials off Site shall have properly fitted side boards and tailboards. Dusty materials shall not be loaded to a level higher than the side boards and tailboards, and shall be covered by a suitable tarpaulin (or any other impervious covering material as Approved by the Contract Manager) in good condition before the vehicle leaves the Site. The tarpaulin or Approved covering material shall be properly secured and extended at least 300 mm over the edges of the side boards and tailboards and properly secured and maintained throughout the journey to the off-loading destination;
4. For the purpose of sub-clauses (3) and (4), "dusty materials" include cement, earth, pulverized fuel ash, aggregates, silt, stone fines, sand, debris, saw dust and wooden chips, etc.;
5. Loads of filling material shall be dampened with water and properly covered with tarpaulins or Approved covering material;
6. Dump trucks for transporting C&D materials shall be installed with a mechanical cover system as specified in clause PRE.C9.498;
7. Employ sufficient labourers to clear the roads and footways along the public roads regularly of any debris deposited by vehicles leaving the Site. Do not flush or hose down the deposited soil or debris into the public road drains;
8. When wheel washing bay is provided at the site exit, the sand and silt in the wash water shall be settled out before discharging into the site drainage system. The section of the site road between the wheel washing bay and the public road should be paved with concrete, bituminous materials or hardcores to the satisfaction of the CM to reduce tracking of soil and prevent surface run-off from entering the public road drains;
9. No vehicle or engine driven movable equipment shall have its exhaust directed towards the ground.

**STOCKPILING**

1. Materials handling and storage areas shall be levelled, well-drained and maintained hard-standing ground to facilitate cleansing and minimize dust generation. In addition, water sprays shall be provided and used both to dampen stored materials and when receiving raw material;
2. Stockpiles of materials which have the potential to create dust shall be either:
   a. Enclosed on three sides, with walls extending above the pile and 2 m beyond the front of the pile;
   b. Covered entirely by impervious sheeting; or
   c. Sprayed with water or a dust suppression chemical so as to maintain the entire surface wet.

**AIR Samplers**

1. Monitor the ambient dust concentration level by sampling at specified locations and frequency to the satisfaction of the CM. Provide and operate to the satisfaction of the CM sufficient numbers of high volume air samplers, PM10 air samplers and associated equipment and shelters in accordance with the USA standard Title 40, Code of Federal Regulations, Chapter 1 (Part 50) Appendix K (for TSP) and Appendix J (for RSP);
2. Carried out sampling 1 day in every 6 days at 6 sampling points within and along the site boundary for such periods and in a manner as Instructed by the CM;
3. The samplers, equipment and shelters shall be constructed so as to be transferable between sampling points to enable monitoring of "dust in air" levels at any sampling point required by the CM;
4. Provide all necessary protection fences and the like at sampling points;
5. Testing and analysis of sampled materials shall be carried out by an Approved laboratory.
CONTRACTOR’S OBLIGATIONS

PRE.C9.750.7 DUST SUPPRESSION EQUIPMENT
The Contractor shall, at his own cost and to the satisfaction of the CM, install effective dust suppression equipment and take such measures as may be necessary to ensure that the concentration of air-borne dust at any location within the Site shall not exceed 5 milligrams per cubic metre, at standard temperature (25°C) and pressure (1.0 bar) at any time and that at the Site boundary and any nearby residential area the concentration of air-borne dust shall not exceed 0.5 milligrams per cubic metre, at standard temperature (25°C) and pressure (1.0 bar) averaged over one hour, or 0.15 milligrams per cubic metre, at standard temperature (25°C) and pressure (1.0 bar) averaged over 24 hours.

PRE.C9.760.7 RESTRICTION ON CONCRETE BATCHING AND ROCK CRUSHING PLANTS ON SITE
The operations of concrete batching and rock crushing plants within the Site are not allowed.

CONTROL OF NOISE

PRE.C9.810.7 GENERAL CARE
Carry out the Works in such a manner as to minimize noise impacts on the surrounding environment during execution of the Works.

PRE.C9.820.7 NOISE CONTROL REGULATIONS
Comply with and observe the Noise Control Ordinance and its subsidiary regulations in force in Hong Kong.

PRE.C9.830.7 CONSTRUCTION NOISE PERMIT
When necessary, apply as soon as possible for a Construction Noise Permit under the Noise Control Ordinance, display the permit as required and copy to the CM. Ensure compliance with any term or condition in the Construction Noise Permit. The Contractor is to note that neither the Employer nor its employees can influence the issue or terms or conditions of a Construction Noise Permit.

PRE.C9.840.7 SOUND LEVEL METER
Provide an Approved integrating sound level meter to IEC 651:1979 (Type 1) and 804:1985 (Type 1) with calibrator and printer (including consumables), for the exclusive use of the CM at all times. Maintain also the meter, calibrator and printer in proper working order and provide a substitute when they are out of order or otherwise not available.

PRE.C9.850.7 ADDITIONAL REQUIREMENTS
In addition to the requirements imposed by the Noise Control Ordinance, to control noise generated from equipment and activities for the purpose of carrying out any construction work other than percussive piling during the time period from 0700 to 1900 hours on any day not being a general holiday (including Sundays), the following requirements shall also be complied with:

1. The noise level measured at 1 m from the most affected external facade of the nearby noise sensitive receivers from the construction works alone during any 30 minute period shall not exceed an equivalent sound level (Leq) of 75 dB(A);

2. The noise level measured at 1 m from the most affected external facade of the nearby schools from the construction works alone during any 30 minute period shall not exceed an equivalent sound level (Leq) of 70 dB(A) [65 dB(A) during school examination periods]. Liaise with the schools and/or the Examination Authority to ascertain the exact dates and times of all examination periods during the course of the Contract;
3. Should the limits stated in the above sub-clauses (1) and (2) be exceeded, stop the construction operation(s) causing the excesses and do not recommence until appropriate measures acceptable to the CM that are necessary for compliance have been taken;

4. Measures that are to be taken to protect adjacent schools and other adjacent noise sensitive receivers, if necessary, shall include, but not be limited to, adequate noise barriers. The barriers shall be of substantial construction and designed to reduce transmission of noise (simple plywood hoarding will not be sufficient). The barriers shall be surmounted with baffle boxes designed to reduce transmission of noise. The barriers shall be designed to BS 5228:Part 1:1984. The location and details of the barriers shall be submitted to the CM for approval before works commence adjacent to schools and other noise sensitive receivers;

5. Adopt, where necessary, the use of quiet construction equipment (QCE) and/or shall employ the quietest practicable working methods when carrying out demolition works, and/or road opening works during restricted hours;

6. Any stoppage or reduction in output resulting from compliance with this clause shall not entitle the Contractor to any extension of time for completion or to any additional costs whatsoever.

PRE.C9.860.7 METHODS OF OPERATION
Devise and arrange methods of working to minimize noise impacts, and provide experienced personnel with suitable training to ensure that these methods are implemented.

PRE.C9.870.7 APPROVAL OF METHODS OF OPERATION
Before the commencement of any work, the CM may require the methods of working, equipment and sound-reducing measures intended to be used on the Site to be made available for inspection and Approval to ensure that they are suitable for the Contract.

PRE.C9.880.7 SOUND REDUCTION EQUIPMENT
Ensure that all plant and equipment to be used on the Site are properly maintained in good operating condition and noisy construction activities shall be effectively sound-reduced by means of silencers, mufflers, acoustic linings or shields, acoustic sheds or screens or other means, to avoid disturbance to any nearby noise sensitive receivers.

PRE.C9.890.7 APPROVED EXCEPTIONS
Notwithstanding the requirements and limitations set out in PRE.C9.850 above, and subject to the compliance with PRE.C9.810, PRE.C9.860 and PRE.C9.880, the CM may, upon application in writing by the Contractor, allow the use of any equipment and the carrying out of any construction activities for any durations provided that he is satisfied with the application which, in his opinion, to be of absolute necessity and adequate noise insulation has been provided to the educational institutions to be affected, or of emergency nature, and not in contravention with the Noise Control Ordinance in any respect.

PRE.C9.900.7 RESTRICTED USE OF EXCAVATOR MOUNTED BREAKERS
The use of excavator mounted breakers within 125 m from any nearby noise sensitive receivers shall be minimized.

PRE.C9.910.7 NOISE SENSITIVE RECEIVERS
For the purposes of the above clauses, any domestic premises, hotel, hostel, temporary housing accommodation, hospital, medical clinic, educational institution, place of public worship, library, court of law, performing arts centre or office building shall be considered to be a noise sensitive receiver.
PRE.C9.920.7 RESTRICTED USE OF ROCK DRILLING EQUIPMENT
Rock drilling equipment shall be quiet drilling rigs with a sound power level not exceeding 100 dB(A). Conventional pneumatically driven drilling rigs are specifically prohibited.

PRE.C9.930.7 BLASTING RESTRICTIONS
1. Observe blasting restrictions due to the presence of the construction works or completed works by others in Sections ....................;
2. Blasting shall not be carried out during 7 p.m. to 7 a.m. and any time on a general holiday, including Sunday, to avoid noise impact at sensitive hours.

PRE.C9.940.7 HAND-HELD BREAKERS AND PORTABLE AIR COMPRESSORS
Hand-held breakers and portable air compressors shall comply with Noise Control (Hand Held Percussion Breakers) Regulations and Noise Control (Air Compressors) Regulations and shall be fitted with Noise Emission Labels when operated.

PRE.C9.950.7 GENERATORS FOR SUPPLY OF TEMPORARY ELECTRICITY TO SITE
1. Provide generators which shall meet with all relevant requirements under the European Union or Japanese system and be certified by an approved body appointed by a member State of the European Union under the European Council Directive 2000/14/EC, or designated as Low Noise Emission Construction Equipment by the Ministry of Land, Infrastructure and Transport of Japan (MLIT), or equivalent or better standards, with the result that the generators are qualified with the Quality Powered Mechanical Equipment (QPME) label;
2. Affix the generators for site's temporary electricity supply with valid QPME labels to facilitate inspection by CM's representatives.

CLEANLINESS

PRE.C9.1010.7 DISPOSAL OF RUBBISH
Further to the requirements of the Conditions of Contract remove all rubbish whether from domestic or other sources, debris, cement bags, disused formwork, etc. as they accumulate on the Site and at the end of each working day. Carry out a general tidying up at the end of each week. The area is to be clean by sweeping and flushing with water as necessary so that the Site is kept constantly clean and tidy during the progress of the Contract.

PRE.C9.1020.7 HEALTH AND SANITATION
Maintain the Site and all working areas in a sanitary condition and in all matters of health and sanitation shall comply with the requirements of Food and Environmental Hygiene Department or other Government bodies.

PRE.C9.1030.7 MAINTAINING CLEARANCE OF DRAINAGE CHANNELS
Ensure that existing drainage channels and drains in and adjacent to the Site do not as a result of the Works become partially or totally blocked by any material from any source.

PRE.C9.1040.7 MAINTAINING CLEARANCE OF RIGHTS OF WAY
1. Take every precaution to prevent earth, rock or debris from depositing on public or private rights of way as a result of site operations including any deposits arising from the movement of plant or vehicles. In the event of any earth, rock or debris from construction works being deposited on public or private rights of way, remove immediately all such earth, rock or debris and restore the affected rights of way to their original state to the satisfaction of the CM;
2. In the event of any spoil or debris from construction works being deposited on adjacent land or seabed or any silt washed down to any area, remove immediately all such spoil, debris or material and silt and restore the affected land or seabed and areas to their natural state to the satisfaction of the CM.

**PRE.C9.1050.7 WHEEL CLEANING FACILITY**

1. All points of egress from the Site onto public roads shall be equipped with a wheel cleaning facility with an automatic high pressure water jet and wheel-wash trough;
2. The facility shall be supervised by the Contractor's personnel at all times when in use, to ensure that no vehicles leaving the Site deposit earth, mud, debris, dust, and the like on the roads;
3. The water in the wheel cleaner shall be changed at frequent intervals, and sediments shall be removed regularly;
4. Submit proposals for Approval prior to construction of the facility;
5. The wheel washing facility shall be ready for use prior to the commencement of earthworks excavation activity on the Site;
6. Provide a hard-surfaced road between the wheel washing facility and the public road;
7. If, despite the above, any vehicle should be found to be depositing any form of dirt on the public road then at the discretion of the CM's Representative the Contractor may not be permitted to use that vehicle on the Works.

**PROTECTION**

**PRE.C9.1110.7 PROTECTION OF WORKS FROM WEATHER**

1. Protect carefully from injury by rain, heat or inclement weather all work which may be adversely affected thereby. In addition to the applicable clauses in these preliminaries the Contractor's attention is drawn to appropriate clauses in other Worksections of this Specification;
2. Take all precautionary measures to prevent nuisance, danger, damage or accident due to rain and wind (including the effects of erosion, silting, accumulation of sediment and/or debris, flooding, landslips, mudflows etc.). In particular such precautions shall include, but shall not be limited, to the following clauses in this Section.

**PRE.C9.1120.7 WORK RESTRICTIONS**

1. All works shall be carried out in the dry, unless otherwise authorised by the CM;
2. Work shall not be carried out in weather conditions which may adversely affect the work unless protection by methods agreed by the CM is provided. Permanent work, including materials for permanent work, shall be protected by methods agreed by the CM from exposure to weather conditions which may affect the work or materials.

**PRE.C9.1130.7 MONITORING WEATHER FORECASTS**

The Contractor shall monitor weather forecasts from the Hong Kong Observatory and shall ensure that he is aware of heavy rain warnings, thunderstorm warnings and the hoisting of typhoon signals; when such warnings are announced, precautions shall be taken and any necessary arrangements made.

**PRE.C9.1140.7 MONITORING WATER LEVEL MEASURING DEVICES**

Monitor water-level measuring devices, in accordance with the requirements of the CM.

**PRE.C9.1150.7 WATER DISPERSAL**

1. Arrange for the rapid dispersal of water which enters the Works from any source;
2. When practicable the water shall be discharged into the permanent drainage system, providing adequate means for trapping silt are provided before discharging into the permanent systems;

3. Excavated areas shall be kept well-drained and free from standing water;

4. Construct, operate and maintain all temporary dams, watercourses and other works of all kinds (including pumping, horizontal drains and well-point dewatering) that may be necessary to exclude water from the Works while construction is in progress. Such Temporary Works shall not be removed without the Approval of the CM;

5. Notwithstanding any Approval by the CM of the Contractor's arrangement for the exclusion of water, the Contractor shall be responsible for the sufficiency thereof and for keeping the Works safe at all times;

6. In this matter take account of PRE.C9.1520;

7. The Contractor is to accept and deal with overflow/wash out from the existing service reservoirs, storm water drainage, surface run-off, foul sewerage and any other liquid discharged from the construction works or completed works by others in Sections .........................

PRE.C9.1160.7 DISCHARGES GENERATED FROM SITE ACTIVITIES

1. Contain within the Site all surface runoff generated from foundation works, dust control and vehicle washing etc. Re-circulate and re-use as far as practicable the surface runoff for housekeeping operations such as dust-control and wheel-washing as detailed in PRE.C9.710 and PRE.C9.1050 respectively. Install waste-water recycling facilities to the satisfaction of CM that meets the following:
   a. Waste-water should be properly treated to meet discharge standards (other than that for foul sewers discharge) as stipulated in the WPCO Licence issued by EPD before re-use for dust-control and wheel-washing;
   b. Warning signs should be displayed prominently upon all temporary storage tanks, drawing attention to the dangers of allowing breeding of mosquitoes; and
   c. Proper and adequate drainage facilities should be provided to discharge excess treated effluent.

2. Maintain the waste-water recycling facilities towards the end of the contract as far as practicable. Obtain CM’s approval prior to removal of the waste-water recycling facilities;

3. Do not discharge directly or indirectly or cause or permit or suffer to be discharged into any public sewer, stormwater drain, channel, stream-course or sea any trade effluent or foul or contaminated water or cooling or hot water without the prior written consent of the CM in consultation with the Director of Environmental Protection and Director of Water Supplies, who may as a condition of granting his consent require the Contractor to provide, operate and maintain at the Contractor's own expense to the satisfaction of the CM suitable works for the treatment and disposal of such trade effluent or foul or contaminated or cooling or hot water. Submit the design of such treatment works to the CM for approval not less than one month before the commencement of the relevant works;

4. If any office, site canteen or toilet facilities is erected, foul water effluent shall be directed to a foul sewer or to a sewage treatment and disposal facility either directly or indirectly by means of pumping or other means approved by the CM.

PRE.C9.1170.7 REUSE OF WATER FROM BORING AND DRILLING

Water used in ground boring and drilling for ground investigation or rock/soil anchoring should as far as practicable be re-circulated after sedimentation. When there is a need for final disposal, the waste water should be discharged into site drainage system via silt removal facilities.
REUSE AND DISPOSAL OF BENTONITE SLURRY
1. Bentonite slurry used in diaphragm wall and bored-pile construction shall be reused as far as practicable. If the disposal of a certain residual quantity cannot be avoided, the used slurry may be disposed of at designated marine dumping area subject to obtaining a marine dumping permit from EPD;
2. Disposal of used bentonite slurry into public drainage system, if intended, shall be treated to meet the discharge standards as stipulated in the WPCO Licence issued by EPD.

TEMPORARY DRAINAGE SYSTEMS
1. Where possible drainage systems shall be constructed from the lowest point upwards;
2. The permanent cut-off channels at the top of all slopes shall be constructed before the commencement of earthworks in accordance with the Drawings. The cut-off channels shall be connected into the existing watercourses which flow across the Site;
3. Design all temporary drainage in accordance with the requirements of PRE.C11.060;
4. Temporary sumps and traps shall be constructed to prevent sediment and/or debris from entering existing drains.

REMOVAL OF SEDIMENT/DEBRIS
1. In accordance with the requirements of GCC Clause 5.7 furnish, for the CM's information, particulars of the arrangements for ensuring that materials from the earthworks do not wash into the drainage system;
2. Any sediment and/or debris that accumulates in any catchpit, manhole, sump, trap, drain, drainage channel or watercourse whether temporary, existing or newly constructed, within the Site, shall be removed on at least a monthly basis, or as directed by the CM;
3. Notwithstanding the above requirements, any sediment and/or debris, that accumulates in such a way that it could, in the opinion of the CM, cause nuisance, danger, damage or accident, shall be removed immediately to the satisfaction of the CM;
4. Also, notwithstanding the above requirements, any water, sediment and/or debris, that accumulates in any property, structure, installation and service within or in the vicinity of the Site as a result of the Works shall be removed immediately to the satisfaction of the CM.

METHOD OF WORKING
1. A method of working shall be adopted to minimize erosion;
2. Excavations on or at the top of slopes, which cannot be drained other than by pumping, shall not remain open for prolonged periods;
3. Construction materials or excavated material shall not be stockpiled where they could erode or cause a landslip or mud flow.

REINSTATING DAMAGE WORKS
The Contractor's attention is drawn to GCC Clause 5.12. Should any damage to the Works occur due to inclement weather or the effects of inclement weather the Contractor shall carry out such repairs and reinstatement as are deemed necessary by the CM at the expense of the Contractor.

EMERGENCY COMMUNICATION AND STANDBY TEAM
1. Provide emergency communication and standby team for the execution of any emergency work on Site warranted necessary by the Contractor for the safety of the Works and/or the public, in accordance with the following:
a. Within one week from the notified date for commencement of the Works establish an emergency contact telephone number and submit the said telephone number to the CM;

b. The emergency contact telephone is to be manned, at all times during which the Rainstorm Red Warning or the Rainstorm Black Warning is issued, or the Tropical Cyclone Warning Signal No 3 or above is hoisted, by a competent English-speaking person. All information received to be immediately conveyed to the Contractor; and

c. The emergency standby team comprising suitable staff, labour and plant is to be available at all times during which the said Signal, including Rainstorm Black/Red Warning, is hoisted. The standby team to be sufficient in size for any emergency work required to be carried out on Site. In the event that the standby team is not stationed at the Site, ensure that the team can be mobilized within the shortest possible time.

2. The provision of the emergency contact telephone number and the emergency standby team shall in no way relieve the Contractor of his obligations, responsibilities and liabilities under the Contract.

**PRE.C9.1260.7 PROTECTION OF WORKERS FROM HEAT STROKE**

In addition to any obligation under GCC Clause 5.11 or similar obligations under any enactment or Regulation, adopt the practices and/or measures in respect of working in hot weather as recommended in the latest edition of the Guidelines on Site Safety Measures for Working in Hot Weather issued by the Construction Industry Council. Examine critically the practices and/or measures as recommended in the above-mentioned Guidelines, especially their applicability and suitability to the Works on account of the actual site conditions and the specific safety hazards of the Works. Alternative practices and/or measures which should not be inferior to those recommended in the said Guidelines may be proposed for CM's approval before implementation. The following highlights of the crucial practices and/or measures, albeit not exhaustive, are extracted from the above-mentioned Guidelines:

1. In relation to PRE.C6.070, ensure that the risk of heat stroke to workers and the caring measures for prevention of heat stroke are incorporated in the Safety Plan;
2. Prohibit consumption of alcoholic drinks;
3. Provide sheltered rest stations close to the workplace;
4. Where working in enclosed area with poor ventilation, ventilate the workplace by means of fans / blowers / chillers or any other form as appropriate;
5. Where appropriate, use mechanical aids for execution of works to minimise workers' physical exertion;
6. Keep heat-generating machinery (e.g. diesel air compressors or generators) away from workers as far as reasonably practicable;
7. Provide potable water at easily accessible drinking points;
8. Pursuant to PRE.C9.260, encourage workers wear proper clothing and safety helmet with ventilation vents to suit the weather;
9. Provide relevant training and site safety information to supervisors and workers to recognize symptoms of heat-related disorders;
10. Establish administration control measures with trained supervisors to take heed of hot weather report and if necessary, to reschedule outdoor work or to arrange job rotation or suitable rest breaks to avoid prolonged working in hot environment;
11. Let workers cool down by arranging regular rest periods, which can also reduce their period of exposure to the hot environment. Apart from the regular 30-minute rest period during the afternoon work session, allow an additional 15-minute rest period during the hot summer months (from May to September every year).
PROTECTION AND PRESERVATION OF EXISTING TREES AND SHRUBS

PRE.C9.1310.7

PROTECTION GENERALLY

Option 1

There are no existing trees or shrubs on the site which are to be retained and protected.

Option 2

Preserve and protect existing trees and shrubs in accordance with PRE.C9.1312 to PRE.C9.1370.

PRE.C9.1312.7

DEFINITIONS

1. "Tree" means a plant with diameter at breast height measuring 95 mm or more. Including plants growing on retaining structures;
2. "Old and Valuable Tree" (hereinafter referred to as OVT) means any tree included in the Register of Old and Valuable Trees posted at website: http://www.lcsd.gov.hk/LEISURE/LP/gc/tree;
3. "Diameter at breast height" means the diameter of the trunk of the plant measured at a height of 1.3 m above ground level;
4. "Tree crown spread" means the diameter of the tree crown defined by the outermost branches of the tree;
5. "Tree height" means the height from ground level to the top of the tree;
6. "Dripline" of a tree means the imaginary vertical plumb line that extends downward from the tips of the outermost tree branches and intersects the ground;
7. "Tree protection zone" for OVT (Tree No. Shown on drawing) means the zone encompassing the tree along its dripline and extending vertically to 2 m upward beyond the top of the tree and 2 m downward beyond the ground level at the trunk base of the tree. For an OVT growing on a retaining structure/wall/rock surface, the tree protection zone should encompass the body of the tree itself and 2 m above the tree crown, as well as the vertical and horizontal surfaces of the retaining structure/wall/rock surface covered by the tree roots together with the space up to 2 m behind those surfaces;
8. "Tree protection zone" for non-OVT (tree other than OVT) means an area within the perimeter that is defined by the dripline of the tree. For a non-OVT growing on a retaining structure/wall/rock surface, the tree protection zone should encompass the body of the tree itself, and the vertical and horizontal surfaces of the retaining structure/wall covered by the tree roots;
9. "Preserved tree" means an existing tree, including OVT, not earmarked to be felled, which may be a tree to be retained at its existing location, a tree at its existing location prior to transplanting, or a tree transplanted within the Site;
10. "Arboricultural work" means any work related to the cultivation and care of trees for any purpose other than timber production, including but not limiting to planting, replanting, transplanting, tree surgery work and control of pest and disease;
11. "Aftercare to Old and Valuable Trees" means the regular monitoring and other operations specified to be performed for Old and Valuable Tree (Tree No. Shown on drawing) during the period stated in the Contract for such regular monitoring and other operations.

PRE.C9.1313.7

INDEPENDENT TREE SPECIALIST

1. Employ a suitably qualified and experienced independent tree specialist (ITS) for the period stated in the Contract to carry out the duties as stipulated in EXT11.W062 in accordance with the followings:
   a. Qualification and experience of the ITS shall be as follows:
i. A degree holder of any of the disciplines of agriculture, arboriculture, botany, forestry, horticulture, landscape architecture, landscape design, landscape management or landscape science or a discipline of equivalent subject acceptable to the CM;

ii. Have specialised knowledge and training in the fields as specified in sub-clause (a)(i) above;

iii. Have at least three (3) years' documented or demonstrable experience gained whether in Hong Kong or elsewhere in the physiology and care of major tree species commonly found in Hong Kong.

b. Nomination and employment of the ITS:

i. Within seven (7) days of the date of the Employer's letter of acceptance of the Tender, nominate a candidate to be the ITS for the approval of the CM. Obtain ITS's declaration of "no conflict of interest" in the discharge of his duties specified under the Contract and submit it to CM;

ii. Enter into a written contract of employment with the ITS and ensure that the employment of the ITS shall commence within seven (7) days of the date of the CM's approval of the employment of the ITS;

iii. In the event that the Contractor fails to comply with any of the requirements in sub-clauses (b)(i) and (b)(ii) above, the Employer shall be entitled to employ an ITS forthwith and deduct all costs, charges and expenses arising from or in connection with the employment of an ITS in accordance with the provisions of General Conditions of Contract Clause 83 and/or recover such costs, charges and expenses as a debt from the Contractor.

c. Nomination and employment of replacement ITS:

i. In the event that the ITS is unable or refuses to carry out such duties or is not performing satisfactorily in the opinion of the CM, the CM may withdraw his approval for employing the ITS at any time. If such approval is withdrawn, nominate a replacement ITS for the approval of the CM within seven (7) days of the notice of withdrawal by the CM. Obtain replacement ITS's declaration of "no conflict of interest" in the discharge of his duties specified under the Contract and submit it to CM;

ii. Enter into a written contract of employment with the replacement ITS and ensure that the employment of the replacement ITS shall commence within seven (7) days of the date of the CM's approval of the employment of the replacement ITS;

iii. In the event that the Contractor fails to comply with any of the requirements in sub-clauses (c)(i) and (c)(ii) above, the Employer shall be entitled to employ a replacement ITS forthwith and deduct all costs, charges and expenses arising from or in connection with the employment of a replacement ITS in accordance with the provisions of GCC Clause 15.3 and/or recover such costs, charges and expenses as a debt from the Contractor.

d. Wages for ITS:

i. Pay wages direct to ITS for his services rendered;

ii. As a condition precedent for entitlement to payment of the item(s) of works for which the services of the ITS are required under the Contract, submit satisfactory evidence, including but not limited to receipts for payment of wages to the ITS, to the CM proving that the ITS has already been paid for his services rendered.

2. Provide all reasonable facilities and attendance for the ITS to carry out his duties;

3. Ensure that the ITS has carried out his duties as specified in the Contract.
1. Unless otherwise agreed by the CM, select such sub-contractor from the prevailing "Housing Authority List of Soft Landscape Contractors for New Works Groups 1 or 2";

2. Enter into a written sub-contract with the sub-contractor to carry out the arboricultural work to trees within the Site, including but not limited to planting, replanting, transplanting, tree surgery work and control of pest and disease;

3. Provided that without the written consent of the CM, do not enter into a written sub-contract with a sub-contractor on the prevailing "Housing Authority List of Soft Landscape Contractors for New Works Groups 1 or 2", who is then suspended from tendering (whether by way of mandatory suspension, voluntary suspension or automatic suspension) in respect of the works in that category;

4. At least seven (7) days prior to entering into a written sub-contract with the sub-contractor, submit details of the sub-contractor to the CM for checking of compliance with sub-clauses (1) to (3) above.

PRE.C9.1315.7 COMPETENT MEMBER OF SITE SUPERVISORY STAFF TO OVERSEE TREE WORKS

1. Assign a competent member of the site supervisory staff to oversee and supervise tree works related to horticultural operations and preservation of trees within the Site, including but not limited to planting, transplanting, tree surgery work and control of pest and disease affecting trees on the Site;

2. The assigned competent member shall comply with the following requirements:
   a. Be working full-time on the Site, but not necessarily working solely on trees;
   b. Have attended relevant training on the subject organised by the training institutes (such as Construction Industry Council Training Academy), or similar courses as considered appropriate by the CM.

3. Within 28 days from the date of the Letter of Acceptance, submit to the CM for approval particulars of the assigned competent member (including his name, experience and position) together with a copy of the certificate issued by the training institute confirming his satisfactory completion of the relevant course.

PRE.C9.1316.7 PRESERVATION AND PROTECTION OF EXISTING TREES AND VEGETATION GENERALLY

Unless otherwise directed or agreed by the CM, comply with the following requirements:

1. Protect all existing trees and palms as shown on Drawing Nos. ............or as Instructed;

2. Protect the branch structure, crown and root zone and any overhanging vegetation;

3. Protect and preserve all existing trees and shrubs including any surrounding curbs/dwarf walls except those instructed to be removed;

4. Be fully acquainted with the location, size, canopy shape, and spread of the existing vegetation shown in Drawing Nos. ............to the extent that the location of existing trees may affect the programming, method or sequencing, and access to the Works;

5. Identify each tree or palm shown in the Drawing that is designated to be retained, transplanted or removed by affixing differently coloured labels printed with the number shown in Drawing Nos................. as follows:
   a. Conduct initial tree survey to identify trees that are not recorded under the Contract and their treatment is yet to be instructed by the CM;
   b. Submit the survey record to the CM within 28 days of the date for commencement of the Works;
   c. Secure the labels by carefully tying with plastic string and avoid damage to the trunk or bark in accordance with Worksection EXT11;
   d. Provide additional labelling or marking to identify the OVT;
   e. Comply with the following in providing the identification labelling or marking systems:
i. Labels shall be made of durable materials that are non-injurious to the trees, placed at a position visible but not easily accessible to the public, and attached in such a manner that allows for the growth of the trees and does not injure the trees;

ii. The identification labelling or marking systems and the on-site status identification of trees, palms and bamboos shall be agreed by the CM and installed prior to the commencement of site clearance, demolition, earth moving, construction of permanent, or other temporary works, and any other site operations which may affect the trees, palms and bamboos;

iii. Reinstall or replace where necessary the identification labelling or marking systems for the preserved trees, and remove these identification labelling or marking systems from the Site upon completion of the Works or earlier if so directed by the CM;

6. Ensure that the ITS shall carry out the following duties:

a. Conduct an initial survey of the OVT and an initial site survey and initial soil tests of its tree protection zone and submit a report on the same comprising the details and within the time frames. The report shall be in the form of an A4-sized, bound document with a report cover indicating the Contract number, Contract title, and date of the report and shall be signed by the ITS. The format of the report shall be agreed by the CM prior to its submission;

b. Prepare monitoring reports on OVT and submit each monitoring report comprising the details and within the time frames as stipulated in EXT11.W062;

c. Conduct a final survey of OVT and a final site survey and final soil tests of its tree protection zone, and submit a report on the same comprising the details and within the time frames as stipulated in EXT11.W062;

d. Provide arboricultural advice in the preparation of method statements and any reports on repair of damage, supervise arboricultural work, and provide on-site advice in relation to site control within the tree protection zone and at its adjacent areas, for the preservation and protection measures for OVT as stipulated in the Contract; and

e. Carry out any other services or duties specified in the Contract.

PRE.C9.1320.7 PROGRAMMING OF PROTECTION WORKS

Allow fully in the programme the effects of preservation and protection of existing trees, the method of operation and construction, and the vehicular access for the Works:

1. Exercise utmost care to avoid damage to all vegetation which is required to be protected throughout the Contract period;

2. Complete protection works before any site clearance, demolition, earth moving, construction of permanent, or other temporary works, and any other site operations that are to be carried out in the vicinity of any vegetation to be retained, and allow inspection of the protective works by the CM;

3. Make allowance for any required tree surgery or transplanting operations to be carried out by the Employer’s Specialist Contractor during works in the vicinity of the vegetation to be retained, including construction of any hoardings and gantries.

PRE.C9.1330.7 EXISTING PROTECTIVE FENCING

Where indicated on Drawings or as Instructed, accept responsibility for protective fencing erected by others for a previous contract. Replace damaged parts as necessary to ensure effective use.
CONTRACTOR'S OBLIGATIONS

PRE.C9

PRE.C9.1340.7 PROTECTIVE BAMBOO FENCING
Where indicated on Drawings or as Instructed, surround existing trees and shrubs around the perimeter of the crown with a 1500 mm high ±50 mm bamboo fence, comprising:
1. 2500 mm long ±50 mm, 30 mm x 30 mm x 5 mm thick galvanized mild steel angle posts driven into the ground at 1500 mm centres ±50 mm and fitted with protective caps with;
2. Top, middle and bottom rails of 70 mm diameter ±5 mm bamboo poles; and
3. 1500 mm long ±50 mm 50 mm diameter ±5 mm bamboo vertical poles at 120 mm centres ±5 mm;
4. All firmly fixed with rot proof twine or wire.

PRE.C9.1350.7 PROTECTIVE CHAIN LINK FENCING
Where indicated on the Drawings or as Instructed, surround existing trees and shrubs around the perimeter of the crown with chain link fencing to BS 1722:Part 1:1986:
1. Fence type: GLS 180 (Table 1 of BS 1722:1986);
2. Height above ground: 1800 mm ±50 mm;
3. Materials:
   a. Zinc coated chain link, 1800 mm wide roll, 50 mm mesh size, 3 mm nominal wire diameter;
   b. Zinc coated mild steel line wire, 3.55 mm nominal wire diameter;
   c. Rolled mild steel angle iron posts and struts in accordance with Table 4 of BS 1722:1986:
      i. Intermediate posts:
         2600 mm long ±50 mm
         45 x 45 x 5 mm section
      ii. Straining posts:
         2600 mm long ±50 mm
         60 x 60 x 6 mm section
      iii. Struts:
         2000 mm long ±50 mm
         45 x 45 x 5 mm section
4. Erection:
   In accordance with Section 3 of BS 1722:Part 1:1986 drive posts or set in concrete as necessary to obtain firm base.

PRE.C9.1360.7 ALIGNMENT OF PROTECTIVE FENCING
Where indicated on the Drawings or as Instructed, align the protective fencing along the outer limit of the canopy ("drip line") of all trees and palms to be retained, to protect from damage.

PRE.C9.1362.7 PROTECTION FROM CHANGE IN GROUND LEVEL
1. Unless explicitly required in the Contract, do not change the existing ground levels within the tree protection zones of the preserved trees without the prior approval of the CM;
2. Where it is necessary for the completion of the Works to reduce the existing ground level around a preserved tree which will result in a lowering of the existing ground level within the tree protection zone, comply with the following requirements:
   a. Construct a retaining wall as shown in Drawing No. ........ install tree supporting devices as shown in Drawing No. .......... or similar measures as agreed by the CM to accommodate the reduction in the existing ground level around the tree;
b. Before commencing the construction of the measures to accommodate reduction in the ground level pursuant to sub-clause (2)(a) above, submit method statements including construction details for the measures for the CM's approval;

c. Commence the construction of the measures only after obtaining CM's approval for the method statements;

d. Follow the requirements stipulated in sub-clause (2) of PRE.C9.1363, regarding excavation and cutting of tree roots and;

e. Maintain balanced moisture content in the tree and in the soil after construction of the measures, by carrying out necessary precautionary measures such as crown thinning, watering and mulching.

3. Where it is necessary for the completion of the Works to raise the existing ground level around a preserved tree which will result in a rise in the existing ground level within the tree protection zone, comply with the following requirements:

a. Construct a dry well and soil aeration system as shown in Drawing No…….. or similar measures as agreed by the CM to accommodate minor to moderate rise of up to 300 mm in the existing ground level around the tree;

b. Construct a dry well and soil aeration system as shown in Drawing No………… or similar measures as agreed by the CM to accommodate major rise of more than 300 mm in the existing ground level around the tree;

c. Before commencing the construction of the measures to accommodate rise in the ground level pursuant to sub-clauses (3)(a) and (3)(b) above, submit method statements including construction details for the measures for the CM's approval; and
d. Commence the construction of the measures only after obtaining CM's approval for the method statements.

---

PRE.C9.1363.7 PROTECTION FROM EXCAVATION INCLUDING TRENCHING

1. Unless explicitly required in the Contract, do not carry out excavation within the tree protection zones of the preserved trees without the prior approval of the CM;

2. For the Approved excavation work within the tree protection zones, comply with the following requirements:

   a. Obtain agreement from the CM to the detailed locations and extent of the excavations before commencing any excavation work;

   b. Carry out the following before commencing any cutting work to the aerial roots or underground roots of the preserved trees:

      i. Determine the locations of the major roots and the bulk of the their absorbing roots so as to keep the cutting of tree roots to a minimum and to preserve the tap roots, sinker roots and support roots of the trees in any circumstances;

      ii. Obtain agreement from the CM to the extent of root cutting on the Site;

      iii. Where the stability of the trees is likely to be jeopardised, comply with the requirements stipulated in sub-clauses (1) to (3) of PRE.C9.1365.

   c. Submit to CM the photographic records showing the condition of the affected trees and the agreed extent of excavations and root cuttings as marked on the Site prior to commencement of the excavation work and root cutting work. Thereafter, submit photographic records showing the condition of the affected trees and the progress of the excavation work and root cutting work at weekly intervals until backfilling of the excavations is complete;

   d. Excavate the service trench on the paved side of the tree if one exists;

   e. Pile the excavated materials outside the tree protection zones to reduce soil compaction;

   f. Carry out the excavations carefully so as not to damage the bark and root collars of the preserved trees;
g. Maintain balanced moisture content in the trees and in the soil after backfilling of the excavations by carrying out necessary precautionary measures;

h. Move the temporary protection fencing stipulated in \textit{PRE.C9.1330} to the edge of the intended excavation area, between the excavation area and the rest of the tree protection zone, during the duration of excavation work, and move back the same to its original location after backfilling.

3. Where the Approved excavation works within the tree protection zone will involve cutting of the roots of the preserved trees, take the following precautions:
   a. Carry out excavation by using only hand-held tools such as hoe and spade, but not mechanical diggers or bulldozers in any circumstances;
   b. Whenever roots are encountered and before root cutting is carried out, fork away soil from the roots carefully by using hand-held tools up to the edge along which root cutting is required;
   c. Carry out root cutting carefully by using sterilised hand-held pruning tools, and prune roots greater than 25 mm in diameter carefully so as not to result in shattered and frayed roots;
   d. Cut back cleanly with sharp tools to undamaged tissue of any roots damaged during excavation and treat it with an approved fungicidal dressing prior to backfilling;
   e. Prevent all cut and exposed roots from drying out during excavation by adopting the following measures until backfilling, unless otherwise agreed by the CM:
      i. Wrap the tap roots, sinker roots, support roots, and roots with diameter exceeding 50 mm, which shall not be cut with hessian, straw or other porous absorbent fabric once they are exposed;
      ii. Hang thick hessian or other porous absorbent fabric from top of the cut surface over the exposed roots and soil immediately after root cutting;
      iii. Mist the hessian or fabric in a frequency that keeps the roots and the soil at the cut surface moist all the time.
   f. Remove immediately before backfilling the hessian, straw or other porous absorbent fabric stipulated in sub-clause (3)(e)(i) above and the hessian or fabric stipulated in sub-clause (3)(e)(ii) above;
   g. Backfill excavations with soil mix incorporated with slow release fertiliser at a rate of 500g/m³ or at a rate as directed by the CM to a level not higher than the original soil level at the root collar.

4. Based on the result of sub-clauses (2)(b)(i) & (2)(b)(ii) above, if in the opinion of the CM that the trenching works within the tree protection zone will involve cutting of a significant part of the roots of the preserved trees, adopt tunnelling in lieu of trench excavation in the following manner and as shown in the Drawing No……. close to the tree trunk on one side:
   a. Excavate a trench as narrow as possible directly towards the tree along a radius to not closer than 1.0 m from the trunk or where roots larger than 25 mm in diameter are encountered, whichever distance is farther away from the trunk;
   b. Tunnel straight beneath the tree at a depth of not less than 750 mm and in a way to avoid damaging any tap root, sinker roots or support roots;
   c. Exit on the opposite side along another radius;
   d. Sleeve the service where it passes beneath the tree to reduce the risk of damage to the service and facilitate future servicing and repair.

\textbf{PRE.C9.1364.7 PROTECTION FROM DRILLING}

1. Unless explicitly required in the Contract, do not carry out drilling such as soil nailing and drilling for bore holes, rock bolts or dowels, within the tree protection zones of the preserved trees without the prior approval of the CM;

2. For the approved drilling work within the tree protection zones, comply with the following requirements:
a. Obtain agreement from the CM to the detailed locations and extent of the drill holes before commencing any drilling work, bearing in mind that the drill holes shall be located in such a way that the structures to be placed into the drill holes, including the surface elements of the structures such as soil nail heads, are at a minimum distance of 500 mm from the trunks of the preserved trees unless otherwise agreed by the CM in exceptional circumstances;
b. Carry out the following before commencing any cutting work to the aerial roots or underground roots of the preserved trees:
   i. Determine the locations of their major roots and the bulk of the their absorbing roots so as to keep the cutting of tree roots to a minimum and to preserve the tap roots, sinker roots and support roots of the trees in any circumstances;
   ii. Obtain agreement from the CM to the extent of root cutting on the Site;
   iii. Where the stability of the trees is likely to be jeopardised, comply with the requirements stipulated in sub-clauses (1) to (3) of PRE.C9.1365.
c. Carry out the drilling work carefully so as not to damage the branches, foliage, trunk, bark and root collars of the preserved trees when gaining access for supporting, mobilising, positioning and operating the drilling rig;
d. Maintain balanced moisture content in the trees and in the soil after the drilling work by carrying out necessary precautionary measures such as crown thinning, watering and mulching.

3. Take the following precautions when carrying out drilling work that involves cutting of the roots of the preserved trees:
   a. Carry out the drilling work and root cutting work carefully;
   b. Prune roots greater than 25 mm in diameter carefully in order to prevent the roots from shattering and fraying;
   c. Cut back cleanly with sharp tools to undamaged tissue of any roots damaged during drilling and treat it with an approved fungicidal dressing.

PRE.C9.1365.7 PROTECTION FROM INSTABILITY
1. Where the Works involve cutting of any major roots or other major parts of the preserved trees or any other works that may jeopardise the stability of the preserved trees, comply with the following:
   a. Install all necessary physical support for the preserved trees to ensure their stability;
   b. Pay particular attention to the stability of the OVT and all other preserved trees that grow on retaining structures in order to prevent the trees from being dislodged from their positions as a result of inadequate support.
2. Comply with the following in installing the physical support measures for the preserved trees:
   a. Before commencing the installation of the physical support, submit method statements for the support measures to the CM for approval;
   b. Commence the installation of the physical support only after obtaining CM's approval for the method statements;
   c. Install the physical support securely prior to commencement of the root cutting, tree pruning or any other works that may affect the stability of the trees;
   d. Securely found the physical support in footings independent of existing walls or building structures or in other supporting systems as appropriate, without interfering with other works, other existing features, and the preserved trees;
e. Where the affected tree is an OVT or any other tree that grows on a retaining structure, make a detailed assessment to estimate the weight of the tree and to identify the best position of supporting the tree in relation to its overall spread and centre of gravity. The method statements for the support measures in respect of the OVT or other trees that grow on retaining structures shall include the following information:

i. Details of the form of construction and where requested by CM structural design calculation for the support measures, demonstrating the bearing capacity of each element;

ii. Details of the foundation of the support measures, demonstrating that the support measures shall not interfere with other works, other existing features, and the preserved trees and, in the case of the tree growing on a retaining structure, shall not affect the stability of the retaining structure;

iii. Means of securing the tree to the structure of the support measures, including detail design of how cups and ties are adjusted to the form of the tree; and

iv. Method of fabrication and erection on the Site.

f. Remove the physical support for the preserved trees from the Site upon completion of the Works, or earlier if so directed by the CM. Do not remove or relocate the physical support for the trees without the prior agreement of the CM.

PRE.C9.1370.7 PRESERVATION AND TREATMENT/REPLACEMENT OF EXISTING TREES AND SHRUBS

1. If any trees, that are to remain after the Works, are damaged, they shall be made good or replaced by the Contractor at his own expense;

2. Note that some existing trees shall be transplanted to ........ as shown on Drawing No. ...... The Contractor is deemed to have made provision for all costs and time required for transplanting works outside the site boundary.

TREE RISK ASSESSMENT AND INSPECTION AFTER INCLEMENT WEATHER

PRE.C9.1410.7 TREE RISK ASSESSMENT AND ARBORICULTURAL WORKS

Provide the following services in relation to tree risk assessment and arboricultural works:

1. Carry out tree risk assessment for the trees as shown on Drawing Nos. .................. and those as instructed by CM through on-the-ground or aerial inspections as approved by the CM;

2. Tree risk assessments shall include but without limitation to the following:
   a. assessment in accordance with the Guidelines For Tree Risk Management and Assessment Arrangement on An Area Basis and on A Tree Basis as issued by the Greening, Landscape and Tree Management Section of the Development Bureau (the latest version);
   b. assessment on internal decay of the main trunk and other locations being considered with structural defects; and
   c. conditions of installations, if any, such as cable, bracing road and propping structure so as to identify any visual damage and other irregularities.

3. Submit tree risk assessment reports, using Form 1 or Form 2, with recommendations of arboricultural works for risk abatement to the CM, details and format of the report have to be approved by the CM;

4. Carry out and complete the arboricultural works as recommended in the assessment reports and approved by the CM, and keep records of supervision and work done; and
5. Provide one Qualified Arborist ("QAr") to carry out tree risk assessment, preparation and presentation of assessment reports, supervise the execution of the arboricultural works recommended in the assessment reports and approved by the CM including preparation of records on supervision and work done.

**PRE.C9.1420.7 TIMING FOR CARRYING OUT OF TREE RISK ASSESSMENT AND ARBORICULTURAL WORK**

1. Carry out and complete tree risk assessment and the related arboricultural work as approved by and to the satisfaction of the CM during the duration of the Contract as described below:

<table>
<thead>
<tr>
<th>Length of the service period</th>
<th>.......... months</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>[modify to suit if the assessment is an one-off exercise]</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Covering period</th>
<th>From Date .......... to Date ..........</th>
</tr>
</thead>
</table>

2. In general, each tree as identified in PRE.C9.1340 or instructed by the CM shall be subject to tree risk assessment by QAr within each twelve (12) months period commencing from the date of commencement of the Works with the exact date to be instructed by the CM; in any case no two assessments shall be separated by more than twelve (12) months within the duration of Contract;

3. Carry out additional tree risk assessments as instructed by the CM on trees which are subject to emergency situations including but not limited to failure of major branches or trunk, blooming of fungal fruiting bodies, accident causing tree injury, acute pest problem and other situation causing imminent danger.

4. Use either Tree Risk Assessment Form 1 or Form 2 as directed by the CM to conduct the above tree risk assessment exercise.

**PRE.C9.1430.7 QUALIFICATION AND EXPERIENCE REQUIREMENTS OF THE QUALIFIED ARBORIST**

1. Each QAr shall possess the following academic training, professional qualifications and working experience in either Degree Entry or Non-Degree Entry respectively:
### Degree Entry

**Academic Training and Professional Qualification:**
Have obtained recognised degree or above in Arboriculture, Horticulture, Landscape Architecture, or equivalent to the standards of ‘Level 5’ or above in Hong Kong Qualifications Framework (HKQF).

**Working Experience:**
- Have at least three (3) years of post-qualification work experience in tree care, and are familiar with tree risk assessment / management as approved by CM.

### Non-Degree Entry

**Academic Training and Professional Qualification:**
- a) Have successfully undertaken training programmes recognised by the Tree Management Office of DevB, such as Tree Risk Assessment Qualification (TRAQ) organised by the International Society of Arboriculture (ISA), or Professional Tree Inspection by Lantra Awards; OR
- b) Have valid qualification or certification awarded by recognised institution or industry organisation on arboriculture, such as Certified Arborist of the ISA, Registered Arborist (‘Level 3’ or above) of Arboriculture Australia, Technician Member or above of the Arboriculture Association of the United Kingdom, Accredited Arboricultural Practitioner of the Hong Kong Institute of Landscape Architects (HKILA), Professional Diploma Programme in Arboriculture or Tree Risk Assessment and Management of the School of Continuing and Professional Studies, Chinese University of Hong Kong (CUSCS), Advanced Diploma in Tree Management and Conservation of the School of Professional and Continuing Education, University of Hong Kong (HKU SPACE), Certificate in Professional Tree Management of the Open University of Hong Kong (OUHK), Professional Diploma in Horticulture and Landscape Management of the Technological and higher Education Institute of Hong Kong (THEi), etc.

**Working Experience:**
- Have at least four (4) years of post-qualification work experience in tree care, and are familiar with tree risk assessment / management as approved by CM.

---

2. The employment of the QAr shall be approved by the CM. In case the employment of the QAr with the Contractor is terminated for whatever reasons, the Contractor shall further provide another QAr who satisfies with the above academic training, professional qualifications and working experience for replacement within fourteen (14) days of the termination.

### PRACTICE ON TREE RISK ASSESSMENT

1. Practice and Procedures on Tree Risk Assessment

---

**PRE.C9.1440.7**
a. The QAr shall use proper equipment such as wood decay detection equipment and drilling resistance measuring equipment, for checking internal decay and take photos for major defects or irregularities spotted;
b. The QAr shall not cause any unnecessary damage to any tree parts or excessive soil compaction during assessment;
c. The Contractor shall provide all necessary equipment and machineries for assessments to be conducted by the QAr;
d. The Contractor shall cordon-off the Site during the aerial inspection and make all arrangements for site cordon-off or road closure, if necessary;
e. The Contractor shall ensure that all their staff and the QAr are provided with and properly used all appropriate equipment and measures in carrying and assisting in carrying out of assessments; and
f. The Contractor shall also take every safety precaution to avoid injury to its staff, the QAr, the general public and to avoid damage to property of others during tree assessments.

2. Tree risk Assessment Report

a. The QAr shall complete and sign a full comprehensive assessment report for each tree as shown on Drawing No.……….. , using Form 1 or Form 2 as instructed and provided by the CM from time to time, which shall include but not be limited to the following:
i. General information of the tree(s);
ii. Observations;
iii. Views on risk caused by defects with justifications; and
iv. Recommended measures for risk abatement which shall, without limitation, include:
   - A proposal of arboricultural works for risk abatement to each tree assessed. The proposal shall have taken into account avoidance of permanent blockage of vehicular or pedestrian traffic;
   - Annotated plans, photos, sketches, or drawings for clear indication in the proposal in respect of the following pruning works or installations may be provided in the report to illustrate or elaborate the recommended measures:

<table>
<thead>
<tr>
<th>Pruning/Installation</th>
<th>Required details</th>
</tr>
</thead>
<tbody>
<tr>
<td>i Crown Reduction</td>
<td>Overall crown reduction: recommended percentage; or Selected branch reduction: location of major limbs (direct connection to the trunk), position of the cut and percentage of reduction.</td>
</tr>
<tr>
<td>ii Crown thinning</td>
<td>Location of major limbs (if any) to be removed and position of the cut.</td>
</tr>
<tr>
<td>iii Crown lifting</td>
<td>Location of major limbs (if any) to be removed and position of the cut.</td>
</tr>
<tr>
<td>iv Cabling</td>
<td>Exact location of each limb involved. Position of each cable and its connection points on approximate position of related limbs. Submit fixing details / shop drawings of cable and end-connection between the limb and the cable for CM's approval. Exact location and the limb position of another tree if involved in cabling.</td>
</tr>
</tbody>
</table>
v Bracing
Exact location of each limb involved.
Position of each bracing rod, its passing through angle and the approximate installation position of related limbs.
Submit fixing details / shop drawings of bracing rod for CM's approval.

vi Guying
Exact location of each limb involved.
Position of each cable and its connection point on approximate position of related limb and that of the ground/other surface.
Submit fixing details / shop drawings of cable and end-connection between the limb for CM's approval.
Proposed specification of the ground support.

vii Propping
Exact location of each limb involved.
Position of each prop and its connection point on approximate position of related limb and that of the ground/other surface.
Submit detail design of the propping structure and fixing details / shop drawings of the prop and its foundation for CM's approval.
The connection details between the prop and the main trunk or the limb, and between the prop and the ground/other surface.

- As regards to chemical treatment for nutrition problem or pests and diseases, a proposal of the specific chemicals to be used together with potential chemical suppliers, application method and schedule; and

v. Attachments for witnessing the content of the report …………

3. Presentation of proposal;
   a. After submission of the tree risk assessment report to the CM, using either Form 1 or Form 2, the QAr shall present the proposals as and when called upon to do so by the CM. The QAr shall, if necessary, revise the recommendations by incorporating further detailed elaboration as required by and up to the satisfaction of the CM. The amended proposals shall be re-submitted to the CM by one week.

PRE.C9.1450.7 INSPECTION AFTER INCLEMENT WEATHER
The QAr shall carry out inspection on trees as shown on Drawing Nos.……….. and those instructed by the CM within one week after cancellation of Typhoon No. 8 or above and Black Rainstorm Warning. The inspections shall focus on the damage, the stability and potential hazard. The QAr shall also propose recommendations for any arboricultural remedial works for Contractor's submission to the CM for approval, and supervise the execution of the arboricultural works as approved by the CM.

PRE.C9.1460.7 ARBORICULTURAL WORKS IN RELATION TO TREE RISK ASSESSMENT AND INSPECTION AFTER INCLEMENT WEATHER AS APPROVED BY THE CM
1. Schedule for Work Completion
   All arboricultural works in relation to tree risk assessment and inspection after inclement weather as approved by the CM shall be completed within the time limit as instructed by and to the satisfaction of the CM;

   2. Pruning
a. Pruning including crown cleaning, crown lifting, crown thinning and crown reduction shall comply with any one of the following standards (the latest version):
   i. American National Standard for Tree Care Operations (ANSI A300 (Part 1)) – Tree, Shrub, and Other Woody Plant Maintenance – Standard Practices (Pruning); or
   ii. British Standard for Tree Work (BS 3998:1989); or
   iii. Other international standards approved by the CM.

b. As regards emergency pruning against imminent danger, prior verbal consent should be obtained by the QAr from the CM;

c. The Contractor shall provide all necessary equipment and machineries including chainsaws, rigging ropes, lifting platform for carrying out and completion of the pruning works;

d. The QAr shall arrange for secure lowering of cut limbs to avoid causing injury to person and damage to property when free falling onto the ground; and

3. Cabling, Bracing and Guying

a. Cabling, bracing and guying shall comply with any one of the following standards (the latest version):
   i. American National Standard for Tree Care Operations (ANSI A300 (Part 3)) – Tree, Shrub, and Other Woody Plant Maintenance – Standard Practices (Support Systems a. Cabling, Bracing, and Guying); or
   ii. British Standard for Tree Work (BS 3998:1989); or
   iii. Other international standards approved by the CM.

b. In case the CM approve to connect a cable to another tree or object, the Contractor shall ensure the proper preparation of anchorage and the connection of cable;

c. The Contractor shall provide all necessary equipment to facilitate the cabling, bracing and guying work as approved by the CM and comply with all safety requirements; and

d. The CM may direct the removal by the Contractor of any equipment which is considered to be unsafe and unfit for the cabling, bracing and guying work, the Contractor shall bear all costs and expenses in relation to such removals and no time or monetary claims will be entertained under the Contract.

4. Tree Removal

a. Do not remove any tree as approved by the CM before the confirmation of the CM that tree felling approval has been obtained from relevant government department(s);

b. Rigging and removal of trees shall comply with any one of the following standards (the latest version):
   i. American National Standard for Arboricultural Operations (ANSI Z133) – Safety Requirements; or
   ii. British Standard for Tree Work (BS 3998:1989); or
   iii. Other international standards approved by the CM.

c. Provide all necessary equipment and machineries including chainsaws, rigging ropes, lifting platform for removal of trees;

d. Ensure that the QAr has arranged for secure lowering of cut limbs and stumps to avoid causing injury to person and damage to property;

e. Clear away the remaining stump and removal of tree debris, cut pieces of limbs and refuse generated from the tree removal work;

f. Prepare a Tree Failure Report as required by the CM.

5. Application of Fertilizers and Pesticides
a. Provide and apply fertilizers and pesticides in accordance with the recommendation approved by the CM;
b. Application of fertilizers shall comply with any one of the following standards (the latest version):
   i. American National Standard for Tree Care Operations (ANSI A300 (Part 2)) – Tree, Shrub, and Other Woody Plant Maintenance – Standard Practices (Fertilization); or
   ii. British Standard for Tree Work (BS 3998:1989); or
   iii. Other international standards approved by the CM.
c. Where chemical method is engaged for pest and disease control, only Approved equipment and chemicals shall be used, and could only be carried out by trained personnel. Pesticides could only be applied by trained personnel who possessed all relevant licence under statutory requirements. Detail records (including but not limited to name of the pesticide, its formulation, registration number, time and location of application, the particulars of the applicator) shall be submitted to the CM for information prior to each operation;
d. No application of pesticides shall be carried out unless with the prior approval of the CM on the time and location of application so as to reduce the disturbance to the public to the minimum; No chemical pest control shall be conducted unless under suitable weather condition and with safety measures implemented. The Contractor shall ensure that the Site is suitably cordoned off and warning notice is displayed to keep off people and animals when chemical is applied. Warning notices should be put up at prominent positions of the Site after each operation of pest control chemical has been applied;
e. The Contractor shall ensure that all personnel in carrying out pesticide application is equipped with and wear the proper protective clothing and working gears during each operation;
f. The Contractor shall ensure that all pesticides to be used shall be in compliance with the Pesticides Ordinance Cap. (133), amended by the Pesticides (Amendment) Ordinance 2013, and approved by the CM before use and application of pesticide shall be performed in accordance with the manufacturer's recommendations; and
g. The Contractor shall dispose of any unwanted pesticides in accordance with the requirements laid down in the Waste Disposal Ordinance (Cap. 354).

6. Work Record
Records on arboricultural works on each tree shall be signed by the QAr, the format of such records shall be as approved by the CM.

7. Safety Requirements
a. The Contractor shall provide proper climbing equipment and protective clothing for its QAr and at all times ensure that all workers operating the chainsaws and other machineries shall have been trained properly and wear safety boots, goggles, protective clothing and reflective safety vests of a conspicuous colour;
b. The Contractor shall remind all personnel working on highway structures (including footbridges, non-expressway bridges and bridge columns) that they have a statutory duty to take reasonable care of their own health and safety as well as that of others their actions or omissions at work may affect. The hazards associated with personnel working on highway structures shall include working at height, falling objects and traffic accidents. All personnel working on highway structures shall wear reflective belts, safety belts, safety harnesses or lifelines as appropriate which should be connected to stable anchorage points;
c. The Contractor shall carry out safety precautions to prevent injury to persons and damage to property as against its workers and the general public. The Contractor shall fulfil the safety requirements of at least one of the following standards (the latest version):
i. American National Standard for Arboricultural Operations (ANSI Z133) – Safety Requirements; or

ii. British Standard for Tree Work (BS 3998:1989); or

iii. Other international standards approved by the CM.

d. Before commencing tree pruning or climbing works, the Contractor shall ensure that there is no overhead high voltage cable near the working area and that pruning operation will not cause damage to the nearby planting or structure. Safety measures must be taken to ensure the safety of the public. The Contractor shall ensure that neither unrelated person nor animal stays nearby during operation and coordinate with relevant authorities regarding any special pruning equipment and/or lighting requirements which may interrupt traffic. Warning signs shall be put up to keep public away from the pruning operation;

e. The Contractor shall ensure that all chainsaws or other machineries used have fulfilled the statutory safety requirements;

f. The CM may direct the removal by the Contractor of any equipment which is considered to be unsafe and unfit for arboricultural works, the Contractor shall bear all costs and expenses in relation to such removals and no time or monetary claims will be entertained under the Contract; and

g. The Contractor shall ensure arboricultural works are carried out in compliance with the Occupational Safety and Health Ordinance (Cap. 509) and its regulations.

8. Collection and Disposal of Refuse

a. The Contractor shall be responsible for the picking up and removal of tree debris, cut pieces of wood, refuse generated from tree assessment/inspection and arboricultural works. The Contractor shall also clear away all debris or refuse, such as joss sticks, incensed idols, construction debris, etc. within the dripline;

b. The Contractor shall provide recyclable polythene bags and transport the refuse collected to the controlled tips at its own cost using wheeled handcarts or any other appropriate equipment in properly covered containers;

c. No damage should be caused to the planting in the working sites when carrying out cleansing duties by the Contractor; and

d. The Contractor shall strictly prohibit its employees or agents from sweeping or dumping the refuses onto the adjoining pavements, surface channels or gullies, or other area or sites at which refuse dumping is not allowed.

9. Work Arrangement along Carriageways

a. The Contractor shall at its own expense make all arrangements for road closure so as to carry out tree assessment/inspection and arboricultural works;

b. Where lane closure is necessary, the Contractor shall liaise with lane closure sub-contractor from approved list of the Highways Department and obtain the necessary approvals from Commissioner for Transport, the Commissioner of Police, the Director of Highways and any other relevant authority for temporary traffic arrangements. The Contractor shall ensure that its workers shall strictly follow the requirements for temporary traffic arrangements as stipulated in the latest version of Code of Practice for the Lighting, Signing and Guarding of Road Works issued by the Highways Department; and

c. The Contractor shall also comply with any other conditions and restrictions imposed by the Commissioner for Transport, the Commissioner of Police and the Director of Highways.
PRESERVATION AND MAINTENANCE OF EXISTING FEATURES

PRE.C9.1510.7 AMENITIES TO BE PRESERVED
Cause the least possible interference with existing amenities, whether natural or man-made.

PRE.C9.1520.7 PROTECTION OF EXISTING ROADS, BUILDINGS AND OTHER STRUCTURES
1. Take all necessary precautions to protect roads, buildings and any other structures, services under or above ground adjacent to or within the Site from the effect of vibration, settlement, undermining or other earth movements, and any such monitoring measures as specified in the Contract or as may be Instructed by the CM;
2. Should the effects of ground movements be detected in any adjacent roads, buildings or other structures, modify methods of construction as Instructed by the CM and any additional expense incurred is deemed to be included in the respective items in the Bill of Quantities;
3. Should ground movements cause any damage to any adjacent roads, buildings or other structures, be responsible for the cost of repairing any such damage.

PRE.C9.1530.7 RESTRICTIONS ON USE OF HIGHWAYS
1. For the purpose of this clause, all public roads shall be regarded as highways;
2. Do not make use of public or private rights of way for depositing or storing plant or materials, other than such plant, materials, tools and implements as shall from time to time be required for immediate use on the several sections of the Works. Place plant, materials and temporary works in such a way as to cause minimum interference with the use of any right of way by the public and maintain those parts of the right of way not temporarily occupied by the Works in a clean, passable and safe state at all times;
3. Use of the surfaced roads leading to the Site shall be limited to tyred vehicular traffic only; tracked vehicles shall not be allowed to run on these roads. Be held responsible for any damage whatsoever caused by construction vehicles and make good immediately any such damage at his own expense.

PRE.C9.1540.7 EXISTING PIEZOMETERS
There are a number of existing piezometers within the Site as indicated on Drawing No. .............. Take all necessary protective measures, such as the erection of protective fencing, to prevent these piezometers from being damaged until the piezometers are removed for the earthworks. Monitor these piezometers in accordance with clause ......................... The Contractor is required to give at least 24 hours advance notice to the CM of his intention of removing the existing piezometers.

PRE.C9.1550.7 REMOVAL OF TREES, PIPES, CABLES, ETC.
If any trees, utility services or other obstructions are required to be removed during the progress of the Works and are not otherwise specifically catered for in the Contract, draw the CM's attention to them and the CM shall arrange for their removal by the Contractor or otherwise.

PRE.C9.1560.7 REINSTATEMENT OF THE SITE
On completion of the Works, all areas outside the limit of construction works shall be restored to their original condition and ground contours unless the CM shall direct otherwise.
PRESERVATION AND MAINTENANCE OF EXISTING UTILITY AND OTHER SERVICES

PRE.C9.1610.7 LIAISON WITH STATUTORY AUTHORITIES
Liaise with the utility undertaking including Water Supplies Department (WSD), Highways Department, Fire Services Department (FSD), Transport Department, Electrical and Mechanical Services Department and Drainage Services Department (DSD) and other relevant departments/parties as advised by the CM from time to time for the removal, alteration and diversion of all utilities, water mains, junction boxes, drainage pipes, traffic light cables, street lighting, road signs and the like during the construction period. Follow the latest version of Transport Department’s Guidelines on Handling of Traffic Installations During Road Works.

PRE.C9.1620.7 DUTY OF CARE
Exercise the greatest care during the progress of work to avoid damage to or interface with any utility or other services, and ensure that no damage shall be done during excavation or any other work on the Site.

PRE.C9.1630.7 PRELIMINARY INVESTIGATIONS
1. Requirements for detecting underground utilities before excavation:
   a. Within 7 days from the date of the Letter of Acceptance, submit to the CM for approval the brand and model of an underground services detection equipment to be used for investigating the locations and depths of underground utilities as required under sub-clause (1)(b) below. The underground services detection equipment proposed must be suitable for the purpose of locating underground utilities which may normally be encountered in the execution of the Works;
   b. Before any excavation including excavation for trial pits, use an Approved underground services detection equipment to locate underground utilities. The underground services detection equipment shall be operated and the results shall be analysed by a person who has the necessary expertise to undertake the detection and analysis; and
c. Take notice of the limitation of using any method of detecting underground services by non-destructive means. Neither the Employer nor the CM shall be responsible whatsoever for any unsuitability of the Approved underground services detection equipment or for the failure of detecting any underground services accurately.

2. Before excavations are carried out near utility services by means of mechanical plant, carry out full and adequate preliminary investigations to locate utility services by means of hand-dug trial holes;

3. Should any cables, ducts and or cover tiles be exposed, the respective utility undertaking should be contacted to determine if all the services have been located;

4. The ducts and cover tiles should only be removed directly by the utility undertaking concerned;

5. Bear the cost of all investigations arising from the requirements of this clause.

PRE.C9.1640.7 LOCATION OF UTILITY SERVICES
1. Details and extent of existing services and installations, and future services and installations likely to be carried out by the Utility Undertaking are prepared from the information provided by the Utility Undertaking and are shown on the Drawings;

2. No warranty either expressed or implied can be given for the accuracy of the information provided;

3. Neither the Housing Authority nor its agents accept any responsibility whatsoever for the accuracy of the Drawings or for the information contained thereon and the Contractor shall be deemed to have made such further enquires and investigation as are required for his own information.

PRE.C9.1650.7 IDENTIFICATION OF SERVICES
1. After the utility services or drains have been located, request the concerned Utility companies or Government Departments to inspect and identify the services or drains by giving at least 3 days notice;

2. Carry out and complete such enquiries and investigations immediately after the notified date for commencement of the Works;

3. Existing services that are known to be within the Site are referred to in PRE.C3.110 and are to be maintained throughout the period of the Contract unless shown on the drawings to be sealed, removed or abandoned.

PRE.C9.1660.7 ALTERATIONS TO SERVICES
Where alterations to services are necessitated by the Works, no adjacent work will be commenced until the alterations have been made.

PRE.C9.1670.7 SAFE KEEPING OF EQUIPMENT
1. Be responsible for the safe keeping and protection of any controllers, cables or other equipment connected with traffic light installations within the Site;

2. The installation, maintenance, removal and restiting of permanent traffic light installations will be arranged by the Housing Authority.

PRE.C9.1680.7 MAINTENANCE OF DRAINAGE SYSTEM
Be responsible for adequately maintaining the existing drainage system at all times including removal of solids in sand traps, manholes and stream beds. (See also PRE.C9.1150 to PRE.C9.1200 inclusive).

PRE.C9.1690.7 RESPONSIBILITY FOR DAMAGE TO SERVICES
1. Be responsible for any such damage caused by the Contractor or his agents directly or arising indirectly from anything done or omitted to be done;
2. Should damage occur, report it to the CM immediately and shall contact the appropriate Utility Undertaking to arrange for any remedial work necessary to be carried out in a manner approved by the CM;
3. Carry out all temporary works necessary to adequately support and protect such services;
4. Bear all costs associated with damage caused to the services.

PRE.C9.1700.7 EXCAVATION BY HAND
If, in the CM’s opinion, damage may be caused by the operation of mechanical plant over or adjacent to any utility services, the Contractor shall be required to excavate by hand in their vicinity. The rates in the contract shall include for such hand excavations.

CONTRACTOR'S SUPERINTENDENCE

PRE.C9.1810.7 GENERALLY
Provide the services of the superintendents listed in PRE.C6.060 in pursuance of GCC Clause 5.8(1) and as specified in the following clauses in this sub-section. Safety training requirements of respective superintendents are specified in the clause PRE.C9.1980.

PRE.C9.1820.7 AUTHORISED REPRESENTATIVE
1. Duties:
The Authorised Representative shall be vested with adequate authority to receive and carry out the directions and instructions of the CM. He shall be an English-speaking representative who shall be in full time attendance on the Contract. To underpin implementation of the safety plan, the Authorised Representative is at duty to assist in promoting the safety and health of personnel employed on Site, which shall include but are not limited to:
a. Supervise the observance of safety standards by the workers;
b. Carry out daily safety inspection;
c. Promote safety-at-work in carrying out work on Site;
d. Attend Site Safety Committee meetings; and
e. Conduct tool-box talks as necessary.
2. Qualifications:
The Contractor’s Authorised Representative shall be a Member of one or more of the following or otherwise suitably qualified to the satisfaction of the CM:
a. The Institution of Civil Engineers (UK);
b. The Institution of Structural Engineers (UK);
c. The Institution of Professional Engineers (New Zealand); and
d. The Hong Kong Institution of Engineers.

PRE.C9.1830.7 LAND SURVEYORS
1. Duties:
Provide the services of a Land Surveyor full time on site for setting out the works. He shall be authorised to receive from the CM all survey data relevant to the Contract.
2. Qualifications:
The Land Surveyor shall be competent and experienced and shall possess a Degree/Diploma in Land Surveying with a minimum of one year local engineering survey experience or other suitable qualification appropriate to the work.
3. Facilities:
Ensure that all necessary equipment and labour for setting out is available when required.

**PRE.C9.1840.7 ENGINEERING GEOLOGIST(S)**

1. **Duties:**
   - Provide the services of .............................. No. Engineering Geologist(s) full time on site whose duties shall include:
     a. Preparing geological logs of drillholes, exploratory pits, excavation faces of caissons and rock and soil faces; keeping photographic records of same; preparing geological sections and reports to the CM, as directed by the CM;
     b. Monitoring behaviour of rock and soil slopes by means of geotechnical instrumentation; collection and presentation of data to the CM, as directed by the CM;
     c. Observing and recording the geological characteristics of the excavated material, all as directed by the CM;
     d. Monitoring behaviour of groundwater on the Site by observing and recording surface flows, piezometers, and flows from any raking drains; collection and presentation of data to the CM, as directed by the CM;
     e. Observation and recording of rock mass characteristics by means of discontinuity surveys; selection of samples for testing; rock and soil slope stability and stabilisation works analyses; presentation of data and reports to the CM as directed by the CM;
     f. Design and sketch stabilisation works using personal computers and Approved computer software, as directed by the CM;
     g. Collection and analysis of data relating to effects of blasting procedures on condition of rock berms and faces and report to the CM, as directed by the CM;
     h. Ensuring adequate field supervision and procedural correctness of rock and soil slope protection and stabilisation works, as directed by the CM. Assessing the stability of boulders and recommending the types of stabilisation works to the CM;
     i. Liaising with the CM on all aspects of the engineering geology and geotechnical works;
     j. Certifying the accuracy, correctness, and completeness, of all geotechnical information supplied to the CM by the Contractor; and
     k. Keeping a detailed record of all aspects of the geotechnical works carried out on site and reporting to the CM weekly.

2. **Qualifications:**
   - The Engineering Geologists shall be competent, English speaking, with a degree from a Hong Kong or British University or Government-approved equivalent in civil engineering, engineering geology, geotechnical engineering, or applied geology, with at least four years geotechnical field experience in Hong Kong.

3. **Facilities:**
   - Provide all necessary labour, technical assistance, draughting assistance and equipment to the Engineering Geologist to allow him to carry out the above work;
   - Because of the technical nature of this supervision and the necessity to work closely with the CM's Geotechnical Engineer, the Engineering Geologist shall be accommodated in the CM's site office.

**PRE.C9.1850.7 BLASTING CONTROL ENGINEER**

1. **Duties:**
   - Provide the services of a Blasting Control Engineer full time on site during rock excavation operations. The Blasting Control Engineer's duties shall include:
     a. Preparing a Blasting Assessment for comment by the Geotechnical Engineering Office before commencement of any rock blasting works;
b. Notifying the CM of the Contractor’s blasting proposals in accordance with
the appropriate clauses in Worksection EAR2 and certifying in writing to the
Contractor’s Representative that all such requirements have been complied
with prior to each blast. This certification shall be copied to the CM at least
one hour before each blast;

c. Acting as an intermediary with the Mines Division, Civil Engineering
Development Department;

d. Advising the Contractor on and vetting the techniques for Controlled
blasting, such as pre-splitting, smooth blasting, etc., with particular reference
to the preservation of high quality rockslope faces and the minimizing of
necessary protection works;

e. Advising on all aspects of blasting safety and in particular prevention of
flying rock; and

f. Monitoring effects of blasting on adjacent property and recommending
improvements to the blasting techniques used where necessary.

Compliance with this sub-clause shall not relieve the Contractor of his
general obligations regarding blasting elsewhere in the Specification.

2. Qualifications:
The Blasting Control Engineer shall be competent, English-speaking, from an
Approved independent agency, and shall be qualified to the satisfaction of the
CM and experienced in Bulk and Controlled blasting.

PRE.C9.1860.7 INDEPENDENT DIVING SPECIALIST

1. Duties:

Provide the services of an independent Diving Specialist. He shall be full-time
on Site during the seawall construction and ......................... He shall inspect all
underwater works and the jointing of the precast box culvert units including
taking colour submarine photographs and preparing inspection reports to the CM,
as directed by the CM.

2. Qualifications:
The independent Diving Specialist shall be suitably qualified to the satisfaction
of the CM.

3. Facilities:

Provide all necessary equipment including a submarine camera, safety
equipment, underwater communication system and a surface decompression
chamber where necessary to the independent Diving Specialist to allow him to
carry out the above works. Provide qualified operators and these persons shall
standby during diving operations.

PRE.C9.1870.7 INDEPENDENT ENVIRONMENTAL CONSULTANT

Provide the services of an independent environmental consultant to conduct the
water quality monitoring works as specified in Worksection MAR. Provide also all
works boats, labour and other resources to the independent environmental consultant
necessary to carry out the above works.

PRE.C9.1880.7 QUALITY CONTROL ENGINEER

1. Duties:

The Contractor shall provide the full time services of a Quality Control Engineer.
The Quality Control Engineer’s duties are:

a. To ensure that all the material and tests comply with the Specification and
Drawings;

b. To inspect work and to certify that it is in accordance with the Specification
and Drawings before seeking Approval to covering up under GCC Clause
7.3(2); and

c. To endorse all delivery vouchers, testing instructions and analysis of testing
results.
The Quality Control Engineer’s endorsement under sub-clause (1)(c) above should state that the materials delivered and constructed and/or testing and/or analysis of testing results conform with the Specification and Drawings.

2. Qualifications:
   a. The Quality Control Engineer shall be competent, English-speaking and qualified in accordance with the following requirements and appropriately experienced to carry out the duties specified in the Contract;
   b. The Quality Control Engineer, shall have a minimum of ............ years' working experience on construction sites of which ........... years must be spent in ............... construction works, and hold one of the following qualifications:
      i. MICE or MHKIE; or
      ii. A degree/higher diploma in civil or structural engineering from a Hong Kong or British University or Government recognised tertiary educational institution.

PRE.C9.1890.7 COMPACTION CONTROL ENGINEER

1. Duties: Be full-time on site during fill slope construction works and:
   a. Supervise and control the quality of all slope filling and compaction works to ensure their compliance with the requirements of the contract;
   b. Supervise all testing associated with the filling and compaction works; and
   c. Prepare the monthly reports, covering assessment, "as-built" plans and sections and testing records specified in EAR1.W2410.

2. Qualifications
   The Compaction Control Engineer shall:
   a. Be a Member of either The Hong Kong Institution of Engineers (Civil or Geotechnical Engineering Discipline) or The Institution of Civil Engineers (UK); or
   b. Hold a degree or higher diploma in civil engineering from a Hong Kong or British University or other Government recognised tertiary educational institution, plus a minimum of four years' relevant experience in civil or geotechnical engineering works.

PRE.C9.1900.7 REGISTERED STRUCTURAL ENGINEER (RSE)

1. Duties: to design, supervise and control all temporary works for earthworks, excavation, dewatering and any specified design and built items. Details are given in Worksection EAR1. Design Section;

2. Qualifications: Registered with the Building Authority as a Registered Structural Engineer and has relevant experiences to the satisfaction of the CM;

3. The RSE shall utilise standard forms (EPS-F3 and EPS-F4 in APPENDIX PRE.C9/II to this Worksection) when submitting all items requiring his certification.

PRE.C9.1902.7 REGISTERED GEOTECHNICAL ENGINEER (RGE)

1. Duties: to prepare and sign the geotechnical report and supporting documentation to support the Contractor's submissions made by the Design Certifying Consultant/Registered Structural Engineer for the following works:
   a. Excavation and Lateral Support Works as stated in EAR1.D030;
   b. Foundation works as stated in the Worksection PIL;
   c. Demolition works as stated in the Worksection DEM.

2. Qualifications: Registered with the Building Authority as a Registered Geotechnical Engineer and has relevant experiences to the satisfaction of the CM;
3. The RGE shall utilise standard forms (EPS-F3 and EPS-F4 in APPENDIX PRE.C9/III to this Worksection) when submitting all items requiring his certification;

4. The RGE shall verify that the conditions on Site are consistent with assumptions made in the geotechnical report and supporting documentation prepared by him;

5. The division of responsibilities between RSE and RGE shall be in accordance with PNAP APP-141.

PRE.C9.1903.7 ENVIRONMENTAL MANAGER (EM)

1. Appoint a person as the EM working on Site to provide professional advice to the Contractor and overseeing all Environmental Management and Site Hygiene matters of the Works and include but not limited to the followings duties:
   a. Prepare, implement and update the Environmental Management Plan;
   b. Advise on measures to be taken to comply with legislative and contractual obligations under environmental protection, waste management and site hygiene and implement such measures;
   c. Liaise on all matters relating to environmental and site hygiene monitoring;
   d. Conduct periodic inspections of the Site for identifying potential hazards to the environment and deficiencies in site hygiene, and recommend corrective actions as necessary;
   e. Attend to enforcement actions taken by the Environmental Protection Department, Food and Environmental Hygiene Department, and other enforcing departments on matters relating to site environment and hygiene;
   f. Attend to public complaints and coordinate remedial actions;
   g. Oversee all the environmental performance on the Site and ensure that any polluting or potentially polluting situation is promptly rectified;
   h. Organize and attend Environmental Management and Site Hygiene meetings;
   i. Compile monthly environmental report for submission to the CM at least five working days before such meetings;
   j. Advise on the implementation of an environmental management system; waste disposal, trip ticketing and other enhancement measures;
   k. Arrange and provide environmental training including site specific induction training and toolbox talks for all Site Personnel, and to organize environmental promotional activities;
   l. Prepare the documentation to support the Contractor's submissions under the Housing Authority's incentive schemes in respect of environmental and site hygiene items;
   m. Monitor the maintenance of cleanliness and tidiness on Site; and
   n. Oversee the proper maintenance of amenity facilities by dedicated workers stated in clause PRE.C9.2440 on the Site.

Option 1

2. The minimum qualification of the EM or the person providing the services of an EM under sub-clause (1) above shall be as follows:
   a. Degree in Environmental Discipline (Environmental Science, Environmental Engineering, Environmental Studies or Environmental Management); or
   b. Degree in construction related discipline and having satisfactorily completed a certificate course in environmental management by a local or overseas tertiary education institute; or
   c. A corporate member of the Hong Kong Institution of Engineers (HKIE) in Environmental Discipline or equivalent; or
   d. A full member of the Hong Kong Chartered Institute of Water and Environmental Management; or
e. A corporate member of a professional institution other than those as mentioned in (c) and (d) above and EITHER having at least 3 years working experience in construction/ project management with environmental management content OR in possession of a diploma or above in environmental studies or environmental engineering awarded by a local or overseas tertiary educational institution.

Option 2

2. The minimum qualification of the EM or the person providing the services of an EM under sub-clause (1) above shall be as follows:
   a. A corporate member of the Hong Kong Institution of Engineers (HKIE) in Environmental Discipline or equivalent; or
   b. A full member of the Hong Kong Chartered Institute of Water and Environmental Management; or
   c. A corporate member of a professional institution other than those as mentioned in (a) and (b) above and EITHER having at least 3 years working experience in construction/ project management with environmental management content OR in possession of a diploma or above in environmental studies or environmental engineering awarded by a local or overseas tertiary educational institution.

PRE.C9.1904.7 ENVIRONMENTAL SUPERVISOR (ES)

1. Appoint an ES working full time on Site to assist EM on the inspection, supervision and monitoring of the environmental and hygiene performance of the Works. The ES's duties include but not limited to the followings:
   a. Assist the EM in carrying out his duties;
   b. Carry out routine inspections of the Site for identifying potential hazards to the environment and deficiencies in site hygiene, report findings with recommendations for corrective actions; and ensure that follow-up action is taken promptly to rectify defects;
   c. Supervise and monitor all the environmental performance on the Site; check and ensure that any polluting or potentially polluting situation is promptly rectified;
   d. Advise EM on the up-keeping of environmental performance and hygiene standards of the Site;
   e. Supervise and promote the execution of environmental protection and hygiene works by the workers on the Site;
   f. Organize site-based environmental protection and hygiene promotion awards and promotional activities as prescribed under the Integrated Pay for Safety, Environment and Hygiene (IPSEHS); and
   g. Supervise the dedicated workers stated in clause PRE.C9.2440 in the proper maintenance of amenity facilities on the Site.

2. The qualification and experience of ES shall be as follows:
   a. A person in possession of a higher diploma or a higher certificate in construction related discipline or environmental studies or environmental engineering awarded by a local or overseas tertiary educational institution, plus 3 years' working experience with a minimum of one year in working experience in environmental related work; or
   b. A person in possession of a higher diploma or a higher certificate in construction related discipline and has satisfactorily completed the "Environmental Protection Course for Environmental Supervisors" organized by CIC, IVE or equivalent.

PRE.C9.1905.7 CONTRACTOR'S LABOUR OFFICER (CLO)

1. The qualifications and experience of the CLO shall be as follows:
   a. Completed Secondary 5 or equivalent; and
   b. Well versed in Hong Kong Employment Ordinance & relevant labour legislation; and
c. Good command of both oral and written English and Chinese; and

d. Good knowledge and experience of the operation and practices of the
construction industry is preferable; and

e. Good computer knowledge preferably with past experience on the operation
of a computerized smart-card system; and

f. 2 years’ full-time working experience on personnel management or human
resources related duties; or Post-secondary qualification in Human
Resources or Personnel Management is preferable.

2. Within 7 days from the notified date for commencement of the Works, the
Contractor shall nominate at least .......... numbers of Contractor's Labour Officer
(CLO) for CM's approval. The nominated CLO(s) when approved shall work
on-site and responsible for monitoring the payment of wages and MPF
contributions. The CLO(s) shall provide all necessary assistance to the Labour
Relations Officer in the monitoring process and in the handling of complaints on
arrears of wages and MPF contributions raised by any Site Personnel;

3. The provision of CLO shall be maintained for the duration of the Contract and at
least 2 months after the month in which the operation of ACRS is terminated as
stipulated in PRE.C9.2560, and within the period the Contractor is required to
keep the wage books as stipulated in PRE.C9.140;

4. The CM shall have the power to withdraw his approval of the CLO at any time.
If such approval shall be withdrawn the Contractor shall, after receiving notice in
writing of such withdrawal, remove the CLO from the Site forthwith and shall
replace him by another CLO approved by the CM.

PRE.C9.1910.7 CONTRACTOR’S EMPLOYEES

1. The minimum number of Trade Tested Workers to be employed by the
Contractor or his subcontractors in accordance with GCC Clause 5.9(1)(c) shall
be calculated in accordance with the following stated percentages of the total
local workforce on the Site (i.e. excluding those labour who are imported with
the approval of the Director of Immigration) at any time in each of the following
specified trades and rounded up to the nearest whole number:

<table>
<thead>
<tr>
<th>Specified Trade</th>

Specification Library 2014 Edition
5. Pursuant to GCC Clause 5.9, the Trade Tested Workers shall have acquired the following qualifications:
   a. Skilled Workers shall be either one of the followings:
      i. A registered skilled worker or registered skilled worker (provisional) as respectively defined in section 2(1) of the Construction Workers Registration Ordinance (Cap 583);
      ii. Holder of a full trade test certificate issued by the Construction Industry Council (CIC) or Vocational Training Council (VTC), or other qualifications as recognised by the Construction Workers Registration Ordinance (Cap 583).
   b. Semi-skilled Workers shall be either one of the followings:
      i. A registered semi-skilled worker or registered semi-skilled worker (provisional) as respectively defined in section 2(1) of the Construction Workers Registration Ordinance (Cap 583);
      ii. Holder of an intermediate trade test certificate issued by the Construction Industry Council (CIC) or Vocational Training Council (VTC), or other qualifications as recognised by the Construction Workers Registration Ordinance (Cap 583).

6. Complete a return for the Trade Tested Workers, giving details of the personal particulars showing but not limited to the trade, name, identity card number and signature of each of such Trade Tested Workers employed, and deliver it together with the returns submitted by the Nominated Sub-contractors to the CM in accordance with GCC Clause 5.25(3):
   a. Obtain the format of the return from the CM;
   b. The return is to be completed in respect of the Trade Tested Workers employed on the fifteenth (15) day of each month, or in the event of the fifteenth (15) day being a General Holiday on the working day immediately following the General Holiday. Submission of the return will not be required after the issue of the Certificate of Completion.

7. Random site checks will be carried out by the CM's site supervisory staff on the workers working on Site. Ensure that all Skilled Workers and Semi-skilled Workers will be able to produce their trade test certificates, intermediate trade test certificates, trade test certification cards, intermediate trade test certification cards, certificates of completion of apprenticeship or registration certificates under the Electricity Ordinance (Cap. 406) upon request;

8. For those trades requiring a total of 100% Skilled Workers plus Semi-skilled Workers, employment of trainees may be allowed subject to the CM's agreement. They should be closely supervised by Skilled/Semi-skilled Workers.

PRE.C9.1920.7 GENERAL FOREMAN
1. Appoint a General Foreman constantly on Site who must have a minimum of 7 years site experience of which four years must have been spent in relevant piling works as a site supervisory staff;
2. Part of the duties of the General Foreman are to assist in promoting the safety and health of personnel employed on Site which shall include but are not limited to:
   a. Supervise the observance of safety standards by the workers;
   b. Carry out daily safety inspection;
   c. Promote safety-at-work in carrying out work on Site;
   d. Attend Site Safety Committee meetings; and
   e. Conduct tool-box talks as necessary.
3. The General Foreman shall have attended and completed the Safety and Health Supervisor (Construction) Course (nominal course duration 43 hours) provided by the Occupational Safety and Health Council or Construction Safety Supervisor Course (nominal course duration 42 hours) provided by the Construction Industry Council. Acceptance of training provided by other organizations is subject to verification that the training is based on course contents of equivalent or above standards and the appointed superintendent has attained the associated qualification;

4. Submit for Approval within seven days from the notified date for commencement for the Works, the name(s), qualifications and experience of general foreman.

**PRE.C9.1930.7 AUTHORIZED SIGNATORY (AS)**

1. The qualification and experience of the AS shall be as required under the Buildings Ordinance, in particular, the requirement stated in the Practice Note for Registered Contractors (PNRC) No. 38, the CoPSS, and other relevant PNRCs issued by the BD;

2. The AS shall carry out the duties in the SSP stated in clause **PRE.C9.2010** and other relevant requirements.

**PRE.C9.1950.7 DESIGN CERTIFYING CONSULTANT**

1. Select a consultant on the Architectural and Associated Consultants Selection Board’s (AACSB) List of Structural Engineering Consultants for CM’s approval as the Design Certifying Consultant;

2. Duties: to certify all layouts, details and calculations submitted to the CM. The submissions must be signed by a Director of the Design Certifying Consultant, who must be a Registered Structural Engineer registered with the Building Authority;

3. The Design Certifying Consultant shall utilise standard forms (EPS-F3 and EPS-F4 in APPENDIX PRE.C9/III to this Worksection) when submitting all items requiring his certification.

**PRE.C9.1965.7 TECHNICALLY COMPETENT PERSONS (TCP) FOR SSP**

1. Appoint one or more TCP of the grade and with qualification and relevant experience specified in the TMSP and CoPSS for various types of works as required under the SSP, to carry out the duties as specified in the SSP;

2. Subject to the CM’s approval, one TCP may be assigned to cover the duties and responsibilities of more than one role provided that:
   a. The TCP who is appointed satisfies the requirements of the highest grade of TCP specified; and
   b. The TCP undertakes inspections at a frequency not less than the frequency derived in accordance with the documents stated in sub-clause (1) above.

3. Notify the CM immediately if there is any subsequent change of the TCP during the course of services.

**PRE.C9.1970.7 TECHNICAL DIRECTOR (TD)**

1. The qualification and experience of the TD shall be as required under the Buildings Ordinance, in particular, the requirements stated in the PNRC No. 38, and other relevant PNRCs issued by the BD;

2. The TD shall be authorized by the Contractor to:
   a. Have access to plant and resources;
   b. Provide technical and financial support for the execution of the Works; and;
   c. Make decisions for the company and supervise the AS and other personnel.

3. The TD should not be the same person as the AS in **PRE.C9.1930**.
MANDATORY SAFETY TRAINING FOR APPOINTED SUPERINTENDENTS

1. Appointed superintendents, namely, Authorised Representative, Quality Control Engineer (QCE), Blast Control Engineer, Authorized Signatory (AS), Technically Competent Person (TCP) Grade T4 to T5 for SSP and Environmental Manager (EM) shall have attained the following mandatory safety training qualification:
   a. Safety Training Course for Site Management Staff (nominal course duration 27 hours) provided by the Construction Industry Council or Occupational Safety & Health Council or equivalent training provided by other organizations subject to verification that the equivalent training is based on course contents of equivalent or higher standard.

2. Superintendents can be exempted from certain modules of the Safety Training Course for Site Management Staff by fulfilling the exemption criteria laid down by the Construction Industry Council or Occupational Safety & Health Council.

3. If any appointee of the specified superintendents in sub-clause (1) above cannot comply with the safety training qualification stipulated therein but have attained the following qualification on or before the date of the Employer’s letter of acceptance of the tender, such appointed superintendent is allowed to attain the safety training qualification of the Safety Training Course for Site Management Staff (with exemption of Modules 1, 2 and 3 for attainment of the qualification) or the equivalent training as referred to in sub-clause (1)(a) above within six months from the date of the Employer’s letter of acceptance of the tender:
   a. Basic Safety Management course (nominal course duration 12 hours) provided by the Occupational Safety & Health Council or equivalent course provided by the Construction Industry Council or equivalent training provided by other organizations subject to verification that the equivalent training is based on course contents of equivalent or higher standard; and Basic Accident Prevention course (nominal course duration 12 hours) provided by the Occupational Safety & Health Council or equivalent training provided by other organizations subject to verification that the equivalent training is based on course contents of equivalent or higher standard; or
   b. Safety Supervisor (Construction) course (nominal course duration 43 hours) provided by the Occupational Safety & Health Council or Construction Safety Supervisor course (nominal course duration 42 hours) provided by the Construction Industry Council.

4. Appointed superintendents, namely, Technically Competent Person (TCP) Grade T1 to T3 for SSP and Environmental Supervisor (ES) shall have attained the following mandatory safety training qualification or equivalent training provided by other organizations subject to verification that the equivalent training is based on course contents of equivalent or higher standard:
   a. Safety and Health Supervisor (Construction) Course (nominal course duration 43 hours) provided by the Occupational Safety and Health Council; or
   b. Construction Safety Supervisor Course (nominal course duration 42 hours) provided by the Construction Industry Council.

5. The appointed superintendents referred to in sub-clauses (1) and (4) above who have attained or once attain the stipulated training qualification shall participate and give advice in Induction Training and Tool Box Talks to enrich the knowledge of personnel of particular trades.
SITE ORGANISATION AND SITE SUPERVISION PLAN

PRE.C9.2010.7 SUBMISSIONS OF ORGANISATION CHART AND SSP
1. Submit to the CM for approval within seven days from the notified date for commencement of the Works, and re-submit any change for CM's further approval, the following:
   a. Site organisation chart including the names of the project director, the Contractor's superintendents as required in PRE.C9 and safety officer;
   b. Names of sub-contractors for foundation works, if any, including the names of the project directors, Authorized Signatory, Technical Director, TCPs and site representatives of sub-contractors; and
   c. Written declaration together with supporting documents (e.g. employment contract, bank payroll record, MPF contribution record) stating that the Contractor’s Management Team and the Contractor's superintendents as required in PRE.C6.060 and other personnel as shown on the site organisation chart are directly employed by the Contractor. The employment terms for the Contractor's Management Team and the Contractor's superintendents shall include a "consent to disclosure" clause in accordance with the data protection principles set out under the Personal Data (Privacy) Ordinance (Cap. 486). Personal data (e.g. HKID number, salary amount) within the supporting documents can be blanked out or covered up when submitted by the Contractor.
2. Submit a SSP for Site Formation Works to the CM at least 22 days before the commencement of the Site Formation Works as follows:
   a. The SSP shall comply in all respects with the requirements stated in the TMSP and CoPSS;
   b. Complete and submit Form ICU 206 for the SSP.
3. Submit a SSP for the foundation works to the CM at least 22 days before commencement of the foundation works:
   a. The SSP shall comply in all respects with the requirements stated in the TMSP and CoPSS;
   b. The supervision provided by the RSC(F) shall cover all stages of works stated in the above documents, including those works required to be carried out by the RSC(GIFW) as stated in PIL1.G460 & PRE.C2.110;
   c. Complete and submit Form ICU 206 for the SSP.
4. Submit a SSP for ELSW to the CM at least 22 days before the commencement of the ELSW as follows:
   a. The SSP shall comply in all respects with the requirements stated in the TMSP and CoPSS;
   b. Complete and submit Form ICU 206 for the SSP.
5. Submit a SSP for GIFW to the CM at least 22 days before the commencement of the GIFW as follows:
   a. The SSP shall comply in all respects with the requirements stated in the TMSP and CoPSS;
   b. Complete and submit Form ICU 206 for the SSP.

SITE ADMINISTRATION

PRE.C9.2110.7 NORMAL WORKING HOURS
Normal working hours of the Contract shall be the period between 08.00 and 17.00 of the same day. The CM shall be informed in advance when the Contractor intends to carry out work outside normal working hours and no such work shall be carried out without Approval.
NOTIFICATION OF OPERATIONS

1. The site inspection system for the Works shall be in accordance with the sub-clauses (2) to (5) below except for mainlaying works which should be as Worksection WSP;

2. Further to GCC Clause 7.3, the Works will be subjected to a formalized system of written application for inspection and approval. The format of the proforma to be used is to be proposed by the Contractor for the Approval of the CM;

3. Further to any other notification required under the Contract, submit to the CM a written application for inspection and Approval at least 24 hours, or longer if so instructed, before any works are to be covered up or put out of view. In the case of weekend working the Contractor must give notice to the CM at the latest 12 o'clock noon on the previous Thursday with regard to works which he intends to carry out on the following Saturday or Sunday. Forty-eight hours notice, or other such period as agreed by the CM, shall be given where it is intended to carry out work immediately following a General Holiday;

4. Notwithstanding the requirements of sub-clause (3) above the CM shall at his absolute discretion have the right to withhold permission for the Contractor to carry out certain works after 12 o'clock noon on Saturdays, and on General Holidays;

5. In addition to the above, submit to the CM's Representative at the end of each day (and on Friday for each weekend) a detailed list of the work to be carried out the next day. This shall include exact locations, nature of each operation, and time when the work is to be carried out to enable the CM's staff to attend for the purpose of examining such work;

6. Should any work not be examined as a result of the Contractor failing to take action in accordance with sub-clauses (3), (4) and (5) above, then it will be treated as having been done without the Approval required by GCC Clause 7.3.

ESTIMATED LABOUR AND PLANT RESOURCES

1. The estimated monthly labour and plant resources for the whole contract period shall be submitted with the programme submitted under GCC Clause 5.7;

2. Within two months from the notified date for commencement of the Works, submit to the CM a forecast of all the estimated monthly interim statements to be submitted by the Contractors pursuant to Clause 14.1(1);

3. The forecast of the estimated monthly interim statements shall be based upon the Contractor's programme submitted in accordance with GCC Clause 5.7.

MONTHLY PROGRESS REPORTS

1. Furnish to the CM written progress reports at monthly intervals at the end of each Contract month;

2. The monthly progress reports shall be submitted in duplicate and shall include a schedule of the labour and plant resources employed during the previous month;

3. The monthly reports shall be related to the programme provided according to PRE.C.6.050 and shall also include a schedule of those activities carried out in the previous month and those activities to be carried out in the following three months showing actual or forecast start and finish times, total and free float and variance against the programme for all activities;

4. Critical activities shall be clearly marked and any critical activities which have not started or finished on time shall be noted;

5. The monthly progress reports shall include revised bar charts and a revised network whenever the logic of the network is changed;

6. The Contractor shall indicate what steps he proposes to make to recover any time lost.
PRE.C9.2150.7 FORMS FOR CONTRACTOR'S MONTHLY INTERIM STATEMENTS
Monthly statements pursuant to GCC Clause 14.1(2) shall be submitted in the manner set out in Appendix ................. on forms to be provided by the Contractor. Such forms shall be printed or duplicated to the Approval of the CM as soon as practicable after the order to commence the Works has been given. Each statement shall be submitted to the CM through his representative, interim statements being in 3 copies and the final statement being in 4 copies.

PRE.C9.2160.7 PROGRESS PHOTOGRAPHS
1. Provide colour record progress photographs taken from the same vantage points at monthly intervals or as directed by the CM. Such photographs shall be sufficient in number and location to record the progress of the Works and one proof copy of each shall be supplied to the CM to allow him to select the photographs which in his opinion provide the best record;
2. Provide two prints of not less than 250 mm x 200 mm in size and one negative of each selected photograph in Approved hard cover ring-file type albums with clear plastic sleeves to accommodate the prints and negatives. A label shall be provided for each photograph in the album clearly indicating the project title, the date the photograph is taken and the part of the works it shows. Prints of the selected photographs shall be signed and dated by the Contractor and the CM and these together with the negatives and the albums shall become the property of the Housing Authority;
3. One set of photographs shall be taken to comprise 36 No. photographs selected by the CM and shall consist of three prints and one negative of each of such photographs;
4. Notwithstanding the above, additional progress photographs shall be provided by the Contractor of any part of the Works when considered necessary as directed by the CM. The cost of these photographs is covered in the B of Q;
5. Provide the progress photographs and corresponding negative to the CM not later than 2 weeks after filming;
6. The Contractor shall ensure that the negatives or prints in his possession are not used by him or other parties without the CM's written permission and shall also ensure that all photography on the Site is authorised by the CM;
7. Upon completion of the Works, provide two sets of aerial photographs showing all the completed works. One set of these photographs shall comprise 36 No. of photographs selected by the CM and shall consist of three 8R size mounted prints and one negative each of such photographs.

PRE.C9.2170.7 STEEL BAR REINFORCEMENT RECORD PHOTOGRAPHS
Provide a photographic record comprising 3R or other Approved size colour prints of each stockpile of mild steel bars placed in each and every location in the Site. Such photographs shall be taken and furnished immediately to the CM twice daily at 9:00 a.m. and 6:00 p.m. for every stockpile of mild steel bars from the same vantage points for each stockpile or as directed by the CM.

PRE.C9.2180.7 DOCUMENTATION FOR STEEL BAR REINFORCEMENT
Submit to the CM the mill certificates and delivery receipts for each consignment of reinforcement. The mill certificates shall be certified by the supplier and the weighing certificates and the delivery receipts shall be certified by the Contractor.

PRE.C9.2190.7 PUBLICITY
Refer all requests from the press or from other media for information concerning the Works or the progress thereof directly to the CM.

PRE.C9.2200.7 GOVERNMENT PLANT
1. Be responsible for the protection, watching, lighting and safe custody of any Government equipment being used on the Works;
2. When Government equipment is hired to the Contractor, the Contractor will be required to enter into a formal agreement setting out the conditions of hire. The Contractor shall be responsible for the collection and transportation of the equipment from the place of issue to the Site and vice versa at his own expense;

3. Housing Authority and Government do not accept liability for any loss or damage caused or alleged to be caused to the Contractor, in the event of breakdown or non-availability of the equipment, due to unforeseen circumstances.

PRE.C9.2210.7 MATERIALS SUPPLIED BY HOUSING AUTHORITY

1. Materials supplied by Housing Authority from Government Supplies Department shall be supplied at ledger cost plus 20% in accordance with Stores Regulation 302 unless specifically provided for otherwise in the Contract;

2. a. Any materials so supplied shall be delivered to the Contractor either at ship, godown, Government stores or quarries on presentation of a requisition signed by the CM;

   b. The Contractor must satisfy himself at the time of taking delivery that all the stores stated in the requisition are handed over to him and that each article is in good condition;

   c. No claim for compensation after they have been removed from the ship, godown or stores can be entertained;

   d. Remove the whole of the articles to the Works and house them to the satisfaction of the CM in a proper store until such time as they are required for use in the Works.

3. The Contractor shall be held responsible for all stores issued to him by the CM and shall make good any damage or losses to the same, the value of such damage or loss being assessed by the CM and deducted from the Contract Manager's certificates for payment to the Contractor;

4. The cost of transport and storage of all such stores will be included in the appropriate rates in the Contract;

5. Where materials supplied by Housing Authority are delivered in crates or containers, dispose of such crates or containers as directed by the CM;

6. The Contractor shall prepare a schedule, in accordance with GCC Clause 5.7, of his programme for the estimated timing of taking delivery of materials to be supplied by the Housing Authority. The schedule shall be submitted to the CM within four weeks from the notified date for commencement of the Works.

PRE.C9.2220.7 LABOUR RETURNS

1. Further to GCC Clause 5.25, enter daily, on a form provided by the CM, information in respect of labour employed on site for the works. Provide information for each of the separate classes of labour, including daily wages, and in accordance with any requirements of the CM and the Census and Statistics Department of the Government of Hong Kong Special Administrative Region. Three copies of the form shall be prepared and two completed forms shall be submitted to the CM. The remaining copy shall be retained by the Contractor;

2. For the purpose of completing the labour return, the individual trades shown in the left hand column below shall be considered as being equivalent to those appearing on the corresponding lines in the right hand column:

<table>

3. No requests from the Contractor for alterations in these equivalent trades will be entertained. Trades of supervisory staff shall not be considered.

**PRE.C9.2230.7 CALIBRATION OF EQUIPMENT**

1. Be responsible for the calibration of the equipment used for the Contract against the appropriate national standards upon commencement of the contract and the calibration will repeat at an interval as specified in PRE.C9.2240;
2. Ensure that the equipment are capable of the accuracy and precision necessary to carry out the inspection, measuring and test;
3. The calibration shall be carried out at the Contractor's own expense;
4. Each item of equipment shall be attached with an identification label and a calibration status label;
5. Calibration Certificates shall be provided as required;
6. Records of calibration results shall also be available at all times for inspection when requested by the CM;
7. Equipment items that are not calibrated at the required interval or found to be inaccurate after calibration shall not be allowed to be used in this Contract.

**PRE.C9.2250.7 COMPLIANCE WITH PERSONAL DATA (PRIVACY) ORDINANCE**

1. Comply with the provisions of the Personal Data (Privacy) Ordinance and any rule, regulation and code of practice made thereunder in respect of personal information held in connection with this Contract and in the collection, handling, use and processing of such personal data;
2. Indemnify the Employer in respect of any liability, loss or damages incurred arising out of or in connection with any non-compliance of the above provisions.

**PRE.C9.2260.7 ENVIRONMENTAL PERMIT**

1. Further to GCC Clause 5.23, conform in all respects with the conditions of the Environmental Permit, a copy of which is reproduced in Appendix ...........
2. For the purpose of this Contract, the "Environmental Permit" means any environmental permit issued by the Director of Environmental Protection in respect of the Works or project which the Works form a part thereof under the Environmental Impact Assessment Ordinance (Cap. 499) including any variation of the environmental permit;
3. Be responsible for displaying a copy of the most updated Environmental Permit at the locations as stipulated under the Environmental Permit or as directed by the CM;
4. It is unnecessary for the Contractor to apply for and hold an Environmental Permit since he may rely on the Environmental Permit obtained by the Employer.

**CONSTRUCTION WASTE MANAGEMENT**

**PRE.C9.2310.7 CONSTRUCTION WASTE MANAGEMENT - GENERAL**

1. In executing the works, generate the minimum quantity of waste possible;
2. Of the inevitable waste that is generated, sort, salvage for re-use, or recycle on or off Site as much of the material as possible;
3. Minimize the disposal of waste material in landfills.

**PRE.C9.2320.7 SPECIAL WASTE MANAGEMENT RESPONSIBILITIES**

Be responsible for the following:
1. To ensure that all relevant legislation and the Contractor’s duty of care is complied with throughout the duration of the Contract;
2. To minimize waste:
   a. Adopt measures to ensure the proper planning of the Works;
   b. Avoid over ordering of materials;
   c. Avoid cross contamination of materials, either for use in the Works or for reuse or recycling;
   d. Minimize the use of timber in temporary work;
CONTRACTOR'S OBLIGATIONS

PRE.C9

- Optimize the use of reusable metal formwork, falsework, trench supports and the like;
- Maximize the use of inert excavated material within the Site.

3. To co-ordinate waste management on Site, keep accurate records on waste movement on and off Site;

4. To ensure that all containers and storage areas are properly labelled;

5. To obtain a list of potential buyers or collectors of materials to be re-used or recycled;

6. Whenever possible (except when new materials are expressly specified), ensure re-use or recycling of material already on Site before it is carted away or new materials are imported;

7. To investigate potential re-use and recycling opportunities.

PRE.C9.2330.7 PACKAGING MATERIAL

Unwrap materials only when they are needed. Separate and store packaging material immediately after unwrapping. Return packaging materials to the supplier or his agent as stated in the Waste Management Plan. Where this is not possible, arrange for collection of the material by a recycling company. Such material may only be disposed of at landfill when it is demonstrated that recycling facilities are either not available, impractical or cost effective.

PRE.C9.2340.7 ON-SITE SORTING OF C&D MATERIAL

1. Sort all C&D material arising from or in connection with the Works to recover the inert portion and other re-usable or recyclable material prior to disposal off-site. Unless otherwise stated, all surplus C&D material shall become the property of the Contractor when it is removed from the Site;

2. Devise a system to sort C&D material on-site including the identification of the source of generation, estimated quantity, arrangement for on-site sorting and/or collection, sorting methodology, temporary storage areas, frequency of collection by the recovery/recycling contractors where specified in the Contract or frequency of removal off the site;

3. All inert C&D material shall be sorted into:
   a. Hard rocks and large broken concrete reusable on the Site or disposable at a designated location as advised by CEDD;
   b. Metals;
   c. Paper and plastics;
   d. Reusable or recyclable material other than materials listed in sub-clauses (3)(a), (3)(b) and (3)(c);
   e. Chemical wastes and containers; and
   f. Materials suitable for disposal at public fill reception facilities, sorting facilities and landfills/oulying islands transfer facilities.

4. Segregate inert C&D material that is suitable for recycling for aggregates to be used in concrete, sub-base or concrete based products for delivery to a designated recycling facility where specified; and

5. Packaging material (cardboard, paper, plastics, foam etc.) shall be properly sorted, segregated and stockpiled in a protected area to prevent contamination.

PRE.C9.2350.7 REMOVAL OF WASTE MATERIALS

1. Stack waste materials neatly, and remove from Site as soon as is practical after completion of each operation and before next trade commences all material that will not be reused or recycled;

2. Avoid obstruction where more than one trade is operating simultaneously;

3. Do not permit accumulated waste material piles to exceed 2000 mm generally; and

4. Provide necessary receptacles to store waste tidily prior to removal from Site.
PRE.C9.2360.7 WASTE REDUCTION TARGETS
1. To facilitate assessment of waste management measures, the following minimum performance targets shall be adopted:
   a. The sorting targets described or specified in Clause PRE.C9.2340;
   b. 100% recovery of inert portion of excavated material and demolition debris from demolition works;
   c. 100% recovery for metallic waste;
   d. 100% recovery for non contaminated paper and cardboard.
2. Other targets set for this Contract are as follows:
3. The Contractor may set higher recovery targets providing that such targets are realistic and achievable. The Contractor may add targets for other C&D waste material that may be applicable to the Contract.

ENVIRONMENTAL MANAGEMENT PLAN

PRE.C9.2410.7 ENVIRONMENTAL MANAGEMENT RESPONSIBILITIES
1. For the duration of the Contract, instruct workers, oversee, and document the results of the Environmental Management Plan described hereafter. Be responsible and ensure that all Nominated Subcontractors, Specialist Contractors, utility undertaking and employees are aware of aims of and the contents of the Environmental Management Plan;
2. Ensure that all relevant legislations and the Contractor’s duty of care are complied with throughout the duration of the Contract.

PRE.C9.2415.7 SUBMISSION AND UPDATING OF ENVIRONMENTAL MANAGEMENT PLAN
1. Further to GCC Clauses 5.28 and 5.31, prepare and submit to the CM within 21 days of the date of the Letter of Acceptance 3 copies of draft Environmental Management Plan (EMP) containing the information specified or required under PRE.C9.2420. Arrange and hold an ad hoc meeting (or meetings if necessary) with the CM or his representative to discuss the draft EMP within 7 days from the submission of such plan. If the CM is of the opinion that the draft EMP does not meet the requirements of the Contract, he can request for remedy of the deficiency. Comply with any such CM’s request prior to submitting six copies of the EMP to the CM for endorsement within 35 days of the date of the Letter of Acceptance;
2. Throughout the duration of the Contract and any extended contract period, update the EMP at monthly intervals or when circumstances deem necessary or when required by the CM so that it is at all times a comprehensive and contemporary statement of the policies, procedures and requirements to achieve the environmental management, waste management and site hygiene obligations and responsibilities under the Contract;
3. The CM may by notice in writing require the Contractor to supplement, revise or update the EMP if he is of the opinions that the EMP is insufficient or requires revision of modification in the interest of the environmental management, waste management and site hygiene, whether for the Site or adjacent to the Site or otherwise. Comply with such CM’s notice within 7 days of such notice;
4. Ensure the EMP has incorporated the Nominated Sub-contractor's environmental management plan in respect of the Nominated Sub-contract Works. Request the Nominated Sub-contractor to prepare and submit an environmental management plan in respect of the Nominated Sub-contract Works within 14 days of the letter of acceptance of the Nominated Sub-contractor's tender for agreement and incorporation into the EMP. Ensure consistency between the EMP and the environmental management plan in respect of the Nominated Sub-contract Works. Submit the agreed environmental management plan in respect of the Nominated Sub-contract Works to the CM for endorsement. Revise and update the EMP to incorporate the environmental management plan in respect of the Nominated Sub-contract Works endorsed by the CM when the EMP is due to be revised or updated;

5. Request the Nominated Sub-contractor to revise or update the environmental management plan in respect of the Nominated Sub-contract Works by virtue of a revision or update of the EMP pursuant to sub-clauses (2) and (3) above. Ensure the revised or updated environmental management plan in respect of the Nominated Sub-contract Works is consistent with the EMP and submit the revised or updated environmental management plan in respect of the Nominated Sub-contract Works to the CM for endorsement;

6. Submit and present the EMP to the Environmental and Site Hygiene Management Meetings;

7. The CM’s endorsement, comment or rejection of the EMP and of any proposed revision or update, and the implementation of the EMP by the Contractor shall not relieve the Contractor from any obligations or responsibilities under the Contract or any statutory regulations;

8. Appoint on a full time basis on Site a person to oversee the implementation of the EMP. Comply and ensure all personnel who are responsible for the environmental management, waste management and site hygiene and who are in a position of authority among sub-contractors have access to the EMP. Any Specialist Contractor and other entities (e.g. public utilities) working on the Site shall also be provided with a copy of the EMP and be required to comply with it, report to the CM any non-compliance on their part;

9. Provide all facilities, access and assistance to the CM to periodically check that the EMP is being implemented properly and fully. If the CM is of the opinion that the Contractor fails to implement properly and fully the EMP and the failure does or may adversely affect the environmental management, waste management and site hygiene, whether for the Site or adjacent to the Site or otherwise, the CM will notify the Contractor in writing of the failure. Take action to remedy the failure immediately.

**PRE.C9.2420.7 ENVIRONMENTAL MANAGEMENT PLAN (EMP)**

All Environmental Management Plan (EMP) and draft EMP shall be signed by the Contractor's Managing Director or his Representative before. The EMP shall be subdivided into the following sections containing:

1. General environmental management of the Contract:
   a. A signed environmental and site hygiene policy statement committing the Contractor to environmental protection for the project;
   b. A Contractor's staff organization chart with duties, responsibilities and accountability defined. Identify the name and position of the person to oversee the implementation of the EMP. The person shall work full time on-site. Also appoint a senior staff member, designated person(s) and experience person(s) for the implementation of the Trip Ticket System (TTS) in pursuance of PRE.C9.470 and PRE.C9.480;
   c. Staff awareness and training proposals for Contractors' and Sub-contractors’ staff with auditable records of trained persons;
   d. Environmental impacts, targets and mitigation objectives to minimize impacts;
   e. Records containing licences, permits, trip ticket records, complaints and record of corrective actions where non-compliance has been identified; and
f. A list on environmental regulations and descriptions on methodology (including testing) to ensure compliance.

2. Waste Management Plan to reduce and minimize the generation of C&D materials in the execution of the Works stating:
   a. An analysis of waste likely to be generated from work processes with types of waste identified and quantified with list of each material proposed to be salvaged, and re-used or recycled with quantities. The data shall be included in the Waste Flow Table at Appendix PRE.C9/I. The Waste Flow Table shall be reviewed and if necessary revised monthly;
   b. A statement of measures taken to reduce, salvage, re-use and recycle waste materials on and off site;
   c. A description of the methods of sorting, segregation, labelling, storing, protecting and disposing of all the various types of waste materials generated. The materials shall be listed in the Waste Flow Table. Various materials may include but are not limited to:
      i. Inert C&D materials generated from the Works;
      ii. Inert C&D materials to be re-used in the Works;
      iii. C&D materials to be re-used in other projects (including reclamations) or at Contractor’s nominated Approved outlets;
      iv. Inert C&D materials suitable for recycling into aggregates for concrete or sub-base to be disposed of at an Approved location;
      v. Inert C&D materials to be disposed of at a public fill reception facility;
      vi. Steel and other metals (including reinforcement bars) for collection by recycling contractors;
      vii. Paper and cardboard for collection by recycling contractors;
      viii. Plastics (i.e. plastic bottles, containers, sheets, foam);
      ix. A list of hazardous wastes (oils, paints and chemicals) together with details of the method of storage and proposals for collection and disposal arrangements by specialist disposal company;
      x. General refuse to be disposed of at a landfill or outlying islands transfer facility.
   d. The location, layout and details of designated sorting and storage areas. Describe necessary adaptations as the works progress;
   e. A method statement of how the Site will be kept clean with debris minimized;
   f. Details to minimize the use of timber in temporary works construction;
   g. Control measures to ensure that the sorted recyclable materials such as metal, paper, plastics and milled bituminous materials etc. are delivered to a proper recycling outlet for processing;
   h. For materials delivered to Site, a statement that reusable and recyclable packaging materials and pallets will be re-used, recycled or returned to the supplier. Identify those suppliers who will not accept the return of pallets and reusable and recyclable packaging materials;
   i. The Waste Management Plan may be revised from time to time to incorporate Nominated Sub-contractors and other party's requirements as and when they are appointed; and
   j. A Waste Disposal Record.

3. Site Management Plan for implementation of the TTS. Submit the Site Management Plan for CM’s Approval within 45 days of the date of the Letter of Acceptance. If the CM is of the opinion by notice in writing that the Site Management Plan does not meet the requirements of this clause, revise the Plan and resubmit for the CM’s Approval within 7 days of the notice. Review the Site Management Plan on a monthly basis at the Site Safety and Environmental Management Committee meeting with discussion items as detailed in sub-clause (3)(i) below. Submit any updated version of the Plan for CM’s Approval. The Plan shall include the following details:-
a. Names of the designated or alternative disposal grounds identified;  
b. A site organization chart showing the manpower resources and duties of  
each staff member in the implementation of the TTS. The following  
requirements shall be met:  
  i. Appoint a senior staff member with at least two years experience in site  
management to be fully responsible for implementing and overseeing  
the operation of the TTS;  
  ii. Appoint designated person(s) to fill in and sign Part 1 of the Daily  
Record Summary (DRS) properly before departure of the trucks. A  
sample of the DRS is given at Appendix PRE.C9.APPEND; and  
  iii. Appoint experienced person(s) to man each exit from the Site to ensure  
that every truck carrying C&D materials leaving the Site bears a duly  
completed CHIT or Disposal Delivery Form (DDF). Such appointed  
person(s) shall record the CHIT/DDF number, the vehicle registration  
number and the departure time of every truck leaving the Site with C&D  
material.  
c. A monthly programme for disposal of C&D materials off the Site, and  
indicate the estimated quantities, types of the C&D materials and  
corresponding disposal grounds. Update the programme and submit to the  
CM by the fifteenth (15) day of each month, or in the event of the fifteenth  
(15) day being a General Holiday the working day immediately following  
the General Holiday, or a later date as agreed by the CM;  
d. Site procedures to ensure that each truckload of C&D materials leaving the  
Site will bear a duly completed CHIT/DDF and that Part 1 of the DRS has  
been filled in and signed properly before departure of the truck;  
e. Recording system with comprehensive register to ensure timely  
retrieval of  
the CHIT/DDF issued and Transaction Record Slip from the disposal  
grounds, and make it available for inspection by CM's Representative upon  
request or where irregularities are observed;  
f. Surveillance system within the Site and at any alternative disposal grounds  
to check that the disposal activities comply with the requirements specified;  
g. Control measures to prevent any unauthorized disposal of C&D materials,  
where trucks need to exit and re-enter the Site for delivery of C&D materials  
generated;  
h. For site formation contract, a video recording system as specified in  
PRE.C9.495; and  
i. The following items shall be included in the agenda for discussion at every  
Site Safety and Environmental Management Committee meeting, or other  
established channels for performance monitoring as agreed by the CM's  
Representative:  
  i. Review the Site Management Plan and implementation of the TTS, and  
identify areas for improvement;  
  ii. Audit the quantity of C&D materials removed from the Site (based on  
the DRS and survey records) against the quantities of C&D materials  
delivered to the disposal ground designated in the Contract (e.g. based  
on the EPD's web-site) or against the quantities of C&D materials  
delivered to the Approved alternative disposal ground;  
  iii. Review incidents of non-compliance and discuss the necessary follow-  
up actions; and  
  iv. Monitor the follow-up action on defects and deficiencies identified.  
4. Air Quality  
a. Measures and methods to control dust and debris on and off Site;  
b. Measures to monitor and report air quality conditions on Site;  
c. Use of ultra-low-sulphur diesel:
i. Ultra-low-sulphur diesel (ULSD) is defined as diesel fuel containing not more than 0.005% by weight of sulphur. All Constructional Plant powered by diesel fuel, whether they belong to the Contractor or his sub-contractors, shall only be replenished with ULSD when working on Site;

ii. The Contractor shall maintain a summary record of all the delivery notes of ULSD delivered to Site, including those ordered by his sub-contractors, together with the details of consumption of such fuel by the individual Constructional Plant on Site and the date of arrival and departure of the Constructional Plant to and from the Site. The Contractor shall utilise the standard proforma in APPENDIX PRE.C9/VI; and

iii. All records of fuel deliveries shall be supported by the original delivery notes of the oil companies. All records and delivery notes shall be kept on Site and ready for inspection by the CM or the CM’s representative upon request.

5. Noise Control
   a. Acquisition of noise permits;
   b. Types of noise reduction equipments to be used and their applications;
   c. Details of noise restrictions affecting the Contract; and
   d. Descriptions of noise mitigation measures.

6. Protection and Damage Mitigation
   a. Mitigation methods to prevent soil erosion, wash down or slope collapse and any method to carry out reinstatement work;
   b. Methods of protecting existing trees, shrubs and other vegetation including protecting fencing provided by others;
   c. Maintenance of roads and footpaths;
   d. Methods to protect adjoining properties, roads, paving, and boundary structures; and
   e. Methods to deal with chemical spillage.

7. Water Pollution Control and Conservation
   a. Measures to conserve water and record water consumption;
   b. Methods of minimizing water consumption including wastewater recycling;
   c. Methods to avoid contamination and blockage of drains and sewers and comply with the Water Pollution Control Ordinance;
   d. Method to prevent flooding and blocking of site drainage system;
   e. Listing and description of necessary permits, approvals to be obtained and complied with; and
   f. Details of necessary drainage diversions and temporary drainage systems.

8. Tropical Hardwoods
   A description of proposed alternatives to tropical hardwood which will meet the same performance standards in the construction of all temporary works including site accommodation, storage sheds, covered walkways, hoardings, screens, signboards excavation supports and formwork and falsework. Tropical hardwoods are not permitted to be used in temporary works without the Approval of the CM;

9. Site cleanliness, tidiness and hygiene
   a. Description of a proposed system to maintain cleanliness and tidiness of the Site including details of means to protect materials locations of stockpiles and on-site sorting and disposal areas;
   b. Measures to remove and prevent standing water and prevent mosquito breeding;
c. Assign a specific number of dedicated workers for maintenance of site hygiene and amenities provisions on Site which are subject to the IPSEHS as referred to in PRE.C9.1903 and PRE.C9.1904. If required, provide the identity of such workers for verification by CM or his representative.

10. Emergency Procedures
   Identify whether any environmental emergency could occur on site such as typhoons and rainstorms and formulate emergency procedures to deal with such situations;

11. Environment and site hygiene promotion
   a. The effort made by different sub-contractors or individuals to maintain cleanliness and tidiness of the Site, to reduce and minimize the generation of waste at work and to protect materials locations of stockpiles and on-site sorting and disposal areas by the application of soundly based policies, procedures and disciplines to be recognised by the presentation of environmental protection awards. Adopt proactive attitude towards improving environmental management and site hygiene performance and to promote workers' awareness on environmental protection and site hygiene. The site as a whole is encouraged to participate in the following designated environmental protection awards:
      - "The Hong Kong Awards for Environmental Excellence" [Environmental Labels (Wastewise or Energywise); Green Innovations; or Sectoral Awards] organized by the Environmental Campaign Committee with EPD; or
      - "Considerate Contractors Site Award Scheme" (Outstanding Environmental Management and Performance Award) organized by the Development Bureau and the Construction Industry Council.
   b. The Contractor is also encouraged to organize site-based awards and competitions to promote participation of his workers and teams in environmental protection and site hygiene theme competitions during the contract period. The adjudicating team shall comprise the site management team, environmental protection personnel and workers' representatives, and shall act openly and fairly in such events.

PRE.C9.2430.7 DISTRIBUTION OF AND COMPLIANCE WITH THE ENVIRONMENTAL MANAGEMENT PLAN
   After CM's endorsement to the EMP, distribute copies of same to CM's Representatives, Nominated Sub-contractors and all specialist contractors and suppliers. Ensure compliance with the EMP and all relevant statutory regulations.

PRE.C9.2435.7 ENVIRONMENTAL MANAGEMENT AND SITE HYGIENE PERFORMANCE
   Throughout the duration of the Contract carry out to the satisfaction of the CM all environmental protection/management and site hygiene measures including the discharge of duties as specified in the Environmental and Site Hygiene Checklist shown below:

<table>
<thead>
<tr>
<th>Environmental and Site Hygiene Issues</th>
<th>Spec. PRE.C</th>
<th>Checking Frequency</th>
<th>Compliance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Noise Control</td>

<tr>
<td>Air Quality</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Removal of Water</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
ENVIRONMENTAL MANAGEMENT AND SITE HYGIENE PERFORMANCE MONITORING AND REPORTING

Throughout the duration of the Contract:

1. Carry out environmental inspections to review, monitor and report monthly to the CM (or when so directed by the CM) on the effectiveness of the implementation of the EMP;

2. Report monthly to the CM for the followings received from Environmental Protection Department (EPD) or Food and Environmental Hygiene Department (FEHD):
   a. Warning letters or offences notifications;
   b. Convictions during the period under any environmental and site hygiene regulations or legislation; and
   c. Abatement Notice.

3. Take all necessary follow-up actions to ensure that any defects or deficiencies are made good and;

4. Conduct monthly Environmental and Site Hygiene Management Meetings or when directed by the CM, submit minutes of the meetings to the CM for verification. The CM may also attend or nominate a representative to attend the meetings. Meetings shall cover the followings:
   a. Environmental and site hygiene matters, including implementation of the Trip-ticket System as appropriate, arising from the Contractor's obligations in executing the Works;
   b. The review on incidents of non-compliance with the EMP;
   c. Discussion and monitoring of the necessary follow-up action on defects and deficiencies; and
   d. Areas for improvement.

5. Report monthly to the CM for the followings:
   a. Particulars of workers specially trained and deployed to attend to site hygiene and amenities provisions during the day and have assisted in the tidying up of trade waste at the end of a working day;
   b. Date-marked photos of site amenities conditions before and after tidying up of loose ends on site; and
   c. Photographic evidence in chronological order of such maintenance work.
PROVISION OF ENVIRONMENT AND HYGIENE TRAINING

1. Arrange for all skilled workers employed on the Works or in connection with the Contract whether in the employment of the Contractor or Sub-contractors to attend training on all aspects of environmental management organized by training institutions and/or the Environmental Protection Department (EPD);

2. Set out the level, frequency and estimated staff numbers to attend such training and state the same in the EMP;

3. Develop and provide site specific induction training and tool box talks on all appropriate aspects of environmental protection and site hygiene to promote workers’ awareness on environmental management and state the same in EMP, such training and tool box talks are to be carried out by suitably qualified supervisors or foremen, site specific induction training and tool box talks may be conducted as part of the site safety training regime;

4. At the end of each period of interim certificate, report to the CM the actual number of workers trained as specified and submit contractors’ with certified attendance records;

5. A full statement of the Contractors training proposals shall be stated in the EMP.

PAYMENT FOR PRE-DETERMINED AMOUNTS FOR SITE SAFETY, ENVIRONMENTAL MANAGEMENT AND SITE HYGIENE

1. The payment for the "environmental management and site hygiene performance" item in the Bills of Quantities shall be subject to the Contractor's average score (A) of the items as specified in the checklist stipulated in PRE.C9.2435 and this average score (A) is worked out by the CM's Representative as follows:

   a. Items of environmental management and site hygiene performance as specified in PRE.C9.2435 are subject to assessment at the frequency specified therein;

   b. The calculation of the average score (A) only applies to valuation of the items under environmental management and site hygiene performance as specified in PRE.C9.2435. The average score (A) for each monthly valuation shall be derived from the results of the assessment as follows:

      \[
      (A) = \frac{A1 + A2 + A3 + A4 + A5 + A6}{6}
      \]

      whereas

      \[
      A1 = \frac{\text{Total No. of Items of Compliance under Noise Control}}{\text{Total No. of Items of Inspection under Noise Control}}
      \]

      \[
      A2 = \frac{\text{Total No. of Items of Compliance under Air Quality}}{\text{Total No. of Items of Inspection under Air Quality}}
      \]

      \[
      A3 = \frac{\text{Total No. of Items of Compliance under Removal of Water}}{\text{Total No. of Items of Inspection under Removal of Water}}
      \]

      \[
      A4 = \frac{\text{Total No. of Items of Compliance under Construction Waste Management}}{\text{Total No. of Items of Inspection under Construction Waste Management}}
      \]

      \[
      A5 = \frac{\text{Total No. of Items of Compliance under Protection}}{\text{Total No. of Items of Inspection under Protection}}
      \]

      \[
      A6 = \frac{\text{Total No. of Items of Compliance under Site Cleanliness & Hygiene}}{\text{Total No. of Items of Inspection under Site Cleanliness & Hygiene}}
      \]
Total number of items of compliance is referring to the number of compliance achieved for the respective item under the respective group for the checking made according to the checking frequency specified in the checklist stipulated in PRE.C9.2435 for a monthly valuation period.

Total number of items of inspection is referring to the number of inspection for the respective item under the respective group for the checking made according to the checking frequency specified in the checklist stipulated in PRE.C9.2435 for a monthly valuation period.

c. Criteria for payment are as follows:
   i. If (A) is below 85%, no payment for the environmental management and site hygiene monitoring performance item incorporated in the Bills of Quantities will be made for that month;
   ii. If (A) is within the range of 85% to less than 90%, payment for that month for the environmental management and site hygiene performance item incorporated in the Bills of Quantities will be valued at the pre-determined rate multiplied by 0.7;
   iii. If (A) is 90% or above, payment for that month for the environmental management and site hygiene performance item incorporated in the Bills of Quantities will be valued at the pre-determined rate multiplied by 1.0.

2. The assessment of payment for the "Silver Card compliance" item in the Bills of Quantities shall be subject to the principles as given below:
   a. The status of each category of workers of specified trades listed in PRE.C9.205 (4)(b) is subject to assessment on a monthly basis based on the records of the date of record checking as designated by the CM (hereinunder referred to as the ‘designated date of record checking’) for a month;
   b. The payment for the "Silver Card Compliance" item in the Bills of Quantities shall be subject to the Contractor's score (R). The score (R) for a monthly valuation shall be derived as follows:
      \[
      (R) = \frac{P}{Q}
      \]
      expressed as a percentage rounded to one decimal place
      where \( P = P_1 + P_2 \)
      \( Q = Q_1 + Q_2 - Q_3 \)
      with each parameter defined in sub-clauses (2)(c) to (2)(g) below.
   c. \( P_1 \) denotes the number of workers of the specified trades (except for the trade of ‘Lift Mechanic and Worker for Lift Installation’) who are on Site and in possession of valid Silver Cards on the designated date of record checking of the month;
   d. \( P_2 \) denotes the number of workers of the specified trades (except for the trade of ‘Lift Mechanic and Worker for Lift Installation’) with all of the following attributes:
      i. The worker was verified to be on Site on the designated date of record checking of a previous month;
      ii. The worker did not possess a valid Silver Card on the designated date of record checking of a previous month but the worker had enrolled in a Silver Card training course / re-validation course run by the CIC;
      iii. The worker is not on Site on the designated date of record checking of the month;
      iv. The designated date of record checking of the month is more than 90 calendar days from the date of the worker's first appearance on Site;
      v. The worker had not been counted under the parameter \( Q_2 \) in any designated date of record checking of any previous months;
      vi. The worker has successfully obtained a valid Silver Card as required on or before the designated date of record checking of the month.
e. Q1 denotes the number of workers of the specified trades (except for the trade of 'Lift Mechanic and Worker for Lift Installation') on Site on the designated date of record checking of the month;

f. Q2 denotes the number of workers of the specified trades (except for the trade of 'Lift Mechanic and Worker for Lift Installation') with all of the following attributes:
   i. The worker was verified to be on Site on the designated date of record checking of a previous month;
   ii. The worker did not possess a valid Silver Card on the designated date of record checking of a previous month but the worker had enrolled in a Silver Card training course / re-validation course run by the CIC;
   iii. The worker is not on Site on the designated date of record checking of the month;
   iv. The designated date of record checking of the month is more than 90 calendar days from the date of the worker's first appearance on Site;
   v. The worker had not been counted under this parameter Q2 in any designated date of record checking of any previous months.

g. Q3 denotes the number of workers of the specified trades (except for the trade of 'Lift Mechanic and Worker for Lift Installation') with all of the following attributes:
   i. The worker is on Site on the designated date of record checking of the month;
   ii. The worker does not possess a valid Silver Card but has enrolled in a Silver Card training course / re-validation course run by the CIC;
   iii. The designated date of record checking of the month is not more than 90 calendar days from the date of the worker's first appearance on Site.

h. For the avoidance of doubt, the 'date of the worker's first appearance on Site' as referred to in sub-clause (2)(d) to (2)(g) above shall be the day on which the worker first enters into the Site to carry out the work of the specified trades and is regardless of whether or not the worker has left the Site and is returning to work again on the specified trades;
   i. The score (R) shall be worked out by the Contractor in accordance with sub-clause (2)(b) above when completing the prescribed form (DCEI-F14) and is subject to verification by the CM's Representative;

j. Criteria for payment for the 'Silver Card Compliance' item are as follows:
   i. Where score (R) turns out to be 0/0 for the designated date of record checking of the month, no payment will be made for the month in which the designated date of record checking falls;
   ii. Where score (R) is a percentage other than 0/0 for the designated date of record checking of the month, then payment for the month in which the designated date of record checking falls will be valued at the predetermined rate against this item multiplied by this score (R).

3. The assessment for payment of the items for "Safety Audit performance indicators" in the Bills of Quantities shall be subject to the principles as given below:
   a. Verified percentage scores for Part A "Safety Management", Part B "Safety Audit Checklist" and verified individual percentage score for designated critical items (collectively referred to as "Verified Safety Audit Percentage Score") are obtained from each safety audit conducted under the Housing Authority Safety Auditing System (HASAS) as specified in PRE.C9.205. Those scores shall be verified by Occupational Safety and Health Council (OSHC) and confirmed by CM for official record and payment purpose;
   b. The criteria for payment assessment in respect of "Safety Audit Performance indicator (overall score)" are as follows:
      i. If the verified percentage score for either Part A or Part B of a safety audit is below 70%, no payment shall be valued and made for this item in respect of that safety audit;
ii. If the verified percentage scores for both Part A and Part B of a safety audit are each equal to or above 70% but with either one or both of them below 80%, the payment for this item in respect of that safety audit shall be valued at the pre-determined rate of this item as included in the Bill of Quantities by multiplying it with the quantity of work of this item in respect of this audit which shall be equal to by 0.7 in respect of that safety audit;

iii. If the verified percentage scores for both Part A and Part B of a safety audit are equal to or above 80%, the payment for this item in respect of that safety audit shall be valued at the pre-determined rate of this item as included in the Bill of Quantities by multiplying it with quantity of work of this item in respect of this audit which shall be equal to 1.0 in respect of that safety audit.

c. The payment assessment in respect of "Safety Audit Performance indicator (critical items)" shall take into account the following:

i. The verified individual percentage score for designated critical items of the Verified Safety Audit Percentage Scores; and

ii. The apportioned percentage for each individual designated critical item as indicated in the table below.

<table>
<thead>
<tr>
<th>Designated critical items</th>
<th>Element/Subsection and reference in safety audit</th>
<th>Apportioned percentage %</th>

</tbody>
</table>

Note: The apportioned percentage for each designated critical item shall be referred to as "effective apportioned percentage" when being applied for payment assessment.

d. The criteria for payment assessment in respect of "Safety Audit Performance indicator (critical items)" are as follows:

i. If the verified individual percentage score for a designated critical item (in the table in sub-clause (c) above) of a safety audit below 70%, the critical item shall not be considered for the purpose of payment assessment in respect of that safety audit;

ii. If the verified individual percentage score for a designated critical item (in the table in sub-clause (c) above) of a safety audit is equal to or above 70%, the corresponding apportioned percentage as included in the table in sub-clause (c) above shall become an "effective apportioned percentage" and shall be used for the purpose of payment assessment in respect of that safety audit;
iii. The payment for this item in respect of a safety audit shall be valued at the pre-determined rate of the item included in the Bill of Quantities and by multiplying it with the quantity of work of this item in respect of this audit which shall be equal to the sum of the "effective apportioned percentage" of the critical items of the table in sub-clause (c) above in respect of that safety audit;

iv. For the avoidance of doubt, the "effective apportioned percentage" for the critical item of "lifting" shall only become applicable for payment assessment in respect of a safety audit if each of the sub-items (namely, subsection 14.2.3, 14.4.1 and 14.4.2) available for assessment has acquired a verified individual percentage score of 70% or above in that safety audit; however, if any one of these sub-items available for assessment has acquired a verified individual percentage score of below 70%, the "effective apportioned percentage" for the whole critical item of "lifting" shall not be applicable in respect of that safety audit.

4. The assessment for payment of the items of "Regulatory Compliance Indicator - yearly record check", "Regulatory Compliance Indicator - residual period record check at completion" and "Regulatory Compliance Indicator – final record check" items in the Bills of Quantities shall be subject to the principles as given below:

**Option 1**

a. Payment for the item of "Regulatory Compliance Indicator - final record check" shall be valued at the pre-determined rate of the item included in the Bill of Quantities and by multiplying it with the quantity of work of the item which shall be equal to 1.0 in respect of the record check if the Contractor has confirmed in writing that none of the following is received from the Labour Department (LD) within the assessment period:

i. One or more letters received subsequent to LD's inspection advising category Part 1 contravention particularly against Construction Site (Safety) Regulations or subsidiary regulations of the Factories and Industrial Undertakings Ordinance;

ii. Five or more letters received subsequent to LD's inspection advising category Part II contravention particularly against Construction Site (Safety) Regulations or subsidiary regulations of the Factories and Industrial Undertakings Ordinance;

iii. Suspension Notice.

b. For the purpose of establishing the Contractor's entitlement to payment for the item of "Regulatory Compliance Indicator - final record check", a one-off assessment irrespective of any extended contract period as defined in the Bill of Quantities shall be carried out by the CM or CM's representative;

c. The assessment period shall be from the date for commencement of the Works up to and including the date of the certificate of completion of the Works (or where phased completion of Sections is specified, the last date of completion stated amongst the different certificates of completion for the Sections of the Works) issued by the CM under GCC Clause 8.7.

**Option 2**

a. Payment for the items of "Regulatory Compliance Indicator - yearly record check" and "Regulatory Compliance Indicator - residual period record check at completion" shall be valued at the pre-determined rate of the respective item included in the Bill of Quantities and by multiplying it with the quantity of work of that item which shall be equal to 1.0 in respect of the record check if the Contractor has confirmed in writing that none of the following is received from the Labour Department (LD) within the respective assessment period:

i. One or more letters received subsequent to LD's inspection advising category Part 1 contravention particularly against Construction Site (Safety) Regulations or subsidiary regulations of the Factories and Industrial Undertakings Ordinance;
ii. Five or more letters received subsequent to LD's inspection advising
category Part II contravention particularly against Construction Site
(Safety) Regulations or subsidiary regulations of the Factories and
Industrial Undertakings Ordinance;

iii. Suspension Notice.

b. For the purpose of establishing the Contractor's entitlement to payment for
the item of "Regulatory Compliance Indicator - yearly record check", an
assessment shall be carried out by the CM or CM's representative at the end
of each full 12-month period commencing from the date for commencement
of the Works. However, no assessment (and hence no payment) shall be
made for any full 12-month period which ends on a date beyond the contract
/extended contract period as defined in Bill of quantities or Schedule of
Rates;

c. For the avoidance of doubt, the remeasured quantity in adjustment of
account for items of "Regulatory Compliance Indicator - yearly record
check" shall not exceed the quantity as stated in the Bill of Quantities;

d. For the purpose of establishing the Contractor's entitlement to payment for
the item of "Regulatory Compliance Indicator - residual period record check
at completion", a one-off assessment irrespective of any extended contract
period as defined in the Bill of Quantities shall be carried out by the CM or
CM's representative. The assessment period shall be from the first day after
the last assessed period of "yearly record check" in (b) above up to and
including the date of the certificate of completion of the Works (or where
phased completion of Sections is specified, the last date of completion stated
amongst the different certificates of completion for the Sections of the
Works) issued by the CM under GCC Clause 8.7.

5. The assessment for payment of the items of "Accident indicator - yearly record
check" and "Accident indicator - final record check at completion" items in the
Bills of Quantities shall be subject to the principles as given below:

Option 1

a. Payment for the item of "Accident Indicator - final record check at completion" shall be valued at the pre-determined rate of the item included
in the Bill of Quantities and by multiplying it with the quantity of work of
that item which shall be equal to 1.0 in respect of the record check if the
Contractor has achieved the following results within the assessment period:

i. No fatal accident; and

ii. Annualized accumulative accident rate not more than 12 per 1,000
workers.

b. The annualized accumulative reportable accident occurrence rate per 1000
workers (AR) is derived from the following formula with the cut-off date
applicable to all variables (i.e. D, N and W) being set at the last date of a
quarter of the calendar year, i.e. 31st March, 30th June, 30th September or
31st December, immediately preceding the quarter in which the last date of
the assessment period of the record check falls:

\[
AR = \frac{N}{W} \times 1000 \times \frac{365}{D}
\]

Where

\[
N = \text{Accumulative number of reportable site accidents as defined in the Factories and Industrial Undertakings Ordinance up to the cut-off date. A "reportable accident" shall refer to an accident arising from industrial activities leading to death(s) or injuries which have incurred incapacity of the person injured for more than 3 days.}
\]

\[
W = \text{Average daily number of workers on site reported on Labour Return Form GF527 starting from the notified date for commencement of the Works up to the cut-off date.}
\]
**Contractor's Obligations**

\[ D = \text{Number of calendar days from the notified date for commencement of the Works up to the cut-off date.} \]

c. For the purpose of establishing the Contractor's entitlement to payment for the item of "Accident indicator - final record check at completion", a one-off assessment irrespective of any extended contract period as defined in the Bill of Quantities shall be carried out by the CM or CM's representative;

d. The assessment period shall be from the date for commencement of the Works up to and including the date of the certificate of completion of the Works (or where phased completion of Sections is specified, the last date of completion stated amongst the different certificates of completion for the Section of the Works) issued by the CM under GCC Clause 8.7.

**Option 2**

a. Payment for the items of "Accident indicator - yearly record check" and "Accident indicator - final record check at completion" shall be valued at the pre-determined rate of the respective item included in the Bill of Quantities and by multiplying it with the quantity of work of that item which shall be equal to 1.0 in respect of the record check if the Contractor has achieved the following results within the assessment period:

i. No fatal accident; and

ii. Annualized accumulative accident rate not more than 12 per 1,000 workers.

b. The annualized accumulative reportable accident occurrence rate per 1000 workers (AR) is derived from the following formula with the cut-off date applicable to all variables (i.e. D, N and W) being set at the last date of a quarter of the calendar year, i.e. 31st March, 30th June, 30th September or 31st December, immediately preceding the quarter in which the last date of the assessment period of the record check falls:

\[ AR = \frac{N}{W} \times 1000 \times \frac{365}{D} \]

Where

\[ N = \text{Accumulative number of reportable site accidents as defined in the Factories and Industrial Undertakings Ordinance up to the cut-off date. A "reportable accident" shall refer to an accident arising from industrial activities leading to death(s) or injuries which have incurred incapacity of the person injured for more than 3 days.} \]

\[ W = \text{Average daily number of workers on site reported on Labour Return Form GF527 starting from the notified date for commencement of the Works up to the cut-off date.} \]

\[ D = \text{Number of calendar days from the notified date for commencement of the Works up to the cut-off date.} \]

c. For establishment of the Contractor's entitlement to payment for the item of "Accident indicator - yearly record check", an assessment shall be carried out by the CM or CM's representative at the end of each full 12-month period commencing from the date for commencement of the Works. However, no assessment (and hence no payment) shall be made for any full 12-month period which ends on a date beyond the contract/extended contract period as defined in Bill of quantities or Schedule of Rates;

d. For the avoidance of doubt, the remeasured quantity in adjustment of account for item of "Accident indicator - yearly record check" is subject to the capping limit which is equal to the quantity as stated in the Bill of Quantities. Therefore, in case where the remeasured quantity is larger than the quantity as stated in the Bill of Quantities, the respective quantity stated in the Bill of Quantities shall be taken as the remeasured quantity for adjustment of account.
e. For the purpose of establishing the Contractor's entitlement to payment for the item of "Accident indicator - final record check at completion", a one-off assessment irrespective of any extended contract period as defined in the Bill of Quantities shall be carried out by the CM or CM's representative. The assessment period shall be from the date for commencement of the Works up to and including the date of the certificate of completion of the Works (or where phased completion of Sections is specified, the last date of completion stated amongst the different certificates of completion for the Section of the Works) issued by the CM under Clause 53 of the General Conditions of Contract.

6. The assessment for payment of the item "Recognition of innovative and functional safety installation or safety measures" in the Bills of Quantities or shall be subject to the principles as given below:
   a. The Contractor has implemented innovative and functional safety installation or safety measures which are verified/supported by the Occupational Safety and Health Council (OSHC) as explicitly stated in the Safety Audit reports; and
   b. CM has verified the implementation merits to his satisfaction.

7. The assessment for payment of the item "Application of Building Information Modeling (BIM) for safety" in the Bills of Quantities shall be subject to the principles as given below:
   a. The Contractor has implemented BIM technology in the hazard control process and training of frontline supervisors and workers;
   b. The application has been verified/supported by the Occupational Safety and Health Council as explicitly stated in the Safety Audit reports; and
   c. CM has verified the implementation merits to his satisfaction.

8. The assessment for payment of the item "Application of Radio Frequency Identification (RFID) for safety" in the Bills of Quantities shall be subject to the principles as given below:
   a. The Contractor has implemented RFID technology to enhance site safety and health management in terms of hazard analysis, risk assessment, safety training, etc.;
   b. The application has been verified/supported by the Occupational Safety and Health Council as explicitly stated in the Safety Audit reports; and
   c. CM has verified the implementation merits to his satisfaction.

9. The assessment for payment of the items of "Compliance with regulations related to Environmental Protection and Site Hygiene - yearly record check", "Compliance with regulations related to Environmental Protection and Site Hygiene - residual period record check at completion" and "Compliance with regulations related to Environmental Protection and Site Hygiene - final record check" items in the Bills of Quantities shall be subject to the principles as given below:

**Option 1**

   a. Payment for the item of "Compliance with regulations related to Environmental Protection and Site Hygiene - final record check" in respect of an assessment period shall be valued at the pre-determined rate of the item included in the Bill of Quantities and by multiplying it with the quantity of work of the item which shall be equal to 1.0 in respect of the record check if none of the following criteria in respect of environmental and site hygiene legislation and regulations are received from the Environmental Protection Department (EPD) or the Food and Environmental Hygiene Department (FEHD) during the assessment period:
      i. One or more warning letters received from the Contract Manager subsequent to inspections;
      ii. One or more warning letters received from EPD or FEHD;
      iii. One or more convictions under any environmental and site hygiene regulations or legislation;
iv. Abatement Notice.
Provided that where the criteria (a)(i) to (iv) above are satisfied but there are one or more offence notifications received from EPD or FEHD during any assessment period for which any conviction under any environmental and site hygiene regulations or legislations is yet to be confirmed by EPD or FEHD at the time when the payment assessment is being carried out, payment for this item shall be valued with the quantity provisionally set at zero and which will be adjusted to 1.0 upon confirmation from EPD or FEHD that there is no conviction;

b. For the purpose of establishing the Contractor's entitlement to payment for the items "Environmental Protection and Site Hygiene - final record check", a one-off assessment irrespective of any extended contract period as defined in the Bill of Quantities shall be carried out by the CM or CM's representative;

c. The assessment period shall be from the date for commencement of the Works up to and including the date of the certificate of completion of the Works (or where phased completion of Sections is specified, the last date of completion stated amongst the different certificates of completion for the Sections of the Works) issued by the CM under GCC Clause 8.7.

Option 2

a. Payment for the items of "Compliance with regulations related to Environmental Protection and Site Hygiene - yearly record check" and "Compliance with regulations related to Environmental Protection and Site Hygiene - residual period record check at completion" shall be valued at the pre-determined rate of the respective item included in the Bill of Quantities and by multiplying it with the quantity of work of that item which shall be equal to 1.0 in respect of the record check if none of the following in respect of environmental and site hygiene legislation and regulations are received from the Environmental Protection Department (EPD) or the Food and Environmental Hygiene Department (FEHD) during the assessment period:

i. One or more warning letters received from the Contract Manager subsequent to inspections;

ii. One or more warning letters received from EPD or FEHD;

iii. One or more convictions under any environmental and site hygiene regulations or legislation;

iv. Abatement Notice.
Provided that where the criteria (a)(i) to (iv) above are satisfied but there are one or more offence notifications received from EPD or FEHD during any assessment period for which any conviction under any environmental and site hygiene regulations or legislations is yet to be confirmed by EPD or FEHD at the time when the payment assessment is being carried out, payment for this item shall be valued with the quantity provisionally set at zero and which will be adjusted to 1.0 upon confirmation from EPD or FEHD that there is no conviction;

b. For the purpose of establishing the Contractor's entitlement to payment for the items "Compliance with regulations related Environmental Protection and Site Hygiene - yearly record check", an assessment shall be carried out by the CM or CM's representative at the end of each full 12-month period commencing from the date for commencement of the Works. However, no assessment (and hence no payment) shall be made for any full 12-month period which ends on a date beyond the contract/extended contract period as defined in Bill of quantities or Schedule of Rates;

c. For the avoidance of doubt, the remeasured quantity in adjustment of account for item of "Compliance with regulations related Environmental Protection and Site Hygiene - yearly record check" is subject to the capping limit which is equal to the quantity as stated in the Bill of Quantities. Therefore, in case where the remeasured quantity is larger than the quantity as stated in the Bill of Quantities, the respective quantity stated in the Bill of Quantities shall be taken as the remeasured quantity for adjustment of account;
d. For the purpose of establishing the Contractor's entitlement to payment for the item of "Compliance with regulations related Environmental Protection and Site Hygiene - residual period record check at completion", an one-off assessment irrespective of any extended contract period as defined in the Bill of Quantities shall be carried out by the CM or CM's representative. The assessment period shall be from the first day after the last assessed period of "yearly record check" in (b) above up to and including the date of the certificate of completion of the Works (or where phased completion of Sections is specified, the last date of completion stated amongst the different certificates of completion for the Sections of the Works) issued by the CM under GCC Clause 8.7.

10. The assessment for payment of the "Recognition of innovation in environmental management and site hygiene measures" item in the Bills of Quantities shall be subject to the principles as given below:
   a. The Contractor has implemented innovative environmental management and site hygiene measures;
   b. The measure has been supported by an independent vetting panel; and
   c. CM has verified the implementation merits to his satisfaction.

SITE ACCESS CONTROL OF PERSONNEL

SITE ACCESS CONTROL AND RECORDING SYSTEM

Provide and operate an Access Control and Recording System (ACRS) to record and verify the information of all personnel (including Site Personnel, Self-employed Workers, Specialist Contractors' workers and visitors) entering and leaving the Site as specified in PRE.C9.2512 to PRE.C9.2560 and as per the requirements stipulated in the latest "Contractor's Guideline on Wage Monitoring System" published by HA from time to time:

1. Operate the ACRS within two weeks from the notified date for commencement of the Works;
2. After the ACRS is put into operation, issue smart cards to all personnel for identification;
3. Subject to sub-clause 2 above, do not allow any personnel without a smart card to work on the Site;
4. Compile a register for all issued smart cards with detail information of the card holders and submit it to the CM for records at regular intervals as confirmed by the CM. Both hard and soft copies of the register shall comply with the format similar to the prescribed forms attached to the latest "Contractor's Guideline on Wage Monitoring System" published by HA from time to time;
5. Compile and maintain daily attendance records of all personnel working on the Site and site access record of all visitors and keep a verified copy in the wage books as required in PRE.C9.140 as per the timeframe confirmed by CM's representative;
6. Compile and maintain schedules of wages and MPF contribution as required in PRE.C6.170 and PRE.C9.140;
7. Compile and print record forms of Silver Card Holders working on Site by respective trades on dates designated by the CM. The record form shall be in the format similar to the Record Form (DCEI-F14) and fields to be entered shall enable the information required in sub-clause (2) of PRE.C6.210 to be retrieved. The Record Form (DCEI-F14) can be obtained from the CM upon request in writing;
8. Provide training to at least three CM's representatives and LRO in using the ACRS;
9. At least 2 number of portable pocket personal computers complying with the system requirements as stipulated in PRE.C9.2520 shall be provided for the use of the CM or LRO during the operation period of ACRS.
ARRANGEMENT FOR PRE-OPERATION OF ACRS

1. Within 7 days from the notified date for commencement of the Works, submit to the CM for record the temporary arrangement for pre-operation of ACRS. The temporary arrangement shall include use of log books, card readers or portable pocket personal computers complying with the system requirements as stipulated in PRE.C9.2520 to record the time of entry and departure of all personnel, and issuing temporary passes or smart cards to them;

2. Implement the temporary arrangement to record and verify the information of all personnel as required in the ACRS and their entering and leaving the Site until the ACRS is ready to operate.

DESIGN, OPERATION AND SUBMISSION REQUIREMENTS

Submit the following of the ACRS to the CM for record within 14 days from the notified date for commencement of the Works:

1. Design and operation detail of the system;
2. Format and submission arrangement of the data;
3. Name and details of the service provider;
4. Emergency plan in the event of breakdowns, repairs or regular maintenance.

SYSTEM REQUIREMENTS

1. The ACRS shall include the following:
   a. Entrance/Exit Control Unit;
   b. Central Data Computer Unit;
   c. Portable pocket personal computer.

   Option 1

2. The ACRS shall be a system utilising biometric recognition technology for identifying the subject (person entering or leaving the site) in combination with a non-contact type smart card system complying with ISO 14443. The chip inside the smart card shall comply with ISO 14443. The biometric authentication shall be a Handkey II or other products having similar and equivalent functions and performances;

   Option 2

2. The ACRS shall be a system with a non-contact type smart card system complying with ISO 14443. The chip inside the smart card shall comply with ISO 14443;

3. The smart card shall be compatible with the Construction Workers Registration Cards issued by the Construction Industry Council (CIC) under the Construction Workers Registration Ordinance (Cap. 583) to registered construction workers. The system's card readers shall be compatible with the smart card and shall be complete with a security access module (SAM) for cryptographic security slot. The Contractor shall obtain the SAM from the CIC;

4. The ACRS shall have sufficient memory to capture and record the information, and produce reports as specified in PRE.C9.2530 to PRE.C9.2550;

5. Adequate and secure backup system shall be provided. In the event of power failure, all memory contained in the data station computer shall be retained;

6. If a personnel (except visitor) is issued with a registration card by the CIC pursuant to the Construction Workers Registration Ordinance (Cap. 583), the card so issued is permitted to be used in lieu of the smart card required under this section;

7. All data stored in the ACRS shall be accessed and retrieved by the microcomputer provided to the LRO. The ACRS shall allow the retrieved data to be printed on paper and exported to electronic files in format of 'Portable Document Format' and 'Microsoft Excel' or other commonly available format acceptable to the CM;
8. The ACRS shall be able to assign an unique Site Personnel Number for each issued smart card complying with the format as stipulated in the latest "Contractor's Guideline on Wage Monitoring System" published by HA from time to time;

9. The ACRS shall be able to compile, print and export forms, schedules and register as required in PRE.C9.140 and PRE.C9.2510 complying with the format similar to the prescribed forms attached to the latest "Contractor's Guideline on Wage Monitoring System" published by HA from time to time;

10. The portable pocket personal computer shall be able to synchronize with the data bank of the ACRS and are capable of recording, verifying and updating the information of the personnel (except visitors) including reading their smart cards and registration cards issued by CIC;

11. The ACRS shall be able to maintain all raw data of in/out records of all site personnel and highlight all the records input or edited by manual in reports compiled and printed by ACRS as stipulated in sub-clauses (9) for checking.

**PRE.C9.2530.7  ENTRANCE/EXIT CONTROL UNIT**

*Option 1*

1. Install sufficient numbers of entrance/exit control unit at all ingress or egress points of the Site and submit the exact locations to the CM for agreement;

2. Each entrance/exit control unit shall be equipped with non-contact type smart card readers with biometric recognition device and access control device, e.g. turnstile;

3. Connect the smart card readers to a secured computer which shall record all personnel's signing in and out of the Site. Provide separate smart card readers with clear labels indicating "IN" and "OUT" for this purpose;

4. Ensure the system can display the photograph of the smart card holder saved in the central data computer unit and the smart card.

*Option 2*

1. A total of ....... number of portable pocket personal computer complied with the system requirements as stipulated in PRE.C9.2520, which can be synchronized with the data bank of the ACRS and is capable of recording, verifying and updating the information of the Site Personnel and Self-employed workers including their smart cards and registration cards issued by CIC, shall be provided for checking the attendance of site personnel during the operation period of ACRS;

2. One portable pocket personal computer shall be provided at a convenient location (as agreed with the CM) within each Portion of the Site under construction. The Portions of the Site to be provided with portable pocket personal computer shall be determined by the CM from time to time during the contract period.

**PRE.C9.2540.7  CENTRAL DATA COMPUTER UNIT**

The secured computer unit must have high availability feature of at least 96% uptime or not more than five hours per month outage and shall be loaded with appropriate software to perform the following functions:

1. Automatic recording of the entry/exit information of the smart card holders passing the entry/exit gates;

2. Output and transmit the registration records and the daily entry and exit record, in a format stipulated by HA, to HA's computer facility electronically on frequency prescribed by HA. The transmitted data including its Intellectual Property Right will be owned by HA. HA shall have the right to keep, analyse, compile and further disclose the transmitted data to any person in such form and manner as HA deems fit;

3. Entry and updating of information on smart card holders;

4. Instant retrieval of picture and information of smart card holder;

5. Automatic printout and alarm message in case of faulty operation.
INFORMATION TO BE CAPTURED AND SAVED IN ACRS

1. Provide clear plastic holders to all personnel (except visitors) for holding their smart cards or registration cards issued by CIC. The plastic holder shall be provided with a means to enable it to be displayed in a conspicuous position of the personnel and affixed with a label with the following information shown:
   a. Site Personnel Number;
   b. Name of personnel in Chinese and English;
   c. Name of personnel's employer in Chinese and English (except Self-employed Worker);
   d. Trade of personnel and, if applicable, the relevant trade no. (refer to the trade list issued by CIC);
   e. Photograph of personnel;
   Background colour of the label for the Contractor's direct employees shall be red, whilst that for all other Site Personnel shall be green, and Self-employed Workers shall be blue and Specialist Contractors' Workers shall be white.

2. Except for the smart cards which are issued to visitors, the following electronic data shall be contained in smart cards of personnel and the central data unit in encrypt form:
   a. Site Personnel Number;
   b. Name of personnel in Chinese and English;
   c. Hong Kong Identity Card number of personnel;
   d. Details of Construction Workers Registration Card and Trade Test / Intermediate Trade Test Certification Card including the card no., expiry date, trade name and trade no., if available;
   e. Name of Personnel's employer in Chinese and English (except Self-employed Worker);
   f. Trade of personnel and, if applicable, the relevant trade no. (refer to the trade list issued by CIC);
   g. Photograph of personnel;
   h. Contract no. and Contract title;
   i. Employment contract details of Personnel/personal insurance policy details as agreed with CM (optional for smart card);
   j. Expiry date of the smart card and whether the smart card has been returned or voided;
   k. Signature specimen of personnel (optional for smart card);
   l. Details of Silver Card (if any) including the card no., expiry date and information required in the Record Form (DCEI-F14) and sub-clause (2) of PRE.C6.210. The Record Form (DCEI-F14) can be obtained from the CM upon request in writing;
   m. Details of Safety Card including the card no. and expiry date;
   n. Contact telephone no. of personnel.

3. The following information of all the visitors shall be captured and recorded in the ACRS:
   a. Name of visitor in Chinese or English;
   b. Hong Kong Identity Card number of visitor;
   c. Name of visitor's company/organization;
   d. Contact telephone no. of visitor;
   e. Particulars of staff to be visited:
      i. Name;
      ii. Telephone no.;
      iii. Name of company.
   f. Purpose of the visit;
g. Site Personnel Number of the smart card issued;

h. Whether the smart card has been returned.

The smart card issued to a visitor shall be provided with a means to enable it to be displayed in a conspicuous position of the visitor and in yellow colour.

4. The smart card shall contain sufficient encrypted information for identification of the card holder and access to the master data bank of the system;

5. Comply with the requirements as stipulated in the Personal Data (Privacy) Ordinance for avoiding the abuse of the information collected. Adequate data security control shall be provided to limit the access right to the ACRS on need basis. The usage of the information collected by the ACRS shall be used exclusively for security control and supporting information as required by the Contract e.g. attendance checking;

6. Allow the LRO, CM's representative or any other persons authorized by the CM to check the accuracy of the records.

**PRE.C9.2560.7 SYSTEM RUNNING AND TERMINATION**

1. Operate the ACRS at all times before termination. Replace any component of the ACRS immediately in the event of breakdowns, repairs or regular maintenance;

2. Maintain the operation of ACRS up to the date of the certificate of completion of the Works (or where phased completion of Sections is specified, the last date of completion stated amongst the different certificates of completion for the Sections of the Works) issued by the CM under GCC Clause 8.7. For Contracts with more than one Portion of the Site, and for those Portions with only one Section of the Works, maintain the operation of ACRS for each Portion up to the date of completion of the Section of the Works in such Portion as issued by the CM under GCC Clause 8.7. For Contracts with more than one Portion of the Site, and for those Portions with more than one Section of the Works, maintain the operation of ACRS for each Portion up to the last date of completion stated amongst the different certificates of completion for the Sections of the Works in the same Portion as issued by the CM under GCC Clause 8.7;

3. Seek CM's prior approval for terminating the operation of each ACRS without prejudice to the provisions as specified in sub-clause (2) above;

4. Seek CM's prior approval for dismantling and removal of each access control unit.

Total Delivered

Remarks: Reasons for the discrepancy between monthly intakes and monthly consumption is due to:

[N.B. The total for the month is for checking the relative order of quantity of fuel delivered and consumed on Site. The Contractor/Sub-contractor shall provide reasons when there is a discrepancy between monthly intake and monthly consumption, for example, wastage during handling and the like.]
TRAFFIC ARRANGEMENTS

PRE.C10 TRAFFIC ARRANGEMENTS

TRAFFIC CONTROL

PRE.C10.010.7 SITE TRAFFIC
1. Ensure that the movement of traffic within the Site is properly supervised, controlled and maintained at all times;
2. Vehicles must be able to enter the Site immediately on arrival as no waiting will be permitted on public roads;
3. Vehicles shall enter and leave the Site in a forward gear;
4. Provision shall be made at the Contractor's expense within the immediate area of the Site entry to allow for parking of haulage vehicles;
5. Parking will not be allowed on public footpaths, verges or roads outside of the Site area;
6. Where works are carried out on highways or footways the flow of traffic must be maintained at all times with minimum interference.

PRE.C10.020.7 COMPLIANCE WITH REGULATIONS
1. Comply in all respects with the Road Traffic (Traffic Control) Regulations;
2. The Contractor's attention is drawn to the Code of Practice for the Lighting, Signing and Guarding of Roadworks, issued by Highways Department;
3. Maintain two copies of the Code of Practice on Site at all times, one copy of which shall be for the exclusive use of the CM.

PRE.C10.030.7 COMPLIANCE WITH AUTHORITIES' REQUIREMENTS
Comply with the requirements of the Commissioner for Transport and/or the Commissioner of Police and/or any other relevant authority regarding any special traffic arrangements which may be necessary.

PRE.C10.040.7 COMPLIANCE WITH PROCEDURES AND REQUIREMENTS
Follow the procedures and requirements given in the Contract or such procedures and requirements as the CM may require for obtaining the prior approval of the relevant authorities and the consent of the CM with respect to any special traffic arrangement, including the erection of any falsework in or over any highway or footway, any road opening or any traffic diversion.

PRE.C10.050.7 CONTRACTOR'S PROPOSALS
1. Submit proposals as required by GCC Clause 5.18 in writing to the CM and the relevant authorities not less than 6 weeks before the proposed date of commencement of any traffic arrangements;
2. Further liaise with the relevant parties and authorities, and submit the final agreed proposal to the CM for Approval at least 10 days before the date of commencement of such special traffic arrangements;
3. Arrange meetings with the relevant parties and authorities to discuss his proposals;
4. The Contractor's proposals shall be clearly marked up on drawings with scales not less than 1:1000 and supported by written descriptions where appropriate;
5. Proposals submitted for Approval shall include details of all lighting, signing and guarding to be implemented.
TEMPORARY TRAFFIC ARRANGEMENTS AND CONTROL

PRE.C10.110.7 CONTRACTOR'S RESPONSIBILITY
Be responsible for all necessary provisioning and repair of temporary diversion ways for the traffic using them.

PRE.C10.120.7 COMPLIANCE WITH AUTHORITIES' REQUIREMENTS
In addition to any other requirements stated in the Contract, temporary traffic arrangements shall be in accordance with conditions and restrictions imposed by the Commissioner for Transport and the Commissioner of Police, and temporary lighting, signing, guarding and traffic control arrangements shall be in accordance with conditions and restrictions imposed by the Director of Highways. Traffic signs which are not prescribed by the Road Traffic Ordinance or its subsidiary legislation shall be in accordance with conditions and restrictions imposed by the Commissioner for Transport.

PRE.C10.130.7 OBTAINING AUTHORITIES' APPROVALS
Make all arrangements with and obtain the necessary approvals from the Commissioner for Transport, the Commissioner of Police, the Director of Highways and any other relevant authority for temporary traffic arrangements and control.

PRE.C10.140.7 APPLICATION
Temporary traffic diversions and pedestrian routes shall be provided where work in roads or footways obstructs existing vehicular or pedestrian access. The relevant work shall not commence until the approved temporary traffic arrangements and control have been implemented.

PRE.C10.150.7 COMPLIANCE WITH CODE OF PRACTICE
Temporary traffic arrangements and control for work in roads and footways shall comply with the requirements contained in the current edition of the document 'Code of Practice for Lighting, Signing and Guarding of Road Works' issued by the Hong Kong Government; a copy of the document shall be kept on the Site.

PRE.C10.160.7 INSPECTION AND MAINTENANCE
Temporary traffic arrangements and control shall be inspected and maintained regularly, both by day and night.

PRE.C10.170.7 SUBMISSION FOR CM'S APPROVAL
Submit the following particulars of the proposed temporary traffic arrangements and control for Approval at least 7 days before the traffic arrangements and control are implemented:

1. Details of traffic diversions and pedestrian routes;

2. Details of lighting, signing, guarding, road marking and traffic control arrangements and equipment;

3. When traffic diversion proposals involve the construction of temporary roads or footpaths or alteration of existing road or footpaths, details of road geometry and levels, pavement thickness and composition, road drainage; detailed calculations shall also be submitted to the CM; and

4. a. Plan and arrange his work to keep the number of traffic diversions and hence disturbance to traffic to a minimum;

   b. To implement traffic diversions, he shall carry out by himself or make arrangements for, as appropriate, all works necessary for such purpose, such as the construction of temporary carriageway pavement with associated drainage systems, fencing, temporary pedestrian access, resiting/provision of street lights, fire hydrants, sign gantries and other street furniture;
c. Temporary protection to or alteration of underground utilities etc. after consultation or approval from the appropriate authorities;
d. Also be responsible for all subsequent maintenance and shall undertake to reinstate all the affected covers to their original state immediately after any phase of temporary arrangement is no longer required.

**TRAFFIC CONTROL EQUIPMENT**

**PRE.C10.210.7 MAINTENANCE OF EQUIPMENT**

1. All equipment for traffic control, lighting and guarding shall be maintained throughout the Contract in good working order and in a clean condition;
2. Traffic lights, lights and signs shall be kept clean and easy to read.

**PRE.C10.220.7 CHECKING EQUIPMENT**

Check regularly, both during the day and during the night, that all equipment is in good working order and correctly positioned and shall immediately carry out such remedial measures or replacements as are necessary.

**PRE.C10.230.7 REPAIRING/REPLACING EQUIPMENT**

1. Equipment which, in the opinion of the CM, is damaged, dirty, incorrectly positioned or not in working order shall be repaired or replaced immediately;
2. All unsatisfactory equipment shall be removed from the Site by the Contractor.

**PRE.C10.240.7 ELECTRIC LAMPS**

1. Electric lamps complying with BS 3143:Part 2:1990 shall be used when a connection to a mains electricity supply is available and feasible;
2. Supply voltage for such lamps shall be stepped down to 50 volts or less. When a mains electricity supply is not available, battery powered lamps shall be used.

**PRE.C10.250.7 TEMPORARY TRAFFIC LIGHT SIGNALS**

Temporary traffic light signals shall be of a type approved by the Commissioner for Transport and shall comply with the requirements contained in the current editions of the documents 'Type Approval Procedure for Portable Traffic Light Signals' and 'Specification for Vehicle Actuated/Fixed Time Portable Traffic Signal Equipment' issued by the Hong Kong Government.

**PRE.C10.260.7 TEMPORARY TRAFFIC SIGNS**

1. Temporary traffic signs, including posts, baking plates and faces, shall comply with all requirements for traffic signs contained in Worksection EXT4;
2. The thickness of backing plates for temporary traffic signs which will be erected for use of less than 6 months may be reduced to 1.5 mm and the thickness requirement as stipulated in sub-clause (1) of EXT4.M320 may not be complied with; the posts for the signs may be constructed of timber or other material provided that in the opinion of the CM the traffic signs will be stable and safe;
3. In addition to the requirements for traffic signs contained in Worksection EXT4 and sub-clause (2) above, temporary traffic signs shall also comply with the following additional requirements:
   a. All corners of a sign plate shall be rounded to a radius of not less than 18 mm unless otherwise stipulated in the relevant standard drawing(s) published by the Transport Department or Highways Department;
   b. All edges of a sign plate shall be grounded to ensure that they are free from sharp edges, burrs, raggedness and tears;
   c. When a sign plate is located on a footway, it should be positioned so as to minimise inconvenience or hazard to pedestrians. Particular attention shall be paid to cater for safety of the children, the elderly and the disabled;
d. The arrangement of information contained on sign faces for temporary traffic directional signs shall be designed by the Contractor. The details of the background, borders and legends, including letters, numerals, characters and symbols, shall comply with the requirements of the Commissioner for Transport.

PRE.C10.270.7 TEMPORARY CONCRETE PROFILE BARRIERS
1. Should precast concrete profile barriers be installed temporarily by Contractor to delineate edges of traffic lanes/footpaths/excavations as protectionary measures or as median barriers separating lanes of opposite travelling directions, the Contractor should conduct risk assessments to identify associated risks and to determine appropriate precautionary measures for installation against those risks;
2. Be responsible for all risks associated with the installation of the temporary precast concrete profile barriers including any injuries to motorists, pedestrians as well as construction workers;
3. Temporary concrete profile barriers should be properly fixed in position and so marked so that they stand out conspicuously and are visible by day and by night.

PRE.C10.280.7 SAFETY OF SITE VEHICLES AND MOBILE PLANT
Comply with the requirements in the latest Publication on ‘Guidelines on Safety of Site Vehicles and Mobile Plant’ issued by the Construction Industry Council with special attention to the following:
1. Conduct risk assessment to identify any risks resulting from site vehicles and mobile plant;
2. Properly design site layout and traffic circulation routes;
3. Where reversing cannot be avoided, reversing vehicles or plant is not guided by a banksman, provide and install reversing video device (RVD) for vehicles/plant in accordance with the above mentioned Guidelines;
4. Formulate safe working procedures concerning operation of site vehicles and mobile plant;
5. Provide specific training to site personnel specific to site vehicles and mobile plant.

WORK IN ROADS AND FOOTWAYS

PRE.C10.310.7 WORK IN SECTIONS
1. Work in roads on the Site shall be carried out in sections such that the length of road occupied at any time does not exceed that approved by the relevant authority described in PRE.C10.030 and the width of road occupied at any time does not exceed the width of one traffic lane, unless otherwise approved by the relevant authority and permitted by the CM;
2. Work in each section shall be completed and the road reinstated and opened to traffic before any work commences in the next section. Work in any section, including loading and unloading, shall be carried out in such a manner that the traffic and utilities in the adjacent road and pedestrian access in the adjacent footway will be adequately maintained.

PRE.C10.320.7 DEFINING AREAS OF EXCAVATION
Before excavations are carried out in roads or footways, except in areas covered with paving blocks or tiles, the limits of the area to be reinstated shall be bounded by a continuous saw-cut groove. The groove shall be at least 6 mm wide and at least 50 mm deep. Cutting the groove and breaking out the road or footway shall be carried out in such a manner that the adjacent road or footway, including edges, are not damaged.
PRE.C10.330.7  STORING EXCAVATED MATERIAL
Excavated material shall not be stored adjacent to excavations in roads or footways unless permitted by the CM.

PRE.C10.340.7  BRIDGING EXCAVATIONS
1. Vehicular access across excavations in roads shall be provided by steel covers;
2. The covers shall be designed to BS 449:Part 2:1969 and shall be capable of withstanding the full traffic load permitted to use the road;
3. The covers shall be secured in position and shall have anti-skid coating so that the skid resistance values on the covers measured in accordance with BS 3262:Part 2: 1989 shall not be less than 45;
4. Sufficient steel cover shall be kept on the Site adjacent to excavations in roads to permit vehicular access across the excavations in case of emergency.

PRE.C10.350.7  REMOVAL OF TEMPORARY EQUIPMENT
Temporary diversions, pedestrian access and lighting, signing, guarding and traffic control equipment shall be removed immediately when they are no longer required. Roads, footways and other items affected by temporary traffic arrangements and control shall be reinstated to the same condition as was existing before the work started or, where such work is covered under an Excavation Permit, to the condition as stipulated under the Conditions of Excavation Permit or to such other condition as may be agreed or Instructed.

PRE.C10.360.7  ADJUSTING THE ROAD HARDWARE LEVELS
Be responsible for adjusting the levels of the existing valve pits and covers, manholes/chambers/pits and covers and other utility/services installations affected by the Works.

PRE.C10.370.7  EXISTING STREET LIGHTING
Ensure the proper functioning of all existing street lighting and shall not abandon any existing street lightings before adequate re-provisioning Approved by the CM and the relevant authority.
TEMPORARY WORKS AND FACILITIES

TEMPORARY WORKS

PRE.C11.010.7 PRIOR APPROVAL
1. Pursuant to GCC Clause 4.3, within a reasonable time (and in any case not less than 28 days) before he intends to commence construction of any Temporary Works, or within the particular times states, the Contractor shall submit full particulars, including Drawings of the same for the Approval of the CM;
2. The consent by the CM of any such particulars shall not relieve the Contractor of his responsibility for the sufficiency of Temporary Works or of his other duties and responsibilities under the Contract;
3. Make safe and reinstate all areas affected by temporary works.

PRE.C11.020.7 EARTH SUPPORT TO RETAINING WALL EXCAVATIONS
1. Design and construct temporary earth support to excavations for the construction of retaining walls shown on the Drawings, and provide a method statement which must take into account all geotechnical considerations;
2. He shall give full details of all materials, plant and timing and sequence of operations involved in the construction of both temporary and permanent works;
3. The Contractor’s attention is drawn to Worksection EAR1.

PRE.C11.030.7 PROVISION OF ACCESS ROADS
1. Provide and maintain an all weather, 2-way access road of ........ width at all times between ........ Street and Section ......... for the use of the ........ Department contractors and any other contractors authorised by the Housing Authority to carry out the works within the completed Sections ........;
2. The access road is to be regarded as temporary works for the purposes of this Contract and is required immediately on completion of Section ........;
3. The access road shall be finished with rigid or flexible surfacing and the road pavement design shall be to Guidance Notes on Pavement Design issued by Highways Department;
4. The gradient and construction of this access road shall be capable of taking all vehicles requiring access to/from the building and ........ construction works in the completed Sections ........;
5. Such vehicles shall include, but not be limited to, cars, fully loaded ready mix concrete trucks and articulated and fixed axle material delivery and disposal trucks;
6. Ensure that none of the above vehicles as a result of the use of the access road deposit earth, mud, debris, dust and the like on public roads when leaving the Site;
7. Submit detailed proposals, including drawings and method of construction of the access road to the CM four weeks before commencement of its construction;
8. The agreement by the CM of any particulars shall not relieve the Contractor of his responsibility for the sufficiency of the access road or his other duties and responsibilities under the contract.

PRE.C11.040.7 TUNNELLING
Tunnelling will not be allowed unless authorised by the CM.
PRE.C11.050.7 APPROVAL OF ACCESS POINTS
1. Submit for Approval details of each access point not less than 14 days before the intended date for taking into use. Details shall indicate the location of the access and the equipment and supervision he intends to use;
2. Comply with PRE.C3 of the Specification regarding restrictions on the use of highways for access to the Site and allow for movements of vehicles being restricted in this respect.

PRE.C11.060.7 DIVERSION OF STREAMS OR DRAINS
1. Be responsible for and shall bear the cost of temporary training, diverting or conduiting of open streams or drains intercepted by any works and for reinstating these to their original courses on completion of the Works when and where in the opinion of the CM such action is desirable;
2. The Contractor's attention is drawn to PRE.C9 and Worksection EAR1;
3. All proposed temporary stream course and drain diversions shall be submitted to the CM for agreement four weeks prior to such diversion works being commenced;
4. Diversions shall be constructed to allow the water flow to discharge adequately and efficiently;
5. The area through which the temporary diversion runs is to be reinstated to the satisfaction of the CM after the permanent drainage system has been completed;
6. No obstruction to flow is to be left in position longer than is necessary for carrying out the works;
7. Ensure that adequate provision is made for dealing with increased flow during the wet season.

PRE.C11.070.7 NEW SIGNBOARDS
1. Provide  No. publicity board(s) and  No. accident statistic board(s) at the Site, as detailed on Drawing(s) Nos. , maintain for the duration of the Contract and leave in position in good condition for use by subsequent contractors;
2. Provide  No. publicity board(s) for motorists and  No. publicity board(s) for pedestrians, as detailed on Drawing(s) Nos. , at prominent locations as agreed by the CM, where works are carried out on carriageway or footway. Maintain for the duration of the works and update the information of the publicity board(s) as necessary or as required by the CM.

PRE.C11.080.7 PAINTING AND SIGNWRITING ON SIGNBOARDS
1. Paint signboards at commencement of Contract;
2. Provide sign writing in multi-coloured gloss finish over the completed board including English letters and Chinese characters, artist's impressions or diagrammatic plans and logos;
3. Submit draft drawings for Approval before painting;
4. Re-paint and provide new sign writing when necessary as directed by the CM;
5. Provide new sign writing to update the accident statistics at monthly intervals.

PRE.C11.090.7 SUPPLY OF WATER
1. Arrange for an adequate supply of fresh water at the Site, including provision of any storage tanks, so that sufficient fresh water is always available for the execution of the Works;
2. Provide suitable supplies of water for drinking, washing and sanitation and general cleaning down in addition to that required for the execution of the Works;
3. In the event of water restrictions, ensure that there is sufficient water storage capacity on site to supply water in accordance with the detailed requirements of the specification, to maintain the general good health of the plants and to ensure the progress of the Works is not adversely affected;

4. Every water storage tank shall be effectively protected against the breeding of mosquitoes and risk of contamination and shall be thoroughly cleaned and scrubbed with a chloride of lime or bleaching powder solution of not less than fifty parts chlorine to one million parts water during the months of March, June, September and December of each year;

5. If water is taken from a source other than Government mains supply, test it at an Approved laboratory in accordance with BS 3148:1980 when required by the CM;

6. Provide temporary pipe lines and make arrangements for storage, pumping and distributing the water about the site;

7. Submit installation details and routing of the water supply for the information of the CM prior to commencement of the installation.

**PRE.C11.095.7 TEMPORARY LIGHTING**

Do not use incandescent light bulbs (GLS) to provide lighting inside any buildings, site accommodations, and areas within the Site and around the Site boundary. Use other types of light bulbs with higher luminous efficacy. Provide only electronic ballast for all types of fluorescent fittings.

**SITE ACCOMMODATION FOR THE CONTRACTOR**

**PRE.C11.110.7 ACCOMMODATION GENERALLY**

In addition to the requirements of GCC Clause 5.31, provide all necessary offices, drinking water, hand washing facilities, temporary toilet accommodation and the like for all workers engaged in the execution of the Works. Provide lighting, power, telephones, cleaning etc and maintain toilet accommodation in a sanitary condition at all times. Temporary site accommodation shall be constructed from prefabricated, demountable, reusable components unless otherwise approved by the CM. The use of tropical hardwoods in the construction of temporary site accommodation is expressly prohibited.

**PRE.C11.120.7 LOCATION OF STRUCTURES**

No structure shall be erected by the Contractor within the Site without the CM's written consent; such consent will not relieve the Contractor of the responsibility of siting temporary structures clear of the Works. A copy of the plan showing the extent and position of all offices, stores, sheds, toilets facilities, etc. shall be prepared by the Contractor and retained for inspection in the site office.

**PRE.C11.130.7 LOCATION OF STORAGE AREAS**

As soon as possible after the notified date for commencement of the Works, submit details of the proposed locations and arrangements of the Contractor's site compound, storage areas, stockpiles, casting yard and the like to the CM for agreement.

**PRE.C11.140.7 TEMPORARY ACCOMMODATION FOR WORKMAN**

No temporary accommodation for workmen shall be erected by the Contractor within the Site without Approval. It shall be kept in a clean and sanitary condition to the satisfaction of the CM.

**PRE.C11.150.7 TEMPORARY SITE LABORATORY FOR ON-SITE FILL TESTING**

1. On-site fill testing as specified in Worksection EAR shall be carried out, under the supervision of the CM, by the Contractor using Approved Laboratories specified at PRE.C8.510;

2. Supply labour and assistance as specified in PRE.C11.810;
3. A calibrated and Approved moisture meter and all necessary apparatus and consumable items shall be provided to carry out the following procedures and tests, as described in 'Geospec 3: Model Specification for Soil Testing', GEO, 2001:
   a. Test Method 5.1 or 5.2 of 'Geospec 3: Model Specification for Soil Testing', GEO, 2001: Determination of moisture content by oven-drying;
   c. Test Method 10.1, 10.2, 10.3, 10.4, 10.5, 10.6, 10.7 or 10.8 of 'Geospec 3: Model Specification for Soil Testing', GEO, 2001: Determination of dry density/moisture content relationship;
   d. Test Method 11.1 of 'Geospec 3: Model Specification for Soil Testing', GEO, 2001: Determination of in-situ bulk density and in-situ dry density of soils by sand replacement method suitable for fine- and medium-grained soils (with small pouring cylinder);

**PRINCIPAL OFFICE ACCOMMODATION FOR THE CM**

**PRE.C11.210.7 OFFICE BUILDINGS**
Provide, erect, service (including payment of all utility charges) and subsequently dismantle at a location approved by the CM and within convenient distance of the Contractor's main site office, offices and toilets for the exclusive use of the CM and the CM's staff including ……… LROs complete with all necessary air conditioning, ventilation, lighting, fire precautions, fresh water supply, drainage, telephone service, attendance, maintenance, watching and protection to the satisfaction of the CM so as to be habitable and operational at all times throughout the course of the Works and during the Defects Liability Period as the CM may require.

**PRE.C11.220.7 LAYOUT AND DESIGN**
The general requirements for the layout, furnishings and services of the CM's temporary accommodation are shown on the Drawings. Also be responsible for the building services and structural design including the foundation design of the CM's principal office. Submit design drawings for the CM's agreement before actual construction commences.

**PRE.C11.230.7 COVERED HARDSTANDINGS**
Approved covered hardstandings for five cars shall be provided as close to the CM's principal office as practicable, and shall be linked to the CM's office by a covered concrete path.

**PRE.C11.240.7 OFFICE FITTINGS, SERVICES, FURNITURE, EQUIPMENT AND MACHINERY**
Provide for use in the CM's principal office the following new items of services, fittings, furniture, equipment and machinery (to be the Contractor's property upon completion of the Contract) as specified in the following clauses:

**PRE.C11.250.7 OFFICE SERVICES**

<table>

PRE.C11.292.7 COPIER-PRINTER-SCANNER EQUIPMENT

1. Provide 1 No. monochrome copier-printer-scanner equipment which shall be networked with driver installed in networked PCs to provide functions of printer and scanner in addition to photocopying function. The specification for the copier-printer-scanner equipment is as follows:
   a. Copier:
      i. Copy speed: not less than 20 copies per minute;
      ii. Resolution: up to 600 dpi;
      iii. Multiple copies: up to 999;
      iv. Zoom: 25 - 400%;
      v. Paper input capacity: 2 x 500-sheet paper trays, 1 x 100-sheet bypass trays;
      vi. Paper output capacity: not less than 1,500 sheets;
   b. Printer:
      i. Print speed: not less than 20 prints per minute;
      ii. Resolution: 600 dpi minimum.
   c. Scanner:
      i. Scan speed: not less than 40 originals per minute;
      ii. Resolution: up to 1,200 dpi;
      iii. Original size: A3 to A5;
iv. Output format: PDF, JPEG, TIFF & high compression PDF.

2. Provide adequate supply of paper and other consumables.

**PRE.C11.295.7 DIGITAL CAMERAS**

1. Provide ….. No. of new digital camera for the use of CM and his representative for the duration of the Contract plus six months commencing from the date of the certificate of completion, or any other longer period as may be Instructed for the necessary completion of the Works and/or additional works within the Maintenance Period;

2. The new digital camera shall comply with the followings:
   a. Be equipped with memory card of not less than 2G and flashes together with batteries and any other consumables required for the cameras and flashes;
   b. Size of the camera: small;
   c. Optical resolution of the camera: 3M pixels or above.

**PRE.C11.300.7 ESTABLISHMENT OF ACCOMMODATION**

1. Within two weeks of acceptance of tender, submit proposals for location of the principal office, its construction and furnishing to the CM;

2. The office shall be erected, equipped and furnished ready for use by the CM's Representative within four weeks from the notified date for commencement of the Works;

3. The installation of the telephones shall be ordered promptly upon acceptance of the tender, and completed at the earliest practicable date;

4. Provide ................ mobile phones for use by the CM before the installation of telephones.

**RELOCATABLE OFFICE ACCOMMODATION FOR THE CM**

**PRE.C11.410.7 CONTAINER OFFICE(S)**

Provide ............... container office(s), each 13 m² minimum floor area, complete with:

1. Telephone and power supply;

2. Fire extinguishers and/or other fire fighting appliances conforming to the regulations of the Fire Services Department;

3. Separate toilet and washing facilities including water supply, waste and foul water disposal, mirrors, cleaning materials, soap, towels, toilet paper and the like;

4. Venetian blinds, mosquito screens and burglar bars to all windows.

**PRE.C11.420.7 FURNITURE, FITTINGS ETC. TO CONTAINER OFFICE(S)**

Provide the following items to each container office provided:

<table>
<thead>
<tr>
<th>No</th>
<th>Item Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>Lockable desk (1300 x 800):</td>

<tr>
<td>7.</td>
<td>Electric fan heater (2 KW):</td>
</tr>
<tr>
<td>8.</td>
<td>Power point (13 amp):</td>
</tr>
</tbody>
</table>
9. Electric kettle: ............................

PRE.C11.430.7 PERIOD REQUIRED
Provide the container office(s) on Site immediately at the start of the Contract for the use of the CM and his staff as instructed by the CM until the principal office is completed. When the principal office is completed and occupied, the container(s) and its equipment shall be returned to the Contractor/re-located to ..........

PRE.C11.440.7 RELOCATION
From time to time, move, relocate and re-establish the CM’s container office(s) accommodation to suit the staging of the Works.

MAINTENANCE AND REMOVAL OF OFFICE ACCOMMODATION

PRE.C11.510.7 REPAINTING
The CM’s principal office and the container office(s) shall be repainted internally and externally with one undercoat and one finishing coat at 18 months intervals after the offices have been erected.

PRE.C11.520.7 REMOVAL
On completion of the Contract, when advised in writing by the CM, remove all the offices, hardstanding, toilets and fixture items leaving the areas in a clean and tidy condition, and make good all damage.

SITE ACCOMMODATION ASSOCIATED WITH IN-SITU CONCRETING WORK

PRE.C11.610.7 CONTAINER OFFICE
Where in-situ concreting work is to be carried out on Site and which forms part of the permanent Works, provide a standard steel container office of nominal size 6000 x 2500 x 2350 mm (as and when required by the CM) for exclusive use of the CM or his appointed Specialist Testing Contractor. Equip the container with the following:
1. A security door-lock;
2. Windows with security metal grilles;
3. Fluorescent lighting;
4. Reversible air conditioner;
5. Work bench 2500 x 900 x 850 mm high;
6. Direct line telephone;
7. Desk with lock up drawers;
8. Pin board;
9. Chair and stool.

PRE.C11.620.7 CONTAINER STORE ROOMS
1. Provide sufficient numbers of steel container rooms, to the satisfaction of the CM, for storing the following core samples:
   a. Samples obtained from sampling and testing founding levels for Type 3 Piles as described in PIL1.T210 & PIL1.T220;
   b. Samples obtained from core testing of Type 3 Piles as described in PIL1.T1220;
   c. Samples obtained from confirmatory core tests of founding strata of Types 3 piles as described in PIL1.T1710.
2. Hand over the steel container rooms and the core samples contained therein to the CM upon completion of the Contract;
3. When Instructed, dispose of the core samples and core boxes upon completion of the Contract.

**PRE.C11.630.7 CONTAINER CURING ROOMS AND TANKS**

Where in-situ concreting works is to be carried out on site and forms part of the permanent Works, provide sufficient numbers of steel container rooms and steel curing tanks for storing and curing test cubes to the satisfaction of the CM. Take note that:

1. A standard curing tank of nominal size 1650 x 860 x 510 mm will be deemed to have a capacity to accommodate one hundred eighty 100 mm concrete cubes;
2. For curing tanks with different nominal sizes, the number of required curing tanks may be estimated on the basis of the capacity for a standard curing tank of equivalent volume at the discretion of the CM, who will require appropriate adjustments in the pump and heater capacities;
3. A standard steel container room of nominal size 6000 x 2500 x 2350 mm may accommodate up to a maximum of five standard curing tanks;
4. Each curing tank must be accessible, and at least one spare curing tank must be provided at all times for cleaning purpose;
5. Concreting work will not be allowed to commence until curing tanks and steel container rooms have been completed and accepted by the CM;
6. A wall-mounted switch panel on the external face of each curing room, with indication light and due protection against inclement weather and accidental damage, must be provided for ensuring the proper functioning of all electrical curing facilities at all times.

**PRE.C11.640.7 STEEL CONTAINER ROOM**

Equip each steel container room with the following:

1. A security door-lock;
2. Windows with security metal grilles;
3. Fluorescent lighting;
4. Air-conditioner with heating and cooling facilities that is capable to keep the room temperature at 25°C ±5°C;
5. Adequate no. of power plugs for operating the curing tanks;
6. Water supply;
7. Drainage outlets connecting to the drainage valves and overflow system of the curing tanks;
8. Main switch box/control panel to the exterior of curing room and duly protected against inclement weather.

**PRE.C11.650.7 STEEL CURING TANK**

1. Construct each curing tank of corrosion-resistant material of adequate strength such as galvanised sheet steel to BS EN ISO 1461:2009 for hot dip galvanised coating or BS 2569 for flame sprayed metal coating, fully welded on all seams and equipped with the following accessories:
   a. A lockable insulated lid or cover properly numbered;
   b. A recirculating water pump and a stand-by pump both of waterproof types and with capacities not less than 1000 litres per hour, earthed and fitted internally at one end of the tank drawing the water through a pipe from the bottom to the diagonally opposite top of the tank at least 25 mm above the water level to stimulate efficient mixing of the water by free falling;
   c. A thermostatically controlled electric immersion heater and a stand-by heater both with wattage of not less than 3 kW and connected with a temperature sensor for continual monitoring of the water temperature at 27°C ± 3°C;
d. A set of three removable lower racks;
e. Two layers of removable racks (ten removable racks per layer) suspending from the sides of the tank;
f. A drainage valve and an overflow system;
g. A steel stand supporting the water tank;
h. Minimum/maximum thermometers for both air and water temperatures;
i. A thermograph for continual recording of the water temperature; and
j. Comply with all other requirements for a curing tank as stated in Appendix A of CS1:2010 (Construction Standard for Testing Concrete).

2. Notwithstanding sub-clause (1)(i) above, if a thermograph is proposed for two or more curing tanks, submit for Approval:
   a. Details of the water circulating system including the provision of a central water closet to the curing tanks; and
   b. Measurement records by an Approved laboratory showing efficient mixing of the water to attain a temperature of 27°C ± 3°C in the circulating system under working environment.

PRE.C11.660.7 CURING TANK MAINTENANCE
Clean each tank at regular intervals and change the water in each tank at least once a month in accordance with CS1:2010 and as directed by the CM. In order to provide adequate circulation of water and to facilitate the removal of test cubes from the curing tank, provide at least 15 mm of water horizontally between test cubes and the sides of the tank.

PRE.C11.670.7 CURING RECORDS
Record the daily maximum and minimum moist air and water curing temperatures and keep the records on site at all times for the inspection of the CM.

PRE.C11.680.7 ACCESS BY TESTING CONTRACTOR
Where directed by the CM, allow the Specialist Testing Contractor sole access and use of the curing room and curing tanks together with all the equipment provided under the Contract.

PRE.C11.690.7 ACCOMMODATION MAINTENANCE
Provide attendance including regular cleaning, lighting and power and maintenance to container rooms and curing tanks.

PRE.C11.700.7 STEEL CONTAINERS FOR TEST SAMPLES OF BAR REINFORCEMENT/FABRIC REINFORCEMENT
As and when required by the CM, provide .......... lockable steel containers, .......... of nominal size (Length x Width x Height) 1500 x 600 x 600 mm and .......... of nominal size (Length x Width x Height) 1500 x 150 x 1500 mm, securely adhered to the curing room, for the exclusively use of the CM or his appointed Specialist Testing Contractor.

SITE FACILITIES FOR THE CM

PRE.C11.810.7 GENERAL FACILITIES
Provide all labour, staging, ladders, wire ropes and other equipment, information and assistance required by the CM and his staff for inspecting, measuring, testing and for the supervision of the Works.
TEMPORARY WORKS AND FACILITIES

PRE.C11.820.7 SURVEY SUPPORT
1. Provide for the exclusive use of the CM's representative at all times during the Contract, full time at the CM office, experienced survey-chainmen, staffmen and assistants as shall be necessary for the CM's representative to carry out his duties under the Contract or works in connection therewith;
2. Personnel to be of sufficient number and capability to operate equipment specified under this clause;
3. It may be necessary for these assistants when directed by the CM's representatives to be used on other works in connection with this Contract;
4. Any operation of the Works which interferes with the checking of lines, levels and other inspections required by the CM shall be temporarily stopped at the direction of the CM until the checking is complete, and in this connection no time or monetary claim will be considered.

PRE.C11.830.7 TYPIST / CLERK
Provide a typist/clerk for the exclusive use of the CM and CM's staff. The typist/clerk shall be from an independent agency Approved by the CM. The typist/clerk shall be based on the Site in the CM's accommodation and shall be available during normal working hours. The CM reserves the right to have the person replaced at any time if, in the CM's opinion, the person's standard of work is unsatisfactory.

PRE.C11.835.7 UNINTERRUPTIBLE POWER SUPPLY
1. Provide ........... No. Uninterruptible Power Supply (UPS) for CM or his representative to protect the computer equipment installed in the site office for the duration of the Contract plus six months commencing from the date of the certificate of completion, and for other longer period as Instructed for the necessary completion of the Works and/or additional works within the Maintenance Period;
2. The UPS shall comply with the following minimum requirements:
   a. Output Power Capacity: 700 Watts/1000VA;
   b. Nominal Input/Output Voltage: 230V;
   c. Backup Time: able to support 15 minutes or more at half load.

PRE.C11.840.7 PROVISION OF INSTRUMENTS AND EQUIPMENT GENERALLY
1. Within 6 weeks from the notified date for commencement of the Works, also provide the instruments and equipment specified in the following clauses in this sub-section for the sole use of the CM and his representatives which shall:
   a. Be new and compatible with each other;
   b. Be of specified source or equivalent;
   c. Be maintained in good working order;
   d. Revert to the Contractor at the completion of the Contract.
2. Be responsible for payment of all bills for maintenance agreements for equipment and instruments listed in this sub-section;
3. The equipment (including hardware and/or software) shall conform to Year 2000, meaning that neither performance nor functionality is affected by dates prior to, during and after the Year 2000. In particular:
   a. No value for current date will cause any interruption in operation;
   b. Data-based functionality must behave consistently for dates prior to, during and after Year 2000;
   c. In all interfaces and data storage, the century in any date must be specified either explicitly or by unambiguous algorithms or inferencing rules;
   d. Year 2000 must be recognised as a leap year.
PRE.C11.850.7  RADIO COMMUNICATION SYSTEM

Provide and maintain in perfect working order for the sole use of the CM and his staff:

1. A two way radio communication system suitable for transmission and reception of clear messages between the transmitter/receiver in the CM's principal office and all parts of the Site;
2. The radio communication system shall be capable of being switched in to any radio communication system used by the Contractor and shall include a transmitter/receiver in the vehicles provided for the CM;
3. The radio communication system shall have a range suitable for expected conditions and shall be to the CM's approval;
4. Be responsible for obtaining all licences and permissions necessary for the use of the CM's radio communication system and the Contract rates shall include the cost of such licences.

Provide sufficient quantities of the following items as required during the Contract Period:
1. Plumb bobs, red clothes, pegs, stakes, strings, paints, chart paper, etc. as necessary for field surveying work;
2. Stationery items for the 1 set of portable data storage unit e.g. 3.5 inch and 5.25 inch diskettes, printer toner cartridges and printer papers etc. as necessary for data and processing and storage.

TRANSPORT FACILITIES FOR THE CM

**PRE.C11.1010.7 VEHICULAR TRANSPORT**

*Option 1*

A vehicle for the use of the CM and CM's representatives is not required for this Contract. The CM or CM's representatives may direct vehicles provided under other Housing Authority contracts to visit this Site. Allow the entrance of such vehicles into the Site and provide suitable parking spaces within the Site for these vehicles.

*Option 2*
1. Provide ........ (no.) vehicle(s) with driver(s) for the use of the CM, CM's representatives, any officials, employees, consultants or agents of the Housing Authority or the Housing Department or any persons authorized or permitted by the CM or CM's representatives. The vehicle(s) will be used for any purposes in connection with this Contract or otherwise. The vehicle(s) shall revert to the Contractor upon the expiration of the period defined in sub-clause (2)(b) below;

2. Comply with the following requirements:
   a. Specification:
      i. Must be environmental-friendly petrol private cars (EPPC) which are type-approved by Environmental Protection Department (EPD) or for which EPD has issued "Environmental-friendly Private Car Certificates";
      ii. Air conditioning: fitted;
      iii. Body type: saloon/estate;
      iv. Drive: two wheel/four wheel;
      v. Seating capacity: not less than 5 (including driver);
      vi. Engine capacity: not less than 1600 cc;
      vii. Mobile phone: fitted;
      viii. Age of vehicle: not more than 30 months with certificate of good condition issued by an approved Car Examination Centre;
      ix. Pager: to be issued to and carried by the driver.
   b. Period of provision:
      From the notified date for commencement of the Works to the date stated in the certificate of completion of the Works, or the last of such certificates where a certificate is issued for a part or parts of the Works before completion of the Works, but in the event that there are works remaining uncompleted after such date stated in the certificate of completion of the Works, or the last of such certificates where a certificate is issued for a part or parts of the Works before completion of the Works, the said period of provision shall be extended until all of the said outstanding works have been completed in accordance with this Contract within the Maintenance Period.
   c. Availability:
      Make the vehicle(s) available for use during the following periods:
      i. Normal working hours and such other times when the Contractor is working;
      ii. Outside the times stated in sub-clause (2)(c)(i) above when requested by the CM or CM's representatives for emergency situations, for the discharge of his or her duties, or for other purposes as may be authorized or permitted by the CM or CM's representatives.
   d. Licence and insurance:
      i. The vehicle(s) shall be properly licensed;
      ii. Provide a fully comprehensive insurance policy for the vehicle(s) as private car under the ownership of the Contractor. The insurance policy shall provide insurance protection to passengers of the vehicle(s) and any third parties and to any use of the vehicle(s) pursuant to sub-clause (1) and sub-clause (2)(c) above;
      iii. Present the insurance policy and submit a written confirmation of compliance of the insurance policy of the vehicle(s) with this specification clause from the insurer or the insurance broker/agent, to the CM, as soon as practicable but in any event no later than the notified date for commencement of the Works.
   e. Records of vehicle journeys:
i. Ensure that the driver for each vehicle institutes and maintains a record of the use of the vehicle. Such a record, in the form of a log book, shall include, inter alia, details, times and purpose of journeys together with appropriate meter readings and distances travelled. The driver is required to ensure that the person using the vehicle or authorising the journey signs his name and title against the entries;

ii. Obtain log books from the CM or CM's representatives. Ensure the driver presents current log books for inspection when so required by the CM or CM's representatives and hand over all completed log books to the CM or CM's representatives for safe keeping.

f. Vehicle maintenance:
   i. Maintain vehicle(s) in clean and roadworthy condition and bear costs of fuel, running cost, maintenance and repair charges and other incidental items;
   ii. Provide an equivalent substitute or form of transport during any period when the vehicle(s) above is/are not available, or out of service for maintenance or repair.

PRE.C11.1020.7 CM'S MARINE TRANSPORT

1. Where the appropriate item is included in the B of Q, provide a boat capable of carrying a coxswain and the minimum number of passengers under a rain proof cover. The boat must have the appropriate license from Marine Department. The coxswain shall have his Engineer's and Master's Certificates appropriate to the type and size of boat, from Marine Department.

2. The requirements of the boat are as follows:
   a. To be licensed for a minimum capacity of ............... passengers;
   b. To be in the charge of a coxswain qualified in accordance with sub-clause (1) and assisted by ............... crew;
   c. To be available at all times when the Contractor is engaged in ............... and otherwise at 24 hours notice. The service of the boat shall be suspended/terminated 24 hours after the CM's instructions for its suspension/termination of service;
   d. To be equipped and manned in accordance with the statutory requirements of the Marine Department and licensed under the Merchant Shipping (Launches and Ferry Vessels) Regulations Chapter 281. A qualified coxswain shall be appointed and shall be available when the marine transport is required by the CM.

3. The Contract Rates for Marine transport shall include for insurances, all running costs and all maintenance and repair charges required to keep the boat in a clean and first class condition at all times. The boat shall be provided with suitable life saving equipment as required by the Director of Marine;

4. 
   a. Records of journeys shall be kept in log books provided by the CM;
   b. Records shall include details of the times and purpose of journeys with appropriate odometer readings and distances travelled;
   c. The person using the boat or authorising the journey, shall sign against the log book entries;
   d. Log books shall be presented for inspection when required by the CM and all completed log books shall be handed over to the CM.
PRE.C12 ATTENDANCE

SUB-CONTRACTORS, SPECIALIST CONTRACTORS AND UTILITY UNDERTAKING

PRE.C12.020.7 PLANNING AND PROGRAMMING GENERALLY
Attendance in co-ordinating and sequencing work programmes and making arrangements as regards to:

1. The time and manner of the execution of their work and delivery of their materials and the time and manner of the submission of drawings or schedules of their builder's work requirements;

2. a. The obtaining of full particulars of their builder's work requirements for chases, recesses, mortices, openings, holes, sleeves, cuttings on formwork and the like;
   b. Execute all such builder's work including forming openings and holes through reinforced concrete (including holes for pipes exceeding 150 mm diameter) and provision of any additional formwork and reinforcement required in trimming around openings;
   c. Provide and fix where required, or obtain from others and fix where required, or obtain from others and fix when supplied, all slots, sleeves, and the like;
   d. Grout voids between sleeves/equipment and openings and for other openings where required in reinforced concrete members with concrete of the same crushing strength as the members after the sleeves or the equipment are properly fixed in position and provision;

3. The obtaining of full particulars of their further builder's work requirements for equipment bases, foundations and the like;

4. The checking of submitted builder's work requirements for conflict between all services. Submit full particulars of builder's work requirements to the CM for Approval, together with a report detailing any ambiguity, discrepancy or conflict between all services;

5. The supplying of details of the method of construction including all dimensions and other information necessary to ensure that their work is correctly executed or correct goods or materials supplied.

PRE.C12.030.7 PLANNING AND PROGRAMMING NOMINATED SUB-CONTRACTOR'S WORKS

1. Provide additional programmes in compliance with GCC Clause 5.7 in respect of each Nominated Sub-contractor within 14 days of the acceptance of each Nominated Sub-contract;

2. Provide attendance in co-ordinating the programme to suit special requirements for phasing the Works as applicable in accordance with the following table:
### Nominated Sub-contractors

<table>
<thead>
<tr>
<th>Electrical Installation</th>
<th>Requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Making available to Sub-contractor the main switch kiosk, and switch kiosks at least 4 months prior to completion of the hard landscape work.</td>
</tr>
<tr>
<td></td>
<td>Making available to Sub-contractor the underground cable ducts and draw pits at least 3 months prior to the completion of hard landscape work.</td>
</tr>
<tr>
<td></td>
<td>Vehicular access for transportation of equipment to the main switch kiosk during the last 3 months prior to completion of the hard landscape work.</td>
</tr>
</tbody>
</table>

### PLANNING AND PROGRAMMING UTILITY UNDERTAKING'S WORKS

1. This clause shall be read in conjunction with GCC Clause 5.7, and **PRE.C6.050**;
2. Be responsible for maintaining close liaison with the Utility Undertaking during the progress of the work and no claims for extra costs or delays incurred by the failure of Utility Undertaking to comply with the agreed programme of works will be considered unless, in the opinion of the CM, the Contractor has taken all reasonable steps to cause the Utility Undertaking to proceed with their work in accordance with the agreed programme;
3. Advise the CM the agreed timing of works to be carried out by Utility Undertaking by inclusion of such works in the programme of Works;
4. Maintain regular liaison with the Utility Undertaking throughout the duration of the Works and inform the CM of the date, time and place of every meeting with the Utility Undertaking for the CM to participate as an observer and copy all correspondence to the CM;
5. The agreed programme of work by Utility Undertaking shall mean that programme agreed in writing by the Contractor and the various Utility Undertaking;
6. Confirm in writing to the Utility Undertaking the programme for any section of work to be carried out by a Utility Undertaking no more than four weeks and no less than one week before the agreed commencement date for that section of work. Copy to the CM such confirmation;
7. Inform the CM immediately of any delays in works by Utility Undertaking which will affect the progress of the Works;
8. Nothing in this clause shall relieve the Contractor of his responsibility for the overall planning of the Works and the co-ordination of the Utility Undertaking;
9. Where it is anticipated that Utility Undertaking will be carrying out substantial works on the Site, this is referred to in **PRE.C2.100**.

### GENERAL ATTENDANCE ON NOMINATED SUB-CONTRACTORS, SPECIALIST CONTRACTORS AND UTILITY UNDERTAKING

#### GENERAL ATTENDANCE

Provide general attendance as defined at clause 7 of Part IV of SMM for CE Works 1992 Edition published by the Hong Kong Government and the following clauses in this sub-section.

#### FREEDOM OF MOVEMENT

Every facility to move about the Site in the legitimate pursuit of their work.
USE OF EXISTING PLANT
The use of such plant, ladders, hoisting facilities, scaffolding or staging as may have been provided or erected by the Contractor, provided that there is no obligation to retain any such plant, ladders, hoisting facilities, scaffolding or staging longer than is necessary for the Contractor's own use.

SPACE FOR STORAGE
1. Having regard to the nature of the Site and the Works, provide sufficient space within the Site or within the Works under construction for work areas and storage sheds for the storage of materials and plant brought onto the Site;
2. Provide a minimum area of 30 m² for special store room for the Electrical Nominated Sub-contractor's use. Such sheds and rooms are to be provided, erected and cleared away by the Nominated Sub-contractors, Specialist Contractors, Government Departments and utility undertaking;
3. Provide security to all storage areas and illuminate all surrounding areas to any storage sheds and store rooms erected.

WATER AND ELECTRIC LIGHTING
1. Adequate temporary water and electrical supplies at convenient positions throughout the Works under construction and to work and storage areas within the Site for lighting, testing and commissioning up to and including final acceptance of the installations by the CM;
2. In compliance with GCC Clause 5.11(4), provide sufficient lighting to all Nominated Sub-contractors where any of their work is carried out in darkness.

SITE CONVENIENCES
The use of the telephone, mess rooms, latrines and the usual conveniences of a construction site.

UNLOADING
Such assistance as is necessary in the unloading of plant, goods and materials brought onto the Site.

SECURITY PROTECTION
Such watchmen or security guards as are reasonably necessary to safeguard the Site.

CLEARING AWAY RUBBISH
Such service as is necessary for the clearing away of rubbish as it accumulates.

REINSTATEMENT
Any making good on completion of work disturbed by the use on removal of the above facilities.

SPECIAL ATTENDANCE ON NOMINATED SUB-CONTRACTORS AND SPECIALIST CONTRACTORS

GENERALLY
Provide electricity supply for the operation of power tools.

TEMPORARY ELECTRICAL SUPPLY REQUIRED FOR TESTING
Provide supply as follows:
<table>
<thead>
<tr>
<th>Nominated Sub-contractors and Specialist Contractors Installation</th>
<th>Capacity</th>
<th>Location</th>
</tr>
</thead>
<tbody>
<tr>
<td>Electrical</td>
<td>60 A 3 Phase</td>
<td>Main Switch Kiosk</td>
</tr>
<tr>
<td></td>
<td>30 A Single Phase</td>
<td>Each Switch Kiosk</td>
</tr>
</tbody>
</table>

Note: The temporary electrical supply and a permanent water supply for testing to be made available for each installation at least 1 month before the completion date of the hard landscape work.

PRE.C12.230.7 SPECIAL ATTENDANCE ON NOMINATED SUB-CONTRACTORS

<table>
<thead>
<tr>
<th>Nominated Sub-contractors</th>
<th>Special Attendance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Electrical installation</td>
<td>Provision of draw wires to all underground ducts. Lubricating all inaccessible ducts with graphite powder. Painting all exposed wiring and conduits upon the completion of the installation.</td>
</tr>
</tbody>
</table>

PRE.C12.240.7 ATTENDANCE ON SPECIALIST CONTRACTORS OF PILING WORKS

1. Provide information for the preparation of the report, all as required by the Specialist Contractors;
2. Be responsible for the co-ordination of testing and for ensuring that the appropriate piles and materials are made available for such testing and commence early enough in the piling works and avoid subsequent delays in performing the pile load test.

PRE.C12.250.7 CONCRETE CORING AND TESTING EXCLUDING CORE TESTING OF TYPE 1(C) & TYPE 3 PILES

Additional materials for coring and testing and making good after coring.

PRE.C12.260.7 NON-DESTRUCTIVE TESTS ON PILES & ULTRASONIC ECHO SONDER TEST FOR TYPE 3 PILE

1. Provide the following Special Attendance:
   a. Compliance with all the requirements of PIL1 - Testing;
   b. Provision of all necessary power including electricity, labour, materials, plant and equipment including welding facilities as required;
   c. Provision of access to the test pile including access to pile when pitched;
   d. Provision of all necessary water at the locations as required by the Specialist Contractor and/or Housing Department Materials Testing Laboratory, and a labourer for full attendance during the testing period, and ladder(s) as required in carrying out the test;
   e. Expose and prepare pile heads for non-destructive tests such that the pile heads are level, clean and free from soil and debris and able to accommodate the testing equipment on the pile heads;
   f. Provision of preliminary pile testing information to Specialist Contractor and/or Housing Department Materials Testing Laboratory;
   g. Provision and installation of sonic access tubes in the Type 3 piles for sonic logging tests; details of the sonic access tubes are shown at PIL Appendix ................................;
   h. Provision of driving equipment for piles selected for pile driving analyser test;
   i. Extend the test pile to a level as and when required so that pile driving analyser tests can be carried out.
2. Non-destructive tests on piles shall include Pile Driving Analyser Test, Pile Integrity Test and Sonic Test.
PRE.C12.270.7  CORE TESTING OF TYPE 1(C) & TYPE 3 PILES

Provide the following Special Attendance:
1. Compliance with all the requirements of PIL1 - Testing;
2. Provision of access to the test pile;
3. Expose and prepare pile heads for the tests such that the pile heads are level, clean and free from soil and debris and able to accommodate the testing equipment on the pile heads;
4. Provision of suitable working platforms for supporting the coring equipment in the execution of coring;
5. Provision of water and electricity as required 24 hours a day for the coring and site testing;
6. Fill cored holes solid with non-shrinkage grout of at least the same crushing strength as the pile cored.

PRE.C12.280.7  CONFIRMATORY CORE TESTING OF FOUNDING STRATA OF TYPE 3 PILES

Provide the following Special Attendance:
1. Compliance with all the requirements of PIL1 - Testing;
2. Provision of access to the test pile;
3. Expose and prepare pile heads for the tests such that the pile heads are level, clean and free from soil and debris and able to accommodate the testing equipment on the pile heads;
4. Provision of suitable working platforms for supporting the coring equipment in the execution of coring;
5. Provision of water and electricity as required 24 hours a day for the coring and site testing;
6. Fill cored holes and sonic tubes solid with non-shrinkage grout of at least the same crushing strength as the pile cored.

PRE.C12.290.7  PROVING BEDROCK AFTER INSTALLATION - TYPES 5 & 6 PILES

Provide the following Special Attendance:
1. Compliance with all the requirements of PIL1 - Testing;
2. Provision of access to the test pile;
3. Provision of suitable working platforms for supporting the coring equipment in the execution of coring;
4. Provision of water and electricity as required 24 hours a day for the coring and site testing;
5. Backfill the drillholes with clean sand.

PRE.C12.300.7  NON-DESTRUCTIVE TESTS ON WELDS OF PILES

Provide the following Special Attendance:
1. Compliance with all the requirements of PIL1 - Testing;
2. Provision of access to the test pile including access to pile when pitched;
3. Provision of electricity as required for the weld tests;
4. Provision of welders and welding facilities when required.

PRE.C12.310.7  LOADING TESTS OF WORKING PILES

Provide the following Special Attendance:
1. Compliance with all the requirements of PIL1 - Testing;
2. Provision of electricity as required 24 hours a day for the loading tests;
3. Provision of access to the test piles;
4. Provision of reactions by means of kentledge, anchor piles or other anchorage with adequate stability and safety and approved by the CM;
5. As and when required, extend the test piles to a suitable level for the carrying out of the test and design and construct a suitable pile cap to the test pile;

6. Expose and prepare pile heads such that the pile heads are level, clean and free from soil and debris and able to accommodate the testing equipment on the pile heads;

7. Provision of transportation of the testing equipment within the Site. Place the testing equipment at the location as required by the CM or the Specialist Contractor;

8. Throughout the period of the test, make observations of the settlement of the pile being tested by a suitable surveyor's level;

9. On completion of the test, remove the kentledge, anchor piles or other anchorage, demolish the test pile cap, make good the test pile and the Site back to their original condition and remove all debris arising from the test from the Site.

PARTicular REQUIREMENTS OF UTILITY UNdERTAKING

PRE.C12.410.7 GENERAL OBLIGATIONS
1. The requirements in this sub-section are not meant to be exhaustive;
2. Establish further requirements with the Utility Undertaking;
3. Compliance with this clause shall in no way relieve the Contractor of his obligation and liabilities under the Contract.

PRE.C12.420.7 SITE PREPARATION
Prior to the handover of any part of the Site to a Utility Undertaking:
1. Ensure that this particular part of the Site is clear and free from all surface and sub-surface obstruction which shall include ground slabs, ground beams, pits, wells and underground tanks;
2. Ensure that this particular part of the Site is in a dry condition and that the surface drains freely throughout the duration of the utility diversion activity;
3. Ensure that, in respect of any underground diversions or new installation by a Utility Undertaking, the particular part of the Site is prepared, to finished earthworks level plus or minus 150 mm;
4. Ensure that in respect of overhead diversions involving the installation of poles or towers by a Utility Undertaking, the part of the Site within 6 metres from the pole or tower in any direction shall be prepared to finished earthworks level plus or minus 150 mm.

PRE.C12.430.7 ACCESS
Provide and maintain free access for staff of the Utility Undertaking and their contractors, with necessary plant and vehicles, to enter the Site for carrying out installation, maintenance and repair works.

PRE.C12.440.7 TRAFFIC DIVERSIONS
Provide all necessary traffic diversions to meet the requirements of the Utility Undertaking whilst making connections to existing services within roads.

PRE.C12.450.7 SETTING OUT
Provide reference lines and levels and kerb alignment of the roads on site for the working of the Utility Undertaking.

PRE.C12.460.7 PROVISION OF TEMPORARY WORKS AREAS
Make available areas of the Site for use as temporary works areas by Utility Undertaking in connection with works related to the Contract.
LOCATIONS OF TEMPORARY WORKS AREAS

1. Agree with the respective Utility Undertaking the arrangements and locations of the temporary works areas to suit the working programme and method of working;
2. Agree with Utility Undertaking the precise arrangements and locations 4 weeks prior to commencement of their respective works;
3. Made available the temporary works areas in a dry condition 25 days prior to commencement of respective Utility Undertaking's works;
4. Arrange with the Utility Undertaking when it is considered necessary to move any of these works areas during the Contract period, and bear all costs arising from such an operation;
5. Ensure that an unobstructed and motorable vehicular access with an all weather surface capability is provided and maintained at all times to the Utility Undertaking's temporary works areas.

SPECIFIC REQUIREMENTS

Comply with the requirements of each respective Utility Undertaking which requirements will include but not be limited to the followings:

1. Water Supplies Department (WSD) or his agent - agree on Site the minimum length of site to be made available to WSD or his agent for mainlaying works. Provide adequate working space on each side of pipe trench. WSD or his agent will require a minimum of two months’ notice before commencement of their works;
2. Fixed Telecommunication Network Services (FTNS) Operators - agree on Site the minimum length of site to be made available to the FTNS operators. FTNS operators will require a minimum of one month's advance notice before commencement of their works;
3. China Light and Power Company Limited (CLP) - agree on Site the minimum length of site to be made available to CLP. CLP will require a minimum of one month's advance notice before commencement of their works;
4. Hong Kong and China Gas Company Limited (HKCG) - agree on Site the minimum length of site to be made available to the HKCG shall be agreed on site. In the case of road crossings, then the relevant length of the crossing only is required. HKCG will require a minimum of two months’ advance notice before commencement of their works. Made available the portion of Site to HKCG at formation level and section by section in a continuous manner;
5. CLP Engineering Limited (CLPEL) - with regard to new installations, lighting, complete all civil works as required before commencement of the street lighting works. CLPEL will require a minimum of three months’ advance notice before commencement of their works.

ATTENDANCE ON CONTRACTORS TENDERING FOR SPECIALIST AND NOMINATED SUB-CONTRACT WORKS

FACILITIES

Provide every facility to inspect the Site and the Works in the legitimate pursuit of their submission of a tender.

INFORMATION

Provide such information as can reasonably be requested as to method of construction, programme of Works, and the like.
GENERAL OBLIGATIONS

PRE.C12.610.7 REMEDIAL WORKS OR EXPENSES
Carry out all work necessitated by any failure in the above arrangements or pay to the Authority all expenses properly incurred as a result of such failure.
PRE.C13 APPENDIX 1

COMPUTER AND IT MULTI-MEDIA FACILITIES

PRE.C13.A030.7 OTHER REQUIREMENTS

1. Provide ...... No. of broadband line(s) for the exclusive use of CM and his representative for the duration of the Contract plus six months commencing from the date of the certificate of completion, or any other longer period as may be instructed for the necessary completion of the Works and/or additional works within the Maintenance Period;

2. The broadband line shall comply with the following:
   a. Unlimited 24 hours internet access through Internet Service Provider (ISP) via broadband with minimum 3M connected individually to each of the computer systems in the CM’s principal office and the container office(s). Security hardware/software systems shall be provided to protect the computer systems from hackers/unauthorized intruders;
   b. Networking to connect each of the computer equipment in the CM's principal office and the container office(s). The broadband router or switch used to connect the network to the ISP must support Virtual Private Network (VPN) using IPSec technology;
   c. Maintenance and support under an agreement between the Contractor and the original supplier for all equipment so provided for the internet service;
   d. All necessary training, manuals and instructions in operating the internet service for all the users as directed by the CM or his representative.
## PRE.C14 APPENDIX 2

### STANDARD FEATURE CODE FOR ENGINEERING SURVEY

**PRE.C14.A010.7**

<td>0.3 m</td>
</tr>
</tbody>
</table>

PRE.C15.A030.7 PLANIMETRIC FEATURES TO BE SURVEYED

1. Building/Structures:
   a. The plinth line of all permanent buildings;
   b. The plinth line of all temporary structures.

2. Boundary Features:
   a. Fences;
   b. Gates;
   c. Walls;
3. Roads, tracks and footpaths:
   a. Kerb lines or edges of surfacing to carriageways;
   b. Tracks and verges;
   c. Ramps and Drives;
   d. Paths;
   e. Pedestrian crossings;
   f. Steps/staircases.
4. Street Furniture:
   a. Letter boxes;
   b. Bus stops with shelters;
   c. Lamp posts;
   d. Telephone poles;
   e. Electricity poles;
   f. Traffic signals and control boxes;
   g. Sign posts;
   h. Drains or gullies;
   i. Fire hydrants;
   j. Various types of manholes or inspection chambers;
   k. Barriers and bollards;
   l. Telephone kiosks;
   m. Electric cabinets and transformer.
5. Slopes and Earthworks:
   a. Cuttings and embankments;
   b. Terraced slopes;
   c. Retaining walls;
   d. Cliff;
   e. Rock outcrops;
   f. Stockpiles;
   g. Boulders greater than 2 m diagonally;
   h. Slope conventions shall be drawn as near as possible to indicate the actual shape of the slope face, i.e. all berms and terraces shall be detailed. Any other features not listed, which are likely to affect construction works shall also be shown.
6. Vegetation:
   a. All trees of trunk diameter greater than 150 mm at 1 m above ground.
7. Water Features:
   a. All water features including ditches, rivers, streams, nullah with the indication of direction of flow.
d. Top and bottom of slopes;
e. Catchwater, ditches, outfalls, streams, culverts and drains at significant changes of gradients;
f. Cover and invert levels of manholes, and inspection covers;
g. Top and bottom of retaining walls;
h. Top level of boulders greater than 2 m diagonally.

SURVEY RESULTS

PRE.C15.A110.7 SURVEY
Supply copies of field notes, computations etc. in relation to the Survey as and when required by the Contract Manager's Representative.

PRE.C15.A120.7 DIGITAL DATA
The digital data for the Survey shall be labelled and recorded in strings type of ASCII code on 3.5" high density double sided disks for input to the Contract Manager's MOSS Modelling System.

APPENDIX D - SCHEDULE OF SAMPLES TO BE PROVIDED BY THE CONTRACTOR
APPENDIX D - SCHEDULE OF SAMPLES TO BE PROVIDED BY THE CONTRACTOR

APD A010.7  SCHEDULE OF SAMPLES TO BE PROVIDED BY THE CONTRACTOR ........ 3
In accordance with PRE.B9.410 and PRE.B9.420, provide the following samples for Approval before confirming orders, and delivery to and use on Site. Samples to be retained by the CM on or off Site. Samples may be sent by the CM, for testing to the appropriate Government of Hong Kong, Polytechnic or University Department in Hong Kong. Any test results which indicate a quality other than that specified will require the replacement and rectifying of any work carried out by the Contractor to comply with the Specification.

APR.R.001.7  INFORMATION REQUIRED BY CONDITIONS OF SUB-CONTRACT ........................................ 3
APPENDIX R - INFORMATION REQUIRED BY CONDITIONS OF SUB-CONTRACT

INFORMATION REQUIRED BY CONDITIONS OF SUB-CONTRACT

Special Conditions of Sub-contract

The following information is to be read in conjunction with the Special Conditions of Sub-contract and is to form part of the Sub-contract:

NS13.1 Price Fluctuations

For the purpose of determining the material fluctuation pursuant to Clause SCC20.1 of the Special Conditions of Contract, the "Cash Seller and Settlement" price in Hong Kong dollar equivalent for Copper Grade A forming the Base or the Current Material Index shall be calculated by multiplying,

1. the "Cash Seller and Settlement" price for Copper Grade A quoted in US dollar per tonne from the London Metal Exchange (LME) (hereinafter referred as "Copper Price") published in LME's official Internet website at the date for fixing the Base or the Current Material Index with;

2. the six-month forward selling exchange rate for US dollar to Hong Kong dollar quoted in the Opening Indicative Counter Exchange Rates Table issued daily by the Hong Kong Association of Banks at the date for fixing the Base or the Current Material Index.

The product obtained from the above multiplication shall be to two decimal places. Decimal places in excess of two shall be rounded up or down to the nearest second decimal place.

In the event that there is any disagreement or doubt as to the correctness of the Copper Price(s) published in LME's official Internet website mentioned in sub-clause (1) above, or the Copper Price(s) is unavailable from LME's official Internet website, or the discontinuation of publishing the Copper Prices in LME's official Internet website, the correct Copper Price(s) shall be obtained from LME. Any provisional calculation of the material fluctuation adjustments based on the latest Copper Price(s) published in LME's official Internet website shall subsequently be corrected upon the obtainment of the correct Copper Price(s). The Sub-contractor shall make all necessary arrangement as instructed by the Contract Manager and shall bear all costs for the obtainment of the correct Copper Price(s) from LME. If after a reasonable time the Sub-contractor fails to obtain the correct Copper Price(s) from LME, the Contract Manager after giving reasonable notice in writing to the Sub-contractor may obtain the correct Copper Price(s) from LME all at the costs, including handling charges, of the Sub-contractor and such costs to be deducted from payment due to the Sub-contractor.

CLA1  PROFILED SHEET ROOFING AND CLADDING

MATERIALS

PROFILED SHEETS

CLA1.M010.7  GENERAL
All profiled sheet must generally comply with BS 5427:1976.

CLA1.M020.7  GALVANIZED CORRUGATED STEEL
To BS 3083:1988 and:
1. Minimum coated thickness: 0.6 mm;
2. BS designation: G350;
3. Each sheet marked with the BS number and the type;
4. Complying with the appropriate corrugation profile described in the BS.

CLA1.M030.7  COATED PROFILED STEEL
Hot-dip zinc coated steel with surface coating and:
1. Thickness including zinc coatings but excluding surface finishes not less than 0.7 mm;
2. Profile and coating type: as shown on Drawings;
3. Colour: as shown on Drawings.

CLA1.M040.7  PROFILED ALUMINIUM
To BS 4868:1972:
1. Profile type:
   a. Type S (Sinusoidal);
   b. Type A (Assymmetrical Trapezoidal);
   c. Type B (Symmetrical trapezoidal).
2. Minimum thickness: 0.6 mm;
3. Finish: plain or Stucco embossed finish.

CLA1.M050.7  COLOUR COATED PROFILED ALUMINIUM
Generally to BS 4868:1972 with aluminium substrate to BS 1470:1987, designation 3103 H18, and:
1. Profile type and pitch and coating type: as shown on Drawings;
2. Minimum thickness: 0.6 mm;
3. Colour: as shown on Drawings.
CLA1.M060.7 **PROFILED GRP**

Glass reinforced plastic sheets to BS 4154:Part 1:1985 with thermo-setting polyester resin to BS 3532:1990:

1. Profile: to BS 4154:Part 2:1985, Table 1;
2. Light diffusion class: to BS 4154:Part 1:1985;
3. Colour: as shown on Drawings;
4. Fire performance requirements:
   a. Fire exposure rating for roofing to BS 476:Part 3:1975;
5. Marked with the manufacturer's name or trademark, the BS number 4154 and the designation of samples tested to BS 476:Part 3:1975 where applicable.

CLA1.M070.7 **PROFILED PVC**

Unreinforced, rigid PVC sheets to BS 4203:Parts 1 and 2:1980

2. Light diffusion characteristics: to BS 4203:Part 2:1980;
3. Colour: as shown on Drawings;
4. Thickness: as shown on Drawings;
5. Marked with the manufacturer's name or trademark, the BS number and the date of manufacture.

CLA1.M080.7 **PROFILED FIBRE CEMENT**

Free of asbestos materials of any kind with profile and colour as shown on Drawings.

CLA1.M090.7 **LINING SHEETS**

1. Material and coating type: as shown on Drawings;
2. Colour: as shown on Drawings;
3. Thickness: as shown on Drawings, including any zinc coatings but excluding finishes.

CLA1.M100.7 **FACTORY COATED PROFILED STEEL INSULATED SHEETS**

Composite profiled sheets with bonded internal insulation:

1. Sheet thickness including zinc coatings but excluding surface finishes: not less than 0.7 mm;
2. Profile, weight, coatings and insulation required: as specified in Project Specific Specification;
3. Colour: as shown on Drawings;
4. Ensure the design of composite sheets allow for differential expansion.

CLA1.M110.7 **PROFILED SHEET ROOFING AND CLADDING FOR DOMESTIC BLOCK**

Proprietary product as follows:

1. Sheeting: 0.47 mm factory painted zinc/aluminium alloyed coated steel with 550 Mpa minimum yield strength, crimp curved as shown on the Drawings;
2. Colour: as shown on the Drawings or to Approval;
3. Accessories: longitudinal and transverse metal flashings, colour-matched to roofing sheets, produced to dimensions and profiles shown on the Drawings;
4. Sealant: one-part silicone as recommended by the manufacturer for sealing between flashings and concrete walls and in compliance with WAT5.M110.

ACCESSORIES FOR PROFILED SHEETS

CLA1.M210.7 ACCESSORIES FOR CORRUGATED STEEL
1. Of proprietary manufacture;
2. Manufactured from 0.6 mm thick galvanized steel sheet.

CLA1.M220.7 ACCESSORIES FOR COLOUR COATED PROFILED STEEL
Obtain from the sheet manufacturer.

CLA1.M230.7 ACCESSORIES FOR PROFILED ALUMINIUM
1. Obtain from the sheet manufacturer;
2. Manufactured from aluminium flat sheet at least 0.6 mm thick and with a similar finish to the profiled sheets.

CLA1.M240.7 ACCESSORIES FOR COLOUR COATED PROFILED ALUMINIUM
1. Obtain from the sheet manufacturer;
2. Manufactured from aluminium flat sheet at least 0.6 mm thick and similar in colour and finish to the profiled sheets.

CLA1.M250.7 ACCESSORIES FOR PROFILED FIBRE CEMENT
Obtain from the sheet manufacturer.

FIXINGS AND ANCILLARY MATERIALS

CLA1.M310.7 FIXINGS GENERALLY
Design to prevent the ingress of rainwater when fixed according to this Specification and as specified from the following;
1. Hook bolts and nuts, drive screws, washers, self-tapping screws, roofing bolts, nuts and clips, roofing screws and sheeting clips to BS 1494:Part 1:1964:
   a. Sizes: as shown on the Drawings;
   b. Finish: hot dip galvanized, zinc, aluminium plated or otherwise specified.
2. As recommended by the sheeting manufacturer.

CLA1.M320.7 WASHERS
Must be capable of withstanding uplift during typhoon conditions.

CLA1.M330.7 FIXING HEADS FOR COLOURED SHEETS
Fitted with plastic caps of a matching colour to that of the sheets.

CLA1.M340.7 METALLIC ZINC RICH PRIMING PAINT
To BS 4652:1995, Type 2.
INSULATION

CLA1.M410.7  GLASS FIBRE INSULATION
Resin bonded, non-combustible, semi-rigid slabs with density, thermal conductivity and thickness of insulation as specified in Project Specific Specification.
WORKMANSHP

PREPARATION OF PROFILED SHEETS

CLA1.W010.7  FIXING HOLES
Drill fixing holes:
1. In the crown of corrugations for roofing;
2. In the trough of corrugations for cladding;
3. 2 mm larger than bolts or screws;
4. Not less than 40 mm from the edges of sheets.

CLA1.W020.7  TREATING CUT OR DRILLED ZINC COATINGS
Make good damage to zinc coatings and galvanizing by applying two coats of metallic, zinc-rich priming paint.

LAPS ON PROFILED SHEETING

CLA1.W110.7  END LAPS ON STEEL SHEETING
Lay:
1. Sloping sheets with a minimum end lap of 150 mm;
2. Vertical sheets with a minimum end lap of 75 mm;
3. So that all laps are located over a supporting member.

CLA1.W120.7  END LAPS ON ALUMINIUM SHEETING
Lay:
1. Sloping sheets with a minimum end lap of 150 mm;
2. Vertical sheets with a minimum end lap of 75 mm;
3. So that all laps are located over a supporting member.

CLA1.W130.7  END LAPS ON GRP SHEETING
Lay:
1. Sloping sheets with a minimum end lap of 150 mm;
2. Vertical sheets with a minimum end lap of 75 mm;
3. So that all laps are located over a supporting member.

CLA1.W140.7  END LAPS ON PVC SHEETING
Lay:
1. Sloping sheets with a minimum end lap of 225 mm;
2. Vertical sheets with a minimum end lap of 75 mm;
3. So that all laps are located over a supporting member.
CLA1.W150.7 END LAPS ON FIBRE CEMENT SHEETING
Lay:
1. Sloping sheets with a minimum end lap as shown on Drawings;
2. Vertical sheets with a minimum end lap as shown on Drawings;
3. So that all laps are located over a supporting member.

CLA1.W160.7 SIDE LAPS
Lay sheets with open joint of side lap away from the prevailing wind.

CLA1.W170.7 SEALING LAPS
Seal laps with lap sealant in accordance with the sheet manufacturer's recommendations.

FIXING PROFILED SHEETING

CLA1.W210.7 GENERAL
Fix sheeting:
1. In accordance with this Specification; or alternatively,
2. Fix in accordance with the sheeting manufacturer's recommendations but, nevertheless, to withstand uplift under typhoon conditions.

CLA1.W220.7 FIXING TO STEELWORK
Fix with hook bolts at maximum centres of 300 mm.

CLA1.W230.7 FIXING TO TIMBER
Fix with hook bolts at maximum centres of 300 mm.

CLA1.W240.7 EAVES, ENDS AND END LAPS
Fix with two fixings per sheet width.

CLA1.W250.7 INTERMEDIATE SUPPORT
Where no lap occurs, fix sheets with two fixings per sheet width.

CLA1.W260.7 SELF TAPPING SCREWS
Tighten self-tapping screws to the torque recommended by the manufacturer.

CLA1.W270.7 FIXING GALVANIZED, CORRUGATED SHEETING AND ACCESSORIES
1. Fix sheeting in accordance with CP 143:Part 10:1973;
2. Cut, fit and dress accessories to fit corrugations and:
   a. Where possible, fix with the same fixings used to secure sheeting;
   b. Elsewhere, fix to the sheeting with roofing bolts.

CLA1.W280.7 FIXING PROFILED ALUMINIUM SHEETING
CLA1.W290.7 MOVEMENT JOINTS
1. Provide movement joints in locations shown on the Drawings, or otherwise in all lengths of roofing or cladding over 45 metres, with one joint for lengths up to 75 metres and one for every additional 30 metres;
2. Fix movement joint cover to sheets on only one side of the joint.

CLA1.W300.7 FIXING COATED PROFILED STEEL
Fix sheets in accordance with the manufacturer's recommendations and:
1. Cut sheets by shearing, without the use of circular saws or abrasive wheels;
2. Make good damage in accordance with clause CLA1.W020.

CLA1.W310.7 FORMING CURVES
Bend sheets requiring to be bent to a radius for fixing to curved roofs, eaves etc by means of a proper profiling machine, designed for this purpose.

CLA1.W320.7 FIXING PROFILED SHEET ROOFING AND CLADDING TO STANDARD DOMESTIC
Fix sheeting:
1. In accordance with the Drawings; and,
2. Fix in accordance with the sheeting manufacturer's recommendations but, nevertheless, to withstand uplift under typhoon conditions.
CLA2 CHINESE TILING

MATERIALS

CHINESE TILES

CLA2.M010.7 TILES GENERALLY
Red in colour, sound, well burnt, unglazed clay, whole and free from cracks and blemishes.

CLA2.M020.7 SIZES OF TILES
Approximate sizes to be as specified for the following:
1. Plain tiles: 225 mm × 225 mm;
2. Roll tiles: 165 mm long and tapered;
3. Valley tiles: 300 mm × 225 mm.

CLA2.M030.7 SPECIAL TILES
1. Roll tiles to be left exposed: specially selected and semi-circular in section;
2. Glazed tiles: to be obtained from an Approved manufacturer.

ANCILLARY MATERIALS

CLA2.M110.7 MORTAR
Cement and lime mortar as MAS3.W170.

CLA2.M120.7 CHUNAM MORTAR
To consist, by volume of:
1. One part of Portland cement type CEM I in BSEN 197-1:2000;
2. Three parts of hydrated lime to BS 890:1972; and
3. Twenty parts of inorganic soil, free from organic matter and containing no more than 30% of soil particles passing a 63 micron BS Test Sieve.

CLA2.M130.7 NAILS
Aluminium or galvanized steel, 2 mm minimum diameter and 30 mm long with plain heads.

CLA2.M140.7 REINFORCEMENT FOR CHUNAM BEDDING MORTAR
Mesh size and finish of reinforcement are shown on Drawings.

CLA2.M150.7 TIMBER TILING BATTENS
As Worksection TIM1.
WORKMANSHIP

FIXING CHINESE TILING

CLA2.W010.7 SINGLE LAYER TILING
Lay tiles in a single layer:
1. Gauge of plain tiles: exceeding 75 mm but not exceeding 115 mm;
2. Gauge of roll tiles: 120 mm.

CLA2.W020.7 DOUBLE LAYER TILING
Lay tiles in two identical layers, the second superimposed on the first:
1. Gauge of plain tiles: exceeding 75 mm but not exceeding 115 mm;
2. Gauge of roll tiles: 120 mm.

CLA2.W030.7 FIXING TILES TO CONTINUOUS DECKS
1. With cement mortar:
   a. Bed corners of plain tiles in mortar dabs;
   b. Lay roll tiles with a 50 mm lap, bedding both edges in mortar;
   c. Cover roll tiles with mortar to a minimum thickness of 15 mm and trowel smooth.
2. With chunam mortar:
   a. Lay a continuous, reinforced, chunam, mortar bed evenly on the substrate: 15 mm thick;
   b. Bed plain tiles onto freshly laid mortar bed;
   c. Lay roll tiles with a 50 mm lap, bedding both edges in mortar;
   d. Cover roll tiles with mortar to a minimum thickness of 15 mm and trowel smooth.

CLA2.W040.7 FIXING TILES TO BATTENS
1. Drive nails into battens and leave projecting 15 mm as a key for mortar dabs;
2. Bed corners of plain tiles in mortar dabs;
3. Lay roll tiles with a 50 mm lap, bedding both edges in mortar;
4. Cover roll tiles with mortar to a minimum thickness of 15 mm and trowel smooth;
5. Neatly point the underside if exposed.

CLA2.W050.7 ROLL TILES TO BE LEFT EXPOSED
Bed and point in cement mortar.

CLA2.W060.7 GLAZED TILES
Fix in accordance with the manufacturer's recommendations.
VERGES
Finish with a mortar fillet, trowelled smooth.

RIDGES AND HIPS
Form ridges and hips with rows of inverted tiles, with rows of roll tiles over.

VALLEYS
1. Lay valley tiles up the valley to gauge as shown on Drawings;
2. Cut roof tiles to rake and finish both sides with mortar, trowelled smooth.

EAVES TO SINGLE LAYER TILING
Finish eaves with a double layer of tiles.

EAVES TO DOUBLE LAYER TILING
Finish eaves with roll tiles or tile slips placed centrally between rolls to form weep hole and fill edge with mortar, trowelled smooth.

ABUTMENTS ANDPIPES ETC
Cut and fit tiling at abutments and around pipes etc and finish with a mortar fillet, trowelled smooth.
CLA4 SHEET METAL COVERINGS

MATERIALS

LEAD SHEET AND ANCILLARY MATERIALS

CLA4.M010.7 MILLED LEAD SHEET AND STRIP
To BS 1178:1982 and of the code specified for the situation given in the table below unless shown otherwise on the Drawings:

<table>
<thead>
<tr>
<th>Situation</th>
<th>Code</th>
</tr>

</table>

CLA4.M020.7 ISOLATION LAYER
Waterproof building paper to BS 1521:1972, Class A, Type A1F.

CLA4.M030.7 UNDERLAY
1. Needled non-woven polyester textile;
2. Weight: not less than 200 g/m².

CLA4.M040.7 CLIPS AND TACKS
1. Cut from Code 6 lead sheet and not less than 50 mm wide; or
2. Cut from sheet copper to BS 2870:1980 and of ¼ H temper, not less than 0.6 mm thick and 50 mm wide. Lead coated when used as visible fixing.

CLA4.M050.7 NAILS
1. Copper, to BS 1202:Part 2:1974, Table 2 with annular ring, helical ring or serrated shank, not less than 20 mm long with a minimum shank diameter of 3.35 mm and head diameter not less than 6 mm;
2. Austenitic stainless steel with annular ring, helical ring or serrated shank, not less than 19 mm long with a minimum shank diameter of 2.65 mm and head diameter not less than 6 mm;
WOOD SCREWS
1. Brass, to BS 1210:1963:Table 3 and not less than 19 mm long and 3.35 mm diameter;
2. Stainless steel: to BS 1210:1963:Table 3, not less than 19 mm long and 3.35 mm diameter.

PLUGS
Proprietary fibre or plastics of length and diameter to suit screw fixings.

SOLDER
To BS 219:1977, Grade D or J.

ALUMINIUM SHEET AND ANCILLARY MATERIALS

ALUMINIUM SHEET
To BS 1470:1987:
1. Grade 1050A, temper grade H12;
2. 0.8 mm thick;
3. With mill finish.

UNDERLAY FOR TIMBER DECKS
Bitumen felt to BS 747:1994, type 4A(ii), No 1 inodorous.

UNDERLAY FOR CEMENTITIOUS DECKS
Polyethylene sheet, 300 microns (0.3 mm) thick.

CLIPS
1. Plain clips: cut from aluminium sheet specified for roofing to dimensions shown in Fig. 4, CP 143:Part 15:1973;
2. Expansion clips: aluminium or stainless steel 0.8 mm thick, type A or B to Fig. 3, CP 143:Part 15:1973.

NAILS
Aluminium to BS 1202:Part 3:1974 and:
1. For securing underlay: 20 mm long x 3 mm diameter clout type;
2. For securing clips: 25 mm long x 3.25 mm diameter.

WOOD SCREWS
Aluminium to BS 1210:1963, anodized and dipped in lanolin and:
1. Not less than 25 mm long x No 8 gauge for securing clips;
2. Appropriate length x No 14 gauge for securing wood rolls.

BITUMEN COATING SOLUTION
To BS 6949:1991, Type 1.
COPPER SHEET AND ANCILLARY MATERIALS

CLA4.M210.7 HOT ROLLED COPPER SHEET AND STRIP
To BS 2870:1980, designation C104:
1. For roofing and cladding: 0.7 mm thick, temper grade 0 for hand applied coverings and temper grade ¼H for machine bending and welding systems;
2. For flashings and weathering: 0.7 mm thick, temper grade ½H.

CLA4.M220.7 UNDERLAY
1. Needled non-woven polyester textile;
2. Weight: not less than 200 g/m².

CLA4.M230.7 CLIPS
Sheet copper to BS 2870:1980, designation C104, hot rolled, temper grade ¼H.

CLA4.M240.7 NAILS
Copper to BS 1202:Part 2:1974, Table 3, jagged shank, 25 mm long.

CLA4.M250.7 WOOD SCREWS
Brass to BS 1210:1963, Table 3.

CLA4.M260.7 PLUGS
Proprietary fibre or plastics of length and diameter to suit screw fixings.

CLA4.M270.7 MORTAR FOR POINTING
As specified in Worksection MAS3.
WORKMANSHIP

GENERAL

CLA4.W010.7 STORAGE
1. Store sheets and strip clear of the ground in a dry place. Protect from distortion and damage to surfaces and edges;
2. Store rolls of underlay and isolation layer upright on a clean, flat surface in a dry place.

CLA4.W020.7 ROOF CONDITION
Before laying coverings ensure that
1. All surfaces are clean, dry, smooth and free from projections;
2. All preliminary works including formation of any grooves, provision of rolls and drips are complete;
3. Roof substructure is to falls shown on the Drawings.

CLA4.W030.7 FIXINGS
Drive heads of nails and screws below surfaces to be covered, to ensure outer layer of sheeting is not pierced.

CLA4.W040.7 LAYING UNDERLAY GENERALLY
Keep base and underlay dry and do not lay more underlay than can be covered with sheeting before end of day's work.

CLA4.W050.7 LAYING, JOINTING AND FIXING COVERING GENERALLY
1. Do not use sharp scribers for marking out;
2. Lay sheets flat on base and dress neatly to profile of upstands and projections etc without causing injury to the surface.

CLA4.W060.7 LAYING SEQUENCE
Lay sheeting in the following sequence: cesspools, gutters, aprons, roof and wall surfaces.

LAYING LEAD SHEET COVERINGS

CLA4.W110.7 GENERAL
1. Lay, joint and fix lead sheet coverings in accordance with BS 6915:1988;
2. Ensure that persons employed on work which exposes them to lead in such a form that it may be inhaled, ingested or otherwise absorbed are aware of the risks from lead and the precautions which should be observed.

CLA4.W120.7 LAYING UNDERLAY ON CEMENTITIOUS DECKS
1. Loose lay building paper onto concrete and screeded bases, and up 50 mm at edges;
2. Loose lay needled non-woven polyester textile onto building paper and butt at edges;  
3. Continue underlay around and up abutments to flashing line.

CLA4.W130.7 LAYING UNDERLAY ON TIMBER DECKS
1. Fix needled non-woven polyester textile to timber with galvanized nails at 300 mm centres, butt jointed to horizontal surfaces with 50 mm wide lap joints to sloping and vertical surfaces;  
2. Continue around and up abutments to flashing line.

CLA4.W140.7 CLIPS AND TACKS
Twice fix and turn 20 mm over free edge of covering.

CLA4.W150.7 FIXING CLIPS TO TIMBER
Fix clips to timber with 25 mm x 3.25 mm copper nails or 25 mm x No. 8 brass screws.

CLA4.W160.7 FIXING CLIPS TO MASONRY/CONCRETE
Fix clips to concrete, brickwork and stonework with fibre or plastics plugs and 25 mm x No. 8 brass screws.

CLA4.W170.7 SOLDERING
Use solder only where unavoidable.

CLA4.W180.7 SHEET SIZES FOR ROOF COVERINGS
1. Not more than 2500 mm long;  
2. Not more than 2.25 m² in area.

CLA4.W190.7 SHEET SIZES FOR WALL COVERINGS
1. Not more than 2400 mm long;  
2. Not more than 1.7 m² in area.

CLA4.W200.7 INTERMEDIATE FIXINGS FOR WALL COVERINGS
Form at centres as shown on Drawings with 25 mm long, raised head brass screws and 10 mm diameter tinned, brass washers set in 40 mm diameter x 8 mm deep recess in base filled with solder and wiped smooth.

CLA4.W210.7 COVER FLASHINGS TO FLAT ROOF COVERINGS
1. Form from sheets not more than 1500 mm long and lap ends 100 mm;  
2. Secure with lead tacks left on underlap at 450 mm centres and turned over 20 mm;  
3. Turn top edge 25 mm into groove in brick and concrete surfaces, wedge at 450 mm centres and point in 1:3 cement: sand mortar;  
4. Lap upstand by not less than 75 mm;  
5. Finish lead 50 mm clear of flat roof coverings with 150 mm minimum depth-on-face of flashing.
CLA4.W220.7 LEAD SLATES, FLASHINGS AND COLLARS
1. Form in Code 4 lead in positions shown on the Drawings;
2. Fit slates around pipes etc penetrating the roof;
3. Dress into roofing for full slate/tile lap;
4. Lead burn collar to lead slate.

CLA4.W230.7 WEDGES
Drive 25 mm wide x 20 mm finished depth, wedge-shaped lead strips full depth into groove.

LAYING ALUMINIUM SHEET COVERINGS

CLA4.W310.7 STANDARD
Lay, fix and joint aluminium coverings in accordance with the recommendations of CP 143:Part 15:1973 unless specified otherwise.

CLA4.W320.7 CONTACT BETWEEN DISSIMILAR METALS
1. Prevent direct contact between aluminium and copper, brass or bronze;
2. Isolate iron and steel in direct contact with aluminium with isolating tape, bitumen coating solution or Approved equivalent.

CLA4.W330.7 STORING ALUMINIUM
In accordance with clause CLA4.W010 and protected from contact with dissimilar metals, alkaline and any other damage.

CLA4.W340.7 LAYING UNDERLAY ON CEMENTITIOUS DECKS
Lay polyethylene underlay with 50 mm lapped joints. Carry up underlay at wall abutments to flashing level.

CLA4.W350.7 LAYING UNDERLAY ON BOARDED OR SHEETED DECKS
Lay felt underlay butt jointed and secured with clout nails. On vertical and steeply pitched surfaces, ensure underlay is securely fastened before fixing clips. Carry up underlay at wall abutments to flashing level.

CLA4.W360.7 CLIPS FOR STANDING SEAMS
Space at 300 mm centres along line of seams and fix to:
1. Timber decks with nails;
2. Cementitious decks with screws and plugs.

CLA4.W370.7 LAYING ALUMINIUM COVERINGS GENERALLY
1. Cut, form and bend sheet to required dimensions in workshop wherever possible;
2. Allow for upstands or verge apron welting in first and last bays when setting out;
3. Lay flat and true to surface of roof.

CLA4.W380.7 STANDING SEAM JOINTS
1. Secure seams up to 3 m long with plain clips;
2. Secure seams longer than 3 m with plain clips for first 3 m from top of slope and remainder of seam with expansion clips;
3. Space clips at 300 mm centres;
4. Machine or hand form seams to dimensions shown on the Drawings.

CLA4.W390.7  **ABUTMENTS TO MASONRY AND CONCRETE SURFACES**
1. Ensure that there is either an underlay backing to aluminium upstand or coat reverse of sheet with bitumen coating solution;
2. Form upstand in sheeting to abutments to dimensions shown on Drawings;
3. Provide and form cover flashing as specified in Worksection WAT4.

**LAYING SHEET COPPER COVERINGS**

CLA4.W410.7  **STANDARD**
Lay, joint and fix copper coverings in accordance with the recommendations of CP 143:Part 12:1970 unless specified otherwise.

CLA4.W420.7  **CONTACT BETWEEN DISSIMILAR METALS**
Prevent contact between copper sheeting and dissimilar metals other than brass and lead. Coat contact surfaces with bituminous coating solution, protective tape or equivalent.

CLA4.W430.7  **LAYING UNDERLAY ON CEMENTITIOUS DECKS**
Lay underlay with butt joints across fall. Continue around gutters and up abutments to flashing line.

CLA4.W440.7  **LAYING UNDERLAY ON BOARDED OR SHEETED DECKS**
Lay underlay with butt joints and nail with 25 mm x 3.25 mm diameter copper nails at 150 mm centres at edges and at 150 mm centres staggered over area of sheets. Continue around gutters and up abutments to flashing line.

CLA4.W450.7  **FIXING CLIPS TO TIMBER**
Fix clips to timber with 25 mm x 3.25 mm diameter copper nails or 25 mm x No. 8 brass screws.

CLA4.W460.7  **FIXING CLIPS TO MASONRY/CONCRETE**
Fix clips to concrete, brickwork and stonework with fibre or plastic plugs and 25 mm x No. 8 brass screws.

CLA4.W470.7  **USE OF SOLDER**
Do not solder sheets.

CLA4.W480.7  **LAYING GENERALLY**
Cut and bend to required size and profile before laying. Ensure sheets lie flat on base on completion of laying.

CLA4.W490.7  **SHEET SIZES**
Do not use sheets exceeding the following size unless otherwise instructed:
1. Length: 1800 mm;
2. Width: 750 mm (to form bay 650 mm wide between joints).

CLA4.W500.7  STANDING SEAM JOINTS
1. Form 20 mm high in direction of fall;
2. Turn up adjacent sheets and double-lock welt together;
3. Secure with copper clips twice fixed at 380 mm centres.

CLA4.W510.7  UPSTANDS AT ABUTMENTS
1. Turn sheeting up at abutments by not less than the following:
   a. Pitch up to 15°: 200 mm;
   b. Pitch over 15° and up to 30°: 150 mm;
   c. Pitch over 30°: 100 mm.
2. Single-lock welt joints and secure with copper clips at 450 mm centres.

CLA4.W520.7  FLASHINGS
1. Form at square abutments with 0.7 mm copper giving 100 mm minimum cover over upstands;
2. Form from sheets not more than 1800 mm long with single-lock welt joints;
3. Welt bottom edge to 12 mm depth of welt;
4. Turn clips down over top of upstand and 25 mm up over bottom edge of flashing;
5. Turn top edge 25 mm into groove, secure with copper wedges and point in mortar.

CLA4.W530.7  FIXING WEDGES TO COVER FLASHINGS
Drive 25 mm wide x 20 mm finished depth wedge-shaped copper strips full depth into groove.

STAINLESS STEEL WINDOWS, DOORS AND LOUVRES

DESIGN

GENERAL

COM1.D010.7 SPECIFICATION REQUIREMENTS
Design and construct all stainless steel windows, doors and louvres, complete with
glazing, in accordance with the clauses in this Worksection and the relevant clauses
in Worksection COM4.

COM1.D020.7 WINDOWS AND DOORS
Must be:
1. Suitable for inside glazing, unless otherwise shown on the Drawings;
2. An Approved glazing system with stainless steel beads.

DESIGN PARAMETERS

COM1.D110.7 TOLERANCES
Design window, door and louvre so that the tolerances are coordinated with the
building tolerances for the structural works as described in Appendix H to this
Specification.

COM1.D120.7 GLASS THICKNESS
Design glass thickness to withstand the wind load as specified in COM1.D130 and in
no case allow it to be less than 6 mm. Calculate and check the correct thickness.

COM1.D130.7 WIND LOADING FOR GLAZED WINDOWS, DOORS AND LOUVRES
1. When fixed in position and glazed, windows, doors and louvres must withstand
   a. A wind load calculated in accordance with the current Code of Practice on
      Wind Effects, Hong Kong; and
   b. The resultant resistance to wind loading of a minimum of
      i. 3.0 kPa for non-domestic buildings such as schools, commercial centres
         etc.;
      ii. 3.8 kPa for domestic buildings excluding ground floor or podium;
2. Maximum permissible deflection: less than 1/180 the length of a particular
   member;
3. Use galvanized mild steel cores, anchors, brackets, etc. as stiffeners, where
   necessary.

COM1.D140.7 DRAINAGE
As COM2.D140.

SUBMISSION

COM1.D210.7 GENERAL
Ensure that drawings and structural calculations are carried out by a Registered
Structural Engineer.
COM1.D220.7 SHOP DRAWINGS AND STRUCTURAL CALCULATION
Submit for Approval, prior to the commencement of fabrication, structural calculation by RSE and shop drawings showing compliance with the design parameters specified in this Worksection. Drawings must include:
1. Fixing details of window, door and louvre members to the adjoining structures;
2. The positions of anchor bolts;
3. Method statement for fixing friction pivots and sliding stays onto galvanised mild steel bars to window frames and sashes;
4. Fixing details of the floor spring, top pivot and bottom strap for stainless steel door using approved floor spring with access for inspection of fixing screws for door pivots.

COM1.D240.7 SAMPLES
Submit material samples of windows, doors and louvres for CM’s approval prior to the commencement of fabrication.
MATERIALS

WINDOWS, DOORS, LOUVRES AND FIXINGS

COM1.M010.7 WEATHERSTRIP
Approved chloroprene rubber, polyvinylchloride or woolpile type.

COM1.M020.7 STAINLESS STEEL PLATE, SHEET AND STRIP
To BS EN 10095:1999 and:
1. Grade: Grade 316 in accordance with MET1.M060;
2. Minimum thickness: 1.5 mm;
3. Finish: as shown on the Drawings.

COM1.M030.7 STUD ANCHORS AND FIXING BOLTS
As MET1.M220.

COM1.M040.7 EXPOSED FIXINGS
1. Screws, nuts, bolts, washers and rivets: stainless steel or nylon washers and caps for window grilles to match finish;
2. For stainless steel door using approved floor spring, all exposed screws to be Allen screws to prevent vandalism.

COM1.M050.7 CONCEALED FIXINGS
Galvanized mild steel.

COM1.M060.7 STAINLESS STEEL BEADS
Use beads which securely clip to the frame or are an integral part of the frame.

COM1.M070.7 SEALANT FOR ASSEMBLING COMPOSITE UNITS
One part gun grade polysulphide sealant WAT5.M130.

WINDOW AND DOOR FITTINGS

COM1.M110.7 FRICTION PIVOTS AND SLIDING STAYS
1. All friction pivots and sliding stays to be 3 mm thick stainless steel of grade 304/A2-70 or Approved equivalent:
   a. For side hung window, providing a minimum clearance of 100 mm between frame and window when opening at 90°;
   b. For top hung window, providing, a minimum clearance of 70 mm between frame and window when opening at 90°.
2. All friction pivots and sliding stays to be fixed with stainless steel screws onto galvanized mild steel bars 12 mm minimum (width) x 3 mm (thick) in nominal size to all frame members and sash members.

COM1.M120.7 CASEMENT FASTENERS, LOCKING HANDLES ETC
Moulded stainless steel with satin finish.

COM1.M130.7 PULL HANDLES
Stainless steel with hairline finish.
### COM1.140.7 ROLLERS, GUIDES ETC
Stainless steel with nylon or brass rollers to suit weight of window or door and adjustable after installation.

WORKMANSHIP

FABRICATION AND ASSEMBLY - OFF SITE

COM1.W010.7 SECTIONS
Fabricate from stainless steel plates, sheets and strips as COM1.M020 with projections along external opening edges of sections for weatherstripping.

COM1.W020.7 FIXING WEATHERSTRIPS
Securely fix weatherstrip to projection along the external opening edge of the window or door section to provide a continuous contact between each opening part and its fixed frame.

COM1.W030.7 WELDING FRAMES
Weld joints of frames to form rigid and secure connections. Do not use excessive heat during welding.

COM1.W040.7 SASH MEMBERS
Mechanically joint or mitre sash members and flush butt weld to develop the full strength of members and provide a neat weather-tight joint. Do not use excessive heat during welding.

FABRICATION AND ASSEMBLY - ON SITE

COM1.W110.7 COMPOSITE UNITS
Assemble all composite units on Site and provide all bolts, screws etc and polysulphide sealants.

INSTALLATION ON SITE

COM1.W120.7 FIXING ANCHOR BOLTS
Fix anchor bolts in accordance with manufacturer's recommendations and at positions to Approved shop drawings.

COM1.W130.7 WINDOWS AND DOORS
Hang to open as indicated on the Drawings and fit with fittings shown on the Drawings.

COM1.W140.7 TOLERANCES
Check the position, size and alignment etc. of all windows, doors and louvres in accordance with the tolerances specified at COM1.D110 and report any discrepancy to the CM. Rectify any fault or discrepancy to the satisfaction of the CM and bear the cost of all such remedial work.

COM1.W145.7 BEDDING AND GROUTING FRAMES
As COM2.W234.

COM1.W147.7 POINTING TO PERIMETER OF WINDOWS, DOORS AND LOUVRES
As COM2.W265.
EQUIPOTENTIAL BONDING TO WINDOWS AND LOUVRES

COM1.W210.7 EQUIPOTENTIAL BONDING TO STAINLESS STEEL WINDOWS, DOORS AND LOUVRES

Unless otherwise specified on Drawings, provide equipotential bonding connection for stainless steel windows, doors and louvers as follows:

1. Louvres for services room and doors:
   a. Weld one end of 1.5 mm thick stainless steel earthing lug(s) to the louvers and doors; and
   b. Form a 5 mm diameter hole at the other end of the earthing lug(s) for connection of the bonding conductor by the Nominated Sub-contractor for Electrical Installation;
   c. Ensure that full electrical continuity is maintained between all the component elements of the metal doors and louvres.

2. Windows and louvres in public access areas:
   a. Provide a 20 mm x 1.5 mm thick steel plates earthing lug electroplated zinc galvanized to BS 1706:1990, class B and 13 μm to the outer frame of the windows and louvers. The cut edges of earthing lug shall be painted with zinc phosphate primer;
   b. Fix one end of the earthing lug to the window with 2 No. M4 self-tapping stainless steel screws at 60 mm centres;
   c. Provide a 5 mm diameter hole at the other end for connection of the bonding conductor by the Nominated Sub-contractor for Electrical Installation;
   d. For window:
      i. The fixing position of the earthing lug should be as far away from the hinge of the window as possible;
      ii. Ensure that full electrical continuity is maintained between all the component elements of composite windows as COM1.W220.
   e. Louvres for services rooms: ensure that full electrical continuity is maintained between all the component elements of the louvres.

3. As COM2.W465 (6).

COM1.W220.7 EQUIPOTENTIAL BONDING REQUIREMENTS FOR COMPOSITE WINDOWS

1. Maintain electrical conductivity with negligible impedance between each member and component of window sets constructed either by means of screw joints, mortice and tenon joints, or riveting;

2. Maintain electrical continuity for composite window construction:
   a. Use appropriate number of stainless steel screws;
   b. Determine number of stainless steel screws and positions to be fixed on windows so as to maintain electric conductivity with negligible impedance between each member and component of the window set.

3. Submit samples of the windows completed with shop drawings showing detailed construction of window sets, including stainless steel screws for earth continuity, all for Approval prior to actual delivery and installation on site.

PROTECTION

COM1.W310.7 PRIMING

Prime reinforced steel framework, cores, anchors and brackets with zinc phosphate primer and paint with two coats of bituminous paint.
TEMPORARY PROTECTIVE COATINGS TO EXPOSED STAINLESS STEEL
1. Protect all exposed stainless steel surfaces with a strippable coating or low-tack masking tape;
2. Maintain and renew protective coatings as necessary.

PROTECTION OF WINDOWS, DOOR UNITS AND OTHER ASSOCIATED MATERIALS
As COM2.W530.

COMPLETION OF THE WORKS

REMOVAL OF PROTECTIVE COATINGS
Return to Site on completion of the building works and carefully remove protective coatings and leave clean.

ON COMPLETION
As COM2.W610.
TESTING

ON-SITE VERIFICATION TEST

COM1.T010.7 TESTING INSTALLED WINDOWS FOR WATERTIGHTNESS
As COM2.T210.
COM2 ALUMINIUM WINDOWS AND LOUVRES

DESIGN

GENERAL

COM2.D010.7 SPECIFICATION REQUIREMENTS
Design and construct aluminium windows and louvres, complete with glazing, in accordance with this Worksection and the relevant clauses of Worksection COM4 and COM11.

COM2.D020.7 WINDOWS
Must be:
1. Suitable for inside glazing, unless otherwise shown or scheduled on the Drawings;
2. An Approved glazing system with aluminium beads.

COM2.D030.7 ADJUSTABLE LOUVRE FRAMES
Must be designed:
1. For hand or pole operations;
2. With single or double control(s);
3. To lock automatically when closed;
4. With adjustable louvre clips suitable for receiving either 100; 150 or 230 mm wide glass blades with a minimum nominal thickness of 6 mm;
5. With subframes for louvre frames which provide slotted adjustable lugs and screws for building in.

DESIGN PARAMETERS

COM2.D110.7 TOLERANCES
Design window and louvre in both precast concrete facades and in-situ concrete walls so that the tolerances are co-ordinated with the appropriate building tolerances for the structural works as described in Appendix H to this Specification.

COM2.D120.7 GLASS THICKNESS
Design glass thicknesses to withstand the wind load as COM2.D130 and in no case allow it to be less than nominal thickness of 6 mm. Calculate and check the correct thickness.

COM2.D130.7 WIND LOADING FOR GLAZED WINDOWS AND LOUVRES
1. When fixed in position and glazed, windows and louvres must withstand:
   a. A wind load calculated in accordance with the current Code of Practice on Wind Effects, Hong Kong; and
   b. The resultant resistance to wind loading of a minimum of:
      i. 3.0 kPa for non-domestic buildings such as schools, commercial centres, etc;
      ii. 3.8 kPa for domestic buildings excluding ground floor or podium.
2. A maximum permissible deflection of 1/180 the length of a particular member or 20 mm;
3. Use galvanized mild steel cores, anchors, brackets, etc as stiffeners, where necessary.

COM2.D132.7 MULLIONS, TRANSOMS AND CORNER POSTS
1. Mullions and transoms to be reinforced with hot dip galvanized mild steel reinforcement, subject to structural calculation where necessary;
2. The reinforcement bar inside the mullion shall be extended 15 mm from one end of the mullion to facilitate checking.

COM2.D135.7 STRUCTURAL CALCULATIONS
Structural design for aluminium window to be in accordance with either CP 118:1969 or BS 8118:Part 1 & 2:1991. Structural calculation shall be prepared by RSE.

COM2.D140.7 DRAINAGE
Design the bottom frame members of the openable windows to drain away water and condensation from other frame members. Provide adequate drainage to the bottom frame members whenever necessary.

SHOP DRAWINGS FOR SUBMISSION

COM2.D210.7 ALUMINIUM WINDOWS AND LOUVRES
Shop drawings must:
1. Be submitted for Approval in accordance with the following:
   a. Six months prior to fabrication for aluminium windows and louvres fixed to cast in-situ concrete walls;
   b. Within two months of the notified date of the commencement of the Works for aluminium windows and louvres fixed to precast concrete facades.
2. Be re-submitted for Approval where amendments are necessary;
3. Include design details of die section members, position of fixing lugs, equipotential bonding connection, ironmongery and accessories, type and thickness of glass in accordance with COM2.D110 to COM2.D140, details of equipotential bonding connection for composite windows in accordance with COM2.W470 and other relevant information;
4. Include fixing details of Radio Frequency Identification tags as specified in the Worksection COM11.

COM2.D230.7 COMPLIANCE WITH STANDARDS
Design aluminium windows in compliance with the appropriate Standards as listed below:
1. All applicable Ordinances, Regulations and Codes in Hong Kong (i.e. the 'Hong Kong Building Code');
2. BS 1470:1987 – Aluminium plate, sheet and strip;
3. BS 1471:1972 – Aluminium drawn tube;
4. BS 1473:1972 – Aluminium rivets, bolts and screws;
5. BS 1474:1987 and BS 18:1987 – Aluminium bars and extrusions;
6. BS 1161:1977 – Specification for aluminium alloy sections for structural purposes;
7. BS EN 12373-1:2001 – Clear anodic oxidation coatings on aluminium and its alloy;
9. BS 4479:1990 – Recommendations for the design of metal articles that are to be coated;
10. BS 7773:1995 – Cleaning and preparation of metal surfaces;
11. BS 6262:1982 – Code of Practice for glazing for buildings;
14. CP 118:1969 – Code of Practice for the structural use of aluminium;
16. BS 5889:1989 – Sealant;
17. BS EN ISO 3506-1 to 2:1998 – Corrosion-resistant stainless steel fasteners;
20. BS 7671:2001 – Requirements for Electrical Installation;
21. BS 4873:2004 – Aluminium alloy windows;
22. BS 3111 – Stainless steel fasteners;
23. PD 6484:1979 – Commentary on corrosion at bimetallic contacts and its alleviation;
24. ASTM A240/A240M-09c – Stainless steel for the sliding stays and base rails of frictional hinges;
25. ASTM A493-09 – Stainless steel for the friction pivots and screws of frictional hinges.

OTHER SUBMISSION

COM2.D310.7 MILL CERTIFICATES
Submit mill certificates to verify compliance of the following:
1. Aluminium alloy to BS 1474:1987 and include:
   a. Requirement and result of chemical analysis;
   b. Requirement and result of mechanical property:
      i. Tensile strength;
      ii. Yield strength;
      iii. Elongation.
3. Stainless steel grade for sliding stays and base rails: of UNS Designation S30400 to ASTM A240/A240M-09c, or equivalent grade of other recognised standards Approved by CM;
4. Stainless steel grade for friction pivots: of either UNS Designation S30200, S30400 or S30430 to ASTM A493-09, or equivalent grade of other recognised standards Approved by CM.

COM2.D320.7 SAMPLES
1. Submit one full size typical sample of window;
2. Submit sample of sections and fittings and obtain Approval prior to starting manufacture;
MATERIALS

GENERAL

COM2.M005.7 ALUMINIUM WINDOWS AND GRILLES

1. Submission Requirements:
   a. At sample submission and approval stage, submit a sample of the proposed aluminium windows and grilles for CM’s approval together with all the following substantiation for CM’s information:
      i. Job reference;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer;
      iv. Where applicable, either the document from the manufacturer showing his authorization for the supplier as the agent/distributor in Hong Kong or the document from the supplier showing the appointment of the manufacturer and manufacturer’s agreement for the production of the proposed product;
   v. When the aluminium windows and grilles are supplied for domestic blocks, except for the ancillary facilities at lower floors, also include the followings in the submission:
      - Two identical sample boards similar to the one maintained by the Housing Department showing the extrusions, ironmongeries and accessories for the proposed aluminium windows and grilles;
      - Original or a certified true copy each of the certification to ISO 9001 and ISO 14001 for the manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by the certification bodies or by the QCM. The certification bodies shall be as follows:

<table>
<thead>
<tr>
<th>ISO</th>
<th>Certification Body</th>
</tr>
</thead>
<tbody>
<tr>
<td>ISO 9001</td>
<td>The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.</td>
</tr>
<tr>
<td>ISO 14001</td>
<td>The certification body shall be accredited by the Hong Kong Accreditation Service (HKAS), the China National Accreditation Service (CNAS), or an accreditation body which has entered into a mutual recognition agreement with HKAS.</td>
</tr>
</tbody>
</table>

   vi. Original or certified true copy of the mill certificates of the stainless steel grades used for manufacturing the sliding stays, base rails and friction pivots as specified in COM2.D310;

   vii. Original or certified true copy of the test reports from the manufacturer of frictional hinges showing the relevant batches of rolls of stainless steel materials to be used for manufacturing the sliding stays, base rails and friction pivots are in full compliance with the requirements of mechanical property and chemical composition of the referenced standard as specified in COM2.D310.
b. For aluminium windows used in domestic blocks, except for the ancillary facilities at lower floors, submit original or a certified true copy of the product conformity certificate to the "Product Conformity Certification Scheme For Aluminium Windows" published by the Hong Kong Institute of Steel Construction to CM for information. The product conformity certificate shall be issued by a certification body accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS. If a photocopy of the product conformity certificate is submitted, it shall be certified true by the certification body or by the QCM:

i. The product conformity certificate shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a) above or at a time not later than 12 months from the date of commencement of the Works;

ii. In the event that the product conformity certificate has not been submitted for CM's information, CM may order the removal of materials or delivered products off Site. Bear all associated costs and no extension of time will be allowed.

c. A summary of the test results under the audit testing of the "Product Conformity Certification Scheme For Aluminium Windows". The summary shall be prepared by the accredited laboratory carried out the testing or the certified manufacturer. If so directed by CM, submit a full set of the audit test reports to CM for record;

d. Submit original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2)(a) below for CM's information unless the test requirements are covered by the scope of the "Product Conformity Certification Scheme For Aluminium Windows":

i. The date of the test shall be generally within five years prior to the notified date for commencement of the Works or at an earlier date for domestic blocks subject to CM's consideration on the track records as maintained by the Housing Department;

ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a) above, or at a time not later than the delivery of the material as mentioned in sub-clause (3)(a) below;

iii. In the event that no test report has been submitted for CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

2. Quality Requirements:

a. The quality and performance requirements are as follows:

<table>
<thead>
<tr>
<th>Items</th>
<th>Method</th>
<th>Acceptance Standards</th>
<th>Remarks</th>
</tr>
</thead>
</table>
| i. Dimensional Tests   | Measure the peripheral and diagonal dimensions of the sample to nearest 0.5 mm. Indicate the measurements in the report with aid of schematic diagrams. | - Peripheral dimensions: ±1.0 mm for length < 2 m  
±1.5 mm for 2 m ≤ length < 3.5 m  
±2.0 mm for 3.5 m ≤ length < 5 m  
±3.0 mm for length ≥ 5 m | - Three specimens are required, one for tests (i), (ii)(a) to (c) and (iii), one for tests (ii)(d) and (v) and the other for test (iv) unless otherwise specified.  
- For tests (i), refer |
- Diagonal dimensions:  
  ±1.5 mm for length < 2 m  
  ±2.5 mm for 2 m ≤ length < 3.5 m  
  ±3.5 mm for length ≥ 3.5 m

to the shop drawings submitted by the suppliers for dimensions of each type of windows.

- Width:  
  - BS 1474:1987: Table 6

- Angular dimensions:  
  - BS 1474:1987: Table 9

- Corner radii:  
  - BS 1474:1987: Table 10

- Straightness:  
  - BS 1474:1987: Table 14

- Concavity:  
  - BS 1474:1987: Table 16

- Thickness:  
  - Minimum 2 mm

- Individual Member  
  Select one structural member to be tested. Choose three positions, 300 mm apart, along the length of the member. Carry out dimensional tests to BS 1474:1987:Cl. 7.4 on width, angular dimensions, corner radii, straightness, concavity and thickness;

Perform the test for structural member above to one non-structural member. Same as above.

- Width:  
  - BS 1474:1987: Table 6

- Angular dimensions:  
  - BS 1474:1987: Table 9

- Corner radii:  
  - BS 1474:1987: Table 10

- Straightness:  
  - BS 1474:1987: Table 14

- Concavity:  
  - BS 1474:1987: Table 16

- Thickness:  
  - Minimum 2 mm

For test on individual member under test (i), suppliers should provide additional sections of the members 300 mm long, in case suitable testing positions are difficult to access in complete windows set.

- Sequence of tests from (ii)(a) to (ii)(c) shall be followed. Failure of any test will have the whole sequence re-tested.

- Test (ii)(c) apply to side hung windows only.

- For tests (iv):  
  Full size sample of window with glazing shall be used.  
  No visual damage, and forces and torque not to exceed the appropriate values in Tables 2 and 3.

- Visual Inspection:  
  - BS 3987:1991: Cl.3 and Appendix G

  Surface shall be free from visible coating defects.

- Thickness of Coating:  
  - BS EN ISO 1463: 1995 for thickness Class 25  

  Minimum average thickness is 25 μm, and minimum local thickness is 20 μm.
### iv. Weather Tightness Tests

<table>
<thead>
<tr>

<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Air Permeability Test</td>
<td>BS 6375-1:2009: Cl. 6 and BS EN 1026:2000 Pa max = 600Pa</td>
</tr>
<tr>
<td>- Watertightness Test</td>
<td>BS 6375-1:2009: Cl. 7 and BS EN 1027:2000 test procedure A Pa max = 770Pa</td>
</tr>
<tr>
<td>- Resistance to Wind Test</td>
<td>BS 6375-1:2009: Cl. 8 and BS EN 12211: 2000 Positive wind pressure: $P_1 = \text{design wind loading in accordance with COM2.D130}$ $P_2 = 0.5 P_1$, $P_3 = 1.5 P_1$; Negative wind pressure: $P_{1}' = \text{design wind loading in accordance with COM2.D130}$ $P_{2}' = 0.5 P_{1}'$, $P_{3}' = 1.5 P_{1}'$</td>
</tr>
<tr>
<td>- Water Penetration Test by Cyclic Static Air Pressure Difference</td>
<td>ASTM:E547-00 Test pressure difference =770Pa Ten test cycles</td>
</tr>
</tbody>
</table>

### v. Tensile Test

<table>
<thead>
<tr>
<th>Test</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Frictional hinge surface quality:</td>
<td>BS 18:1987</td>
</tr>
<tr>
<td>i. Free from rust, cracks;</td>
<td>BS 1474:1987</td>
</tr>
<tr>
<td>ii. Friction pivots are correctly positioned at the sliding stays, squarely pinned and not over-clamped.</td>
<td></td>
</tr>
<tr>
<td>- When the aluminium windows and grilles are supplied for domestic blocks except those for the ancillary facilities at lower floors, standard of visual quality shall be comparable with the benchmark samples maintained by the Housing Department.</td>
<td></td>
</tr>
</tbody>
</table>

### On Site Delivery Verification:

<table>
<thead>
<tr>
<th>Test</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>- At delivery stage, submit the following documents:</td>
<td>BS 6375-1:2009: Cl. 6 and Figure 1 : Graph C No damages and functional defects shall be noted.</td>
</tr>
<tr>
<td>i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (1)(a) above;</td>
<td></td>
</tr>
<tr>
<td>ii. Original or certified true copy of Certificate of Origin for every batch of delivery. One batch being the material quantity covered under each delivery note;</td>
<td></td>
</tr>
<tr>
<td>iii. Delivery notes for all material delivered to Site.</td>
<td>BS 6375-1:2009: Cl. 7 No water leakage, damages and functional defects shall be noted. BS 6375-1:2009: Cl. 8 and BS EN 12210: 2000 Cl.6 - For deflection test at pressure $P_1$ and $P_1'$; permissible deformation of any member shall be less than $1/180$ the length of the particular member and shall not be greater than 20 mm</td>
</tr>
