ii. Weekly Cycle:
- Weekly safety inspection by Site Agent and Safety Officer and the CM or his representatives;
- Weekly safety coordination meeting;
- Weekly overall cleaning and tidying up of the Site;
- Advance planning of the cleaning and tidying up, safety checks of the workplace, machineries and plant, before and after public holidays in the coming week(s). Site Agent and Safety Officer shall prepare a checklist of work making reference to the Handbook on Work Safety Immediately Before and After Public Holidays issued by OSHC and assign competent personnel for implementation and monitoring.

iii. Monthly Cycle:
- Site Safety Committee meeting and pre-meeting inspection.

b. The first 3 items under Daily Cycle described in sub-clause (7)(a)(i), namely, Pre-work Exercise and Safety (PES) meeting, Hazard Identification Activity (HIA) meeting and Pre-work Safety Checks, are collectively referred to as the “Pre-work Activities”. Pre-work Activities are to be held for attendance by persons employed on the Works (excluding clerical and administrative staff in site office), irrespective of whether they are in the employment of the Contractor or sub-contractors. Detail requirements for the Pre-work Activities are:

i. Arrange and hold Pre-work Exercise & Safety (PES) meeting of about 10 to 15 minutes for all persons employed on the Works. The PES meeting shall be led by the Site Agent or senior staff of site management of the Contractor, who has attended the training course on Safe Working Cycle of the OSHC or CIC. The PES meeting shall start with physical exercise, followed by a briefing to workers on the prevailing safety and health matters related to the Site, such as common hazards and control measures, safety precautions, specific safety concerns etc.;

ii. Arrange and hold Hazard Identification Activity (HIA) meeting of about 10 minutes for the attendees immediately after the PES meeting. Alternatively, the HIA meetings can be held in small groups according to the trades, work teams or works areas set out by the Contractor for the Site. If so, the Contractor shall ensure that the assigned persons are competent to lead the HIA meetings. Persons who have attended one day training course on HIA leadership provided by OSHC are considered competent to lead the HIA meetings. The issues discussed at the HIA meetings shall cover, but not limited to:
- Implementation of the already devised safe systems of work for hazardous works to be carried out in accordance with the Safety Plan;
- Hazards and control measures specific to the works or trades;
- Special safety concerns;
- Assurance of safety requirements and measures;
- Reprimand of repeated irregularities and malpractice etc.
iii. Arrange and hold Pre-work Safety Checks for the attendee immediately after the HIA meeting. The Pre-work Safety Checks shall be carried out by foremen, gangers, Safety Supervisors or Safety Representatives of the attendees according to the trades, work teams or works areas. The Pre-work Safety Checks shall include the checking of personal protective equipment worn by attendees before they start working on that day such as safety helmet, reflective vest, ear protectors, eye protectors, safety harness, safety footwear etc..

c. Pre-Work Activities are to be held daily, but in any case the frequency of Pre-work Activities for attendance by each person employed on the Works shall not be less than once a week. The Pre-work Activities shall be carried out prior to any work carried out by the persons attending the Pre-work Activities on that day;

d. Maintain attendance records of the workers participating in the Pre-Work Activities including their names and trades. Such attendance records are to be certified by Site Agent. Maintain electronic photo record showing the attendants during such activities. These records shall be made available for CM's inspection upon request by the CM.

8. Safety Representatives:

a. Appoint the ganger of each labour group or team working on the site to act as Safety Representative. The Safety Representatives shall be clearly identified on the Site by wearing an armband or a safety helmet appropriately marked in Chinese and English;

b. The Safety Representatives shall attend Safety and Health for Supervisors (Construction) Course (nominal course duration 43 hours) provided by the OSHC or Construction Safety Supervisor Course (nominal course duration 43 hours) provided by the CIC. Acceptance of training provided by other organizations is subject to verification that the training is based on course contents of equivalent or above standards and the appointed superintendent has attained the associated qualification;

c. In respect of underpinning safety management, the Safety Representative shall be responsible for ensuring that:

   i. The directives on safety and health matters from the Contractor, the Safety Officer, Safety Supervisors, Site Agent and Foremen are duly carried out;

   ii. Safety practices are adopted by the workers;

   iii. Protective clothing and equipment are used by the workers at all times on the Site.

d. Ensure that the Safety Representatives and the workers on the Site under supervision of the Safety Representatives are aware of the roles and responsibilities of the Safety Representatives on safety and health matters.

9. Other Safety Requirement:

In addition to any obligation under GCC Clause 5.11 or any similar obligations under any enactment or resolution, comply with the following requirements for temporary platform on the slope or berm of the slope:
a. Do not erect temporary platform on the slope or on the berm of the slope, unless under exceptional circumstances, and approved by the CM. Under such circumstances, obtain approval of the CM, demonstrate compliance with the special precautions issued from time to time under Section 7(4) of the Factories and Industrial Undertakings Ordinance in all respects. Such Approval shall not relieve the Contractor from the responsibilities imposed by the Contract. The special precautions include, but are not limited to, the following:

i. Commission a registered professional engineer, whose name is registered under the relevant statutes, to properly design every temporary platform on the slope or on the berm of the slope. Submit the name of the registered professional engineer to the CM for information.

The plan shall contain all the specifications approved by such engineer. Keep plan available on the Site for inspection by the occupational safety officer of LD;

ii. Construct every temporary platform on the slope or on the berm of the slope in accordance with the approved plan and under the supervision of a competent person. Keep record of the date of erection of each platform and the name of the person who supervised the work. Keep records available on the Site for inspection by the occupational safety officer of LD;

iii. Conduct risk assessment through a competent person within the meaning of the Factories and Industrial Undertakings Ordinance before work is commenced to dismantle a temporary platform on the slope or on the berm of the slope. The dismantling work shall be supervised by a competent person;

iv. Take all necessary steps to ensure that no material is thrown, tipped or shot down into a temporary platform on the slope or on the berm of the slope unless the platform has been designed for such purpose in sub-clause (9)(a)(i) above;

v. Remove materials accumulated on a temporary platform on the slope or on the berm of the slope regularly;

vi. Provide suitable fall arresting system used by workers while they are engaged in removing of any materials accumulated on a temporary platform on the slope or on the berm of the slope or in dismantling of the platform.

10. Surprise Safety Inspection Programme (SSIP):

a. Professional Safety Inspectors appointed by OSHC will conduct surprise safety inspection;

b. The surprise safety inspection may be conducted at any time after the date for commencement of the Works till the certified date of completion of the Works;

c. Provide all necessary attendance for the surprise safety inspection including fully facilitating the inspection of the Site, the Works and all necessary supporting documents such as certificates, records and reports relating to safety and health matters, and fully cooperate with the Safety Inspector in the carrying out of the surprise safety inspection;

d. A Contractor's representative must accompany the Safety Inspector throughout the inspection;

e. The Contractor's representative shall acknowledge the result of the inspection by signing in the presence of HD resident site staff and submit a copy of signed report to the CM and another copy to OSHC for record;
f. Rectify the non-conformance items recorded by the Safety Inspector;

g. The Site Agent shall report the results of surprise safety inspection and the respective follow up rectification actions for non-conformance items in the monthly site meeting.

11. Comply with the requirements of the Construction Sites (Safety) Regulations, and adopt the practices and/or measures in respect of first aid facilities and first aiders recommended in the latest edition of the Reference Materials on Construction Site Welfare Health and Safety Measures issued by CIC. First aid room/area shall be provided on Site and fitted with:

a. sufficient first aid supplies and equipment for transporting the injured persons, including but not limited to stretchers;

b. First aid kits, up to the standard required by the Occupational Safety and Health Ordinance (Cap. 509) and the Factories and Industrial Undertakings Ordinance (Cap. 59).

12. Work Safe Behaviour Programme:

a. Use a work safe behaviour programme with reference to the guidebook “Implementing The Work Safe Behaviour (WSB) Programme” issued by the OSHC;

b. Identify the major high risk activities to the HA site staff for comment according to the construction cycle and review on a half-yearly basis;

c. Based on the major high risk activities identified, create and develop relevant work safe behaviour checklists and conduct observations with observed data analysed for behaviour interventions. Templates of the work safe behaviour checklists can be downloaded from the Housing Authority Site Safety Website for reference;

d. Analyse the work safe behaviour result and prepare the WSB report;

e. Develop and implement an action plan according to the analysed result;

f. Submit the work safe behaviour report and the excel file of raw data base to the Safety and Health Unit of Housing Department for record within 6 months after the date of certified completion of the Works.

PRE.C9.210.8 GENERAL REQUIREMENTS

1. Be responsible for the safety of all workers and other persons entering or in the Works and, to the Approval of the CM, take measures necessary to ensure their safety;

2. In particular such measures shall include:

a. Provision of apparatus for dealing with casualties due to fire, gas and electric shock including stretchers and first aid equipment and personnel trained in their use;

b. Safe supporting for all excavations;

c. Safe control of water including provision of ample standby generating and pumping plant;

d. Provision and maintenance of safe, sound mechanical equipment, each item of plant having an up-to-date testing certificate where applicable;

e. Provision of good and safe access to all parts of the Site.
**CONTRACTOR'S OBLIGATIONS**

**PRE.C9.230.8 PROVISION OF SAFETY REGULATIONS**

Keep on Site a copy of the 'Construction Sites (Safety) Regulations 1997' and a copy of the booklet 'A Guide to the Construction Site (Safety) Regulations' which shall be available for the reference of the CM.

**PRE.C9.235.8 SAFETY POSTERS**

Obtain posters, in both English and Chinese, drawing attention to safety on Site and display prominently upon all structures or temporary huts on the Site throughout the duration of the Contract and remove on completion. These posters are obtainable from LD, OSHC and CIC.

**PRE.C9.240.8 SAFETY TRAINING**

The Contractor shall ensure that all his employees are fully conversant with the emergency and rescue procedures and regulations and shall ensure that any employee committing a serious breach of such regulations shall be dismissed instantly and shall not be re-employed.

**PRE.C9.245.8 CARING OF NEW WORKERS**

Provide caring programme for new workers, making reference to the practices recommended by the Guidelines on The Implementation of “P” and “N” Caring Programme issued by CIC, including but not limited to the following:

1. Probationers (workers who newly join the construction industry or with relevant job experience of less than 6 months):
   a. Provide identification with "P" labels;
   b. Assign mentors (with a ratio of 1 mentor to not more than 4 probationers) who possess good experience on the Site to take care of the Probationers and provide guidance on site safety with a caring period not less than 3 months;
   c. Provide a safety orientation programme covering the essential safety aspects related to the Site, guidance for work and arrangement for familiarization of the Site;
   d. Subject to the mentor being satisfied with the Probationer's safety performance, remove identification label from safety helmet after the 3 months' caring period.

2. Newcomers (workers with relevant job experience of more than 6 months but newly arrive at the Site):
   a. Provide identification with "N" labels;
   b. The display of "N" labels shall not be less than 2 weeks;
   c. Provide a safety orientation programme covering the essential safety aspects related to the Site, guidance for work and arrangement for familiarization of the Site.

3. Requirements of labels for Probationers and Newcomers:
   a. Each label shall be adhered on a conspicuous part of a safety helmet;
   b. The size of label shall not be less than 50 mm (L) x 50 mm (H);
   c. The name and telephone number of the mentor shall be shown on the label;
   d. The date on which the worker joined the Site shall be shown on the label.
SAFETY OF CRANES, HOISTS ETC.

1. In addition to any obligation under GCC Clause 5.11 or similar obligations under any enactment or Regulation, adopt the practices and/or measures in respect of tower crane operation as recommended in the latest edition of the CoP for Safe Use of Tower Cranes, CoP for Safe Use of Mobile Cranes issued by LD and the Guidelines on Safety of Tower Cranes issued by CIC. Examine critically the practices and/or measures as recommended in the said CoP and Guidelines, especially their applicability and suitability to the Works on account of the actual site conditions and the specific safety hazards of the Works. Alternative practices and/or measures which should not be inferior to those recommended in the said CoP and Guidelines may be proposed for CM’s approval before implementation;

2. Comply with the following measures in lifting operations:
   a. Conduct a trial of the lifting operation of precast concrete pipes and large metal components, as recommended by risk assessment, when the load is lifted not more than 300-500mm off the level where it is originally placed and ensure the load is securely rigged before the load is further lifted;
   b. Ensure all workers to leave the danger zone of lifting operation before the load being lifted is started to be lifted above 300-500mm off the level where it is originally placed;
   c. Work within the safe working load with due considerations on various specific working conditions;
   d. Tie all materials safely and securely;
   e. Take due care to avoid falling objects;
   f. Not to work outside the Site boundary unless obtained CM’s prior approval;
   g. Provide site personnel to assist the slinger to carry out his work within the lifting zone;
   h. Mobile cranes have outriggers shall be fully extended, securely held at the extended position, securely levelled and supported before commencing operations.

3. All crane hooks and other lifting gear used on or around the Site shall be fitted with a safety latch or similar device. Cranes which are rented and are not expected to be used on site for more than six months are not subject to this requirement. Provide interlocking devices or other measures to secure the safety latches of crane hooks. The safety latches shall only be released manually, so as to prevent slipping of lifting gear out of the hooks. Submit details to the CM for approval. Refer to drawing no. REF/SS/ID/SK-01 in Appendix U to this Specification for reference only;

4. Display a current valid test and examination certificate for all lifting equipment. The certificate shall be in Forms 1, 2, 3 and 5 of the Factories and Industrial Undertakings (Lifting Appliances and Lifting Gear) Regulations where appropriate and duly signed by the competent person (for Form 1 only) and the competent examiner respectively;

5. Develop a checklist for checking Form 1, 3, 5, 6 & 7 and critical parts of the mobile crane, anchorage and supporting structure before operation of mobile cranes;

6. Provide close site supervision of mobile crane operations. Ensure all workers to leave the danger zone of lifting operation before the commencement of lifting operation, but the crane operator is an exception if it is not feasible to have remote control of mobile crane by the crane operator;
7. Engage or arrange through Contractor's sub-contractor(s) the engagement of the following personnel full time on Site during the operation of mobile crane (except the personnel under sub-clauses (7)(a) and (7)(f) who need to be on Site for the carrying out of the duties in accordance with the said CoP):

a. Competent Examiner:
   i. The competent examiner shall be a registered professional engineer registered under the Engineers Registration Ordinance within the discipline of Mechanical Engineering or Marine & Naval Architecture or a relevant discipline specified by the Commissioner for Labour.

b. Crane Operator:
   i. The crane operator shall possess relevant qualification, experience and competency as specified in the said CoP.

c. Slinger (Construction Materials Rigger):
   i. The slinger shall possess relevant qualification, experience and competency as specified in the said CoP.

d. Signaller:
   i. The signaller shall possess Silver Card of Slinger (Construction Materials Rigger), relevant qualification, experience and competency as specified in the said CoP;
   ii. The role of signaller can be taken up by a slinger possessing relevant qualification and experience in carrying out the duties as specified in sub-clause (7)(d)(i) above;
   iii. The signaller shall also have completed Signalman for Hoisting Operations at Construction Sites Course provided by the CIC. Acceptance of training provided by other organisations is subject to verification by the CM that the training is based on course contents of equivalent or higher standards and the appointed signaller has attained the associated qualification. A signaller having completed relevant training and already working in the industry by end 2017 is exempted. A signaller not complying with the training requirement of this sub-clause (7)(d)(iii) is permitted up to 31 December 2021.

e. Responsible Person:
   i. The responsible person shall possess relevant training, experience and competency in respect of discharging duties for the proper implementation of the safe system of work and the permit-to-work system as specified in the said CoP.

f. Competent Person:
   i. The competent person shall possess adequate training, experience and competency as specified in the said CoP.

8. Ensure all the personnel as specified in sub-clauses (7)(a) to (7)(f), the Safety Supervision Personnel as per PRE.C9.205 shall carry out their respective duties on Site in accordance with the said CoP;

9. Submit particulars of all the personnel as specified in sub-clauses (7)(a) to (7)(f), the Safety Supervision Personnel as per PRE.C9.205, including their names and qualifications, to the CM for approval before their engagement in the Contract.
SAFETY EQUIPMENT AND CLOTHING FOR PERSONAL PROTECTION OF OPERATIVES AND SITE SUPERVISORY STAFF

1. Safety helmet: provide each of the operatives and site supervisory staff with safety helmet conforming to the following requirements, and ensure that each of them wears the safety helmet on Site:
   a. Comply with the latest guidance notes on the selection, use and maintenance of safety helmets issued by LD;
   b. With ventilation vents and wear the Y-type chin strap as prerequisite and with sunshade accessories such as brim or neck protector where appropriate;
   c. The Y-type chin strap shall be supplied by the same manufacturer of the safety helmet used and have a clear identification label, the manufacturer name, model number, and a proof that the safety helmet with the chin strap comply with BS EN397 or other international or national standards recognized by Labour Department. If the manufacturer of safety helmet does not produce Y-type chin strap, then the manufacturer of safety helmet shall produce test certificate and test report issued by a BSI / CSA / or an approved third party accredited laboratory for compatible Y-type chin straps to demonstrate compliance with BS EN397;
   d. Replacement cycle shall not be more than 2 years from date of manufacture unless the manufacturers of safety helmet can provide proof such as BSI test certificate and test report to substantiate a longer life span of their helmets.

2. Clothing and footwear: provide each of the operatives (other than casual workers who are expected to work on Site for not more than an aggregate total of 7 working days throughout the duration of the Contract) and site supervisory staff with and ensure that each of them wears on Site the following items:
   a. Anti-heat stress uniform comprising polo shirt in short sleeves and long sleeves to suit the weather and trousers;
   b. Reflective vest (for operatives and site supervisory staff involved in lifting operation, roadworks outside Site and controlling vehicular traffic except the tower crane operator);
   c. Wind breaker (to suit the weather);
   d. Sunglasses of normal type and sunglasses of specific types suitable for putting over spectacles;
   e. Safety boots (except for bamboo scaffolders, plasterers and tilers).

3. The clothing shall be provided in compliance with specified requirements:
   a. The Contractor shall procure the anti-heat stress uniform designed by the Hong Kong Polytechnic University through Construction Industry Council (CIC) or sign a sub-licence with CIC for procuring the uniform from other supplier / manufacturer based on the design of Hong Kong Polytechnic University as shown in the drawing no. CIC-SK-01 and CIC-SK-02 in Appendix C to this Specification. The polo shirt shall be made with Coolmax fabric (100% polyester) with minimum weight of 140 grams per square meter (gsm) or other fabric meeting the requirement of anti-heat stress uniform design laid down by CIC. Trousers shall be made with fabric comprising 60% cotton and 40% polyester with minimum weight of 180 gsm or other fabric meeting the requirement of anti-heat stress uniform design laid down by CIC. The yellow standard uniform previously developed / promoted by CIC can also be accepted. For avoidance of doubt, since the yellow standard uniform does not comprise trousers, the Contractor shall ensure that workers wear the trousers of either anti-heat stress uniform or corporate uniform;
b. Washable retroreflective strips in silver colour with mesh shall be incorporated onto the anti-heat stress uniform and wind breakers. The specification of the retroreflective strips shall comply with EN20471 class 2;

c. Reflective vests shall conform to the following and drawing no. RJ-SK-01 in Appendix C to this Specification:
   i. Background material: fluorescent orange-red, mesh knitted;
   ii. Retroreflective strips:
      - 50 mm in silver gray with fabric backing, conforming to photometric performance requirements as mentioned in EN20471 class 2;
      - Be durable and can still comply with EN20471 class 2 after washing for a minimum of 25 cycles;
      - The supplier shall submit test reports on retroreflective materials for demonstrating compliance with the following requirements under EN20471 class 2: photometric performance (initial), abrasion, flexing, folding at cold temperatures, exposure to temperature variations, washing and influence of rainfall.

d. Wind breaker shall be imprinted with a logo of the construction industry;

e. The fabric for summer clothing should preferably be of light colour and be thin and absorbent to minimise heat absorption and enhance heat and perspiration dissipation.

4. Eye and ear protection: ensure that
   a. Operatives of grinding machines and cutting wheels wear goggles;
   b. Operatives chiselling or drilling rock or concrete wear goggles;
   c. Welders use visors;
   d. Operatives of percussion tools wear ear mufflers;
   e. Operatives handling corrosives wear goggles;
   f. Operatives using hand held cartridge-operated tools wear goggles and ear mufflers.

5. Provide and maintain machine guards to dangerous parts of machines. Size of openings in fixed guards shall comply with the 3rd Schedule of the Factories and Industrial Undertakings (Guarding and Operation of Machinery) Regulations;

6. Ensure that operatives using spray paint or similar materials wear suitable protective respirators;

7. Provide operatives with relevant information, instructions, training and supervision, to ensure operatives understand the cause of using and how to use properly the personal protective clothing and equipment;

8. Certain categories / types of personal protective clothing and equipment shall conform to the models and specifications recognised by LD under relevant legislations. Other categories / types not prescribed by LD shall conform to current international and national standards;

9. The sunglasses provided shall comply with EN166 or equivalent standard;

10. Keep the safety equipment stipulated in sub-clause (1) to (4) above in good and hygienic conditions;

11. When working in drains and sewers, adequate safety equipment shall be provided and maintained to the satisfaction of the CM;
12. When working in sewers, drains and other confined spaces, safety precautions shall comply with the Factories and Industrial Undertakings (Confined Spaces) Regulations. The major provisions of these Regulations are contained in the current edition of the document “A Brief Guide to the Factories and Industrial Undertakings (Confined Spaces) Regulation” issued by LD;

13. When work is being carried out over water, adequate life saving equipment shall be provided and maintained, all to the satisfaction of the CM;

14. Provision of appropriate fall arresting devices such as waist tool belts and tool straps securely attached to the wrist so that handheld tools are handled securely by workers to avoid the hazard of falling of tools from height. The Contractor shall consider and safeguard against the risk of falling heavy portable power tools when it is still connected to the user's body by tool strap.

15. Protection for hands: ensure, albeit not exhaustive, that
   a. Operatives wear protective cotton gloves to facilitate better grip of objects by absorbing sweat when handling sharp edges and corners;
   b. Operatives wear fire retardant leather gloves during gas welding;
   c. Operatives wear cut-resistant gloves during cutting;
   d. Operatives wear chemical-proof gloves with high mechanical strength when handling chemicals;
   e. Operatives wear plastic gloves when handling corrosives;
   f. Operatives wear heat insulating gloves when handling hot objects;
   g. Operatives wear leather gloves when handling steel reinforcement or sharp objects;
   h. Operatives wear electric insulating gloves when carrying out electrical works and electric welding;
   i. Operatives wear anti-shock gloves when operating vibrating machines;
   j. Operatives wear anti-slip gloves to facilitate better grip of bamboo sticks when dismantling bamboo scaffolds.

PRE.C9.270.A SAFETY EQUIPMENT AND CLOTHING FOR PERSONAL PROTECTION OF THE CM, HIS REPRESENTATIVES AND VISITORS

1. Provide sufficient safety helmets complying with the latest guidance notes on the selection, use and maintenance of safety helmets issued by LD with ventilation vents and Y-type chin straps as prerequisite and with sunshade accessories such as brim or neck protector where appropriate, protective and waterproof clothing, safety harness and lines, reflective vests, safety rubber boots, safety leather boots with shoe insoles, replacements for worn-out shoe insoles, breathing respirators (of Approved proprietary type), ear mufflers, protective glasses, sunglasses of normal types as well as specific types suitable for putting over spectacles of the users, torches and the like where appropriate for the use of the CM, his representatives, and authorised persons visiting the site;

2. Replacement cycle of safety helmets shall not be more than 2 years from date of manufacture;

3. The reflective vests provided shall conform to the following with reference to drawing no. RJ-SK-01:
   a. Background material: fluorescent orange-red, mesh knitted;
   b. Retroreflective strips:
i. 50 mm in silver gray with fabric backing, conforming to photometric performance requirements as mentioned in EN471-2003 (Class 2);
ii. Be durable and can still comply with the requirement in sub-clause 3(b)(i) after washing for a minimum of 25 cycles;
iii. The supplier shall submit test reports on retroreflective materials for demonstrating compliance with the following requirements under EN471-2003 (Class 2): photometric performance (initial), abrasion, flexing, folding at cold temperatures, exposure to temperature variations, washing and influence of rainfall.

4. The sunglasses provided shall comply with EN 166 or equivalent standard;

5. Keep the safety equipment stipulated in sub-clause (1) above in good and hygienic conditions.

PRE.C9.280.8 DELIVERY OF MATERIALS BY VEHICLES TO SITE

1. Suitable types of vehicles shall be used with respect to the loads to be transported;

2. Only vehicles designed for the loadings to be transported in compliance with the requirements stipulated in the Code of Practice for the Loading of Vehicles issued by the Transport Department shall be allowed to enter into the Site;

3. The following safety measures shall be taken for loading / unloading of vehicles:
   a. Planning:
      i. Conduct risk assessment of lifting operations by the safety officer or a competent person to identify hazards and risk control measures beforehand;
      ii. Prepare statement with substantiation for the extent of danger zone to be fenced off in relation to loading and unloading of vehicles;
      iii. Provide appropriate and adequate warning signs, guards, fences or barriers around danger zone to prevent unauthorized entry.
   b. Crane Operators and Personnel:
      i. Maintain a list of lorry-mounted crane / operators employed by the Contractor and his sub-contractors of all tiers for handling loading and unloading operations on the Site. All operators shall be trained as both qualified riggers & signallers and worker(s) assisting in unloading material from the vehicle on the Site shall be trained in lifting operation;
      ii. Provide a lifting supervisor to monitor and supervise the whole lifting process. The lifting supervisor shall be a qualified rigger and signaller and have a minimum of four-year experience in lifting operation.
   c. Operation:
      i. Park the vehicle on a level ground as far as possible before loading / unloading. If a level site condition is not available, adjust the vehicle to be level with outriggers fully stretched to rest on pads for stability;
      ii. Stretch the outriggers of the lorry-mounted crane fully to rest on pads laid on solid ground.
   d. Handling Load:
      i. If there is a risk of the load falling down from the vehicle, secure and keep the load to be unloaded from the vehicle in a position by a device or method such as a crane before the strap / chain fastening the load is unfastened;
ii. When the load is higher than the sideboard of the vehicle, provide lateral barriers which may take the form of a metal frame mounted on the vehicle to restrain the position of the load;

iii. When the load comprises layers stacked over one another, add devices between the layers to secure them altogether to avoid risk of sliding;

iv. Tie all loads on the vehicle securely to the vehicle to prevent undue movement during transportation.

**PRE.C9.290.8 PLATFORMS FOR WORKING AT DIFFERENT HEIGHTS**

1. Provide the following equipment for working involving a possible fall of:
   a. 2 meters or more: working platform with guard-rails, toe boards and a fall arresting system as warranted after conducting risk assessment;
   b. Less than 2 meters but more than 900mm:
      i. Light-duty working platform such as hop-up platform or step platform with guard-rails, and provide toe-boards when the working platform or step platform is used near a building edge or floor opening to avoid risk of falling object from height;
      ii. A fall arresting system as warranted after conducting risk assessment for working at a height of 1350mm - 2000mm.
   c. Less than or equal to 900mm: hop-up platform or step platform with or without guard-rails;
   d. A height under abnormal circumstances where use of working platform, hop-up platform or step platform is not reasonably practicable: alternative proposal incorporating a fall arresting system after conducting risk assessment.

2. Ensure that the following safety measures are fulfilled:
   a. the right type of light-duty working platform is used for the job;
   b. the workers who use the light-duty working platforms have been provided with adequate information, instruction, training and supervision;
   c. the workers are fully aware of the risks and control measures;
   d. follow a safe system of work (including a pre-use check) so as to use the platform safely;
   e. the workers are not allowed to work on the access steps of a light-duty working platform;
   f. the fall arresting system shall comprise a full-body harness linked to a rigid anchor point. The anchor point shall be planned in advance, installed and tested.

3. Guard-rails shall be situated at 450mm - 600mm and 900mm - 1150mm high from the platform and form a barrier to prevent the worker standing on the platform from falling down;

4. Toe boards shall be not less than 200mm high;

5. Locking device shall be provided to movable working platforms to ensure that the platforms are stable when in use;

6. Step ladders, straight ladders and extension ladders are used purely as a means of access and egress to working platforms;

7. Portable ladders provided shall comply with the safety requirements of at least one of the following standards (the latest version):
a. BS EN131 for timber, metal and glass-fibre reinforced plastic ladder;
b. BS 2037 for metal ladder;
c. EATS13/1 for glass-fibre reinforced plastic ladder;
d. BS EN14183 for step platform; or
e. Other international standards approved by the CM.

PRE.C9.291.8 SAFETY OF REINFORCEMENT BAR BENDING MACHINES

Apply the following safety measure(s) to machines for small reinforcement bars or stirrups (Y16 or below), to avoid striking and trapping by the moving parts of machines or the bending reinforcement bars. Submit details of the safety measure(s) for the CM’s approval. Examples include the following and refer to drawing no. REF/SS/BM/SK-01 in Appendix U to this Specification for reference only.

1. Install an interlocking guarding to the rotating part and a timer switch to isolate power supply automatically after a time interval set according to risk assessment conducted by Safety Officer, if the guarding is not closed properly;
2. Install an angle indicator on the top to visually indicate the angle set for the current operation.

PRE.C9.292.8 INSTALLATIONS TO REDUCE RISK OF MANUAL HANDLING AND WORKING AT HEIGHT

Provide installations, or safety measures, to reduce risk of manual handling and working at height. Include, but not limited to, the following implementation:

1. Prevent injuries of wheelbarrow users by providing two-wheel wheelbarrow with braking system. Prohibit the use of single-wheel wheelbarrow. Refer to drawing no. REF/SS/WB/SK-01 in Appendix U to this Specification for reference only;
2. Provide safety measures to reduce manual lifting of hand-held pneumatic breaker for works. Refer to drawing no. REF/SS/BR/SK-01 in Appendix U to this Specification for reference only;
3. Adopt safety measure by mechanical means, certified by Quality Control Engineer as stipulated in PRE.C6.060 as necessary, to eliminate releasing shackle for H-pile and sheet pile at height manually and prohibit the use of man-cage. Use double lock remote release shackle or other measures to achieve the purpose. Refer to drawing no. REF/SS/DL/SK-01 in Appendix U to this Specification for reference only.

PRE.C9.293.A SAFETY OF ELECTRIC PORTABLE TOOLS

1. Ensure the use of cordless electric portable tools by operatives, including: circular saws for cutting wood or metal, reciprocating saws, angle grinders, rotary hammers, combination hammers for drilling and chiselling in concrete, impact drivers and impact wrenches. Prohibit the use of the above tools that are with cords;
2. Inspection records that verify the cordless electric portable tools are in safe and serviceable conditions shall be kept on site for checking by representatives of the CM. Verification record shall be either:
   a. annual certificates issued by the original manufacturer; or
   b. quarterly records certified by Registered Electrical Worker.
3. Arrange centralised charging facilities to ensure safe use of electricity.
WIRELESS COMMUNICATION TECHNOLOGIES

Implement efficient and effective safety systems with aid of wireless communication technologies such as RFID, infra-red or equivalent, for authenticating authorised operation of mobile plant or equipment, controlling access, alerting to unsafe acts or conditions, and checking data of personnel, plant and equipment. Submit details of the systems to the CM for approval. Mobile plant and equipment in sub-clause (1) below which are rented and are not expected to be used on site for more than six months are not subject to this requirement. Refer to drawing no. REF/SS/WT/SK-01 to SK-04 in Appendix U to this Specification for reference only. Include, but not limited to, the following implementation:

1. For authenticating authorised operation of plant or equipment:
   a. Implement a system on mobile elevated work platforms to allow operation by authorised operators only; and prohibit unauthorised duplication of operation keys;
   b. Implement a system on mobile plants (including forklift trucks, bobcats, excavators and mobile cranes) to allow operation by authorised operators only; and prohibit unauthorised duplication of operation keys;

2. For controlling access:
   a. Implement a system to prevent unauthorised access and monitor personnel staying inside the danger zones (e.g. confined space, basement) which are identified by risk assessment that they cannot be overseen easily and have limited access points to facilitate entry control. Subject to the risk assessment, water tanks or manholes which can normally be overseen easily are not required to be covered by this system of wireless communication technologies. The system shall also take real-time record of the list of workers who have entered the area and their duration of staying and such record shall be able to be monitored at Contractor’s site office;

3. For alerting against unsafe acts or conditions:
   a. Implement a system on mobile plants (including excavators and mobile cranes) to alert any personnel who enters danger zones of the mobile plant and record the unsafe acts for follow-up actions;
   b. Implement a visual and audio alarm system at site entrance / exit to alert drivers and security guards to stop a mobile plant from entering or leaving the site when the mobile plant exceeds the height limit of haul road of the site or the height limit of vehicles regulated by the Transport Department, whichever is lower.

4. For checking and updating information of personnel, plant and equipment:
   Implement systems to the following listed subjects to store and update information of personnel, plant or equipment; allow retrieval of such information instantly on site by an electronic device; and set up and update computerised data base regularly:
   a. Major construction plant (including mobile crane, truck-mounted crane, crawler crane, oscillator and rotator) – for the plant checking and updating of the information of the plant including, but not limited to, its type, permit number, owner, model number, serial number / owner’s mark, manufacture date, Certificate of Overhaul, photo of the plant for confirmation, list of authorized operators, valid records of test, examination and risk assessment;
   b. Workers - for checking and updating of their information, including but not limited to, their names, employers (i.e. the Contractor or sub-contractors that they belong to), their registered trade under Construction Workers Registration Ordinance (CWRO), records of training attended and safety performance.
TEMPORARY STAIRCASES

When permanent staircases are unavailable and the level difference is not less than 600mm, provide a secure temporary staircase or other safe means of access. The temporary staircase provided shall have top railings at a height of 900 mm to 1100 mm and middle railings at a height of 450 mm to 500 mm. The riser and the tread shall not be more than 175mm and less than 250mm respectively whereas the sum of two times the riser plus the tread shall not be less than 600mm.

LOCKOUT AND TAGOUT PROCEDURES FOR ELECTRICAL WORKS

1. Implement “lockout and tagout” procedures on Site when conducting electrical works to keep workers safe from electrical hazard;
2. Isolate and lock out any electrical system and / or equipment from its power source with an assigned lock by a designated individual using a unique key;
3. Each designated individual must place his individual lock and tag on the power source. Use a multi-pad lock if more than one designated individual is required to work on the same equipment/same outgoing circuit on Site;
4. Verify the power supply of the electrical system and / or equipment has been disconnected by using a voltage indicator;
5. Fasten a tag securely at the isolator with a clear and easy to understand prominent warning notice;
6. The name of each designated registered electrical worker shall appear on the tag which shall be signed with date and time;
7. Implement permit-to-work system according to the requirements stipulated in CoP for the Electricity (Wiring) Regulations issued by EMSD.

PROVISION OF AUTOMATED EXTERNAL DEFIBRILLATOR (AED)

1. Provide an automated external defibrillator (AED) for resuscitation at the site office with trained personnel to operate the machine.
2. The AED shall provide the following functions:
   a. Fully automatic or semi-automatic operation to provide basic life support;
   b. Provided with non-polarised and self-adhesive defibrillation pads;
   c. Providing Cantonese voice prompts as well as traditional Chinese display to guide the operator on the use of AED and Cardio Pulmonary Resuscitation;
   d. Meeting AAMI DF80 and American Heart Association recommendations;
   e. Battery level indicator;
   f. Recording the rescue event data and patient analysis decisions;
   g. Complying with the relevant safety and health standard set by the Electrical and Mechanical Services Department and Department of Health.
3. The operator of the AED shall have attained the training course or revalidation training on use of AED organised by the Occupational Safety & Health Council or the Hong Kong St. John Ambulance or equivalent training provided by other organisations subject to verification that the equivalent training is based on course contents of equivalent or higher standard.
FIRE PRECAUTIONS

PRE.C9.310.8 FIRE REGULATIONS
Comply with all regulations to prevent loss or damage from fire but have particular regard to the following clauses in this sub-section.

PRE.C9.320.8 STREET FIRE HYDRANTS
Ensure that any existing street fire hydrants are not obstructed by hoardings etc.

PRE.C9.330.8 DANGEROUS GOODS STORE
1. Comply with all relevant regulations to prevent the occurrence of fire or damage from fire;

PRE.C9.340.8 PORTABLE FIRE FIGHTING APPLIANCES
Provide and properly maintain a sufficient number of portable fire fighting appliances.

PRE.C9.350.8 PROHIBITING SMOKING ON SITE
1. Prohibit smoking on Site except in the designated smoking areas;
2. Provide the designated smoking areas with suitable fire-fighting appliances and clean the designated smoking areas daily;
3. Do not designate the following areas as a designated smoking area on Site:
   a. Any area where there is a risk of fire due to the use, intended use or storage of flammable liquid, mixture containing flammable liquid or substances/materials; and
   b. Any area where naked lights are prohibited.

GENERAL NUISANCE

PRE.C9.410.8 AVOIDANCE OF NUISANCE
1. Carry out the Works in such a manner as to cause the minimum inconvenience and annoyance to adjoining residents and the general public;
2. Undertake environmental protection measures to reduce the environmental impacts arising from the execution of the Works. Arrange the method of working to minimise the effects on the air, noise, water quality as well as nuisance of waste within and outside the Site, on transport routes and at the loading, dredging and dumping areas;
3. Be responsible for any claims which may arise from such inconvenience.

PRE.C9.420.8 COMPLIANCE WITH REGULATIONS
1. Observe and comply with relevant environmental protection and pollution control ordinances which shall include but not be limited to the following:
   a. Air Pollution Control Ordinance (Cap 311);
   b. Waste Disposal Ordinance (Cap 354);
   c. Water Pollution Control Ordinance (Cap 358);
d. Noise Control Ordinance (Cap 400);  
e. Dumping at Sea Ordinance (Cap 446);  
f. Environmental Impact Assessment Ordinance (Cap 499);  
g. Factories and Industrial Undertakings Ordinance (Cap 59);  
h. Buildings Ordinance (Cap 123);  
i. Buildings Ordinance (Application to New Territories) Ordinance (Cap 121);  
j. Public Health and Municipal Services Ordinance (Cap 132);  
k. Public Cleansing and Prevention of Nuisances (Regional Council) By-Laws (Cap 132);  
l. Public Cleansing and Prevention of Nuisances (Urban Council) By-Laws (Cap 132);  
m. Summary Offences Ordinance (Cap 228);  
n. Merchant Shipping (Oil Pollution) (Hong Kong) Order 1975;  
o. Waste Disposal (Chemical Waste) (General) Regulation;  
p. Air Pollution Control (Open Burning) Regulation;  
q. Air Pollution Control (Construction Dust) Regulation;  
r. Air Pollution Control (Furnaces Ovens and Chimneys) Installation and Alteration Regulation;  
s. Air Pollution Control (Smoke) Regulation;  
t. Air Pollution Control (Volatile Organic Compounds) Regulation.

2. Design, construct, operate and maintain pollution control measures to ensure compliance with the contract provisions as well as the environmental ordinances and their regulations. Conduct compliance monitoring following a programme as agreed with the CM, and submit the monitoring results to the CM;

3. Make due allowance in the rates and in the programme for the carrying out of the Works in compliance with the environmental protection control requirements under the Contract.

**PRE.C9.430.8 BONFIRE RESTRICTIONS**

Do not light bonfires on site for the burning of debris, or of any other matter, arising out of the execution of the Works, or from any other source.

**PRE.C9.440.8 AIR POLLUTION REGULATIONS**

1. Observe and comply with the Air Pollution Control Ordinance and its subsidiary regulations, particularly the Air Pollution Control (Open Burning) Regulation, Air Pollution Control (Construction Dust) Regulation, Air Pollution Control (Smoke) Regulation and Air Pollution Control (Volatile Organic Compounds) Regulation;

2. For materials under the control of the Air Pollution Control (Volatile Organic Compounds) Regulation, submit written confirmation of the following from suppliers or manufacturers:
   
a. The types of regulated coatings/paints and their VOC content; and  
b. The VOC contents of the coatings/paints complied with the Air Pollution Control (Volatile Organic Compounds) Regulation.
**CONTRACTOR'S OBLIGATIONS**

**PRE.C9.450.8  POLLUTION BY VEHICLES**

1. Construction vehicles must be well maintained so that they will not generate excessive exhaust fumes or noise;
2. Drivers shall be instructed to drive slowly so as to keep traffic noise to a minimum;
3. Upon the Instruction of the CM, cease to employ any vehicles or drivers that are considered not meeting the above requirements.

**PRE.C9.460.8  WATER POLLUTION**

1. Observe and comply with the Water Pollution Control Ordinance (WPCO) and the Technical Memorandum on Standards for Effluents Discharged into Drainage and Sewerage Systems, Inland and Coastal Waters and any additions or amendments thereto during the continuance of the Works;
2. Obtain a WPCO Licence from Environmental Protection Department (EPD) before discharging any waste water from the Site and comply with all terms and conditions stipulated in the Licence including the installation of a continuous flow measuring device as stipulated therein. Submit a copy of valid WPCO Licence to the CM for record as soon as it has been issued by EPD. Prepare and submit monthly record for the daily flow rate of the waste water discharged from Site (reference proforma at PRE.C9.APPEND5) to the CM for inspection;
3. Carry out the Works in such a manner as to minimise adverse impacts on the water quality during execution of the Works. In particular, arrange the method of working to minimise the effects on the water quality within and outside the Site, on the transport routes and at the loading, dredging and dumping areas. Observe strictly the water pollution and monitoring requirements during reclamation and seawall construction as specified in the Contract;
4. Follow the practices, and be responsible for the design, construction, operation and maintenance of all the mitigation measures as specified in the Professional Persons Environmental Consultative Committee Practice Note (ProPECC PN) 1/94 "Construction Site Drainage" issued by the Director of Environmental Protection, or any additions or amendments thereto during continuance of the Works. Submit the design of the mitigation measures to the CM for approval.

**DISPOSAL OF CONSTRUCTION AND DEMOLITION (C&D) MATERIALS**

**PRE.C9.470.8  DISPOSAL OF INERT C&D MATERIALS**

1. Subject to sub-clause (1) above on alternative disposal ground, the public fill reception facility as designated by CEDD is .......... and the corresponding acceptance criteria are as follows:
   a. ........................................;
   b. ........................................
2. Allow for adoption of other public fill reception facilities that may be subsequently designated by CEDD due to reasons such as closure of the designated public fill reception facility by CEDD. Bear all additional cost incurred due to switching to the alternative designated disposal facility and no extension of time will be granted;
3. Implement a Trip Ticket system (TTS) as specified in PRE.C9.490;
4. Unless separate Approval is obtained, disposal of inert C&D materials from the Site shall not commence before the Environmental Management Plan required in PRE.C9.2420 is endorsed by the CM; and

5. If no public fill reception facility is available, as confirmed by the PFC, submit a disposal plan for inert C&D materials for the CM’s agreement. The disposal plan shall include information as specified in sub-clauses (1)(a) to (1)(f) of PRE.C9.500.

PRE.C9.480.8 DISPOSAL OF NON-INERT C&D MATERIALS

1. Non-inert C&D materials refer to the portion of the C&D materials other than the inert portion. In order to make use of non-inert C&D materials generated by the Site, make best endeavours to identify recycling facilities or other construction sites as alternative disposal grounds where such materials can be used. Obtain Approval for such a site which has been identified as an alternative disposal ground in accordance with PRE.C9.500. If there is no such a site as an alternative disposal ground, dispose of non-inert C&D materials as specified in sub-clauses (2) and (4) below;

2. Subject to sub-clause (1) above on alternative disposal ground, dispose of non-inert C&D materials at the landfill or outlying islands transfer facility as designated by PEPO(FM) of EPD and to comply with their acceptance criteria;

3. Subject to sub-clause (1) above on alternative disposal ground, the landfill or outlying islands transfer facility as designated by EPD is ........... and the corresponding acceptance criteria are as follows:
   a. ..............................................;
   b. ..............................................

4. Allow for adoption of other landfills or outlying islands transfer facilities that may be subsequently designated by EPD due to reasons such as closure of the designated landfill or outlying islands transfer facility by EPD. Bear all additional cost incurred due to switching to the alternative designated disposal facility and no extension of time will be granted;

5. Implement a Trip Ticket System (TTS) as specified in PRE.C9.490;

6. Unless separate Approval is obtained, disposal of non-inert C&D materials from the Site shall not commence before the Environmental Management Plan required in PRE.C9.2420 is approved by the CM; and

7. If no landfill or outlying islands transfer facility is available, as confirmed by EPD, submit a disposal plan for non-inert C&D materials for the CM’s agreement. The disposal plan shall include information as specified in sub-clauses (1)(a) to (1)(f) of PRE.C9.500.

PRE.C9.490.A TRIP TICKET SYSTEM FOR DISPOSAL OF C&D MATERIALS AT PUBLIC FILL RECEPTION FACILITIES/LANDFILLS/OUTLYING ISLANDS TRANSFER FACILITIES

1. Provide the account number of the billing account for disposal of construction waste under the Waste Disposal (Designated Waste Disposal Facility) Regulation (Cap. 354L) for overall monitoring of the Trip Ticket System;

2. Maintain a daily record of disposal of C&D materials from the Site including CHIT numbers, vehicle registration numbers, approximate volume, C&D materials type, designated disposal ground, departure time from the Site, actual disposal ground and arrival time at disposal ground, using the Daily Record Summary (DRS) at Appendix PRE.C9/II;
3. Submit the duly completed Part 1 of the DRS in duplicate before departure of the dump truck;

4. When leaving the Site, each and every vehicle transporting C&D materials including both the inert and non-inert portion, must bear a CHIT. The CHIT shall be duly completed;

5. Carry the CHIT on board the vehicle at all times throughout the vehicular trip to the designated disposal ground as stipulated in the CHIT;

6. For each vehicular trip after disposal of C&D materials, obtain a Transaction Record Slips and a stamped return of the CHIT from the operator of the designated disposal facility;

7. Check the information recorded in the DRS against available information including the Contractor's own records and data from EPD's web-site, then complete Part 2 of the DRS form and submit it to the CM within 1 working day after the records are posted at the EPD's web-site;

8. Where an irregularity is observed or where requested by the CM under special circumstances (e.g. a CHIT has been issued but there is no disposal record at the disposal ground), submit to the CM within 5 working days after the recorded date of disposal the supporting evidence such as duly stamped CHIT and/or the Transaction Record Slips (where relevant) to confirm proper completion of the delivery trip(s) in question, or within 2 working days after the CM has requested for such evidence, whichever is later; and

9. All C&D materials shall become the property of the Contractor when they are removed from the Site.

PRE.C9.493.A TRIP TICKET SYSTEM FOR DISPOSAL OF C&D MATERIALS AT DISPOSAL FACILITIES OTHER THAN PUBLIC FILL RECEPTION FACILITIES/LANDFILLS/OUTLYING ISLANDS TRANSFER FACILITIES

1. Maintain a daily record of disposal of C&D materials from the Site including Disposal Delivery Form (DDF) numbers, vehicle registration numbers, approximate volume, C&D materials type, Approved alternative disposal ground, departure time from the Site, actual disposal ground and arrival time at disposal ground, using the Daily Record Summary (DRS) at Appendix PRE.C9/II;

2. Submit the duly completed Part 1 of the DRS in duplicate before departure of the dump truck;

3. When leaving the Site, each and every vehicle transporting C&D materials including both the inert and non-inert portion, must bear a DDF. A sample of the DDF is at Appendix PRE.C9/IV. The DDF shall be duly completed and authorized by the CM;

4. Carry the DDF on board the vehicle at all times throughout the vehicular trip to the Approved alternative disposal ground as stipulated in the DDF;

5. For each vehicular trip after disposal of C&D materials, ensure that the DDF is signed off by a competent person as agreed by the CM at the Approved alternative disposal ground to confirm completion of each trip. Keep a copy of the DDF for inspection by the CM upon request. Complete Part 2 of the DRS form and submit it to the CM within 3 working days after the date of disposal;
6. Where an irregularity is observed or where requested by the CM under special circumstances (e.g. a DDF has been issued but there is no disposal record at the Approved alternative disposal ground), submit to the CM within 5 working days after the recorded date of disposal the supporting evidence such as the signed off DDF to confirm proper completion of the delivery trip(s) in question, or within 2 working days after the CM has requested for such evidence, whichever is later; and

7. All C&D materials shall become the property of the Contractor when they are removed from the Site.

**SITE VIDEO RECORDING SYSTEM**

1. Provide, operate and maintain, including all necessary cables, wirings, lightings and other accessories, a video recording system, at each vehicular exit with gate(s), with the following essential features to record all trucks leaving the Site:
   a. The video cameras used in the system shall be suitable for external use, protected from adverse weather and of high resolution, lowlight and colour type;
   b. Power backup shall be provided to cater for accidental breakdown of the power supply to the system;
   c. Videos captured by the system shall be recorded continuously without break unless agreed by the CM;
   d. Videos shall be captured in a format acceptable to CM;
   e. Registration number of each dump truck leaving the Site shall be captured by the system; and
   f. Loading conditions of dump trucks including empty trucks shall be captured by the system prior to opening of the gate.

2. Securely protect the video cameras from being damaged or blocked;

3. Design and construct all necessary temporary works, including any supporting frames and protections, for mounting the video cameras and their accessories;

4. Provide the software and hardware for capturing the vehicle registration number, the time and date, and the loading condition of each dump truck including empty truck leaving the Site, and for the CM's immediate viewing and taking of photograph of the trucks, and for viewing the recorded videos and photographs. Keep the videos record for at least 60 days and the photographs until such time as agreed by the CM; and

5. Post sufficient notices at conspicuous positions to notify the workers, drivers and staff about the purpose of the video recording system (i.e. all collected personal information/data will be used by the CM to monitor the loading conditions of trucks with C&D materials leaving the Site only and will not be released/issued to irrelevant persons/parties without the permission of the persons/parties being monitored) in accordance with data protection principles set out in the Personal Data (Privacy) Ordinance.

**MECHANICAL COVER SYSTEM FOR DUMP TRUCK FOR TRANSPORTING CONSTRUCTION AND DEMOLITION (C&D) MATERIALS**

1. Use dump truck with mechanical cover system satisfying the requirements specified in either sub-clauses (7) to (10) below;
2. Ensure all dump trucks, which are goods vehicles fitted with a dump bed and of gross vehicle weight equal to or over 16 tonnes for transportation of C&D materials, are installed with a mechanical cover system, which is in good service condition to cover the dump bed;

3. Dump truck may not be allowed to enter the Site if sub-clauses (2) and (7) to (10) of this clause have not been complied with;

4. Clean all dust or debris on top of the mechanical cover so as not to obstruct its operation;

5. Loaded dump truck may be required to unload its contents on Site before leaving the Site if the dump bed and the cover of the dump truck do not comply with the requirements specified in sub-clauses (2), (4) and (7) to (10) of this clause after loading;

6. The Approval of the CM for a loaded dump truck leaving the Site shall not relieve the Contractor's obligation to comply with the relevant legislation. The Employer shall not be liable for any loss or damage sustained by the Contractor arising from or in connection with any offence committed by the Contractor or the dump truck drivers or dump truck owners in relation to the transportation of the C&D materials from the Site;

7. The mechanical cover system of a dump truck shall comply with the following requirements:
   a. The cover shall be made of durable material and constructed with suitable components;
   b. The mechanical cover system shall be effective in preventing dust emission from the dump bed of the truck;
   c. The system shall be able to withstand strong winds under normal circumstances;
   d. The system shall be power-operated inside the driving cabin and backup with manual operation outside;
   e. When the dump bed is covered by the mechanical cover, any gap between the cover and the dump bed shall not exceed 25 mm wide and shall be sealed up tightly with suitable materials as far as practicable; and
   f. The mechanical cover system shall be installed with the following control devices to ensure its safe operation:
      i. The mechanical cover shall be operated only when the dump truck has been stopped and the hand brake is engaged;
      ii. A warning system consisting of flashing amber lights and audible alarm shall be activated automatically when the mechanical cover is being operated inside the driving cabin;
      iii. The warning system shall be visible and audible from both inside (by an indicator light associated with alarm system or the like) and outside of the driving cabin;
      iv. An locking system shall be provided to prevent accidental opening of the mechanical cover, if applicable; and
      v. The associated electrical equipment shall comply with the commonly adopted safety standard.
8. The gross vehicle weight and maximum dimensions of the dump truck after installation of a mechanical cover system shall comply with the relevant legislation and such dump truck shall pass the annual inspection and examination by the Transport Department. Submit supporting evidence to the CM to prove that such annual inspection and examination has passed;

9. Unless otherwise Approved by the CM, the mechanical cover system of a dump truck shall be certified by a Registered Professional Engineer in the Mechanical Engineering Discipline under the Engineers Registration Ordinance that the system complies with the requirements as specified in sub-clauses (2), (7) and (8) above. The certification must include a certified true photograph of the mechanical cover in a closed configuration;

10. Dump trucks installed with a mechanical cover system and have been registered under the "Pay for Safety Scheme" or "Pay for Safety and Environment Scheme" of the CEDD are deemed to comply with the requirement of sub-clause (9) above;

11. Vehicles other than 'dump trucks' carrying dusty materials from the Site may use means other than mechanical covers to cover the dusty materials, provided that the requirements stipulated in sub-clause (3) of PRE.C9.720 are complied with.

PRE.C9.500.A ALTERNATIVE DISPOSAL GROUNDS

1. Make best endeavours to identify recycling facilities or construction sites other than the designated public fill reception facilities/landfills/outlying islands transfer facilities, or other public fill reception facilities/landfills/outlying islands transfer facilities as may be required by CEDD/EPD, which can be used as an alternative disposal ground. Obtain Approval for adoption of such a site as an alternative disposal ground. In support of the request for such Approval, submit a disposal plan for CM's agreement. The disposal plan shall include:

   a. A detailed description of the alternative disposal ground, including location, lot number (where appropriate), location plan and photographs of the proposed alternative disposal ground showing the surrounding environment and land use;

   b. Where the alternative disposal ground is a private construction site, a letter from each of the relevant authorities, such as Agriculture, Fisheries and Conservation Department, Lands Department and Planning Department, providing comment on suitability of the site under their respective purview, and a letter from the Authorized Person (as defined under the Buildings Ordinance) of the private construction site to confirm that:

      i. The C&D materials for use in the development are acceptable;

      ii. The land/pond filling in the proposed alternative disposal ground and the use of land so formed by the C&D materials is in conformity with the statutory Outline Zoning Plan and lease conditions; and

      iii. The CM or his representatives are allowed to enter the alternative disposal ground to conduct inspections where necessary.

   c. Where the alternative disposal ground is a private recycling facility, it shall be on the recyclers' list for C&D materials recognized by EPD, as well as a letter from the recycling facility operator to confirm that the CM's staff are allowed to enter the recycling facility to conduct inspections where necessary;

   d. Where the alternative disposal ground is a construction site of Government (other than a government contract quarry) including those of Housing Authority, or MTRCL, a written consent from the contract/project manager of the alternative disposal ground to use the C&D materials generated from the Site;
e. Where the alternative disposal ground is a government contract quarry, a written consent from the Mines Division of CEDD to import the C&D materials generated from the Site; and

f. The estimated quantity and type of C&D materials to be used/processed in the alternative disposal ground and the approximate delivery programme, together with the name, post and specimen signature of the competent person to sign the Disposal Delivery Form (DDF).

2. Dispose of C&D materials at Approved alternative disposal ground. Disposal of C&D materials at private land or a private construction site which is not administered by an Authorized Person (as defined under the Buildings Ordinance) is prohibited; and

3. Bear all additional cost incurred due to the Approval or disapproval by the CM on the Contractor's request for alternative disposal ground and no extension of time will be granted.

PRE.C9.510.8 REMOVAL OF C&D MATERIALS FROM UNAUTHORIZED DISPOSAL GROUND

1. Where C&D materials from the Site have been dumped at a place other than that designated under the Contract or as Approved, undertake the following remedial action and bear all associated cost:
   a. Remove the dumped C&D materials from the unauthorised disposal ground to a disposal ground designated under the Contract or as Approved; and
   b. Reinstate the unauthorized disposal ground to the condition as before dumping of the C&D materials or a condition considered satisfactory by the relevant Government authorities as required under the relevant legislation where appropriate.

2. Where the unauthorised disposal ground is private property, obtain the landowner's consent before removal of the dumped C&D materials.

PRE.C9.610.8 PREVENTION OF MOSQUITO BREEDING

PRE.C9.610.8 DISPLAY OF POSTERS
Provide and display prominently upon all structures or temporary huts on the Site throughout the construction period and remove on completion, posters, in both English and Chinese, drawing attention to the dangers of allowing the breeding of mosquitoes. These posters may be obtained free of charge from the Food and Environmental Hygiene Department, Health Education Exhibition and Resource Centre of the Government of the Hong Kong Special Administrative Region.

PRE.C9.620.8 REMOVAL AND TREATMENT OF STANDING WATER
Prevent or remove standing water from disused tyres, uneven floors, pits or any other water receptacle location. Dispose of the water through a petrol interceptor and not directly into the stormwater drainage system. Where removal of water is not possible, treat any standing water on the Site with an Approved oil at least once per week.

PRE.C9.630.8 TREATMENT OF WATER RECEPTACLES
Store, cover or treat all items on the Site, including Constructional Plant, capable of retaining water to prevent the collection of water in them.
CONTRACTOR'S OBLIGATIONS

PRE.C9.640.8  DISPOSAL OF WATER RECEPTACLES
Provide throughout the construction period, an Approved central collection point on the Site for depositing of all empty cans, oil drums, packings and other receptacles capable of holding water and for the regular collection and removal of such articles from the Site.

PRE.C9.650.8  PESTICIDES AND LARVICIDES
Only pesticides and larvicides that have been registered in Hong Kong may be used. To protect environmental and human impacts, pesticides and larvicides must be used in accordance with the manufacturers’ instructions. For enquiries on the procurement and use of pesticides, contact the Agricultural, Fisheries and Conservation Department.

CONTROL OF DUST AND DEBRIS

PRE.C9.710.8  DUST CONTROL GENERALLY
1. Undertake at all times to prevent dust nuisance and smoke as a result of activities on the Site;
2. In the process of material handling, any material which has the potential to create dust shall be treated with water or wetting agent sprays. Obtain prior approval of the Director of Water Supplies for any proposal to use a dust suppression chemical in the immediate vicinity of water storage or gathering grounds of the Water Supplies Department;
3. Frequently clean and water the Site to minimize the fugitive dust emissions. Ensure that there will be adequate water supply/storage for dust suppressions. If dust extraction and filtering device is used for dust control, clear the dust collector when it is full;
4. Devise, arrange methods of working and carrying out the works in such a manner so as to minimize dust impacts on the surrounding environment, and provide experienced personnel with suitable training to ensure that these methods are implemented.
5. Before the commencement of any work, the CM may require the methods of working, plant, equipment and air pollution control system to be used on the Site to be made available for inspection and approval to ensure that they are suitable for the Contract.

PRE.C9.720.8  VEHICLE PREPARATIONS
1. Restrict all motorised vehicles to a maximum speed of 8 km per hour and confine haulage and delivered vehicle to designed roadways inside the Site. These roadways shall be paved with concrete, bituminous materials or hardcore to the satisfaction of the CM;
2. All trucks for delivery of concrete are to be effectively washed down after loading and prior to leaving the Site. Concrete waste material must not enter any drains. Water recycling should be practised as far as practicable to minimize water use;
3. Without prejudice to the generality of GCC Clause 5.23, any vehicle with an open load compartment used for transferring dusty materials off Site shall have properly fitted side boards and tailboards. Dusty materials shall not be loaded to a level higher than the side boards and tailboards, and shall be covered by a suitable tarpaulin (or any other impervious covering material as Approved by the Contract Manager) in good condition before the vehicle leaves the Site. The tarpaulin or Approved covering material shall be properly secured and extended at least 300 mm over the edges of the side boards and tailboards and properly secured and maintained throughout the journey to the off-loading destination;

4. For the purpose of sub-clauses (3) and (4), "dusty materials" include cement, earth, pulverized fuel ash, aggregates, silt, stone fines, sand, debris, saw dust and wooden chips, etc.;

5. Loads of filling material shall be dampened with water and properly covered with tarpaulins or Approved covering material;

6. Dump trucks for transporting C&D materials shall be installed with a mechanical cover system as specified in clause PRE.C9.498;

7. Employ sufficient labourers to clear the roads and footways along the public roads regularly of any debris deposited by vehicles leaving the Site. Do not flush or hose down the deposited soil or debris into the public road drains;

8. When wheel washing bay is provided at the site exit, the sand and silt in the wash water shall be settled out before discharging into the site drainage system. The section of the site road between the wheel washing bay and the public road should be paved with concrete, bituminous materials or hardcores to the satisfaction of the CM to reduce tracking of soil and prevent surface run-off from entering the public road drains;

9. No vehicle or engine driven movable equipment shall have its exhaust directed towards the ground.

PRE.C9.730.8 STOCKPILING

1. Materials handling and storage areas shall be levelled, well-drained and maintained hard-standing ground to facilitate cleansing and minimize dust generation. In addition, water sprays shall be provided and used both to dampen stored materials and when receiving raw material;

2. Stockpiles of materials which have the potential to create dust shall be either:
   a. Enclosed on three sides, with walls extending above the pile and 2 m beyond the front of the pile;
   b. Covered entirely by impervious sheeting; or
   c. Sprayed with water or a dust suppression chemical so as to maintain the entire surface wet.

PRE.C9.740.8 AIR SAMPLERS

1. Monitor the ambient dust concentration level by sampling at specified locations and frequency to the satisfaction of the CM. Provide and operate to the satisfaction of the CM sufficient numbers of high volume air samplers, PM10 air samplers and associated equipment and shelters in accordance with the USA standard Title 40, Code of Federal Regulations, Chapter 1 (Part 50) Appendix K (for TSP) and Appendix J (for RSP);

2. Carried out sampling 1 day in every 6 days at 6 sampling points within and along the site boundary for such periods and in a manner as Instructed by the CM;
3. The samplers, equipment and shelters shall be constructed so as to be transferable between sampling points to enable monitoring of "dust in air" levels at any sampling point required by the CM;

4. Provide all necessary protection fences and the like at sampling points;

5. Testing and analysis of sampled materials shall be carried out by an Approved laboratory.

**PRE.C9.750.8**  
**DUST SUPPRESSION EQUIPMENT**

The Contractor shall, at his own cost and to the satisfaction of the CM, install effective dust suppression equipment and take such measures as may be necessary to ensure that the concentration of air-borne dust at any location within the Site shall not exceed 5 milligrams per cubic metre, at standard temperature (25°C) and pressure (1.0 bar) at any time and that at the Site boundary and any nearby residential area the concentration of air-borne dust shall not exceed 0.5 milligrams per cubic metre, at standard temperature (25°C) and pressure (1.0 bar) averaged over one hour, or 0.15 milligrams per cubic metre, at standard temperature (25°C) and pressure (1.0 bar) averaged over 24 hours.

**PRE.C9.760.8**  
**RESTRICTION ON CONCRETE BATCHING AND ROCK CRUSHING PLANTS ON SITE**

The operations of concrete batching and rock crushing plants within the Site are not allowed.

**CONTROL OF NOISE**

**PRE.C9.810.8**  
**GENERAL CARE**

Carry out the Works in such a manner as to minimize noise impacts on the surrounding environment during execution of the Works.

**PRE.C9.820.8**  
**NOISE CONTROL REGULATIONS**

Comply with and observe the Noise Control Ordinance and its subsidiary regulations in force in Hong Kong.

**PRE.C9.830.8**  
**CONSTRUCTION NOISE PERMIT**

When necessary, apply as soon as possible for a Construction Noise Permit under the Noise Control Ordinance, display the permit as required and copy to the CM. Ensure compliance with any term or condition in the Construction Noise Permit. The Contractor is to note that neither the Employer nor its employees can influence the issue or terms or conditions of a Construction Noise Permit.

**PRE.C9.840.8**  
**SOUND LEVEL METER**

Provide an Approved integrating sound level meter to IEC 651:1979 (Type 1) and 804:1985 (Type 1) with calibrator and printer (including consumables), for the exclusive use of the CM at all times. Maintain also the meter, calibrator and printer in proper working order and provide a substitute when they are out of order or otherwise not available.
**PRE.C9.850.8 ADDITIONAL REQUIREMENTS**

In addition to the requirements imposed by the Noise Control Ordinance, to control noise generated from equipment and activities for the purpose of carrying out any construction work other than percussive piling during the time period from 0700 to 1900 hours on any day not being a general holiday (including Sundays), the following requirements shall also be complied with:

1. The noise level measured at 1 m from the most affected external facade of the nearby noise sensitive receivers from the construction works alone during any 30 minute period shall not exceed an equivalent sound level (Leq) of 75 dB(A);

2. The noise level measured at 1 m from the most affected external facade of the nearby schools from the construction works alone during any 30 minute period shall not exceed an equivalent sound level (Leq) of 70 dB(A) [65 dB(A) during school examination periods]. Liaise with the schools and/or the Examination Authority to ascertain the exact dates and times of all examination periods during the course of the Contract;

3. Should the limits stated in the above sub-clauses (1) and (2) be exceeded, stop the construction operation(s) causing the excesses and do not recommence until appropriate measures acceptable to the CM that are necessary for compliance have been taken;

4. Measures that are to be taken to protect adjacent schools and other adjacent noise sensitive receivers, if necessary, shall include, but not be limited to, adequate noise barriers. The barriers shall be of substantial construction and designed to reduce transmission of noise (simple plywood hoarding will not be sufficient). The barriers shall be surmounted with baffle boxes designed to reduce transmission of noise. The barriers shall be designed to BS 5228:Part 1:1984. The location and details of the barriers shall be submitted to the CM for approval before works commence adjacent to schools and other noise sensitive receivers;

5. Adopt, where necessary, the use of quiet construction equipment (QCE) and/or shall employ the quietest practicable working methods when carrying out demolition works, and/or road opening works during restricted hours;

6. Any stoppage or reduction in output resulting from compliance with this clause shall not entitle the Contractor to any extension of time for completion or to any additional costs whatsoever.

**PRE.C9.860.8 METHODS OF OPERATION**

Devise and arrange methods of working to minimize noise impacts, and provide experienced personnel with suitable training to ensure that these methods are implemented.

**PRE.C9.870.8 APPROVAL OF METHODS OF OPERATION**

Before the commencement of any work, the CM may require the methods of working, equipment and sound-reducing measures intended to be used on the Site to be made available for inspection and Approval to ensure that they are suitable for the Contract.

**PRE.C9.880.8 SOUND REDUCTION EQUIPMENT**

Ensure that all plant and equipment to be used on the Site are properly maintained in good operating condition and noisy construction activities shall be effectively sound-reduced by means of silencers, mufflers, acoustic linings or shields, acoustic sheds or screens or other means, to avoid disturbance to any nearby noise sensitive receivers.
Contractor’s Obligations

**PRE.C9.890.8** APPROVED EXCEPTIONS

Notwithstanding the requirements and limitations set out in PRE.C9.850 above, and subject to the compliance with PRE.C9.810, PRE.C9.860 and PRE.C9.880, the CM may, upon application in writing by the Contractor, allow the use of any equipment and the carrying out of any construction activities for any durations provided that he is satisfied with the application which, in his opinion, to be of absolute necessity and adequate noise insulation has been provided to the educational institutions to be affected, or of emergency nature, and not in contravention with the Noise Control Ordinance in any respect.

**PRE.C9.900.8** RESTRICTED USE OF EXCAVATOR MOUNTED BREAKERS

The use of excavator mounted breakers within 125 m from any nearby noise sensitive receivers shall be minimized.

**PRE.C9.910.8** NOISE SENSITIVE RECEIVERS

For the purposes of the above clauses, any domestic premises, hotel, hostel, temporary housing accommodation, hospital, medical clinic, educational institution, place of public worship, library, court of law, performing arts centre or office building shall be considered to be a noise sensitive receiver.

**PRE.C9.920.8** RESTRICTED USE OF ROCK DRILLING EQUIPMENT

Rock drilling equipment shall be quiet drilling rigs with a sound power level not exceeding 100 dB(A). Conventional pneumatically driven drilling rigs are specifically prohibited.

**PRE.C9.930.8** BLASTING RESTRICTIONS

1. Observe blasting restrictions due to the presence of the construction works or completed works by others in Sections .................;
2. Blasting shall not be carried out during 7 p.m. to 7 a.m. and any time on a general holiday, including Sunday, to avoid noise impact at sensitive hours.

**PRE.C9.940.8** HAND-HELD BREAKERS AND PORTABLE AIR COMPRESSORS

Hand-held breakers and portable air compressors shall comply with Noise Control (Hand Held Percussion Breakers) Regulations and Noise Control (Air Compressors) Regulations and shall be fitted with Noise Emission Labels when operated.

**PRE.C9.950.8** GENERATORS FOR SUPPLY OF TEMPORARY ELECTRICITY TO SITE

1. Provide generators which shall meet with all relevant requirements under the European Union or Japanese system and be certified by an approved body appointed by a member State of the European Union under the European Council Directive 2000/14/EC, or designated as Low Noise Emission Construction Equipment by the Ministry of Land, Infrastructure and Transport of Japan (MLIT), or equivalent or better standards, with the result that the generators are qualified with the Quality Powered Mechanical Equipment (QPME) label;
2. Affix the generators for site's temporary electricity supply with valid QPME labels to facilitate inspection by CM's representatives;
3. Provide hangers for hanging cables of the generators. Refer to drawing no. REF/SS/CH/SK-01 in Appendix U to this Specification for reference only.
CONTRACTOR’S OBLIGATIONS

PRE.C9.960.8 HEALTH CARE PLAN

1. The health care plan is one of the sections of the Safety Plan as per PRE.C9.205, where specifies the time of its submission to the CM and the frequency of its updating;

2. The health care plan shall comprise the following:
   a. Health check programme for workers on Site on worker’s volunteer basis;
   b. Medical Examination for workers as required under relevant legislations for specific trades of workers. Details of the requirements of the statutory medical examinations are given at Appendix I of the Guidance Notes on Medical Examinations for Workers engaged in Hazardous Occupations in Industrial Undertakings issued by LD;
   c. Recommended medical examinations for certain trades of construction workers given at Appendix II of the Guidance Notes mentioned at sub-clause (2)(b);
   d. Risk assessment and the preventive measures for working under inclement weather conditions as per PRE.C9.1110;
   e. Risk assessment and the caring measures for the prevention of heat stroke as per PRE.C9.1110;
   f. Risk assessment and the caring measures for working in cold weather as per PRE.C9.1270;
   g. Information to the workers on Site about the substances they work with and train them about the risks to their health and the proper way to use any control measures provided;
   h. Health promotion for the well-being of workers on Site.

3. Execute the health care plan throughout the duration of the Contract.

PRE.C9.965.8 REST AREAS FOR WORKERS

1. Provide sheltered rest area(s) close to the workplace for all workers employed on the Works or in connection with the Contract. The area(s) shall be furnished with drinking facilities, hand washing facilities, chairs, tables, lighting and power, and good mechanical ventilation. The rest area(s) shall be in adequate number taking into account the number workers and their locations on site;

2. Maintain the rest area(s) in clean, tidy and functional condition for use of workers throughout the duration of the Contract.

CLEANLINESS

PRE.C9.1010.8 DISPOSAL OF RUBBISH

Further to the requirements of the Conditions of Contract remove all rubbish whether from domestic or other sources, debris, cement bags, disused formwork, etc. as they accumulate on the Site and at the end of each working day. Carry out a general tidying up at the end of each week. The area is to be clean by sweeping and flushing with water as necessary so that the Site is kept constantly clean and tidy during the progress of the Contract.

PRE.C9.1020.8 HEALTH AND SANITATION

Maintain the Site and all working areas in a sanitary condition and in all matters of health and sanitation shall comply with the requirements of Food and Environmental Hygiene Department or other Government bodies.
CONTRACTOR’S OBLIGATIONS

PRE.C9.1030.8 MAINTAINING CLEARANCE OF DRAINAGE CHANNELS
Ensure that existing drainage channels and drains in and adjacent to the Site do not as a result of the Works become partially or totally blocked by any material from any source.

PRE.C9.1040.8 MAINTAINING CLEARANCE OF RIGHTS OF WAY
1. Take every precaution to prevent earth, rock or debris from depositing on public or private rights of way as a result of site operations including any deposits arising from the movement of plant or vehicles. In the event of any earth, rock or debris from construction works being deposited on public or private rights of way, remove immediately all such earth, rock or debris and restore the affected rights of way to their original state to the satisfaction of the CM;
2. In the event of any spoil or debris from construction works being deposited on adjacent land or seabed or any silt washed down to any area, remove immediately all such spoil, debris or material and silt and restore the affected land or seabed and areas to their natural state to the satisfaction of the CM.

PRE.C9.1050.A WHEEL CLEANING FACILITY
1. All points of egress from the Site onto public roads shall be equipped with a wheel cleaning facility with an automatic high pressure water jet and wheel-wash trough;
2. The facility shall be supervised by the Contractor's personnel at all times when in use, to ensure that no vehicles leaving the Site deposit earth, mud, debris, dust, and the like on the roads;
3. The water in the wheel cleaner shall be changed at frequent intervals, and sediments shall be removed regularly;
4. Submit proposals for Approval prior to construction of the facility;
5. The wheel washing facility shall be ready for use prior to the commencement of earthworks excavation activity on the Site;
6. Provide a hard-surfaced road between the wheel washing facility and the public road;
7. If, despite the above, any vehicle should be found to be depositing any form of dirt on the public road then at the discretion of the CM, the Contractor may not be permitted to use that vehicle on the Works.

PROTECTION

PRE.C9.1110.8 PROTECTION FROM WEATHER
1. In addition to any obligation under GCC Clause 5.11 or similar obligations under any enactment or Regulation, adopt the practices and / or measures in respect of working under inclement weather conditions as recommended in the latest edition of the CoP in Times of Typhoons and Rainstorms issued by LD and the Guide on Safety at Work in Times of Inclement Weather jointly issued by LD and OSHC. Examine critically the practices and / or measures as recommended in the said CoP and Guide, especially their applicability and suitability to the Works on account of the actual site conditions and the specific safety hazards of the Works. Alternative practices and / or measures which should not be inferior to those recommended in the said CoP and Guide may be proposed for the CM’s approval before implementation. The following highlights of the crucial practices and / or measures, albeit not exhaustive, are extracted from the said CoP and Guide:
a. Conduct risk assessment on working under inclement weather conditions, identify and analyse the hazards;

b. Establish practical safety measures and emergency plans with documented procedures on communication of weather information, warning system, traffic arrangement, work arrangement, use of appropriate personal protective equipment, evacuation route, safe shelters, first aid facilities and back up services etc.;

c. Formulate training programme with regular drills for all emergency situations to all site personnel to become knowledgeable to all hazards, and all necessary precautions to take under inclement weather conditions;

d. Resume work after the occurrence of inclement weather conditions only after a thorough examination and completion of all necessary repairs to ensure the safe working condition of lifting appliances, scaffolds, suspended working platforms, electrical installations and other plant.

2. Appoint an emergency standby team as per PRE.C9.1230 to monitor changes in weather conditions and take appropriate actions as per sub-clause (1);

3. Follow the advice and practical guidelines on work arrangements in times of typhoons and rainstorms as given at the said CoP, taking into account the applicability and suitability to the Works on account of actual site conditions and the specific safety hazards of the Works;

4. Protect carefully from injury by rain, heat or inclement weather all work which may be adversely affected thereby. In addition to the applicable clauses in these preliminaries the Contractor's attention is drawn to appropriate clauses in other Worksections of this Specification;

5. Take all precautionary measures to prevent nuisance, danger, damage or accident due to rain and wind (including the effects of erosion, silting, accumulation of sediment and / or debris, flooding, landslips, mudflows etc.). In particular such precautions shall include, but shall not be limited, to the following clauses in this Section.

**PRE.C9.1120.8 WORK RESTRICTIONS**

1. All works shall be carried out in the dry, unless otherwise authorised by the CM;

2. Work shall not be carried out in weather conditions which may adversely affect the work unless protection by methods agreed by the CM is provided. Permanent work, including materials for permanent work, shall be protected by methods agreed by the CM from exposure to weather conditions which may affect the work or materials.

**PRE.C9.1130.8 MONITORING WEATHER FORECASTS**

The Contractor shall monitor weather forecasts from the Hong Kong Observatory and shall ensure that he is aware of heavy rain warnings, thunderstorm warnings and the hoisting of typhoon signals; when such warnings are announced, precautions shall be taken and any necessary arrangements made.

**PRE.C9.1140.8 MONITORING WATER LEVEL MEASURING DEVICES**

Monitor water-level measuring devices, in accordance with the requirements of the CM.

**PRE.C9.1150.8 WATER DISPERsal**

1. Arrange for the rapid dispersal of water which enters the Works from any source;
2. When practicable the water shall be discharged into the permanent drainage system, providing adequate means for trapping silt are provided before discharging into the permanent systems;

3. Excavated areas shall be kept well-drained and free from standing water;

4. Construct, operate and maintain all temporary dams, watercourses and other works of all kinds (including pumping, horizontal drains and well-point dewatering) that may be necessary to exclude water from the Works while construction is in progress. Such Temporary Works shall not be removed without the Approval of the CM;

5. Notwithstanding any Approval by the CM of the Contractor's arrangement for the exclusion of water, the Contractor shall be responsible for the sufficiency thereof and for keeping the Works safe at all times;

6. In this matter take account of PRE.C9.1520;

7. The Contractor is to accept and deal with overflow/wash out from the existing service reservoirs, storm water drainage, surface run-off, foul sewerage and any other liquid discharged from the construction works or completed works by others in Sections ........................

PRE.C9.1160.8 DISCHARGES GENERATED FROM SITE ACTIVITIES

1. Contain within the Site all surface runoff generated from foundation works, dust control and vehicle washing etc. Re-circulate and re-use as far as practicable the surface runoff for housekeeping operations such as dust-control and wheel-washing as detailed in PRE.C9.710 and PRE.C9.1050 respectively. Install waste-water recycling facilities to the satisfaction of CM that meets the following:
   a. Waste-water should be properly treated to meet discharge standards (other than that for foul sewers discharge) as stipulated in the WPCO Licence issued by EPD before re-use for dust-control and wheel-washing;
   b. Warning signs should be displayed prominently upon all temporary storage tanks, drawing attention to the dangers of allowing breeding of mosquitoes; and
   c. Proper and adequate drainage facilities should be provided to discharge excess treated effluent.

2. Maintain the waste-water recycling facilities towards the end of the contract as far as practicable. Obtain CM’s approval prior to removal of the waste-water recycling facilities;

3. Do not discharge directly or indirectly or cause or permit or suffer to be discharged into any public sewer, stormwater drain, channel, stream-course or sea any trade effluent or foul or contaminated water or cooling or hot water without the prior written consent of the CM in consultation with the Director of Environmental Protection and Director of Water Supplies, who may as a condition of granting his consent require the Contractor to provide, operate and maintain at the Contractor’s own expense to the satisfaction of the CM suitable works for the treatment and disposal of such trade effluent or foul or contaminated or cooling or hot water. Submit the design of such treatment works to the CM for approval not less than one month before the commencement of the relevant works;

4. If any office, site canteen or toilet facilities is erected, foul water effluent shall be directed to a foul sewer or to a sewage treatment and disposal facility either directly or indirectly by means of pumping or other means approved by the CM.
PRE.C9.1170.8  REUSE OF WATER FROM BORING AND DRILLING

Water used in ground boring and drilling for ground investigation or rock/soil anchoring should as far as practicable be re-circulated after sedimentation. When there is a need for final disposal, the waste water should be discharged into site drainage system via silt removal facilities.

PRE.C9.1180.8  REUSE AND DISPOSAL OF BENTONITE SLURRY

1. Bentonite slurry used in diaphragm wall and bored-pile construction shall be reused as far as practicable. If the disposal of a certain residual quantity cannot be avoided, the used slurry may be disposed of at designated marine dumping area subject to obtaining a marine dumping permit from EPD;

2. Disposal of used bentonite slurry into public drainage system, if intended, shall be treated to meet the discharge standards as stipulated in the WPCO Licence issued by EPD.

PRE.C9.1190.8  TEMPORARY DRAINAGE SYSTEMS

1. Where possible drainage systems shall be constructed from the lowest point upwards;

2. The permanent cut-off channels at the top of all slopes shall be constructed before the commencement of earthworks in accordance with the Drawings. The cut-off channels shall be connected into the existing watercourses which flow across the Site;

3. Design all temporary drainage in accordance with the requirements of PRE.C11.060;

4. Temporary sumps and traps shall be constructed to prevent sediment and/or debris from entering existing drains.

PRE.C9.1200.8  REMOVAL OF SEDIMENT/DEBRIS

1. In accordance with the requirements of GCC Clause 5.7 furnish, for the CM's information, particulars of the arrangements for ensuring that materials from the earthworks do not wash into the drainage system;

2. Any sediment and/or debris that accumulates in any catchpit, manhole, sump, trap, drain, drainage channel or watercourse whether temporary, existing or newly constructed, within the Site, shall be removed on at least a monthly basis, or as directed by the CM;

3. Notwithstanding the above requirements, any sediment and/or debris, that accumulates in such a way that it could, in the opinion of the CM, cause nuisance, danger, damage or accident, shall be removed immediately to the satisfaction of the CM;

4. Also, notwithstanding the above requirements, any water, sediment and/or debris, that accumulates in any property, structure, installation and service within or in the vicinity of the Site as a result of the Works shall be removed immediately to the satisfaction of the CM.

PRE.C9.1210.8  METHOD OF WORKING

1. A method of working shall be adopted to minimize erosion;

2. Excavations on or at the top of slopes, which cannot be drained other than by pumping, shall not remain open for prolonged periods;

3. Construction materials or excavated material shall not be stockpiled where they could erode or cause a landslip or mud flow.
CONTRACTOR'S OBLIGATIONS

PRE.C9

PRE.C9.1220.8  REINSTATING DAMAGE WORKS

The Contractor's attention is drawn to GCC Clause 5.12. Should any damage to the Works occur due to inclement weather or the effects of inclement weather the Contractor shall carry out such repairs and reinstatement as are deemed necessary by the CM at the expense of the Contractor.

PRE.C9.1230.8  EMERGENCY COMMUNICATION AND STANDBY TEAM

1. Provide emergency communication and standby team for the execution of any emergency work on Site warranted necessary by the Contractor for the safety of the Works and/or the public, in accordance with the following:
   a. Within one week from the notified date for commencement of the Works establish an emergency contact telephone number and submit the said telephone number to the CM;
   b. The emergency contact telephone is to be manned, at all times during which the Rainstorm Red Warning or the Rainstorm Black Warning is issued, or the Tropical Cyclone Warning Signal No 3 or above is hoisted, by a competent English-speaking person. All information received to be immediately conveyed to the Contractor; and
   c. The emergency standby team comprising suitable staff, labour and plant is to be available at all times during which the said Signal, including Rainstorm Black/Red Warning, is hoisted. The standby team to be sufficient in size for any emergency work required to be carried out on Site. In the event that the standby team is not stationed at the Site, ensure that the team can be mobilized within the shortest possible time.

2. The provision of the emergency contact telephone number and the emergency standby team shall in no way relieve the Contractor of his obligations, responsibilities and liabilities under the Contract.

PRE.C9.1260.8  PROTECTION OF WORKERS FROM HEAT STROKE

In addition to any obligation under GCC Clause 5.11 or similar obligations under any enactment or Regulation, adopt the practices and / or measures in respect of working in hot weather as recommended in the latest edition of the Guidelines on Site Safety Measures for Working in Hot Weather issued by CIC and the leaflet on Prevention of Heat Stroke at Work in a Hot Environment issued by LD. Examine critically the practices and / or measures as recommended in the said Guidelines and leaflet, especially their applicability and suitability to the Works on account of the actual site conditions and the specific safety hazards of the Works. Alternative practices and / or measures which should not be inferior to those recommended in the said Guidelines and leaflet may be proposed for the CM's approval before implementation. The following highlights the crucial practices and / or measures, albeit not exhaustive, extracted from the said Guidelines, leaflet and measures required:

1. In relation to PRE.C6.070, ensure that a safe system of work including the risk assessment and the caring measures for prevention of heat stroke are incorporated in the Safety Plan;

2. Make reference to Annex A of the said Guidelines issued by CIC for the purpose of conducting the risk assessment as per sub-clause (1); review and adopt as appropriate in the light of applicability and suitability to the Works on account of the actual site conditions and the specific safety hazards of the Works;

3. Set up sunshade to block away sunlight at exposed work areas and provide good mechanical ventilation as far as reasonably practicable;
4. Ventilate the workplace by means of fans / blowers / chillers or any other form as appropriate;
5. Where working in enclosed area with poor ventilation, in addition to the provision at sub-clause (4), exhaust the hot air by exhaust pipes or other suitable measures;
6. Keep heat-generating machinery (e.g. diesel air compressors or generators) away from workers or use insulating materials to minimize heat dissipation as far as reasonably practicable;
7. Use mechanical aids for execution of works where appropriate to minimise workers' physical exertion;
8. Establish administration control measures with trained supervisors to take heed of hot weather report and if necessary, to reschedule outdoor work or to arrange job rotation or suitable rest breaks to avoid prolonged working in hot environment;
9. Assign a lower workload or shorter working duration as a start to the workers new to a hot environment, with the workload increased gradually over a number of days to help them acclimatize to the hot environment;
10. Avoid assigning workers who may have difficulties in coping with heat to work under hot environment. Consider the advice of their attending doctors if necessary;
11. Arrange regular rest periods to reduce the period of exposure to the hot environment to let the workers cool down. Apart from the regular 30-minute rest period during the afternoon work session, allow an additional 15-minute rest period during the hot summer months (from May to September every year);
12. Provide relevant training and site safety information to supervisors and workers in understanding the potential risks for working in hot environment inclusive of the knowledge in recognizing symptoms of heat-related disorders, the precautionary measures and the emergency response actions etc.;
13. Provide sheltered rest areas as per PRE.C.9.965 with cooling aids and cool potable water close to the workplace;
14. In addition to sub-clause (13), provide easily accessible drinking points with cool potable water for all workers employed on the Works or in connection with the Contract;
15. Encourage workers to take plenty of water or other appropriate beverages to replenish the fluid and electrolytes lost through sweating;
16. Prohibit consumption of alcoholic drinks;
17. Pursuant to PRE.C.9.260, encourage workers to wear proper clothing and safety helmet in light colour, wide brim and with ventilation vents to suit the weather;
18. Provide misting machines and regularly change the water in water tank of misting machine for hygiene;
19. Provide air-conditioners or cooling facilities in the cabins of plant where the operator is likely to be exposed to high temperature.
CONTRACTOR'S OBLIGATIONS

PRE.C9.1270.8 PROTECTION OF WORKERS WORKING IN COLD WEATHER

In addition to any obligation under GCC Clause 5.11 or similar obligations under any enactment or Regulation, adopt the practices and / or measures in respect of working in cold weather as recommended in the Health Guide for Working during the Cold Weather issued by LD. Examine critically the practices and / or measures as recommended in the said Guide, especially their applicability and suitability to the Works on account of the actual site conditions and the specific safety hazards of the Works. Alternative practices and / or measures which should not be inferior to those recommended in the said Guide may be proposed for the CM's approval before implementation:

1. In relation to PRE.C6.070, ensure that the risks of working in cold weather to the workers and the caring measures are incorporated in the Safety Plan;
2. Take heed of weather report. Inform workers of the necessary safety and health precautions to take and remind workers to wear appropriate warm clothing at work;
3. Reschedule outdoor work or work in remote areas to warmer periods in daytime where practicable;
4. Make arrangements for work shifts to rotate from outdoor to indoor or sheltered work sites where practicable;
5. Provide hot drinking water or other beverages for all workers employed on the Works or in connection with the Contract;
6. Provide workers working alone in remote areas with effective communication or other suitable measures for calling for assistance in case of emergency.

PROTECTION AND PRESERVATION OF EXISTING TREES AND SHRUBS

PRE.C9.1310.8 PROTECTION GENERALLY

Option 1

There are no existing trees or shrubs on the site which are to be retained and protected.

Option 2

Preserve and protect existing trees and shrubs in accordance with PRE.C9.1312 to PRE.C9.1370.

PRE.C9.1312.8 DEFINITIONS

1. "Tree" means a plant with diameter at breast height measuring 95 mm or more. Including plants growing on retaining structures;
2. "Old and Valuable Tree" (hereinafter referred to as OVT) means any tree included in the Register of Old and Valuable Trees posted at website: http://www.lcsd.gov.hk/LEISURE/LP/gc/tree;
3. "Diameter at breast height" means the diameter of the trunk of the plant measured at a height of 1.3 m above ground level;
4. "Tree crown spread" means the diameter of the tree crown defined by the outermost branches of the tree;
5. "Tree height" means the height from ground level to the top of the tree;
6. "Dripline" of a tree means the imaginary vertical plumb line that extends downward from the tips of the outermost tree branches and intersects the ground;
7. "Tree protection zone" for OVT (Tree No. Shown on drawing) means the zone encompassing the tree along its dripline and extending vertically to 2 m upward beyond the top of the tree and 2 m downward beyond the ground level at the trunk base of the tree. For an OVT growing on a retaining structure/wall/rock surface, the tree protection zone should encompass the body of the tree itself and 2 m above the tree crown, as well as the vertical and horizontal surfaces of the retaining structure/wall/rock surface covered by the tree roots together with the space up to 2 m behind those surfaces;

8. "Tree protection zone" for non-OVT (tree other than OVT) means an area within the perimeter that is defined by the dripline of the tree. For a non-OVT growing on a retaining structure/wall/rock surface, the tree protection zone should encompass the body of the tree itself, and the vertical and horizontal surfaces of the retaining structure/wall covered by the tree roots;

9. "Preserved tree" means an existing tree, including OVT, not earmarked to be felled, which may be a tree to be retained at its existing location, a tree at its existing location prior to transplanting, or a tree transplanted within the Site;

10. "Arboricultural work" means any work related to the cultivation and care of trees for any purpose other than timber production, including but not limiting to planting, replanting, transplanting, tree surgery work and control of pest and disease;

11. "Aftercare to Old and Valuable Trees" means the regular monitoring and other operations specified to be performed for Old and Valuable Tree (Tree No. Shown on drawing) during the period stated in the Contract for such regular monitoring and other operations.

PRE.C9.1313.8 INDEPENDENT TREE SPECIALIST

1. Employ a suitably qualified and experienced independent tree specialist (ITS) for the period stated in the Contract to carry out the duties as stipulated in EXT11.W062 in accordance with the following:

   a. Qualification and experience of the ITS shall be as follows:

      i. A degree holder of any of the disciplines of agriculture, arboriculture, botany, forestry, horticulture, landscape architecture, landscape design, landscape management or landscape science or a discipline of equivalent subject acceptable to the CM;

      ii. Have specialised knowledge and training in the fields as specified in sub-clause (a)(i) above;

      iii. Have at least three (3) years' documented or demonstrable experience gained whether in Hong Kong or elsewhere in the physiology and care of major tree species commonly found in Hong Kong.

   b. Nomination and employment of the ITS:

      i. Within seven (7) days of the date of the Letter of Acceptance, nominate a candidate to be the ITS for the approval of the CM. Obtain ITS's declaration of "no conflict of interest" in the discharge of his duties specified under the Contract and submit it to CM;

      ii. Enter into a written contract of employment with the ITS and ensure that the employment of the ITS shall commence within seven (7) days of the date of the CM's approval of the employment of the ITS;
iii. In the event that the Contractor fails to comply with any of the requirements in sub-clauses (b)(i) and (b)(ii) above, the Employer shall be entitled to employ an ITS forthwith and deduct all costs, charges and expenses arising from or in connection with the employment of an ITS in accordance with the provisions of General Conditions of Contract Clause 83 and / or recover such costs, charges and expenses as a debt from the Contractor.

c. Nomination and employment of replacement ITS:

i. In the event that the ITS is unable or refuses to carry out such duties or is not performing satisfactorily in the opinion of the CM, the CM may withdraw his approval for employing the ITS at any time. If such approval is withdrawn, nominate a replacement ITS for the approval of the CM within seven (7) days of the notice of withdrawal by the CM. Obtain replacement ITS's declaration of "no conflict of interest" in the discharge of his duties specified under the Contract and submit it to CM;

ii. Enter into a written contract of employment with the replacement ITS and ensure that the employment of the replacement ITS shall commence within seven (7) days of the date of the CM's approval of the employment of the replacement ITS;

iii. In the event that the Contractor fails to comply with any of the requirements in sub-clauses (c)(i) and (c)(ii) above, the Employer shall be entitled to employ a replacement ITS forthwith and deduct all costs, charges and expenses arising from or in connection with the employment of a replacement ITS in accordance with the provisions of GCC Clause 15.3 and / or recover such costs, charges and expenses as a debt from the Contractor.

d. Wages for ITS:

i. Pay wages direct to ITS for his services rendered;

ii. As a condition precedent for entitlement to payment of the item(s) of works for which the services of the ITS are required under the Contract, submit satisfactory evidence, including but not limited to receipts for payment of wages to the ITS, to the CM proving that the ITS has already been paid for his services rendered.

2. Provide all reasonable facilities and attendance for the ITS to carry out his duties;

3. Ensure that the ITS has carried out his duties as specified in the Contract.

**CONTRACTOR FOR TREE WORKS**

If the Contractor is not included in the "Housing Authority List of Soft Landscape Contractors for New Works Groups 1 or 2", engage a sub-contractor in accordance with the following:

1. Unless otherwise agreed by the CM, select such sub-contractor from the prevailing "Housing Authority List of Soft Landscape Contractors for New Works Groups 1 or 2";

2. Enter into a written sub-contract with the sub-contractor to carry out the arboricultural work to trees within the Site, including but not limited to planting, replanting, transplanting, tree surgery work and control of pest and disease;
3. Provided that without the written consent of the CM, do not enter into a written sub-contract with a sub-contractor on the prevailing "Housing Authority List of Soft Landscape Contractors for New Works Groups 1 or 2", who is then suspended from tendering (whether by way of mandatory suspension, voluntary suspension or automatic suspension) in respect of the works in that category;

4. At least seven (7) days prior to entering into a written sub-contract with the sub-contractor, submit details of the sub-contractor to the CM for checking of compliance with sub-clauses (1) to (3) above.

PRE.C9.1315.8 COMPETENT MEMBER OF SITE SUPERVISORY STAFF TO OVERSEE TREE WORKS

1. Assign a competent member of the site supervisory staff to oversee and supervise tree works related to horticultural operations and preservation of trees within the Site, including but not limited to planting, transplanting, tree surgery work and control of pest and disease affecting trees on the Site;

2. The assigned competent member shall comply with the following requirements:
   a. Be working full-time on the Site, but not necessarily working solely on trees;
   b. Have attended relevant training on the subject organised by the training institutes (such as Construction Industry Council Training Academy), or similar courses as considered appropriate by the CM.

3. Within 28 days from the date of the Letter of Acceptance, submit to the CM for approval particulars of the assigned competent member (including his name, experience and position) together with a copy of the certificate issued by the training institute confirming his satisfactory completion of the relevant course.

PRE.C9.1316.8 PRESERVATION AND PROTECTION OF EXISTING TREES AND VEGETATION GENERALLY

Unless otherwise directed or agreed by the CM, comply with the following requirements:

1. Protect all existing trees and palms as shown on Drawing Nos. …………or as Instructed;

2. Protect the branch structure, crown and root zone and any overhanging vegetation;

3. Protect and preserve all existing trees and shrubs including any surrounding curbs/dwarf walls except those instructed to be removed;

4. Be fully acquainted with the location, size, canopy shape, and spread of the existing vegetation shown in Drawing Nos. ………….to the extent that the location of existing trees may affect the programming, method or sequencing, and access to the Works;

5. Identify each tree or palm shown in the Drawing that is designated to be retained, transplanted or removed by affixing differently coloured labels printed with the number shown in Drawing Nos. …………….. as follows:
   a. Conduct initial tree survey to identify trees that are not recorded under the Contract and their treatment is yet to be instructed by the CM;
   b. Submit the survey record to the CM within 28 days of the date for commencement of the Works;
   c. Secure the labels by carefully tying with plastic string and avoid damage to the trunk or bark in accordance with Worksection EXT11;
   d. Provide additional labelling or marking to identify the OVT;
   e. Comply with the following in providing the identification labelling or marking systems:
CONTRACTOR'S OBLIGATIONS

i. Labels shall be made of durable materials that are non-injurious to the trees, placed at a position visible but not easily accessible to the public, and attached in such a manner that allows for the growth of the trees and does not injure the trees;

ii. The identification labelling or marking systems and the on-site status identification of trees, palms and bamboos shall be agreed by the CM and installed prior to the commencement of site clearance, demolition, earth moving, construction of permanent, or other temporary works, and any other site operations which may affect the trees, palms and bamboos;

iii. Reinstall or replace where necessary the identification labelling or marking systems for the preserved trees, and remove these identification labelling or marking systems from the Site upon completion of the Works or earlier if so directed by the CM;

6. Ensure that the ITS shall carry out the following duties:

a. Conduct an initial survey of the OVT and an initial site survey and initial soil tests of its tree protection zone and submit a report on the same comprising the details and within the time frames. The report shall be in the form of an A4-sized, bound document with a report cover indicating the Contract number, Contract title, and date of the report and shall be signed by the ITS. The format of the report shall be agreed by the CM prior to its submission;

b. Prepare monitoring reports on OVT and submit each monitoring report comprising the details and within the time frames as stipulated in EXT11.W062;

c. Conduct a final survey of OVT and a final site survey and final soil tests of its tree protection zone, and submit a report on the same comprising the details and within the time frames as stipulated in EXT11.W062;

d. Provide arboricultural advice in the preparation of method statements and any reports on repair of damage, supervise arboricultural work, and provide on-site advice in relation to site control within the tree protection zone and at its adjacent areas, for the preservation and protection measures for OVT as stipulated in the Contract; and

e. Carry out any other services or duties specified in the Contract.

PROGRAMMING OF PROTECTION WORKS

Allow fully in the programme the effects of preservation and protection of existing trees, the method of operation and construction, and the vehicular access for the Works:

1. Exercise utmost care to avoid damage to all vegetation which is required to be protected throughout the Contract period;

2. Complete protection works before any site clearance, demolition, earth moving, construction of permanent, or other temporary works, and any other site operations that are to be carried out in the vicinity of any vegetation to be retained, and allow inspection of the protective works by the CM;

3. Make allowance for any required tree surgery or transplanting operations to be carried out by the Employer's Specialist Contractor during works in the vicinity of the vegetation to be retained, including construction of any hoardings and gantries.
PRE.C9.1330.8  EXISTING PROTECTIVE FENCING
Where indicated on Drawings or as Instructed, accept responsibility for protective fencing erected by others for a previous contract. Replace damaged parts as necessary to ensure effective use.

PRE.C9.1340.8  PROTECTIVE BAMBOO FENCING
Where indicated on Drawings or as Instructed, surround existing trees and shrubs around the perimeter of the crown with a 1500 mm high ±50 mm bamboo fence, comprising:

1. 2500 mm long ±50 mm, 30 mm x 30 mm x 5 mm thick galvanized mild steel angle posts driven into the ground at 1500 mm centres ±50 mm and fitted with protective caps with;
2. Top, middle and bottom rails of 70 mm diameter ±5 mm bamboo poles; and
3. 1500 mm long ±50 mm 50 mm diameter ±5 mm bamboo vertical poles at 120 mm centres ±5 mm;
4. All firmly fixed with rot proof twine or wire.

PRE.C9.1350.8  PROTECTIVE CHAIN LINK FENCING
Where indicated on the Drawings or as Instructed, surround existing trees and shrubs around the perimeter of the crown with chain link fencing to BS 1722:Part 1:1986:

1. Fence type: GLS 180 (Table 1 of BS 1722:1986);
2. Height above ground: 1800 mm ±50 mm;
3. Materials:
   a. Zinc coated chain link, 1800 mm wide roll, 50 mm mesh size, 3 mm nominal wire diameter;
   b. Zinc coated mild steel line wire, 3.55 mm nominal wire diameter;
   c. Rolled mild steel angle iron posts and struts in accordance with Table 4 of BS 1722:1986:
      i. Intermediate posts:
         2600 mm long ±50 mm
         45 x 45 x 5 mm section
      ii. Straining posts:
         2600 mm long ±50 mm
         60 x 60 x 6 mm section
      iii. Struts:
         2000 mm long ±50 mm
         45 x 45 x 5 mm section
4. Erection:
   In accordance with Section 3 of BS 1722:Part 1:1986 drive posts or set in concrete as necessary to obtain firm base.
ALIGNMENT OF PROTECTIVE FENCING
Where indicated on the Drawings or as Instructed, align the protective fencing along the outer limit of the canopy ("drip line") of all trees and palms to be retained, to protect from damage.

PROTECTION FROM CHANGE IN GROUND LEVEL
1. Unless explicitly required in the Contract, do not change the existing ground levels within the tree protection zones of the preserved trees without the prior approval of the CM;

2. Where it is necessary for the completion of the Works to reduce the existing ground level around a preserved tree which will result in a lowering of the existing ground level within the tree protection zone, comply with the following requirements:
   a. Construct a retaining wall as shown in Drawing No. ........ install tree supporting devices as shown in Drawing No........ or similar measures as agreed by the CM to accommodate the reduction in the existing ground level around the tree;
   b. Before commencing the construction of the measures to accommodate reduction in the ground level pursuant to sub-clause (2)(a) above, submit method statements including construction details for the measures for the CM's approval;
   c. Commence the construction of the measures only after obtaining CM's approval for the method statements;
   d. Follow the requirements stipulated in sub-clause (2) of PRE.C9.1363, regarding excavation and cutting of tree roots and;
   e. Maintain balanced moisture content in the tree and in the soil after construction of the measures, by carrying out necessary precautionary measures such as crown thinning, watering and mulching.

3. Where it is necessary for the completion of the Works to raise the existing ground level around a preserved tree which will result in a rise in the existing ground level within the tree protection zone, comply with the following requirements:
   a. Construct a dry well and soil aeration system as shown in Drawing No.......... or similar measures as agreed by the CM to accommodate minor to moderate rise of up to 300 mm in the existing ground level around the tree;
   b. Construct a dry well and soil aeration system as shown in Drawing No.......... or similar measures as agreed by the CM to accommodate major rise of more than 300 mm in the existing ground level around the tree;
   c. Before commencing the construction of the measures to accommodate rise in the ground level pursuant to sub-clauses (3)(a) and (3)(b) above, submit method statements including construction details for the measures for the CM's approval; and
   d. Commence the construction of the measures only after obtaining CM's approval for the method statements.

PROTECTION FROM EXCAVATION INCLUDING TRENCHING
1. Unless explicitly required in the Contract, do not carry out excavation within the tree protection zones of the preserved trees without the prior approval of the CM;

2. For the Approved excavation work within the tree protection zones, comply with the following requirements:
CONTRACTOR’S OBLIGATIONS

a. Obtain agreement from the CM to the detailed locations and extent of the excavations before commencing any excavation work;

b. Carry out the following before commencing any cutting work to the aerial roots or underground roots of the preserved trees:

   i. Determine the locations of the major roots and the bulk of the their absorbing roots so as to keep the cutting of tree roots to a minimum and to preserve the tap roots, sinker roots and support roots of the trees in any circumstances;

   ii. Obtain agreement from the CM to the extent of root cutting on the Site;

   iii. Where the stability of the trees is likely to be jeopardised, comply with the requirements stipulated in sub-clauses (1) to (3) of PRE.C9.1365.

c. Submit to CM the photographic records showing the condition of the affected trees and the agreed extent of excavations and root cuttings as marked on the Site prior to commencement of the excavation work and root cutting work. Thereafter, submit photographic records showing the condition of the affected trees and the progress of the excavation work and root cutting work at weekly intervals until backfilling of the excavations is complete;

d. Excavate the service trench on the paved side of the tree if one exists;

e. Pile the excavated materials outside the tree protection zones to reduce soil compaction;

f. Carry out the excavations carefully so as not to damage the bark and root collars of the preserved trees;

g. Maintain balanced moisture content in the trees and in the soil after backfilling of the excavations by carrying out necessary precautionary measures;

h. Move the temporary protection fencing stipulated in PRE.C9.1330 to the edge of the intended excavation area, between the excavation area and the rest of the tree protection zone, during the duration of excavation work, and move back the same to its original location after backfilling.

3. Where the Approved excavation works within the tree protection zone will involve cutting of the roots of the preserved trees, take the following precautions:

a. Carry out excavation by using only hand-held tools such as hoe and spade, but not mechanical diggers or bulldozers in any circumstances;

b. Whenever roots are encountered and before root cutting is carried out, fork away soil from the roots carefully by using hand-held tools up to the edge along which root cutting is required;

c. Carry out root cutting carefully by using sterilised hand-held pruning tools, and prune roots greater than 25 mm in diameter carefully so as not to result in shattered and frayed roots;

d. Cut back cleanly with sharp tools to undamaged tissue of any roots damaged during excavation and treat it with an approved fungicidal dressing prior to backfilling;

e. Prevent all cut and exposed roots from drying out during excavation by adopting the following measures until backfilling, unless otherwise agreed by the CM:

   i. Wrap the tap roots, sinker roots, support roots, and roots with diameter exceeding 50 mm, which shall not be cut with hessian, straw or other porous absorbent fabric once they are exposed;
ii. Hang thick hessian or other porous absorbent fabric from top of the cut surface over the exposed roots and soil immediately after root cutting;

iii. Mist the hessian or fabric in a frequency that keeps the roots and the soil at the cut surface moist all the time.

f. Remove immediately before backfilling the hessian, straw or other porous absorbent fabric stipulated in sub-clause (3)(e)(i) above and the hessian or fabric stipulated in sub-clause (3)(e)(ii) above;

g. Backfill excavations with soil mix incorporated with slow release fertiliser at a rate of 500g/m³ or at a rate as directed by the CM to a level not higher than the original soil level at the root collar.

4. Based on the result of sub-clauses (2)(b)(i) & (2)(b)(ii) above, if in the opinion of the CM that the trenching works within the tree protection zone will involve cutting of a significant part of the roots of the preserved trees, adopt tunnelling in lieu of trench excavation in the following manner and as shown in the Drawing No.…… close to the tree trunk on one side:

a. Excavate a trench as narrow as possible directly towards the tree along a radius to not closer than 1.0 m from the trunk or where roots larger than 25 mm in diameter are encountered, whichever distance is farther away from the trunk;

b. Tunnel straight beneath the tree at a depth of not less than 750 mm and in a way to avoid damaging any tap root, sinker roots or support roots;

c. Exit on the opposite side along another radius;

d. Sleeve the service where it passes beneath the tree to reduce the risk of damage to the service and facilitate future servicing and repair.

**PRE.C9.1364.8 PROTECTION FROM DRILLING**

1. Unless explicitly required in the Contract, do not carry out drilling such as soil nailing and drilling for bore holes, rock bolts or dowels, within the tree protection zones of the preserved trees without the prior approval of the CM;

2. For the approved drilling work within the tree protection zones, comply with the following requirements:

   a. Obtain agreement from the CM to the detailed locations and extent of the drill holes before commencing any drilling work, bearing in mind that the drill holes shall be located in such a way that the structures to be placed into the drill holes, including the surface elements of the structures such as soil nail heads, are at a minimum distance of 500 mm from the trunks of the preserved trees unless otherwise agreed by the CM in exceptional circumstances;

   b. Carry out the following before commencing any cutting work to the aerial roots or underground roots of the preserved trees:

      i. Determine the locations of their major roots and the bulk of the their absorbing roots so as to keep the cutting of tree roots to a minimum and to preserve the tap roots, sinker roots and support roots of the trees in any circumstances;

      ii. Obtain agreement from the CM to the extent of root cutting on the Site;

      iii. Where the stability of the trees is likely to be jeopardised, comply with the requirements stipulated in sub-clauses (1) to (3) of PRE.C9.1365.

   c. Carry out the drilling work carefully so as not to damage the branches, foliage, trunk, bark and root collars of the preserved trees when gaining access for supporting, mobilising, positioning and operating the drilling rig;
d. Maintain balanced moisture content in the trees and in the soil after the drilling work by carrying out necessary precautionary measures such as crown thinning, watering and mulching.

3. Take the following precautions when carrying out drilling work that involves cutting of the roots of the preserved trees:
   a. Carry out the drilling work and root cutting work carefully;
   b. Prune roots greater than 25 mm in diameter carefully in order to prevent the roots from shattering and fraying;
   c. Cut back cleanly with sharp tools to undamaged tissue of any roots damaged during drilling and treat it with an approved fungicidal dressing.

**PRE.C9.1365.8 PROTECTION FROM INSTABILITY**

1. Where the Works involve cutting of any major roots or other major parts of the preserved trees or any other works that may jeopardise the stability of the preserved trees, comply with the following:
   a. Install all necessary physical support for the preserved trees to ensure their stability;
   b. Pay particular attention to the stability of the OVT and all other preserved trees that grow on retaining structures in order to prevent the trees from being dislodged from their positions as a result of inadequate support.

2. Comply with the following in installing the physical support measures for the preserved trees:
   a. Before commencing the installation of the physical support, submit method statements for the support measures to the CM for approval;
   b. Commence the installation of the physical support only after obtaining CM's approval for the method statements;
   c. Install the physical support securely prior to commencement of the root cutting, tree pruning or any other works that may affect the stability of the trees;
   d. Securely found the physical support in footings independent of existing walls or building structures or in other supporting systems as appropriate, without interfering with other works, other existing features, and the preserved trees;
   e. Where the affected tree is an OVT or any other tree that grows on a retaining structure, make a detailed assessment to estimate the weight of the tree and to identify the best position of supporting the tree in relation to its overall spread and centre of gravity. The method statements for the support measures in respect of the OVT or other trees that grow on retaining structures shall include the following information:
      i. Details of the form of construction and where requested by CM structural design calculation for the support measures, demonstrating the bearing capacity of each element;
      ii. Details of the foundation of the support measures, demonstrating that the support measures shall not interfere with other works, other existing features, and the preserved trees and, in the case of the tree growing on a retaining structure, shall not affect the stability of the retaining structure;
      iii. Means of securing the tree to the structure of the support measures, including detail design of how cups and ties are adjusted to the form of the tree; and...
iv. Method of fabrication and erection on the Site.

f. Remove the physical support for the preserved trees from the Site upon completion of the Works, or earlier if so directed by the CM. Do not remove or relocate the physical support for the trees without the prior agreement of the CM.

PRE.C9.1370.8  PRESERVATION AND TREATMENT/REPLACEMENT OF EXISTING TREES AND SHRUBS

1. If any trees, that are to remain after the Works, are damaged, they shall be made good or replaced by the Contractor at his own expense;

2. Note that some existing trees shall be transplanted to .......... as shown on Drawing No. ...... The Contractor is deemed to have made provision for all costs and time required for transplanting works outside the site boundary.

TREE RISK ASSESSMENT AND INSPECTION AFTER INCLEMENT WEATHER

PRE.C9.1410.8  TREE RISK ASSESSMENT AND ARBORICULTURAL WORKS

Provide the following services in relation to tree risk assessment and arboricultural works:

1. Carry out tree risk assessment for the trees as shown on Drawing Nos. .................... and those as instructed by CM through on-the-ground or aerial inspections as approved by the CM;

2. Tree risk assessments shall include but without limitation to the following:
   a. assessment in accordance with the Guidelines For Tree Risk Management and Assessment Arrangement on An Area Basis and on A Tree Basis as issued by the Greening, Landscape and Tree Management Section of the Development Bureau (the latest version);
   b. assessment on internal decay of the main trunk and other locations being considered with structural defects; and
   c. conditions of installations, if any, such as cable, bracing road and propping structure so as to identify any visual damage and other irregularities.

3. Submit tree risk assessment reports, using Form 1 or Form 2, with recommendations of arboricultural works for risk abatement to the CM, details and format of the report have to be approved by the CM;

4. Carry out and complete the arboricultural works as recommended in the assessment reports and approved by the CM, and keep records of supervision and work done; and

5. Provide one Qualified Arborist ("QAr") to carry out tree risk assessment, preparation and presentation of assessment reports, supervise the execution of the arboricultural works recommended in the assessment reports and approved by the CM including preparation of records on supervision and work done.

PRE.C9.1420.A  TIMING FOR CARRYING OUT OF TREE RISK ASSESSMENT AND ARBORICULTURAL WORK

1. Carry out and complete tree risk assessment and the related arboricultural work as approved by and to the satisfaction of the CM during the duration of the Contract as described below:
2. In general, each tree as identified in PRE.C9.1340 or instructed by the CM shall be subject to tree risk assessment by QAr within each twelve (12) months period commencing from the notified date for commencement of the Works with the exact date to be instructed by the CM; in any case no two assessments shall be separated by more than twelve (12) months within the duration of Contract;

3. Carry out additional tree risk assessments as instructed by the CM on trees which are subject to emergency situations including but not limited to failure of major branches or trunk, blooming of fungal fruiting bodies, accident causing tree injury, acute pest problem and other situation causing imminent danger;

4. Use either Tree Risk Assessment Form 1 or Form 2 as directed by the CM to conduct the above tree risk assessment exercise.

**QUALIFICATION AND EXPERIENCE REQUIREMENTS OF THE QUALIFIED ARBORIST**

1. Each QAr shall possess the following academic training, professional qualifications and working experience in either Degree Entry or Non-Degree Entry respectively:
Degree Entry | Non-Degree Entry
---|---
**Academic Training and Professional Qualification:**  
Have obtained recognised degree or above in Arboriculture, Horticulture, Landscape Architecture, or equivalent to the standards of 'Level 5' or above in Hong Kong Qualifications Framework (HKQF).  

Academic Training and Professional Qualification:  
a) Have successfully undertaken training programmes recognised by the Tree Management Office of DevB, such as Tree Risk Assessment Qualification (TRAQ) organised by the International Society of Arboriculture (ISA), or Professional Tree Inspection by Lantra Awards; OR  
b) Have valid qualification or certification awarded by recognised institution or industry organisation on arboriculture, such as Certified Arborist of the ISA, Registered Arborist ('Level 3' or above) of Arboriculture Australia, Technican Member or above of the Arboriculture Association of the United Kingdom, Accredited Arboricultural Practitioner of the Hong Kong Institute of Landscape Architects (HKILA), Professional Diploma Programme in Arboriculture or Tree Risk Assessment and Management of the School of Continuing and Professional Studies, Chinese University of Hong Kong (CUSCS), Advanced Diploma in Tree Management and Conservation of the School of Professional and Continuing Education, University of Hong Kong (HKU SPACE), Certificate in Professional Tree Management of the Open University of Hong Kong (OUHK), Professional Diploma in Horticulture and Landscape Management of the Technological and higher Education Institute of Hong Kong (THEi), etc.

**Working Experience:**  
Have at least three(3) years of post-qualification work experience in tree care, and are familiar with tree risk assessment / management as approved by CM.  

**Working Experience:**  
Have at least four(4) years of post-qualification work experience in tree care, and are familiar with tree risk assessment / management as approved by CM.

2. The employment of the QAr shall be approved by the CM. In case the employment of the QAr with the Contractor is terminated for whatever reasons, the Contractor shall further provide another QAr who satisfies with the above academic training, professional qualifications and working experience for replacement within fourteen (14) days of the termination.
PRACTICE ON TREE RISK ASSESSMENT

1. Practice and Procedures on Tree Risk Assessment
   a. The QAr shall use proper equipment such as wood decay detection equipment and drilling resistance measuring equipment, for checking internal decay and take photos for major defects or irregularities spotted;
   b. The QAr shall not cause any unnecessary damage to any tree parts or excessive soil compaction during assessment;
   c. The Contractor shall provide all necessary equipment and machineries for assessments to be conducted by the QAr;
   d. The Contractor shall cordon-off the Site during the aerial inspection and make all arrangements for site cordon-off or road closure, if necessary;
   e. The Contractor shall ensure that all their staff and the QAr are provided with and properly used all appropriate equipment and measures in carrying and assisting in carrying out of assessments; and
   f. The Contractor shall also take every safety precaution to avoid injury to its staff, the QAr, the general public and to avoid damage to property of others during tree assessments.

2. Tree risk Assessment Report
   a. The QAr shall complete and sign a full comprehensive assessment report for each tree as shown on Drawing No…………… , using Form 1 or Form 2 as instructed and provided by the CM from time to time, which shall include but not be limited to the following:
      i. General information of the tree(s);
      ii. Observations;
      iii. Views on risk caused by defects with justifications; and
      iv. Recommended measures for risk abatement which shall, without limitation, include:
         - A proposal of arboricultural works for risk abatement to each tree assessed. The proposal shall have taken into account avoidance of permanent blockage of vehicular or pedestrian traffic;
         - Annotated plans, photos, sketches, or drawings for clear indication in the proposal in respect of the following pruning works or installations may be provided in the report to illustrate or elaborate the recommended measures:

<table>
<thead>
<tr>
<th>Pruning/ Installation</th>
<th>Required details</th>
</tr>
</thead>
<tbody>
<tr>
<td>i Crown Reduction</td>
<td>Overall crown reduction: recommended percentage; or Selected branch reduction: location of major limbs (direct connection to the trunk), position of the cut and percentage of reduction.</td>
</tr>
<tr>
<td>ii Crown thinning</td>
<td>Location of major limbs (if any) to be removed and position of the cut.</td>
</tr>
<tr>
<td>iii Crown lifting</td>
<td>Location of major limbs (if any) to be removed and position of the cut.</td>
</tr>
</tbody>
</table>
### iv Cabling
- Exact location of each limb involved.
- Position of each cable and its connection points on approximate position of related limbs.
- Submit fixing details / shop drawings of cable and end-connection between the limb and the cable for CM's approval.
- Exact location and the limb position of another tree if involved in cabling.

### v Bracing
- Exact location of each limb involved.
- Position of each bracing rod, its passing through angle and the approximate installation position of related limbs.
- Submit fixing details / shop drawings of bracing rod for CM's approval.

### vi Guying
- Exact location of each limb involved.
- Position of each cable and its connection point on approximate position of related limb and that of the ground/other surface.
- Submit fixing details / shop drawings of cable and end-connection between the limb for CM's approval.
- Proposed specification of the ground support.

### vii Propping
- Exact location of each limb involved.
- Position of each prop and its connection point on approximate position of related limb and that of the ground/other surface.
- Submit detail design of the propping structure and fixing details / shop drawings of the prop and its foundation for CM's approval.
- The connection details between the prop and the main trunk or the limb, and between the prop and the ground/other surface.

As regards to chemical treatment for nutrition problem or pests and diseases, a proposal of the specific chemicals to be used together with potential chemical suppliers, application method and schedule; and

v. Attachments for witnessing the content of the report …………

3. Presentation of proposal;

a. After submission of the tree risk assessment report to the CM, using either Form 1 or Form 2, the QAr shall present the proposals as and when called upon to do so by the CM. The QAr shall, if necessary, revise the recommendations by incorporating further detailed elaboration as required by and up to the satisfaction of the CM. The amended proposals shall be re-submitted to the CM by one week.
INSPECTION AFTER INCLEMENT WEATHER

The QAr shall carry out inspection on trees as shown on Drawing Nos.……….. and those instructed by the CM within one week after cancellation of Typhoon No. 8 or above and Black Rainstorm Warning. The inspections shall focus on the damage, the stability and potential hazard. The QAr shall also propose recommendations for any arboricultural remedial works for Contractor's submission to the CM for approval, and supervise the execution of the arboricultural works as approved by the CM.

ARBORICULTURAL WORKS IN RELATION TO TREE RISK ASSESSMENT AND INSPECTION AFTER INCLEMENT WEATHER AS APPROVED BY THE CM

1. Schedule for Work Completion

All arboricultural works in relation to tree risk assessment and inspection after inclement weather as approved by the CM shall be completed within the time limit as instructed by and to the satisfaction of the CM;

2. Pruning

a. Pruning including crown cleaning, crown lifting, crown thinning and crown reduction shall comply with any one of the following standards (the latest version):

i. American National Standard for Tree Care Operations (ANSI A300 (Part 1)) – Tree, Shrub, and Other Woody Plant Maintenance – Standard Practices (Pruning); or

ii. British Standard for Tree Work (BS 3998:1989); or

iii. Other international standards approved by the CM.

b. As regards emergency pruning against imminent danger, prior verbal consent should be obtained by the QAr from the CM;

c. The Contractor shall provide all necessary equipment and machineries including chainsaws, rigging ropes, lifting platform for carrying out and completion of the pruning works;

d. The QAr shall arrange for secure lowering of cut limbs to avoid causing injury to person and damage to property when free falling onto the ground; and

e. The pruning operation shall not cause damage to the nearby planting or structure. All cut branches carrying diseases or insects have to be bagged in a recyclable polythene bag and properly disposed to avoid contamination.

3. Cabling, Bracing and Guying

a. Cabling, bracing and guying shall comply with any one of the following standards (the latest version):

i. American National Standard for Tree Care Operations (ANSI A300 (Part 3)) – Tree, Shrub, and Other Woody Plant Maintenance – Standard Practices (Support Systems a. Cabling, Bracing, and Guying); or

ii. British Standard for Tree Work (BS 3998:1989); or

iii. Other international standards approved by the CM.

b. In case the CM approve to connect a cable to another tree or object, the Contractor shall ensure the proper preparation of anchorage and the connection of cable;
c. The Contractor shall provide all necessary equipment to facilitate the cabling, bracing and guying work as approved by the CM and comply with all safety requirements; and

d. The CM may direct the removal by the Contractor of any equipment which is considered to be unsafe and unfit for the cabling, bracing and guying work, the Contractor shall bear all costs and expenses in relation to such removals and no time or monetary claims will be entertained under the Contract.

4. Tree Removal

a. Do not remove any tree as approved by the CM before the confirmation of the CM that tree felling approval has been obtained from relevant government department(s);

b. Rigging and removal of trees shall comply with any one of the following standards (the latest version):

   i. American National Standard for Arboricultural Operations (ANSI Z133) – Safety Requirements; or

   ii. British Standard for Tree Work (BS 3998:1989); or

   iii. Other international standards approved by the CM.

c. Provide all necessary equipment and machineries including chainsaws, rigging ropes, lifting platform for removal of trees;

d. Ensure that the QAr has arranged for secure lowering of cut limbs and stumps to avoid causing injury to person and damage to property;

e. Clear away the remaining stump and removal of tree debris, cut pieces of limbs and refuse generated from the tree removal work;

f. Prepare a Tree Failure Report as required by the CM.

5. Application of Fertilizers and Pesticides

a. Provide and apply fertilizers and pesticides in accordance with the recommendation approved by the CM;

b. Application of fertilizers shall comply with any one of the following standards (the latest version):

   i. American National Standard for Tree Care Operations (ANSI A300 (Part 2)) – Tree, Shrub, and Other Woody Plant Maintenance – Standard Practices (Fertilization); or

   ii. British Standard for Tree Work (BS 3998:1989); or

   iii. Other international standards approved by the CM.

c. Where chemical method is engaged for pest and disease control, only Approved equipment and chemicals shall be used, and could only be carried out by trained personnel. Pesticides could only be applied by trained personnel who possessed all relevant licence under statutory requirements. Detail records (including but not be limited to name of the pesticide, its formulation, registration number, time and location of application, the particulars of the applicator) shall be submitted to the CM for information prior to each operation;
d. No application of pesticides shall be carried out unless with the prior approval of the CM on the time and location of application so as to reduce the disturbance to the public to the minimum; No chemical pest control shall be conducted unless under suitable weather condition and with safety measures implemented. The Contractor shall ensure that the Site is suitably cordoned off and warning notice is displayed to keep off people and animals when chemical is applied. Warning notices should be put up at prominent positions of the Site after each operation of pest control chemical has been applied;

e. The Contractor shall ensure that all personnel in carrying out pesticide application is equipped with and wear the proper protective clothing and working gears during each operation;

f. The Contractor shall ensure that all pesticides to be used shall be in compliance with the Pesticides Ordinance Cap. (133), amended by the Pesticides (Amendment) Ordinance 2013, and approved by the CM before use and application of pesticide shall be performed in accordance with the manufacturer's recommendations; and

g. The Contractor shall dispose of any unwanted pesticides in accordance with the requirements laid down in the Waste Disposal Ordinance (Cap. 354).

6. Work Record

Records on arboricultural works on each tree shall be signed by the QAr, the format of such records shall be as approved by the CM.

7. Safety Requirements

a. The Contractor shall provide proper climbing equipment and protective clothing for its QAr and at all times ensure that all workers operating the chainsaws and other machineries shall have been trained properly and wear safety boots, goggles, protective clothing and reflective safety vests of a conspicuous colour;

b. The Contractor shall remind all personnel working on highway structures (including footbridges, non-expressway bridges and bridge columns) that they have a statutory duty to take reasonable care of their own health and safety as well as that of others their actions or omissions at work may affect. The hazards associated with personnel working on highway structures shall include working at height, falling objects and traffic accidents. All personnel working on highway structures shall wear reflective belts, safety belts, safety harnesses or lifelines as appropriate which should be connected to stable anchorage points;

c. The Contractor shall carry out safety precautions to prevent injury to persons and damage to property as against its workers and the general public. The Contractor shall fulfil the safety requirements of at least one of the following standards (the latest version):

i. American National Standard for Arboricultural Operations (ANSI Z133) – Safety Requirements; or

ii. British Standard for Tree Work (BS 3998:1989); or

iii. Other international standards approved by the CM.

d. Before commencing tree pruning or climbing works, the Contractor shall ensure that there is no overhead high voltage cable near the working area and that pruning operation will not cause damage to the nearby planting or structure. Safety measures must be taken to ensure the safety of the public. The Contractor shall ensure that neither unrelated person nor animal stays nearby during operation and coordinate with relevant authorities regarding any special pruning equipment and/or lighting requirements which may interrupt traffic. Warning signs shall be put up to keep public away from the pruning operation;
e. The Contractor shall ensure that all chainsaws or other machineries used have fulfilled the statutory safety requirements;

f. The CM may direct the removal by the Contractor of any equipment which is considered to be unsafe and unfit for arboricultural works, the Contractor shall bear all costs and expenses in relation to such removals and no time or monetary claims will be entertained under the Contract; and

g. The Contractor shall ensure arboricultural works are carried out in compliance with the Occupational Safety and Health Ordinance (Cap. 509) and its regulations.

8. Collection and Disposal of Refuse

a. The Contractor shall be responsible for the picking up and removal of tree debris, cut pieces of wood, refuse generated from tree assessment/inspection and arboricultural works. The Contractor shall also clear away all debris or refuse, such as joss sticks, incensed idols, construction debris, etc. within the dripline;

b. The Contractor shall provide recyclable polythene bags and transport the refuse collected to the controlled tips at its own cost using wheeled handcarts or any other appropriate equipment in properly covered containers;

c. No damage should be caused to the planting in the working sites when carrying out cleansing duties by the Contractor; and

d. The Contractor shall strictly prohibit its employees or agents from sweeping or dumping the refuses onto the adjoining pavements, surface channels or gullies, or other area or sites at which refuse dumping is not allowed.

9. Work Arrangement along Carriageways

a. The Contractor shall at its own expense make all arrangements for road closure so as to carry out tree assessment/inspection and arboricultural works;

b. Where lane closure is necessary, the Contractor shall liaise with lane closure sub-contractor from approved list of the Highways Department and obtain the necessary approvals from Commissioner for Transport, the Commissioner of Police, the Director of Highways and any other relevant authority for temporary traffic arrangements. The Contractor shall ensure that its workers shall strictly follow the requirements for temporary traffic arrangements as stipulated in the latest version of Code of Practice for the Lighting, Signing and Guarding of Road Works issued by the Highways Department; and

c. The Contractor shall also comply with any other conditions and restrictions imposed by the Commissioner for Transport, the Commissioner of Police and the Director of Highways.

PRESERVATION AND MAINTENANCE OF EXISTING FEATURES

PRE.C9.1510.8 AMENITIES TO BE PRESERVED

Cause the least possible interference with existing amenities, whether natural or man-made.
CONTRACTOR'S OBLIGATIONS

PRE.C9.1520.8 PROTECTION OF EXISTING ROADS, BUILDINGS AND OTHER STRUCTURES

1. Take all necessary precautions to protect roads, buildings and any other structures, services under or above ground adjacent to or within the Site from the effect of vibration, settlement, undermining or other earth movements, and any such monitoring measures as specified in the Contract or as may be instructed by the CM;

2. Should the effects of ground movements be detected in any adjacent roads, buildings or other structures, modify methods of construction as instructed by the CM and any additional expense incurred is deemed to be included in the respective items in the Bill of Quantities;

3. Should ground movements cause any damage to any adjacent roads, buildings or other structures, be responsible for the cost of repairing any such damage.

PRE.C9.1530.8 RESTRICTIONS ON USE OF HIGHWAYS

1. For the purpose of this clause, all public roads shall be regarded as highways;

2. Do not make use of public or private rights of way for depositing or storing plant or materials, other than such plant, materials, tools and instruments as shall from time to time be required for immediate use on the various sections of the Works. Place plant, materials and temporary works in such a way as to cause minimum interference with the use of any right of way by the public and maintain those parts of the right of way not temporarily occupied by the Works in a clean, passable and safe state at all times;

3. Use of the surfaced roads leading to the Site shall be limited to tyred vehicular traffic only; tracked vehicles shall not be allowed to run on these roads. The Contractor shall be held responsible for any damage whatsoever caused by construction vehicles and make good immediately any such damage at his own expense.

PRE.C9.1540.8 EXISTING PIEZOMETERS

There are a number of existing piezometers within the Site as indicated on Drawing No. ............... Take all necessary protective measures, such as the erection of protective fencing, to prevent these piezometers from being damaged until the piezometers are removed for the earthworks. Monitor these piezometers in accordance with clause ............................ The Contractor is required to give at least 24 hours advance notice to the CM of his intention of removing the existing piezometers.

PRE.C9.1550.8 REMOVAL OF TREES,PIPES, CABLES, ETC.

If any trees, utility services or other obstructions are required to be removed during the progress of the Works and are not otherwise specifically catered for in the Contract, draw the CM's attention to them and the CM shall arrange for their removal by the Contractor or otherwise.

PRE.C9.1560.8 REINSTATEMENT OF THE SITE

On completion of the Works, all areas outside the limit of construction works shall be restored to their original condition and ground contours unless the CM shall direct otherwise.
CONTRACTOR'S OBLIGATIONS

PRE.C9

PRE.C9.1570.8 PROTECTION OF NATURAL STREAMS/RIVERS

1. Isolate the Site, such as by placing of sandbags, to prevent adverse impacts on the stream water qualities of natural streams/rivers in the proximity. Take protective measures to ensure that no pollution or siltation occurs to the water gathering grounds of the Site;

2. Locate and properly cover temporary storage of construction materials (e.g. equipment, filling materials, chemicals, fuel etc.) away from natural streams/rivers;

3. Cover up and properly dispose of construction debris as soon as possible to avoid being washed into natural streams/rivers;

4. Locate discharge outlets of wastewater away from natural streams/rivers;

5. Obtain CM’s approval prior to carrying out of any works which may cause disturbance to the natural bottom and existing flow in the river or removal of any existing vegetation alongside the riverbanks;

6. When disturbance to riverbed and/or existing vegetation alongside the riverbanks is unavoidable, reinstate all disturbed areas with suitable methods upon completions of works. Submit remedial proposal for CM’s approval and bear the cost of all associated works and no extension of time shall be entertained;

7. Attend to issues on water pollution, discharges generated from site activities, temporary drainage systems and diversion of streams or drains specified in PRE.C9.460, PRE.C9.1160, PRE.C9.1190 and PRE.C11.060.

PRESERVATION AND MAINTENANCE OF EXISTING UTILITY AND OTHER SERVICES

PRE.C9.1610.8 LIAISON WITH STATUTORY AUTHORITIES

Liaise with the utility undertaking including Water Supplies Department (WSD), Highways Department, Fire Services Department (FSD), Transport Department, Electrical and Mechanical Services Department and Drainage Services Department (DSD) and other relevant departments/parties as advised by the CM from time to time for the removal, alteration and diversion of all utilities, water mains, junction boxes, drainage pipes, traffic light cables, street lighting, road signs and the like during the construction period. Follow the latest version of Transport Department's Guidelines on Handling of Traffic Installations During Road Works.

PRE.C9.1620.8 DUTY OF CARE

Exercise the greatest care during the progress of work to avoid damage to or interface with any utility or other services, and ensure that no damage shall be done during excavation or any other work on the Site.

PRE.C9.1630.8 PRELIMINARY INVESTIGATIONS

1. Requirements for detecting underground utilities before excavation:

   a. Within 7 days from the date of the Letter of Acceptance, submit to the CM for approval the brand and model of an underground services detection equipment to be used for investigating the locations and depths of underground utilities as required under sub-clause (1)(b) below. The underground services detection equipment proposed must be suitable for the purpose of locating underground utilities which may normally be encountered in the execution of the Works;
b. Before any excavation including excavation for trial pits, use an Approved underground services detection equipment to locate underground utilities. The underground services detection equipment shall be operated and the results shall be analysed by a person who has the necessary expertise to undertake the detection and analysis; and

c. Take notice of the limitation of using any method of detecting underground services by non-destructive means. Neither the Employer nor the CM shall be responsible whatsoever for any unsuitability of the Approved underground services detection equipment or for the failure of detecting any underground services accurately.

2. Before excavations are carried out near utility services by means of mechanical plant, carry out full and adequate preliminary investigations to locate utility services by means of hand-dug trial holes;

3. Should any cables, ducts and or cover tiles be exposed, the respective utility undertaking should be contacted to determine if all the services have been located;

4. The ducts and cover tiles should only be removed directly by the utility undertaking concerned;

5. Bear the cost of all investigations arising from the requirements of this clause.

PRE.C9.1640.8 LOCATION OF UTILITY SERVICES

1. Details and extent of existing services and installations, and future services and installations likely to be carried out by the Utility Undertaking are prepared from the information provided by the Utility Undertaking and are shown on the Drawings;

2. No warranty either expressed or implied can be given for the accuracy of the information provided;

3. Neither the Housing Authority nor its agents accept any responsibility whatsoever for the accuracy of the Drawings or for the information contained thereon and the Contractor shall be deemed to have made such further enquires and investigation as are required for his own information.

PRE.C9.1650.8 IDENTIFICATION OF SERVICES

1. After the utility services or drains have been located, request the concerned Utility companies or Government Departments to inspect and identify the services or drains by giving at least 3 days notice;

2. Carry out and complete such enquiries and investigations immediately after the notified date for commencement of the Works;

3. Existing services that are known to be within the Site are referred to in PRE.C3.110 and are to be maintained throughout the period of the Contract unless shown on the drawings to be sealed, removed or abandoned.

PRE.C9.1660.8 ALTERATIONS TO SERVICES

Where alterations to services are necessitated by the Works, no adjacent work will be commenced until the alterations have been made.

PRE.C9.1670.8 SAFE KEEPING OF EQUIPMENT

1. Be responsible for the safe keeping and protection of any controllers, cables or other equipment connected with traffic light installations within the Site;

2. The installation, maintenance, removal and resiting of permanent traffic light installations will be arranged by the Housing Authority.
CONTRACTOR'S OBLIGATIONS

PRE.C9.1680.8 MAINTENANCE OF DRAINAGE SYSTEM
Be responsible for adequately maintaining the existing drainage system at all times including removal of solids in sand traps, manholes and stream beds. (See also PRE.C9.1150 to PRE.C9.1200 inclusive).

PRE.C9.1690.8 RESPONSIBILITY FOR DAMAGE TO SERVICES
1. Be responsible for any such damage caused by the Contractor or his agents directly or arising indirectly from anything done or omitted to be done;
2. Should damage occur, report it to the CM immediately and shall contact the appropriate Utility Undertaking to arrange for any remedial work necessary to be carried out in a manner approved by the CM;
3. Carry out all temporary works necessary to adequately support and protect such services;
4. Bear all costs associated with damage caused to the services.

PRE.C9.1700.8 EXCAVATION BY HAND
If, in the CM's opinion, damage may be caused by the operation of mechanical plant over or adjacent to any utility services, the Contractor shall be required to excavate by hand in their vicinity. The rates in the contract shall include for such hand excavations.

CONTRACTOR'S SUPERINTENDENCE

PRE.C9.1810.8 GENERALLY
Provide the services of the superintendents listed in PRE.C6.060 in pursuance of GCC Clause 5.8(1) and as specified in the following clauses in this sub-section. Safety training requirements of respective superintendents are specified in the clause PRE.C9.1980.

PRE.C9.1820.8 AUTHORISED REPRESENTATIVE
1. Duties:
The Authorised Representative shall be vested with adequate authority to receive and carry out the directions and instructions of the CM. He shall be an English-speaking representative who shall be in full time attendance on the Contract. To underpin implementation of the safety plan, the Authorised Representative is at duty to assist in promoting the safety and health of personnel employed on Site, which shall include but are not limited to:
   a. Supervise the observance of safety standards by the workers;
   b. Carry out daily safety inspection;
   c. Promote safety-at-work in carrying out work on Site;
   d. Attend Site Safety Committee meetings; and
   e. Conduct tool-box talks as necessary.
2. Qualifications:
The Contractor's Authorised Representative shall be a Member of one or more of the following or otherwise suitably qualified to the satisfaction of the CM:
   a. The Institution of Civil Engineers (UK);
   b. The Institution of Structural Engineers (UK);
c. The Institution of Professional Engineers (New Zealand); and

d. The Hong Kong Institution of Engineers.

PRE.C9.1830.8 LAND SURVEYORS

1. Duties:

Provide the services of a Land Surveyor full time on site for setting out the works. He shall be authorised to receive from the CM all survey data relevant to the Contract;

2. Qualifications:

The Land Surveyor shall be competent and experienced and shall possess a diploma / higher certificate in land surveying or a higher diploma in geomatics from a Hong Kong technical institute / polytechnic or university; or an associate membership of the Hong Kong Institute of Surveyors in the Land Surveying Division; or equivalent qualification appropriate to the nature of the survey work required for the Contract, plus a minimum of 2 years of relevant experience in engineering surveying;

3. Facilities:

Ensure that all necessary equipment and labour for setting out is available when required.

PRE.C9.1840.8 ENGINEERING GEOLOGIST(S)

1. Duties:

Provide the services of……………………….. No. Engineering Geologist(s) full time on site whose duties shall include:

a. Preparing geological logs of drillholes, exploratory pits, excavation faces of caissons and rock and soil faces; keeping photographic records of same; preparing geological sections and reports to the CM, as directed by the CM;

b. Monitoring behaviour of rock and soil slopes by means of geotechnical instrumentation; collection and presentation of data to the CM, as directed by the CM;

c. Observing and recording the geological characteristics of the excavated material, all as directed by the CM;

d. Monitoring behaviour of groundwater on the Site by observing and recording surface flows, piezometers, and flows from any raking drains; collection and presentation of data to the CM, as directed by the CM;

e. Observation and recording of rock mass characteristics by means of discontinuity surveys; selection of samples for testing; rock and soil slope stability and stabilisation works analyses; presentation of data and reports to the CM as directed by the CM;

f. Design and sketch stabilisation works using personal computers and Approved computer software, as directed by the CM;

g. Collection and analysis of data relating to effects of blasting procedures on condition of rock berms and faces and report to the CM, as directed by the CM;

h. Ensuring adequate field supervision and procedural correctness of rock and soil slope protection and stabilisation works, as directed by the CM. Assessing the stability of boulders and recommending the types of stabilisation works to the CM;
CONTRACTOR'S OBLIGATIONS

PRE.C9

i. Liaising with the CM on all aspects of the engineering geology and geotechnical works;

j. Certifying the accuracy, correctness, and completeness, of all geotechnical information supplied to the CM by the Contractor; and

k. Keeping a detailed record of all aspects of the geotechnical works carried out on site and reporting to the CM weekly.

2. Qualifications:
The Engineering Geologists shall be competent, English speaking, with a degree from a Hong Kong or British University or Government-approved equivalent in civil engineering, engineering geology, geotechnical engineering, or applied geology, with at least four years geotechnical field experience in Hong Kong.

3. Facilities:
a. Provide all necessary labour, technical assistance, draughting assistance and equipment to the Engineering Geologist to allow him to carry out the above work;

b. Because of the technical nature of this supervision and the necessity to work closely with the CM's Geotechnical Engineer, the Engineering Geologist shall be accommodated in the CM's site office.

PRE.C9.1850.8 BLASTING CONTROL ENGINEER

1. Duties:
Provide the services of a Blasting Control Engineer full time on site during rock excavation operations. The Blasting Control Engineer's duties shall include:

a. Preparing a Blasting Assessment for comment by the Geotechnical Engineering Office before commencement of any rock blasting works;

b. Notifying the CM of the Contractor's blasting proposals in accordance with the appropriate clauses in Worksection EAR2 and certifying in writing to the Contractor's Representative that all such requirements have been complied with prior to each blast. This certification shall be copied to the CM at least one hour before each blast;

c. Acting as an intermediary with the Mines Division, Civil Engineering Development Department;

d. Advising the Contractor on and vetting the techniques for Controlled blasting, such as pre-splitting, smooth blasting, etc., with particular reference to the preservation of high quality rockslope faces and the minimizing of necessary protection works;

e. Advising on all aspects of blasting safety and in particular prevention of flying rock; and

f. Monitoring effects of blasting on adjacent property and recommending improvements to the blasting techniques used where necessary.

Compliance with this sub-clause shall not relieve the Contractor of his general obligations regarding blasting elsewhere in the Specification.

2. Qualifications:
The Blasting Control Engineer shall be competent, English-speaking, from an Approved independent agency, and shall be qualified to the satisfaction of the CM and experienced in Bulk and Controlled blasting.
PRE.C9.1860.8  INDEPENDENT DIVING SPECIALIST

1. Duties:

Provide the services of an independent Diving Specialist. He shall be full-time on Site during the seawall construction and ....................... He shall inspect all underwater works and the jointing of the precast box culvert units including taking colour submarine photographs and preparing inspection reports to the CM, as directed by the CM.

2. Qualifications:

The independent Diving Specialist shall be suitably qualified to the satisfaction of the CM.

3. Facilities:

Provide all necessary equipment including a submarine camera, safety equipment, underwater communication system and a surface decompression chamber where necessary to the independent Diving Specialist to allow him to carry out the above works. Provide qualified operators and these persons shall standby during diving operations.

PRE.C9.1870.8  INDEPENDENT ENVIRONMENTAL CONSULTANT

Provide the services of an independent environmental consultant to conduct the water quality monitoring works as specified in Worksection MAR. Provide also all works boats, labour and other resources to the independent environmental consultant necessary to carry out the above works.

PRE.C9.1880.8  QUALITY CONTROL ENGINEER

1. Duties:

The Contractor shall provide the full time services of a Quality Control Engineer. The Quality Control Engineer's duties are:

a. To ensure that all the material and tests comply with the Specification and Drawings;

b. To inspect work and to certify that it is in accordance with the Specification and Drawings before seeking Approval to covering up under GCC Clause 7.3(2); and

c. To endorse all delivery vouchers, testing instructions and analysis of testing results.

The Quality Control Engineer's endorsement under sub-clause (1)(c) above should state that the materials delivered and constructed and/or testing and/or analysis of testing results conform with the Specification and Drawings.

2. Qualifications:

a. The Quality Control Engineer shall be competent, English-speaking and qualified in accordance with the following requirements and appropriately experienced to carry out the duties specified in the Contract;

b. The Quality Control Engineer, shall have a minimum of ............ years' working experience on construction sites of which ............ years must be spent in ................ construction works, and hold one of the following qualifications:

i. MICE or MHKIE; or
ii. A degree/higher diploma in civil or structural engineering from a Hong Kong or British University or Government recognised tertiary educational institution.

PRE.C9.1890.8  COMPACtion CONTROL ENGINEER

1. Duties: Be full-time on site during fill slope construction works and:
   a. Supervise and control the quality of all slope filling and compaction works to ensure their compliance with the requirements of the contract;
   b. Supervise all testing associated with the filling and compaction works; and
   c. Prepare the monthly reports, covering assessment, "as-built" plans and sections and testing records specified in EAR1.W2410.

2. Qualifications:
   The Compaction Control Engineer shall:
   a. Be a Member of either The Hong Kong Institution of Engineers (Civil or Geotechnical Engineering Discipline) or The Institution of Civil Engineers (UK); or
   b. Hold a degree or higher diploma in civil engineering from a Hong Kong or British University or other Government recognised tertiary educational institution, plus a minimum of four years' relevant experience in civil or geotechnical engineering works.

PRE.C9.1900.8  REGISTERED STRUCTURAL ENGINEER (RSE)

1. Duties: to design, supervise and control all temporary works for earthworks, excavation, dewatering and any specified design and built items. Details are given in Worksection EAR1. Design Section;

2. Qualifications: Registered with the Building Authority as a Registered Structural Engineer and has relevant experiences to the satisfaction of the CM;

3. The RSE shall utilise standard forms (EPS-F3 and EPS-F4 in APPENDIX PRE.C9/III to this Worksection) when submitting all items requiring his certification;

4. Where off-site fabrication of structural steelwork is proposed by the Contractor, the Registered Structural Engineer shall carry out the responsibility detailed in STW.W1130.

PRE.C9.1902.8  REGISTERED GEOTECHNICAL ENGINEER (RGE)

1. Duties: to prepare and sign the geotechnical report and supporting documentation to support the Contractor’s submissions made by the Design Certifying Consultant/Registered Structural Engineer for the following works;
   a. Excavation and Lateral Support Works as stated in EAR1.D030;
   b. Foundation works as stated in the Worksection PIL;
   c. Demolition works as stated in the Worksection DEM.

2. Qualifications: Registered with the Building Authority as a Registered Geotechnical Engineer and has relevant experiences to the satisfaction of the CM;

3. The RGE shall utilise standard forms (EPS-F3 and EPS-F4 in APPENDIX PRE.C9/III to this Worksection) when submitting all items requiring his certification;
4. The RGE shall verify that the conditions on Site are consistent with assumptions made in the geotechnical report and supporting documentation prepared by him;

5. The division of responsibilities between RSE and RGE shall be in accordance with PNAP APP-141.

**PRE.C9.1903.8 ENVIRONMENTAL MANAGER (EM)**

1. Appoint a person as the EM working on Site to provide professional advice to the Contractor and overseeing all Environmental Management and Site Hygiene matters of the Works and include but not limited to the following duties:
   a. Prepare, implement and update the Environmental Management Plan;
   b. Advise on measures to be taken to comply with legislative and contractual obligations under environmental protection, waste management and site hygiene and implement such measures;
   c. Liaise on all matters relating to environmental and site hygiene monitoring;
   d. Conduct periodic inspections of the Site for identifying potential hazards to the environment and deficiencies in site hygiene, and recommend corrective actions as necessary;
   e. Attend to enforcement actions taken by the Environmental Protection Department, Food and Environmental Hygiene Department, and other enforcing departments on matters relating to site environment and hygiene;
   f. Attend to public complaints and coordinate remedial actions;
   g. Oversee all the environmental performance on the Site and ensure that any polluting or potentially polluting situation is promptly rectified;
   h. Organize and attend Environmental Management and Site Hygiene meetings;
   i. Compile monthly environmental report for submission to the CM at least five working days before such meetings;
   j. Advise on the implementation of an environmental management system; waste disposal, trip ticketing and other enhancement measures;
   k. Arrange and provide environmental training including site specific induction training and toolbox talks for all Site Personnel, and to organize environmental promotional activities;
   l. Prepare the documentation to support the Contractor's submissions under the Housing Authority's incentive schemes in respect of environmental and site hygiene items;
   m. Monitor the maintenance of cleanliness and tidiness on Site; and
   n. Oversee the proper maintenance of amenity facilities by dedicated workers stated in clause PRE.C9.2440 on the Site.

**Option 1**

2. The minimum qualification of the EM or the person providing the services of an EM under sub-clause (1) above shall be as follows:
   a. Degree in Environmental Discipline (Environmental Science, Environmental Engineering, Environmental Studies or Environmental Management); or
   b. Degree in construction related discipline and having satisfactorily completed a certificate course in environmental management by a local or overseas tertiary education institute; or
c. A corporate member of the Hong Kong Institution of Engineers (HKIE) in Environmental Discipline or equivalent; or

d. A full member of the Hong Kong Chartered Institute of Water and Environmental Management; or

e. A corporate member of a professional institution other than those as mentioned in (c) and (d) above and EITHER having at least 3 years working experience in construction/project management with environmental management content OR in possession of a diploma or above in environmental studies or environmental engineering awarded by a local or overseas tertiary educational institution.

Option 2

2. The minimum qualification of the EM or the person providing the services of an EM under sub-clause (1) above shall be as follows:

a. A corporate member of the Hong Kong Institution of Engineers (HKIE) in Environmental Discipline or equivalent; or

b. A full member of the Hong Kong Chartered Institute of Water and Environmental Management; or

c. A corporate member of a professional institution other than those as mentioned in (a) and (b) above and EITHER having at least 3 years working experience in construction/project management with environmental management content OR in possession of a diploma or above in environmental studies or environmental engineering awarded by a local or overseas tertiary educational institution.

PRE.C9.1904.8  ENVIRONMENTAL SUPERVISOR (ES)

1. Appoint an ES working full time on Site to assist EM on the inspection, supervision and monitoring of the environmental and hygiene performance of the Works. The ES's duties include but not limited to the following:

a. Assist the EM in carrying out his duties;

b. Carry out routine inspections of the Site for identifying potential hazards to the environment and deficiencies in site hygiene, report findings with recommendations for corrective actions; and ensure that follow-up action is taken promptly to rectify defects;

c. Supervise and monitor all the environmental performance on the Site; check and ensure that any polluting or potentially polluting situation is promptly rectified;

d. Advise EM on the up-keeping of environmental performance and hygiene standards of the Site;

e. Supervise and promote the execution of environmental protection and hygiene works by the workers on the Site;

f. Organize site-based environmental protection and hygiene promotion awards and promotional activities as prescribed under the Integrated Pay for Safety, Environment and Hygiene (IPSEHS); and

g. Supervise the dedicated workers stated in clause PRE.C9.2440 in the proper maintenance of amenity facilities on the Site.

2. The qualification and experience of ES shall be as follows:
a. A person in possession of a higher diploma or a higher certificate in construction related discipline or environmental studies or environmental engineering awarded by a local or overseas tertiary educational institution, plus 3 years' working experience with a minimum of one year in working experience in environmental related work; or

b. A person in possession of a higher diploma or a higher certificate in construction related discipline and has satisfactorily completed the “Environmental Protection Course for Environmental Supervisors” organized by CIC, IVE or equivalent.

PRE.C9.1905.8 CONTRACTOR'S LABOUR OFFICER (CLO)

1. The qualifications and experience of the CLO shall be as follows:
   a. Completed Secondary 5 or equivalent; and
   b. Well versed in Hong Kong Employment Ordinance & relevant labour legislation; and
   c. Good command of both oral and written English and Chinese; and
   d. Good knowledge and experience of the operation and practices of the construction industry is preferable; and
   e. Good computer knowledge preferably with past experience on the operation of a computerized smart-card system; and
   f. 2 years' full-time working experience on personnel management or human resources related duties; or Post-secondary qualification in Human Resources or Personnel Management is preferable.

2. Within 7 days from the notified date for commencement of the Works, the Contractor shall nominate at least ......... numbers of Contractor's Labour Officer (CLO) for CM's approval. The nominated CLO(s) when approved shall work on-site and responsible for monitoring the payment of wages and MPF contributions. The CLO(s) shall provide all necessary assistance to the Labour Relations Officer in the monitoring process and in the handling of complaints on arrears of wages and MPF contributions raised by any Site Personnel;

3. The provision of CLO shall be maintained for the duration of the Contract and at least 2 months after the month in which the operation of ACRS is terminated as stipulated in PRE.C9.2560, and within the period the Contractor is required to keep the wage books as stipulated in PRE.C9.140;

4. The CM shall have the power to withdraw his approval of the CLO at any time. If such approval shall be withdrawn the Contractor shall, after receiving notice in writing of such withdrawal, remove the CLO from the Site forthwith and shall replace him by another CLO approved by the CM.

PRE.C9.1910.8 CONTRACTOR'S EMPLOYEES

1. The Contractor and his subcontractors shall comply with the Construction Workers Registration Ordinance (Cap. 583), in particular with respect to the requirements that only registered skilled / semi-skilled workers are employed to carry out construction works of those designated trade divisions set out in the Ordinance unless under the conditions specified in the Ordinance which exempt the above requirements;

2. Further to GCC Clause 5.9(1), the following qualified workers shall have acquired the respective qualifications:
a. “Skilled Worker” is a registered skilled worker or registered skilled worker (provisional) as respectively defined in section 2(1) of the Construction Workers Registration Ordinance (Cap. 583);

b. “Semi-skilled Worker” is a registered semi-skilled worker or registered semi-skilled worker (provisional) as respectively defined in section 2(1) of the Construction Workers Registration Ordinance (Cap. 583).

3. For complying with GCC Clause 5.9(1)(c), the Contractor or his subcontractors shall employ the minimum number of Skilled and Semi-skilled Workers calculated in accordance with the stated percentages of the total workforce on Site at any time in each of the following specified trade divisions. For the purpose of this sub-clause, the term “total workforce” means the total number of workers of the relevant trade division but excluding Workers under Instruction as provided for under sub-clause (4) below, workers working across designated trade divisions pursuant to section 3A of the Construction Workers Registration Ordinance (Cap. 583) and workers carrying out exempted construction work pursuant to section 63A of the Construction Workers Registration Ordinance (Cap. 583):

4. The Contractor and his subcontractors shall follow the latest “Guidelines on Arrangement of Instruction and Supervision and Code of Practice for Reasonable Measures of Instruction and Supervision” published by CIC and implement reasonable measures regarding the arrangement for workers not registered under the relevant trade division (i.e. “Workers under Instruction”) to carry out construction work of such trade division under instruction and supervision pursuant to section 4 of the Construction Workers Registration Ordinance (Cap. 583);

5. Complete a return for workers for each trade division prescribed under sub-clause (3) above, giving details of the personal particulars of each of such workers employed, and deliver it together with the returns submitted by the Nominated Sub-contractors to the CM in accordance with GCC Clause 5.25(3):

   a. Obtain the format of the return from the CM;
   
   b. The return is to be completed in respect of:
      
      i. The workers which include Skilled Workers, Semi-skilled Workers, Workers under Instruction, workers working across designated trade divisions and workers carrying out exempted construction work for each trade division employed on the fifteenth (15) day of each month, or in the event of the fifteenth (15) day being a General Holiday on the working day immediately following the General Holiday;
      
      ii. The average number of workers which include Skilled Workers, Semi-skilled Workers, Workers under Instruction, workers working across designated trade divisions and workers carrying out exempted construction work for each trade division per day employed in the preceding week.

### GENERAL FOREMAN

1. Appoint a General Foreman constantly on Site who must have a minimum of 7 years site experience of which four years must have been spent in relevant piling works as a site supervisory staff;

2. Part of the duties of the General Foreman are to assist in promoting the safety and health of personnel employed on Site which shall include but are not limited to:

   a. Supervise the observance of safety standards by the workers;
   
   b. Carry out daily safety inspection;
   
   c. Promote safety-at-work in carrying out work on Site;
   
   d. Attend Site Safety Committee meetings; and
   
   e. Conduct tool-box talks as necessary.

3. The General Foreman shall have attended and completed the Safety and Health for Supervisors (Construction) Course (nominal course duration 43 hours) provided by the Occupational Safety and Health Council or Construction Safety Supervisor Course (nominal course duration 43 hours) provided by the Construction Industry Council. Acceptance of training provided by other organizations is subject to verification that the training is based on course contents of equivalent or above standards and the appointed superintendent has attained the associated qualification;

4. Submit for Approval within seven days from the notified date for commencement for the Works, the name(s), qualifications and experience of general foreman.
PRE.C9.1930.8 AUTHORIZED SIGNATORY (AS)
1. The qualification and experience of the AS shall be as required under the Buildings Ordinance, in particular, the requirement stated in the Practice Note for Registered Contractors (PNRC) No. 38, the CoPSS, and other relevant PNRCs issued by the BD;
2. The AS shall carry out the duties in the SP stated in clause PRE.C9.2010 and other relevant requirements.

PRE.C9.1950.8 DESIGN CERTIFYING CONSULTANT
1. Select a consultant on the Architectural and Associated Consultants Selection Board’s (AACSB) List of Structural Engineering Consultants for CM’s approval as the Design Certifying Consultant;
2. Duties: to certify all layouts, details and calculations submitted to the CM. The submissions must be signed by a Director of the Design Certifying Consultant, who must be a Registered Structural Engineer registered with the Building Authority;
3. The Design Certifying Consultant shall utilise standard forms (EPS-F3 and EPS-F4 in APPENDIX PRE.C9/III to this Worksection) when submitting all items requiring his certification.

PRE.C9.1965.8 TECHNICALLY COMPETENT PERSONS (TCP) FOR SP
1. Appoint one or more TCP of the grade and with qualification and relevant experience specified in the TMSP and CoPSS for various types of works as required under the SP, to carry out the duties as specified in the SP;
2. Subject to the CM’s approval, one TCP may be assigned to cover the duties and responsibilities of more than one role provided that:
   a. The TCP who is appointed satisfies the requirements of the highest grade of TCP specified;
   b. The TCP undertakes inspections at a frequency not less than the frequency derived in accordance with the documents stated in sub-clause (1) above.
3. Notify the CM immediately if there is any subsequent change of the TCP during the course of services.

PRE.C9.1970.8 TECHNICAL DIRECTOR (TD)
1. The qualification and experience of the TD shall be as required under the Buildings Ordinance, in particular, the requirements stated in the PNRC No. 38, and other relevant PNRCs issued by the BD;
2. The TD shall be authorized by the Contractor to:
   a. Have access to plant and resources;
   b. Provide technical and financial support for the execution of the Works; and;
   c. Make decisions for the company and supervise the AS and other personnel.
3. The TD should not be the same person as the AS in PRE.C9.1930.

PRE.C9.1980.8 MANDATORY SAFETY TRAINING FOR APPOINTED SUPERINTENDENTS
1. Appointed superintendents, namely, Authorised Representative, Quality Control Engineer (QCE), Blast Control Engineer, Authorized Signatory (AS), Technically Competent Person (TCP) Grade T4 to T5 for SP and Environmental Manager (EM) shall have attained the following mandatory safety training qualification:
a. Safety Training Course for Site Management Staff (nominal course duration 27 hours) provided by the Construction Industry Council or Occupational Safety & Health Council or equivalent training provided by other organizations subject to verification that the equivalent training is based on course contents of equivalent or higher standard.

2. Superintendents can be exempted from certain modules of the Safety Training Course for Site Management Staff by fulfilling the exemption criteria laid down by the Construction Industry Council or Occupational Safety & Health Council;

3. Appointed superintendents, namely, Technically Competent Person (TCP) Grade T1 to T3 for SP and Environmental Supervisor (ES) shall have attained the following mandatory safety training qualification or equivalent training provided by other organizations subject to verification that the equivalent training is based on course contents of equivalent or higher standard:
   a. Safety and Health for Supervisors (Construction) Course (nominal course duration 43 hours) provided by the Occupational Safety and Health Council; or
   b. Construction Safety Supervisor Course (nominal course duration 43 hours) provided by the Construction Industry Council.

4. The appointed superintendents as per in sub-clauses (1) and (3) above who have attained or once attain the stipulated training qualification shall participate and give advice in Induction Training and Tool Box Talks to enrich the knowledge of personnel of particular trades.

SITE ORGANISATION AND SUPERVISION PLAN

PRE.C9.2010.8 SUBMISSIONS OF ORGANISATION CHART AND SP

1. Submit to the CM for approval within seven days from the notified date for commencement of the Works, and re-submit any change for the CM's further approval, the following:
   a. Site organisation chart including the names of the project director, the Contractor's superintendents as required in PRE.C9 and safety officer;
   b. Names of sub-contractors for foundation works, if any, including the names of the project directors, Authorized Signatory, Technical Director, TCPs and site representatives of sub-contractors;
   c. Written declaration together with supporting documents (e.g. employment contract, bank payroll record, MPF contribution record) stating that the Contractor’s Management Team and the Contractor's superintendents as required in PRE.C6.060 and other personnel as shown on the site organisation chart are directly employed by the Contractor. The employment terms for the Contractor's Management Team and the Contractor's superintendents shall include a "consent to disclosure" clause in accordance with the data protection principles set out under the Personal Data (Privacy) Ordinance (Cap. 486). Personal data (e.g. HKID number, salary amount) within the supporting documents can be blanked out or covered up when submitted by the Contractor.

2. Submit a SP for Site Formation Works to the CM at least 22 days before the commencement of the Site Formation Works as follows:
   a. The SP shall comply in all respects with the requirements stated in the TMSP and CoPSS;
   b. Complete and submit Form ICU 206 for the SP.
3. Submit a SP for the foundation works to the CM at least 22 days before commencement of the foundation works:
   a. The SP shall comply in all respects with the requirements stated in the TMSP and CoPSS;
   b. The supervision provided by the RSC(F) shall cover all stages of works stated in the above documents, including those works required to be carried out by the RSC(GIFW) as stated in PIL1.G460 & PRE.C2.110;
   c. Complete and submit Form ICU 206 for the SP.
4. Submit a SP for ELSW to the CM at least 22 days before the commencement of the ELSW as follows:
   a. The SP shall comply in all respects with the requirements stated in the TMSP and CoPSS;
   b. Complete and submit Form ICU 206 for the SP.
5. Submit a SP for GIFW to the CM at least 22 days before the commencement of the GIFW as follows:
   a. The SP shall comply in all respects with the requirements stated in the TMSP and CoPSS;
   b. Complete and submit Form ICU 206 for the SP.

PRE.C9.2020.8 PROBITY AND CODE OF ETHICS

1. The Contractor shall submit to the CM a company code of ethics and associated code of conduct similar to the probity and integrity requirements in the “Sample Company Code of Ethics for Hong Kong Housing Authority Contractors” and “Sample Code of Conduct for Directors and Staff Members of Hong Kong Housing Authority Contractors / Service Providers” in APPENDIX PRE.C9/VII to this Worksection;
2. The Contractor shall uphold its company code of ethics and associated code of conduct and shall also ensure its employees, sub-contractors, suppliers and agents to comply with the same probity and integrity requirements as stated in the company code of ethics and code of conduct in execution of the Works.

SITE ADMINISTRATION

PRE.C9.2110.8 NORMAL WORKING HOURS

Normal working hours of the Contract shall be the period between 08.00 and 17.00 of the same day. The CM shall be informed in advance when the Contractor intends to carry out work outside normal working hours and no such work shall be carried out without Approval.

PRE.C9.2120.A NOTIFICATION OF OPERATIONS

1. The site inspection system for the Works shall be in accordance with the sub-clauses (2) to (5) below except for mainlaying works which should be as Worksection WSP;
2. Further to GCC Clause 7.3, the Works will be subjected to a formalized system of written application for inspection and approval. The format of the proforma to be used is to be proposed by the Contractor for the Approval of the CM;
3. Further to any other notification required under the Contract, submit to the CM a written application for inspection and Approval at least 24 hours, or longer if so instructed, before any works are to be covered up or put out of view. In the case of weekend working the Contractor must give notice to the CM at the latest 12 o'clock noon on the previous Thursday with regard to works which he intends to carry out on the following Saturday or Sunday. Forty-eight hours notice, or other such period as agreed by the CM, shall be given where it is intended to carry out work immediately following a General Holiday;

4. Notwithstanding the requirements of sub-clause (3) above the CM shall at his absolute discretion have the right to withhold permission for the Contractor to carry out certain works after 12 o'clock noon on Saturdays, and on General Holidays;

5. In addition to the above, submit to the CM at the end of each day (and on Friday for each weekend) a detailed list of the work to be carried out the next day. This shall include exact locations, nature of each operation, and time when the work is to be carried out to enable CM's staff to attend for the purpose of examining such work;

6. Should any work not be examined as a result of the Contractor failing to take action in accordance with sub-clauses (3), (4) and (5) above, then it will be treated as having been done without the Approval required by GCC Clause 7.3.

PRE.C9.2130.8 ESTIMATED LABOUR AND PLANT RESOURCES

1. The estimated monthly labour and plant resources for the whole contract period shall be submitted with the programme submitted under GCC Clause 5.7;

2. Within two months from the notified date for commencement of the Works, submit to the CM a forecast of all the estimated monthly interim statements to be submitted by the Contractors pursuant to GCC Clause 14.1(1);

3. The forecast of the estimated monthly interim statements shall be based upon the Contractor's programme submitted in accordance with GCC Clause 5.7.

PRE.C9.2140.8 MONTHLY PROGRESS REPORTS

1. Furnish to the CM written progress reports at monthly intervals at the end of each Contract month;

2. The monthly progress reports shall be submitted in duplicate and shall include a schedule of the labour and plant resources employed during the previous month;

3. The monthly reports shall be related to the programme provided according to PRE.C6.050 and shall also include a schedule of those activities carried out in the previous month and those activities to be carried out in the following three months showing actual or forecast start and finish times, total and free float and variance against the programme for all activities;

4. Critical activities shall be clearly marked and any critical activities which have not started or finished on time shall be noted;

5. The monthly progress reports shall include revised bar charts and a revised network whenever the logic of the network is changed;

6. The Contractor shall indicate what steps he proposes to make to recover any time lost.
**CONTRACTOR'S OBLIGATIONS**

---

**PRE.C9.2150.8**  **FORMS FOR CONTRACTOR'S MONTHLY INTERIM STATEMENTS**

Monthly statements pursuant to GCC Clause 14.1(2) shall be submitted in the manner set out in Appendix .......... on forms to be provided by the Contractor. Such forms shall be printed or duplicated to the Approval of the CM as soon as practicable after the order to commence the Works has been given. Each statement shall be submitted to the CM through his representative, interim statements being in 3 copies and the final statement being in 4 copies.

---

**PRE.C9.2160.8**  **PROGRESS PHOTOGRAPHS**

1. Provide colour record progress photographs taken from the same vantage points at monthly intervals or as directed by the CM. Such photographs shall be sufficient in number and location to record the progress of the Works and one proof copy of each shall be supplied to the CM to allow him to select the photographs which in his opinion provide the best record;

2. Provide two prints of not less than 250 mm x 200 mm in size of each selected photograph in Approved hard cover ring-file type albums with clear plastic sleeves to accommodate the prints and provide the soft copy of such photographs. A label shall be provided for each photograph in the album clearly indicating the project title, the date the photograph is taken and the part of the works it shows. Prints of the selected photographs shall be signed and dated by the Contractor and the CM and these together with such soft copy and the albums shall become the property of the Housing Authority;

3. One set of photographs shall be taken to comprise 36 No. photographs selected by the CM and shall consist of three prints and the soft copy of each of such photographs;

4. Notwithstanding the above, additional progress photographs shall be provided by the Contractor of any part of the Works when considered necessary as directed by the CM. The cost of these photographs is covered in the Bills of Quantities;

5. Provide the progress photographs and corresponding soft copy to the CM not later than 2 weeks after filming;

6. The Contractor shall ensure that the soft copy or prints in his possession are not used by him or other parties without the CM's written permission and shall also ensure that all photography on the Site is authorised by the CM;

7. Upon completion of the Works, provide two sets of aerial photographs showing all the completed works. One set of these photographs shall comprise 36 No. of photographs selected by the CM and shall consist of three 8R size mounted prints and the soft copy each of such photographs.

---

**PRE.C9.2170.8**  **STEEL BAR REINFORCEMENT RECORD PHOTOGRAPHS**

Provide a photographic record comprising 3R or other Approved size colour prints of each stockpile of mild steel bars placed in each and every location in the Site. Such photographs shall be taken and furnished immediately to the CM twice daily at 9:00 a.m. and 6:00 p.m. for every stockpile of mild steel bars from the same vantage points for each stockpile or as directed by the CM.

---

**PRE.C9.2180.8**  **DOCUMENTATION FOR STEEL BAR REINFORCEMENT**

Submit to the CM the mill certificates and delivery receipts for each consignment of reinforcement. The mill certificates shall be certified by the supplier and the weighing certificates and the delivery receipts shall be certified by the Contractor.
PRE.C9.2190.8 PUBLICITY
Refer all requests from the press or from other media for information concerning the Works or the progress thereof directly to the CM.

PRE.C9.2200.8 GOVERNMENT PLANT
1. Be responsible for the protection, watching, lighting and safe custody of any Government equipment being used on the Works;
2. When Government equipment is hired to the Contractor, the Contractor will be required to enter into a formal agreement setting out the conditions of hire. The Contractor shall be responsible for the collection and transportation of the equipment from the place of issue to the Site and vice versa at his own expense;
3. Housing Authority and Government do not accept liability for any loss or damage caused or alleged to be caused to the Contractor, in the event of breakdown or non-availability of the equipment, due to unforeseen circumstances.

PRE.C9.2210.8 MATERIALS SUPPLIED BY HOUSING AUTHORITY
1. Materials supplied by Housing Authority from Government Supplies Department shall be supplied at ledger cost plus 20% in accordance with Stores Regulation 302 unless specifically provided for otherwise in the Contract;
2. Any materials so supplied shall be delivered to the Contractor either at ship, godown, Government stores or quarries on presentation of a requisition signed by the CM;
3. The Contractor must satisfy himself at the time of taking delivery that all the stores stated in the requisition are handed over to him and that each article is in good condition;
4. No claim for compensation after they have been removed from the ship, godown or stores can be entertained;
5. Remove the whole of the articles to the Works and house them to the satisfaction of the CM in a proper store until such time as they are required for use in the Works.
6. The Contractor shall be held responsible for all stores issued to him by the CM and shall make good any damage or losses to the same, the value of such damage or loss being assessed by the CM and deducted from the Contract Manager's certificates for payment to the Contractor;
7. The cost of transport and storage of all such stores will be included in the appropriate rates in the Contract;
8. Where materials supplied by Housing Authority are delivered in crates or containers, dispose of such crates or containers as directed by the CM;
9. The Contractor shall prepare a schedule, in accordance with GCC Clause 5.7, of his programme for the estimated timing of taking delivery of materials to be supplied by the Housing Authority. The schedule shall be submitted to the CM within four weeks from the notified date for commencement of the Works.
LABOUR RETURNS

1. Further to GCC Clause 5.25, enter daily, on a form provided by the CM, information in respect of labour employed on site for the Works. Provide information for each of the separate classes of labour, including daily wages, and in accordance with any requirements of the CM and the Census and Statistics Department of the Government of Hong Kong Special Administrative Region. Three copies of the form shall be prepared and two completed forms shall be submitted to the CM. The remaining copy shall be retained by the Contractor;

2. For the purpose of completing the labour return, the individual trades shown in the left hand column below shall be considered as being equivalent to those appearing on the corresponding lines in the right hand column:

<table>
<thead>
<tr>
<th>Trade</th>
<th>Equivalent Trade</th>
</tr>
</thead>

</tbody>
</table>

3. No requests from the Contractor for alterations in these equivalent trades will be entertained. Trades of supervisory staff shall not be considered.

CALIBRATION OF EQUIPMENT

1. Be responsible for the calibration of the equipment used for the Contract against the appropriate national standards upon commencement of the contract and the calibration will repeat at an interval as specified in PRE.C9.2240;

2. Ensure that the equipment are capable of the accuracy and precision necessary to carry out the inspection, measuring and test;

3. The calibration shall be carried out at the Contractor's own expense;

4. Each item of equipment shall be attached with an identification label and a calibration status label;

5. Calibration Certificates shall be provided as required;

6. Records of calibration results shall also be available at all times for inspection when requested by the CM;

7. Equipment items that are not calibrated at the required interval or found to be inaccurate after calibration shall not be allowed to be used in this Contract.

PRE.C9.2250.8  COMPLIANCE WITH PERSONAL DATA (PRIVACY) ORDINANCE

1. Comply with the provisions of the Personal Data (Privacy) Ordinance and any rule, regulation and code of practice made thereunder in respect of personal information held in connection with this Contract and in the collection, handling, use and processing of such personal data;

2. Indemnify the Employer in respect of any liability, loss or damage incurred arising out of or in connection with any non-compliance of the above provisions.

PRE.C9.2260.8  ENVIRONMENTAL PERMIT

1. Further to GCC Clause 5.23, conform in all respects with the conditions of the Environmental Permit, a copy of which is reproduced in Appendix ..........;

2. For the purpose of this Contract, the "Environmental Permit" means any environmental permit issued by the Director of Environmental Protection in respect of the Works or project which the Works form a part thereof under the Environmental Impact Assessment Ordinance (Cap. 499) including any variation of the environmental permit;

3. Be responsible for displaying a copy of the most updated Environmental Permit at the locations as stipulated under the Environmental Permit or as directed by the CM;
CONTRACTOR'S OBLIGATIONS

4. It is unnecessary for the Contractor to apply for and hold an Environmental Permit since he may rely on the Environmental Permit obtained by the Employer. Should for any reason the Contractor choose to apply for and hold an Environmental Permit he shall do so at his own risk and cost and it shall not form the basis of any claim for extension of time.

CONFORMATION OF VERBAL INSTRUCTION (CVI)

1. In accordance with Clause 4.2(4) of the GCC, the Contractor shall give adequate notice in writing to the CM of any other Drawings or Specification that may be required for the execution of the Works. CVI is an interim measure for the CM and the Contractor to confirm construction details usually minor in nature, which have to be determined promptly for immediate resolution of construction problems encountered, in order not to affect the progress of works;

2. The Contractor shall use the standard template for CVI in APPENDIX PRE.C9/VIII when submitting CVI;

3. Any variation to the Works arising from the information in CVI shall be separately covered by written instruction by the CM with variation drawings incorporating changes confirmed by the CM;

4. If CVI involves abortive works, the Contractor shall use the standard template for Abortive Works Record Sheet in APPENDIX PRE.C9/IX for recording the abortive works and submit for the CM’s checking;

5. CVI is not a notice of claims for extension of time or additional expenditure under the Contract and no time or cost claim shall be implied under CVI. Any such claim shall be submitted separately in accordance with the Contract provisions;

6. The Contractor shall use the standard template for CVI Summary Table for Monthly Site Meetings in APPENDIX PRE.C9/X to report the status of CVI in the site meeting; and

7. Unless otherwise approved by the CM, the CVI, Abortive Works Record Sheet and CVI Summary Table for Monthly Site Meetings submitted by the Contractor shall be in accordance with the standard templates in APPENDIX PRE.C9/VIII, IX and X.

DEVELOPMENT AND CONSTRUCTION SITE MOBILE SYSTEM (DCSMS)

1. The Development and Construction Site Mobile System (DCSMS) shall be adopted from within one month after the notified date for commencement of the Works to the date of six months after the date of certified completion of the Works. The Contractor shall login the DCSMS system with his HOMES accounts and use the following mobile application (App) and/or web application (Web), if applicable, of the DCSMS:

   a. Safety Alert App and Web for reporting and recording accidents / incidents, and followed by submission of signed hard copy of the completed documents to the CM.

2. Ensure the availability of computer systems and/or mobile devices, if applicable, that connect to and login the DCSMS, and bear all costs for the computer systems, mobile devices and the connection of the computer systems and the mobile devices to DCSMS through web browser (internet connection). The mobile devices and computer systems shall fulfil the minimum requirements as specified in sub-clauses (3) and (4) below respectively;

3. The minimum requirements of the mobile devices to access DCSMS are tabled as follows:
<table>
<thead>
<tr>
<th>Specifications</th>
<th>Details</th>

**CONSTRUCTION WASTE MANAGEMENT**

**CONSTRUCTION WASTE MANAGEMENT - GENERAL**

1. In executing the works, generate the minimum quantity of waste possible;
2. Of the inevitable waste that is generated, sort, salvage for re-use, or recycle on or off Site as much of the material as possible;

3. Minimize the disposal of waste material in landfills.

**PRE.C9.2320.8 SPECIAL WASTE MANAGEMENT RESPONSIBILITIES**

Be responsible for the following:

1. To ensure that all relevant legislation and the Contractor’s duty of care is complied with throughout the duration of the Contract;

2. To minimize waste:
   a. Adopt measures to ensure the proper planning of the Works;
   b. Avoid over ordering of materials;
   c. Avoid cross contamination of materials, either for use in the Works or for reuse or recycling;
   d. Minimize the use of timber in temporary work;
   e. Optimize the use of reusable metal formwork, falsework, trench supports and the like;
   f. Maximize the use of inert excavated material within the Site.

3. To coordinate waste management on Site, keep accurate records on waste movement on and off Site;

4. To ensure that all containers and storage areas are properly labelled;

5. To obtain a list of potential buyers or collectors of materials to be re-used or recycled;

6. Whenever possible (except when new materials are expressly specified), ensure re-use or recycling of material already on Site before it is carted away or new materials are imported;

7. To investigate potential re-use and recycling opportunities.

**PRE.C9.2330.8 PACKAGING MATERIAL**

Unwrap materials only when they are needed. Separate and store packaging material immediately after unwrapping. Return packaging materials to the supplier or his agent as stated in the Waste Management Plan. Where this is not possible, arrange for collection of the material by a recycling company. Such material may only be disposed of at landfill when it is demonstrated that recycling facilities are either not available, impractical or cost effective.

**PRE.C9.2340.8 ON-SITE SORTING OF C&D MATERIAL**

1. Sort all C&D material arising from or in connection with the Works to recover the inert portion and other re-usable or recyclable material prior to disposal off-site. Unless otherwise stated, all surplus C&D material shall become the property of the Contractor when it is removed from the Site;

2. Devise a system to sort C&D material on-site including the identification of the source of generation, estimated quantity, arrangement for on-site sorting and/or collection, sorting methodology, temporary storage areas, frequency of collection by the recovery/recycling contractors where specified in the Contract or frequency of removal off the site;

3. All inert C&D material shall be sorted into:
CONTRACTOR'S OBLIGATIONS

PRE.C9

a. Hard rocks and large broken concrete reusable on the Site or disposable at a designated location as advised by CEDD;
b. Metals;
c. Paper and plastics;
d. Reusable or recyclable material other than materials listed in sub-clauses (3)(a), (3)(b) and (3)(c);
e. Chemical wastes and containers; and
f. Materials suitable for disposal at public fill reception facilities, sorting facilities and landfills/outlying islands transfer facilities.

4. Segregate inert C&D material that is suitable for recycling for aggregates to be used in concrete, sub-base or concrete based products for delivery to a designated recycling facility where specified; and

5. Packaging material (cardboard, paper, plastics, foam etc.) shall be properly sorted, segregated and stockpiled in a protected area to prevent contamination.

PRE.C9.2350.8 REMOVAL OF WASTE MATERIALS

1. Stack waste materials neatly, and remove from Site as soon as is practical after completion of each operation and before next trade commences all material that will not be reused or recycled;

2. Avoid obstruction where more than one trade is operating simultaneously;

3. Do not permit accumulated waste material piles to exceed 2000 mm generally; and

4. Provide necessary receptacles to store waste tidily prior to removal from Site.

PRE.C9.2360.8 WASTE REDUCTION TARGETS

1. To facilitate assessment of waste management measures, the following minimum performance targets shall be adopted:
   a. The sorting targets described or specified in Clause PRE.C9.2340;
   b. 100% recovery of inert portion of excavated material and demolition debris from demolition works;
   c. 100% recovery for metallic waste;
   d. 100% recovery for non contaminated paper and cardboard.

2. Other targets set for this Contract are as follows:

   ........................................................................................................

3. The Contractor may set higher recovery targets providing that such targets are realistic and achievable. The Contractor may add targets for other C&D waste material that may be applicable to the Contract.

ENVIRONMENTAL MANAGEMENT PLAN

PRE.C9.2410.8 ENVIRONMENTAL MANAGEMENT RESPONSIBILITIES

1. For the duration of the Contract, instruct workers, oversee, and document the results of the Environmental Management Plan described hereafter.  Be responsible and ensure that all Nominated Subcontractors, Specialist Contractors, utility undertaking and employees are aware of aims of and the contents of the Environmental Management Plan;
2. Ensure that all relevant legislations and the Contractor's duty of care are complied with throughout the duration of the Contract.

PRE.C9.2415.A SUBMISSION AND UPDATING OF ENVIRONMENTAL MANAGEMENT PLAN

1. Further to GCC Clauses 5.28 and 5.31, prepare and submit to the CM within 21 days of the date of the Letter of Acceptance 3 copies of draft Environmental Management Plan (EMP) containing the information specified or required under PRE.C9.2420. Arrange and hold an ad hoc meeting (or meetings if necessary) with the CM or his representatives to discuss the draft EMP within 7 days from the submission of such plan. If the CM is of the opinion that the draft EMP does not meet the requirements of the Contract, he can request for remedy of the deficiency. Comply with any such CM’s request prior to submitting six copies of the EMP to the CM for endorsement within 35 days of the date of the Letter of Acceptance;

2. Throughout the duration of the Contract and any extended contract period, update the EMP at monthly intervals or when circumstances deem necessary or when required by the CM so that it is at all times a comprehensive and contemporary statement of the policies, procedures and requirements to achieve the environmental management, waste management and site hygiene obligations and responsibilities under the Contract;

3. The CM may by notice in writing require the Contractor to supplement, revise or update the EMP if he is of the opinions that the EMP is insufficient or requires revision of modification in the interest of the environmental management, waste management and site hygiene, whether for the Site or adjacent to the Site or otherwise. Comply with such CM’s notice within 7 days of such notice;

4. Ensure the EMP has incorporated the Nominated Sub-contractor's environmental management plan in respect of the Nominated Sub-contract Works. Request the Nominated Sub-contractor to prepare and submit an environmental management plan in respect of the Nominated Sub-contract Works within 14 days of the letter of acceptance of the Nominated Sub-contractor's tender for agreement and incorporation into the EMP. Ensure consistency between the EMP and the environmental management plan in respect of the Nominated Sub-contract Works. Submit the agreed environmental management plan in respect of the Nominated Sub-contract Works to the CM for endorsement. Revise and update the EMP to incorporate the environmental management plan in respect of the Nominated Sub-contract Works endorsed by the CM when the EMP is due to be revised or updated;

5. Request the Nominated Sub-contractor to revise or update the environmental management plan in respect of the Nominated Sub-contract Works by virtue of a revision or update of the EMP pursuant to sub-clauses (2) and (3) above. Ensure the revised or updated environmental management plan in respect of the Nominated Sub-contract Works is consistent with the EMP and submit the revised or updated environmental management plan in respect of the Nominated Sub-contract Works to the CM for endorsement;

6. Submit and present the EMP to the Environmental and Site Hygiene Management Meetings;

7. CM’s endorsement, comment or rejection of the EMP and of any proposed revision or update, and the implementation of the EMP by the Contractor shall not relieve the Contractor from any obligations or responsibilities under the Contract or any statutory regulations;
8. Appoint on a full time basis on Site a person to oversee the implementation of the EMP. Comply and ensure all personnel who are responsible for the environmental management, waste management and site hygiene and who are in a position of authority among sub-contractors have access to the EMP. Any Specialist Contractor and other entities (e.g. public utilities) working on the Site shall also be provided with a copy of the EMP and be required to comply with it, report to the CM any non-compliance on their part;

9. Provide all facilities, access and assistance to the CM to periodically check that the EMP is being implemented properly and fully. If the CM is of the opinion that the Contractor fails to implement properly and fully the EMP and the failure does or may adversely affect the environmental management, waste management and site hygiene, whether for the Site or adjacent to the Site or otherwise, the CM will notify the Contractor in writing of the failure. Take action to remedy the failure immediately.

**PRE.C9.2420.B ENVIRONMENTAL MANAGEMENT PLAN (EMP)**

All Environmental Management Plan (EMP) and draft EMP shall be signed by the Contractor's Managing Director or his Representative before submission. The EMP shall be subdivided into the following sections containing:

1. General environmental management of the Contract:
   a. A signed environmental and site hygiene policy statement committing the Contractor to environmental protection for the project;
   b. A Contractor's staff organization chart with duties, responsibilities and accountability defined. Identify the name and position of the person to oversee the implementation of the EMP. The person shall work full time on-site. Also appoint a senior staff member, designated person(s) and experience person(s) for the implementation of the Trip Ticket System (TTS) in pursuance of PRE.C9.470 and PRE.C9.480;
   c. Staff awareness and training proposals for Contractors' and Sub-contractors' staff with auditable records of trained persons;
   d. Environmental impacts, targets and mitigation objectives to minimize impacts;
   e. Records containing licences, permits, trip ticket records, complaints and record of corrective actions where non-compliance has been identified;
   f. A list on environmental regulations and descriptions on methodology (including testing) to ensure compliance.

2. Waste Management Plan to reduce and minimize the generation of C&D materials in the execution of the Works stating:
   a. An analysis of waste likely to be generated from work processes with types of waste identified and quantified with list of each material proposed to be salvaged, and re-used or recycled with quantities. The data shall be included in the Waste Flow Table at Appendix PRE.C9/I. The Waste Flow Table shall be reviewed and if necessary revised monthly;
   b. A statement of measures taken to reduce, salvage, re-use and recycle waste materials on and off site;
   c. A description of the methods of sorting, segregation, labelling, storing, protecting and disposing of all the various types of waste materials generated. The materials shall be listed in the Waste Flow Table. Various materials may include but are not limited to:
      i. Inert C&D materials generated from the Works;
ii. Inert C&D materials to be re-used in the Works;

iii. C&D materials to be re-used in other projects (including reclamation) or at Contractor's nominated Approved outlets;

iv. Inert C&D materials suitable for recycling into aggregates for concrete or sub-base to be disposed of at an Approved location;

v. Inert C&D materials to be disposed of at a public fill reception facility;

vi. Steel and other metals (including reinforcement bars) for collection by recycling contractors;

vii. Paper and cardboard for collection by recycling contractors;

viii. Plastics (i.e. plastic bottles, containers, sheets, foam);

ix. A list of hazardous wastes (oils, paints and chemicals) together with details of the method of storage and proposals for collection and disposal arrangements by specialist disposal company;

x. General refuse to be disposed of at a landfill or outlying islands transfer facility.

d. The location, layout and details of designated sorting and storage areas. Describe necessary adaptations as the works progress;

e. A method statement of how the Site will be kept clean with debris minimized;

f. Details to minimize the use of timber in temporary works construction;

g. Control measures to ensure that the sorted recyclable materials such as metal, paper, plastics and milled bituminous materials etc. are delivered to a proper recycling outlet for processing;

h. For materials delivered to Site, a statement that reusable and recyclable packaging materials and pallets will be re-used, recycled or returned to the supplier. Identify those suppliers who will not accept the return of pallets and reusable and recyclable packaging materials;

i. The Waste Management Plan may be revised from time to time to incorporate Nominated Sub-contractors and other party's requirements as and when they are appointed;

j. A Waste Disposal Record.

3. Site Management Plan for implementation of the TTS. Submit the Site Management Plan for the CM's Approval within 45 days of the date of the Letter of Acceptance. If the CM is of the opinion by notice in writing that the Site Management Plan does not meet the requirements of this clause, revise the Plan and resubmit for the CM's Approval within 7 days of the notice. Review the Site Management Plan on a monthly basis at the Site Safety and Environmental Management Committee meeting with discussion items as detailed in sub-clause (3)(i) below. Submit any updated version of the Plan for the CM's Approval. The Plan shall include the following details:

a. Names of the designated or alternative disposal grounds identified;

b. A site organization chart showing the manpower resources and duties of each staff member in the implementation of the TTS. The following requirements shall be met:

i. Appoint a senior staff member with at least two years experience in site management to be fully responsible for implementing and overseeing the operation of the TTS;
ii. Appoint designated person(s) to fill in and sign Part 1 of the Daily Record Summary (DRS) properly before departure of the trucks. A sample of the DRS is given at Appendix PRE.C9.APPEND2;

iii. Appoint experienced person(s) to man each exit from the Site to ensure that every truck carrying C&D materials leaving the Site bears a duly completed CHIT or Disposal Delivery Form (DDF). Such appointed person(s) shall record the CHIT/DDF number, the vehicle registration number and the departure time of every truck leaving the Site with C&D material.

c. A monthly programme for disposal of C&D materials off the Site, and indicate the estimated quantities, types of the C&D materials and corresponding disposal grounds. Update the programme and submit to the CM by the fifteenth (15) day of each month, or in the event of the fifteenth (15) day being a General Holiday the working day immediately following the General Holiday, or a later date as agreed by the CM;

d. Site procedures to ensure that each truckload of C&D materials leaving the Site will bear a duly completed CHIT/DDF and that Part 1 of the DRS has been filled in and signed properly before departure of the truck;

e. Recording system with comprehensive register to ensure timely retrieval of the CHIT/DDF issued and Transaction Record Slip from the disposal grounds, and make it available for inspection by the CM upon request or where irregularities are observed;

f. Surveillance system within the Site and at any alternative disposal grounds to check that the disposal activities comply with the requirements specified;

g. Control measures to prevent any unauthorized disposal of C&D materials, where trucks need to exit and re-enter the Site for delivery of C&D materials generated;

h. For site formation contract, a video recording system as specified in PRE.C9.495;

i. The following items shall be included in the agenda for discussion at every Site Safety and Environmental Management Committee meeting, or other established channels for performance monitoring as agreed by the CM:

i. Review the Site Management Plan and implementation of the TTS, and identify areas for improvement;

ii. Audit the quantity of C&D materials removed from the Site (based on the DRS and survey records) against the quantities of C&D materials delivered to the disposal ground designated in the Contract (e.g. based on the EPD’s web-site) or against the quantities of C&D materials delivered to the Approved alternative disposal ground;

iii. Review incidents of non-compliance and discuss the necessary follow-up actions;

iv. Monitor the follow-up action on defects and deficiencies identified.

4. Air Quality

a. Measures and methods to control dust and debris on and off Site;

b. Measures to monitor and report air quality conditions on Site;

c. Use of B5 diesel or Euro V diesel / Ultra-low-sulphur diesel:
CONTRACTOR'S OBLIGATIONS

i. All Constructional Plant powered by diesel fuel, whether they belong to the Contractor or his sub-contractors, shall only be replenished with B5 diesel when working on Site;

ii. The B5 diesel shall be Euro V diesel containing a fatty acid methyl ester content of 5%, as determined in accordance with the document published by the European Committee for Standardization commonly known as EN 14078:2003. The Euro V diesel shall be light diesel oil complying with the specifications set out in Chapter 311L Schedule 1 – Air Pollution Control (Motor Vehicle Fuel) Regulation of the Laws of Hong Kong, all applicable legislation in Hong Kong and the requirements of all relevant regulatory authorities in Hong Kong which are in effect on the date that the B5 diesel is supplied;

iii. Notwithstanding sub-clause 4(c)(i) above, should there be a supply shortage or other difficulties in delivering of B5 diesel to Site, the Contractor or his sub-contractors may propose with justification for the CM’s Approval for the use of Euro V diesel / Ultra-low-sulphur diesel (ULSD) instead of B5 diesel. ULSD is defined as diesel fuel containing not more than 0.005% by weight of sulphur;

iv. The Contractor shall maintain a summary record of all the delivery notes of B5 diesel or Euro V diesel / ULSD delivered to Site, including those ordered by his sub-contractors, together with the details of consumption of such fuel by the individual Constructional Plant on Site and the date of arrival and departure of the Constructional Plant to and from the Site. The Contractor shall utilise the standard proforma in APPENDIX PRE.C9/V1;

v. All records of fuel deliveries shall be supported by the original delivery notes of the oil companies. All records and delivery notes shall be kept on Site and ready for inspection by the CM upon request.

5. Noise Control
   a. Acquisition of noise permits;
   b. Types of noise reduction equipments to be used and their applications;
   c. Details of noise restrictions affecting the Contract;
   d. Descriptions of noise mitigation measures.

6. Protection and Damage Mitigation
   a. Mitigation methods to prevent soil erosion, wash down or slope collapse and any method to carry out reinstatement work;
   b. Methods of protecting the existing trees, shrubs and other vegetation including protecting fencing provided by others;
   c. Maintenance of roads and footpaths;
   d. Methods to protect adjoining properties, roads, paving, and boundary structures;
   e. Methods to deal with chemical spillage.

7. Water Pollution Control and Conservation
   a. Measures to conserve water and record water consumption;
   b. Methods of minimizing water consumption including wastewater recycling;
   c. Methods to avoid contamination and blockage of drains and sewers and comply with the Water Pollution Control Ordinance;
CONTRACTOR'S OBLIGATIONS

PRE.C9

1. Method to prevent flooding and blocking of site drainage system;

e. Listing and description of necessary permits, approvals to be obtained and complied with;

f. Details of necessary drainage diversions and temporary drainage systems.

8. Tropical Hardwoods

A description of proposed alternatives to tropical hardwood which will meet the same performance standards in the construction of all temporary works including site accommodation, storage sheds, covered walkways, hoardings, screens, signboards excavation supports and formwork and falsework. Tropical hardwoods are not permitted to be used in temporary works without the Approval of the CM;

9. Site cleanliness, tidiness and hygiene

a. Description of a proposed system to maintain cleanliness and tidiness of the Site including details of means to protect materials locations of stockpiles and on-site sorting and disposal areas;

b. Measures to remove and prevent standing water and prevent mosquito breeding;

c. Assign a specific number of dedicated workers for maintenance of site hygiene and amenities provisions on Site which are subject to the IPSEHS as referred to in PRE.C9.1903 and PRE.C9.1904. If required, provide the identity of such workers for verification by the CM or his representatives.

10. Emergency Procedures

Identify whether any environmental emergency could occur on site such as typhoons and rainstorms and formulate emergency procedures to deal with such situations;

11. Environment and site hygiene promotion

a. The effort made by different sub-contractors or individuals to maintain cleanliness and tidiness of the Site, to reduce and minimize the generation of waste at work and to protect materials locations of stockpiles and on-site sorting and disposal areas by the application of soundly based policies, procedures and disciplines to be recognised by the presentation of environmental protection awards. Adopt proactive attitude towards improving environmental management and site hygiene performance and to promote workers' awareness on environmental protection and site hygiene. The site as a whole is encouraged to participate in the following designated environmental protection awards:

   i. "The Hong Kong Awards for Environmental Excellence" [Environmental Labels (Wastewise or Energywise); Green Innovations; or Sectoral Awards] organized by the Environmental Campaign Committee with EPD; or

   ii. "Considerate Contractors Site Award Scheme" (Outstanding Environmental Management and Performance Award) organized by the Development Bureau and the Construction Industry Council.

b. The Contractor is also encouraged to organize site-based awards and competitions to promote participation of his workers and teams in environmental protection and site hygiene theme competitions during the contract period. The adjudicating team shall comprise the site management team, environmental protection personnel and workers' representatives, and shall act openly and fairly in such events.
PRE.C.9.2430.A DISTRIBUTION OF AND COMPLIANCE WITH THE ENVIRONMENTAL MANAGEMENT PLAN

After CM’s endorsement to the EMP, distribute copies of same to the CM, Nominated Sub-contractors and all specialist contractors and suppliers. Ensure compliance with the EMP and all relevant statutory regulations.

PRE.C.9.2435.8 ENVIRONMENTAL MANAGEMENT AND SITE HYGIENE PERFORMANCE

Throughout the duration of the Contract carry out to the satisfaction of the CM all environmental protection/management and site hygiene measures including the discharge of duties as specified in the Environmental and Site Hygiene Checklist shown below:

<table>

PRE.C.9.2440.8 ENVIRONMENTAL MANAGEMENT AND SITE HYGIENE PERFORMANCE MONITORING AND REPORTING

Throughout the duration of the Contract:

1. Carry out environmental inspections to review, monitor and report monthly to the CM (or when so directed by the CM) on the effectiveness of the implementation of the EMP;

2. Report monthly to the CM for the following received from Environmental Protection Department (EPD) or Food and Environmental Hygiene Department (FEHD):
   a. Warning letters or offences notifications;
b. Convictions during the period under any environmental and site hygiene regulations or legislation; and

c. Abatement Notice.

3. Take all necessary follow-up actions to ensure that any defects or deficiencies are made good and;

4. Conduct monthly Environmental and Site Hygiene Management Meetings or when directed by the CM, submit minutes of the meetings to the CM for verification. The CM may also attend or nominate a representative to attend the meetings. Meetings shall cover the following:

   a. Environmental and site hygiene matters, including implementation of the Trip-ticket System as appropriate, arising from the Contractor's obligations in executing the Works;

   b. The review on incidents of non-compliance with the EMP;

   c. Discussion and monitoring of the necessary follow-up action on defects and deficiencies; and

   d. Areas for improvement.

5. Report monthly to the CM for the following:

   a. Particulars of workers specially trained and deployed to attend to site hygiene and amenities provisions during the day and have assisted in the tidying up of trade waste at the end of a working day;

   b. Date-marked photos of site amenities conditions before and after tidying up of loose ends on site; and

   c. Photographic evidence in chronological order of such maintenance work.

---

### PROVISION OF ENVIRONMENT AND HYGIENE TRAINING

**PRE.C9.2460.8**

1. Arrange for all skilled workers employed on the Works or in connection with the Contract whether in the employment of the Contractor or Sub-contractors to attend training on all aspects of environmental management organized by training institutions and/or the Environmental Protection Department (EPD);

2. Set out the level, frequency and estimated staff numbers to attend such training and state the same in the EMP;

3. Develop and provide site specific induction training and tool box talks on all appropriate aspects of environmental protection and site hygiene to promote workers’ awareness on environmental management and state the same in EMP, such training and tool box talks are to be carried out by suitably qualified supervisors or foremen, site specific induction training and tool box talks may be conducted as part of the site safety training regime;

4. At the end of each period of interim certificate, report to the CM the actual number of workers trained as specified and submit contractors’ with certified attendance records;

5. A full statement of the Contractors training proposals shall be stated in the EMP.

---

### PAYMENT FOR PRE-DETERMINED AMOUNTS FOR SITE SAFETY, ENVIRONMENTAL MANAGEMENT AND SITE HYGIENE

**PRE.C9.2470.B**

1. The payment for the "environmental management and site hygiene performance" item in the Bills of Quantities shall be subject to the Contractor's average score (A) of the items as specified in the checklist stipulated in **PRE.C9.2435** and this average score (A) is worked out by the CM as follows:
a. Items of environmental management and site hygiene performance as specified in PRE.C9.2435 are subject to assessment at the frequency specified therein;

b. The calculation of the average score (A) only applies to valuation of the items under environmental management and site hygiene performance as specified in PRE.C9.2435. The average score (A) for each monthly valuation shall be derived from the results of the assessment as follows:

\[
(A) = \frac{A_1 + A_2 + A_3 + A_4 + A_5 + A_6}{6}
\]

whereas

\[
A_1 = \frac{\text{Total No. of Items of Compliance under Noise Control}}{\text{Total No. of Items of Inspection under Noise Control}}
\]

\[
A_2 = \frac{\text{Total No. of Items of Compliance under Air Quality}}{\text{Total No. of Items of Inspection under Air Quality}}
\]

\[
A_3 = \frac{\text{Total No. of Items of Compliance under Removal of Water}}{\text{Total No. of Items of Inspection under Removal of Water}}
\]

\[
A_4 = \frac{\text{Total No. of Items of Compliance under Construction Waste Management}}{\text{Total No. of Items of Inspection under Construction Waste Management}}
\]

\[
A_5 = \frac{\text{Total No. of Items of Compliance under Protection}}{\text{Total No. of Items of Inspection under Protection}}
\]

\[
A_6 = \frac{\text{Total No. of Items of Compliance under Site Cleanliness & Hygiene}}{\text{Total No. of Items of Inspection under Site Cleanliness & Hygiene}}
\]

Total number of items of compliance is referring to the number of compliance achieved for the respective item under the respective group for the checking made according to the checking frequency specified in the checklist stipulated in PRE.C9.2435 for a monthly valuation period.

Total number of items of inspection is referring to the number of inspection for the respective item under the respective group for the checking made according to the checking frequency specified in the checklist stipulated in PRE.C9.2435 for a monthly valuation period.

c. Criteria for payment are as follows:

i. If the score of any element (A1 to A6) is below 85%, no payment for the environmental management and site hygiene monitoring performance item incorporated in the Bills of Quantities shall be made for that month;

ii. If the score of each of the elements (A1 to A6) is 85% or above and the Contractor’s average score (A) is within the range of 85% to less than 90%, payment for that month in respect of environmental management and site hygiene performance shall be valued at the pre-determined rate included in the Bill of Quantities multiplied by 0.7;

iii. If the score of each of the elements (A1 to A6) is 85% or above and the Contractor’s average score (A) is 90% or above, payment for that month in respect of the environmental management and site hygiene performance shall be valued at the pre-determined rate included in the Bill of Quantities multiplied by 1.0.
2. The assessment of payment for the "Silver Card compliance" item in the Bills of Quantities shall be subject to the principles as given below:

   a. The status of each category of workers of specified trades listed in PRE.C9.205 (4)(b) is subject to assessment on a monthly basis based on the records of the date of record checking as designated by the CM (hereinunder referred to as the 'designated date of record checking') for a month;
   b. The payment for the "Silver Card Compliance" item in the Bills of Quantities shall be subject to the Contractor's score (R). The score (R) for a monthly valuation shall be derived as follows:

   \[
   (R) = \frac{P}{Q}
   \]

   expressed as a percentage rounded to one decimal place

   where

   \[
   P = P_1 + P_2
   \]

   and

   \[
   Q = Q_1 + Q_2 - Q_3
   \]

   with each parameter defined in sub-clauses (2)(c) to (2)(g) below.

   c. P1 denotes the number of workers of the specified trades (except for the trade of 'Lift Mechanic') who are on Site and in possession of valid Silver Cards on the designated date of record checking of the month;
   d. P2 denotes the number of workers of the specified trades (except for the trade of 'Lift Mechanic') with all of the following attributes:

      i. The worker was verified to be on Site on the designated date of record checking of a previous month;
      ii. The worker did not possess a valid Silver Card on the designated date of record checking of a previous month but the worker had enrolled in a Silver Card training course / re-validation course run by the CIC;
      iii. The worker is not on Site on the designated date of record checking of the month;
      iv. The designated date of record checking of the month is more than 90 calendar days from the date of the worker's first appearance on Site;
      v. The worker had not been counted under the parameter Q2 in any designated date of record checking of any previous months;
      vi. The worker has successfully obtained a valid Silver Card as required on or before the designated date of record checking of the month.
   e. Q1 denotes the number of workers of the specified trades (except for the trade of 'Lift Mechanic') on Site on the designated date of record checking of the month;
   f. Q2 denotes the number of workers of the specified trades (except for the trade of 'Lift Mechanic') with all of the following attributes:

      i. The worker was verified to be on Site on the designated date of record checking of a previous month;
      ii. The worker did not possess a valid Silver Card on the designated date of record checking of a previous month but the worker had enrolled in a Silver Card training course / re-validation course run by the CIC;
      iii. The worker is not on Site on the designated date of record checking of the month;
iv. The designated date of record checking of the month is more than 90 calendar days from the date of the worker's first appearance on Site;

v. The worker had not been counted under this parameter Q2 in any designated date of record checking of any previous months.

g. Q3 denotes the number of workers of the specified trades (except for the trade of 'Lift Mechanic') with all of the following attributes:

i. The worker is on Site on the designated date of record checking of the month;

ii. The worker does not possess a valid Silver Card but has enrolled in a Silver Card training course / re-validation course run by the CIC;

iii. The designated date of record checking of the month is not more than 90 calendar days from the date of the worker's first appearance on Site.

h. For the avoidance of doubt, the 'date of the worker's first appearance on Site' as referred to in sub-clause (2)(d) to (2)(g) above shall be the day on which the worker first enters into the Site to carry out the work of the specified trades and is regardless of whether or not the worker has left the Site and is returning to work again on the specified trades;

i. The score (R) shall be worked out by the Contractor in accordance with sub-clause (2)(b) above when completing the prescribed form (DCEI-F14) and is subject to verification by the CM;

j. Criteria for payment for the 'Silver Card Compliance' item are as follows:

i. Where score (R) turns out to be 0/0 for the designated date of record checking of the month, no payment shall be made for the month in which the designated date of record checking falls;

ii. Where score (R) is a percentage other than 0/0 for the designated date of record checking of the month, then payment for the month in which the designated date of record checking falls shall be valued at the predetermined rate against this item multiplied by this score (R).

3. The assessment for payment of the items for "Safety Audit performance indicators" in the Bills of Quantities shall be subject to the principles as given below:

a. Verified percentage scores for Part A "Safety Management", Part B "Safety Audit Checklist" and verified individual percentage score for designated critical items (collectively referred to as "Verified Safety Audit Percentage Score") are obtained from each safety audit conducted under the Housing Authority Safety Auditing System (HASAS) as specified in PRE.C9.205. Those scores shall be verified by the OSHC and confirmed by the CM for official record and payment purpose;

b. The criteria for payment assessment in respect of "Safety Audit performance indicator (overall score)" are as follows:

i. If the verified percentage scores for either Part A or Part B of a safety audit are below 70%, no payment shall be valued and made for this item in respect of that safety audit;

ii. If the verified percentage scores for both Part A and Part B of a safety audit are each equal to or above 70% but with either one or both of them below 80%, payment for this item in respect of that safety audit shall be valued by multiplying the pre-determined rate of this item as included in the Bill of Quantities with 0.7;
iii. If the verified percentage scores for both Part A and Part B of a safety audit are equal to or above 80%, payment for this item in respect of that safety audit shall be valued by multiplying the pre-determined rate of this item as included in the Bill of Quantities with 1.0.

c. Payment assessment in respect of "Safety Audit performance indicators (scores for critical items)" shall take into account the following:

i. The verified individual percentage score for designated critical items of the Verified Safety Audit Percentage Scores; and

ii. The apportioned percentages for the respective designated critical items as shown in the table below.

<table>
<thead>
<tr>
<th>Designated critical items</th>
<th>Element / Subsection and reference in safety audit</th>
<th>Apportioned percentage %</th>
</tr>
</thead>
<tbody>
<tr>
<td>Job hazard analysis</td>
<td>Key element 7</td>
<td>25</td>
</tr>
<tr>
<td>Housekeeping</td>
<td>Subsection 14.1.4</td>
<td>15</td>
</tr>
<tr>
<td>Prevention against falling objects</td>
<td>Subsection 14.1.5</td>
<td>25</td>
</tr>
<tr>
<td>Lifting</td>
<td>Lifting operation (subsection 14.2.3)</td>
<td>25</td>
</tr>
<tr>
<td></td>
<td>Tower crane (subsection 14.4.1)</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Mobile crane (subsection 14.4.2)</td>
<td></td>
</tr>
<tr>
<td>Electrical supply system</td>
<td>Subsection 14.3.2</td>
<td>10</td>
</tr>
<tr>
<td>Total of apportioned percentages =</td>
<td>100</td>
<td></td>
</tr>
</tbody>
</table>

Note: The apportioned percentage for each designated critical item shall be referred to as "effective apportioned percentage" when being applied for payment assessment.

d. The criteria for payment assessment in respect of "Safety Audit performance indicators (scores for critical items)" are as follows:

i. If the verified percentage score for a designated critical item (in the table in sub-clause (3)(c) above) of a safety audit is below 70%, no payment shall be valued and made for that critical item in respect of that safety audit;

ii. If the verified percentage score of a designated critical item is equal to or above 70% and below 75% the corresponding apportioned percentage as included in the table in sub-clause (3)(c) above multiplied by 0.7 shall become the “payable effective apportioned percentage” for that designated critical item for payment assessment in respect of that safety audit;

iii. If the verified percentage score of a designated critical item of a safety audit is equal to or above 75% the corresponding apportioned percentage as included in the table in sub-clause (3)(c) above multiplied by 1.0 shall become the “payable effective apportioned percentage” for that designated critical item for payment assessment in respect of that safety audit;
iv. Payment for this item "Safety Audit performance indicators (scores for critical items)" in respect of a safety audit shall be valued by multiplying the pre-determined rate of this item as included in the Bill of Quantities or Schedule of Rates with the sum of the “payable effective apportioned percentage” of the critical items in the table in sub-clause (3)(c) above in respect of that safety audit;

v. For the avoidance of doubt, 0.7 and 1.0 of the corresponding apportioned percentage for the critical item of "lifting" as included in the table in sub-clause (c) above shall only become the “payable effective apportioned percentage” applicable for payment assessment in respect of a safety audit if each of the sub-items available for assessment (namely, subsection 14.2.3, 14.4.1 and 14.4.2) has acquired a verified individual percentage score of 70% or above but below 75% and not less than 75% in that safety audit respectively. However, if any one of these sub-items available for assessment has acquired a verified individual percentage score of below 70%, no "payable effective apportioned percentage" for the whole critical item of "lifting" shall be applicable for payment assessment in respect of that safety audit.

4. The assessment for payment of the items of "Regulatory Compliance Indicator - yearly record check", "Regulatory Compliance Indicator - residual period record check at completion" and "Regulatory Compliance Indicator – final record check" items in the Bills of Quantities shall be subject to the principles as given below:

Option 1

a. Payment for the item of "Regulatory Compliance Indicator - final record check" shall be valued by multiplying the pre-determined rate of the item as included in the Bill of Quantities with 1.0 in respect of the record check if the Contractor has confirmed in writing that none of the following is received from the Labour Department (LD) within the assessment period:

i. One or more letters received subsequent to LD's inspection advising category Part 1 contravention particularly against Construction Site (Safety) Regulations or subsidiary regulations of the Factories and Industrial Undertakings Ordinance;

ii. Five or more letters received subsequent to LD's inspection advising category Part II contravention particularly against Construction Site (Safety) Regulations or subsidiary regulations of the Factories and Industrial Undertakings Ordinance;

iii. Suspension Notice.

b. For the purpose of establishing the Contractor's entitlement to payment for the item of "Regulatory Compliance Indicator - final record check", a one-off assessment irrespective of any extended contract period as defined in the Bill of Quantities shall be carried out by the CM;

c. The assessment period shall be from the date for commencement of the Works up to and including the date of the certificate of completion of the Works (or where phased completion of Sections is specified, the last date of completion stated amongst the different certificates of completion for the Sections of the Works) issued by the CM under GCC Clause 8.7.
Option 2

a. Payment for the items of "Regulatory Compliance Indicator - yearly record check" and "Regulatory Compliance Indicator - residual period record check at completion" shall be valued by multiplying the pre-determined rate of the respective item as included in the Bill of Quantities with 1.0 in respect of the record check if the Contractor has confirmed in writing that none of the following is received from the Labour Department (LD) within the respective assessment period:

i. One or more letters received subsequent to LD's inspection advising category Part I contravention particularly against Construction Site (Safety) Regulations or subsidiary regulations of the Factories and Industrial Undertakings Ordinance;

ii. Five or more letters received subsequent to LD's inspection advising category Part II contravention particularly against Construction Site (Safety) Regulations or subsidiary regulations of the Factories and Industrial Undertakings Ordinance;

iii. Suspension Notice.

b. For the purpose of establishing the Contractor's entitlement to payment for the item of "Regulatory Compliance Indicator - yearly record check", an assessment shall be carried out by the CM at the end of each full 12-month period commencing from the date for commencement of the Works. However, no assessment (and hence no payment) shall be made for any full 12-month period which ends on a date beyond the contract /extended contract period as defined in Bill of Quantities;

c. For the avoidance of doubt, the remeasured quantity in adjustment of account for items of "Regulatory Compliance Indicator - yearly record check" shall not exceed the quantity as stated in the Bill of Quantities;

d. For the purpose of establishing the Contractor's entitlement to payment for the item of "Regulatory Compliance Indicator - residual period record check at completion", a one-off assessment irrespective of any extended contract period as defined in the Bill of Quantities shall be carried out by the CM. The assessment period shall be from the first day after the last assessed period of "yearly record check" in sub-clause (4)(b) above up to and including the date of the certificate of completion of the Works (or where phased completion of Sections is specified, the last date of completion stated amongst the different certificates of completion for the Sections of the Works) issued by the CM under GCC Clause 8.7.

5. The assessment for payment of the items of "Accident indicator - yearly record check" and "Accident indicator - final record check at completion" items in the Bills of Quantities shall be subject to the principles as given below:
Option 1

a. Payment for the item of "Accident Indicator - final record check at completion" shall be valued by multiplying the pre-determined rate of the item as included in the Bill of Quantities with 1.0 in respect of the record check if the Contractor has achieved the following results within the assessment period:

i. No fatal accident; and

ii. Annualized accumulative accident rate not more than 9 per 1,000 workers.

b. The annualized accumulative reportable accident occurrence rate per 1000 workers (AR) is derived from the following formula with the cut-off date applicable to all variables (i.e. D, N and W) being set at the last date of a quarter of the calendar year, i.e. 31st March, 30th June, 30th September or 31st December, immediately preceding the quarter in which the last date of the assessment period of the record check falls:

\[
AR = \frac{N}{W \times 1000 \times \frac{365}{D}}
\]

Where

\(N\) = Accumulative number of reportable site accidents as defined in the Factories and Industrial Undertakings Ordinance up to the cut-off date. A "reportable accident" shall refer to an accident arising from industrial activities leading to death(s) or injuries which have incurred incapacity of the person injured for more than 3 days.

\(W\) = Average daily number of workers on site reported on Labour Return Form GF527 plus number of site management staff collated by CTO site staff starting from the notified date for commencement of the Works up to the cut-off date.

\(D\) = Number of calendar days from the notified date for commencement of the Works up to the cut-off date.

c. For the purpose of establishing the Contractor's entitlement to payment for the item of "Accident indicator - final record check at completion", a one-off assessment irrespective of any extended contract period as defined in the Bill of Quantities shall be carried out by the CM;

d. The assessment period shall be from the date for commencement of the Works up to and including the date of the certificate of completion of the Works (or where phased completion of Sections is specified, the last date of completion stated amongst the different certificates of completion for the Section of the Works) issued by the CM under GCC Clause 8.7.

Option 2

a. Payment for the items of "Accident indicator - yearly record check" and "Accident indicator - final record check at completion" shall be valued by multiplying the pre-determined rate of the respective item as included in the Bill of Quantities with 1.0 in respect of the record check if the Contractor has achieved the following results within the assessment period:

i. No fatal accident; and

ii. Annualized accumulative accident rate not more than 9 per 1,000 workers.
b. The annualized accumulative reportable accident occurrence rate per 1000 workers (AR) is derived from the following formula with the cut-off date applicable to all variables (i.e. D, N and W) being set at the last date of a quarter of the calendar year, i.e. 31st March, 30th June, 30th September or 31st December, immediately preceding the quarter in which the last date of the assessment period of the record check falls:

\[
AR = \frac{N}{W} \times 1000 \times \frac{365}{D}
\]

Where

\(N\) = Accumulative number of reportable site accidents as defined in the Factories and Industrial Undertakings Ordinance up to the cut-off date. A "reportable accident" shall refer to an accident arising from industrial activities leading to death(s) or injuries which have incurred incapacity of the person injured for more than 3 days.

\(W\) = Average daily number of workers on site reported on Labour Return Form GF527 plus number of site management staff collated by CTO site staff starting from the notified date for commencement of the Works up to the cut-off date.

\(D\) = Number of calendar days from the notified date for commencement of the Works up to the cut-off date.

c. For establishment of the Contractor's entitlement to payment for the item of "Accident indicator - yearly record check", an assessment shall be carried out by the CM at the end of each full 12-month period commencing from the date for commencement of the Works. However, no assessment (and hence no payment) shall be made for any full 12-month period which ends on a date beyond the contract/extended contract period as defined in Bill of quantities or Schedule of Rates;

d. For the avoidance of doubt, the remeasured quantity in adjustment of account for item of "Accident indicator - yearly record check" is subject to the capping limit which is equal to the quantity as stated in the Bill of Quantities. Therefore, in case where the remeasured quantity is larger than the quantity as stated in the Bill of Quantities, the respective quantity stated in the Bill of Quantities shall be taken as the remeasured quantity for adjustment of account;

e. For the purpose of establishing the Contractor's entitlement to payment for the item of "Accident indicator - final record check at completion", a one-off assessment irrespective of any extended contract period as defined in the Bill of Quantities shall be carried out by the CM. The assessment period shall be from the date for commencement of the Works up to and including the date of the certificate of completion of the Works (or where phased completion of Sections is specified, the last date of completion stated amongst the different certificates of completion for the Section of the Works) issued by the CM under GCC Clause 8.7.

6. The assessment of payment of the item "Reporting of Accident and Incident" in the Bills of Quantities or Schedule of Rates shall be subject to the principles as given below:

a. The Contractor shall report accidents and incidents, if any, timely to Labour Department under the Factories and Industrial Undertakings Regulations and to the CM according to the accident / incident reporting procedures set out at the Housing Authority Site Safety Website;
b. Full payment at the pre-determined rate shall be assessed if there is no accident or incident for reporting or the total number of late reporting of accidents and incidents is not more than 3 up to the date of completion of the Works (or where phased completion of Sections is specified in the Contract, up to the last date of completion stated amongst the different certificates of completion for the Sections); and

c. For more than 3 cases of late reporting, full payment at the pre-determined rate shall be assessed if the project team is convinced that the late reporting is beyond the Contractor’s reasonable control such that the total number of accidents and incidents with late reporting after deducting those cases beyond the Contractor’s reasonable control is not more than 3. Otherwise, no payment for this item "Reporting of Accident and Incident" shall be made.

7. The assessment for payment of the item "Recognition of innovative and functional safety installation or safety measures" in the Bills of Quantities or shall be subject to the principles as given below:

a. The Contractor has implemented innovative and functional safety installation or safety measures which shall be new concepts subject to OSHC's assessment under HASAS/HALENSAS and such safety installation or safety measures are not implemented to comply with legal or contractual requirement, not common practices in the construction industry nor proprietary products procured from the market;

b. The Contractor shall submit the relevant detailed specification and design drawings to the accredited safety auditor for vetting. The innovative and functional safety installation or safety measures has been verified / supported by the OSHC through safety audit and explicitly stated in the Safety Audit reports; and

c. The CM has verified the implementation merits and checked the sufficiency of the relevant detailed specification and design drawings to his satisfaction.

8. The assessment for payment of the item "Application of Building Information Modelling (BIM) for safety" in the Bills of Quantities shall be subject to the principles as given below:

a. The Contractor has implemented BIM technology for safety which is a new concept and other than those as required under the specification requirement and such implementation of BIM by the Contractor has been supported by OSHC under assessment of HASAS / HALENSAS;

b. The Contractor shall submit the relevant detailed specification and design drawings to the accredited safety auditor for vetting. The application has been verified / supported by the OSHC through safety audit and explicitly stated in the Safety Audit reports; and

c. The CM has verified the implementation merits and checked the sufficiency of the relevant detailed specification and design drawings to his satisfaction.

9. The assessment for payment of the item "Application of Radio Frequency Identification (RFID) for safety" in the Bills of Quantities or shall be subject to the principles as given below:

a. The Contractor has implemented RFID technology to enhance site safety and health management in terms of hazard analysis, risk assessment, safety training, etc. which shall be new concepts subject to OSHC's assessment under HASAS/HALENSAS and such RFID technology is not implemented to comply with legal or contractual requirement, not common practices in the construction industry nor proprietary products procured from the market;
b. The Contractor shall submit the relevant detailed specification and design drawings to the accredited safety auditor for vetting. The application has been verified / supported by the OSHC through safety audit and explicitly stated in the Safety Audit reports; and

c. The CM has verified the implementation merits and checked the sufficiency of the relevant detailed specification and design drawings to his satisfaction.

10. The assessment for payment of the items of "Compliance with regulations related to Environmental Protection and Site Hygiene - yearly record check", "Compliance with regulations related to Environmental Protection and Site Hygiene - residual period record check at completion" and "Compliance with regulations related to Environmental Protection and Site Hygiene - final record check" items in the Bills of Quantities shall be subject to the principles as given below:

Option 1

a. Payment for the item of "Compliance with regulations related to Environmental Protection and Site Hygiene - final record check" in respect of an assessment period shall be valued by multiplying the pre-determined rate of the item as included in the Bill of Quantities with 1.0 in respect of the record check if none of the following criteria in respect of environmental and site hygiene legislation and regulations are received from the Environmental Protection Department (EPD) or the Food and Environmental Hygiene Department (FEHD) during the assessment period:

i. One or more warning letters received from the Contract Manager subsequent to inspections;

ii. One or more warning letters received from EPD or FEHD;

iii. One or more convictions under any environmental and site hygiene regulations or legislation;

iv. Abatement Notice.

Provided that where the criteria under sub-clauses (10)(a)(i) to (iv) above are satisfied but there are one or more offence notifications received from EPD or FEHD during any assessment period for which any conviction under any environmental and site hygiene regulations or legislations is yet to be confirmed by EPD or FEHD at the time when the payment assessment is being carried out, payment for this item shall be valued with the quantity provisionally set at zero and which will be adjusted to 1.0 upon confirmation from EPD or FEHD that there is no conviction;

b. For the purpose of establishing the Contractor's entitlement to payment for the item "Environmental Protection and Site Hygiene - final record check", a one-off assessment irrespective of any extended contract period as defined in the Bill of Quantities shall be carried out by the CM;

c. The assessment period shall be from the date for commencement of the Works up to and including the date of the certificate of completion of the Works (or where phased completion of Sections is specified, the last date of completion stated amongst the different certificates of completion for the Sections of the Works) issued by the CM under GCC Clause 8.7.

Option 2
a. Payment for the items of "Compliance with regulations related to Environmental Protection and Site Hygiene - yearly record check" and "Compliance with regulations related to Environmental Protection and Site Hygiene - residual period record check at completion" shall be valued by multiplying the pre-determined rate of the respective item included in the Bill of Quantities with 1.0 in respect of the record check if none of the following in respect of environmental and site hygiene legislation and regulations are received from the Environmental Protection Department (EPD) or the Food and Environmental Hygiene Department (FEHD) during the assessment period:

i. One or more warning letters received from the Contract Manager subsequent to inspections;

ii. One or more warning letters received from EPD or FEHD;

iii. One or more convictions under any environmental and site hygiene regulations or legislation;

iv. Abatement Notice.

Provided that where the criteria under sub-clauses (10)(a)(i) to (iv) above are satisfied but there are one or more offence notifications received from EPD or FEHD during any assessment period for which any conviction under any environmental and site hygiene regulations or legislations is yet to be confirmed by EPD or FEHD at the time when the payment assessment is being carried out, payment for this item shall be valued with the quantity provisionally set at zero and which will be adjusted to 1.0 upon confirmation from EPD or FEHD that there is no conviction;

b. For the purpose of establishing the Contractor's entitlement to payment for the items of "Compliance with regulations related Environmental Protection and Site Hygiene - yearly record check", an assessment shall be carried out by the CM at the end of each full 12-month period commencing from the date for commencement of the Works. However, no assessment (and hence no payment) shall be made for any full 12-month period which ends on a date beyond the contract / extended contract period as defined in Bill of quantities or Schedule of Rates;

c. For the avoidance of doubt, the remeasured quantity in adjustment of account for item of "Compliance with regulations related Environmental Protection and Site Hygiene - yearly record check" is subject to the capping limit which is equal to the quantity as stated in the Bill of Quantities. Therefore, in case where the remeasured quantity is larger than the quantity as stated in the Bill of Quantities, the respective quantity stated in the Bill of Quantities shall be taken as the remeasured quantity for adjustment of account;

d. For the purpose of establishing the Contractor's entitlement to payment for the item of "Compliance with regulations related Environmental Protection and Site Hygiene - residual period record check at completion", an one-off assessment irrespective of any extended contract period as defined in the Bill of Quantities shall be carried out by the CM. The assessment period shall be from the first day after the last assessed period of "yearly record check" in sub-clause (9)(b) above up to and including the date of the certificate of completion of the Works (or where phased completion of Sections is specified, the last date of completion stated amongst the different certificates of completion for the Sections of the Works) issued by the CM under GCC Clause 8.7.

11. The assessment for payment of the "Recognition of innovation in environmental management and site hygiene measures" item in the Bills of Quantities shall be subject to the principles as given below:
a. The Contractor has implemented innovative and functional environmental protection installation and site hygiene measures which shall be new concepts and such measures are not implemented to comply with legal or contractual requirement, not common practices in the construction industry nor proprietary products procured from the market;

b. The measures have been supported by an independent vetting panel; and

c. The CM has verified the implementation merits to his satisfaction.

12. The assessment for payment of the items for "Surprise Safety Inspection Programme performance indicators" in the Bill of Quantities or Schedule of Rates shall be subject to the principles as given below:

a. Total score and activity scores are obtained from each inspection conducted under the Surprise Safety Inspection Programme (SSIP) as specified in PRE.C9.205. These scores shall be verified by the OSHC and confirmed by the CM for official record and payment purpose;

b. The criteria for payment assessment in respect of Surprise Safety Inspection Programme performance indicators (total score) are as follows:

i. If the total score or any activity score is below 70%, no payment shall be valued and made for this item in respect of that inspection;

ii. If the total score and all activity scores are equal to or above 70% but either the total score or any activity score is below 80%, payment for this item in respect of that inspection shall be valued by multiplying the pre-determined rate of this item as included in the Bill of Quantities or Schedule of Rates with 0.7;

iii. If the total score and all activity scores are equal to or above 80%, payment for this item in respect of that inspection shall be valued by multiplying the pre-determined rate of this item as included in the Bill of Quantities or Schedule of Rates with 1.0.

c. The criteria for payment assessment in respect of Surprise Safety Inspection performance indicators (activity scores) are as follows:

The apportioned percentage for each activity item is included in the table below.

<table>
<thead>
<tr>
<th>Item</th>
<th>Designated Critical Items</th>
<th>Apportioned percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Working at height</td>
<td>20</td>
</tr>
<tr>
<td>2</td>
<td>Prevention against falling objects</td>
<td>20</td>
</tr>
<tr>
<td>3</td>
<td>Housekeeping</td>
<td>20</td>
</tr>
<tr>
<td>4</td>
<td>Lifting operations</td>
<td>20</td>
</tr>
<tr>
<td>5</td>
<td>Electrical supply system</td>
<td>20</td>
</tr>
</tbody>
</table>

Note: The apportioned percentage for each designated critical item shall be referred to as “effective apportioned percentage” when being applied for payment assessment.

i. If the activity score of a designated critical item of an inspection is below 70%, no payment shall be valued and made for that critical item in respect of that inspection; or
ii. If the activity score of a designated critical item of an inspection is equal to or above 70% and below 80%, the corresponding apportioned percentage as included in the above table shall become an “effective apportioned percentage” for payment assessment in respect of that inspection. Payment for this item in respect of this designated critical item of that inspection shall be valued by multiplying the pre-determined rate of the item as included in the Bill of Quantities or Schedule of Rates with 0.7 of the “effective apportioned percentage” of the designated critical item; or

iii. If the activity score of a designated critical item of an inspection is equal to or above 80%, the corresponding apportioned percentage as included in the above table shall become an “effective apportioned percentage” for payment assessment in respect of that inspection. Payment for this item in respect of this designated critical item of that inspection shall be valued by multiplying the pre-determined rate of the item included in the Bill of Quantities or Schedule of Rates with 1.0 of the “effective apportioned percentage” of the designated critical item.

13. The assessment of payment of the item "Contribution to Safety Campaigns" in the Bill of Quantities or Schedule of Rates shall be subject to the principles as given below:

a. The Contractor shall be entitled to payment for entry to one of the following safety campaigns:
   i. Construction Safety Promotional Campaign organised by the OSHC;
   ii. Good Housekeeping Promotional Campaign organised by the OSHC;
   iii. Hong Kong Occupational Safety and Health Award organised by the OSHC;
   iv. Construction Industry Safety Award Scheme organised by the Labour Department; or
   v. Considerate Contractors Site Award Scheme organised by the Development Bureau with the Construction Industry Council.

   One contract can only allow a maximum of 5 such one-off payments.

b. The Contractor shall also be entitled to payment for winning a prize (any of the Gold, Silver, Bronze or Meritorious prize) in the above campaigns. The Contractor shall only be entitled to a maximum of 5 one-off payments for winning open competitions;

c. The Contractor shall also be entitled to a maximum of 3 one-off payments for organising site-based safety awards.

14. The assessment of payment of the item "Contribution to Environmental Protection Awards" in the Bill of Quantities or Schedule of Rates shall be subject to the principles as given below:

a. The Contractor shall be entitled to payment for entry to one of the following:
   i. Environmental Labels (Wastewise or Energywise) organised by the Environmental Campaign Committee (ECC) with Environmental Protection Department (EPD);
   ii. Green Innovations organised by ECC and EPD;
   iii. Sectoral Awards of The Hong Kong Awards for Environmental Excellence organised by ECC and EPD; or
iv. Outstanding Environmental Management and Performance Award of the
Considerate Contractors Site Award Scheme organised by the Development
Bureau with the Construction Industry Council.

One contract can only allow a maximum of 3 such one-off payments.
b. The Contractor shall only be entitled to a maximum of 2 one-off payments for
organising site-based environmental awards.

SITE ACCESS CONTROL OF PERSONNEL

SITE ACCESS CONTROL AND RECORDING SYSTEM

Provide and operate an Access Control and Recording System (ACRS) to record and
verify the information of all personnel (including Site Personnel, Self-employed
Workers, Specialist Contractors’ workers and visitors) entering and leaving the Site as
specified in PRE.C9.2512 to PRE.C9.2560 and as per the requirements stipulated in
the latest “Contractor's Guideline on Wage Monitoring System” published by HA from time
to time:

1. Operate the ACRS within two weeks from the notified date for commencement of
the Works;
2. After the ACRS is put into operation, issue smart cards to all personnel for
identification;
3. Subject to sub-clause 2 above, do not allow any personnel without a smart card to
work on the Site;
4. Compile a register for all issued smart cards with detail information of the card
holders and submit it to the CM for records at regular intervals as confirmed by the
CM. Both hard and soft copies of the register shall comply with the format similar
to the prescribed forms attached to the latest “Contractor's Guideline on Wage
Monitoring System” published by HA from time to time;
5. Compile and maintain daily attendance records of all personnel working on the Site
and site access record of all visitors and keep a verified copy in the wage books as
required in PRE.C9.140 as per the timeframe confirmed by the CM or his
representatives;
6. Compile and maintain schedules of wages and MPF contribution as required in
PRE.C6.170 and PRE.C9.140;
7. Compile and print record forms of Silver Card Holders working on Site by
respective trades on dates designated by the CM. The record form shall be in the
format similar to the Record Form (DCEI-F14) and fields to be entered shall enable
the information required in sub-clause (2) of PRE.C6.210 to be retrieved. The
Record Form (DCEI-F14) can be obtained from the CM upon request in writing;
8. Provide training to at least three representatives of the CM and LRO in using the
ACRS;
9. At least 2 number of portable pocket personal computers complying with the system
requirements as stipulated in PRE.C9.2520 shall be provided for the use of the CM
or LRO during the operation period of ACRS.
**CONTRACTOR'S OBLIGATIONS**

</table>

**Option 1**

| 2. The ACRS shall be a system utilising biometric recognition technology for identifying the subject (person entering or leaving the site) in combination with a non-contact type smart card system complying with ISO 14443. The chip inside the smart card shall comply with ISO 14443. The biometric authentication shall be a Handkey II or other products having similar and equivalent functions and performances; |

**Option 2**

| 2. The ACRS shall be a system with a non-contact type smart card system complying with ISO 14443. The chip inside the smart card shall comply with ISO 14443; |
| 3. The smart card shall be compatible with the Construction Workers Registration Cards issued by the Construction Industry Council (CIC) under the Construction Workers Registration Ordinance (Cap. 583) to registered construction workers. The system's card readers shall be compatible with the smart card and shall be complete with a security access module (SAM) for cryptographic security slot. The Contractor shall obtain the SAM from the CIC; |
| 4. The ACRS shall have sufficient memory to capture and record the information, and produce reports as specified in PRE.C9.2530 to PRE.C9.2550; |
| 5. Adequate and secure backup system shall be provided. In the event of power failure, all memory contained in the data station computer shall be retained; |
| 6. If a personnel (except visitor) is issued with a registration card by the CIC pursuant to the Construction Workers Registration Ordinance (Cap. 583), the card so issued is permitted to be used in lieu of the smart card required under this section; |
7. All data stored in the ACRS shall be accessed and retrieved by the microcomputer provided to the LRO. The ACRS shall allow the retrieved data to be printed on paper and exported to electronic files in format of 'Portable Document Format' and 'Microsoft Excel' or other commonly available format acceptable to the CM;

8. The ACRS shall be able to assign an unique Site Personnel Number for each issued smart card complying with the format as stipulated in the latest "Contractor's Guideline on Wage Monitoring System" published by HA from time to time;

9. The ACRS shall be able to compile, print and export forms, schedules and register as required in PRE.C9.140 and PRE.C9.2510 complying with the format similar to the prescribed forms attached to the latest "Contractor's Guideline on Wage Monitoring System" published by HA from time to time;

10. The portable pocket personal computer shall be able to synchronize with the data bank of the ACRS and are capable of recording, verifying and updating the information of the personnel (except visitors) including reading theirsmart cards and registration cards issued by CIC;

11. The ACRS shall be able to maintain all raw data of in/out records of all site personnel and highlight all the records input or edited by manual in reports compiled and printed by ACRS as stipulated in sub-clause (9) for checking.

**PRE.C9.2530.8 ENTRANCE/EXIT CONTROL UNIT**

*Option 1*

1. Install sufficient numbers of entrance/exit control unit at all ingress or egress points of the Site and submit the exact locations to the CM for agreement;

2. Each entrance/exit control unit shall be equipped with non-contact type smart card readers with biometric recognition device and access control device, e.g. turnstile;

3. Connect the smart card readers to a secured computer which shall record all personnel's signing in and out of the Site. Provide separate smart card readers with clear labels indicating "IN" and "OUT" for this purpose;

4. Ensure the system can display the photograph of the smart card holder saved in the central data computer unit and the smart card.

*Option 2*

1. A total of ……. number of portable pocket personal computer complied with the system requirements as stipulated in PRE.C9.2520, which can be synchronized with the data bank of the ACRS and is capable of recording, verifying and updating the information of the Site Personnel and Self-employed workers including their smart cards and registration cards issued by CIC, shall be provided for checking the attendance of site personnel during the operation period of ACRS;

2. One portable pocket personal computer shall be provided at a convenient location (as agreed with the CM) within each Portion of the Site under construction. The Portions of the Site to be provided with portable pocket personal computer shall be determined by the CM from time to time during the contract period.

**PRE.C9.2540.8 CENTRAL DATA COMPUTER UNIT**

The secured computer unit must have high availability feature of at least 96% uptime or not more than five hours per month outage and shall be loaded with appropriate software to perform the following functions:

1. Automatic recording of the entry/exit information of the smart card holders passing the entry/exit gates;
2. Output and transmit the registration records and the daily entry and exit record, in a format stipulated by HA, to HA’s computer facility electronically on frequency prescribed by HA. The transmitted data including its Intellectual Property Right will be owned by HA. HA shall have the right to keep, analyse, compile and further disclose the transmitted data to any person in such form and manner as HA deems fit;

3. Entry and updating of information on smart card holders;

4. Instant retrieval of picture and information of smart card holder;

5. Automatic printout and alarm message in case of faulty operation.

**PRE.C9.2550.A INFORMATION TO BE CAPTURED AND SAVED IN ACRS**

1. Provide clear plastic holders to all personnel (except visitors) for holding their smart cards or registration cards issued by CIC. The plastic holder shall be provided with a means to enable it to be displayed in a conspicuous position of the personnel and affixed with a label with the following information shown:
   a. Site Personnel Number;
   b. Name of personnel in Chinese and English;
   c. Name of personnel’s employer in Chinese and English (except Self-employed Worker);
   d. Trade of personnel and, if applicable, the relevant trade no. (refer to the trade list issued by CIC);
   e. Photograph of personnel;

   Background colour of the label for the Contractor’s direct employees shall be red, whilst that for all other Site Personnel shall be green, and Self-employed Workers shall be blue and Specialist Contractors’ Workers shall be white.

2. Except for the smart cards which are issued to visitors, the following electronic data shall be contained in smart cards of personnel and the central data unit in encrypt form:
   a. Site Personnel Number;
   b. Name of personnel in Chinese and English;
   c. Hong Kong Identity Card number of personnel;
   d. Details of Construction Workers Registration Card and Trade Test / Intermediate Trade Test Certification Card including the card no., expiry date, trade name and trade no., if available;
   e. Name of Personnel's employer in Chinese and English (except Self-employed Worker);
   f. Trade of personnel and, if applicable, the relevant trade no. (refer to the trade list issued by CIC);
   g. Photograph of personnel;
   h. Contract no. and Contract title;
   i. Employment contract details of Personnel/personal insurance policy details as agreed with the CM (optional for smart card);
   j. Expiry date of the smart card and whether the smart card has been returned or voided;
k. Signature specimen of personnel (optional for smart card);

l. Details of Silver Card (if any) including the card no., expiry date and information required in the Record Form (DCEI-F14) and sub-clause (2) of PRE.C6.210. The Record Form (DCEI-F14) can be obtained from the CM upon request in writing;

m. Details of Safety Card including the card no. and expiry date;

n. Contact telephone no. of personnel.

3. The following information of all the visitors shall be captured and recorded in the ACRS:

a. Name of visitor in Chinese or English;

b. Hong Kong Identity Card number of visitor;

c. Name of visitor's company/organization;

d. Contact telephone no. of visitor;

e. Particulars of staff to be visited:

   i. Name;

   ii. Telephone no.;

   iii. Name of company.

f. Purpose of the visit;

g. Site Personnel Number of the smart card issued;

h. Whether the smart card has been returned.

The smart card issued to a visitor shall be provided with a means to enable it to be displayed in a conspicuous position of the visitor and in yellow colour.

4. The smart card shall contain sufficient encrypted information for identification of the card holder and access to the master data bank of the system;

5. Comply with the requirements as stipulated in the Personal Data (Privacy) Ordinance for avoiding the abuse of the information collected. Adequate data security control shall be provided to limit the access right to the ACRS on need basis. The usage of the information collected by the ACRS shall be used exclusively for security control and supporting information as required by the Contract e.g. attendance checking;

6. Allow the LRO, representatives of the CM or any other persons authorized by the CM to check the accuracy of the records.

PRE.C9.2560.8 SYSTEM RUNNING AND TERMINATION

1. Operate the ACRS at all times before termination. Replace any component of the ACRS immediately in the event of breakdowns, repairs or regular maintenance;
2. Maintain the operation of ACRS up to the date of the certificate of completion of the Works (or where phased completion of Sections is specified, the last date of completion stated amongst the different certificates of completion for the Sections of the Works) issued by the CM under GCC Clause 8.7. For Contracts with more than one Portion of the Site, and for those Portions with only one Section of the Works, maintain the operation of ACRS for each Portion up to the date of completion of the Section of the Works in such Portion as issued by the CM under GCC Clause 8.7. For Contracts with more than one Portion of the Site, and for those Portions with more than one Section of the Works, maintain the operation of ACRS for each Portion up to the last date of completion stated amongst the different certificates of completion for the Sections of the Works in the same Portion as issued by the CM under GCC Clause 8.7;

3. Seek CM's prior approval for terminating the operation of each ACRS without prejudice to the provisions as specified in sub-clause (2) above;

4. Seek CM's prior approval for dismantling and removal of each access control unit.

WORKS WITHIN THE RAILWAY PROTECTION AREA

PRE.C9.2600.N  GENERAL
Further to the provisions of Clause SCC22.6 of the Special Conditions of Contract, comply with PRE.C9.2605 to PRE.C9.2695 for works to be carried out within the Railway Protection Area as defined in the Contract and as shown on the Drawing referred to in PRE.C6.240.

PRE.C9.2605.N  PROCEDURE FOR POSSESSION
Provided the Contractor has completed all his obligations to obtain a Possession and has made satisfactory arrangements with MTRCL in respect of the extent of working area and procedure for such Possession, MTRCL shall before the Possession advise the Contractor of the detailed time, limits and conditions with which the Contractor must comply.

Except with the prior written approval of MTRCL the Contractor shall not carry out any works in the vicinity of the railway track without the attendance of a MTRCL’s Competent Person to take care of track safety.

PRE.C9.2615.N  TRESPASSING ON RAILWAY PREMISES
The Contractor shall be responsible for ensuring that none of his personnel, subcontractors or other persons employed by him or on his behalf proceed beyond the agreed limits of the working area or access route or trespass upon railway premises.
CONTRACTOR'S OBLIGATIONS

PRE.C9

PRE.C9.2620.N PREVENTION OF ACCIDENTS
Before entry is made within the railway premises, the Contractor shall consult MTRCL regarding the latest safety requirements for working within the railway premises. The Contractor shall brief each person employed by or on behalf of him, and those employed by or on behalf of any sub-contractor who may work on or above the track, including persons recruited during the progress of the Works. The Contractor shall ensure that all such persons are fully conversant with the requirements and that those requirements are strictly observed. The Contractor shall arrange induction courses for each and every member of staff (including those of the sub-contractors and the CM) before they are allowed to work within the railway premises and he shall arrange for all personnel to wear identification cards to facilitate control if required by MTRCL.

PRE.C9.2625.N WORKS DESIGNED BY CONTRACTOR
Where the Contractor is required to carry out any design works for permanent or temporary works, the Contractor shall prepare the design works with reference to the DEVB TC(W) No. 1/2019 on Railway Protection and shall in addition to the requirements specified in other relevant contract documents:

1. Hold early preliminary discussions, through the CM, with MTRCL and make provisional arrangements so that the works can be carried out with the minimum interference to railway traffic and within the extent of Restriction, Possession and Isolation periods that MTRCL can make available. The actual dates for any Restriction, Possession or Isolation previously agreed may, depending on the railway traffic requirements, be subject to amendment by MTRCL when the firm program is drawn up. If MTRCL agrees that such works do not require a Restriction, Possession or Isolation then no early provisional arrangements are necessary;

2. Submit full details, drawings and calculations of such works for consideration by MTRCL. No examination by MTRCL of any document submitted by the Contractor or of any Contractor's drawings of such works or agreement expressed by MTRCL shall absolve the Contractor of his responsibility for the adequacy of the design;

3. Bear in mind that there are certain restraints on the design of and making alteration to properties in close proximity to a railway vent shaft to minimize the possibility of contamination by fire or smoke. Openings of the new structure such as an openable or fixed window, doorway, building ventilation system intake or exhaust and the like in any building shall be located not closer than 5 m to any railway vent shaft, irrespective of whether such vent shaft is free-standing or is accommodated in a building. The distance may be reduced to 2.5 m if the exhaust air from the railway vent shaft is directed away from and is not likely to affect the opening by natural convection.

PRE.C9.2630.N METHOD OF CARRYING OUT THE WORKS AND USE OF PLANT
1. At least six weeks prior to the commencement of those part of the Works within the Railway Protection Area, full details, including calculations, drawings and construction method statements on such permanent works, temporary works, slope works, drainage works, tree planting works, ground investigation works, hoarding works, fire protection measures, lifting operations, construction sequence and program and the likes shall be submitted to MTRCL for comments and agreement. MTRCL’s agreement with such submission shall not relieve the Contractor of any of his duties or responsibilities under the Contract;
2. All works and plant operations within the Railway Protection Area shall be carried out in such manner as to avoid risk of danger to the railway traffic facilities and to passengers or to persons entitled to be within the railway premises and so as to avoid (except to the extent previously agreed in writing) any interference with or obstruction of the free movement of the railway traffic or any such passengers or persons;

3. Detailed plans and sections showing the relationship amongst the proposed works, plant operations, railway structures and tracks shall be provided for MTRCL’s prior comments and agreement;

4. All works shall be arranged and carried out in compliance with the requirements as stipulated in the “Technical Notes for Guidance in Assessing the Effects of Civil Engineering Construction / Building Development on Railway Structures and Operations” in APPENDIX PRE.C9/XI to this Specification and the “Key industrial safety precautions for Contractors working within railway premises” in APPENDIX PRE.C9/XII to this Specification respectively;

5. Prior to the commencement of any structural works in connection with railway structure, if agreed by MTRCL, a structural compatibility check certified by the original designer of the railway structure or by a Registered Structural Engineer shall be submitted to MTRCL for comments and agreement. As built information of the railway structure can be viewed in MTRCL;

6. Assessment to check the effects induced in railway structures / installations arising from the works in accordance with the “Technical Notes for Guidance in Assessing the Effects of Civil Engineering Construction / Building Development on Railway Structures and Operations” in APPENDIX PRE.C9/XI to this Specification shall be carried out and submitted to MTRCL for prior comments and agreement;

7. Any damage done to railway structures / installations or any works done which affect the safe operation of the railway shall be repaired and reinstated by the Contractor to the satisfaction of MTRCL;

8. Prior to the commencement of any works within the Railway Protection Area, a survey to record the condition of the railway structures / installations constructed within 30 m from the works shall be carried out and submitted to MTRCL for comments and agreement;

9. The movement, deformation, change in stress and vibration induced in any railway structures / installations arising from the works shall be monitored by the Contractor. A monitoring proposal shall be submitted to MTRCL for prior comments and agreement;

10. No excavated materials, building materials, debris, containers, sheds of any kind, huts, compressors, power generators, dangerous goods or inflammable materials shall be placed or stored within 6 m of the railway premises;

11. At all times, a safe, fluent and unimpeded passageway must be maintained on the Site for MTRCL staff to all railway structures / installations;

12. The free and unblocked passenger access, maintenance access and emergency vehicle access (EVA) of the railway must not be affected by the works at all times;

13. Working Hours:
a. Prior comments and agreement from MTRCL shall be obtained on the working hours for the works such as erection of hoarding, working platform, lifting operations and all other works to be carried out within railway premises as well as in the vicinity of the railway structures and installation such as overhead power cables which will in the opinion of MTRCL affect the safe operation of the railway. MTRCL may require these works to be carried out outside the peak railway traffic hours or to be carried out during the non-traffic hours of the railway.

14. Site Representative:
   a. When working within or above the railway premises and/or within 6 m of the railway track and/or overhead power cables, the Contractor shall provide a competent site representative to supervise the proper execution of the works. The site representative shall be a professionally qualified engineer and a member of the Hong Kong Institution of Engineers or the Institution of Civil Engineers, UK or equivalent, and have site management experience appropriate to the nature of works;
   b. The site representative shall have the authority to receive and carry out the directives and instructions from MTRCL. The site representative shall carry a mobile phone at all times and respond to the MTRCL’s calls immediately;
   c. The site representative shall be present on site full time during the construction works carried out within or above the railway premises and/or within 6 m of the railway track and/or overhead power cables. If such site representative is absent, no works shall be allowed to be executed.

15. MTRCL’s Competent Persons:
   a. All works to be carried out within or above the railway premises and/or the works which have high risk on the safe operation of the railway and are required by MTRCL to be carried out during non-traffic hours of the railway, shall be carried out in the presence of a MTRCL’s Competent Person and/or MTRCL’s engineer’s person-in-charge and/or hand signalman and/or lookoutman depending on the nature of the works and its possible effects on the railway. The Contractor shall be required to make request to MTRCL three weeks in advance for such arrangements.

16. With regard to all works to be carried out within railway premises, the Contractor shall apply for the necessary construction noise permit from the relevant Government Departments;

17. For safety and operational reasons, MTRCL shall have the authority to stop the works when required. The Contractor shall stop the works immediately when such an instruction is given by MTRCL and the works shall not be resumed until permission is given by MTRCL;

18. Before the Contractor takes over the Site within the Railway Protection Area, the Contractor shall establish an effective communication channel amongst MTRCL, the CM and the Contractor. Such a communication channel shall be adequate to cover all hours;

19. MTRCL shall be informed at least three weeks prior to the actual commencement of any site works.
CONTRACTOR'S OBLIGATIONS

INTERFERENCE WITH DRAINS AND SERVICES

1. The Contractor shall not interfere with the MTRCL’s cables, signals, telegraph wires or any other apparatus affecting the operations of the railway. The Contractor shall give sufficient notice to MTRCL to enable him to arrange for any diversion, protection or support works which MTRCL considers could be and should be carried out prior to the commencement of any works which may affect such apparatuses;

2. The Contractor shall not interfere with any public utility services within the railway premises. The Contractor shall give sufficient notice to the public utility companies, the MTRCL and/or the relevant Government Departments to enable them to arrange for any diversion, protection or support works which they consider could be and should be carried out prior to the commencement of any works which may affect such services;

3. The Contractor shall ensure that no metallic object (including metallic surveying tapes) is allowed to come into contact with two or more running rails nor bridge the gap across insulated rail joints. Failure to do so will cause interference with the signaling system and corresponding delays to traffic;

4. The Contractor shall divert to a suitable outlet, by pipes or other means, water from springs, water courses, or drains which may be affected by the works and every reasonable precaution shall be taken by the Contractor to prevent damage to MTRCL’s property. The Contractor shall not be allowed without the prior agreement of MTRCL to make temporary or permanent connections to the railway drains, pipes or other services.

CROSSING THE TRACK

Persons engaged on the Works shall not be allowed to cross or convey material across the tracks except under conditions previously agreed in writing by MTRCL.

OVERHEAD ELECTRICAL EQUIPMENT

The Contractor's attention is drawn to the presence of the overhead electrical equipment which should be treated live at all times unless it has been isolated and earthed. Overhead electrical equipment is charged at high voltage and the Contractor shall observe the following precautions:

1. Works shall not be carried out, cranes or other plant shall not be erected, operated or dismantled, or materials shall not be stored, within the prohibited space which is within 3 m of a vertical plane from the nearest live overhead electrical equipment including return conductors and all supports to such electrical equipment;

2. The prohibited space in sub-clause (1) above shall be increased by the length of any tool or material being handled. However, works below the overhead electrical equipment on the permanent way, platforms, walkways and the like is permitted without special precautions provided that tools or equipment are not at any time raised or extended above head height;

3. The prohibited space in sub-clause (1) above shall be increased by the length of the longest individual unit of any scaffolding. MTRCL may require the scaffolds or similar apparatuses to be earthed;

4. If a crane or other construction equipment is used, crane stops, protective catch fence and warning notices shall be provided by the Contractor to ensure that there can be no encroachment by the crane, load or other construction equipment on the prohibited space defined in sub-clause (1) above even if such crane, load or construction equipment slips, falls, fails or overturns. The design of the protective catch fence shall be agreed with MTRCL;
5. Portable ladders used shall be of non-conducting material and shall not be reinforced by metal attachments running along the stiles of the ladders. Special precautions must be taken to ensure that the ladder cannot slip and encroach on the prohibited space defined in sub-clause (1) above;

6. Any disturbance of or attachment to any equipment forming part of the overhead electrical equipment system must be carried out by authorized personnel of MTRCL;

7. Provided that where it is impracticable to comply with any of the above requirements, the Contractor shall request MTRCL to arrange any possible special precautions which MTRCL considers could be taken.

**USE OF EXPLOSIVES**

Explosives shall not be used in connection with the Works without the written consent of MTRCL and the Commissioner of Mines, Hong Kong Special Administrative Region. If approval to blast is given then it shall only be carried out under such conditions as the Commissioner of Mines may impose.

**EMERGENCY CREW**

The Contractor shall provide an emergency crew during heavy rains and typhoons and, if required by MTRCL, at critical stages of the Works. The name of, and the method of communication with, the person who will be in charge of the crew for the following month shall be forwarded to MTRCL not less than two weeks before the first day of that month.

**STACKING OF MATERIAL**

The Contractor shall stack and place all materials, plant and appliances in such a manner as to prevent their causing injury or damage to persons or property and at a safe distance both from railway tracks and platform edges, normally not less than 2.8 m from the nearest rail of operating track or 2.5 m from a platform edge, but subject to the requirements as specified in PRE.C9.2645. The Contractor shall also strictly observe any instructions given by MTRCL as to the precautions to be taken and the distance from railway tracks and platform edges within which materials, plant and appliances shall not be stacked or placed.

**SCREENING OF LIGHTS**

All lights provided by the Contractor shall be placed or screened so as not to interfere with any railway signals and shall not form a source of glare to the train operator. The Contractor shall inform MTRCL and obtain his written permission before commencing any temporary works which might interfere with the railway signals or the sighting of such.

**FIRE PREVENTION**

The Contractor shall during the performance of the works make adequate arrangements, to the satisfaction of MTRCL, for the protection of the works and any adjacent railway premises from fire and shall comply with MTRCL’s requirements, if any, with regard to such protection. The Contractor shall give MTRCL all facilitations to inspect the fire prevention arrangements within the railway premises and within such distance from them as MTRCL may consider necessary and shall remove such materials and take such steps to reduce the fire risk as MTRCL may from time to time require.
PRE.C9.2675.N  NOTICE OF ACCIDENTS

In the case of any accident arising out of the works within the railway premises, the Contractor shall without delay notify MTRCL in addition to any other notification which he is required to make by law and/or under the Contract.

PRE.C9.2680.N  ADVERTISEMENTS

The Contractor shall not permit any advertisement to be displayed within the railway premises.

The Contractor shall prevent mud or water falling or draining from the Works on to the land or property within the railway premises and particularly on to the track, ballast or walkways. The Contractor shall not leave any rubbish on the land and property within the railway premises. The Contractor shall clear away and remove all constructional plant, surplus materials and temporary works as and when in the opinion of MTRCL these cease to be required for the works being carried out. Any damage to the land or property within the railway premises shall be repaired and reinstated to the satisfaction of MTRCL.

The Contractor shall be liable for and shall indemnify MTRCL against any liabilities, claims or proceedings in respect of any damage or injury arising out of or in connection with his works within/in the vicinity of the railway premises. The Contractor shall complete and provide to MTRCL an indemnity and a letter of undertaking in the form set out in APPENDIX PRE.C9/XIII and APPENDIX PRE.C9/XIV to this Worksection respectively.

PRE.C9.2695.N  RATE OF CHARGE FOR SERVICE / INFORMATION PROVIDED BY MTRCL

The Contractor shall be responsible for the payment of service / information provided by MTRCL. The rate of charge for service / information provided by MTRCL is set out in Appendix U to this Specification for reference only.

**Total Delivered**

**Remarks:** Reasons for the discrepancy between monthly intakes and monthly consumption is due to:

[N.B. The total for the month is for checking the relative order of quantity of fuel delivered and consumed on Site. The Contractor / Sub-contractor shall provide reasons when there is a discrepancy between monthly intake and monthly consumption, for example, wastage during handling and the like.]
Sample Company Code of Ethics for Hong Kong Housing Authority Contractors

The Company is committed to upholding the highest standards of honesty and integrity to enhance the quality and efficiency of service. As we owe a duty to the community, employers, contractors and their employees, we will act professionally and use our best endeavour to practise this code of ethics in order to promote integrity within the construction industry.

1. Laws and Regulations

The Company shall conduct all business dealings strictly according to all the statutory rules and regulations. Directors and employees are not allowed to solicit or accept any advantages, whether in Hong Kong or elsewhere, when conducting business on behalf of the company.

2. Securing of Work/Contract

In accepting or securing work/contract, the Company shall have regard to factors which might reflect adversely upon the integrity, objectivity and judgement in relation to that work/contract. We shall not directly or indirectly exert undue pressure/influence on any person, for the purpose of securing work/contract.

3. Confidentiality

The Company owes a duty to the employer, contractors and employees to protect any confidential/privileged information entrusted upon us. We shall not disclose to a third party any such information without prior consent.

4. Professionalism

The Company shall discharge its trade related contractual responsibilities with competence and due diligence. We shall at all times perform our work objectively and impartially and free from influence by any consideration, which may, either potentially or actually, conflict with this requirement. The Company shall ensure that the work is carried out with proper regard to technical and professional standard expected of the trade.

5. Respect to Intellectual Property

The Company affords full respect to proprietary intellectual property and shall refrain from using any ideas, products and goods without proper authorisation.
6. **Relationships with Employers and Contractors**

The Company shall conduct all business dealings, including the procurement of service and supply, with honesty and fairness and expect the same in the relationships with all those with whom we do business. The Company shall deal with its employers and contractors in a professional, fair and ethical manner.

7. **Safety and Training**

The Company shall provide a safe and healthy workplace for the employees and workforce and shall encourage continuous professional development and skill enhancement amongst its staff and the workforce.

8. **Community and Environment**

In the course of business, the Company shall seek to protect public interest and safety. We shall also seek to minimise public nuisance, maximise general safety measures and be sensitive to protection of environment.

9. **Declaration**

The Company shall declare to its employers, contractors and any business associates whenever any conflict of interest situation which, to its best knowledge, arises or has arisen.

10. **Delegation of Duties**

To enable the directors and employees to perform at the highest level of integrity, commitment and professionalism, the Company has issued a code of conduct for directors and employees. The Company shall ensure its site staff and those to whom it delegates work (such as employers/contractors) understand the Company’s code of conduct and encourage them to comply with these requirements.
Sample Code of Conduct
for Directors and Staff Members of
Hong Kong Housing Authority Contractors/Service Providers

Ethical Commitment
1. The (name of company) (hereafter referred to as the Company) regards honesty, integrity and fair play as our core values that must be upheld by all directors and staff of the Company at all times. This Code sets out the basic standard of conduct expected of all directors and staff members, and the Company’s policy on acceptance of advantage and handling of conflict of interest when dealing with the Company’s business.

Prevention of Bribery
2. The Company prohibits all forms of bribery and corruption. All directors and staff are prohibited from soliciting, accepting or offering any bribe in conducting the Company’s business or affairs, whether in Hong Kong or elsewhere. In conducting all business or affairs of the Company, they must comply with the Prevention of Bribery Ordinance (POBO) (Cap. 201) and must not:

   (a) solicit or accept any advantage from others as a reward for or inducement to doing any act or showing favour in relation to the Company’s business or affairs, or offer any advantage to an agent of another as a reward for or inducement to doing any act or showing favour in relation to his principal’s business or affairs;

   (b) offer any advantage to any public servant (including Government / public body employee) as a reward for or inducement to his performing any act in his official capacity or his showing any favour or providing any assistance in business dealing with the Government / a public body;

   (c) offer any advantage to any staff and members of a government department or public body while they are having dealings with the latter; or

   (d) use documents containing false information to deceive or mislead the Company, regardless of whether there is any gain or advantage involved.

(The relevant provisions of the POBO are at the Annex.)

Acceptance of Advantage
3. It is the Company’s policy that directors and staff should not solicit or accept any advantage for themselves or others, from any person, company or organisation having business dealings with the Company or any subordinate, except that they may accept (but not solicit) the following when offered on a voluntary basis:

---

1 “Staff” cover full-time, part-time and temporary staff, except where specified.
SAMPLE COMPANY CODE OF ETHICS FOR HONG KONG HOUSING AUTHORITY CONTRACTORS (SHEET 4 OF 6)

(a) advertising or promotional gifts or souvenirs of a nominal value; or
(b) modest gifts given on festive or special occasions, subject to a maximum limit of $_______ in value; or
(c) discounts or other special offers given by any person or company to them as customers, on terms and conditions equally applicable to other customers in general.

4. Gifts or souvenirs described in paragraph 3(a) that are presented to directors and staff in official functions are deemed as offers to the Company. The directors and staff concerned should report the acceptance to the Company and seek direction as to how to handle the gifts or souvenirs from the approving authority in writing. If a director or staff member wishes to accept any advantage not covered in paragraph 3, he/she should also seek permission from the approving authority in writing.

5. However, a director or staff member should decline an offer of advantage if acceptance could affect his/her objectivity in conducting the Company’s business or induce him/her to act against the interest of the Company, or acceptance will likely lead to perception or allegation of impropriety.

6. If a director or staff member has to act on behalf of a client in the course of carrying out the Company’s business, he/she should also comply with any additional restrictions on acceptance of advantage that may be set by the client (e.g. directors and staff performing any duties under a Hong Kong Housing Authority (HKA) contract are prohibited from accepting advantages (including gifts from tenants/licencess/occupiers/visitors/third parties/sub-contractors/agents, etc.) in relation to that contract).

Offer of Advantage

7. Directors and staff are prohibited from offering advantages to any director, staff member or agent of another company or organisation, for the purpose of influencing such person in any dealing, whether directly or indirectly through a third party, when conducting the Company’s business. Even when an offer of advantage carries no intention of improper influence, it should be ascertained that the intended recipient is permitted by his employer/principal to accept it under the relevant circumstance before the advantage is offered. However, directors and staff must not offer advantage to any staff and member of a government department or public body while they are having dealings with the latter (para. 2(e)).

Entertainment

8. Although entertainment is an acceptable form of business and social behaviour, a director or staff member should not accept lavish or frequent entertainment from persons with whom the Company has business dealings (e.g. tenants, suppliers or

---

2 Specify the post of the approving authority in the Code.
3 Entertainment refers to "entertainment" as defined in the POBO, i.e. food or drink provided for immediate consumption on the occasion, and any other entertainment provided at the same time.
contractors in HA contracts), or from his/her subordinates to avoid placing himself/herself in a position of obligation. Where acceptance of such invitations are unavoidable for reasons of courtesy, directors and staff should seek permission from the approving authority. Moreover, directors and staff are not allowed to offer any excessive entertainment, in particular, to any HA and Housing Department employees or members of their families.

Conflict of Interest

9. Directors and staff should avoid any conflict of interest situation (i.e. situation where their private interest conflicts with the interest of the Company) or the perception of such conflicts. When actual or potential conflict of interest arises (e.g. directors, staff or their family members have interest in the Company’s contracts which they are supervising), the directors or staff concerned should make a declaration to the approving authority in writing through their supervisors. They should also similarly seek prior approval from the Company before they take up outside work or employment which could create or give rise to a conflict of interest situation.

Gambling

10. Directors and staff should not engage in frequent, excessive or high stake gambling of any kind with persons having business dealings with the Company (including project staff in HA contracts and tenants, etc.) to avoid any actual or potential conflict of interest.

Loans

11. Directors and staff should not accept any loan from, or through the assistance of, any individual or organisation having business dealings with the Company. There is however no restriction on borrowing from licensed banks or financial institutions.

Misuse of Official Position, Company Assets and Information

12. Directors and staff must not misuse their official positions in the Company to pursue their own private interests, which include their financial and personal interests and those of their family members, relatives or close personal friends.

13. Directors and staff in charge of or having access to any Company assets (including funds, property, information, intellectual property, etc.) should use them solely for the purpose of conducting the Company’s business. Unauthorised use of Company assets, such as misuse for personal interest, is strictly prohibited.

14. Directors and staff should not disclose any classified information (e.g. tenants’ personal or family particulars in a HA contract) without authorisation or misuse any Company information (e.g. unauthorised sale of the information). Directors and staff who have access to or are in control of such information, including information in the Company’s computer system, should take security measures to protect the information.
from misuse or unauthorised disclosure. Special care should also be taken in the use of any personal data, including directors’, staff’s and customers’ personal data, to ensure compliance with the Personal Data (Privacy) Ordinance (Cap. 486).

**Compliance with the Code**

15. It is the responsibility of every director and staff member of the Company to understand and comply with this Code, whether performing his duties of the Company in or outside Hong Kong. Managers and supervisors should also ensure that the staff under their supervision understand well and comply with this Code.

16. Any director or staff member in breach of this Code will be subject to disciplinary action, including termination of appointment. Any reports of suspected breaches or enquiries about this Code should be made to (post of a designated senior staff member). In cases of suspected corruption or other criminal offences, a report should be made to the appropriate authority.

## PRE.C9.APPEND8.8  STANDARD TEMPLATE FOR CONFIRMATION OF VERBAL INSTRUCTION

### CONFIRMATION OF VERBAL INSTRUCTION (CVI)

<table>
<thead>
<tr>
<th>Contract No.</th>
<th>CVI No.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

#### Principles:

1. CVI provides quick means for the Contractor to convey the Project Team construction details usually minor in nature.
2. CVI shall not relieve the Contractor's obligation under relevant clause of the Conditions of Contract to give adequate notice of request for information for execution of the Works.
3. CVI shall NOT be used for measurement and adjustment of the final contract sum.
4. Any variation to the Contract arising from the information in CVI shall be separately counted by CM/PM Instructions [R] with varied drawings incorporating changes confirmed by CM/PM and Contractor may raise for discussion any particular CVI not received by CM/PM claiming considerable cost implication may request indicative cost of £100,000 or above, and they offer the CVI to be in the purchase estimating the cost effect for cost reporting and interim payment as necessary.
5. CVI is NOT a notice of claim for extension of time or cost claim under the Contract, and NO time or cost claim shall be implied under CVI. Any such claim shall be submitted separately in accordance with relevant clauses of the Conditions of Contract.

APPENDIX PRE.C9/XI

Technical Notes for Guidance in Assessing the Effects of Civil Engineering Construction/Building Development on Railway Structures and Operations

A. General

All proposals for new building and engineering works including utilities works involving excavation within the limits of the Railway Protection Area shall be subject to special scrutiny by MTRCL prior to giving approval to any plans and consent for commencing construction works. Every proposal shall be assessed individually on its impact on existing railway and related structures/installations including all plant and fixtures necessary for the safe operation of the railway and subject to satisfactory compliance with the following technical requirements.

B. Underground Railway Structures

1. Site Formation/Foundation Works

Where site formation or foundation works or excavation works etc. are proposed above, beneath or adjacent to railway underground structures/installations including cooling water mains system, the effects of such works shall not exceed the following limits: -

(a) The vertical or horizontal pressure change on any underground structures/installations due to the works, including filling, ground improvement, dewatering etc. and due to addition or reduction of loads transmitted from foundations (including any loads arising during construction), shall not exceed 20 kPa.

(b) Differential movement resulting from the works shall not produce distortion in any railway structures/installations including the plinth or track in excess of 1 in 1 000 in any plane or a total movement in any railway structures/installations including the plinth or track exceeding 20 mm in any plane.

(c) The induced level difference between rails of a track in perpendicular plan resulting from the works shall not exceed 5 mm.

(d) The peak particle velocities induced to any railway structures resulting from blasting (where permitted) and from driving or withdrawing of piles or any similar operation which can induce prolonged vibration shall not exceed 25 mm/sec and 15 mm/sec respectively, when measured with a vibrograph.

(e) No pile, foundation, borehole/drillhole, well, soil nail, horizontal drain, rock bolt/dowel or other geotechnical installation shall be driven, constructed or installed within a distance of 3 m from any point of the underground railway structures.

(f) Any part of an anchor, if allowed, shall be more than 3 m away from any part of a railway structure/installation, and the centroid of the fixed length of the anchor shall be more than twice the fixed length away from any railway structure/installation.

2. Ground Investigation Works

Ground investigation proposals should include the following details and requirements: -
CONTRACTOR'S OBLIGATIONS

(a) Details of the exploration and locations of the proposed exploration holes, trial pits, trenches, field testing or instrumentations relative to any railway structures whether inside or outside the lot;

(b) Proposed depth of boreholes/drillholes, pits or trenches;

(c) A method statement for sinking boreholes/drillholes, excavating trial pits and trenches including back-filling, conducting field testing or installing instrumentation;

(d) A method statement for checking verticality of boreholes/drillholes located within a distance of 10 m on plan of any point of the underground railway structure, should boreholes/drillholes be sunk to a depth of 3 m from the highest point of the railway structures; and

(e) A method statement for controlling depth of boreholes/drillholes sinking within a distance of 3 m on plan of any point of the underground railway structures.

Each proposal will also be judged against the technical guidelines as specified in paragraph B.1 above.

3. Utility Works

Utility trenches/pits which require excavation within the Railway Protection Area shall not be carried out without the approval of MTRCL.

4. Marine Works

Any reclamation, dredging, laying of pipes, dropping of anchors, or other engineering works to be carried out within the Railway Protection Area shall be submitted to MTRCL for approval.

5. Sinking of Wells

Sinking of wells within Railway Protection Area shall not be carried out without the approval of MTRCL.

C. Overhead Railway Structures

1. Scaffolding, Advertising Signs, Projections

Erection of scaffolding, working platforms, advertising signs or any projections at a level above the railway tracks shall not be allowed within a distance of 6 m on plan of any point of the railway tracks, without the agreement from MTRCL. When such works are permitted to be carried out within the 6 m limit, effective measures to protect the railway structures shall be provided. According to individual circumstances it may be necessary for such works to be conducted outside the railway operation hours and all protective works shall be subject to the special approval of MTRCL.

2. Overhead Structures

The requirements of paragraph B.1(b) to B.1(f) shall also apply to overhead structures.

3. Utility Works

When cables, ducts and pipes, etc. are to cross above or below railway overhead structures, the Utility Undertaker shall submit to MTRCL details of the cables, ducts, pipes and the method of construction and seek approval before works can commence. When cables, ducts and pipes, etc. are to pass over the railway, the provisions of paragraphs B.1, C.1 and D shall apply.

D. At-grade Railway Structures

1. When utility works are to be carried out across the at-grade railway tracks, agreement from MTRCL has to be sought.

2. Unless prior special agreement has been obtained from MTRCL, piling works will not be permitted within 3 m on plan from the railway fence or wall along the Railway Protection Area, or 7 m on plan from the centreline of the nearest track when there is no railway fence or wall.
3. Vibration measured on the overhead power line mast or signalling and telecommunication furniture of the railway shall not exceed the peak particle velocity of 10 mm/sec and the vibration amplitudes shall not exceed 80 µm.

4. The requirements of paragraphs B.1, B.2, B.3 and C.1 shall also apply to the at-grade railway structures and tracks.

E. Operation of Stationary Lifting Appliance (tower crane, hoist, piling/drilling rigs)

1. When a stationary lifting appliance is erected adjacent to railway tracks and/or above ground structures/installations, effective measures to protect the railway structures shall be provided. According to individual circumstances it may be necessary for such works to be conducted outside the railway operation hours. All protective works shall be subject to MTRCL’s approval. MTRCL may impose conditions on the operation and positioning of the appliance if in its opinion such operation and positioning may endanger the safe operation of the railway.

2. The swings of the lifting appliance shall not encroach within 6 m of the railway tracks and/or above ground structures/installations on plan except with special approval from MTRCL.

F. Mobile Lifting Appliance

Where a mobile lifting appliance (e.g. crane, excavator) operates within 6 m on plan of railway structures and any part of the appliance is higher than the railway track level, the provisions of paragraph E shall apply.

G. Maintenance of Road Lamp Standards

When road lighting tower maintenance vehicles are to be used to service road lamp standards adjacent to railway tracks, the working equipment shall not be positioned closer to the railway tracks than the nearest part of the road lamp standard where the height of the lamp standard is greater than the height of the tracks. If the working equipment is to be operated at a level higher than 1 m above railway tracks and closer than 6 m from the railway tracks, provisions of paragraphs C.1, E and F shall also apply.

H. Fire Services Department/Police Force Vehicles

The operation of Fire Services/Police vehicles adjacent to the railway tracks or vent shafts under emergency situations shall be in accordance with the emergency procedure(s) agreed between MTRCL and the respective organization.

I. Storage of Materials

1. No materials, containers, huts etc. shall be stored within 6 m on plan of the railway structures/tracks and vent shaft openings except with the special approval from MTRCL.

2. No dangerous goods or other inflammable materials shall be stored within 6 m on plan of railway structures/tracks except with the special approval from MTRCL.

J. Demolition Works

Where demolition and removal works for any structure which includes scaffolding, advertising signs, container offices and buildings are proposed above or adjacent to above ground railway structures, such as entrances, vent shafts, power distribution substations, traction substations, plant rooms, overhead railway structures and at-grade railway tracks, effective measures to protect the railway structures shall be provided. Demolition works proposal with the protective measures shall be submitted to MTRCL for approval and consent prior to commencing the works.

K. Exemption

Exemption is given to those works involving only ground breaking and excavations not exceeding 1 m deep, provided that MTRCL has been advised of the works in advance, and under the following condition:

(a) outside the areas measuring at 6 m from the at-grade railway tracks and station entrances; or

(b) outside the areas bounded by railway fence/wall.
APPENDIX PRE.C9/XII

PRE.C9.APPEND12.NKEY INDUSTRIAL SAFETY PRECAUTIONS FOR CONTRACTORS WORKING WITHIN RAILWAY PREMISES

Key industrial safety precautions for Contractors working within railway premises

1 General Requirements

The Contractor shall comply with all of MTRCL’s Railway Safety Rules, Procedures and Code of Practice and the relevant Ordinances and statutory regulations, especially the Factories and Industrial Undertakings Ordinance, Dangerous Goods Ordinance and their subsidiary legislations.

2 Breach of Requirements

The Contractor shall be required to stop the works whenever any of the requirements mentioned in these precautions is found breached and shall not resume the works until the satisfactory rectification of the unsafe condition.

3 Site of Works and Routes of Access

Within MTRCL’s railway premises, the Contractor shall not work in areas other than the works site defined and agreed by the MTRCL (“the MTRCL Site”). Suitable barriers and warning signs shall be erected where necessary to segregate the Site.

4 Person-in-Charge

The Contractor shall appoint a person-in-charge for the job to ensure that all works are done safely. He shall be present at the Site at all times of works. The person-in-charge shall ensure that all sources of ignition are removed, all power supplies are isolated, and the Site is in a safe condition before leaving the Site.

5 Portable Fire Extinguisher

At least one 4.5 kg dry chemical powder type portable fire extinguisher, or its equivalent, in efficient working state, shall be provided at each working location of the Site to guard against incipient fires. Additional fire extinguishers shall be required as necessary.

6 Flammable Substance

No flammable substance shall be kept at the Site unless prior approval has been obtained from MTRCL. However, if such material shall be used on the Site and permitted by MTRCL it shall be contained in suitable receptacles for the specific work requirement, the quantity shall be kept as low as possible in a closed metal cabinet provided by MTRCL, and the Contractor shall comply with the safety precautions as may be instructed by the Contract Manager.

7 Dangerous Substances

The Contractor shall label all dangerous substances, keep them in suitable containers and handle with extreme care as per statutory requirements.

8 Welding and Flame-cutting
No welding or flame-cutting is permitted without prior authorisation from MTRCL. Only one set of oxygen-acetylene is allowed at the Site, and it shall be fitted with proper flashback arrestors. The oxygen and acetylene set shall be in good working conditions and free of cracks and leaks.

9 Painting

Painting and welding or flame-cutting shall not be done simultaneously at the Site.

10 Guarding of Machinery

All machinery in use shall be properly guarded against human bodies reaching its dangerous parts.

11 Electrical Tools, Equipment and Installation

The Contractor shall ensure that all electrical tools, equipment and installation in use shall be –

11.1 suitable for the supply voltage and loading current;
11.2 suitable for the type of environmental condition;
11.3 properly insulated; and
11.4 properly protected against electrocution by earth leakage circuit breakers or by earthing.

12 Temporary Electric Wiring

The Contractor shall ensure that all temporary wiring in use shall be –

12.1 free of frayed portions;
12.2 free of exposed live conductors;
12.3 free of sloppily-taped joints;
12.4 properly connected by plugs and sockets;
12.5 properly protected against mechanical damage;
12.6 properly secured and running at high levels; and
12.7 properly secured at suitable locations.

13 Conveyance of Bulky Items

No bulky items shall be conveyed onto MTRCL’s railway premises without the prior permission from the MTRCL.

14 Dangerous Tools and Equipment

Dangerous tools and equipment shall not be brought onto MTRCL’s railway premises including –

14.1 cartridge operated fixing tools;
14.2 open type welding transformers;
14.3 spray painting equipment; and
14.4 asbestos products.

15 Pressure Receivers

All air receivers in use on MTRCL Site shall be in good working condition and provided with a valid certificate to prove that they have been properly tested and examined in accordance with the provisions of the Boilers and Pressure Vessels Ordinance.

16 Lifting Appliance
All lifting appliances and gears in use within and in the vicinity of MTRCL’s railway premises shall be in good working condition, and shall not be expired on their weekly inspections and 6/14 monthly examinations as per the requirements under the Construction Sites (Safety) Regulations. The Contractor shall obtain valid certificates of inspection and examination before use, and produce them for inspection on demand.

17 Scaffolding

All scaffolding, if permitted, including mobile scaffoldings in use shall be –

17.1 erected by competent persons;
17.2 guarded against overturning by the erection of outriggers or other suitable means;
17.3 displayed with warning signs on the danger of falling objects;
17.4 kept away from causing obstruction to any passageway;
17.5 locked at designated locations after each workshift;
17.6 maintained in good working condition; and
17.7 inspected periodically by a competent person as per statutory requirements.

18 High Level Working Platform

All high level working platforms shall be –

18.1 without access to MTRCL operating area; and
18.2 closely planked with minimum 2 m long solid planks.

Safety belts, safety nets or fall arrestors shall be used by all workers when working at height.

19 House-keeping

Good house-keeping shall be maintained at the Site at all times. All flammable waste and sources of ignition shall be removed, all power supplies isolated and the Site left in a safe condition after each workshift.

20 Electric Cables

The Contractor shall treat all electric cables and the like installed within MTRCL’s railway premises as “LIVE” and no work shall be carried out on or cause any damage to them.

21 Personal Protective Equipment

All workmen on the Site shall wear the necessary personal protective equipment, i.e. safety helmets, eye goggles, ear protectors, respirators and safety belts, etc. as required by the nature of work.

22 Smoking

The Contractor shall ensure that there is no smoking when working within MTRCL’s railway premises.

23 Working on MTRCL Equipment

The Contractor and its workers shall not work on any MTRCL equipment unless prior approval has been obtained from MTRCL.

24 Working on or near Railway Tracks

24.1 High-visibility clothing shall be worn when working on or near railway tracks; and
24.2 All persons, tools and materials shall be cleared of the track upon completion of each workshift.
25 **Illumination**

The Contractor shall provide adequate lighting to the Site within and in the vicinity of MTRCL’s railway premises.

26 **First Aid Facilities**

Sufficient first aid facilities shall be provided in a first aid box at the Site as per statutory requirements.

27 **Ladders**

27.1 All ladders in use shall be of good construction and be made of good material. Each ladder shall bear an identification mark and be inspected six-monthly by a competent person. The next due date for examination shall be marked on the equipment; and

27.2 No metal ladder shall be permitted to be used on the Site.

28 **Additional Safety Precautions**

The aforementioned safety precautions are in no way exhaustive and additional ones will be imposed whenever necessary.
APPENDIX PRE.C9/XIII

PRE.C9.APPEND13.NMTRCL’S INDEMNITY FORM
THE INDEMNITY

In consideration of your permission to allow me/ourselves to visit/work at __________________________ (site location) from __________________________ to __________________________ (duration of work), I, ___________________________________________ (full name), the duly authorised representative of ______________________________________ (name of Company), hereby agree that I/we shall do so entirely at my/our own risk and that the MTR Corporation Limited, its servants and agents shall not be liable in any manner whatsoever to whomsoever in respect of all claims, costs, damages or expenses for any damage to or loss of property, personal injury or loss of life howsoever caused arising out of or in any way connected with my/our visit/work, and I/we for myself/ourselves and for and on behalf of ___________________________________________ (name of aforesaid Company) hereby agree to indemnify and keep the MTR Corporation Limited indemnified from and against all claims, cost, damages and expenses in respect of any damage to or loss of property, personal injury or loss of life howsoever caused arising out of or in any way connected with my/our visit/work within/in the vicinity of MTR Corporation Limited premises.

PRE.C10 TRAFFIC ARRANGEMENTS

TRAFFIC CONTROL

PRE.C10.010.8 SITE TRAFFIC
1. Ensure that the movement of traffic within the Site is properly supervised, controlled and maintained at all times;
2. Vehicles must be able to enter the Site immediately on arrival as no waiting will be permitted on public roads;
3. Vehicles shall enter and leave the Site in a forward gear;
4. Provision shall be made at the Contractor's expense within the immediate area of the Site entry to allow for parking of haulage vehicles;
5. Parking will not be allowed on public footpaths, verges or roads outside of the Site area;
6. Where works are carried out on highways or footways the flow of traffic must be maintained at all times with minimum interference.

PRE.C10.020.8 COMPLIANCE WITH REGULATIONS
1. Comply in all respects with the Road Traffic (Traffic Control) Regulations;
2. The Contractor's attention is drawn to the Code of Practice for the Lighting, Signing and Guarding of Roadworks, issued by Highways Department;
3. Maintain two copies of the Code of Practice on Site at all times, one copy of which shall be for the exclusive use of the CM.

PRE.C10.030.8 COMPLIANCE WITH AUTHORITIES' REQUIREMENTS
Comply with the requirements of the Commissioner for Transport and/or the Commissioner of Police and/or any other relevant authority regarding any special traffic arrangements which may be necessary.

PRE.C10.040.8 COMPLIANCE WITH PROCEDURES AND REQUIREMENTS
Follow the procedures and requirements given in the Contract or such procedures and requirements as the CM may require for obtaining the prior approval of the relevant authorities and the consent of the CM with respect to any special traffic arrangement, including the erection of any falsework in or over any highway or footway, any road opening or any traffic diversion.

PRE.C10.050.8 CONTRACTOR'S PROPOSALS
1. Submit proposals as required by GCC Clause 5.18 in writing to the CM and the relevant authorities not less than 6 weeks before the proposed date of commencement of any traffic arrangements;
2. Further liaise with the relevant parties and authorities, and submit the final agreed proposal to the CM for Approval at least 10 days before the date of commencement of such special traffic arrangements;
3. Arrange meetings with the relevant parties and authorities to discuss his proposals;
4. The Contractor's proposals shall be clearly marked up on drawings with scales not less than 1:1000 and supported by written descriptions where appropriate;

5. Proposals submitted for Approval shall include details of all lighting, signing and guarding to be implemented.

PRE.C10.060.8 GATES AT VEHICULAR INGRESS / EGRESS FOR TRAFFIC CONTROL

1. Provide an electrically-operated gate system at vehicular ingress / egress points of the hoardings and covered walkways fronting public footpaths, including gantries to control vehicular and pedestrian flow across footpath. Operate the gate system (including vehicular gates and pedestrian gates) by a single action. The pedestrian gates shall be closed before the vehicular gates are opened for ingress / egress of vehicles; and the vehicular gates shall be closed before the pedestrian gates are opened for pedestrian passage at the site vehicular entrance. Refer to drawing no. REF/SS/GA/SK-01 in Appendix U to this Specification for reference only. Submit detail drawings of the electrically-operated gate system for the CM’s approval;

2. The Registered Professional Engineer registered under the Engineers Registration Ordinance within the discipline of mechanical engineering shall certify the design and installation of the gate system and proper functioning of the safety devices such that no person or objects shall be trapped during operation of the gates;

3. Station security guards as required under PRE.C9.110 at the vehicular ingress / egress point to operate the gate system, direct the crossing pedestrians, and control the vehicles entering or leaving the Site;

4. Install the gate system with the following warning / safety devices and ensure their function and safe operation:
   a. Flashing amber lights and audible alarms activated automatically when the gate is in operation under the control of the security guards posted at the vehicular ingress / egress point;
   b. The warning devices shall be visible and audible to the pedestrian crossing the vehicular ingress / egress points;
   c. The movement of the gate shall be controlled by continuous pressure type push buttons or switches, i.e. the motion would persist only if the button or switch is being continuously pressed or held on manually. Each button or switch shall be suitably coloured and indicated corresponding to its function;
   d. At least one emergency stop push button shall be provided adjacent to the gate in a conspicuous position to immediately stop the movement of the gate. Emergency stop buttons shall each have a large red mushroom head and be suitably labelled in both English and Chinese;
   e. The terminal stopping of the gate shall normally be effected by limit switches. The limit switches shall be robust in construction and suitable for outdoor operation;
   f. At both ends of the travel, mechanical end stoppers shall be provided to prevent the gate from over-travel;
   g. Safety devices shall be provided for protection against accidental damage to passing objects or injury to persons such that the movement of the gate system could be stopped immediately and the gate system shall immediately be capable of manually operated to relieve the grip on the passing object or person when an obstruction is detected;
h. A simple manual release device shall be incorporated in the driving unit to release the gate from its locked position under power failure or emergency conditions. When the gate system is released from its locked position, it shall be capable of being moved manually by an adult. An instruction for use of the manual release device shall be posted in a conspicuous position adjacent to the drive unit. The instruction shall be properly protected for durable use and frequent reference. The security guard responsible for operation of the gate system shall be trained on the use of the manual release device. Instructions shall be provided in English and Chinese; and

i. All associated electrical equipment shall comply with the relevant safety standard. The electrical wiring work shall comply with the requirements of the Electricity Ordinance (Cap. 406) and its associated Regulations. In particular, all metal work of the installation shall be properly earthed.

5. Paint the gates in contrasting colours for clear identification;

6. Provide sign(s) at prominent locations in Chinese and English to give alert of the existence of the gate system, describe how it works, and inform the steps for the pedestrians to follow when the gate system is in operation;

7. Provide a floor mark / line preferably with simple wordings in both Chinese and English on both sides of the ingress / egress point to alert the pedestrians to keep clear of the closing gates when the gate system is in operation;

8. Repair and maintain the gate system and associated warning / safety devices in good working condition till the date of certified completion of the Works as far as practicable, and in any case the gate system and associated warning / safety devices could be dismantled within 3 - 6 months prior to the date of certified completion of the Works and as approved by the CM, unless otherwise proposed by the Contractor and agreed by the CM;

9. Ensure that the gate system and the warning / safety devices are properly reinstalled and in operation in the event of any location change of the gantries or openings at hoardings or covered walkways; and

10. Leave the gate system and associated warning / safety devices on the Site for use by subsequent contractors, or remove them when instructed by the CM.

PRE.C10.070.8 TAKING OVER EXISTING GATES AT VEHICULAR INGRESS / EGRESS FOR TRAFFIC CONTROL

1. Take over existing gate system and associated warning / safety devices and signs;

2. Station security guards as required under PRE.C9.110 at the vehicular ingress / egress point to operate the gate system, direct the crossing pedestrians, and control the vehicles entering or leaving the Site;

3. Repair and maintain the gate system and associated warning / safety devices in good working condition till the date of certified completion of the Works as far as practicable, and in any case the gates and associated warning / safety devices could be dismantled within 3 - 6 months prior to the date of certified completion of the Works and as approved by the CM, unless otherwise proposed by the Contractor and agreed by the CM;

4. Ensure that the gate system and the warning / safety devices are properly reinstalled and in operation in the event of any location change of the gantries or openings at hoardings or covered walkways; and

5. Leave the gate system and associated warning / safety devices on the Site for use by subsequent contractors, or remove them when instructed by the CM.
TEMPORARY TRAFFIC ARRANGEMENTS AND CONTROL

PRE.C10.110.8 CONTRACTOR'S RESPONSIBILITY
Be responsible for all necessary provisioning and repair of temporary diversion ways for the traffic using them.

PRE.C10.120.8 COMPLIANCE WITH AUTHORITIES' REQUIREMENTS
In addition to any other requirements stated in the Contract, temporary traffic arrangements shall be in accordance with conditions and restrictions imposed by the Commissioner for Transport and the Commissioner of Police. In case works with temporary traffic arrangement affecting carriageway, including that with pedestrian diversion onto carriageway, the details of the temporary traffic arrangements, including necessary supporting material such as staging of works, traffic impact assessment, drawings, plans and calculations for obtaining relevant authorities’ approvals shall be prepared and submitted by the Contractor. These details shall be prepared and signed by a professional engineer who has been a corporate member of the Hong Kong Institution of Engineers in the Civil Discipline or Logistics and Transportation Discipline (or has possessed equivalent qualifications) for at least 3 years. Temporary lighting, signing, guarding and traffic control arrangements shall be in accordance with conditions and restrictions imposed by the Director of Highways. Traffic signs which are not prescribed by the Road Traffic Ordinance or its subsidiary legislation shall be in accordance with conditions and restrictions imposed by the Commissioner for Transport.

PRE.C10.130.8 OBTAINING AUTHORITIES' APPROVALS
Make all arrangements with and obtain the necessary approvals from the Commissioner for Transport, the Commissioner of Police, the Director of Highways and any other relevant authority for temporary traffic arrangements and control.

PRE.C10.140.8 APPLICATION
Temporary traffic diversions and pedestrian routes shall be provided where work in roads or footways obstructs existing vehicular or pedestrian access. The relevant work shall not commence until the approved temporary traffic arrangements and control have been implemented.

PRE.C10.150.8 COMPLIANCE WITH CODE OF PRACTICE
Temporary traffic arrangements and control for work in roads and footways shall comply with the requirements contained in the current edition of the document 'Code of Practice for Lighting, Signing and Guarding of Road Works' issued by the Hong Kong Government; a copy of the document shall be kept on the Site.

PRE.C10.160.8 INSPECTION AND MAINTENANCE
Temporary traffic arrangements and control shall be inspected and maintained regularly, both by day and night.

PRE.C10.170.8 SUBMISSION FOR CM'S APPROVAL
Submit the following particulars of the proposed temporary traffic arrangements and control for Approval at least 7 days before the traffic arrangements and control are implemented:
1. Details of traffic diversions and pedestrian routes;
2. Details of lighting, signing, guarding, road marking and traffic control arrangements and equipment;
3. When traffic diversion proposals involve the construction of temporary roads or footpaths or alteration of existing road or footpaths, details of road geometry and levels, pavement thickness and composition, road drainage; detailed calculations shall also be submitted to the CM; and
4. a. Plan and arrange his work to keep the number of traffic diversions and hence disturbance to traffic to a minimum;
b. To implement traffic diversions, he shall carry out by himself or make arrangements for, as appropriate, all works necessary for such purpose, such as the construction of temporary carriageway pavement with associated drainage systems, fencing, temporary pedestrian access, resiting/provision of street lights, fire hydrants, sign gantries and other street furniture;
c. Temporary protection to or alteration of underground utilities etc. after consultation or approval from the appropriate authorities;
d. Also be responsible for all subsequent maintenance and shall undertake to reinstate all the affected covers to their original state immediately after any phase of temporary arrangement is no longer required.

TRAFFIC CONTROL EQUIPMENT
PRE.C10.210.8 MAINTENANCE OF EQUIPMENT
1. All equipment for traffic control, lighting and guarding shall be maintained throughout the Contract in good working order and in a clean condition;
2. Traffic lights, lights and signs shall be kept clean and easy to read.

PRE.C10.220.8 CHECKING EQUIPMENT
Check regularly, both during the day and during the night, that all equipment is in good working order and correctly positioned and shall immediately carry out such remedial measures or replacements as are necessary.

PRE.C10.230.8 REPAIRING/REPLACING EQUIPMENT
1. Equipment which, in the opinion of the CM, is damaged, dirty, incorrectly positioned or not in working order shall be repaired or replaced immediately;
2. All unsatisfactory equipment shall be removed from the Site by the Contractor.

PRE.C10.240.8 ELECTRIC LAMPS
1. Electric lamps complying with BS 3143:Part 2:1990 shall be used when a connection to a mains electricity supply is available and feasible;
2. Supply voltage for such lamps shall be stepped down to 50 volts or less. When a mains electricity supply is not available, battery powered lamps shall be used.
TEMPORARY TRAFFIC LIGHT SIGNALS

Temporary traffic light signals shall be of a type approved by the Commissioner for Transport and shall comply with the requirements contained in the current editions of the documents 'Type Approval Procedure for Portable Traffic Light Signals' and 'Specification for Vehicle Actuated/Fixed Time Portable Traffic Signal Equipment' issued by the Hong Kong Government.

TEMPORARY TRAFFIC SIGNS

1. Temporary traffic signs, including posts, backing plates and faces, shall comply with all requirements for traffic signs contained in Worksection EXT4;

2. The thickness of backing plates for temporary traffic signs which will be erected for use of less than 6 months may be reduced to 1.5 mm and the thickness requirement as stipulated in sub-clause (1) of EXT4.M320 may not be complied with; the posts for the signs may be constructed of timber or other material provided that in the opinion of the CM the traffic signs will be stable and safe;

3. In addition to the requirements for traffic signs contained in Worksection EXT4 and sub-clause (2) above, temporary traffic signs shall also comply with the following additional requirements:
   a. All corners of a sign plate shall be rounded to a radius of not less than 18 mm unless otherwise stipulated in the relevant standard drawing(s) published by the Transport Department or Highways Department;
   b. All edges of a sign plate shall be grounded to ensure that they are free from sharp edges, burrs, raggedness and tears;
   c. When a sign plate is located on a footway, it should be positioned so as to minimise inconvenience or hazard to pedestrians. Particular attention shall be paid to cater for safety of the children, the elderly and the disabled;
   d. The arrangement of information contained on sign faces for temporary traffic directional signs shall be designed by the Contractor. The details of the background, borders and legends, including letters, numerals, characters and symbols, shall comply with the requirements of the Commissioner for Transport.

TEMPORARY CONCRETE PROFILE BARRIERS

1. Should precast concrete profile barriers be installed temporarily by Contractor to delineate edges of traffic lanes/footpaths/excavations as protectionary measures or as median barriers separating lanes of opposite travelling directions, the Contractor should conduct risk assessments to identify associated risks and to determine appropriate precautionary measures for installation against those risks;

2. Be responsible for all risks associated with the installation of the temporary precast concrete profile barriers including any injuries to motorists, pedestrians as well as construction workers;

3. Temporary concrete profile barriers should be properly fixed in position and so marked so that they stand out conspicuously and are visible by day and by night.

SAFETY OF SITE VEHICLES AND MOBILE PLANT

In addition to any obligations under GCC Clause 5.11 or similar enactment or Regulation, comply with the requirements in the latest edition on the Guidelines on Safety of Site Vehicles and Mobile Plant issued by CIC and the Guidance Notes on Safe Use of Loadshifting Machines for Earth Moving Operations on Construction Sites issued by LD, with special attention to the following:
1. Establish a safe system of work with risk assessment to identify any risks and formulate safe working procedures for the operation of site vehicles and mobile plant;

2. Provide workers with adequate information, training and instruction in respect of the safe system of work;

3. Provide requisite recognised training to site personnel to obtain valid certificates to acquire the knowledge and competency on the inspection, operation, maintenance, testing and examination applicable to a particular type(s) of site vehicles and mobile plant;

4. Properly design site layout and traffic circulation routes as follows:
   a. Minimize movements of vehicles and plant through appropriate measures;
   b. Impose speed limits on traffic routes through erecting of speed limit sign and road humps or other similar devices;
   c. Minimize reversing movements of vehicles and plant. Where reversing cannot be avoided, reversing vehicles or plant is not guided by a banksman, provide and install reversing video device (RVD) for vehicles / plant in accordance with the above mentioned Guidelines;
   d. Provide appropriate facilities for the safe movement of personnel within the Site.

5. For forklift truck, provide operator presence sensing system to cease all operations of forklift truck when the operator is not sitting on the seat to control the truck for more than 2 seconds.

WORK IN ROADS AND FOOTWAYS

PRE.C10.310.8 WORK IN SECTIONS

1. Work in roads on the Site shall be carried out in sections such that the length of road occupied at any time does not exceed that approved by the relevant authority described in PRE.C10.030 and the width of road occupied at any time does not exceed the width of one traffic lane, unless otherwise approved by the relevant authority and permitted by the CM;

2. Work in each section shall be completed and the road reinstated and opened to traffic before any work commences in the next section. Work in any section, including loading and unloading, shall be carried out in such a manner that the traffic and utilities in the adjacent road and pedestrian access in the adjacent footway will be adequately maintained.

PRE.C10.320.8 DEFINING AREAS OF EXCAVATION

Before excavations are carried out in roads or footways, except in areas covered with paving blocks or tiles, the limits of the area to be reinstated shall be bounded by a continuous saw-cut groove. The groove shall be at least 6 mm wide and at least 50 mm deep. Cutting the groove and breaking out the road or footway shall be carried out in such a manner that the adjacent road or footway, including edges, are not damaged.

PRE.C10.330.8 STORING EXCAVATED MATERIAL

Excavated material shall not be stored adjacent to excavations in roads or footways unless permitted by the CM.
PRE.C10.340.8  BRIDGING EXCAVATIONS

1. Vehicular access across excavations in roads shall be provided by steel covers;
2. The covers shall be designed to BS 449:Part 2:1969 and shall be capable of withstanding the full traffic load permitted to use the road;
3. The covers shall be secured in position and shall have anti-slip coating so that the skid resistance values on the covers measured in accordance with BS 3262:Part 2: 1989 shall not be less than 45;
4. Sufficient steel cover shall be kept on the Site adjacent to excavations in roads to permit vehicular access across the excavations in case of emergency.

PRE.C10.350.8  REMOVAL OF TEMPORARY EQUIPMENT

Temporary diversions, pedestrian access and lighting, signing, guarding and traffic control equipment shall be removed immediately when they are no longer required. Roads, footways and other items affected by temporary traffic arrangements and control shall be reinstated to the same condition as was existing before the work started or, where such work is covered under an Excavation Permit, to the condition as stipulated under the Conditions of Excavation Permit or to such other condition as may be agreed or Instructed.

PRE.C10.360.8  ADJUSTING THE ROAD HARDWARE LEVELS

Be responsible for adjusting the levels of the existing valve pits and covers, manholes/chambers/pits and covers and other utility/services installations affected by the Works.

PRE.C10.370.8  EXISTING STREET LIGHTING

Ensure the proper functioning of all existing street lighting and shall not abandon any existing street lightings before adequate re-provisioning Approved by the CM and the relevant authority.
PRE.C11 TEMPORARY WORKS AND FACILITIES

TEMPORARY WORKS

PRE.C11.010.8 PRIOR APPROVAL

1. Pursuant to GCC Clause 4.3, within a reasonable time (and in any case not less than 28 days) before he intends to commence construction of any Temporary Works, or within the particular times states, the Contractor shall submit full particulars, including Drawings of the same for the Approval of the CM;

2. The consent by the CM of any such particulars shall not relieve the Contractor of his responsibility for the sufficiency of Temporary Works or of his other duties and responsibilities under the Contract;

3. Make safe and reinstate all areas affected by temporary works.

PRE.C11.020.8 EARTH SUPPORT TO RETAINING WALL EXCAVATIONS

1. Design and construct temporary earth support to excavations for the construction of retaining walls shown on the Drawings, and provide a method statement which must take into account all geotechnical considerations;

2. He shall give full details of all materials, plant and timing and sequence of operations involved in the construction of both temporary and permanent works;

3. The Contractor's attention is drawn to Worksection EAR1.

PRE.C11.030.8 PROVISION OF ACCESS ROADS

1. Provide and maintain an all weather, 2-way access road of .......... width at all times between .......... Street and Section .......... for the use of the .......... Department contractors and any other contractors authorised by the Housing Authority to carry out the works within the completed Sections ..........;

2. The access road is to be regarded as temporary works for the purposes of this Contract and is required immediately on completion of Section ..........;

3. The access road shall be finished with rigid or flexible surfacing and the road pavement design shall be to Guidance Notes on Pavement Design issued by Highways Department;

4. The gradient and construction of this access road shall be capable of taking all vehicles requiring access to/from the building and .......... construction works in the completed Sections ..........;

5. Such vehicles shall include, but not be limited to, cars, fully loaded ready mix concrete trucks and articulated and fixed axle material delivery and disposal trucks;

6. Ensure that none of the above vehicles as a result of the use of the access road deposit earth, mud, debris, dust and the like on public roads when leaving the Site;

7. Submit detailed proposals, including drawings and method of construction of the access road to the CM four weeks before commencement of its construction;

8. The agreement by the CM of any particulars shall not relieve the Contractor of his responsibility for the sufficiency of the access road or his other duties and responsibilities under the contract.
PRE.C11.040.8  TUNNELLING

Tunnelling will not be allowed unless authorised by the CM.

PRE.C11.050.8  APPROVAL OF ACCESS POINTS

1. Submit for Approval details of each access point not less than 14 days before the intended date for taking into use. Details shall indicate the location of the access and the equipment and supervision he intends to use;
2. Comply with PRE.C3 of the Specification regarding restrictions on the use of highways for access to the Site and allow for movements of vehicles being restricted in this respect.

PRE.C11.060.8  DIVERSION OF STREAMS OR DRAINS

1. Be responsible for and shall bear the cost of temporary training, diverting or conduiting of open streams or drains intercepted by any works and for reinstating these to their original courses on completion of the Works when and where in the opinion of the CM such action is desirable;
2. The Contractor's attention is drawn to PRE.C9 and Worksection EAR1;
3. All proposed temporary stream course and drain diversions shall be submitted to the CM for agreement four weeks prior to such diversion works being commenced;
4. Diversions shall be constructed to allow the water flow to discharge adequately and efficiently;
5. The area through which the temporary diversion runs is to be reinstated to the satisfaction of the CM after the permanent drainage system has been completed;
6. No obstruction to flow is to be left in position longer than is necessary for carrying out the works;
7. Ensure that adequate provision is made for dealing with increased flow during the wet season.

PRE.C11.070.8  NEW SIGNBOARDS

1. Provide .......... No. publicity board(s) and ............... No. accident statistic board(s) at the Site, as detailed on Drawing(s) Nos. ......................, maintain for the duration of the Contract and leave in position in good condition for use by subsequent contractors;
2. Provide .......... No. publicity board(s) for motorists and ........... No. publicity board(s) for pedestrians, as detailed on Drawing(s) Nos. ................................., at prominent locations as agreed by the CM, where works are carried out on carriageway or footway. Maintain for the duration of the works and update the information of the publicity board(s) as necessary or as required by the CM.

PRE.C11.080.8  PAINTING AND SIGNWRITING ON SIGNBOARDS

1. Paint signboards at commencement of Contract;
2. Provide sign writing in multi-coloured gloss finish over the completed board including English letters and Chinese characters, artist's impressions or diagrammatic plans and logos;
3. Submit draft drawings for Approval before painting;
4. Re-paint and provide new sign writing when necessary as directed by the CM;
5. Provide new sign writing to update the accident statistics at monthly intervals.
PRE.C11.090.8  SUPPLY OF WATER

1. Arrange for an adequate supply of fresh water at the Site, including provision of any storage tanks, so that sufficient fresh water is always available for the execution of the Works;

2. Provide suitable supplies of water for drinking, washing and sanitation and general cleaning down in addition to that required for the execution of the Works;

3. In the event of water restrictions, ensure that there is sufficient water storage capacity on site to supply water in accordance with the detailed requirements of the specification, to maintain the general good health of the plants and to ensure the progress of the Works is not adversely affected;

4. Every water storage tank shall be effectively protected against the breeding of mosquitoes and risk of contamination and shall be thoroughly cleaned and scrubbed with a chloridse of lime or bleaching powder solution of not less than fifty parts chlorine to one million parts water during the months of March, June, September and December of each year;

5. If water is taken from a source other than Government mains supply, test it at an Approved laboratory in accordance with BS 3148:1980 when required by the CM;

6. Provide temporary pipe lines and make arrangements for storage, pumping and distributing the water about the site;

7. Submit installation details and routing of the water supply for the information of the CM prior to commencement of the installation.

PRE.C11.095.8  TEMPORARY LIGHTING

Do not use incandescent light bulbs (GLS) to provide lighting inside any buildings, site accommodations, and areas within the Site and around the Site boundary. Use other types of light bulbs with higher luminous efficacy. Provide only electronic ballast for all types of fluorescent fittings.

SITE ACCOMMODATION FOR THE CONTRACTOR

PRE.C11.110.8  ACCOMMODATION GENERALLY

In addition to the requirements of GCC Clause 5.31, provide all necessary offices, drinking water, hand washing facilities, temporary toilet accommodation and the like for all workers engaged in the execution of the Works. Provide lighting, power, telephones, cleaning etc and maintain toilet accommodation in a sanitary condition at all times. Temporary site accommodation shall be constructed from prefabricated, demountable, reusable components unless otherwise approved by the CM. The use of tropical hardwoods in the construction of temporary site accommodation is expressly prohibited.

PRE.C11.120.8  LOCATION OF STRUCTURES

No structure shall be erected by the Contractor within the Site without the CM's written consent; such consent will not relieve the Contractor of the responsibility of siting temporary structures clear of the Works. A copy of the plan showing the extent and position of all offices, stores, sheds, toilets facilities, etc. shall be prepared by the Contractor and retained for inspection in the site office.
LOCATION OF STORAGE AREAS

As soon as possible after the notified date for commencement of the Works, submit details of the proposed locations and arrangements of the Contractor's site compound, storage areas, stockpiles, casting yard and the like to the CM for agreement.

TEMPORARY ACCOMMODATION FOR WORKMAN

No temporary accommodation for workmen shall be erected by the Contractor within the Site without Approval. It shall be kept in a clean and sanitary condition to the satisfaction of the CM.

TEMPORARY SITE LABORATORY FOR ON-SITE FILL TESTING

1. On-site fill testing as specified in Worksection EAR shall be carried out, under the supervision of the CM, by the Contractor using Approved Laboratories specified at PRE.C8.510;

2. Supply labour and assistance as specified in PRE.C11.810;

3. A calibrated and Approved moisture meter and all necessary apparatus and consumable items shall be provided to carry out the following procedures and tests, as described in 'Geospec 3: Model Specification for Soil Testing', GEO, 2001:
   a. Test Method 5.1 or 5.2 of 'Geospec 3: Model Specification for Soil Testing', GEO, 2001: Determination of moisture content by oven-drying;
   c. Test Method 10.1, 10.2, 10.3, 10.4, 10.5, 10.6, 10.7 or 10.8 of 'Geospec 3: Model Specification for Soil Testing', GEO, 2001: Determination of dry density/moisture content relationship;
   d. Test Method 11.1 of 'Geospec 3: Model Specification for Soil Testing', GEO, 2001: Determination of in-situ bulk density and in-situ dry density of soils by sand replacement method suitable for fine- and medium-grained soils (with small pouring cylinder);

PRINCIPAL OFFICE ACCOMMODATION FOR THE CM

OFFICE BUILDINGS

Provide, erect, service (including payment of all utility charges) and subsequently dismantle at a location approved by the CM and within convenient distance of the Contractor's main site office, offices and toilets for the exclusive use of the CM and the CM's staff including .......... LROs complete with all necessary air conditioning, ventilation, lighting, fire precautions, fresh water supply, drainage, telephone service, attendance, maintenance, watching and protection to the satisfaction of the CM so as to be habitable and operational at all times throughout the course of the Works and during the Maintenance Period as the CM may require.
**PRE.C11.220.8 LAYOUT, DESIGN AND SUSTAINABLE PROVISIONS OF SITE ACCOMMODATION**

1. The general requirements for the layout, furnishings and services of the CM's temporary accommodation are shown on the Drawings. Orientate and design site accommodation to maximise natural ventilation and daylighting to reduce energy consumption where applicable;

2. Be responsible for the building services and structural design including the foundation design of the CM's principal office;

3. Design, install and maintain building services installations in accordance with the latest edition of the Code of Practice for Energy Efficiency of Building Services Installation issued by EMSD where applicable;

4. Submit design drawings for the CM's agreement before actual construction commences;

5. Make sustainable provisions as follows:
   a. Use demountable office furniture / equipment in modular design layout where applicable to facilitate future re-use and to minimize wastage during transit from one site to another;
   b. Use energy efficient products with energy labels of:
      i. “Grade 1” or “Grade 2” for products fall within the category of “Mandatory Energy Efficiency Labelling Scheme” (MEELS) of EMSD;
      ii. “Recognition Type” for products fall within the category of “Voluntary Energy Efficiency Labelling Scheme” (VEELS) of EMSD.
   c. Use water-consuming appliances registered under the “Water Efficiency Labelling Scheme” (WELS) of WSD;
   d. Use recycled paper with Forest Stewardship Council (FSC) certificate(s) or Programme for the Endorsement of Forest Certification (PEFC) certificate(s) for printing and photocopying.

6. Allow used materials and products which are in reasonable and serviceable conditions;

7. Maintain the site accommodation together with the sustainable provisions in serviceable conditions;

8. Display notices prominently to remind staff to switch off computers and other electrical appliances when they are not in use or after business hours.

---

**PRE.C11.230.8 COVERED HARDSTANDINGS**

Approved covered hardstandings for five cars shall be provided as close to the CM's principal office as practicable, and shall be linked to the CM's office by a covered concrete path.

**PRE.C11.240.8 OFFICE FITTINGS, SERVICES, FURNITURE, EQUIPMENT AND MACHINERY**

Provide for use in the CM's principal office the following items of services, fittings, furniture, equipment and machinery (to be the Contractor's property upon expiry of the Maintenance Period unless otherwise specified) as specified in PRE.C11.250 to PRE.C11.295 and PRE.C11.840 to PRE.C11.860.
### PRE.C11.250.8  OFFICE SERVICES

1. Telephone as follows:
   a. Direct line telephone: 1
   b. Direct line for site staff: 1
   c. Extension telephone: (model 4 direct lines plus 12 extensions or equivalent)

2. Power point (13 amps):

3. Fire extinguishers and / or any other fire fighting appliances:
   conforming to the regulations of the Fire Services Department

4. Double ring gas cooker unit complete with bottles (including all gas):

5. Toilet equipment and materials, including mirrors, soap, towels, hot air blowers, toilet paper and the like:
   as required

6. Air conditioner with de-humidifier function (22000 BTU or above):

7. Dehumidifier (10 litre capacity or above):

8. Door mat:

9. Electric water heater to shower:

10. Exhaust fan:

11. Cold distilled water dispenser (including continuous supply of distilled water):

12. First aid kit:

13. Electric kettle:

### PRE.C11.260.8  OFFICE FITTINGS

1. Notice board:
   a. 2.0 m x 1.2 m:
   b. 0.6 m x 0.45 m:
      (Approved white board or equivalent including all pens)

2. Edged cork display board (2.0 m x 1.2 m):

3. Venetian blinds, mosquito screens and burglar bars:
   to all windows

4. Electric fan heater (2 KW) or equivalent:

5. Refrigerator (100 litres):

6. Kitchen sink unit, adequate cupboard storage and formica working surface and all necessary crockery, cutlery and cleaning equipment:
   as drawings

### PRE.C11.270.A  OFFICE FURNITURE

1. Lockable desk (1650 x 1000 mm):

2. Lockable desk (1500 x 800 mm):
3. Lockable desk (1300 x 800 mm): ..........  
4. Layout table with 4 drawers plan cabinet under: ..........  
5. Conference table ( ............ x ............ ): ..........  
6. Draughting Board - and all necessary draughting equipment (free-standing, A.O. size with lamp): ..........  
7. Typists chair: 1  
8. Desk chair (with arms and castors): ..........  
9. Desk chair: ..........  
10. Draughtsman stool with padded seat: ..........  
11. Glass fronted lockable bookcase (1250 mm in length x 3 shelves): ..........  
12. Filing cabinet - 4 drawers: ..........  
13. Filing cabinet - 2 drawers: ..........  
14. Metal vertical cabinet: ..........  

**PRE.C11.280.8 OFFICE EQUIPMENT**  
No.  
1. Office equipment, including rubber stamps, inking pads, pencil sharpeners: as required.  
2. Waste paper bin: ..........  
3. Correspondence tray: ..........  

**PRE.C11.290.8 OFFICE MACHINERY**  
No.  
1. Scientific electronic portable calculator or equivalent (with power point adaptor): ..........  
2. Facsimile machine together with dedicated telecommunication line, and supply of specialist paper and other consumables: ..........  

**PRE.C11.292.8 COPIER-PRINTER-SCANNER EQUIPMENT**  
1. Provide 1 No. monochrome copier-printer-scanner equipment which shall be networked with driver installed in networked PCs to provide functions of printer and scanner in addition to photocopying function. The specification for the copier-printer-scanner equipment is as follows:  
a. Copier:  
   i. Copy speed: not less than 20 copies per minute;  
   ii. Resolution: up to 600 dpi;  
   iii. Multiple copies: up to 999;  
   iv. Zoom: 25 - 400%;  
   v. Paper input capacity: 2 x 500-sheet paper trays, 1 x 100-sheet bypass trays;  
   vi. Paper output capacity: not less than 1,500 sheets;  
b. Printer:
i. Print speed: not less than 20 prints per minute;
   ii. Resolution: 600 dpi minimum.

c. Scanner:
   i. Scan speed: not less than 40 originals per minute;
   ii. Resolution: up to 1,200 dpi;
   iii. Original size: A3 to A5;
   iv. Output format: PDF, JPEG, TIFF & high compression PDF.

2. Provide adequate supply of paper and other consumables.

PRE.C11.295.A DIGITAL CAMERAS

1. Provide …… No. of new digital camera for the use of the CM and his representatives for the duration from the date for commencement of the Works up to six months after the date of certified completion of the Works;

2. The new digital camera shall comply with the following:
   a. Be equipped with memory card of not less than 2G and flashes together with batteries and any other consumables required for the cameras and flashes;
   b. Size of the camera: small;
   c. Optical resolution of the camera: 3M pixels or above.

PRE.C11.300.A ESTABLISHMENT OF ACCOMMODATION

1. Within two weeks of acceptance of tender, submit proposals for location of the principal office, its construction and furnishing to the CM;

2. The office shall be erected, equipped and furnished ready for use by the CM within four weeks from the notified date for commencement of the Works;

3. The installation of the telephones shall be ordered promptly upon acceptance of the tender, and completed at the earliest practicable date;

4. Provide …………… mobile phones for use by the CM before the installation of telephones.

RELOCATABLE OFFICE ACCOMMODATION FOR THE CM

PRE.C11.410.8 CONTAINER OFFICE(S)

Provide …………… container office(s), each 13 m² minimum floor area, complete with:

1. Telephone and power supply;

2. Fire extinguishers and / or other fire fighting appliances conforming to the regulations of the Fire Services Department;

3. Separate toilet and washing facilities including water supply, waste and foul water disposal, mirrors, cleaning materials, soap, towels, toilet paper and the like;

4. Venetian blinds, mosquito screens and burglar bars to all windows;

5. Sustainable provisions as specified in PRE.C11.220 where applicable.
PRE.C11.420.A  FURNITURE, FITTINGS ETC. TO CONTAINER OFFICE(S)

Provide the following items to each container office provided:

1. Lockable desk (1300 x 800 mm): ................
2. Layout table (2300 x 1150 mm) with 4 drawers plan cabinet under: ................
3. Chair: ................
4. Waste paper bin: ................
5. Telephone: ................
6. Air conditioner (22000 BTU or above): ................
7. Electric fan heater (2 KW): ................
8. Power point (13 amp): ................
9. Electric kettle: ................

PRE.C11.430.8  PERIOD REQUIRED

Provide the container office(s) on Site immediately at the start of the Contract for the use of the CM and his staff as instructed by the CM until the principal office is completed. When the principal office is completed and occupied, the container(s) and its equipment shall be returned to the Contractor/re-located to ...........

PRE.C11.440.8  RELOCATION

From time to time, move, relocate and re-establish the CM's container office(s) accommodation to suit the staging of the Works.

MAINTENANCE AND REMOVAL OF OFFICE ACCOMMODATION

PRE.C11.510.8  REPAINTING

The CM's principal office and the container office(s) shall be repainted internally and externally with one undercoat and one finishing coat at 18 months intervals after the offices have been erected.

PRE.C11.520.8  REMOVAL

On completion of the Contract, when advised in writing by the CM, remove all the offices, hardstanding, toilets and fixture items leaving the areas in a clean and tidy condition, and make good all damage.

SITE ACCOMMODATION ASSOCIATED WITH IN-SITU CONCRETING WORK

PRE.C11.610.8  CONTAINER OFFICE

Where in-situ concreting work is to be carried out on Site and which forms part of the permanent Works, provide a standard steel container office of nominal size 6000 x 2500 x 2350 mm (as and when required by the CM) for exclusive use of the CM or his appointed Specialist Testing Contractor. Equip the container with the following:
1. A security door-lock;
2. Windows with security metal grilles;
3. Fluorescent lighting;
4. Reversible air conditioner;
5. Work bench 2500 x 900 x 850 mm high;
6. Direct line telephone;
7. Desk with lock up drawers;
8. Pin board;
9. Chair and stool.

**CONTAINER STORE ROOMS**

1. Provide sufficient numbers of steel container rooms, to the satisfaction of the CM, for storing the following core samples:
   a. Samples obtained from sampling and testing founding levels for Type 3 Piles as described in PIL1.T210 & PIL1.T220;
   b. Samples obtained from core testing of Type 3 Piles as described in PIL1.T1220;
   c. Samples obtained from confirmatory core tests of founding strata of Types 3 piles as described in PIL1.T1710.
2. Hand over the steel container rooms and the core samples contained therein to the CM upon completion of the Contract;
3. When Instructed, dispose of the core samples and core boxes upon completion of the Contract.

**CONTAINER CURING ROOMS AND TANKS**

Where in-situ concreting works is to be carried out on site and forms part of the permanent Works, provide sufficient numbers of steel container rooms and steel curing tanks for storing and curing test cubes to the satisfaction of the CM. Take note that:

1. A standard curing tank of nominal size 1650 x 860 x 510 mm will be deemed to have a capacity to accommodate one hundred eighty 100 mm concrete cubes;
2. For curing tanks with different nominal sizes, the number of required curing tanks may be estimated on the basis of the capacity for a standard curing tank of equivalent volume at the discretion of the CM, who will require appropriate adjustments in the pump and heater capacities;
3. A standard steel container room of nominal size 6000 x 2500 x 2350 mm may accommodate up to a maximum of five standard curing tanks;
4. Each curing tank must be accessible, and at least one spare curing tank must be provided at all times for cleaning purpose;
5. Concreting work will not be allowed to commence until curing tanks and steel container rooms have been completed and accepted by the CM;
6. A wall-mounted switch panel on the external face of each curing room, with indication light and due protection against inclement weather and accidental damage, must be provided for ensuring the proper functioning of all electrical curing facilities at all times.
PRE.C11.640.8  STEEL CONTAINER ROOM

Equip each steel container room with the following:

1. A security door-lock;
2. Windows with security metal grilles;
3. Fluorescent lighting;
4. Air conditioner with heating and cooling facilities that is capable to keep the room temperature at 25°C ±5°C;
5. Adequate no. of power plugs for operating the curing tanks;
6. Water supply;
7. Drainage outlets connecting to the drainage valves and overflow system of the curing tanks;
8. Main switch box / control panel to the exterior of curing room and duly protected against inclement weather.

PRE.C11.650.8  STEEL CURING TANK

1. Construct each curing tank of corrosion-resistant material of adequate strength such as galvanised sheet steel to BS EN ISO 1461:2009 for hot dip galvanised coating or BS 2569 for flame sprayed metal coating, fully welded on all seams and equipped with the following accessories:
   a. A lockable insulated lid or cover properly numbered;
   b. A recirculating water pump and a stand-by pump both of waterproof types and with capacities not less than 1000 litres per hour, earthed and fitted internally at one end of the tank drawing the water through a pipe from the bottom to the diagonally opposite top of the tank at least 25 mm above the water level to stimulate efficient mixing of the water by free falling;
   c. A thermostatically controlled electric immersion heater and a stand-by heater both with wattage of not less than 3 kW and connected with a temperature sensor for continual monitoring of the water temperature at 27°C ± 3°C;
   d. A set of three removable lower racks;
   e. Two layers of removable racks (ten removable racks per layer) suspending from the sides of the tank;
   f. A drainage valve and an overflow system;
   g. A steel stand supporting the water tank;
   h. Minimum/maximum thermometers for both air and water temperatures;
   i. A thermograph for continual recording of the water temperature; and
   j. Comply with all other requirements for a curing tank as stated in Appendix A of CS1:2010 (Construction Standard for Testing Concrete).

2. Notwithstanding sub-clause (1)(i) above, if a thermograph is proposed for two or more curing tanks, submit for Approval:
   a. Details of the water circulating system including the provision of a central water closet to the curing tanks; and
   b. Measurement records by an Approved laboratory showing efficient mixing of the water to attain a temperature of 27°C ± 3°C in the circulating system under working environment.
PRE.C11.660.8 CURING TANK MAINTENANCE
Clean each tank at regular intervals and change the water in each tank at least once a month in accordance with CS1:2010 and as directed by the CM. In order to provide adequate circulation of water and to facilitate the removal of test cubes from the curing tank, provide at least 15 mm of water horizontally between test cubes and the sides of the tank.

PRE.C11.670.8 CURING RECORDS
Record the daily maximum and minimum moist air and water curing temperatures and keep the records on site at all times for the inspection of the CM.

PRE.C11.680.8 ACCESS BY TESTING CONTRACTOR
Where directed by the CM, allow the Specialist Testing Contractor sole access and use of the curing room and curing tanks together with all the equipment provided under the Contract.

PRE.C11.690.8 ACCOMMODATION MAINTENANCE
Provide attendance including regular cleaning, lighting and power and maintenance to container rooms and curing tanks.

PRE.C11.700.8 STEEL CONTAINERS FOR TEST SAMPLES OF BAR REINFORCEMENT/FABRIC REINFORCEMENT
As and when required by the CM, provide ............ lockable steel containers, ............ of nominal size (Length x Width x Height) 1500 x 600 x 600 mm and ............ of nominal size (Length x Width x Height) 1500 x 150 x 1500 mm, securely adhered to the curing room, for the exclusively use of the CM or his appointed Specialist Testing Contractor.

SITE FACILITIES FOR THE CM

PRE.C11.810.8 GENERAL FACILITIES
Provide all labour, staging, ladders, wire ropes and other equipment, information and assistance required by the CM and his staff for inspecting, measuring, testing and for the supervision of the Works.

PRE.C11.820.A SURVEY SUPPORT
1. Provide for the exclusive use of the CM and his representatives at all times during the progress of the Works, 3 full-time survey assistants as shall be necessary for the CM and his representatives to carry out checking or surveying works under the Contract or works in connection therewith;

2. The survey assistants as provided under sub-clause (1) shall have at least 2 years of construction site engineering survey experiences and are capable of operating the equipment specified under PRE.C11.860;

3. It may be necessary for these assistants when directed by the CM to be used on other works in connection with this Contract;

4. Any operation of the Works which interferes with the checking of lines, levels and other inspections required by the CM shall be temporarily stopped at the direction of the CM until the checking is complete, and in this connection no time or monetary claim will be considered.
PRE.C11.830.8  **TYPIST / CLERK**  
Provide a typist/clerk for the exclusive use of the CM and CM's staff. The typist/clerk shall be from an independent agency Approved by the CM. The typist/clerk shall be based on the Site in the CM's accommodation and shall be available during normal working hours. The CM reserves the right to have the person replaced at any time if, in the CM's opinion, the person's standard of work is unsatisfactory.

---

PRE.C11.835.A  **UNINTERRUPTIBLE POWER SUPPLY**  
1. Provide ………. No. Uninterruptible Power Supply (UPS) for the CM or his representatives to protect the computer equipment installed in the site office for the duration of the Contract plus six months commencing from the date of the certificate of completion, and for other longer period as Instructed for the necessary completion of the Works and/or additional works within the Maintenance Period;  
2. The UPS shall comply with the following minimum requirements:  
   a. Output Power Capacity: 700 Watts/1000VA;  
   b. Nominal Input/Output Voltage: 230V;  
   c. Backup Time: able to support 15 minutes or more at half load.

---

PRE.C11.840.8  **PROVISION OF INSTRUMENTS AND EQUIPMENT GENERALLY**  
1. Within 6 weeks from the date for commencement of the Works, provide for the sole use of the CM and his representatives the instruments and equipment specified under PRE.C11.860 which are:  
   a. Compatible with each other;  
   b. Of specified source or equivalent;  
   c. Covered by valid calibration certificate issued by approved laboratory;  
   d. Maintained by the service agent and calibrated by an approved laboratory annually. Replacement instrument or equipment of the same condition and specification shall be provided when any instrument or equipment is out of service;  
   e. To be returned to the Contractor within 3 months after the date of certified completion of the Works.  
2. Be responsible for payment of all bills for maintenance agreements for the instruments and equipment listed under PRE.C11.860.

---

PRE.C11.850.8  **RADIO COMMUNICATION SYSTEM**  
Provide and maintain in perfect working order for the sole use of the CM and his staff:  
1. Four sets of portable transceivers with spare batteries, chargers and hand-free speaker microphone with sprint belt clip for transmission and reception of clear messages between the transmitter / receiver in the CM's principal office and all parts of the Site;  
2. The radio communication system shall be capable of being switched in to any radio communication system used by the Contractor and shall include a transmitter / receiver in the vehicles provided for the CM;  
3. The radio communication system shall have a range suitable for expected conditions and shall be to the CM's approval;
4. Be responsible for obtaining all licences and permissions necessary for the use of the CM's radio communication system and the Contract rates shall include the cost of such licences.

| Computer and multi-media IT package (excluding the digital camera) as detailed in PRE.C13 Appendix 1 | .......... | .........

### CONSUMABLES

Provide sufficient quantities of the following items as required during the progress of the Works:

1. Plumb bobs, red clothes, pegs, stakes, strings, paints, chart paper, etc. as necessary for field surveying work;
2. Stationery items, computer consumables, e.g. CDs / DVDs, printer toner cartridges and printer papers etc. as necessary for data processing and storage.

### TRANSPORT FACILITIES FOR THE CM

#### VEHICULAR TRANSPORT

**Option 1**

A vehicle for the use of the CM or his representatives is not required for this Contract. The CM or his representatives may direct vehicles provided under other Housing Authority contracts to visit this Site. Allow the entrance of such vehicles into the Site and provide suitable parking spaces within the Site for these vehicles.

**Option 2**

1. Provide ........ (no.) vehicle(s) with driver(s) for the use of the CM, his representatives, any officials, employees, consultants or agents of the Housing Authority or the Housing Department or any persons authorized or permitted by the CM or his representatives. The vehicle(s) will be used for any purposes in connection with this Contract or otherwise. The vehicle(s) shall revert to the Contractor upon the expiration of the period defined in sub-clause (2)(b) below;
2. Comply with the following requirements:
   a. Specification:
      i. Must be environmental-friendly petrol private cars (EPPC) which are type-approved by Environmental Protection Department (EPD);
      ii. Air conditioning: fitted;
      iii. Body type: saloon / estate;
      iv. Drive: two wheel / four wheel;
      v. Seating capacity: not less than 5 (including driver);
      vi. Engine capacity: not less than 1600 cc;
      vii. Mobile phone: fitted;
      viii. Age of vehicle: not more than 30 months with certificate of good condition issued by an approved Car Examination Centre;
      ix. Pager: to be issued to and carried by the driver.
   b. Period of provision:
From the notified date for commencement of the Works to the date stated in the certificate of completion of the Works, or the last of such certificates where a certificate is issued for a part or parts of the Works before completion of the Works, but in the event that there are works remaining uncompleted after such date stated in the certificate of completion of the Works, or the last of such certificates where a certificate is issued for a part or parts of the Works before completion of the Works, the said period of provision shall be extended until all of the said outstanding works have been completed in accordance with this Contract within the Maintenance Period.

c. Availability:

Make the vehicle(s) available for use during the following periods:

i. Normal working hours and such other times when the Contractor is working;

ii. Outside the times stated in sub-clause (2)(c)(i) above when requested by the CM or his representatives for emergency situations, for the discharge of his or her duties, or for other purposes as may be authorized or permitted by the CM or his representatives.

d. Licence and insurance:

i. The vehicle(s) shall be properly licensed;

ii. Provide a fully comprehensive insurance policy for the vehicle(s) as private car under the ownership of the Contractor. The insurance policy shall provide insurance protection to passengers of the vehicle(s) and any third parties and to any use of the vehicle(s) pursuant to sub-clause (1) and sub-clause (2)(c) above;

iii. Present the insurance policy and submit a written confirmation of compliance of the insurance policy of the vehicle(s) with this specification clause from the insurer or the insurance broker / agent, to the CM, as soon as practicable but in any event no later than the notified date for commencement of the Works.

e. Records of vehicle journeys:

i. Ensure that the driver for each vehicle institutes and maintains a record of the use of the vehicle. Such a record, in the form of a log book, shall include, inter alia, details, times and purpose of journeys together with appropriate meter readings and distances travelled. The driver is required to ensure that the person using the vehicle or authorising the journey signs his name and title against the entries;

ii. Obtain log books from the CM or his representatives. Ensure the driver presents current log books for inspection when so required by the CM or his representatives and hand over all completed log books to the CM or his representatives for safe keeping.

f. Vehicle maintenance:

i. Maintain vehicle(s) in clean and roadworthy condition and bear costs of fuel, running cost, maintenance and repair charges and other incidental items;

ii. Provide an equivalent substitute or form of transport during any period when the vehicle(s) above is / are not available, or out of service for maintenance or repair.
CM'S MARINE TRANSPORT

1. Where the appropriate item is included in the B of Q, provide a boat capable of carrying a coxswain and the minimum number of passengers under a rain proof cover. The boat must have the appropriate license from Marine Department. The coxswain shall have his Engineer’s and Master’s Certificates appropriate to the type and size of boat, from Marine Department.

2. The requirements of the boat are as follows:
   a. To be licensed for a minimum capacity of ............... passengers;
   b. To be in the charge of a coxswain qualified in accordance with sub-clause (1) and assisted by ............... crew;
   c. To be available at all times when the Contractor is engaged in ................... and otherwise at 24 hours notice. The service of the boat shall be suspended/terminated 24 hours after the CM's instructions for its suspension/termination of service;
   d. To be equipped and manned in accordance with the statutory requirements of the Marine Department and licensed under the Merchant Shipping (Launches and Ferry Vessels) Regulations Chapter 281. A qualified coxswain shall be appointed and shall be available when the marine transport is required by the CM.

3. The Contract Rates for Marine transport shall include for insurances, all running costs and all maintenance and repair charges required to keep the boat in a clean and first class condition at all times. The boat shall be provided with suitable life saving equipment as required by the Director of Marine;

4. 
   a. Records of journeys shall be kept in log books provided by the CM;
   b. Records shall include details of the times and purpose of journeys with appropriate odometer readings and distances travelled;
   c. The person using the boat or authorising the journey, shall sign against the log book entries;
   d. Log books shall be presented for inspection when required by the CM and all completed log books shall be handed over to the CM.
# PRE.C12 ATTENDANCE

## SUB-CONTRACTORS, SPECIALIST CONTRACTORS AND UTILITY UNDERTAKING

### PRE.C12.020.8 PLANNING AND PROGRAMMING GENERALLY

Attendance in coordinating and sequencing work programmes and making arrangements as regards to:

1. The time and manner of the execution of their work and delivery of their materials and the time and manner of the submission of drawings or schedules of their builder's work requirements;

2. a. The obtaining of full particulars of their builder's work requirements for chases, recesses, mortices, openings, holes, sleeves, cuttings on formwork and the like;
   
   b. Execute all such builder's work including forming openings and holes through reinforced concrete (including holes for pipes exceeding 150 mm diameter) and provision of any additional formwork and reinforcement required in trimming around openings;
   
   c. Provide and fix where required, or obtain from others and fix where required, or obtain from others and fix when supplied, all slots, sleeves, and the like;
   
   d. Grout voids between sleeves / equipment and openings and for other openings where required in reinforced concrete members with concrete of the same crushing strength as the members after the sleeves or the equipment are properly fixed in position and provision;

3. The obtaining of full particulars of their further builder's work requirements for equipment bases, foundations and the like;

4. The checking of submitted builder's work requirements for conflict between all services. Submit full particulars of builder's work requirements to the CM for Approval, together with a report detailing any ambiguity, discrepancy or conflict between all services;

5. The supplying of details of the method of construction including all dimensions and other information necessary to ensure that their work is correctly executed or correct goods or materials supplied.

### PRE.C12.030.8 PLANNING AND PROGRAMMING NOMINATED SUB-CONTRACTOR'S WORKS

1. Provide additional programmes in compliance with GCC Clause 5.7 in respect of each Nominated Sub-contractor within 14 days of the acceptance of each Nominated Sub-contract;

2. Provide attendance in coordinating the programme to suit special requirements for phasing the Works as applicable in accordance with the following table:
## Nominated Sub-contractors

<table>
<thead>
<tr>
<th>Requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td>Making available to Sub-contractor the main switch kiosk, and switch kiosks at least 4 months prior to completion of the hard landscape work.</td>
</tr>
<tr>
<td>Making available to Sub-contractor the underground cable ducts and draw pits at least 3 months prior to the completion of hard landscape work.</td>
</tr>
<tr>
<td>Vehicular access for transportation of equipment to the main switch kiosk during the last 3 months prior to completion of the hard landscape work.</td>
</tr>
</tbody>
</table>

### PLANNING AND PROGRAMMING UTILITY UNDERTAKING’S WORKS

1. This clause shall be read in conjunction with GCC Clause 5.7, and PRE.C6.050;
2. Be responsible for maintaining close liaison with the Utility Undertaking during the progress of the work and no claims for extra costs or delays incurred by the failure of Utility Undertaking to comply with the agreed programme of works will be considered unless, in the opinion of the CM, the Contractor has taken all reasonable steps to cause the Utility Undertaking to proceed with their work in accordance with the agreed programme;
3. Advise the CM the agreed timing of works to be carried out by Utility Undertaking by inclusion of such works in the programme of Works;
4. Maintain regular liaison with the Utility Undertaking throughout the duration of the Works and inform the CM of the date, time and place of every meeting with the Utility Undertaking for the CM to participate as an observer and copy all correspondence to the CM;
5. The agreed programme of work by Utility Undertaking shall mean that programme agreed in writing by the Contractor and the various Utility Undertaking;
6. Confirm in writing to the Utility Undertaking the programme for any section of work to be carried out by a Utility Undertaking no more than four weeks and no less than one week before the agreed commencement date for that section of work. Copy to the CM such confirmation;
7. Inform the CM immediately of any delays in works by Utility Undertaking which will affect the progress of the Works;
8. Nothing in this clause shall relieve the Contractor of his responsibility for the overall planning of the Works and the coordination of the Utility Undertaking;
9. Where it is anticipated that Utility Undertaking will be carrying out substantial works on the Site, this is referred to in PRE.C2.100.

### GENERAL ATTENDANCE ON Nominated Sub-contractors, Specialist Contractors and Utility Undertaking

#### GENERAL ATTENDANCE

Provide general attendance as defined at clause 7 of Part IV of SMM for CE Works 1992 Edition published by the Hong Kong Government and the following clauses in this sub-section.
**PRE.C12.120.8**  
**FREEDOM OF MOVEMENT**  
Every facility to move about the Site in the legitimate pursuit of their work.

**PRE.C12.130.8**  
**USE OF EXISTING PLANT**  
The use of such plant, ladders, hoisting facilities, scaffolding or staging as may have been provided or erected by the Contractor, provided that there is no obligation to retain any such plant, ladders, hoisting facilities, scaffolding or staging longer than is necessary for the Contractor’s own use.

**PRE.C12.140.8**  
**SPACE FOR STORAGE**  
1. Having regard to the nature of the Site and the Works, provide sufficient space within the Site or within the Works under construction for work areas and storage sheds for the storage of materials and plant brought onto the Site;  
2. Provide a minimum area of 30 m² for special store room for the Electrical Nominated Sub-contractor’s use. Such sheds and rooms are to be provided, erected and cleared away by the Nominated Sub-contractors, Specialist Contractors, Government Departments and utility undertaking;  
3. Provide security to all storage areas and illuminate all surrounding areas to any storage sheds and store rooms erected.

**PRE.C12.150.8**  
**WATER AND ELECTRIC LIGHTING**  
1. Adequate temporary water and electrical supplies at convenient positions throughout the Works under construction and to work and storage areas within the Site for lighting, testing and commissioning up to and including final acceptance of the installations by the CM;  
2. In compliance with GCC Clause 5.11(4), provide sufficient lighting to all Nominated Sub-contractors where any of their work is carried out in darkness.

**PRE.C12.160.8**  
**SITE CONVENIENCES**  
The use of the telephone, mess rooms, latrines and the usual conveniences of a construction site.

**PRE.C12.170.8**  
**UNLOADING**  
Such assistance as is necessary in the unloading of plant, goods and materials brought onto the Site.

**PRE.C12.180.8**  
**SECURITY PROTECTION**  
Such watchmen or security guards as are reasonably necessary to safeguard the Site.

**PRE.C12.190.8**  
**CLEARING AWAY RUBBISH**  
Such service as is necessary for the clearing away of rubbish as it accumulates.

**PRE.C12.200.8**  
**REINSTATEMENT**  
Any making good on completion of work disturbed by the use on removal of the above facilities.
SPECIAL ATTENDANCE ON NOMINATED SUB-CONTRACTORS AND SPECIALIST CONTRACTORS

PRE.C12.210.8  GENERALLY
Provide electricity supply for the operation of power tools.

PRE.C12.220.8  TEMPORARY ELECTRICAL SUPPLY REQUIRED FOR TESTING
Provide supply as follows:

<table>
<thead>
<tr>
<th>Nominated Sub-contractors and Specialist Contractors Installation</th>
<th>Capacity</th>
<th>Location</th>
</tr>
</thead>
<tbody>
<tr>
<td>Electrical</td>
<td>60 A 3 Phase</td>
<td>Main Switch Kiosk</td>
</tr>
<tr>
<td>30 A Single Phase</td>
<td>Each Switch Kiosk</td>
<td></td>
</tr>
</tbody>
</table>

Note: The temporary electrical supply and a permanent water supply for testing to be made available for each installation at least 1 month before the completion date of the hard landscape work.

PRE.C12.230.8  SPECIAL ATTENDANCE ON NOMINATED SUB-CONTRACTORS

<table>
<thead>
<tr>
<th>Nominated Sub-contractors</th>
<th>Special Attendance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Electrical installation</td>
<td>Provision of draw wires to all underground ducts.</td>
</tr>
<tr>
<td></td>
<td>Lubricating all inaccessible ducts with graphite powder.</td>
</tr>
<tr>
<td></td>
<td>Painting all exposed wiring and conduits upon the completion of the installation.</td>
</tr>
</tbody>
</table>

PRE.C12.240.8  ATTENDANCE ON SPECIALIST CONTRACTORS OF PILING WORKS
1. Provide information for the preparation of the report, all as required by the Specialist Contractors;
2. Be responsible for the coordination of testing and for ensuring that the appropriate piles and materials are made available for such testing and commence early enough in the piling works and avoid subsequent delays in performing the pile load test.

PRE.C12.250.8  CONCRETE CORING AND TESTING EXCLUDING CORE TESTING OF TYPE 1(C) & TYPE 3 PILES
Additional materials for coring and testing and making good after coring.

PRE.C12.260.8  NON-DESTRUCTIVE TESTS ON PILES & ULTRASONIC ECHO SOUNDER TEST FOR TYPE 3 PILE
1. Provide the following Special Attendance:
   a. Compliance with all the requirements of PIL1 - Testing;
   b. Provision of all necessary power including electricity, labour, materials, plant and equipment including welding facilities as required;
   c. Provision of access to the test pile including access to pile when pitched;
d. Provision of all necessary water at the locations as required by the Specialist Contractor and/or Housing Department Materials Testing Laboratory, and a labourer for full attendance during the testing period, and ladder(s) as required in carrying out the test;

e. Expose and prepare pile heads for non-destructive tests such that the pile heads are level, clean and free from soil and debris and able to accommodate the testing equipment on the pile heads;

f. Provision of preliminary pile testing information to Specialist Contractor and/or Housing Department Materials Testing Laboratory;

g. Provision and installation of sonic access tubes in the Type 3 piles for sonic logging tests; details of the sonic access tubes are shown at PIL Appendix ................................;

h. Provision of driving equipment for piles selected for pile driving analyser test;

i. Extend the test pile to a level as and when required so that pile driving analyser tests can be carried out.

2. Non-destructive tests on piles shall include Pile Driving Analyser Test, Pile Integrity Test and Sonic Test.

PRE.C12.270.8 CORE TESTING OF TYPE 1(C) & TYPE 3 PILES

Provide the following Special Attendance:

1. Compliance with all the requirements of PIL1 - Testing;

2. Provision of access to the test pile;

3. Expose and prepare pile heads for the tests such that the pile heads are level, clean and free from soil and debris and able to accommodate the testing equipment on the pile heads;

4. Provision of suitable working platforms for supporting the coring equipment in the execution of coring;

5. Provision of water and electricity as required 24 hours a day for the coring and site testing;

6. Fill cored holes solid with non-shrinkage grout of at least the same crushing strength as the pile cored.

PRE.C12.280.8 CONFIRMATORY CORE TESTING OF FOUNDING STRATA OF TYPE 3 PILES

Provide the following Special Attendance:

1. Compliance with all the requirements of PIL1 - Testing;

2. Provision of access to the test pile;

3. Expose and prepare pile heads for the tests such that the pile heads are level, clean and free from soil and debris and able to accommodate the testing equipment on the pile heads;

4. Provision of suitable working platforms for supporting the coring equipment in the execution of coring;

5. Provision of water and electricity as required 24 hours a day for the coring and site testing;

6. Fill cored holes and sonic tubes solid with non-shrinkage grout of at least the same crushing strength as the pile cored.
PROVING BEDROCK AFTER INSTALLATION - TYPES 5 & 6 PILES

Provide the following Special Attendance:

1. Compliance with all the requirements of PIL1 - Testing;
2. Provision of access to the test pile;
3. Provision of suitable working platforms for supporting the coring equipment in the execution of coring;
4. Provision of water and electricity as required 24 hours a day for the coring and site testing;
5. Backfill the drillholes with clean sand.

NON-DESTRUCTIVE TESTS ON WELDS OF PILES

Provide the following Special Attendance:

1. Compliance with all the requirements of PIL1 - Testing;
2. Provision of access to the test pile including access to pile when pitched;
3. Provision of electricity as required for the weld tests;
4. Provision of welders and welding facilities when required.

LOADING TESTS OF WORKING PILES

Provide the following Special Attendance:

1. Compliance with all the requirements of PIL1 - Testing;
2. Provision of electricity as required 24 hours a day for the loading tests;
3. Provision of access to the test piles;
4. Provision of reactions by means of kentledge, anchor piles or other anchorage with adequate stability and safety and approved by the CM;
5. As and when required, extend the test piles to a suitable level for the carrying out of the test and design and construct a suitable pile cap to the test pile;
6. Expose and prepare pile heads such that the pile heads are level, clean and free from soil and debris and able to accommodate the testing equipment on the pile heads;
7. Provision of transportation of the testing equipment within the Site. Place the testing equipment at the location as required by the CM or the Specialist Contractor;
8. Throughout the period of the test, make observations of the settlement of the pile being tested by a suitable surveyor's level;
9. On completion of the test, remove the kentledge, anchor piles or other anchorage, demolish the test pile cap, make good the test pile and the Site back to their original condition and remove all debris arising from the test from the Site.

PARTICULAR REQUIREMENTS OF UTILITY UNDERTAKING

GENERAL OBLIGATIONS

1. The requirements in this sub-section are not meant to be exhaustive;
2. Establish further requirements with the Utility Undertaking;
3. Compliance with this clause shall in no way relieve the Contractor of his obligation and liabilities under the Contract.

PRE.C12.420.8 SITE PREPARATION
Prior to the handover of any part of the Site to a Utility Undertaking:
1. Ensure that this particular part of the Site is clear and free from all surface and subsurface obstruction which shall include ground slabs, ground beams, pits, wells and underground tanks;
2. Ensure that this particular part of the Site is in a dry condition and that the surface drains freely throughout the duration of the utility diversion activity;
3. Ensure that, in respect of any underground diversions or new installation by a Utility Undertaking, the particular part of the Site is prepared, to finished earthworks level plus or minus 150 mm;
4. Ensure that in respect of overhead diversions involving the installation of poles or towers by a Utility Undertaking, the part of the Site within 6 metres from the pole or tower in any direction shall be prepared to finished earthworks level plus or minus 150 mm.

PRE.C12.430.8 ACCESS
Provide and maintain free access for staff of the Utility Undertaking and their contractors, with necessary plant and vehicles, to enter the Site for carrying out installation, maintenance and repair works.

PRE.C12.440.8 TRAFFIC DIVERSIONS
Provide all necessary traffic diversions to meet the requirements of the Utility Undertaking whilst making connections to existing services within roads.

PRE.C12.450.8 SETTING OUT
Provide reference lines and levels and kerb alignment of the roads on site for the working of the Utility Undertaking.

PRE.C12.460.8 PROVISION OF TEMPORARY WORKS AREAS
Make available areas of the Site for use as temporary works areas by Utility Undertaking in connection with works related to the Contract.

PRE.C12.470.8 LOCATIONS OF TEMPORARY WORKS AREAS
1. Agree with the respective Utility Undertaking the arrangements and locations of the temporary works areas to suit the working programme and method of working;
2. Agree with Utility Undertaking the precise arrangements and locations 4 weeks prior to commencement of their respective works;
3. Made available the temporary works areas in a dry condition 25 days prior to commencement of respective Utility Undertaking's works;
4. Arrange with the Utility Undertaking when it is considered necessary to move any of these works areas during the Contract period, and bear all costs arising from such an operation;
5. Ensure that an unobstructed and motorable vehicular access with an all weather surface capability is provided and maintained at all times to the Utility Undertaking's temporary works areas.
SPECIFIC REQUIREMENTS

Comply with the requirements of each respective Utility Undertaking which requirements will include but not be limited to the following:

1. Water Supplies Department (WSD) or his agent - agree on Site the minimum length of site to be made available to WSD or his agent for mainlaying works. Provide adequate working space on each side of pipe trench. WSD or his agent will require a minimum of two months’ notice before commencement of their works;

2. Fixed Telecommunication Network Services (FTNS) Operators - agree on Site the minimum length of site to be made available to the FTNS operators. FTNS operators will require a minimum of one month’s advance notice before commencement of their works;

3. CLP Power Hong Kong Limited (CLP) - agree on Site the minimum length of site to be made available to CLP. CLP will require a minimum of one month’s advance notice before commencement of their works;

4. Hong Kong and China Gas Company Limited (HKCG) - agree on Site the minimum length of site to be made available to the HKCG shall be agreed on site. In the case of road crossings, then the relevant length of the crossing only is required. HKCG will require a minimum of two months’ advance notice before commencement of their works. Made available the portion of Site to HKCG at formation level and section by section in a continuous manner;

5. CLP Engineering Limited (CLPEL) - with regard to new installations, lighting, complete all civil works as required before commencement of the street lighting works. CLPEL will require a minimum of three months’ advance notice before commencement of their works.

ATTENDANCE ON CONTRACTORS TENDERING FOR SPECIALIST AND NOMINATED SUB-CONTRACT WORKS

FACILITIES

Provide every facility to inspect the Site and the Works in the legitimate pursuit of their submission of a tender.

INFORMATION

Provide such information as can reasonably be requested as to method of construction, programme of Works, and the like.

GENERAL OBLIGATIONS

REMEDIAL WORKS OR EXPENSES

Carry out all work necessitated by any failure in the above arrangements or pay to the Authority all expenses properly incurred as a result of such failure.
PRE.C13 APPENDIX 1

COMPUTER AND IT MULTI-MEDIA FACILITIES

PRE.C13.A030.A OTHER REQUIREMENTS

1. Provide ...... No. of broadband line(s) for the exclusive use of the CM and his representatives for the duration from the date of commencement of the Works up to six months after the date of certified completion of the Works;

2. The broadband line shall comply with the following:

   a. Unlimited 24 hours internet access through Internet Service Provider (ISP) via broadband with minimum 3M connected individually to each of the computer systems in CM's principal office and the container office(s). Security hardware / software systems shall be provided to protect the computer systems from hackers / unauthorized intruders;

   b. Networking to connect each of the computer equipment in CM's principal office and the container office(s). The broadband router or switch used to connect the network to the ISP must support Virtual Private Network (VPN) using IPSec technology;

   c. Maintenance and support under an agreement between the Contractor and the original supplier for all equipment so provided for the internet service;

   d. All necessary training, manuals and instructions in operating the internet service for all the users as directed by the CM or his representatives.

PRE.C15.A030.8  PLANIMETRIC FEATURES TO BE SURVEYED

1. Building / Structures:
   a. The plinth line of all permanent buildings;
   b. The plinth line of all temporary structures.

2. Boundary Features:
   a. Fences;
b. Gates;
c. Walls;
d. Boundary stones;
e. Hoardings.

3. Roads, tracks and footpaths:
   a. Kerb lines or edges of surfacing to carriageways;
   b. Tracks and verges;
   c. Ramps and Drives;
   d. Paths;
   e. Pedestrian crossings;
   f. Steps / staircases.

4. Street Furniture:
   a. Letter boxes;
   b. Bus stops with shelters;
   c. Lamp posts;
   d. Telephone poles;
   e. Electricity poles;
   f. Traffic signals and control boxes;
   g. Sign posts;
   h. Drains or gullies;
   i. Fire hydrants;
   j. Various types of manholes or inspection chambers;
   k. Barriers and bollards;
   l. Telephone kiosks;
   m. Electric cabinets and transformer.

5. Slopes and Earthworks:
   a. Cuttings and embankments;
   b. Terraced slopes;
   c. Retaining walls;
   d. Cliff;
   e. Rock outcrops;
   f. Stockpiles;
   g. Boulders greater than 2 m diagonally;
   h. Slope conventions shall be drawn as near as possible to indicate the actual shape of the slope face, i.e. all berms and terraces shall be detailed. Any other features not listed, which are likely to affect construction works shall also be shown.

6. Vegetation:
   a. All trees of a trunk diameter measures 95 mm or more at a height of 1.3 m above ground level.
7. Water Features:
   a. All water features including ditches, rivers, streams, nullah with the indication of direction of flow.

PRE.C15.A040.A SPOT LEVELS
1. Sufficient spot levels shall be surveyed such that the ground topography is accurately represented on drawing;
2. The maximum distance between adjacent spot levels shall not exceed 50 mm at plan scale unless otherwise specified by the CM;
3. Spot levels shall also be surveyed at the features listed below:
   a. Back of footpaths, pavements, top and bottom of kerbs, surface channels and centre line of road at 10 m intervals or at change of gradients;
   b. Top and bottom of staircase and ramps;
   c. Corners of buildings and other artificial structures;
   d. Top and bottom of slopes;
   e. Catchwater, ditches, outfalls, streams, culverts and drains at significant changes of gradients;
   f. Cover and invert levels of manholes, and inspection covers;
   g. Top and bottom of retaining walls;
   h. Top level of boulders greater than 2 m diagonally.

SURVEY RESULTS

PRE.C15.A110.A SURVEY
Supply copies of raw data, field notes, computations, survey reports etc. in relation to the Survey as and when required by the CM.

PRE.C15.A120.8 DIGITAL DATA
The digital data for the Survey shall be labelled and recorded in optical media (e.g. CD / DVD) for input to the Contract Manager's computer system.

APPENDIX D - SCHEDULE OF SAMPLES TO BE PROVIDED BY THE CONTRACTOR
APPENDIX D - SCHEDULE OF SAMPLES TO BE PROVIDED BY THE CONTRACTOR

**APD.A010.8**  

**SCHEDULE OF SAMPLES TO BE PROVIDED BY THE CONTRACTOR**

In accordance with [PRE.B9.410](#) and [PRE.B9.420](#), provide the following samples for Approval before confirming orders, and delivery to and use on Site. Samples to be retained by the CM on or off Site. Samples may be sent by the CM, for testing to the appropriate Government of Hong Kong, Polytechnic or University Department in Hong Kong. Any test results which indicate a quality other than that specified will require the replacement and rectifying of any work carried out by the Contractor to comply with the Specification.

APPENDIX R - INFORMATION REQUIRED BY CONDITIONS OF SUB-CONTRACT

INFORMATION REQUIRED BY CONDITIONS OF SUB-CONTRACT

NS13.1 Price Fluctuations

For the purpose of determining the material fluctuation pursuant to Clause SCC20.1 of the Special Conditions of Contract, the "Cash Seller and Settlement" price in Hong Kong dollar equivalent for Copper Grade A forming the Base or the Current Material Index shall be calculated by multiplying,

1. the "Cash Seller and Settlement" price for Copper Grade A quoted in US dollar per tonne from the London Metal Exchange (LME) (hereinafter referred as "Copper Price") published in LME’s official Internet website at the date for fixing the Base or the Current Material Index with;

2. the six-month forward selling exchange rate for US dollar to Hong Kong dollar quoted in the Opening Indicative Counter Exchange Rates Table issued daily by the Hong Kong Association of Banks at the date for fixing the Base or the Current Material Index.

The product obtained from the above multiplication shall be to two decimal places. Decimal places in excess of two shall be rounded up or down to the nearest second decimal place.

In the event that there is any disagreement or doubt as to the correctness of the Copper Price(s) published in LME’s official Internet website mentioned in sub-clause (1) above, or the Copper Price(s) is unavailable from LME’s official Internet website, or the discontinuation of publishing the Copper Prices in LME’s official Internet website, the correct Copper Price(s) shall be obtained from LME. Any provisional calculation of the material fluctuation adjustments based on the latest Copper Price(s) published in LME’s official Internet website shall subsequently be corrected upon the obtaining of the correct Copper Price(s). The Sub-contractor shall make all necessary arrangement as instructed by the Contract Manager and shall bear all costs for the obtaining of the correct Copper Price(s) from LME. If after a reasonable time the Sub-contractor fails to obtain the correct Copper Price(s) from LME, the Contract Manager after giving reasonable notice in writing to the Sub-contractor may obtain the correct Copper Price(s) from LME all at the costs, including handling charges, of the Sub-contractor and such costs to be deducted from payment due to the Sub-contractor.

CLA1  PROFILED SHEET ROOFING AND CLADDING

MATERIALS

PROFILED SHEETS

CLA1.M010.8  GENERAL
All profiled sheet must generally comply with BS 5427:1976.

CLA1.M020.8  GALVANIZED CORRUGATED STEEL
To BS 3083:1988 and:
1. Minimum coated thickness: 0.6 mm;
2. BS designation: G350;
3. Each sheet marked with the BS number and the type;
4. Complying with the appropriate corrugation profile described in the BS.

CLA1.M030.8  COATED PROFILED STEEL
Hot-dip zinc coated steel with surface coating and:
1. Thickness including zinc coatings but excluding surface finishes not less than 0.7 mm;
2. Profile and coating type: as shown on Drawings;
3. Colour: as shown on Drawings.

CLA1.M040.8  PROFILED ALUMINIUM
To BS 4868:1972:
1. Profile type:
   a. Type S (Sinusoidal);
   b. Type A (Asymmetrical Trapezoidal);
   c. Type B (Symmetrical trapezoidal).
2. Minimum thickness: 0.6 mm;
3. Finish: plain or Stucco embossed finish.

CLA1.M050.8  COLOUR COATED PROFILED ALUMINIUM
Generally to BS 4868:1972 with aluminium substrate to BS 1470:1987, designation 3103 H18, and:
1. Profile type and pitch and coating type: as shown on Drawings;
2. Minimum thickness: 0.6 mm;
3. Colour: as shown on Drawings.
CLA1.M060.8  PROFILED GRP
Glass reinforced plastic sheets to BS 4154:Part 1:1985 with thermo-setting polyester resin to BS 3532:1990:
1. Profile: to BS 4154:Part 2:1985, Table 1;
2. Light diffusion class: to BS 4154:Part 1:1985;
3. Colour: as shown on Drawings;
4. Fire performance requirements:
   a. Fire exposure rating for roofing to BS 476:Part 3:1975;
5. Marked with the manufacturer's name or trademark, the BS number 4154 and the designation of samples tested to BS 476:Part 3:1975 where applicable.

CLA1.M070.8  PROFILED PVC
Unreinforced, rigid PVC sheets to BS 4203:Parts 1 and 2:1980
2. Light diffusion characteristics: to BS 4203:Part 2:1980;
3. Colour: as shown on Drawings;
4. Thickness: as shown on Drawings;
5. Marked with the manufacturer's name or trademark, the BS number and the date of manufacture.

CLA1.M080.8  PROFILED FIBRE CEMENT
Free of asbestos materials of any kind with profile and colour as shown on Drawings.

CLA1.M090.8  LINING SHEETS
1. Material and coating type: as shown on Drawings;
2. Colour: as shown on Drawings;
3. Thickness: as shown on Drawings, including any zinc coatings but excluding finishes.

CLA1.M100.8  FACTORY COATED PROFILED STEEL INSULATED SHEETS
Composite profiled sheets with bonded internal insulation:
1. Sheet thickness including zinc coatings but excluding surface finishes: not less than 0.7 mm;
2. Profile, weight, coatings and insulation required: as specified in Project Specific Specification;
3. Colour: as shown on Drawings;
4. Ensure the design of composite sheets allow for differential expansion.

CLA1.M110.8  PROFILED SHEET ROOFING AND CLADDING FOR DOMESTIC BLOCK
Proprietary product as follows:
1. Sheeting: 0.47 mm factory painted zinc/aluminium alloyed coated steel with 550 Mpa minimum yield strength, crimp curved as shown on the Drawings;
2. Colour: as shown on the Drawings or to Approval;
3. Accessories: longitudinal and transverse metal flashings, colour-matched to roofing sheets, produced to dimensions and profiles shown on the Drawings;
4. Sealant: one-part silicone as recommended by the manufacturer for sealing between flashings and concrete walls and in compliance with WAT5.M110.

ACCESSORIES FOR PROFILED SHEETS

CLA1.M210.8 ACCESSORIES FOR CORRUGATED STEEL
1. Of proprietary manufacture;
2. Manufactured from 0.6 mm thick galvanized steel sheet.

CLA1.M220.8 ACCESSORIES FOR COLOUR COATED PROFILED STEEL
Obtain from the sheet manufacturer.

CLA1.M230.8 ACCESSORIES FOR PROFILED ALUMINIUM
1. Obtain from the sheet manufacturer;
2. Manufactured from aluminium flat sheet at least 0.6 mm thick and with a similar finish to the profiled sheets.

CLA1.M240.8 ACCESSORIES FOR COLOUR COATED PROFILED ALUMINIUM
1. Obtain from the sheet manufacturer;
2. Manufactured from aluminium flat sheet at least 0.6 mm thick and similar in colour and finish to the profiled sheets.

CLA1.M250.8 ACCESSORIES FOR PROFILED FIBRE CEMENT
Obtain from the sheet manufacturer.

FIXINGS AND ANCILLARY MATERIALS

CLA1.M310.8 FIXINGS GENERALLY
Design to prevent the ingress of rainwater when fixed according to this Specification and as specified from the following;
1. Hook bolts and nuts, drive screws, washers, self-tapping screws, roofing bolts, nuts and clips, roofing screws and sheeting clips to BS 1494:Part 1:1964:
   a. Sizes: as shown on the Drawings;
   b. Finish: hot dip galvanized, zinc, aluminium plated or otherwise specified.
2. As recommended by the sheeting manufacturer.

CLA1.M320.8 WASHERS
Must be capable of withstanding uplift during typhoon conditions.

CLA1.M330.8 FIXING HEADS FOR COLOURED SHEETS
Fitted with plastic caps of a matching colour to that of the sheets.
**CLA1.M340.8**  METALLIC ZINC RICH PRIMING PAINT
To BS 4652:1995, Type 2.

**INSULATION**

**CLA1.M410.8**  GLASS FIBRE INSULATION
Resin bonded, non-combustible, semi-rigid slabs with density, thermal conductivity and thickness of insulation as specified in *Project Specific Specification*. 
WORKMANSHIP

PREPARATION OF PROFILED SHEETS

CLA1.W010.8 FIXING HOLES
Drill fixing holes:
1. In the crown of corrugations for roofing;
2. In the trough of corrugations for cladding;
3. 2 mm larger than bolts or screws;
4. Not less than 40 mm from the edges of sheets.

CLA1.W020.8 TREATING CUT OR DRILLED ZINC COATINGS
Make good damage to zinc coatings and galvanizing by applying two coats of metallic, zinc-rich priming paint.

LAPS ON PROFILED SHEETING

CLA1.W110.8 END LAPS ON STEEL SHEETING
Lay:
1. Sloping sheets with a minimum end lap of 150 mm;
2. Vertical sheets with a minimum end lap of 75 mm;
3. So that all laps are located over a supporting member.

CLA1.W120.8 END LAPS ON ALUMINIUM SHEETING
Lay:
1. Sloping sheets with a minimum end lap of 150 mm;
2. Vertical sheets with a minimum end lap of 75 mm;
3. So that all laps are located over a supporting member.

CLA1.W130.8 END LAPS ON GRP SHEETING
Lay:
1. Sloping sheets with a minimum end lap of 150 mm;
2. Vertical sheets with a minimum end lap of 75 mm;
3. So that all laps are located over a supporting member.

CLA1.W140.8 END LAPS ON PVC SHEETING
Lay:
1. Sloping sheets with a minimum end lap of 225 mm;
2. Vertical sheets with a minimum end lap of 75 mm;
3. So that all laps are located over a supporting member.
**END LAPS ON FIBRE CEMENT SHEETING**

Lay:
1. Sloping sheets with a minimum end lap as shown on Drawings;
2. Vertical sheets with a minimum end lap as shown on Drawings;
3. So that all laps are located over a supporting member.

**SIDE LAPS**

Lay sheets with open joint of side lap away from the prevailing wind.

**SEALING LAPS**

Seal laps with lap sealant in accordance with the sheet manufacturer's recommendations.

**FIXING PROFILED SHEETING**

**GENERAL**

Fix sheeting:
1. In accordance with this Specification; or alternatively,
2. Fix in accordance with the sheeting manufacturer's recommendations but, nevertheless, to withstand uplift under typhoon conditions.

**FIXING TO STEELWORK**

Fix with hook bolts at maximum centres of 300 mm.

**FIXING TO TIMBER**

Fix with hook bolts at maximum centres of 300 mm.

**EAVES, ENDS AND END LAPS**

Fix with two fixings per sheet width.

**INTERMEDIATE SUPPORT**

Where no lap occurs, fix sheets with two fixings per sheet width.

**SELF TAPPING SCREWS**

Tighten self-tapping screws to the torque recommended by the manufacturer.

**FIXING GALVANIZED, CORRUGATED SHEETING AND ACCESSORIES**

1. Fix sheeting in accordance with CP 143:Part 10:1973;
2. Cut, fit and dress accessories to fit corrugations and:
   a. Where possible, fix with the same fixings used to secure sheeting;
   b. Elsewhere, fix to the sheeting with roofing bolts.

**FIXING PROFILED ALUMINIUM SHEETING**

CLA1.W290.8  MOVEMENT JOINTS
1. Provide movement joints in locations shown on the Drawings, or otherwise in all lengths of roofing or cladding over 45 metres, with one joint for lengths up to 75 metres and one for every additional 30 metres;
2. Fix movement joint cover to sheets on only one side of the joint.

CLA1.W300.8  FIXING COATED PROFILED STEEL
Fix sheets in accordance with the manufacturer's recommendations and:
1. Cut sheets by shearing, without the use of circular saws or abrasive wheels;
2. Make good damage in accordance with clause CLA1.W020.

CLA1.W310.8  FORMING CURVES
Bend sheets requiring to be bent to a radius for fixing to curved roofs, eaves etc by means of a proper profiling machine, designed for this purpose.

CLA1.W320.8  FIXING PROFILED SHEET ROOFING AND CLADDING TO STANDARD DOMESTIC
Fix sheeting:
1. In accordance with the Drawings; and,
2. Fix in accordance with the sheeting manufacturer's recommendations but, nevertheless, to withstand uplift under typhoon conditions.
CLA2 CHINESE TILING

MATERIALS

CHINESE TILES

CLA2.M010.8 TILES GENERALLY
Red in colour, sound, well burnt, unglazed clay, whole and free from cracks and blemishes.

CLA2.M020.8 SIZES OF TILES
Approximate sizes to be as specified for the following:
1. Plain tiles: 225 mm × 225 mm;
2. Roll tiles: 165 mm long and tapered;
3. Valley tiles: 300 mm × 225 mm.

CLA2.M030.8 SPECIAL TILES
1. Roll tiles to be left exposed: specially selected and semi-circular in section;
2. Glazed tiles: to be obtained from an Approved manufacturer.

ANCILLARY MATERIALS

CLA2.M110.8 MORTAR
Cement and lime mortar as MAS3.W170.

CLA2.M120.8 CHUNAM MORTAR
To consist, by volume of:
1. One part of Portland cement type CEM I in BSEN 197-1:2000;
2. Three parts of hydrated lime to BS 890:1972; and
3. Twenty parts of inorganic soil, free from organic matter and containing no more than 30% of soil particles passing a 63 micron BS Test Sieve.

CLA2.M130.8 NAILS
Aluminium or galvanized steel, 2 mm minimum diameter and 30 mm long with plain heads.

CLA2.M140.8 REINFORCEMENT FOR CHUNAM BEDDING MORTAR
Mesh size and finish of reinforcement are shown on Drawings.

CLA2.M150.8 TIMBER TILING BATTENS
As Worksection TIM1.
WORKMANSHIP

FIXING CHINESE TILING

CLA2.W010.8 SINGLE LAYER TILING
Lay tiles in a single layer:
1. Gauge of plain tiles: exceeding 75 mm but not exceeding 115 mm;
2. Gauge of roll tiles: 120 mm.

CLA2.W020.8 DOUBLE LAYER TILING
Lay tiles in two identical layers, the second superimposed on the first:
1. Gauge of plain tiles: exceeding 75 mm but not exceeding 115 mm;
2. Gauge of roll tiles: 120 mm.

CLA2.W030.8 FIXING TILES TO CONTINUOUS DECKS
1. With cement mortar:
   a. Bed corners of plain tiles in mortar dabs;
   b. Lay roll tiles with a 50 mm lap, bedding both edges in mortar;
   c. Cover roll tiles with mortar to a minimum thickness of 15 mm and trowel smooth.
2. With chunam mortar:
   a. Lay a continuous, reinforced, chunam, mortar bed evenly on the substrate: 15 mm thick;
   b. Bed plain tiles onto freshly laid mortar bed;
   c. Lay roll tiles with a 50 mm lap, bedding both edges in mortar;
   d. Cover roll tiles with mortar to a minimum thickness of 15 mm and trowel smooth.

CLA2.W040.8 FIXING TILES TO BATTENS
1. Drive nails into battens and leave projecting 15 mm as a key for mortar dabs;
2. Bed corners of plain tiles in mortar dabs;
3. Lay roll tiles with a 50 mm lap, bedding both edges in mortar;
4. Cover roll tiles with mortar to a minimum thickness of 15 mm and trowel smooth;
5. Neatly point the underside if exposed.

CLA2.W050.8 ROLL TILES TO BE LEFT EXPOSED
Bed and point in cement mortar.

CLA2.W060.8 GLAZED TILES
Fix in accordance with the manufacturer's recommendations.
CLA2.W070.8  VERGES
Finish with a mortar fillet, trowelled smooth.

CLA2.W080.8  RIDGES AND HIPS
Form ridges and hips with rows of inverted tiles, with rows of roll tiles over.

CLA2.W090.8  VALLEYS
1. Lay valley tiles up the valley to gauge as shown on Drawings;
2. Cut roof tiles to rake and finish both sides with mortar, trowelled smooth.

CLA2.W100.8  EAVES TO SINGLE LAYER TILING
Finish eaves with a double layer of tiles.

CLA2.W110.8  EAVES TO DOUBLE LAYER TILING
Finish eaves with roll tiles or tile slips placed centrally between rolls to form weep hole and fill edge with mortar, trowelled smooth.

CLA2.W120.8  ABUTMENTS AND PIPES ETC
Cut and fit tiling at abutments and around pipes etc and finish with a mortar fillet, trowelled smooth.
**CLA4 SHEET METAL COVERINGS**

**MATERIALS**

**LEAD SHEET AND ANCILLARY MATERIALS**

**CLA4.M010.8 MILLED LEAD SHEET AND STRIP**

To BS 1178:1982 and of the code specified for the situation given in the table below unless shown otherwise on the Drawings:

<table>
<thead>
<tr>
<th>Situation</th>

**CLA4.M020.8 ISOLATION LAYER**

Waterproof building paper to BS 1521:1972, Class A, Type A1F.

**CLA4.M030.8 UNDERLAY**

1. Needled non-woven polyester textile;
2. Weight: not less than 200 g/m².

**CLA4.M040.8 CLIPS AND TACKS**

1. Cut from Code 6 lead sheet and not less than 50 mm wide; or
2. Cut from sheet copper to BS 2870:1980 and of ¼ H temper, not less than 0.6 mm thick and 50 mm wide. Lead coated when used as visible fixing.

**CLA4.M050.8 NAILS**

1. Copper, to BS 1202:Part 2:1974, Table 2 with annular ring, helical ring or serrated shank, not less than 20 mm long with a minimum shank diameter of 3.35 mm and head diameter not less than 6 mm;
2. Austenitic stainless steel with annular ring, helical ring or serrated shank, not less than 19 mm long with a minimum shank diameter of 2.65 mm and head diameter not less than 6 mm;
WOOD SCREWS
1. Brass, to BS 1210:1963:Table 3 and not less than 19 mm long and 3.35 mm diameter;
2. Stainless steel: to BS 1210:1963:Table 3, not less than 19 mm long and 3.35 mm diameter.

PLUGS
Proprietary fibre or plastics of length and diameter to suit screw fixings.

SOLDER
To BS 219:1977, Grade D or J.

ALUMINIUM SHEET AND ANCILLARY MATERIALS

ALUMINIUM SHEET
To BS 1470:1987:
1. Grade 1050A, temper grade H12;
2. 0.8 mm thick;
3. With mill finish.

UNDERLAY FOR TIMBER DECKS
Bitumen felt to BS 747:1994, type 4A(ii), No 1 inodorous.

UNDERLAY FOR CEMENTITIOUS DECKS
Polyethylene sheet, 300 microns (0.3 mm) thick.

CLIPS
1. Plain clips: cut from aluminium sheet specified for roofing to dimensions shown in Fig. 4, CP 143:Part 15:1973;
2. Expansion clips: aluminium or stainless steel 0.8 mm thick, type A or B to Fig. 3, CP 143:Part 15:1973.

NAILS
Aluminium to BS 1202:Part 3:1974 and:
1. For securing underlay: 20 mm long x 3 mm diameter clout type;
2. For securing clips: 25 mm long x 3.25 mm diameter.

WOOD SCREWS
Aluminium to BS 1210:1963, anodized and dipped in lanolin and:
1. Not less than 25 mm long x No 8 gauge for securing clips;
2. Appropriate length x No 14 gauge for securing wood rolls.

BITUMEN COATING SOLUTION
To BS 6949:1991, Type 1.
COPPER SHEET AND ANCILLARY MATERIALS

CLA4.M210.8  HOT ROLLED COPPER SHEET AND STRIP
To BS 2870:1980, designation C104:
1. For roofing and cladding: 0.7 mm thick, temper grade 0 for hand applied coverings and temper grade ¼H for machine bending and welding systems;
2. For flashings and weathering: 0.7 mm thick, temper grade ½H.

CLA4.M220.8  UNDERLAY
1. Needled non-woven polyester textile;
2. Weight: not less than 200 g/m².

CLA4.M230.8  CLIPS
Sheet copper to BS 2870:1980, designation C104, hot rolled, temper grade ¼H.

CLA4.M240.8  NAILS
Copper to BS 1202:Part 2:1974, Table 3, jagged shank, 25 mm long.

CLA4.M250.8  WOOD SCREWS
Brass to BS 1210:1963, Table 3.

CLA4.M260.8  PLUGS
Proprietary fibre or plastics of length and diameter to suit screw fixings.

CLA4.M270.8  MORTAR FOR POINTING
As specified in Worksection MAS3.
WORKMANSHIP

GENERAL

CLA4.W010.8 STORAGE
1. Store sheets and strip clear of the ground in a dry place. Protect from distortion and damage to surfaces and edges;
2. Store rolls of underlay and isolation layer upright on a clean, flat surface in a dry place.

CLA4.W020.8 ROOF CONDITION
Before laying coverings ensure that
1. All surfaces are clean, dry, smooth and free from projections;
2. All preliminary works including formation of any grooves, provision of rolls and drips are complete;
3. Roof substructure is to falls shown on the Drawings.

CLA4.W030.8 FIXINGS
Drive heads of nails and screws below surfaces to be covered, to ensure outer layer of sheeting is not pierced.

CLA4.W040.8 LAYING UNDERLAY GENERALLY
Keep base and underlay dry and do not lay more underlay than can be covered with sheeting before end of day's work.

CLA4.W050.8 LAYING, JOINTING AND FIXING COVERING GENERALLY
1. Do not use sharp scribers for marking out;
2. Lay sheets flat on base and dress neatly to profile of upstands and projections etc without causing injury to the surface.

CLA4.W060.8 LAYING SEQUENCE
Lay sheeting in the following sequence: cesspools, gutters, aprons, roof and wall surfaces.

LAYING LEAD SHEET COVERINGS

CLA4.W110.8 GENERAL
1. Lay, joint and fix lead sheet coverings in accordance with BS 6915:1988;
2. Ensure that persons employed on work which exposes them to lead in such a form that it may be inhaled, ingested or otherwise absorbed are aware of the risks from lead and the precautions which should be observed.

CLA4.W120.8 LAYING UNDERLAY ON CEMENTITIOUS DECKS
1. Loose lay building paper onto concrete and screeded bases, and up 50 mm at edges;
2. Loose lay needle non-woven polyester textile onto building paper and butt at edges;
3. Continue underlay around and up abutments to flashing line.

CLA4.W130.8  LAYING UNDERLAY ON TIMBER DECKS
1. Fix needle non-woven polyester textile to timber with galvanized nails at 300 mm centres, butt jointed to horizontal surfaces with 50 mm wide lap joints to sloping and vertical surfaces;
2. Continue around and up abutments to flashing line.

CLA4.W140.8  CLIPS AND TACKS
Twice fix and turn 20 mm over free edge of covering.

CLA4.W150.8  FIXING CLIPS TO TIMBER
Fix clips to timber with 25 mm x 3.25 mm copper nails or 25 mm x No. 8 brass screws.

CLA4.W160.8 -fixing clips to masonry/concrete
Fix clips to concrete, brickwork and stonework with fibre or plastics plugs and 25 mm x No. 8 brass screws.

CLA4.W170.8  SOLDERING
Use solder only where unavoidable.

CLA4.W180.8  SHEET SIZES FOR ROOF COVERINGS
1. Not more than 2500 mm long;
2. Not more than 2.25 m² in area.

CLA4.W190.8  SHEET SIZES FOR WALL COVERINGS
1. Not more than 2400 mm long;
2. Not more than 1.7 m² in area.

CLA4.W200.8  INTERMEDIATE FIXINGS FOR WALL COVERINGS
Form at centres as shown on Drawings with 25 mm long, raised head brass screws and 10 mm diameter tinned, brass washers set in 40 mm diameter x 8 mm deep recess in base filled with solder and wiped smooth.

CLA4.W210.8  COVER FLASHINGS TO FLAT ROOF COVERINGS
1. Form from sheets not more than 1500 mm long and lap ends 100 mm;
2. Secure with lead tacks left on underlap at 450 mm centres and turned over 20 mm;
3. Turn top edge 25 mm into groove in brick and concrete surfaces, wedge at 450 mm centres and point in 1:3 cement: sand mortar;
4. Lap upstand by not less than 75 mm;
5. Finish lead 50 mm clear of flat roof coverings with 150 mm minimum depth-on-face of flashing.

CLA4.W220.8  LEAD SLATES, FLASHINGS AND COLLARS
1. Form in Code 4 lead in positions shown on the Drawings;
2. Fit slates around pipes etc penetrating the roof;
3. Dress into roofing for full slate/tile lap;
4. Lead burn collar to lead slate.

CLA4.W230.8 WEDGES
Drive 25 mm wide x 20 mm finished depth, wedge-shaped lead strips full depth into groove.

LAYING ALUMINIUM SHEET COVERINGS

CLA4.W310.8 STANDARD
Lay, fix and joint aluminium coverings in accordance with the recommendations of CP 143:Part 15:1973 unless specified otherwise.

CLA4.W320.8 CONTACT BETWEEN DISSIMILAR METALS
1. Prevent direct contact between aluminium and copper, brass or bronze;
2. Isolate iron and steel in direct contact with aluminium with isolating tape, bitumen coating solution or Approved equivalent.

CLA4.W330.8 STORING ALUMINIUM
In accordance with clause CLA4.W010 and protected from contact with dissimilar metals, alkaline and any other damage.

CLA4.W340.8 LAYING UNDERLAY ON CEMENTITIOUS DECKS
Lay polyethylene underlay with 50 mm lapped joints. Carry up underlay at wall abutments to flashing level.

CLA4.W350.8 LAYING UNDERLAY ON BOARDED OR SHEETED DECKS
Lay felt underlay butt jointed and secured with clout nails. On vertical and steeply pitched surfaces, ensure underlay is securely fastened before fixing clips. Carry up underlay at wall abutments to flashing level.

CLA4.W360.8 CLIPS FOR STANDING SEAMS
Space at 300 mm centres along line of seams and fix to:
1. Timber decks with nails;
2. Cementitious decks with screws and plugs.

CLA4.W370.8 LAYING ALUMINIUM COVERINGS GENERALLY
1. Cut, form and bend sheet to required dimensions in workshop wherever possible;
2. Allow for upstands or verge apron welting in first and last bays when setting out;
3. Lay flat and true to surface of roof.

CLA4.W380.8 STANDING SEAM JOINTS
1. Secure seams up to 3 m long with plain clips;
2. Secure seams longer than 3 m with plain clips for first 3 m from top of slope and remainder of seam with expansion clips;
3. Space clips at 300 mm centres;
4. Machine or hand form seams to dimensions shown on the Drawings.

**CLA4.W390.8 ABUTMENTS TO MASONRY AND CONCRETE SURFACES**

1. Ensure that there is either an underlay backing to aluminium upstand or coat reverse of sheet with bitumen coating solution;
2. Form upstand in sheeting to abutments to dimensions shown on Drawings;
3. Provide and form cover flashing as specified in Worksection WAT4.

**LAYING SHEET COPPER COVERINGS**

**CLA4.W410.8 STANDARD**

Lay, joint and fix copper coverings in accordance with the recommendations of CP 143:Part 12:1970 unless specified otherwise.

**CLA4.W420.8 CONTACT BETWEEN DISSIMILAR METALS**

Prevent contact between copper sheeting and dissimilar metals other than brass and lead. Coat contact surfaces with bituminous coating solution, protective tape or equivalent.

**CLA4.W430.8 LAYING UNDERLAY ON CEMENTITIOUS DECKS**

Lay underlay with butt joints across fall. Continue around gutters and up abutments to flashing line.

**CLA4.W440.8 LAYING UNDERLAY ON BOARDED OR SHEETED DECKS**

Lay underlay with butt joints and nail with 25 mm x 3.25 mm diameter copper nails at 150 mm centres at edges and at 150 mm centres staggered over area of sheets. Continue around gutters and up abutments to flashing line.

**CLA4.W450.8 FIXING CLIPS TO TIMBER**

Fix clips to timber with 25 mm x 3.25 mm diameter copper nails or 25 mm x No. 8 brass screws.

**CLA4.W460.8 FIXING CLIPS TO MASONRY/CONCRETE**

Fix clips to concrete, brickwork and stonework with fibre or plastic plugs and 25 mm x No. 8 brass screws.

**CLA4.W470.8 USE OF SOLDER**

Do not solder sheets.

**CLA4.W480.8 LAYING GENERALLY**

Cut and bend to required size and profile before laying. Ensure sheets lie flat on base on completion of laying.

**CLA4.W490.8 SHEET SIZES**

Do not use sheets exceeding the following size unless otherwise Instructed:
1. Length: 1800 mm;
2. Width: 750 mm (to form bay 650 mm wide between joints).
CLA4.W500.8 STANDING SEAM JOINTS
1. Form 20 mm high in direction of fall;
2. Turn up adjacent sheets and double-lock welt together;
3. Secure with copper clips twice fixed at 380 mm centres.

CLA4.W510.8 UPSTANDS AT ABUTMENTS
1. Turn sheeting up at abutments by not less than the following:
   a. Pitch up to 15°: 200 mm;
   b. Pitch over 15° and up to 30°: 150 mm;
   c. Pitch over 30°: 100 mm.
2. Single-lock welt joints and secure with copper clips at 450 mm centres.

CLA4.W520.8 FLASHINGS
1. Form at square abutments with 0.7 mm copper giving 100 mm minimum cover over upstands;
2. Form from sheets not more than 1800 mm long with single-lock welt joints;
3. Welt bottom edge to 12 mm depth of welt;
4. Turn clips down over top of upstand and 25 mm up over bottom edge of flashing;
5. Turn top edge 25 mm into groove, secure with copper wedges and point in mortar.

CLA4.W530.8 FIXING WEDGES TO COVER FLASHINGS
Drive 25 mm wide x 20 mm finished depth wedge-shaped copper strips full depth into groove.

COM1 STAINLESS STEEL WINDOWS, DOORS AND LOUVRES

DESIGN

GENERAL

COM1.D010.8 SPECIFICATION REQUIREMENTS
Design and construct all stainless steel windows, doors and louvres, complete with glazing, in accordance with the clauses in this Worksection and the relevant clauses in Worksection COM4.

COM1.D020.8 WINDOWS AND DOORS
Must be:
1. Suitable for inside glazing, unless otherwise shown on the Drawings;
2. An Approved glazing system with stainless steel beads.

DESIGN PARAMETERS

COM1.D110.8 TOLERANCES
Design window, door and louvre so that the tolerances are coordinated with the building tolerances for the structural works as described in Appendix H to this Specification.

COM1.D120.8 GLASS THICKNESS
Design glass thickness to withstand the wind load as specified in COM1.D130 and in no case allow it to be less than 6 mm. Calculate and check the correct thickness.

COM1.D130.8 WIND LOADING FOR GLAZED WINDOWS, DOORS AND LOUVRES
1. The maximum design wind pressure, with topography factor taken into account, adopted for the structural design of the non-domestic buildings and domestic buildings of the Works are  .......... kPa and ........ kPa respectively;
2. When fixed in position and glazed, windows, doors and louvres must withstand:
   a. A wind load calculated in accordance with the current Code of Practice on Wind Effects, Hong Kong;
   b. The resultant resistance to wind loading of a minimum of:
      i. 3.0 kPa for non-domestic buildings such as schools, commercial centres etc.;
      ii. 3.8 kPa for domestic buildings excluding ground floor or podium.
3. A maximum permissible deflection of less than 1/180 the length of a particular member or 20mm;
4. Use galvanized mild steel cores, anchors, brackets, etc. as stiffeners, where necessary.

COM1.D140.8 DRAINAGE
As COM2.D140.
SUBMISSION

COM1.D210.8  GENERAL
Ensure that drawings and structural calculations are carried out by a Registered Structural Engineer.

COM1.D220.8  SHOP DRAWINGS AND STRUCTURAL CALCULATION
Submit shop drawings and structural calculations for Approval in accordance with the following:

1. Six months prior to fabrication for windows, doors and louvres;
2. Re-submit for Approval where amendments are necessary;
3. Include design parameters specified on Drawings, design details of section members, fixing details of window, door and louvre members to the adjoining structures, positions of anchor bolts, equipotential bonding connection, ironmongery and accessories, type and thickness of glass in accordance with COM2.D110 to COM2.D140, details of equipotential bonding connection for composite windows in accordance with COM2.W470 and other relevant information;
4. Method statement for fixing friction pivots and sliding stays onto galvanised mild steel bars to window frames and sashes;
5. Structural design for window to be in accordance with either CP 118:1969 or BS 8118:Part 1 & 2:1991. Structural calculation shall be prepared, endorsed and submitted by RSE;
6. Fixing details of floor spring, top pivot and bottom strap for the stainless steel doors using Approved floor spring, including the inspection access for the door pivots fixing screws.

COM1.D240.8  SAMPLES
Submit material samples of windows, doors and louvres for CM's approval prior to the commencement of fabrication.
MATERIALS

WINDOWS, DOORS, LOUVRES AND FIXINGS

COM1.M010.8 WEATHERSTRIP
1. For doors: an Approved proprietary product of chloroprene rubber, polyvinylchloride or woolpyle type;
2. For windows: an Approved proprietary product of UV resistant thermoplastic vulcanizate rubber designed for glazing and sealing applications, sized and shaped to fit the proposed window system.

COM1.M020.A STAINLESS STEEL PLATE, SHEET AND STRIP
1. To BS EN 10095:1999;
2. Grade:
   a. Grade 316 in accordance with MET1.M060 (1)(c);
   b. Grade 304 in accordance with MET1.M060 (1)(b).
3. Thickness: Minimum 1.5 mm or as shown on the Drawings;
4. Finish: in accordance with MET1.M060 (4) or as shown on the Drawings;
5. On Site Delivery Verification (for grade 316 stainless steel items):
   a. Verification required at delivery stage for the following items:
      i. Window or louvre frame;
      ii. Window sash;
      iii. Louvre;
      iv. Non-pipe duct door leaf and door frame;
      v. As directed by the CM.
   b. At delivery stage, submit the following documents:
      i. Manufacturer's certificate:
         Provide the original or a certified true copy of the manufacturer's certificate of compliance with chemical analysis for each consignment delivered to Site. The certificate shall state the standard that the material complies with, and show that the material has been tested and found to comply with the chemical composition specifically required under the standard quoted;
      ii. Written confirmation that the materials delivered to Site conform with the requirements stated at sub-clause (1) to (4) above;
      iii. Delivery notes for all materials delivered to Site.
   c. Chemical Drop Test:
      Carry out and submit report on the following verifications for items stated in sub-clause 5(a) using an Approved proprietary chemical test kit to distinguish the grade of stainless steel. Prior to carrying out the verifications, inform the CM who may present to witness the verifications:
      i. Method:
### Verification Items

<table>
<thead>
<tr>
<th>Verification Items</th>
<th>Method</th>
<th>Acceptance Standards</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Window frame</td>
<td>Approved proprietary Chemical drop test</td>
<td>Change of colour at the tested spot matching the colour indicated at the test chemical’s instruction / catalogue</td>
</tr>
<tr>
<td>- Window sash</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Louvre</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Non-pipe duct door leave and door frame</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### ii. Frequency:

<table>
<thead>
<tr>
<th>Items</th>
<th>Sampling Frequency</th>
<th>Representative Batch</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Window frame</td>
<td>One test sample per item per batch</td>
<td>Same batch of material delivered to Site under one delivery note</td>
</tr>
<tr>
<td>- Window sash</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Louvre</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Non-pipe duct door leaf and door frame</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

d. When any of the verifications fail to meet the acceptance standards, either:

i. Remove the representative batch off Site; or

ii. When agreed by the CM, carry out verification using an Approved test method for identification of the grade of stainless steel on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.

**COM1.M030.8 STUD ANCHORS AND FIXING BOLTS**

As **MET1.M220**.

**COM1.M040.8 EXPOSED FIXINGS**

1. Stainless steel screws, nuts, bolts, washers and rivets; nylon washers and caps for window grilles to match finish;

2. For stainless steel door using approved floor spring, all exposed screws to be Allen screws to prevent vandalism.

**COM1.M050.8 CONCEALED FIXINGS**

Galvanized mild steel fasteners as shown on Drawings.

**COM1.M060.8 STAINLESS STEEL BEADS**

Fix beads securely to the frame with stainless steel screws or are an integral part of the frame.

**COM1.M070.8 SEALANT FOR ASSEMBLING COMPOSITE UNITS**

Silicone sealant as per **WAT5.M130**.
WINDOW AND DOOR FITTINGS

COM1.M110.8  FRICITION PIVOTS AND SLIDING STAYS

1. All friction pivots and sliding stays to be 3 mm thick. All sliding stays and base rails are stainless steel of UNS Designation S30400 to ASTM A240/A240M-09c or equivalent grade of other recognised standards Approved by the CM:
   a. For side hung window, providing a minimum clearance of 100 mm between frame and window when opening at 90°;
   b. For top hung window, providing a minimum clearance of 70 mm between frame and window when opening at 90°.
2. Friction pivots and screws are to be stainless steel of either UNS Designation S30200, S30400 or S30430 to ASTM A493-09, or equivalent grade of other recognised standards Approved by the CM;
3. All friction pivots and sliding stays are to be fixed with at least 3 nos. of 5 mm diameter stainless steel screws onto galvanized mild steel bar 12 mm minimum (width) x 3 mm (thick) in nominal size, as follows:
4. Length of the friction pivots and sliding stays for side hung window shall be of at least 60% of the width of the side hung window.

COM1.M120.8  CASEMENT FASTENERS, LOCKING HANDLES ETC

1. Stainless steel with satin finish; or
2. Die-cast zinc alloy to BS EN 1774:1998 and BS EN 12844:1999 suitably coloured to match the anodised window.

COM1.M130.8  PULL HANDLES

Stainless steel with hairline finish or anodized aluminium as shown on Drawings.

COM1.M140.8  ROLLERS, GUIDES ETC

Stainless steel with nylon or brass rollers to suit weight of window or door and adjustable after installation.

REMOTE CONTROL EQUIPMENT

COM1.M210.8  HAND OPERATED SYSTEM

As COM2.M310.

COM1.M220.8  REMOTE CONTROL SYSTEM

As COM2.M320.

ANCILLARY MATERIALS

COM1.M310.8  BITUMINOUS PAINT

As COM2.M410.

COM1.M320.8  WATERPROOF BEDDING MORTAR

As COM2.M190.
WORKMANSHIP

FABRICATION AND ASSEMBLY - OFF SITE

COM1.W010.8  SECTIONS
Fabricate from stainless steel plates, sheets and strips as COM1.M020 with projections along external opening edges of sections for weatherstripping.

COM1.W020.8  FIXING WEATHERSTRIPS
Securely fix weatherstrip to projection along the external opening edge of the window or door section to provide a continuous contact between each opening part and its fixed frame.

COM1.W030.8  WELDING FRAMES
Weld joints of frames to form rigid and secure connections. Do not use excessive heat during welding.

COM1.W040.8  SASH MEMBERS
Mechanically joint or mitre sash members and flush butt weld to develop the full strength of members and provide a neat weather-tight joint. Do not use excessive heat during welding.

FABRICATION AND ASSEMBLY - ON SITE

COM1.W110.8  COMPOSITE UNITS
Assemble all composite units on Site and provide all bolts, screws etc and silicone sealants.

INSTALLATION ON SITE

COM1.W120.8  FIXING ANCHOR BOLTS
Fix anchor bolts in accordance with manufacturer's recommendations and at positions to Approved shop drawings.

COM1.W130.8  WINDOWS AND DOORS
Hang to open as indicated on the Drawings and fit with fittings shown on the Drawings.

COM1.W140.8  TOLERANCES
Check the position, size and alignment etc. of all windows, doors and louvres in accordance with the tolerances specified at COM1.D110 and report any discrepancy to the CM. Rectify any fault or discrepancy to the satisfaction of the CM and bear the cost of all such remedial work.

COM1.W145.8  BEDDING AND GROUTING FRAMES
As COM2.W234.

COM1.W147.8  POINTING TO PERIMETER OF WINDOWS, DOORS AND LOUVRES
As COM2.W265.
EQUIPOTENTIAL BONDING TO WINDOWS AND LOUVRES

COM1.W210.8  EQUIPOTENTIAL BONDING TO STAINLESS STEEL WINDOWS, DOORS AND LOUVRES

Unless otherwise specified on Drawings, provide equipotential bonding connection for stainless steel windows, doors and louvers as follows:

1. Louvres for services room and doors:
   a. Weld one end of 1.5 mm thick stainless steel earthing lug(s) to the louvers and doors;
   b. Form a 5 mm diameter hole at the other end of the earthing lug(s) for connection of the bonding conductor by the Nominated Sub-contractor for Electrical Installation;
   c. Ensure that full electrical continuity is maintained between all the component elements of the metal doors and louvres.

2. Windows and louvres in public access areas:
   a. Provide a 20 mm x 1.5 mm thick steel plates earthing lug electroplated zinc galvanized to BS 1706:1990, class B and 13 μm to the outer frame of the windows and louvers. The cut edges of earthing lug shall be painted with zinc rich primer to BS 4652:1995;
   b. Fix one end of the earthing lug to the window with 2 No. M4 self-tapping stainless steel screws at 60 mm centres;
   c. Provide a 5 mm diameter hole at the other end for connection of the bonding conductor by the Nominated Sub-contractor for Electrical Installation;
   d. For window:
      i. The fixing position of the earthing lug should be as far away from the hinge of the window as possible;
      ii. Ensure that full electrical continuity is maintained between all the component elements of composite windows as COM1.W220.
   e. Louvres for services rooms: ensure that full electrical continuity is maintained between all the component elements of the louvres.

3. As COM2.W465 (6).

COM1.W220.8  EQUIPOTENTIAL BONDING REQUIREMENTS FOR COMPOSITE WINDOWS

1. Maintain electrical conductivity with negligible impedance between each member and component of window sets constructed either by means of screw joints, mortice and tenon joints, or riveting;

2. Maintain electrical continuity for composite window construction:
   a. Use appropriate number of stainless steel screws;
   b. Determine number of stainless steel screws and positions to be fixed on windows so as to maintain electric conductivity with negligible impedance between each member and component of the window set.

3. Submit samples of the windows completed with shop drawings showing detailed construction of window sets, including stainless steel screws for earth continuity, all for Approval prior to actual delivery and installation on site.
PROTECTION

**COM1.W310.8  PRIMING**
Prime reinforced steel framework, cores, anchors and brackets with zinc rich priming paint to BS 4652:1995 with two coats of bituminous paint.

**COM1.W320.8  TEMPORARY PROTECTIVE COATINGS TO EXPOSED STAINLESS STEEL**
1. Protect all exposed stainless steel surfaces with a strippable coating or low-tack masking tape;
2. Maintain and renew protective coatings as necessary.

**COM1.W330.8  PROTECTION OF WINDOWS, DOOR UNITS AND OTHER ASSOCIATED MATERIALS**
As COM2.W530.

COMPLETION OF THE WORKS

**COM1.W410.8  REMOVAL OF PROTECTIVE COATINGS**
Return to Site on completion of the building works and carefully remove protective coatings and leave clean.

**COM1.W420.8  ON COMPLETION**
As COM2.W610.
TESTING

ON-SITE VERIFICATION TEST

COM1.T010.8 TESTING INSTALLED WINDOWS FOR WATERTIGHTNESS
As COM2.T210.
COM2 ALUMINIUM WINDOWS AND LOUVRES

DESIGN

GENERAL

COM2.D010.A SPECIFICATION REQUIREMENTS
Design, supply and construct aluminium windows, doors, acoustic panels and louvres, complete with glazing, in accordance with this Worksection and the relevant clauses of Worksection COM4 and COM11.

COM2.D020.8 WINDOWS
Must be:
1. Suitable for inside glazing, unless otherwise shown or scheduled on the Drawings;
2. An Approved glazing system with aluminium beads.

COM2.D030.8 ADJUSTABLE LOUVRE FRAMES
Must be designed:
1. For hand or pole operations;
2. With single or double control(s);
3. To lock automatically when closed;
4. With adjustable louvre clips suitable for receiving either 100; 150 or 230 mm wide glass blades with a minimum nominal thickness of 6 mm;
5. With subframes for louvre frames which provide slotted adjustable lugs and screws for building in.

GENERAL

COM2.D040.N ACOUSTIC PANEL AT ACOUSTIC BALCONY AND ACOUSTIC WINDOW
1. A composite panel system primarily composed of:
   a. Perforated aluminium sheet to COM2.M040;
   b. Sound absorptive material to COM2.M610;
   c. Black fibre glass tissue covering the sound absorptive material.
2. Dimensions as shown on Drawings;
3. Noise reduction coefficient (NRC) of minimum 0.7 (ASTM C423 or equivalent);
DESIGN PARAMETERS

COM2.D110.A  TOLERANCES
Design windows, doors, acoustic panels and louvres in both precast concrete facades, precast concrete balconies and in-situ concrete walls so that the tolerances are coordinated with the appropriate building tolerances for the structural works as described in Appendix H to this Specification.

COM2.D120.8  GLASS THICKNESS
Design glass thicknesses to withstand the wind load as COM2.D130 and in no case allow it to be less than nominal thickness of 6 mm. Calculate and check the correct thickness.

COM2.D130.A  WIND LOADING FOR GLAZED WINDOWS, DOORS, ACOUSTIC PANELS AND LOUVRES
1. The maximum design wind pressure, with topography factor taken into account, adopted for the structural design of the non-domestic buildings and domestic buildings of the Works are ______ kPa and ______ kPa respectively;
2. When fixed in position and glazed, windows, doors, acoustic panels and louvres must withstand:
   a. A wind load calculated in accordance with the current Code of Practice on Wind Effects, Hong Kong;
   b. The resultant resistance to wind loading of a minimum of:
      i. 3.0 kPa for non-domestic buildings such as schools, commercial centres, etc.;
      ii. 3.8 kPa for domestic buildings excluding ground floor or podium.
3. A maximum permissible deflection of 1/180 the length of a particular member or 20 mm;
4. Use galvanized mild steel cores, anchors, brackets, etc as stiffeners, where necessary.

COM2.D132.8  MULLIONS, TRANSOMS AND CORNER POSTS
1. Mullions and transoms to be reinforced with hot dip galvanized mild steel reinforcement, subject to structural calculation where necessary;
2. The reinforcement bar inside the mullion shall be extended 15 mm from one end of the mullion to facilitate checking.

COM2.D135.A  STRUCTURAL CALCULATIONS
Structural design for aluminium windows, doors, and acoustic panels to be in accordance with either CP 118:1969 or BS 8118:Part 1 & 2:1991. Acoustic panel anchor bolt characteristic capacities to have minimum factor of safety of 3. Structural calculation shall be prepared, endorsed and submitted by RSE.

COM2.D140.8  DRAINAGE
Design the bottom frame members of the openable windows to drain away water and condensation from other frame members. Provide adequate drainage to the bottom frame members whenever necessary.
DESIGN PARAMETERS

COM2.D150.N  ALUMINIUM SLIDING WINDOW AT ACOUSTIC BALCONY
1. Design the aluminium sliding window so that removal of the sliding sash from the window frame is possible only purposefully actuate or remove a safety device;
2. Rollers to be heavy duty nonferrous metal sized and detailed to suit weight of the sliding sash.

SHOP DRAWINGS / CALCULATIONS FOR SUBMISSION

COM2.D210.A  ALUMINIUM WINDOWS, DOORS, ACOUSTIC PANELS AND LOUVRES
Shop drawings and calculations must:
1. Be submitted for Approval in accordance with the following:
   a. Six months prior to fabrication for aluminium windows, doors, acoustic panels and louvres fixed to cast in-situ concrete walls;
   b. Within two months of the notified date of the commencement of the Works for aluminium windows, doors and louvres fixed to precast concrete facades and/or precast concrete balconies.
2. Be re-submitted for Approval where amendments are necessary;
3. Include design details of die section members, position of fixing lugs, equipotential bonding connection, ironmongery and accessories, type and thickness of glass in accordance with the design parameters specified in COM2.D110 to COM2.D150, details of equipotential bonding connection for composite windows in accordance with COM2.W470 and other relevant information;
4. Include fixing details of Radio Frequency Identification tags as specified in the Worksection COM11 for aluminium windows.

COM2.D230.A  COMPLIANCE WITH STANDARDS
Design aluminium windows, doors and acoustic panels in compliance with the appropriate Standards as listed below:
2. BS 1470:1987 – Aluminium plate, sheet and strip;
3. BS 1471:1972 – Aluminium drawn tube;
4. BS 1473:1972 – Aluminium rivets, bolts and screws;
5. BS 1474:1987 and BS 18:1987 – Aluminium bars and extrusions;
6. BS 1161:1977 – Specification for aluminium alloy sections for structural purposes;
7. BS EN 12373-1:2001 – Clear anodic oxidation coatings on aluminium and its alloy;
9. BS 4479:1990 – Recommendations for the design of metal articles that are to be coated;
10. BS 7773:1995 – Cleaning and preparation of metal surfaces;
11. BS 6262:1982 – Code of Practice for glazing for buildings;
14. CP 118:1969 – Code of Practice for the structural use of aluminium;
16. BS 5889:1989 – Sealant;
17. BS EN ISO 3506-1 to 2:1998 – Corrosion-resistant stainless steel fasteners;
20. BS 7671:2001 – Requirements for Electrical Installation;
21. BS 4873:2004 – Aluminium alloy windows;
22. BS 3111 – Stainless steel fasteners;
23. PD 6484:1979 – Commentary on corrosion at bimetallic contacts and its alleviation;
24. ASTM A240/A240M -09c – Stainless steel for the sliding stays and base rails of frictional hinges;
25. ASTM A493-09 – Stainless steel for the friction pivots and screws of frictional hinges.

OTHER SUBMISSION

COM2.D310.8 MILL CERTIFICATES
Submit mill certificates to verify compliance of the following:
1. Aluminium alloy to BS 1474:1987 and include:
   a. Requirement and result of chemical analysis;
   b. Requirement and result of mechanical property:
      i. Tensile strength;
      ii. Yield strength;
      iii. Elongation.
3. Stainless steel grade for sliding stays and base rails: of UNS Designation S30400 to ASTM A240/A240M-09c, or equivalent grade of other recognised standards Approved by CM;
4. Stainless steel grade for friction pivots: of either UNS Designation S30200, S30400 or S30430 to ASTM A493-09, or equivalent grade of other recognised standards Approved by CM.

COM2.D320.X DELETED
MATERIALS

GENERAL

COM2.M005.A  ALUMINIUM WINDOWS, DOORS, GRILLES AND ACOUSTIC PANELS

1. Submission Requirements:
   a. At sample submission and approval stage, submit a sample of the proposed aluminium windows, doors, grilles and acoustic panels for CM's approval together with all the following substantiation for CM's information:
      i. Job reference;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer;
      iv. Where applicable, either the document from the manufacturer showing his authorization for the supplier as the agent / distributor in Hong Kong or the document from the supplier showing the appointment of the manufacturer and manufacturer's agreement for the production of the proposed product;
      v. When the aluminium windows, doors, grilles and acoustic panels are supplied for domestic blocks, except for the ancillary facilities at lower floors, also include the following in the submission:
         - Submit a sample board similar to the one maintained by the Housing Department showing the extrusions, ironmongeries and accessories for the proposed aluminium windows, doors, grilles and acoustic panels if applicable. Submit an additional sample board of the approved sample for keeping in the Housing Department’s Sample Display Gallery if the material has not been approved for use in a public housing project in the past five years prior to the notified date for commencement of the Works;
         - Submit the proposed Radio Frequency Identification tag and fixing method as specified in Worksection COM11;
         - Original or a certified true copy each of the certification to ISO 9001 and ISO 14001 for the manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by the certification bodies or by the QCM. The certification bodies shall be as follows:

<table>
<thead>
<tr>
<th>ISO</th>
<th>Certification Body</th>
</tr>
</thead>
<tbody>
<tr>
<td>ISO 9001</td>
<td>The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.</td>
</tr>
<tr>
<td>ISO 14001</td>
<td>The certification body shall be accredited by the Hong Kong Accreditation Service (HKAS), or the China National Accreditation Service (CNAS), or an accreditation body which has entered into a mutual recognition agreement with HKAS.</td>
</tr>
</tbody>
</table>

   vi. Original or certified true copy of the mill certificates of the stainless steel grades used for manufacturing the sliding stays, base rails and friction pivots as specified in COM2.D310;
vii. Original or certified true copy of the test reports from the manufacturer of frictional hinges showing the relevant batches of rolls of stainless steel materials to be used for manufacturing the sliding stays, base rails and friction pivots are in full compliance with the requirements of mechanical property and chemical composition of the referenced standard as specified in COM2.D310;

viii. When acoustic panels are supplied for domestic blocks, submit original or certified true copy of the test report from the manufacturer of acoustic panels showing:

- The sound absorptive material (SAM) used is non-combustible as per COM2.M610 (3);
- The composite acoustic panel system is in compliance with the noise reduction requirement as per COM2.D040 (3);
- The composite acoustic panel system is in compliance with the fire performance requirement as per COM2.D040 (4).

Date of the tests shall be generally within five years prior to the notified date for commencement of the Works;

b. For aluminium windows used in domestic blocks, except for the ancillary facilities at lower floors, submit original or a certified true copy of the product conformity certificate to the "Product Conformity Certification Scheme For Aluminium Windows" published by the Hong Kong Institute of Steel Construction to the CM for information. The product conformity certificate shall be issued by a certification body accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS. If a photocopy of the product conformity certificate is submitted, it shall be certified true by the certification body or by the QCM:

i. The product conformity certificate shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a) above or at a time not later than 12 months from the date of commencement of the Works;

ii. In the event that the product conformity certificate has not been submitted for CM's information, the CM may order the removal of materials or delivered products off Site. Bear all associated costs and no extension of time will be allowed.

c. A summary of the test results under the audit testing of the "Product Conformity Certification Scheme For Aluminium Windows". The summary shall be prepared by the accredited laboratory carried out the testing or the certified manufacturer. If so directed by the CM, submit a full set of the audit test reports to the CM for record;

d. Submit original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2)(a) below for CM's information unless the test requirements are covered by the scope of the "Product Conformity Certification Scheme For Aluminium Windows":

i. The date of the test shall be generally within five years prior to the notified date for commencement of the Works or at an earlier date for domestic blocks subject to CM's consideration on the track records as maintained by the Housing Department;
ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a) above, or at a time not later than the delivery of the material as mentioned in sub-clause (3)(a) below;

iii. In the event that no test report has been submitted for the CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

2. Quality Requirements:

a. The quality and performance requirements are as follows:

<table>
<thead>
<tr>

</table>

b. Frictional hinge surface quality:
   i. Free from rust, cracks;
   ii. Friction pivots are correctly positioned at the sliding stays, squarely pinned and not over-clamped.

c. When the aluminium windows and grilles are supplied for domestic blocks except those for the ancillary facilities at lower floors, standard of visual quality shall be comparable with the benchmark samples maintained by the Housing Department;

3. On Site Delivery Verification:
   a. At delivery stage, submit the following documents:
      i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (1)(a) above;
      ii. Original or certified true copy of Certificate of Origin for every batch of delivery. One batch being the material quantity covered under each delivery note;
      iii. Delivery notes for all material delivered to Site;
      iv. For the weather strip, the following delivery notes certified by the aluminium window manufacturer –
         - From manufacture plant of the thermoplastic vulcanizate (TPV) raw material to the weather strip manufacturing plant complete with a lot number; date of delivery generally within three years prior to the notified date for commencement of the Works; and
From the weather strip manufacturing plant to the aluminium window manufacturing plant at sub-clause (1)(a)(v) showing the lot number of the TPV used; date of delivery to be generally within one year prior to the notified date for commencement of the Works.

b. Carry out and submit report on the following verifications for aluminium windows and grilles upon delivery on Site. Prior to carrying out the verifications, inform the CM who may present to witness the verifications:

</tr>
<tr>
<td>Surface Quality</td>
<td>1 sample for every 200 pieces or part thereof</td>
<td>Same batch of material delivered to Site under one Delivery Note</td>
</tr>
</tbody>
</table>
c. When any of the verifications fail to meet the acceptance standards, either:
   i. Remove the representative batch off Site; or
   ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.

4. Open Up Inspections:
   a. When instructed, open up a sample of aluminium window for verification of the concealed parts by the CM before the window is installed to the concrete surrounds at:
      i. Precast concrete component factory;
      ii. Site.
   b. Inspection samples:
      i. For sub-clause (a)(i), one set of aluminium window for installation at a precast façade selected by the CM;
      ii. For sub-clause (a)(ii), one set of aluminium window with a reinforcement bar at the mullion for installation on Site selected by the CM;
      iii. For the purpose of sub-clause (4), the representative batch of the samples means the same type of aluminium window in the same batch of material delivered to the precast concrete component factory or to Site under a delivery note as specified in sub-clause (3)(a)(ii).
   c. Inspection to include the following concealed items:
      i. Reinforcement bar inside mullion;
      ii. Reinforcement bar inside the window frame and sash for fixing the frictional hinges;
      iii. Angle bracket at corners of sashes.
   d. All checked items to be in compliance with the Approved drawings;
   e. In the event that any of the verifications fails to meet the acceptance standards, either remove the representative batch off Site, or apply to the CM for re-inspection for the representative batch in accordance with the test methods specified in sub-clauses (4)(c) and (4)(d) above on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed;
f. When the representative batch of aluminium windows is removed off Site, replace with another new batch (hereinafter referred to as the "replacement batch"). Apply to the CM for inspection in accordance with the methods as specified in sub-clause (4)(a), (4)(b), (4)(c) and (4)(d)) above for one set of samples selected by the CM from the replacement batch. In case any one sample fails the inspection, follow the action stated in sub-clause (4)(e);

g. Bear the costs of any failed open up inspections and all associated costs for the inspection(s) and re-inspection(s) required in sub-clauses (4)(e) and (4)(f). No extension of time will be allowed.

ALUMINIUM MEMBERS AND FINISHES

COM2.M010.8 SECTIONS
Extruded aluminium alloy to BS 1474:1987, and:
1. Alloy designation: 6063 - T5 or T6;
2. Structural members: minimum wall thickness 2 mm;
3. Non-structural members: minimum wall thickness 2 mm;
4. Glazing bead: minimum wall thickness 1.0 mm;
5. Dovetailed groove for weather stripping;
6. Handle: minimum wall thickness as per Approved shop drawings.

COM2.M020.A CLEAR ANODIZING
To BS EN 12373-1:2001, thickness Class 25 (average thickness of 25 microns minimum and local thickness of 20 microns minimum) for aluminium window frames.

COM2.M030.8 COLOUR ANODIZING
1. To BS 3987:1991 and not less than 25 microns thick;
2. Colour: as shown on the Drawings.

ALUMINIUM MEMBERS AND FINISHES

COM2.M040.N PERFORATED ALUMINIUM SHEET AT ACOUSTIC INSTALLATIONS
Comply with the following requirements:
1. Acoustic panel at acoustic window –
   a. 2mm thick aluminium sheet with 40% perforation subject to project specific Environmental Assessment Report;
   b. Surface to be natural anodize finished.
2. Acoustic panel at acoustic balcony –
   a. 3mm thick aluminium sheet with 23% perforation subject to project specific Environmental Assessment Report;
   b. Surface finish to be polyvinylidene difluoride (PVDF) coating finished to AAMA 2605-11 requirements, factory applied 3 coat system of 30 microns minimum total dry film thickness;
   c. Colour to CM’s approval;
   d. Provide aluminium stiffeners at locations as required by structural calculations and to show on shop drawings for Approval;
   e. Fold aluminium sheet to form the acoustic panel; maintain along the folded edges of the panel a solid margin without perforations.
FIXINGS, FASTENINGS ETC

COM2.M110.A WEATHER STRIP
1. An Approved weather strip, manufactured from a thermoplastic vulcanize (TPV) material, designed for weather strip applications, sized and shaped to securely dovetail into the window section groove, black in colour, free of porosity, surface defects, and dimensional irregularities;
2. The weather strip shall have a record of minimum five local projects completed within five years prior to the notified date for commencement of the Works;
3. Fire retardant performance of the elastomeric material for the weather strip to comply with either -
   a. UL 94 Class V-0; or
   b. ASTM C1166-06, flame propagation max 100mm.
4. Physical properties of weather strip to comply with the following requirements:

<table>

COM2.M120.8 ALUMINIUM BEADS
Use beads which securely clip to the frame or are an integral part of the frame.

COM2.M130.8 EXPOSED FIXINGS
Screws, nuts, bolts, washers and rivets: use aluminium alloy, stainless steel (grade 304/A2-70 for bolts and grade 302/A2-50 for screws), copper with chromium plated finish or nylon washers and caps for window grilles to match finish, where possible.

COM2.M140.8 CONCEALED FASTENING DEVICES
Galvanized mild steel or aluminium fasteners as shown on Drawings.

COM2.M145.8 FIXING LUGS
Galvanized steel to BS EN10346:2009, Coating Designation Z200 and 14 μm, size as shown on the Drawings unless otherwise Approved, with the cut edges to be painted with zinc rich primer to BS 4652:1995.

COM2.M160.8 PERIMETER SEALANT
1. In compliance with WAT5.M110;
2. Low modulous silicone rubber sealant to BS 5889:1989, Type A.

COM2.M170.8 SEALANT FOR ASSEMBLING COMPOSITE UNITS
1. In compliance with WAT5.M110;
2. Silicone sealant to BS 5889:1989, Type B.

COM2.M171.8 SEALANT FOR FIXING GLAZING
1. In compliance with WAT5.M110;
2. Silicone sealant to BS 5889:1989 (neutral type), Type B.

**COM2.M172.8 SMALL GAP SEALANT**
1. In compliance with WAT5.M110;
2. Synthetic rubber base sealant for aluminium section joints.

**COM2.M190.8 WATERPROOF BEDDING MORTAR**
1. Cement and sand (1:3) with non-shrinkage waterproofing additives as recommended by the manufacturer or;
2. Proprietary mortar with non-shrinkage waterproofing additives as recommended by the manufacturers suitable for bedding and grouting window frames.

**COM2.M195.8 WATER BARS**
Aluminium with keyed surface bent to shape as shown on the Drawings.

**WINDOWS FITTINGS**

**COM2.M210.8 FRICTION PIVOTS, SLIDING STAYS, BASE RAILS AND SCREWS OF FRICTIONAL HINGES**
1. All sliding stays are to be 2.5 mm minimum thick. All sliding stays and base rails are stainless steel of UNS Designation S30400 to ASTM A240/A240M-09c or equivalent grade of other recognised standards Approved by CM:
   a. For side hung window, provide a minimum clearance of 100 mm between frame and window when it opens at 90°;
   b. For top hung window, provide a minimum clearance of 70 mm between frame and window when it opens at 90°.
2. Friction pivots and screws are to be stainless steel of either UNS Designation S30200, S30400 or S30430 to ASTM A493-09, or equivalent grade of other recognised standards Approved by CM;
3. All friction pivots and sliding stays are to be fixed with at least 3 nos. of 5 mm diameter stainless steel screws onto galvanized mild steel bar 12 mm minimum (width) x 3 mm (thick) in nominal size, as follows:
   a. Frame members:
      i. At location with aluminium box section, the galvanized mild steel bar is to be inserted and pre-fixed inside the box;
      ii. At location with single web aluminium frame section, the galvanized mild steel bar is to be pre-fixed directly underneath the web.
   b. Sash members:
      i. The galvanized mild steel bar is to be inserted and pre-fixed inside the box, terminated at the aluminium alloy angle bracket at the corner for mechanical fixing of the mitre joint;
      ii. One screw is to be fixed onto the pre-tapped aluminium alloy angle bracket close to the mitre joint and the remaining screws are to be fixed onto the pre-fixed galvanized mild steel bar.
4. Length of the friction pivots and sliding stays for side hung window shall be of at least 60% of the width of the side hung window.

**COM2.M220.8 CASEMENT FASTENERS, LOCKING HANDLES ETC**
1. Stainless steel with satin finish; or
2. Die-cast zinc alloy to BS EN 1774:1998 and BS EN 12844:1999 suitably coloured to match the anodised window.

**COM2.M230.A WINDOWS LOCKS**

1. Dual lock, triple point lock and cam lock:
   a. Dual lock for side hung window up to 1200 mm high and triple point lock for side hung window exceeding 1200 mm high. The guiding system for both dual lock and triple point lock shall prevent loosening and sideway movement of the lock handles;
   b. Cam lock: one at 800 mm width for top hung window;
   c. The locks shall be of matching style and finishes;
   d. When the locks are supplied for domestic blocks, the profile and the visual quality of the locks shall be comparable with the latest benchmark samples of the locks maintained by the Housing Department.

2. Lock for fixed window to be operated by a hex key or equivalent as shown on the Drawings;

3. Locks for the sliding window at acoustic balcony –
   a. Dual shootbolt lock at both verticals of sash;
   b. Operate lock by handle with a hex key or equivalent.

**COM2.M240.8 PULL HANDLES**

Anodized aluminium.

**COM2.M250.8 ROLLERS, GUIDES ETC**

Electroplated zinc galvanized steel with nylon or brass rollers to suit weight of window and adjustable after installation.

**COM2.M260.8 EARTHING LUGS**

A 20 mm x 1.5 mm thick steel plate earthing lug electroplated zinc galvanized to BS 1706:1990, Class B and 13 μm to the outer frame of window and louvers with cut edges painted with zinc rich primer to BS 4652:1995.

**COM2.M300.8 REINFORCEMENT**

2. Securely fixed as recommended by the window supplier.

**COM2.M305.8 IDENTIFICATION**

Supply RFID tags as specified in COM11 with a unique serial number and marked in an inconspicuous position on each aluminium window. Identify and record the date of manufacture.

**WINDOWS FITTINGS**

**COM2.M306.N ROLLER AT ALUMINIUM SLIDING WINDOW**

Heavy duty non-ferrous metal rollers and comply with requirements at COM2.D150 (2).

Comply with requirements at COM2.D150 (1).
REMOTE CONTROL EQUIPMENT

COM2.M310.8  HAND OPERATED SYSTEM
Approved proprietary product with shaft and lever.

COM2.M320.8  REMOTE CONTROL SYSTEM
Approved proprietary product. Conduit and cable system with bronze or die-cast zinc alloy bevel gear boxes, adjustable arms and keyed shafts.

PROTECTIVE PAINTS

COM2.M410.8  BITUMINOUS PAINT
Black bitumen coating solution to BS 6949:1991, Type 1.

ACOUSTIC BALCONY ALUMINIUM DOOR FITTINGS

Provide the following according to Drawings -
1. Multi point lock to be:
   a. Mortised into the door stile;
   b. Operated from inside the flat only by turning the door lever handle together with press and hold the snib at the lever handle.
2. Pull handle profile on the outside and inside to be identical;
3. Butt hinge to be exposed type with metal washers and an internal stainless steel rod;
4. Laminated tempered glass to COM4.M060 and COM4.M110; pattern shown on Drawings to be either by ceramic frits fused to glass surface #4 or using patterned pvb interlayer;
5. Elastomeric weather strip along perimeter of door leaf and frame to COM2.M110.

SOUND ABSORPTIVE MATERIAL

COM2.M610.N  SOUND ABSORPTIVE MATERIAL (SAM) FOR ACOUSTIC INSTALLATIONS
Comply with the following requirements:
1. A proprietary product of glass fibre, mineral fibre or equivalent;
2. No release of toxic emission;
4. When installed in acoustic panels at Acoustic Balcony or Acoustic Window, the SAM shall comply with the noise reduction requirements for the composite acoustic panel system as per COM2.D040 (3).
WORKMANSHIP

APPROVAL PRIOR TO FABRICATION AND SITE INSTALLATION

COM2.W020.8 SAMPLES AND SHOP DRAWING APPROVAL
Do not commence fabrication or site installation works until all samples and shop drawings have been Approved.

FABRICATION AND ASSEMBLY

COM2.W110.8 FIXING WEATHERSTRIPS
Securely fix weatherstrip into the dovetailed groove of the window section. Ensure there is continuous contact between each opening part and its fixed frame.

COM2.W120.8 WELDING WEATHERSTRIPS
Weld all corner joints of weatherstrips and provide a neat weathertight joint.

COM2.W130.8 FRAMES
Mechanically joint using mortice and tenon construction to provide a rigid and secure connection.

COM2.W140.8 SASH MEMBERS
Mechanically joint or mitre sash members to develop the full strength of members and provide a neat weathertight joint. Fix aluminium angle plate at the back of mitre joint of sash members with silicone sealant (neutral type).

COM2.W150.8 SIDE AND TOP HUNG WINDOWS
Hang to open as indicated on the Drawings and fit as specified with:
1. Friction pivots and sliding stays;
2. Pull handle with dual or triple-point lock for side hung windows;
3. Cam lock for top hung windows.

COM2.W170.A OPENING LIGHT FRAMES
Ensure tightness and clearance between sash and frame of all opening lights before deliver to Site or precast concrete component yard.

INSTALLATION OF ALUMINIUM WINDOWS TO CAST IN-SITU CONCRETE WALLS

COM2.W210.8 COMPOSITE UNITS
Assemble all composite units on Site and provide all bolts, screws etc and sealants.

COM2.W220.8 CUTTING, TRIMMING AND WELDING
Do not cut, trim or weld during erection on Site.
ALUMINIUM WINDOWS AND LOUVRES

COM2.W230.A TOLERANCES
1. Check the position, size and alignment etc. of all openings for windows, doors, acoustic panels and adjustable louvres in accordance with the tolerances specified in Appendix H to this Specification and report any discrepancy to the CM;
2. Rectify any fault or discrepancy to the satisfaction of the CM, and bear the cost of such remedial work.

COM2.W231.8 FIXING LUGS
1. Space galvanized steel fixing lugs, formed to the dimensions shown on the Drawings, at 150 mm from corner edge and 300 mm maximum centre to the outer frame of each unit and where shown fix lugs with cartridge driving pin or proprietary anchoring system;
2. Form or cut pockets in heads etc. to receive fixing lugs, fixing/anchor bolts, build in lugs or insert bolts and screw to frames using packing pieces where necessary. Do not distort frames when tightening fixings.

COM2.W232.A POSITIONING
Position windows, doors, acoustic panels and louvres plumb, level and square.

COM2.W233.8 OPENING LIGHTS
Check tightness and clearance between sash and frames of all opening lights.

COM2.W234.8 BEDDING AND GROUTING FRAMES
Mix and apply waterproof bedding mortar strictly in accordance with the mortar manufacturer's recommendations. Fully bed and grout frames leaving no gaps.

COM2.W236.8 FIXING WATER BARS
Fixed full height water bars at locations as shown on the Drawings.

COM2.W265.8 POINTING TO PERIMETER OF WINDOWS AND LOUVRES
1. Remove filler board from the pre-formed joint, if any, around external perimeter of window frames;
2. Mask any adjoining surfaces which would be impossible to clean if smeared with sealant;
3. Point external perimeter of window frames with sealant to form a smooth flat joint; and
4. Remove excess sealant from the adjoining surfaces and wipe clean.

FIXING LOUVRE FRAMES

COM2.W310.8 HANDLING AND STORAGE
Avoid distortion during handling and storage.

COM2.W320.8 POSITIONING
Position frames plumb, level and square.

COM2.W330.8 FIXING
When fixing:
1. Form or cut pockets to receive fixing lugs, where required. Build in lugs and screw to sub-frames; or
2. Where necessary, plug and screw sub-frames using packing pieces; and
3. Plug and screw louvre frames and weatherstrips, where required.
COM2.W340.8  BEDDING AND GROUTING IN MORTAR
Mix and apply waterproof bedding mortar in accordance with manufacturer's recommendation. Fully bed and grout sub-frames leaving no gaps.

COM2.W350.8  LOUvre FRAMES
Screw louvre frames to sub-frames at maximum 225 mm centres to centre. Do not distort frames when tightening fixings.

INSTALLATION OF ALUMINIUM WINDOWS TO PRECAST CONCRETE FACADES

COM2.W415.8  FIXING LUGS
Space fish-tail galvanized steel fixing lugs by slotting into the window frame at 150 mm from corner edge and 300 mm maximum centre to centre.

COM2.W420.8  POSITIONING
Position windows plumb, level and square.

COM2.W430.A  FIXING
Fix windows and window frames in position with adequate supports to avoid distortion and damage to windows before placing concrete in moulds for the facade / balcony units.

COM2.W450.8  POINTING TO PERIMETER OF WINDOWs AND LOUVRES
1. Mask any adjoining surfaces which would be impossible to clean if smeared with sealant;
2. Point external perimeter of window frames with sealant to form a smooth flat joint; and
3. Remove excess sealant from adjoining surfaces and wipe clean.

EARTH / EQUIPOTENTIAL BONDING

COM2.W465.A  EQUIPOTENTIAL BONDING TO WINDOWS, DOORS, ACOUSTIC PANELs AND LOUVRES
1. Provide earthing lugs as per COM2.M260;
2. Fix one end of the earthing lug to the windows, doors, acoustic panels and louvers with 2 nos. M4 self-tapping stainless steel screws at 60 mm centres;
3. Provide a 5 mm diameter hole at the other end for connection of the bonding conductor by the Nominated Sub-contractor for Electrical Installation;
4. For window:
   a. The fixing position of the earthing lug should be as far away from the hinge of the window as possible;
   b. Ensure that full electrical continuity is maintained between all the component elements of composite windows as COM2.W470.
5. Louvres for services rooms: ensure that full electrical continuity is maintained between all the component elements of the louvres;
6. The Nominated Sub-contractor for Electrical Installation shall ensure the bonding for extraneous conductive parts is sound and the result complies with the CoP for the Electricity (Wiring) Regulation and BS 7671:2001 by proper measurement with records at good time. For those parts of equipotential bonding system found not electrical conductive, the Main Contractor and the Nominated Sub-contractor for Electrical Installation shall be responsible for rectification of their own works as early as possible.

COM2.W470.8 EQUIPOTENTIAL BONDING REQUIREMENTS FOR COMPOSITE WINDOWS

1. Maintain electrical conductivity with negligible impedance between each member and component of window sets constructed either by means of screw joints, mortice and tenon joints, or riveting;
2. Maintain electrical continuity for composite window construction:
   a. Use appropriate number of stainless self-tapping stainless steel screws;
   b. Determine number of stainless steel screws and positions to be fixed on windows so as to maintain electric conductivity with negligible impedance between each member and component of the window set.
3. Submit samples of the windows completed with shop drawings showing detailed construction of window sets, including stainless steel screws for earth continuity, all for Approval prior to actual delivery and installation on site.

TRANSPORTATION, HANDLING AND STORAGE

COM2.W490.A TRANSPORTATION, HANDLING AND STORAGE

1. Avoid distortion during handling and storage, transporting to and within Site and the precast concrete component yard;
2. Do not allow working platform rest on windows and/or window frames to prevent damage or distortion;
3. Keep upright during handling to prohibit sagging and stack off ground on levelled hard standing under cover, clear of mud and site traffic.

PROTECTION

COM2.W510.8 PRIMING STEEL REINFORCEMENT ETC
Prime the cut edges of galvanized steel reinforcement, cores, anchors and brackets, (except fixing lugs), with zinc rich primer to BS 4652:1995 and paint the whole piece of material with two coats of bituminous paint.

COM2.W515.8 ALUMINIUM FRAME AND SASH
Provide adequate backing supports to all fixed accessories on frame and sash such as dual lock, cam lock, glazing bead and etc.

COM2.W520.8 ALUMINIUM IN CONTACT WITH OTHER MATERIALS
Protect concealed aluminium surfaces which may come in contact with wet mortar, cement, plaster or similar materials with one coat of bituminous paint.

COM2.W525.8 PROTECTION OF ALUMINIUM IN CONTACT WITH OTHER MATERIALS
Avoid contact with concrete, mortar, plaster or other similar materials. Where there is not possible refer to COM2.W530 and COM2.W540.

TESTING

ON-SITE VERIFICATION TEST

COM2.T210.B TESTING INSTALLED WINDOWS AND ACOUSTIC BALCONY DOORS FOR WATERTIGHTNESS

1. Testing Arrangements:
   a. Carry out watertightness test to properly fixed windows at external walls, balcony doors or any doors with weather seal gasket installed all round, as early as possible before scaffolding is removed or gondola is dismantled/removed unless the CM is satisfied that testing and any subsequent remedial work can adequately be executed after the dismantling/removal of scaffolding or gondola.

2. Testing Samples:
   a. 100% of properly fixed windows at external walls, balcony doors or any doors with weather seal gasket installed all round, except those windows with louvers and doors, in accordance with the procedures as specified in sub-clauses (3)(a) to (3)(i).

3. Testing Methods:
   a. Test joints between window frames, and between window and door frames, and:
      i. The concrete surround;
      ii. Frames of casements;
      iii. Fixed panels;
      iv. Transoms and mullions; and
      v. Sashes.
   b. Use brass nozzle comprising:
      i. 13 mm diameter outlet fitted with diffuser connected to a 20 mm garden hose; and
      ii. A control valve and a pressure gauge as illustrated at Appendix COM2/I to this Worksection.
   c. Carry out the test with the water jet from the outside, with the window and door in the closed position;
   d. Spray a continuous jet of water, at a nozzle pressure of between 210 kPa and 240 kPa, at approximately 300 mm from the window and door joints;
   e. Move the spraying nozzle to and fro along the joints, starting at the lowest horizontal joint at the cill then the middle horizontal joints, then the vertical joints and lastly the topmost horizontal joint at the window and door head;
   f. Test the joints between the window and door frames and the surrounding structure for a period of 1 minute for every 2 metres of joint length, and other joints for a period of 1 minute for every 3 metres of joint length or on pro-rata basis;
   g. Observe the whole watertightness test from indoor. Tap the lowest glazing bead slightly to check for water leakages or seepage;
   h. All watertightness tests must be witnessed by the Contractor or his representative and the CM or his representatives;
   i. Submit three copies, or other number of copies as directed by the CM, of the test reports for the watertightness tests for record.

4. Non-compliance:
a. The window or door joints will be deemed to have failed where there are signs of water seeping through the joints or ironmongeries during the watertightness test specified in this Worksection or within half an hour to two hours after the test;
b. In the event that any test failed to meet the requirements:
   i. Remedy all such failed joints by Approved methods. Retest all remedial joints until all the joints meet the specified criteria;
   ii. Bear the cost of all remedial work and the retest. No extension of time will be allowed.

SURVEILLANCE TESTS

SURVEILLANCE TESTS FOR ALUMINIUM WINDOWS

COM2.T405.A

1. Test Arrangements:
   a. When Instructed, surveillance tests shall be carried out by the CM, Direct Testing Contractor or the Housing Department Material Testing Laboratory;
   b. Comply with the following pertaining to the surveillance tests:
      i. Provide attendance on the Site and in the manufacturers' factories in the supply chain, including the aluminium window and precast concrete component manufacturing factories;
      ii. Provide, deliver and collect samples etc. as directed by the CM or as specified;
      iii. Arrange transportation for the parties referred to in sub-clause 1(a) above for passages to and from the manufacturers' factories in the supply chain for sampling of materials;
      iv. Provide attendance on the selection, examination of aluminium windows and detachment of hinges from aluminium windows.

2. Test Samples:
   a. Provide one set of test samples from the batch of material delivered to or manufactured in:
      i. Site under the delivery note as specified in COM2.M005 (3)(a); or
      ii. The manufacturer's factory of aluminium window; or
      iii. The manufacturer's factory of precast concrete components; or
      iv. Locations as instructed by the CM.
         (hereinafter referred to as the "representative batch");
   b. One set of test samples shall consist of two representative frictional hinges and three representative aluminium windows of any type without louvre. Sample shall be the completed component as to be installed, including glazing, all fixed parts, casements, top-hung and fixings necessary to ensure normal operation. Bear all cost for any replacement of samples.

3. Test methods:
   a. Aluminium window quality and performance requirements: As per COM2.M005 (2)(a);
   b. Open up inspection as per COM2.M005 (4);
   c. Mechanical property and chemical composition tests for sliding stays and base rails of the frictional hinges: As referred to in ASTM A240/A240M-09c;
   d. Mechanical property and chemical composition tests for friction pivots and screws of the frictional hinges: As referred to in ASTM A493-09.

4. Non-compliance:
a. In the event that any of the test samples fails to meet the test requirements, follow either one of the following actions:
   i. Remove the representative batch off Site or from the factory of precast concrete components or from further production or fabrication in the material supply chain for HA's construction contracts where appropriate; or
   ii. Apply to the CM for re-test for the representative batch in accordance with the test methods as specified in sub-clause (3) above by Direct Testing Contractor or by a laboratory that complies with the requirements stated in PRE.B9.570 for three separate sets of samples selected by the CM from the representative batch. The CM shall have the discretion to approve or not the commissioning of the latter laboratory for the re-test. In case any one sample for the re-test fails, remove the representative batch off Site.

b. When the representative batch of aluminium windows is removed off Site or from further production or fabrication in the material supply chain for HA's construction contracts, replace with another new batch (hereinafter referred to as the "replacement batch"). Apply to the CM for test in accordance with the test methods as specified in sub-clause (3) above by Direct Testing Contractor or by a laboratory that complies with the requirements stated in PRE.B9.570 for one set of samples selected by the CM from the replacement batch. The CM shall have the discretion to approve or not the commissioning of the latter laboratory for the test. In case any one sample fails the test, follow action stated in sub-clause (4)(a);

c. Bear the costs of any failed surveillance tests and all associated costs for the test(s) and re-test(s) required in sub-clauses (4)(a) and (4)(b). No extension of time will be allowed.

COM2.T410.A ON-SITE OPERATION TESTS FOR ALUMINIUM WINDOWS

1. Test Arrangements:
   a. When Instructed, surveillance tests shall be carried out by the CM, Direct Testing Contractor or the Housing Department Material Testing Laboratory;
   b. Comply with the following pertaining to the surveillance tests:
      i. Provide attendance on the Site;
      ii. Provide, deliver and collect samples etc. as directed by the CM or as specified.

2. Test Samples:
   a. The test locations and samples are selected by the CM from the batch of material delivered to Site under the delivery note as specified in COM2.M005 (3)(a) (hereinafter referred to as the "representative batch");
   b. Each set of samples consists of 2 window sashes.

3. Test methods:
   As per COM2.M005 (2)(a)(ii(a)) "Operating Forces".

4. Non-compliance:
   a. In the event that any of the test samples fails to meet the test requirements, follow either one of the following actions:
      i. Remove the representative batch of associated frictional hinges off Site; or
ii. Apply to the CM for re-test in accordance with the test methods as specified in sub-clause (3) above by Direct Testing Contractor or by a laboratory that complies with the requirements stated in PRE.B9.570 for three separate sets of samples selected by the CM from the representative batch. The CM shall have the discretion to approve or not the commissioning of the latter laboratory for the re-test. In case any one sample for the re-test fails, remove the representative batch off Site.

b. When the representative batch of frictional hinges is removed off Site, replace with another new batch (hereinafter referred to as the "replacement batch"). Apply to the CM for test in accordance with the test methods as specified in sub-clause (3) above by Direct Testing Contractor or by a laboratory that complies with the requirements stated in PRE.B9.570 for one set of samples selected by the CM from the replacement batch. The CM shall have the discretion to approve or not the commissioning of the latter laboratory for the test. In case any one sample fails the test, follow actions stated in sub-clause (4)(a);

c. Bear the costs of any failed surveillance tests and all associated costs for the test(s) and re-test(s) required in sub-clauses (4)(a) and (4)(b). No extension of time will be allowed.
APPENDIX COM2/I

COM2.APPEND1.8 SITE WATERTIGHTNESS TEST
COM3 UPVC WINDOWS

DESIGN

GENERAL

COM3.D010.8 SPECIFICATION REQUIREMENTS
Design and construct uPVC windows, complete with glazing, in accordance with this Worksection and the relevant clauses of COM4.

COM3.D020.8 WINDOWS
1. Must be suitable for inside glazing, unless otherwise shown on the Drawings;
2. Must be an Approved glazing system with uPVC beads;
3. Heat welded corner joints. Welded joints are to be mitred and neat;
4. The size of the window profile must provide sufficient glazed area to satisfy with the requirement stipulated in all applicable Ordinances, Regulations and Codes in Hong Kong;
5. Colour to be consistent for all windows profiles.

DESIGN PARAMETERS

COM3.D110.8 TOLERANCES
Design window so that the tolerances are coordinated with the appropriate building tolerances for the structural works as described in Appendix H to this Specification.

COM3.D120.8 GLASS THICKNESS
Design glass thickness to withstand the wind load as COM3.D130 and in no case allow it to be less than 5 mm. Calculate and check the correct thickness.

COM3.D130.8 WIND LOADING FOR GLAZED WINDOWS
1. When fixed in position and glazed, windows must withstand:
   a. A wind load calculated in accordance with the current Code of Practice on Wind Effects, Hong Kong; and
   b. The resultant resistance to wind loading of a minimum of:
      i. 3.0 kPa for non-domestic buildings such as schools, commercial centres etc.;
      ii. 3.8 kPa for domestic buildings excluding ground floor or podium.
2. A maximum permissible deflection of 1/180 the length of a particular member or 20 mm;
3. Use galvanized mild steel cores, anchors, brackets, etc as stiffeners, where necessary.

COM3.D140.8 DRAINAGE
1. Design the bottom frame members of the openable windows to drain away water and condensation from other frame members. Provide adequate drainage to bottom frame members whenever necessary;
2. Drainage paths should prevent water running through the reinforcement chamber of the profile which are to be fully sealed when the main profiles are welded together.
SUBMISSION

COM3.D210.8  SHOP DRAWINGS AND STRUCTURAL CALCULATION
Structural calculation by RSE, shop drawings and test reports in COM3.M010 (1)(a)(v) showing compliance with the design parameters specified in the Worksection must:

1. Be submitted for Approval in accordance with the following:
   a. Six months prior to fabrication for uPVC windows fixed to cast in-situ concrete walls;
   b. Within two months of the notified date for the commencement of the Works for uPVC windows fixed to precast concrete facade;

2. Be re-submitted for Approval where amendments are necessary;

3. Shop drawings must include
   a. Design and technical details of members, reinforcement, ironmongery and accessories;
   b. Type and position of fixings;
   c. Method statement for fixing friction pivots and sliding stays onto galvanized mild steel bars to window frames and sashes;
   d. Waterproofing design details between window frame and opening;
   e. Design of drainage;
   f. Type and thickness of glass;
   g. Calculation on the net glazing and openable areas of windows in compliance with the minimum area required under Building Regulations.

COM3.D230.8  COMPLIANCE WITH STANDARDS
Design uPVC windows in compliance with the appropriate Standards listed below:

1. All applicable Ordinances, Regulations and Codes in Hong Kong (i.e. the 'Hong Kong Building Code');
2. BS 6262:1982 - Code of Practice for glazing for buildings;
MATERIALS

GENERAL

COM3.M010.A UPVC WINDOWS AND GRILLES

1. Submission Requirements:
   a. At sample submission and approval stage, submit a sample of the proposed uPVC windows and grilles for CM's approval together with all the following substantiation for CM's information:
      i. Job reference;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer;
      iv. Where applicable, either the document from the manufacturer showing his authorization for the supplier as the agent/distributor in Hong Kong or the document from the supplier showing the appointment of the manufacturer and manufacturer's agreement for the production of the proposed product;
      v. When the uPVC windows and grilles are supplied for domestic blocks, except for the ancillary facilities at lower floors, comply with the following in the submission:
         - Submit a sample board similar to the sample boards for all other windows maintained by the Housing Department showing the extrusions, ironmongeries and accessories for the proposed uPVC windows and grilles. Submit an additional sample board of the approved sample for keeping in the Housing Department’s Sample Display Gallery if the material has not been approved for use in a public housing project in the past five years prior to the notified date for commencement of the Works;
         - Original or a certified true copy of the ISO 9001 certificate for the manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by a certification body or by the QCM. The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.

   b. Submit original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2)(a) for CM's information:
      i. The date of the test shall be generally within five years prior to the notified date for commencement of the Works or at an earlier date for domestic blocks subject to CM's consideration on the track records as maintained by the Housing Department;
      ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material as mentioned in sub-clause (3)(a);
      iii. In the event that no test report has been submitted for CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

2. Quality Requirements:
a. The quality and performance requirements are as follows:

### 3. On Site Delivery Verification:

- Mass per unit area
- Uniformity of coating
a. At delivery stage, submit the following documents:

i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (1)(a);

ii. Original or certified true copy of the Certificate of Origin for every batch of delivery. One batch being the material quantity covered under each delivery note;

iii. Delivery notes for all material delivered to Site.

b. Carry out and submit report on the following verifications for uPVC windows and grilles upon delivery on Site. Prior to carrying out the verifications, inform the CM or his representatives who may present to witness the verifications:

   i. Method:

<table>
<thead>
<tr>

</tbody>
</table>
c. Where any of the verifications fail to meet the acceptance standards, either:
   i. Remove the representative batch off Site; or
   ii. When agreed by the CM, repeat the verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.

MEMBERS AND FIXINGS

COM3.M110.8 FRAME PROFILES AND SECTIONS
1. unplasticised polyvinyl chloride (uPVC) must not be carcinogenic;
2. Profiles for windows: extruded sections of a multi-chambered design and of a four-corner hot welded construction;
3. Transoms/mullions: weld onto frames or mechanically fix onto frames with joints filled with windows supplier’s recommended sealant in compliance with WAT5.M110 or Approved equivalent to provide a neat weather-tight joint;
4. Outer wall thickness (maximum tolerance allowed 0.3 mm) for frames and transom: 2.5 mm minimum;
5. Colour of profile: white or Approved, uniform in colour when viewed by normal vision. The external and internal face surfaces of the profile are to be free from foreign bodies, cracks, sink marks or die lines when similarly viewed.

COM3.M120.8 REINFORCEMENT
2. Securely fixed as recommended by the window supplier.

COM3.M130.8 GLAZING GASKETS AND WEATHERSTRIP
Glazing gaskets and weatherstrip shall have no adverse effect on the uPVC profile as recommended by window supplier.

COM3.M140.8 UPVC GLAZING BEADS
1. Use beads which securely clip to the frame or are an integral part of the frame;
2. Wall thickness of glazing bead: 2 mm minimum with maximum tolerance of 0.3 mm.

COM3.M150.8 EXPOSED FIXINGS
Screws, nuts, bolts washers and rivets: stainless steel (grade 304 for bolts and grade 302 for screws), or nylon washer and caps for window grilles to match finish.

COM3.M160.8 CONCEALED FASTENING DEVICES
Galvanized mild steel.

COM3.M170.8 BEDDING AND GROUTING MATERIAL
Bedding and grouting material shall be compatible with the use of uPVC windows as recommended by the window supplier.
COM3.M180.8  PERIMETER SEALANT
External perimeters: seal with a low modulus silicone rubber sealant in compliance with WAT5.M110 or an Approved equivalent, which is of a compatible formula to adhere to uPVC and the building materials, i.e. concrete, sand/cement, plaster, tiles etc., at the abutment between the window frame and the fabric of the structure.

WINDOW FITTINGS/HARDWARE

COM3.M210.8  FRICTION PIVOTS AND SLIDING STAYS
1. All friction pivots and sliding stays to be 3 mm thick stainless steel of grade 304/A2-70 or Approved equivalent:
   a. For side hung window, providing a minimum clearance of 100 mm between frame and window when opening at 90°;
   b. For top hung window, providing, a minimum clearance of 70 mm between frame and window when opening at 90°.
2. All friction pivots and sliding stays to be fixed with stainless steel screws onto galvanized mild steel bars 12 mm minimum (width) x 3 mm (thick) in nominal size to all frame members and sash members.

COM3.M220.8  LOCKING HANDLES & PULL HANDLES ETC.
Polyester powder coated aluminium alloy or an Approved equivalent.

COM3.M230.8  IRONMONGERY
1. All ironmongery and metal components of hardware are to be corrosion resistant materials;
2. Metals that are in contact with each other are to be compatible so as to prevent galvanitic corrosion of dissimilar metals by electrolytic action.
WORKMANSHIP

APPROVAL PRIOR TO FABRICATION AND SITE INSTALLATION

COM3.W010.8 TESTING REPORT
Do not commence fabrication until test reports in COM3.M010 (1)(a)(v) have been approved.

COM3.W020.8 SHOP DRAWING AND SAMPLE APPROVAL
Do not commence fabrication until all shop drawings and samples have been Approved.

OFF SITE FABRICATION AND ASSEMBLY

COM3.W110.8 FIXING WEATHERSTRIPS
Securely fix weatherstrip. Ensure there is continuous contact between each opening part and its fixed frame.

COM3.W130.8 SIDE AND TOP HUNG WINDOWS
Hang to open as indicated on the Drawings and fit as specified with:
1. Friction pivots and sliding stays;
2. Pull handle with dual lock for side hung window; and
3. Cam lock for top hung window.

FIXING OF UPVC WINDOWS TO CAST IN-SITU CONCRETE FACADE

COM3.W210.8 COMPOSITE UNITS
Assemble all composite units on Site and provide all bolts, screws etc. and sealants.

COM3.W220.8 CUTTING TRIMMING AND WELDING
Do not cut, trim or weld during erection on Site.

COM3.W230.8 TOLERANCES
1. Check the position, size and alignment etc. of all openings for windows in accordance with the tolerances specified in Appendix H to this Specification and report any discrepancy to the CM;
2. Rectify any fault or discrepancy to the satisfaction of the CM, and bear the cost of such remedial work.

COM3.W260.8 POSITIONING
Position windows plumb, level and square.

COM3.W270.8 INSTALLATION
1. Install uPVC windows in accordance with window supplier's recommendation;
2. Apply bedding and grouting materials in accordance with window supplier's recommendation.
UPVC WINDOWS

COM3.W280.8 PERIMETER POINTING OF EXTERNAL WINDOWS
1. Remove filler board from the preformed joint, if any, around external edges of window and door frames;
2. Mask adjoining surfaces which would be impossible to clean if smeared with sealant;
3. Point around external edges of window frames with Approved sealant in COM3.M180 to form a neat, smooth and flat joint;
4. Remove excess sealant from the adjoining surfaces and leave clean.

FIXING UPVC WINDOWS TO PRECAST CONCRETE FACADES

COM3.W410.8 POSITIONING
Position windows plumb, level and square.

COM3.W420.8 OPENING LIGHT FRAMES
Check tightness and clearance between sash and frames of opening lights which are to be fixed before and during concreting of the facade units.

COM3.W425.8 POSITIONING OF WINDOWS AND WINDOW FRAMES
Fix windows and window frames in position before placing concrete in moulds for the facade units.

COM3.W430.8 CURING OF CONCRETE
In case of steam curing, ensure that temperatures are not to exceed the softening temperature of uPVC profile.

COM3.W440.8 POINTING TO PERIMETER OF WINDOW
Point perimeter of window frames with Approved sealant in COM3.M180 to form a neat, smooth, flat joint and:
1. Mask any adjoining surfaces which would be impossible to clean if smeared with sealant; and/or
2. Remove excess sealant from adjoining surfaces and wipe clean.

HANDLING, STORAGE AND PROTECTION

COM3.W610.8 TRANSPORTATION, HANDLING AND STORAGE
As COM2.W490.

COM3.W620.8 PROTECTION
1. Wrap all windows and other associated materials in stout waterproof paper or polythene to protect against damp and scratching;
2. Protect all exposed surfaces with a strippable coating or low-track masking tape;
3. Maintain and renew protective coating as necessary;
4. Carefully remove protective coating and leave clean on completion of building works.
TESTING

SURVEILLANCE TESTS FOR UPVC WINDOWS AND GRILLES

COM3.T050.A SURVEILLANCE TESTS
1. Testing Arrangements:
   a. When Instructed, surveillance tests shall be carried out by the CM, a Direct Contractor or the Housing Department Material Testing Laboratory;
   b. Comply with the following pertaining to surveillance tests:
      i. Provide attendance on the Site;
      ii. Provide, deliver and collect samples etc. as directed by the CM or as specified.
2. Testing Samples:
   a. Provide one set of test sample from the batch of material delivered to Site under the delivery note as specified in COM3.M010 (3)(a) or as instructed by the CM;
   b. One set of test sample shall consist of two representative uPVC window specimens of any type without louvre. Sample shall be the completed component as to be installed, including glazing, all fixed parts, casements, top-hung and fixings necessary to ensure normal operation. Bear all cost for any replacement of samples.
3. Testing methods:
   As per COM3.M010 (2)(a) except (vii), (viii), (ix) & (x).
4. Non-compliance:
   a. In the event that the testing samples fail to meet the testing requirements, follow either one of the following actions:
      i. Remove the representative batch off Site; or
      ii. Carry out re-test for the representative batch in accordance with the testing methods as specified in sub-clause (3) in a laboratory that complies with the requirements stated in PRE.B9.570 on three separate sets of samples selected by the CM from the representative batch. In case of any one sample fails the re-test, remove the representative batch off Site.
   b. When the representative batch of uPVC window is removed off Site, replace with another new batch and carry out test in accordance with the testing methods as specified in sub-clause (3) in a laboratory that complies with the requirements stated in PRE.B9.570 for one sample selected by the CM from the replacing batch. In case of such test fails, follow action stated in sub-clauses (4)(a);
   c. Bear all associated costs for the test and re-test required in sub-clauses (4)(a) and (4)(b). No extension of time will be allowed.

ON-SITE VERIFICATION TEST

COM3.T310.8 TESTING INSTALLED WINDOWS FOR WATERTIGHTNESS
   As COM2.T210.
COM4 GLAZING

MATERIALS

GLASS GENERALLY

COM4.M001.A SUBMISSION REQUIREMENTS FOR GLASS MATERIALS

1. Submission Requirements:
   At sample submission and approval stage, submit:
   a. Sample(s), 300 mm minimum square, for each type of glass and plastic sheet in accordance with PRE.B9.410 for CM's approval;
   b. The following substantiation for CM's information:
      i. Catalogue, brand name / model name and job reference;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer;
      iv. Where applicable, either the document from the manufacturer showing his authorization for the supplier as the agent / distributor in Hong Kong or the document from the supplier showing the appointment of the manufacturer and manufacturer's agreement for the production of the proposed product;
      v. Original or a certified true copy of the certification to ISO 9001 for the manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by the certification bodies or by the QCM. The certification bodies shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS;
      vi. Original or certified true copy of the test reports from the manufacturer showing that the glass material is in full compliance with the quality and performance requirements of the referenced standard specified for the type of glass product:
         - The date of the test shall be generally within five years prior to the notified date for commencement of the Works or at an earlier date subject to CM's consideration on the track records as maintained by the Housing Department;
         - The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material to Site;
         - In the event that no test report has been submitted for CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

2. On Site Delivery:
   a. At delivery stage, submit the following documents for CM’s information:
      i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (1)(a);
ii. Original or certified true copy of the Certificate of Origin for every batch of delivery. One batch being the material quantity covered under each delivery note;

iii. Delivery notes for all materials delivered to site.

b. Carry out and submit report on the material verification upon delivery to Site as applicable. Prior to carrying out the verifications, inform the CM who may be present to witness the verifications.

**COM4.M010.A**  
**FLOAT GLASS**

1. Submission Requirements as per **COM4.M001**;

2. Quality Requirements:
   b. Thickness as shown on Drawings.

3. On Site Delivery Verification:
   a. Further to the submission requirements at delivery stage in **COM4.M001** (2)(a), carry out and submit report on the following verifications as appropriate for material upon delivery on Site. Prior to carrying out the verifications, inform the CM who may present to witness the verifications:
      i. Method:

        | Verification Items                                         | Method              | Acceptance Standards                              |
        |-----------------------------------------------------------|---------------------|---------------------------------------------------|
        | Manufacturer's Certificate of Origin & delivery note       | Document Check      | From an Approved origin                           |
        | Dimension Check                                           | By measurement      | As specified                                      |
        | Surface Quality                                           | Visual              | Same as the CM’s Approved Sample Free from warping, oil canning effects |

b. When any of the verifications fail to meet the acceptance standards, either:
   
   i. Remove the representative batch off Site; or
   
   ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.

COM4.M040.8  WIRED GLASS
To BS 952:Part 1:1995,
1. Type: as shown on Drawings;
2. Square mesh wire, 13 mm squares, electrically welded at each intersection;
3. Thickness: as shown on Drawings.

COM4.M050.8  MIRROR GLASS
Selected float glass to BS 952:Part 1:1995 suitable for silvering:
1. Edges: square or bevelled as shown on the Drawings;
2. Exposed arrises: ground smooth.

COM4.M060.A  THERMALLY TOUGHENED GLASS / TEMPERED GLASS
1. Submission Requirements:
   
   a. Further to the submission requirements at sample submission and approval stage as per COM4.M001 (1), submit also a compliance report for heat soak process issued by the glass manufacturer containing the following information:
      
      i. Total number and surface area of tempered glass panes used in the Contract;
      
      ii. Location and identity number of the ovens, in which the heat soak process of the glass panes in (c) was conducted;
      
      iii. Calibration report of the ovens in accordance with BS EN 14179-1: 2005 or equivalent;
      
      iv. Quantity and configuration of thermocouples used to measure the glass surface temperatures in the oven. A minimum of 8 thermocouples shall be used. The location of these thermocouples shall be determined from the calibration report of the oven;
      
      v. Recorded temperature versus time graphs for each of the 8 thermocouples during the heating phase, holding phase and cooling phase of the heat soak process;
      
      vi. Quantity, dimensions and thickness of the tempered glass panes conforming to BS EN 14179-1: 2005 or other equivalent international standards, and the record of breakages of panes in each heat soak process with corresponding oven number;
      
      vii. Date of carrying out the heat soak process.
      
      The compliance report shall be endorsed by a RSE, who shall also provide a signed statement confirming that the report has adequate provisions in ensuring the heat soak process has been duly carried out to all tempered glass;
   
   b. Submit as per sub-clauses (c), (d) and (e) for the following installations:
      
      i. When the least dimension of the structural opening for window and window wall exceeds 1.8 m; or
      
      ii. When the area of structural opening exceeds 6 m²; or
      
      iii. When a window or window wall, glass wall, glass shop front or glass door with design span of its structural elements exceeds 6 m; or
iv. When a window or window wall system that functions as a protective barrier.

c. A copy of the Quality Assurance Scheme of the tempered glass manufacturer containing the following information and appended with a statement signed by Contractor’s appointed RSE mentioned in sub-clause (1)(a) above declaring that the RSE has studied the Quality Assurance Scheme and confirming that there are adequate measures incorporated in the Quality Assurance Scheme to ensure the quality of the tempered glass products is in compliance with the provisions of the Building Ordinance and the Approved plans:
   i. Heat soak process to all tempered glass panes;
   ii. Calibration of heat soak oven and laboratory equipment for quality control tests;
   iii. Residual surface compressive stress measurement of tempered glass;
   iv. Testing procedures and requirements;
   v. Frequency and extent of inspection and audit by in-house staff of the manufacturer, and independent parties.

d. A copy of the quality supervision plan for the quality supervision of manufacturer’s heat soak process of the tempered glass. Assign a quality control supervisor to provide full time continuous supervision of the heat soak process of all tempered glass panes in the factory. The minimum qualification and experience of the quality control supervisor are to be the same as TCP grade T1 under the RC’s stream, as stipulated in the CoPSS;

e. A copy of the quality supervision report prepared by Contractor’s appointed RSE mentioned in sub-clause (1)(a) and (1)(b) above which shall include a statement signed by Contractor’s appointed RSE, to confirm that adequate supervision has been provided in accordance with the quality supervision plan, including streams of Registered General Building Contractor.

2. Quality Requirements:
   a. To BS 952: Part 1: 1995 and manufactured:
      i. To precise glazing sizes and thickness as shown on the Drawings;
      ii. With permanent identification markings showing the compliance Standards as provided by the glass manufacturer and are marked in position which is visible but not prominent after fixing.

b. The glass shall be heat treated to approximately three times the strength and impact resistance of untreated glass and upon fracture would break into small fragments;

c. The glass shall be heat soak treated to reduce the risk of spontaneous breakage by accelerating the expulsion of the nickel sulphide in the glass through the heat soak process conforming to BS EN 14179-1: 2005 or other equivalent international standards;

d. Quality Assurance Scheme as per sub-clause (1)(c).

3. On Site Delivery Verification:
   a. Further to the submission requirements at delivery stage in COM4.M001 (2)(a), carry out and submit report on the following verifications as appropriate for material upon delivery on Site. Prior to carrying out the verifications, inform the CM who may present to witness the verifications:
      i. Method:

      | delivery note                           |                    |                                           |
      | Dimension Check                         | By measurement    | As specified                              |
      | Surface Quality                         | Visual            | Same as the CM’s Approved Sample          |
      |                                         |                   | Free from warping, oil canning effects    |

      ii. Frequency:

      | Items                                      | Sampling Frequency | Representative Batch |
      |--------------------------------------------|--------------------|----------------------|
      | Manufacturer's Certificate of Origin &     | Each batch         | Same batch of material |
      | delivery note                             |                    | delivered to Site     |
      | Dimension Check                           | 2 samples per batch| Same batch of material |
      | Surface Quality                           | 2 samples per batch| Same batch of material |
      |                                            |                    | delivered to Site     |

b. When any of the verifications fail to meet the acceptance standards, either:
   i. Remove the representative batch off Site; or
   ii. When agreed by the CM, repeat all verification items on three separate
       samples selected by the CM. In case of failure of any verification to any
       one sample, remove the representative batch off Site, bear all associated
       costs, and no extension of time will be allowed.

COM4.M100.A     REFLECTIVE GLASS

1. Submission Requirements as per COM4.M001;
2. Quality Requirements:
   a. To BS 952:Part 1:1995;
   b. Surface to be coated reflective, colour and performance as specified in Project
      Specific Specification;
   c. Thickness as shown on Drawings.
3. On Site Delivery Verification:
a. Further to the submission requirements at delivery stage in COM4.M001 (2)(a), carry out and submit report on the following verifications as appropriate for material upon delivery on Site. Prior to carrying out the verifications, inform the CM who may present to witness the verifications:

i. Method:

<table>
<thead>

COM4.M120.8    GLASS LOUVRE BLADES
With bevelled edges and ground to remove sharp arrises, thickness as shown on Drawings.

COM4.M130.B    FIRE RESISTANT LAMINATED SAFETY GLASS
1. Submission Requirements as per COM4.M001;
2. Quality Requirements:
   a. Generally:
      i. Laminated safety glass with interlayer(s) of fire resistant non-gel type material to BS EN ISO 12543-2: 2011 or BS EN 14449: 2005;
ii. Permanent identification mark(s) showing the name or logo of the glass manufacturer and the relevant compliance Standards in sub-clauses (2)(a)(i), (2)(b)(i) and (2)(c)(i) at corner of glass panel;

iii. Appearance:
- In accordance with BS EN ISO 12543-6: 2011; and
- When inspected at less than 2m from the glass surface, no accumulation of four or more spot defects of size less than 0.5mm at a distance of less than 200mm from each other.

b. For installing at fire rated timber doorsets at domestic block:
   i. Forming part of the whole of a fire rated timber doorset, which is capable of resisting the action of fire and meeting the prescribed fire resistant rating when tested in accordance with BS 476 Parts 20: 1987 and 22: 1987, or BS EN 1634-1: 2008;
   ii. Durability to BS EN ISO 12543-2: 2011 sub-clause 6.2 of the standard “humidity test for glass that is not normally exposed to direct solar radiation”.

c. For installing at external wall or other locations:
   i. Forming part of the whole of a fire resistant assembly, which is capable of resisting the action of fire and meeting the prescribed fire resistant rating when tested in accordance with BS 476 Parts 20: 1987 and 22: 1987, or BS EN 1363-1: 1999 and 1364-1: 1999;
   ii. Durability to BSEN ISO 12543-2: 2011 sub-clause 6.3 of the standard “humidity test for glass that is normally exposed to direct solar radiation”;
   iii. Impact resistance to BS 6206:1981 (Class A) or BS EN 12600:2002 (Class 1B1).

3. On Site Delivery Verification:
   a. Further to the submission requirements at delivery stage in COM4.M001 (2)(a), carry out and submit report on the following verifications as appropriate for material upon delivery on Site. Prior to carrying out the verifications, inform the CM or his representatives who may present to witness the verifications:
      i. Method:

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

b. When any of the verifications fail to meet the acceptance standards, either:
   i. Remove the representative batch off Site; or
   ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.

**PLASTIC GLAZING MATERIALS**

**COM4.M210.8 POLYCARBONATE SHEET**
Thickness: as shown on Drawings.

**COM4.M220.8 SURFACE HARDENED POLYCARBONATE SHEET**
Thickness: as shown on Drawings.

**COM4.M230.8 PLASTICS GLAZING MATERIALS**
Plastics type and thickness: as shown on Drawings.
SAMPLES

COM4.M310.8 GLAZING SAMPLES
Submit samples, 300 mm minimum square, for each type of glass and plastic sheet for Approval in accordance with PRE.B9.410.

ANCILLARY MATERIALS

COM4.M410.8 DISTANCE PIECES
PVC to BS 2571:1990, and:
1. Length: 10 mm minimum;
2. Width: equal to space between glass and rebate or bead;
3. Depth: giving 5 mm minimum cover of sealant.

COM4.M420.8 SETTING BLOCKS
1. Manufactured from either:
   a. PVC to BS 2571:1990, with a softness number between 35 and 45;
   b. Neoprene with Shore A hardness number between 80 and 90.
2. Length: 30 mm/m² of glazing but:
   a. In no circumstance less than 25 mm;
   b. Not less than 60 mm in vertically pivoted windows.

COM4.M430.8 LOCATION BLOCKS
Do not use location blocks if sealant is used in lieu of glazing compound.

COM4.M440.8 NON-SETTING COMPOUND
Of proprietary type as recommended by the window manufacturer: colour to Approval.

COM4.M450.8 PLASTIC SHEET GLAZING COMPOUND
Of proprietary type and compatible with proprietary sheets: colour to Approval.

COM4.M460.8 LINSEED OIL PUTTY
To BS 544:1969.

COM4.M470.8 PUTTY FOR HARDWOOD APPLICATION
A proprietary type recommended by the window manufacturer.

COM4.M480.8 SILICONE SEALANT
1. In compliance with WAT5.M110;
2. For mirror: one-part sealant to BS 5889:1989, Type A, neutral type sealant;
3. For glazing: one-part sealant to BS 5889:1989, Type B, neutral type sealant.

COM4.M485.8 STRUCTURAL SEALANTS
Where structural sealant is used in the construction of curtain wall, window or window wall system, the structural sealant shall be compatible with the glazing system and the structural frame with which it is in contact, which shall develop an allowable strength of 138 kPa with its substrates for short term wind load and has a safety factor suitable for the application. Compliance certificates comprising the sealant compatibility report, sealant adhesion report and the print review report issued by the manufacturers / suppliers and endorsed by a Contractor’s appointed RSE shall be submitted for the CM’s approval.

<td>Small, headless, non-corrodible nails or pins.</td>
</tr>
</tbody>
</table>
WORKMANSHIP

GENERAL

COM4.W010.8 STANDARD
Comply with BS 6262:1982 unless specified otherwise.

COM4.W020.8 DELIVERY
Ensure glass and plastic sheet is kept dry and clean during delivery.

COM4.W030.8 STORAGE
Store glass and plastic sheet vertically in a well ventilated location, protected from condensation and other moisture.

COM4.W040.8 FIRE RESISTANT LAMINATED SAFETY GLASS
Fire resistant laminated safety glass used as a fire barrier shall be installed in accordance with the glazing system manufacturer’s recommendations to satisfy the fire resistance criteria stipulated on Drawings.

PREPARATION OF SURROUNDS

COM4.W110.8 PREPARATION OF REBATES
Ensure rebates are clean, dry and unobstructed at time of priming and glazing.

COM4.W120.8 PRIMING OF WOODEN SURROUNDS
Ensure priming paint, in accordance with Worksection FIN7, has been applied to rebates before glazing with linseed oil putty.

FIXING GLASS GENERALLY

COM4.W210.8 GENERALLY
Ensure external glazing is wind and water tight on completion.

COM4.W220.8 CAST OR PATTERNED GLASS FOR EXTERNAL GLAZING
Fix cast or patterned glass for external glazing with patterned side inside.

COM4.W230.8 WIRED GLASS
Fix wired glass with the wires parallel to surround and align wire in adjacent panes.

COM4.W240.8 CUT EDGES OF WIRED GLASS
Grind the edge of cut glass smooth and paint cut edges of wired glass with black bituminous base paint to inhibit rusting.

COM4.W250.8 DIRECTIONALLY PATTERNED GLASS
Fix directionally patterned glass with the pattern parallel to surround.

COM4.W260.8 EDGE CLEARANCES OF SEALANT FOR ALUMINIUM WINDOWS
Ensure edge clearances are equal all round each pane and are at least 3 mm.
COM4.W270.8 EDGE COVER
1. Provide edge cover with sealant in accordance with the following table:

<table>
<thead>
<tr>
<th>Glass area</th>
<th>Edge cover</th>
</tr>
</thead>
<tbody>
<tr>
<td>Up to 0.5 m²</td>
<td>5 mm</td>
</tr>
<tr>
<td>0.5 to 1.5 m²</td>
<td>9 mm</td>
</tr>
<tr>
<td>1.5 to 4.0 m²</td>
<td>12 mm</td>
</tr>
<tr>
<td>Over 4.0 m²</td>
<td>As recommended by the sealant Manufacturer</td>
</tr>
</tbody>
</table>

COM4.W275.8 EDGE COVER FOR SINGLE GLASS GLAZED IN PUTTY OR NON-SETTING COMPOUND
Ensure the cover is in accordance with Tables 13 & 14 of BS 6262:1982.

COM4.W280.8 SETTING, LOCATION BLOCKS AND DISTANCE PIECES
1. Use setting blocks for all panes exceeding 0.2 m²;
2. Use distance pieces for all panes exceeding 0.2 m² and use minimum 2 Nos. of distance pieces on each side of the glass pane at 600 mm centres or less;
3. Use location blocks for all panes without sealant.

COM4.W290.8 POSITIONING AND SETTING LOCATION BLOCKS
Locate setting and location blocks in accordance with BS 6262:1982, Figure 22 and not less than 30 mm from corner of surround to end of block nearest corner.

COM4.W300.8 BEDDING FOR NON-SETTING COMPOUND
Ensure that no voids or spaces are left in backing or bedding non-setting compounds and there is no glass to frame contact.

COM4.W310.8 STRIPPING SURPLUS NON-SETTING COMPOUND
Strip surplus backing or bedding non-setting compound as follows:
1. To top and side edges: flush with top of rebate or bead;
2. To bottom edges: at 45° angle.

COM4.W320.8 SILICONE SEALANT
Where specified, seal the joint between the glass and bead with an Approved silicone sealant.

COM4.W330.8 PREFORMED TAPES, SHIMS AND COMPRESSION GASKETS FOR GLAZING
Obtain Approval before use and comply with manufacturer's recommendations.

GLAZING TIMBER WINDOWS

COM4.W410.8 SECURING GLASS
Secure glass to wooden surrounds with glaziers sprigs at 450 mm maximum centres.

COM4.W420.8 BACK PUTTY
Of regular thickness and 2 mm minimum.

COM4.W430.8 FRONT PUTTY
Form front putty to a neat triangular fillet stopping 2 mm short of sight lines.
OPENING LIGHTS
Ensure opening lights remain in closed position until putty has set sufficiently to prevent displacement of glass.

SEALING PUTTY
Seal linseed oil putty once sufficiently hard and within manufacturer's recommended times with primer and paint as specified in Worksection FIN7.

BEDDING GLAZING BEADS
Bed glazing beads in glazing compound for external glazing.

SECURING WOODEN GLAZING BEADS
Secure wood glazing beads with rustproof panel pins or with countersunk brass screws and cups at 200 mm maximum centres and 75 mm maximum from each corner.

GLAZING ALUMINIUM WINDOWS

GLAZING ALUMINIUM WINDOWS
To be carried out by the specialist contractor supplying and fixing the windows in accordance with Worksection COM2 as specified.

FIXING LOUVRE BLADES
Fix louvre blades into adjustable frames using clips as recommended by the frame manufacturer.

GLAZING WITH PLASTIC SHEETS

CUTTING PLASTIC SHEETS
Cut plastic sheets with a fine tooth saw and smooth or chamfer edges.

EDGE CLEARANCE
Allow edge clearance and cover as recommended by the sheet manufacturer.

PROTECTIVE COVERING
Remove only sufficient of the protective covering around edges to allow glazing.

FINISHING

CLEANING
1. Remove paint drips whilst wet;
2. Remove mortar, plaster or concrete spillage whilst wet;
3. Prior to practical completion of works:
   a. Remove all smears and excess glazing compound;
   b. Remove protective covering from plastic sheets;
   c. Leave clean, inside and out and free from scratches.
COM4.W820.8  BROKEN OR DAMAGED GLAZING
Replace glass or fixing materials broken or damaged before completion of the Works
and redecorate as Instructed.
COM5 TIMBER DOORSETS

MATERIALS

DOORSETS GENERALLY

COM5.M001.8 MATERIALS OF TIMBER DOORSETS

1. Non-fire rated doorsets and doorsets with fire resistance rating of 30 minutes:

<table>
<thead>
<tr>
<th>Parts of doorsets</th>
<th>Materials</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Door leaves</td>
<td></td>
</tr>
<tr>
<td>i. Core battens</td>
<td>Softwood or hardwood</td>
</tr>
<tr>
<td>ii. Stiles and rails</td>
<td>Softwood or hardwood</td>
</tr>
<tr>
<td>iii. Facing</td>
<td>Plywood</td>
</tr>
<tr>
<td>iv. Lipping</td>
<td>Hardwood</td>
</tr>
<tr>
<td>b. Door frame</td>
<td>Hardwood</td>
</tr>
<tr>
<td>c. Architrave</td>
<td>Softwood or hardwood</td>
</tr>
</tbody>
</table>

2. Doorsets with fire resistance rating of 60 minutes:

<table>
<thead>
<tr>
<th>Parts of doorsets</th>
<th>Materials</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Door leaves</td>
<td></td>
</tr>
<tr>
<td>i. Core battens</td>
<td>Softwood or hardwood</td>
</tr>
<tr>
<td>ii. Stiles and rails</td>
<td>Softwood or hardwood</td>
</tr>
<tr>
<td>iii. Fire rated covering sheet (optional as per Drawing)</td>
<td>Non-timber fire-rated materials such as calcium silicate or magnesium board subject to the CM’s approval</td>
</tr>
<tr>
<td>iv. Facing</td>
<td>Plywood</td>
</tr>
<tr>
<td>v. Lipping</td>
<td>Hardwood</td>
</tr>
<tr>
<td>b. Door frame</td>
<td>Hardwood</td>
</tr>
<tr>
<td>c. Architrave</td>
<td>Softwood or hardwood</td>
</tr>
</tbody>
</table>

3. Proprietary doors:
   Proprietary design recommended by door manufacturers to the CM’s approval.

COM5.M005.8 USE OF SUSTAINABLE TIMBER

1. All softwood used in timber doorsets shall be from sustainable sources;
2. At least 50% of all timber by volume for doorsets shall be from sustainable sources;
3. The hardwood or softwood to be regarded as sustainable shall be originated from a well-managed source which is governed under an internationally recognised, globally applicable, independent certification scheme for sustainable forest management;
4. The softwood or hardwood to be regarded as sustainable shall be originated from a well-managed source under the following independent certification scheme with a chain of custody system:
   a. Forest Stewardship Council (FSC); or
b. Programme for the Endorsement of Forest Certification Schemes (PEFC); or

c. Other equivalent internationally recognized, globally applicable, independent certification scheme for sustainable forest management in terms of environmental, ecological, biodiversity, social and economic needs.

5. Submit the following documents as specified in COM5.M040 to demonstrate that softwood or hardwood from a well-managed source in sub-clause (4) has been purchased, processed and delivered to Site:

a. Document proof of a forestry product Chain-of-Custody (COC) certification providing the doorsets from sustainable sources with a certificate code of an independent certification scheme as specified in sub-clause (4). The submission shall include:

i. The original or certified true copy of a certificate of registration issued by an independent certification body certifying that the doorset supplier / manufacturer meeting the COC standard of an independent certification scheme as specified in sub-clause (4) for production of the doorsets from sustainable sources;

ii. Specimens of the doorset supplier / manufacturer’s Certificate of Origin and delivery note that an original of which will be submitted for each batch of the doorsets from sustainable sources delivered to Site at delivery stage. The specimen shall indicate the name and COC number of the doorset supplier / manufacturer and the certificate code of the independent certification scheme for the doorsets delivered;

b. Additional documents for the other independent certification scheme in sub-clause (4)(c) if applicable:

i. The species and country of origin of softwood or hardwood;

ii. The name of the concessions or plantations from which the hardwood or softwood originate;

iii. Copies of the forestry policies implemented by these concessions or plantations which confirm that the management of the timber resource is sustainable.

COM5.M010.8 TIMBER QUALITY

To comply with the following:

1. Class and exposure to BS 1186:Part 1:1991, as follows:

<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Class</td>
</tr>
<tr>
<td>a. Door frame</td>
<td>2</td>
</tr>
<tr>
<td>b. Door leaf</td>
<td></td>
</tr>
<tr>
<td>i. Stiles and rails</td>
<td>2</td>
</tr>
<tr>
<td>ii. Eggcrate ribs</td>
<td>2</td>
</tr>
<tr>
<td>iii. Core (lamels)</td>
<td>3</td>
</tr>
<tr>
<td>iv. Lipping</td>
<td>2</td>
</tr>
</tbody>
</table>

2. Grading of defect limits to BS 1186:Part 1:1991 for knot size and distribution limits as follows:
### COM5.M015.8 COMPOSITE JOINTED (LAMINATED) TIMBER AND FINGER JOINTED TIMBER

1. Laminated timber and finger jointed timber may be used at door frames, stiles and rails of door leaves subject to CM’s approval;

2. Laminated timber and finger jointed timber shall be to BS 1186:Part 2:1988 and comply with the following dimensional requirements:

   - **a. Composite jointed (Laminated) timber:**
     - i. Min. dimension of each piece: 25 mm
     - ii. Max. no. of laminated pieces in stiles/ rails: 2 nos.
     - iii. Max. no. of laminated pieces in door frames: 4 nos.

   - **b. Finger jointed timber:**
     - i. Min. length of each segment: 150 mm
     - ii. Min. length of end pieces: 100 mm
     - iii. Min. overlapping of adjacent segments: 50 mm
     - iv. Max. no. of finger jointed segments in vertical stiles: 7 nos.
     - v. Max. no. of finger jointed segments in horizontal rails: 4 nos.

3. Detailed composition and dimension of laminated timber and finger jointed timber components / segments shall be clearly indicated in shop drawings submission for CM’s approval.

### COM5.M020.8 AVERAGE PERMISSIBLE MOISTURE CONTENT

For timber incorporated into the work:

1. The average permissible moisture content is 13% to 17%;

2. Measure the moisture content of timber using an electrical resistance moisture meter in accordance with clause 7 of BS 1186:Part 1:1991;

3. Draw to the CM’s attention any situations where these percentages cannot be attained due to local circumstances of supply and availability.

### COM5.M025.8 SOFTWOOD FOR CORE BATTENS, STILES AND RAILS AND ARCHITRAVE OF DOOR LEAVES

1. Softwood shall be originated from sustainable source as specified in COM5.M005;
2. The softwood used in the core battens, stiles and rails and architrave of door leaves etc. shall be Douglas Fir, Larch, Hemlock, Radiata Pine, Red Cedar, Spruce, Yellow Cypress or other softwood as approved;

3. The minimum average density of softwood at 15% moisture shall be 450 kg/m³.

COM5.M030.8 HARDWOOD FOR CORE BATTENS, STILES, RAILS, ARCHITRAVE AND LINING OF DOOR LEAVES
"Meranti" or equivalent wood species of minimum average density of 450 kg/m³ at 15% moisture content for the construction of the door leaves.

COM5.M035.8 HARDWOOD FOR LIPPING AND FRAME
1. The hardwood used for the lipping and frame shall be "San Cheung" (Kapore), Ash Wood, Obar Suluk or other hardwood as approved;
2. The minimum average density of hardwood at 15% moisture content shall be 620 kg/m³.

COM5.M040.A TIMBER DOORSETS
1. Submission Requirements:
   a. At sample submission and approval stage, submit a sample of the proposed wooden doorsets for CM's approval together with all the following substantiation for CM's information:
      i. Job reference;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer;
      iv. Where applicable, either the document from the manufacturer showing his authorization for the supplier as the agent / distributor in Hong Kong or document from the supplier showing the appointment of the manufacturer and manufacturer's agreement for the production of the proposed product;
      v. Original or a certified true copy of product conformity certificate for the doorsets of fire rated construction, covering the following typical door types:
         - domestic flat entrance doors; and
         - domestic flat kitchen doors.

This shall be submitted at sample submission and approval stage, or at a time not later than the delivery of the material. The certification shall be to the "Product Conformity Certification Scheme For Passive Fire Protection Products" published by the Hong Kong Institute of Steel Construction. The product conformity certificate shall be issued by a certification body accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS. If a photocopy of the product conformity certificate is submitted, it shall be certified true by the certification body or by the QCM.

The product conformity certificate shall cover tests in accordance with either set of standards below:
It shall be certified as being capable of resisting the action of fire and smoke, if applicable for the specified periods by a laboratory which must be accredited for the specific test by HKAS under the Hong Kong Laboratory Accreditation Scheme (HOKLAS), or an equivalent organization which has signed a mutual recognition agreement with HOKLAS with appropriate qualifications and experience in fire resisting construction;

vi. The detail specification of the doorsets selected for the product conformity certification audit testing by the certification body, together with drawings and photographs sufficient to completely describe the doorset's construction, materials, fittings used and installation details;

vii. A copy of the test reports, assessment reports or fire / smoke test certificate which are certified true by the accredited laboratory or QCM and generally within 5 years prior to the notified date for commencement of the Works;

viii. Shop drawings for Approval showing the materials and exact dimensions of all doorset components, fixing, joint details, the internal arrangements of the rail and battens, and particularly routing of the cavity reserved for the wiring of the electrical locksets. Where laminated timber and finger jointed timber are used, detailed composition and dimension of the components / segments shall be incorporated in the shop drawings;

ix. Samples of wooden veneer faced plywood and door frame if timber veneer finished doorsets are shown on Drawings;

x. Confirmation in writing with a declaration from the doorset supplier / manufacturer on the composition and sources (e.g. sustainable source / non-sustainable source) of all the solid timber and plywood used for manufacturing of timber doorsets, and that the quality of timber used, and the laminated timber / finger jointed timber used if applicable, comply with COM5.M010 and COM5.M015 respectively;

xi. When the doorsets are supplied for domestic blocks also include the following in the submission:
   - Submit a sample board similar to the one maintained by the Housing Department showing the quality, species and country of origin of timber for the doorsets; Submit an additional sample board of the approved sample for keeping in the Housing Department’s Sample Display Gallery if the material has not been approved for use in a public housing project in the past five years prior to the notified date for commencement of the Works;
   - Test report showing the average density of not less than 3 nos. of timber samples of proposed species;
   - Documents for the doorsets from sustainable sources as specified in sub-clause (5) of COM5.M005;
   - Calculation to demonstrate at least 50% of all timber by volume for the doorsets is from sustainable source;
   - One sample each for kitchen, bathroom, flat entrance and exit staircase doorsets in Standard Domestic on Site for the purposes of inspection and Approval. The Approved samples shall be kept on Site until completion of the doorset installation work;
   - Original or a certified true copy each of the certification to ISO 9001 and ISO 14001 for the manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by the certification bodies or by the QCM. The certification bodies shall be as follows:
### ISO 9001
The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.

### ISO 14001
The certification body shall be accredited by the Hong Kong Accreditation Service (HKAS), or the China National Accreditation Service (CNAS), or an accreditation body which has entered into a mutual recognition agreement with HKAS.

- A test report showing compliance with sub-clause (3)(b)(iii) for doorsets produced by the proposed doorset manufacturer to demonstrate the effectiveness of the insecticidal control on the production of doorsets.

### xii. When the doorsets are supplied with fire resistant glass:
- Catalogue, brand name / model name, origin and job reference of the fire resistant glass;
- Name of the manufacturer of the fire resistant glass;
- Sample of fire resistant glass with an identification mark for the proprietary product;
- Confirmation in writing with a declaration from the door supplier / manufacturer that the fire resistant glass complies with the requirement as specified in sub-clause (1) of COM4.M130.

### xiii. When the doorsets are supplied with fire rated covering sheet such as calcium silicate or magnesium board:
- Catalogue, brand name / model name, origin and job reference of the fire rated covering sheet;
- Name of the manufacturer of the fire rated covering sheet;
- Sample of the fire rated covering sheet;
- Confirmation in writing with a declaration from the door supplier that the fire rated covering sheet is asbestos free.

### xiv. When the doorsets are supplied with smoke seal:
- Catalogue, brand name / model name, origin and job reference of the smoke seal;
- Name of the manufacturer of the smoke seal;
- Sample board of the proposed smoke seal with all accessories;
- Original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements as specified in sub-clause (1) & (2) of COM5.M090 for CM's information. The date of the test shall be generally within five years prior to the notified date for commencement of the Works.

### xv. Confirmation in writing with a declaration from the doorset supplier / manufacturer that the doorset paint finish and the adhesive used on timber and plywood are in compliance with the prescribed limits of VOC content as set out in the Air Pollution Control (Volatile Organic Compounds) Regulation;
xvi. The proposed Radio Frequency Identification tag and fixing method as specified in Worksection COM11.

b. Submit original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clauses (2)(d) to (2)(e) for the doorset and COM5.M100 for the fire rated vision panel installed at doorsets for CM's information:
   i. The date of the test shall be generally within three years prior to the notified date for commencement of the Works or at an earlier date for domestic blocks subject to CM's consideration on the track records as maintained by the Housing Department;
   ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material as mentioned in sub-clause (3)(a);
   iii. In the event that no test report has been submitted for CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

2. Quality Requirements:
   a. Doorsets must be capable of withstanding incidental static and dynamic loads imposed during use, including forced opening and closing and impacts from human bodies and hard objects. The loads must not result in significant damage or deformation to the doorsets, nor dislodge or shatter any composite parts in a dangerous manner;
   b. Doorsets with fire resistance rating of 30 minutes:
      i. A fire resistance rating of 30 minutes, 30/30 (30 minutes integrity, 30 minutes insulation) or 30/- (30 minutes integrity with no specified requirement for insulation) shall be provided when tested to BS 476:Part 22:1987 or BS EN 1634:Part 1:2008;
      ii. Timber doorsets including frame, hinges, door closers and any other hardware shall be as specified in Appendix A.2.3 of BS 476:Part 22:1987 or clause 6.7 of BS EN 1634:Part 1:2008;
      iii. Should be closely fitted around the edges to impede the passage of smoke and flame. Bottom gap shall not be more than the designed values of the door specified in the relevant fire test reports and should not exceed 10mm (between the bottom of the door and the floor when the smoke seal is lifted up).
   c. Doorsets with fire resistance rating of 60 minutes:
      i. A fire resistance rating of 60 minutes, 60/60 (60 minutes integrity, 60 minutes insulation) or 60/- (60 minutes integrity with no specified requirement for insulation) when tested to BS 476:Part 22:1987 or BS EN 1634:Part 1:2008;
      ii. Timber doorsets including frame, hinges, door closers and any other hardware shall be as specified in BS 476:Part 22:1987:Appendix A.2.3 or BS EN 1634:Part 1:2008:6.7;
      iii. Should be closely fitted around the edges to impede the passage of smoke and flame. Bottom gap shall not be more than the designed values of the door specified in the relevant fire test reports and should not exceed 10 mm (between the bottom of the door and the floor when the smoke seal is lifted up).
d. Satisfy the requirements of the following tests. After each test, the doorset must function properly and any damage or deformations are to be within the limits prescribed in sub-clauses (2)(f) to (2)(p). Two brand new samples are required for the tests below. Test number 1 to 3 to be carried out on Sample A in any order, and evaluation of result need not be terminated because of failure of one test. Test number 4 to 11 to be carried out on Sample B in sequence;

Refer sub-clause (2)(p)
Same as Test No. 8.

12 Endurance of mechanical smoke seal
Refer sub-clause (2)(q)
Intact to perform the normal drop and lift up function smoothly without any distortion

Record the following information in the test reports:

i. Description of product: a detailed specification and any necessary drawings or photographs, sufficient to completely identify the product and its fittings;

ii. Test results:
- Numerical test results expressed in the units prescribed for the appropriate test;
- Any other specified criteria, e.g. "no damage occurred" etc.;
- A graph of performance against increasing stress wherever applicable;
- Diagrams or photographs to show points of failure where appropriate.

iii. Test conditions: details of atmosphere i.e. conditions prior to and during testing where appropriate.

Test No. 1 - dimensional accuracy, squareness:

i. Specified linear dimensions and squareness will be measured in accordance with BS 5278:1976, except that the height and width of doors will be measured with a maximum uncertainty of ±1.0 mm.

Test No. 2 - general flatness, evenness:

i. The defects of general flatness of a door leaf will be measured in accordance with BS 5277:1976;

ii. Evenness of surfaces will be measured by metal straight edges, one each of 50 ± 2 mm and 200 ± 2 mm and a set of feeler gauges which enables measurement of 0.2 to 1.0 mm in increments of 0.1 mm;

iii. Each door will be examined along four horizontal lines and two vertical lines, equally spaced, on each face of the doors, for any deviation in position exceeding the specified limits;

iv. Each continuous gap will be measured once at the point of maximum deviation;
v. The position of the point measured together with the magnitude of deviation will be recorded and reported.

h. Test No. 3 - behaviours under humidity variations:
i. Tests will be conducted in accordance with BS 5369:1987;
ii. Measurements of bending and twist will be taken within 6 hours of removal from the chamber;
iii. Doors that cannot be measured within the above specified period will be stored in the relevant climate or sealed in plastic wrapping;
iv. Have a maximum deviation due to bending of 7.5 mm, measured vertically;
v. The range between maximum deviation, due to twisting of any corner of the door in relation to the other three corners under the three climatic conditions, must not exceed 10 mm.

i. Test No. 4 - resistance to impact, hard body:
i. Test apparatus:
   - The impactor will be a solid steel ball of diameter 50 ± 2.5 mm, which can be dropped down the inside of a release tower of 100 mm internal diameter, with a flat base and weighing about 5 kg, excluding the steel ball. The tower will incorporate a means of releasing the ball quickly and freely.

ii. Test method:
   - The test doorset will be laid horizontally on a solid base, supported along three edges (top and both sides). Impacts of 3 Nm will be applied to fifteen points on the surface as specified below.

iii. Object of impact pattern:
   - The object of the impact pattern is to control the spread of test points so that an undue concentration on places of high or low resistance is avoided;
   - Figure 4(a) in Appendix COM5/I to this Worksection illustrates the principles by which a pattern is constructed, and shows one-half of the specimen;
   - Aiming points are chosen from the centres of those sub-areas marked X;
   - One point is selected from each of the fifteen rows, so that aiming points are spread in consecutive columns as shown in figure 4(a).

iv. Standard impact patterns:
   - Figure 4(b) in Appendix COM5/I to this Worksection indicates four different sets of aiming patterns developed in this way;
   - Some door constructions may require different aiming points from the remaining sub-areas marked Y but alternatives will not give such a balanced pattern;
   - Any of the four patterns shown may be used for a test but the location which is expected to be most vulnerable will be included;
   - The development of alternative patterns is not essential.

v. Repeat testing template:
   - Where repeated testing is expected, such as for door leaves of standard size, a template may be used to avoid the need to mark out the face of a door leaf.

vi. Measurement of indents:
- The depth of indent caused by an impact will be measured by a dial gauge mounted on a reference bar;
- The contact between the reference bar and the door leaf surface is by a flattened knife edge at one end and a single rounded point contact at the other;
- The knife edge will be positioned at right angles to the length of the bar and set at a separation of 200 mm from the point of contact;
- The dial gauge will be positioned centrally between the knife edge and the point of contact;
- The extent of damage caused by an impact will be assessed by a transparent sheet on which a circle of 15 mm diameter has been inscribed.

vii. Test method sequence:

The sequence of the test method will be carried out as follows:
- An aiming point will be selected;
- A dial gauge reading will be taken at this point with the bar in a known orientation relative to the door edges;
- The tower will be positioned with its central axis over the aiming point;
- The ball will be dropped from a height where the distance from its underside to the door leaf surface corresponds to the specified impact energy;
- The tower will be removed and the depth of indent measured (by the difference of readings) with the bar and dial gauge in the previous position and orientation;
- Any consequent cracking of the material of the door together with any other damage caused by the impact will be assessed;
- This procedure will be repeated for the remainder of the specified aiming points.

j. Test No. 5 - resistance to torsion:

i. Test apparatus:
- The doorset will be mounted vertically and fixed in accordance with the manufacturer's recommendations;
- Arrangements will be made whereby the door leaf can be held open at 90 degrees by means of a clamp to top lockside corner;
- A means of applying force normal to the plane of the door leaf will be provided acting at its mid height;
- The force will act at the lockside edge of the door leaf;
- Deflection normal to the plane of the door leaf will be measured at the lower lockside corner.

ii. Initial loading:
- Slack in the hinges will be taken up initially by preloading;
- Preloading will be carried out by carefully applying a force of 200 N to the attachment point in increments not exceeding 100 N, the force acting at right angles to the door leaf;
- The force will be removed in the same incremental stages as in the loading procedure;
- The position of the lockside lower corner will be noted as a datum for deflection measurements.

iii. Test loading:
- A force of 400 N will be applied in increments not exceeding 100 N, the force acting at right angles to the door leaf;
- The deflection will be measured after the door leaf has stabilised at each increment, the movement of the dial gauge being less than 0.02 mm per minute;
- After the recording of the deflection under maximum force the reverse procedure will be adopted to remove the load. The final residual deflection at least 1 hour after all force has been removed will be recorded;
- Refer to Figure 5 - Torsion in Appendix COM5/I to this Worksection.

k. Test No. 6 - strength in the plane of the door leaf:
i. Test specimen:
- Doorset with factory-finish or finished as specified.

ii. Test method:
As Test No. 5 - resistance to torsion test:
- The doorset will remain in the rig position described;
- In the resistance to torsion test, the force will be applied, acting downwards in the plane of the door leaf, to a point at about mid-height of the door leaf near the lockset in a vertical direction;
- The point of measurement will be on the centre line of the bottom edge of the door leaf and 10 mm in from the locking edge.

iii. Test reading:
- The initial and final reading of the dial gauge will be taken with no force whatsoever applied to the door leaf (including the weight of the rope).

iv. Loading door:
- A downward vertical force of 500 N will be applied in increments of 50 N;
- The final force will be maintained for 5 minutes when the maximum deformation is recorded;
- The reverse procedure will be adopted and the residual deformation measured one hour after all downward forces have been released.

v. Test criteria:
- The maximum and residual deformation must not exceed 1.00 mm.

l. Test No. 7 - slamming open:
i. Mount for test:
- The doorset, including any architraves, trims, door stop, check or similar as specified, will be mounted, positioned and supported as in intended operational use, with the door leaf fully opened.

ii. Test method:
- The door leaf will be moved towards the closed position through an angle of 30 degrees and allowed to open freely under the influence of a 4 kg weight applied to the middle of the edge opposite the hinges at right angles to the plane of the fully open door;
- The procedure will be repeated 10 times at a rate not exceeding 15 times per minute;
- Double swing doors will be slammed open 10 times in each direction;
- If no closer or stop is specified, a floor mounted door stop will be provided at the 90 degrees open position;
- Refer to Figure 2 - slamming open, in Appendix COM5/I to this Worksection.

m. Test No. 8 - slamming closed:

i. Test apparatus:
- The doorset will be placed vertically in a rigid rig, fixed by a method recommended by the manufacturer;
- A light strong line will be arranged, that allows the door leaf to be closed from 60 degrees open by the descent of a weight of mass of 15 kg;
- The line will be attached to the leaf at the lockset or if this is more than 150 mm from the lockside edge at some point within 150 mm of that edge at the level of the lockset;
- The line will be passed horizontally from the door leaf and then over a 25 mm diameter, horizontal bar of smooth steel arranged with its axis parallel to the plane of the door frame;
- The bar will be positioned 400 mm from the door leaf face when the door leaf is closed and spanning the width of the doorset;
- The line will descend vertically from the bar and carry the weight at its lower extremity so arranged that, at the point of closure, the weight strikes a platform removing further tension from the line.

ii. Test method:
- The door leaf will be opened to 60 degrees and released, the door will be slammed shut by the action of the falling weight;
- Carry out test 20 times;
- Refer to Figure 1. - slamming closed, in Appendix COM5/I to this Worksection.

n. Test No. 9 - resistance to jarring and vibration:

i. Mount for test:
- The doorset will be mounted vertically in a rigid rig and fixed in accordance with the manufacturer's recommendations.

ii. Test apparatus:
- A sphericoinal bag to BS EN 596:1995 Clause 6.2 will be hung from an independent support at about the same height as the top of the door leaf as a pendulum capable of striking the door's closing face;
- The bag will be hung so that, at rest, with the door open at 45 degrees, it just contacts the surface of the door leaf with its centre of gravity at the level of the lockset, and at mid-width of the door frame;
- The lockset will be removed where this would be struck.

iii. Test method:
- The door leaf will be opened from the closed position through an angle of 45°;
- If any closing device is fitted, the door leaf will be restrained slightly against closing, but not against opening; otherwise the door leaf will be unrestrained;
- If no closer or stop is specified, a floor mounted door stop at the 90° open position will be provided;
- The test body will be drawn away from the door leaf in a vertical plane normal to the door frame through an arc of 250 mm vertical height then released to strike the door leaf;
- Carry out test 100 times;
- Refer to Figure 7 - jarring, in Appendix COM5/I to this Worksection.

o. Test No. 10 - resistance to impact; heavy body:
   i. Test apparatus:
      - A spherocnical bag to BS EN 596:1995 Clause 6.2 will be hung as a pendulum capable of striking the door leaf;
      - The bag will be placed so that, at rest, it just contacts the surface of the door leaf with its centre of gravity at the level of the lockset, such that when swung in a vertical plane normal to the door leaf it will impact the door leaf at mid-width of the door leaf.
   ii. Mount for test:
      - The doorset will be mounted vertically and fixed in accordance with the manufacturer's recommendations. The door leaf, will be closed and locked.
   iii. Test method:
      - With the door leaf closed and locked, the test body will be swung against the door leaf three times to the closing face, with an impact energy of:
         - 20 Nm each time for kitchen and bathroom doorsets and;
         - 40 Nm each time for flat entrance and exit staircase doorsets.
      The doorset will then be examined for any damage or deformation; then
      - With the door leaf closed and locked and clamped at the position of the lockset the test will be repeated against both sides of the door leaf, three times, commencing with the opening face and with an impact energy of:
         - 40 Nm each time for kitchen and bathroom doorsets and;
         - 80 Nm each time for flat entrance and exit staircase doorsets.
      The doorset will then be examined for any breakage.
      - Refer to Figure 3 - heavy body, in Appendix COM5/I to this Worksection.

p. Test No. 11 - resistance to closing against an obstruction:
   i. Mount for test:
      - The doorset will be mounted vertically in a rigid rig, and fixed in accordance with the manufacturer's recommendations. A dry hardwood slip, 50 mm x 50 mm x 10 mm and of mass between 15 g and 20 g will be provided for the test.
   ii. Test method:
- The door will be opened and the hardwood slip placed in the gap between the door leaf and the bottom of the hinge side jamb of the frame in order to hold the door ajar. The slip will be inserted from the closing face with its grain horizontal and its plane vertical and parallel to the plane of the door frame as shown in Figure 6 - "Arrangement of Hardwood slip for obstruction test", in Appendix COM5/I to this Worksection;

- A force will be applied, acting at right angles to the plane of the frame, increasing in 50 N increments to the lockside edge, at the handle height until it reaches 200 N.

q. Test No. 12 – endurance test of mechanical smoke seal
   i. The drop seal sample will be installed securely to the timber door / panel set up in laboratory. The assembly of the timber door / panel set up will be similar to the recommended installation details indicated in the shop drawing;
   
   ii. The door / panel will be closed such that the seal will be in fully dropped position and seal up the gap at bottom of the door / panel. Photos of the test sample will be taken at both closed and opened positions of the door / panel for record;
   
   iii. Hydraulic jack / motor / pressure cylinder will be used to open and close the door with an opening angle of around 10 degrees to activate the mechanism of drop seal such that the seal will be lifted up when the door is opened and in fully dropped position when the door is closed. Each test cycle will be completed in 2 to 3 seconds;
   
   iv. After completion of the first 50,000 test cycles in step (iii), the test sample will be examined for any distortion or breakage, and any abnormality of the dropping / lifting of the seal and any wear and tear of the seal observed will be recorded;
   
   v. Step (iii) and (iv) will be repeated to a total of 500,000 test cycles;
   
   vi. In case the mechanical operation of the drop seal fails during the test (i.e. the seal either cannot drop when the button / block is pushed or cannot be lifted up when the button / block is released), the test will be suspended and the failure condition will be recorded.

r. When the wooden doorsets are supplied for domestic blocks, standard of visual quality of doorsets shall be comparable with the benchmark samples maintained by the Housing Department.

3. On Site Delivery Verification:
   a. At delivery stage, submit to the CM the following:
      i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (1)(a);
      
      ii. Original or certified true copy of the Certificate of Origin for every batch of delivery. A batch being the accumulative total of 1500 doorsets or part thereof delivered to Site;
      
      iii. Delivery notes for all material delivered to Site;
      
      iv. The Certificates of Origin and delivery notes for the doorsets from sustainable sources shall indicate the name and COC number of the doorset supplier / manufacturer and the certificate code of the independent certification scheme for the doorsets delivered.
      
   b. Carry out X-ray scanning test as follows:
i. In an Approved Laboratory within two weeks from the delivery day of the representative batch of doorsets on Site to prove that the doorsets delivered is free from live insects and larvae infestation;

ii. Two specimens in one sample of doorsets to be selected by the CM from each batch of delivery for the test;

iii. Testing method in sequence shown below:
   - Apply X-ray scanning to the whole door leaf;
   - Select 10 spots from the X-ray scanning films;
   - Remove the facing on one side of the door leaf for general inspection;
   - Study in detail on the 10 selected spots including microscopic inspection (multiplication X20);
   - Record the findings of the 10 selected spots including photographs of the whole leaf and individual selected spots.

iv. Remove the representative batch of doorsets off Site if the test results fail to meet the requirement stated in (b)(i), bear all associated costs, and no extension of time will be allowed.

c. Subsequent to each X-ray scanning test as per sub-clause (3)(b), verify the average density of the X-rayed solid core timber doorsets. Location for taking the specimens for the density test is to be selected by the CM. Carry out the test on one set of samples for each type of doorset by the same Approved Laboratory as follows:
   i. Measure the density of 6 nos. of timber samples from one door leaf and take average;
   ii. Measure the density of 3 nos. of timber samples from one set of door frame and take average;
   iii. Where the results fail to meet the requirement stated in COM5.M025, COM5.M030 and COM5.M035, either:
      - Remove the representative batch of timber doorsets off Site; or
      - When agreed by the CM, repeat verification in (c)(i) and (c)(ii) for three separate door leaves and door frames selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.

d. Subsequent to each X-ray scanning test as per sub-clause (3)(b), open-up inspection shall be conducted by an Approved Laboratory using the same tested specimens. The specimens shall be the complete component as to be installed, including frame, door leaf, glazing, fire / smoke seals, all fixed parts, leaf, fastenings, and fixings necessary to ensure normal operation.

ii. Where the results fail to meet the requirement stated in (d)(i), either:
   - Remove the representative batch of doorsets off site; or
   - When agreed by the CM, repeat the inspection (d)(i) on three separate samples of doorset selected by the CM from the same batch. One set of test sample consist of two specimens. In case of failure of any inspection to any one sample, remove the same type of doorsets from the representative batch off site, bear all associated costs, and no extension of time will be allowed.

e. Carry out and submit report on the following verifications for wooden doorsets upon delivery on Site. Prior to carrying out the verifications, inform the CM who may present to witness the verifications:

f. When any of the verifications fail to meet the acceptance standards, either:
   i. Remove the representative batch off Site; or
   ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.

**COM5.M050.8  DOORSET TYPE (PAINT FINISH)**

Doorset to comprise of the following:
1. Solid core or skeleton flush door leaves with paint finish complete with ironmongeries and hinged to door frame;
2. Hardwood door frame with paint finish;
3. Hardwood or softwood architraves with paint finish;
4. Glazing beads with paint finish, fixing screws for glazing beads; and
5. Plastic pellets.

**COM5.M060.8  DOORSET TYPE (TIMBER VENEER FINISH)**

Doorsets to comprise of the following:
1. Solid core or skeleton flush door in timber veneer faced plywood finish sprayed with semi-gloss clear water based polyurethane paint or clear water based lacquer paint complete with ironmongeries and hinged to door frame;

2. Hardwood door frame to comprise a frame sprayed with semi-gloss clear water based polyurethane paint or clear water based lacquer paint;

3. Glazing beads sprayed with semi-gloss clear water based polyurethane paint or clear water based lacquer paint, fixing screws for glazing beads and matching wooden fillet.

COM5.M070.8 IDENTIFICATION
Supply RFID tags as specified in COM11 with a unique serial number and marked in an inconspicuous position on each doorset and its detached parts. Identify and record the date of manufacture.

COM5.M080.8 INTUMESCENT STRIP
1. Approved proprietary intumescent strip complying with the following requirements:
   a. Intumescent strip for fire protection only shall be tested to BS 476:Part 22:1987 or BS EN 1634:Part 1:2008;

2. The fire sealing system shall be firmly fixed and its performance shall not be affected by moisture or dampness. For intumescent strip made of hygroscopic materials, the ends and the cut edges of the intumescent strip shall be properly protected and sealed with fire mastic to prevent deterioration through the absorption of atmospheric moisture;

3. Where the intumescent strip has to be used with a bedding liner made of hygroscopic materials underneath the glazing bead around the glazing panel, suitable means such as a continuous bead of sealant to prevent the bedding liner from deterioration through the absorption of atmospheric moisture shall be provided;

4. The use of intumescent strip and any details such as application of fire mastic or sealants shall be covered under a valid fire test report or the assessment report.

COM5.M090.8 SMOKE SEAL
1. Approved proprietary smoke seal tested at ambient temperature and medium temperature and demonstrated to comply with the smoke leakage rate criteria in accordance with BS EN 1634:Part 3:2004;

2. Smoke seal shall be covered under a valid smoke test report. The test specimen construction and finish shall be fully representative of that intended to be used in practice. When installed on Site, the bottom gap between the fire rated / smoke control door and the floor shall be not more than the designed values of such door specified in the fire or smoke test report;

3. When specified on Drawings or as required in accordance with the door manufacturer’s fire rated door design, smoke seal installed at bottom of fire rated doors shall be a mechanical "drop-type" threshold smoke seal certified as tested to 500,000 cycles with test procedures to sub-clause 2(q) of COM5.M040;

4. For mechanical "drop-type" threshold smoke seal operated with an actuator hitting against the door jamb, the actuator shall be of non-ferrous metal and not in direct contact with the intumescent strip embedded at the door jamb, otherwise it may damage or affect the performance of the intumescent strip;

5. Other non-drop type smoke seal installed at door frame rebate shall be elastomeric fin(s) with self-adhesion backing;
6. The fire sealing system shall be firmly fixed and its performance shall not be affected by moisture or dampness.

COM5.M100.8 FIRE RESISTANT GLASS
Proprietary fire resistant laminated safety glass as per sub-clause (1) of COM4.M130.

DIMENSIONAL ACCURACY

COM5.M210.8 DOORSETS, DOOR LEAVES AND FRAMES GENERALLY
Comply with BS 4787:Part 1:1980 unless otherwise specified in Appendix H "Schedule of Tolerances” to this Specification.

PREFORMING AND DRILLING

COM5.M310.8 DOORSETS
Preformed with:
1. Holes or recesses to receive ironmongery as scheduled with the exception of overhead door closers and door stops and pre-drill screw fixing holes:
   a. For the purpose of fixing the door frames on to the sub-frames/linings or drywall partitions;
   b. On the door frames at 150 mm above finished floor level and at maximum 450 mm centres;
   c. Ensuring position of the ironmongery does not obstruct the predrilled fixing holes.
2. A cavity, where necessary, for the installation of wiring for the electrical locksets.

COM5.M320.8 EXPANDING ANCHOR FOR FIXING DOOR TO CONCRETE
1. Not less than 10 mm diameter proprietary expanding anchor, consisting of zinc electro-plated steel screw and zinc electro-plated steel sleeve. The anchor and sleeve shall be from the same manufacturer and packaged and supplied as a complete unit;
2. Minimum 30mm effective anchorage depth in concrete. Application and fixing shall be in strict compliance with the manufacturer’s recommendations.

COM5.M330.8 EXPANDING ANCHOR FOR FIXING DOOR TO PANEL WALL
1. Not less than 10 mm diameter proprietary expanding anchor, consisting of zinc electro-plated steel screw and polyamide sleeve. The anchor and sleeve shall be from the same manufacturer and packaged and supplied as a complete unit;
2. Minimum 50mm effective anchorage depth in panel wall. Application and fixing shall be in strict compliance with the manufacturer’s recommendations.

DOORSET FINISHES

COM5.M410.8 SURFACE FINISH
Ensure all timber doorsets, including top panels where applicable, frames and their parts are supplied in the following condition:
1. Door leaf surfaces: flat, true, smooth and jointless with no visible defects;
2. Inside of bathroom door leaf surfaces: finished with 1.0 mm plastic laminate;
3. Paint and decorative materials shall be as specified in FIN7 and generally in compliance with FIN7.M010:
a. For doorsets with paint finish:
   i. Primed, undercoated and sprayed with wood paint of good adhesion and
good resistance to fading (except sub-clause (2) above) as per FIN7.M585;
   ii. With backs of hardwood door frames treated with two coats of wood
preservative as per FIN7.M140.

b. For doorsets with timber veneer finish:
   i. Sprayed with semi-gloss clear water based polyurethane paint or clear water
   based lacquer paint (except sub-clause (2) above) as per FIN7.M585;
   ii. With backs of hardwood door frames and veneer faced plywood treated
with two coats of wood preservative as per FIN7.M140.

COM5.M420.8  PLYWOOD FOR DOOR FACINGS
1. To BS 6566, Grade 2 veneer, 5 mm thick;
2. Plywood facings to be close grained and filled.

COM5.M430.8  LAMINATED PLASTIC SHEET FOR BATHROOM DOOR FACINGS
To BS EN 438:Part 1 & 2:1991:
1. Class:  VG
   a. “V” denotes “Vertical grade”; 
   b. “G” denotes “General purpose or moderate use”.
2. Colour / sheen: matt texture with colour to Approval;
3. Thickness: 1.0 mm;
4. Back of sheet to be suitable for adhesive bonding to a substrate;
5. Submit samples for Approval.

IRONMONGERY AND OTHER MATERIALS

COM5.M510.8  IRONMONGERY
Doorsets to be supplied with the following items of ironmongery:
1. Ironmongery supplied fitted:
   a. 'Magic Eye / Door Viewer’ to IRO1.M1220 where scheduled;
   b. Hinges to IRO1.M210;
   c. Kicker plates to IRO1.M1150 where scheduled;
   d. Others as shown on the Drawings or scheduled.
2. Ironmongery supplied loose:
   a. Door closer to IRO1.M530 where scheduled;
   b. Locks and latches where scheduled;
   c. Push plates and pull handles to IRO1.M1150 where scheduled.

COM5.M520.8  WOOD SCREWS
1. For fixing glazing beads, architraves and other components of the timber doorset
where applicable - as per TIM1.M630 and TIM1.M640;
2. For fixing door hinges – as per IRO1.M360 and IRO1.M370.

COM5.M525.8  ADHESIVES FOR WOOD
As TIM1.M710.
COM5.M530.8  FIRE RESISTANT LAMINATED SAFETY GLASS
As COM4.M130.
WORKMANSHIP

GENERALLY

COM5.W010.8 FRAME ASSEMBLY
1. For doorsets with paint finish:
   a. Construct door frames and door leaf framing with tight fitting joints ensuring framework is square after assembly.
2. For doorsets with timber veneer finish:
   a. Construct door frames, door leaf framing and patterns on veneer faced plywood with tight fitting joints ensuring framework is square after assembly.

COM5.W020.8 HEAD FIXING
Mid-span fix at the head.

COM5.W030.8 PELLEETING
Plug pre-drilled fixing holes with nylon pellets.

COM5.W040.8 SPLAY EDGES
Provide splay edges to the lipping to enhance the operation of door leaves.

COM5.W050.8 JOINTS
1. For doorsets with paint finish:
   a. Provide 'V' joints at mitre joints of frames and of glazing beads, and at T' joint for transoms and frames to control the possible cracks of the paint finishes.
2. For doorsets with timber veneer finish:
   a. Provide 'V' joints at mitre joints of frames and of glazing beads, and at T' joint for transoms and frames. Provide the joints of the veneered faced plywood as shown in the standard drawings.

COM5.W060.8 SPREAD OF ADHESIVE
1. For doorsets with paint finish
   Provide sufficient and even spread of adhesive for gluing the plywood faces. This is indicated by a consistent bead of adhesive squeeze from the timber to plywood joint all around the perimeter of door leaves.
2. For doorsets with timber veneer finish
   Provide sufficient and even spread of adhesive for gluing the veneer and plywood faces. This is indicated by a consistent bead of adhesive squeeze from the plywood to veneer and from timber to plywood joint all around the perimeter of door leaves.

FIXING SEQUENCE

COM5.W110.8 INSTALLATION
Fix doorsets in formed openings in accordance with the manufacturer's recommendations and in the following sequence:
1. Install sub-frames/linings for fixing of door frames. Provide 5 mm thick plywood packs at every fixing position of door frame/sides panels. Provide means of attaching the door frames to sub-frames/linings or to panel partitions;
2. Fix door frames after the completion of all wet trade in the adjacent areas. Apply low modulus silicone sealant at joints between panel partitions/sub-frames and back of door frames;
3. Install ironmongery to the predrilled holes or recesses on the doorsets;
4. Ease and oil knobsets and other ironmongery;
5. Install vision panels, overpanels and side panels as specified in Worksection COM4.
TESTING

SURVEILLANCE TESTS FOR TIMBER DOORSETS

COM5.T1605.A SURVEILLANCE TESTS

1. Test Arrangements:
   a. When Instructed, surveillance tests shall be carried out by the CM, Direct Testing Contractor or the Housing Department Material Testing Laboratory;
   b. Comply with the following pertaining to the surveillance tests:
      i. Provide attendance on the Site;
      ii. Provide, deliver and collect samples etc. as directed by the CM or as specified.

2. Test Samples:
   a. For sub-clause (3)(a) to (c), provide one set of test samples from the batch of material delivered to Site (inclusive of door leaves, frames, ironmongery and other accessories sufficient for assembling the doorsets) under the delivery note as specified in COM5.M040 (3)(a) (hereinafter referred to as the "representative batch") or as instructed by the CM;
   b. Open-up inspection specified in sub-clause (3)(d) shall be conducted immediately after X-ray scanning specified in sub-clause COM5.M040 (3)(b) using the same tested specimens. The specimens shall be the complete component as to be installed, including frame, door leaf, glazing, fire / smoke seals, all fixed parts, leaf, fastenings and fixings necessary to ensure normal operation;
   c. Bear all cost for any replacement of samples.

3. Test methods:
   a. For Fire Resistance Test, as per COM5.M040 (2)(b)(i) or (2)(c)(i) as appropriate;
   b. For Smoke Control Test, as per COM5.M090 (1);
   c. For Functional Dimensions / Strength Test, as per COM5.M040 (2)(d);
   d. For Open Up Inspection, as per COM5.M040 (3)(d)(i):

4. Non-compliance:
   a. In the event that any of the testing samples fails to meet the test requirements in sub-clause (3), follow either one of the following actions:
      i. Remove the representative batch off Site; or
      ii. Apply to the CM for re-test / re-inspection as follows:
         - For Fire Resistance Test or Smoke Control Test, re-test for the representative batch in accordance with the test methods as specified in sub-clause (3) by Direct Testing Contractor or by a laboratory that complies with the requirements stated in PRE.B9.570 for one separate set of samples selected by the CM from the representative batch;
         - For Functional Dimensions / Strength Test, re-test for the representative batch in accordance with the test methods as specified in sub-clause (3) by Direct Testing Contractor or by a laboratory that complies with the requirements stated in PRE.B9.570 for three separate sets of samples selected by the CM from the representative batch;
         - For Open Up Inspection, carry out re-inspection for the representative batch in accordance with the methods as specified in sub-clause (3) by the CM for three separate sets of samples selected by the CM from the representative batch.
   
The CM shall have the discretion to approve or not the commissioning of the latter laboratory for the re-test. In case any one sample for the re-test fails, remove the representative batch off Site.

   b. When the representative batch of doorsets is removed off Site, replace with another new batch (hereinafter referred to as the "replacement batch"). Apply to the CM for test in accordance with the test methods as specified in sub-clause (3) by Direct Testing Contractor or by a laboratory that complies with the requirements stated in PRE.B9.570 for one set of samples selected by the CM from the replacement batch. The CM shall have the discretion to approve or not the commissioning of the latter laboratory for the test. In case any one sample fails the test, follow action stated in sub-clauses (4)(a);

   c. Bear the costs of any failed surveillance tests and all associated costs for the test(s) and re-test(s) required in sub-clauses (4)(a) and (4)(b). No extension of time will be allowed.

COM5.T1610.A SURVEILLANCE TESTS FOR MECHANICAL SMOKE SEAL

1. Testing Arrangements:
   a. When instructed, surveillance tests shall be carried out by the CM, a Direct Testing Contractor or the Housing Department Material Testing Laboratory;
   b. Comply with the following pertaining to surveillance tests:
      i. Provide attendance on the Site;
      ii. Provide, deliver and collect samples etc. as directed by the CM or as specified;
      iii. Set up the timber door/ panel and install the test sample as directed by the CM or as specified.

2. Testing Samples:
   a. Provide one set of test sample from the material delivered to Site as instructed by the CM;
   b. One set of test sample shall consist of one smoke seal and the associated accessories, fastenings and fixings necessary to ensure normal operation or as instructed by the CM.
3. Testing methods:
   As per sub-clause 2(q) of COM5.M040.

4. Non-compliance:
   a. In the event that the testing samples fail to meet the testing requirements, follow either one of the following actions:
      i. Remove the representative batch of mechanical smoke seal off Site; or
      ii. Carry out re-test for the representative batch in accordance with the testing methods as specified in sub-clause (3) in a laboratory that complies with the requirements stated in PRE.B9.570 on three separate samples selected by the CM from the representative batch. In case of any one sample fails the re-test, remove the representative batch of mechanical smoke seal off Site.
   b. When the representative batch of mechanical smoke seal is removed off Site, replace with another new batch and carry out test in accordance with the testing methods as specified in sub-clause (3) in a laboratory that complies with the requirements stated in PRE.B9.570 for one sample selected by the CM from the replacing batch. In case of such test fails, follow action stated in sub-clauses (4)(a);
   c. Bear all associated costs for the test and re-test required in sub-clauses (4)(a) and (4)(b). No extension of time will be allowed.

COM6 STEEL DOORS

DESIGN

GENERAL

COM6.D010.8 SPECIFICATION REQUIREMENTS
Instruct the Supplier to design, construct, fix and glaze steel doors and louvres in accordance with this Worksection and the relevant clauses of:
1. MET1 General Metalwork;
2. COM4 Glazing;
3. WAT5 Sealants.

COM6.D020.8 STEEL DOORS AND LOUVRES
Comply with BS 6510:1984 and including:
1. Fixings:
   a. Slotted adjustable lugs and screws necessary for building in steel doors and louvres with either:
      i. Lugs: projecting a minimum of 60 mm beyond the metal frame; or
      ii. Shot fixing lugs: at least 1.6 mm thick x 30 to 40 mm wide fixed at 300 to 400 mm centres with a minimum of one shot fixing to each and projecting a minimum of 50 mm beyond the metal frame; or
   b. Expansion bolts to MET1.M220.
2. Rolled steel, heavy channel section glazing beads, size as shown on the Drawings, mitred at the corners and fixed with galvanized, mild steel, flat headed countersunk screws at maximum centres of 225 mm and tap frames to receive screws.

COM6.D030.8 INSIDE GLAZING
Design steel doors for inside glazing unless otherwise shown on the Drawings.

SUBMISSION

COM6.D040.8 SHOP DRAWINGS AND STRUCTURAL CALCULATION
1. Submit structural calculation by RSE and shop drawings showing details of the members and the positions of fixings for CM’s approval prior to the commencement of fabrication;

COM6.D050.8 SAMPLES
Submit samples of steel louvres, doors and ironmongery for the CM’s approval prior to the commencement of fabrication.

DESIGN PARAMETERS

COM6.D110.8 WIND LOADING FOR EXTERNAL STEEL DOORS AND LOUVRES
When fixed in position and glazed, steel doors and louvres must withstand:
1. A wind load calculated in accordance with the current Code of Practice on Wind Effects, Hong Kong; and
2. The resultant resistance to wind loading of a minimum of:
   a. 3.0 kPa for non-domestic buildings such as schools, commercial centres etc.;
   b. 3.8 kPa for domestic buildings excluding ground floor or podium.
MATERIALS

STEEL MEMBERS AND FINISHES

COM6.M010.8 SECTIONS
Universal steel sections, hot rolled, cold straightened and:
1. Size: as shown on the Drawings;
2. Free from rolling defects;
3. With all manufacturer's fabrication holes sealed by welding prior to delivery to site.

COM6.M020.8 FRAMES
Must be:
1. Square and flat with mitred, welded corners;
2. With glazing bars machine tenoned and/or welded to frames;
3. With weatherbars for the complete width of the steel doors as shown on the Drawings.

COM6.M030.8 FINISH
1. All steel doors after fabrication must be hot dip galvanized as MET1.W330;
2. Any cutting, drilling or welding after galvanizing must be treated with an zinc rich primer on completion.

FIXINGS, FASTENING ETC

COM6.M110.8 SEALANT
As WAT5.M310.

COM6.M130.8 IRONMONGERY
Pull handle, striking plates, hinges, surface bolt, hasp and staple, padlock etc. as shown on the Drawings.
WORKMANSHIP

FABRICATION AND ASSEMBLY

COM6.W010.8 STEEL DOORS AND LOUVRES
Hang to open and fit with ironmongery as indicated on the Drawings.

COM6.W020.8 POSITIONING
Position steel doors plumb, level and square.

COM6.W030.8 EQUIPOTENTIAL BONDING TO STEEL DOORS AND LOUVRES
Unless otherwise specified on Drawings, provide equipotential bonding connection for steel doors and louvres as follows:

1. Louvres in public access areas:
   a. Provide a 20 mm x 1.5 mm thick steel plates earthing lug electroplated zinc galvanized to BS 1706:1990, class B and 13 μm to the outer frame of windows and louvres. The cut edges of earthing lug shall be painted with zinc phosphate primer;
   b. Fix one end of the earthing lug to the louvres with 2 No. M4 self-tapping stainless steel screws at 60 mm centres;
   c. Provide a 5 mm diameter hole at the other end for connection of the bonding conductor by the Nominated Sub-contractor for Electrical Installation;
   d. Ensure that full electrical continuity is maintained between all the component elements of louvres.

2. Doors and louvres for services rooms:
   a. Weld one end of 1.5 mm thick galvanised mild steel earthing lug(s) to the doors and louvres; and
   b. Form a 5 mm diameter hole at the other end of the earthing lug(s) for connection of the bonding conductor by the Nominated Sub-contractor for Electrical Installation;
   c. Ensure that full electrical continuity is maintained between all the component elements of the steel doors and louvres.

3. As COM2.W465 (6).

COM6.W040.8 BEDDING MORTAR
Bed steel frames in waterproof mortar as MAS3.W180 leaving no gaps.

COM6.W050.8 POINTING TO PERIMETER OF STEEL DOORS AND LOUVRES
Where specified, point around external perimeter of steel louvres and door frames. Point in accordance with the Workmanship requirements of Worksection WAT5.

COM6.W060.8 PAINTING
Deliver steel doors and louvres to site unprimed and paint surfaces in accordance with Worksection FIN7.
TRANSPORTATION, HANDLING AND STORAGE

COM6.W110.8 STEEL DOORS AND LOUVRES
Keep upright during handling to prohibit sagging, stack off ground on levelled hard standing under cover, clear of mud and site traffic and avoid:
1. Distortion during handling and storage;
2. Distortion during vertical transportation to floors at high level.

TOLERANCES

COM6.W210.8 GENERAL
Refer to Appendix H "Schedule of Tolerances" to this Specification.
COM7 GATESETS

GENERAL

APPLICATION OF SPECIFICATION

COM7.G010.8 GATESETS
The gatesets specified in this Worksection are for use in domestic flats design and comprise the following:
1. Galvanized mild steel sliding type;
2. Galvanized mild steel swing type.
DESIGN

GENERAL

COM7.D010.8 DESIGN RESPONSIBILITY
Design and manufacture the gatesets based on the Drawings and in accordance with the requirements of this Worksection and Worksection MET1 as appropriate.

PERFORMANCE CRITERIA

COM7.D140.8 GATESET OPERATION
Ensure the operation of gateset is in a smooth and quiet manner.
MATERIALS

GALVANISED MILD STEEL GATESETS

COM7.M010.A  GALVANIZED MILD STEEL GATESETS

1. Submission Requirements:
   a. At sample submission and approval stage, submit one sample of the gateset showing complete fittings and accessories including typical section of members, track and guide rail, Approved steel roller, steel anchor bolts and lock for CM’s approval together with all the following substantiation for CM’s information:
      i. Job reference;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer;
      iv. Brand name of the lock case and key cylinder;
   v. Original or a certified true copy each of the certification to ISO 9001 and ISO 14001 for the manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by the certification bodies or by the QCM. The certification bodies shall be as follows:

<table>
<thead>
<tr>
<th>ISO</th>
<th>Certification Body</th>
</tr>
</thead>
<tbody>
<tr>
<td>ISO 9001</td>
<td>The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.</td>
</tr>
<tr>

</table>

   vi. Submit a sample board similar to the one maintained by the Housing Department showing complete fittings and accessories including typical section of members, track and guide rail, Approved steel roller, steel anchor bolts and lock.

   When the gatesets are supplied for domestic blocks, submit an additional sample board of the approved sample for keeping in the Housing Department’s Sample Display Gallery if the material has not been approved for use in a public housing project in the past five years prior to the notified date for commencement of the Works.

   b. Submit original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clauses (2)(d) to (2)(g) and COM7.M080 for CM’s information:
      i. The date of the test shall be generally within three years prior to the notified date for commencement of the Works or at an earlier date for domestic blocks subject to CM’s consideration on the track records as maintained by the Housing Department;
      ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material as mentioned in sub-clause (3)(a);
GATESETS

iii. In the event that no test report has been submitted for CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

c. Submit shop drawings for CM's approval, prior to the commencement of ordering of material. Drawings for each type of gateset shall include:

i. Materials in compliance with Drawings and Specification;

ii. Fixing details of metal gate to walls and floors;

iii. Positions of anchor bolts;

iv. Details of roller (with brand name if applicable), completed with lubricated bearings, threaded hangers and connection bars;

v. Welding details of components and parts;

vi. Details and sections to show sizes, profiles and fixings of assembling and concealed parts;

vii. Fixing details of equipotential bonding connection for the gateset;

2. Quality Requirements:

a. Satisfy the requirements of the following tests. Record the test results as specified in sub-clause (2)(b) and follow the sequence for carrying out the test as sub-clause (2)(c).

b. Record the following information in test reports:

i. A detailed description and specification of the product with any necessary drawings and photographs, sufficient completely to identify the product and its fittings;

ii. Description of each test undertaken and the performance of the gateset relative to the acceptance standards;
iii. Numerical test results expressed in the units prescribed for the appropriate test and supported by any other specified criteria, e.g. "no damage occurred" etc. A graph of performance against increasing stress will be included where appropriate, as will diagrams or photographs of points of failure.

iv. Details of atmospheric conditions, prior to and during testing, where appropriate.

c. Carry out tests on two brand new samples for sliding type gateset and two brand new samples for swing type gateset:

i. First sample (Sample A) for the tests in the following order:
   - Operation Test as in sub-clause (2)(d);
   - Slamming Closed Test as in sub-clause (2)(e);
   - Slamming Open Test as in sub-clause (2)(f);
   - Heavy Body Impact Test as in sub-clauses (2)(g) & (2)(h);
   - Resistance to torsion as in sub-clause (2)(i);
   - Strength in the plane of the gateset leaf as in sub-clause (2)(j);
   - Resistance to closing against obstruction as in sub-clause (2)(k);
   - Resistance to jarring and vibration as in sub-clause (2)(l).

ii. Second sample (Sample B) for the tests in the following order:
   - Endurance Performance Test as in sub-clause (2)(m);
   - Security by personnel loading as in sub-clause (2)(n).

d. Operation Test:

i. Install the gateset with frame secured in a vertical position, according to actual construction details, in the laboratory;

ii. The gateset will be operated manually several times to ensure that it moves freely;

iii. The gateset will be tested in the state of lubrication in which it is supplied;

iv. For sliding type gateset, the force, acting at the position of the handle horizontally and in the direction of the travel of the gateset, required to open the gateset by 600 mm ± 30 mm from just open position (i.e. the side frame positioned 3 mm from the fixed frame) will be recorded to the nearest 0.5 N;

v. For swing type gateset, the force action at the position of the handle horizontally and in the direction of the travel of the gateset, required to open the gateset 60° ± 1° from just open position (i.e. the gate leaf positioned 10 mm from the fixed frame) will be recorded to the nearest 0.5 N.

e. Slamming Closed Test:

i. Secure the gateset and prepare the test as sub-clause (2)(d);

ii. For sliding type gateset, the gateset will be slammed closed from fully open position 20 times by a force of 15 kg ± 50 g action at the mid-height of the gate handle horizontally and in the direction of the travel of the gateset;

iii. For swing type gateset, conduct the test as follows:
   - A light strong line will be arranged such that by it the gate leaf may be closed from 60 ± 1 degrees open by the descent of a weight of mass 15 kg ± 50 g. The line will be attached at some point within 150 mm of the lockside edge at the level of mid-height of the gate handle;
- The line is to pass horizontally from the gate leaf and then over a horizontal bar of smooth steel arranged with its axis parallel to the plane of the gate frame. The bar is to be of 25 ± 1 mm diameter, be 400 ± 5 mm from the gate leaf face when the gate leaf is closed and span the width of the swing gateset. The line is to descend vertically from the bar and carry the weight strikes a platform removing further tension from the line;

- The swing gate leaf will be opened to 60 ± 1 degrees and released. The gate leaf will be slammed shut by the action of the falling weight for 20 times.

f. Slamming Open Test:
   i. Secure the gateset and prepare the test as sub-clause (2)(d);
   ii. With the gate leaf fully opened, the gate leaf will be moved towards the closed position through an angle of 30 ± 1 degrees and allowed to open freely under the influence of a weight of mass 4 kg ± 5 g applied to a point 50 ± 1 mm form the lockside edge at level of mid-height of the gate handle and at right angles to the plane of the fully open door;
   iii. The gate leaf will be slammed open 10 times at a rate not exceeding 15 times per minutes against a floor mounted gate stop fixed at the 90 ± 1 degrees open position.

g. Heavy Body Impact Test for sliding type gateset:
   i. Secure the gateset and prepare the test as sub-clause (2)(d). The gate will be closed and locked;
   ii. The gateset will be struck by a sphaericonical bag to BS EN 596:1995 Clause 6. The sand bag will strike the gateset normally with an impact energy of 80 Nm for three times at the following locations:
      - At the level of the handle and at the mid-width of the gateset;
      - At the centre of the upper infill grille panel;
      - At the centre of the lower infill grille panel.
   iii. The gateset will be examined for:
      - Any visually unacceptable damage, checking that the gateset can still operate in the normal manner. Repeat the test in sub-clause (2)(d);
      - Any breakage.
   iv. Repeat sub-clause (2)(g)(ii) but with an impact energy of 240 Nm once for the location at the level of the handle and at the mid-width of the gateset;
   v. The gateset will be examined for any breakage.

h. Heavy Body Impact Test for swing type gateset:
   i. A sphaericonical bag to BS EN 596 Clause 6.2 will be hung as a pendulum capable of striking the gate leaf. The bag will be placed so that at rest it just contacts the surface of the gate leaf with its center of gravity at the level of the gate handle, such that when swung in a vertical plane normal to the gate leaf it will impact the gate leaf. The impact will be at mid-width of the gate leaf;
   ii. Mount the gateset vertically and install in accordance with the manufacturer's recommendations. The gate leaf will be closed and locked;
   iii. The test body will be swung against the gate leaf three times. This will be done to the closing face. The impact energy will be 80 Nm each time;
iv. The gateset will be examined for any breakage and / or any visually unacceptable damage; checking that the swing gateset can still operate in the normal manner. Test No. 2.6 will be repeated. Maximum deformation will be measured;

v. The test will be repeated with impact energy of 240 Nm once. Any breakage will be examined.

i. Resistance to torsion:
   i. Mount the swing gateset vertically and install in accordance with the manufacturer's recommendations. The gate leaf is then to be held open at 90 ± 1 degrees by means of a clamp to top lockside corner. Means is to be provided to apply force normal to the plane of the gate leaf at its mid-height. The force will be applied at the lockside edge of the gate leaf. Deflection normal to the plane of the gate leaf will be measured at the lower lockside corner;
   ii. A force of 200 ± 3 N will be carefully applied to the attachment point in increments not exceeding 100 N, the force acting at right angles to the gate leaf. The force will be removed in the same incremental stages as in the loading procedure. The position of the lockside lower corner will be noted as datum for deflection measurements;
   iii. A force of 400 ± 3 N will then be applied in increments not exceeding 100 N, the force acting at right angles to the gate leaf. The deflection will be measured after the gate leaf has stabilized at each increment, the movement of the dial gauge being less than 0.02 mm per minute. After recording the deflection under maximum force the reverse procedure will be adopted to remove the load, the final residual deflection being recorded at least 1 hour after all force has been removed.

j. Test on strength in the plane of the gateset leaf:
   i. Same test specimen for sub-clause (2)(i), resistance to torsion will be used;
   ii. This test will follow the resistance to torsion test. The swing type gateset will remain in the rig in the position as previously described in sub-clause (2)(i) (clamp at the top lockside corner must not restrict the gate leaf to move along its plane). The force, acting vertically downwards in plane of the gate leaf, is to be applied at mid-height of the gate leaf near the handle. The point of measurement will be on the center line of the underside of the gate leaf and 10 ± 1 mm from the bottom lockside corner;
   iii. The initial and final readings of the dial gauge will be taken when the downward force of 50 ± 3 N is applied to the gate leaf (including the weight of the rope). The downward vertical force will then be increased to 1000 ± 5 N at increments of 50 N;
   iv. The final force will be maintained for 5 minutes when the maximum deformation is recorded. The reverse procedure will be adopted and the residual deformation will be measured one hour after the downward force has been decreased to 50 ± 3 N.

k. Test on resistance to closing against an obstruction:
   i. Mount the swing type gateset vertically in a rigid rig, installed by the method recommended by the gateset manufacturer. A dry hardwood slip, 50 mm x 10 mm and of mass between 15 g and 20 g is required for the test;
ii. The gate set will be opened and the hardwood slip placed in the gap between
the gate leaf and the bottom of the hinge side jamb of the frame so as to
hold the gate leaf ajar;

iii. The slip will be inserted from the closing face with its grain horizontal and
its plane vertical and parallel to the plane of the gate set frame. A force will
be applied increasing in 50 N increments to the lockside edge at mid-height
of the gate handle until it reaches 200 ± 3 N. The force will act at right
angles to the plane of the frame.

l. Test on resistance to jarring and vibration:
   i. Mount the swing type gate set vertically in a rigid rig and install in
      accordance with the manufacturer's recommendations. A sphericoconical bag
      to BS EN 596 Clause 6.2 will be hung from an independent support at
      about the same height as the top of the gate leaf as a pendulum capable of
      striking the closing face of the gate leaf. The bag will be hung so that at
      rest with the gate set open at 45 ± 1 degrees it just contacts the surface of the
      gate leaf with its center of gravity at mid-leaf width and at level of the middle
      of the gate handle;
   ii. The gate leaf will be opened from the closed position through an angle of
      45 ± 1 degrees. Provide a floor mounted gate stop at the 90 ± 1 degrees
      open position;
   iii. The sand bag will be drawn away from the gate leaf in a vertical plane
      normal to the gate frame through an arc of 250 ± 5 mm vertical height then
      released to strike the gate leaf. This will be repeated 99 times.

m. Endurance Performance Test:
   i. Ensure that the gate set is installed and secured as sub-clause (2)(d);
   ii. The gate set will be operated manually to ensure that it moves freely. The
      sample will be tested in the state of lubrication in which it is supplied;
   iii. The test is performed as sub-clause (2)(d);
   iv. Either the inside or outside gate handle will be connected to a mechanical
      system capable of producing a uniform back and forth movement of the
      gate set;
   v. The gate set will then be moved backwards and forwards over a distance
      equal to at least 90% of the full travel distance of the gate leaf, from the
      closed position, for 60,000 operations at such a speed as will ensure free
      impact with the frame at each operation;
   vi. The specimen will be checked for damage and examined for, and a record
      made of, the wear and tear condition after 5,000, 10,000 and 20,000
      operations and thereafter every 20,000 operations;
   vii. The test as sub-clause (2)(d) will then be repeated.

n. Test on security by personnel loading:
   i. After performing sub-clause (2)(k), the swing gate set will be subject to an
      outward load of 50 ± 3 N normal to the opening face of gate leaf at mid-
      point of the highest 30 x 10 mm box section of the bottom panel of grills.
      Width of load will be 100 ± 5 mm. The gate set will be closed and locked
      when performing the test;
   ii. The initial measurement will be taken at positions normal to the plane of the
      gate leaf at bottom lockside corner of the gate set (10 mm from both edges)
      and under the load;
iii. The load will be taken to 700 ± 5 N, and the maximum deflection measured at these positions 15 minutes after the load is applied;
iv. The load will be decreased to 50 ± 3 N, and the deformation recorded at these positions one hour later;
v. The load will be removed and the gateset examined for any visually unacceptable damage, breakage and functional defects;
vii. The test as sub-clause (2)(d) will then be repeated.
o. Standard of quality of gatesets shall be comparable with the benchmark samples maintained by the Housing Department.

3. On Site Delivery Verification:
a. At delivery stage, submit to the CM the following documents:
i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under the sub-clause (1)(a);
ii. Original or certified true copy of Certificate of Origin for every batch of delivery. A batch being the accumulative total of 500 metal gatesets or part thereof delivered to Site;
iii. Delivery notes for all material delivered to Site.
b. Carry out and submit report on the following verifications for gatesets upon delivery on Site. Prior to carrying out the verifications, inform the CM who may present to witness the verifications:
i. Method:

c. Where any of the verifications fail to meet the acceptance standards, either:
   i. Remove the representative batch off Site; or
   ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.

COM7.M020.8 SAMPLES
Keep the Approved sample and sample board available for inspection on Site until completion of the installation work of all the gatesets.

COM7.M030.8 DIMENSIONAL ACCURACY
1. See Appendix H of this Specification for permissible tolerances;
2. Maximum gap size to be generally 0.5 mm between connecting parts;
3. Critical dimensions to be maintained as shown on the Drawings.

COM7.M040.8 CONSTRUCTION
Manufacture gatesets from the following materials:
1. Mild steel sections:
   b. Section size and thickness: as shown on Drawings;
   c. Zinc electroplated component parts, except rolled sections, to BS 1706:1990 Class A 0.025 mm thick.
2. Rolled sections formed from metal sheets:
   a. 1 mm, 1.2 mm and 1.5 mm thick slit coils to grade Z27 of JIS G3302-1994 or coating designation Z275 of BS EN 10346:2009;
   b. Electrically galvanized except parts made of plastic, nylon or brass.

COM7.M050.8 CONSTRUCTION (STAINLESS STEEL PARTS)
1. Stainless steel parts: to BS EN 10095:1995:
   a. Section size and thickness: as shown on Drawings;
   b. Grade: Grade 304 in accordance with MET1.M060;
   c. Finish: as shown on Drawings.

COM7.M060.8 GATESET ASSEMBLY
1. Construct component parts for assembly without welding unless otherwise approved by the CM or as indicated on Drawings;
2. All welding points are to be polished, free of rusting and pre-treated as appropriate before application of the electrostatic powder coating;
3. Assembled gatesets must be capable of receiving Approved steel rollers and ironmongery as specified in Worksection IRO1;
4. Carry out quality tests in accordance with the requirements of this Worksection when gate set are re-designed on project basis, as required by the CM.

**COM7.M070.8 GATESET FINISH**

Electrostatic powder coating of epoxy and polyester resin mix with hammer or plain finish applied by electrostatic spray by either manual or automatic methods. Apply finish in accordance with the finish manufacturer’s recommended method of operation. Finish and application must meet the following requirements:

1. Performance properties:
   a. Nominal thickness: 70 microns - 150 microns;
   b. Cross-cut test (BS EN ISO 2409: 2007): Classification = 1;
   c. Salt spray (ASTM B117): no discernible change after 1000 hours of test.

2. Colour and finish of the electrostatic powder coating to be submitted to the CM for approval;

3. Pretreatment: pretreat metal surfaces with phosphate treatment or other alternative pretreatment process to the CM’s approval prior to application of powder coating;

4. Extent: treat and finish all exposed steel and galvanized steel surfaces, including portions of the component parts forming moveable joints, pre-drilled screw holes, hinges, handles and welds as specified in Worksection MET1.

**COM7.M080.8 LOCKSET**

In compliance with IRO1.M750. Lock case and lock cylinder with brand name and / or logo engraved.

**COM7.M090.8 PULL HANDLE**

To be 25mm diameter stainless steel grade 304 securely fixed with recessed type screws.
WORKMANSHIP

INSTALLATION OF GATESETS

COM7.W005.8  SAMPLES AND SHOP DRAWING APPROVAL
Do not commence fabrication until all samples and shop drawings have been Approved and all shop drawings have been checked on Site to suit all flat entrance sizes and conditions (with or without wall recess) for each flat.

COM7.W010.8  CLEANING AND PROTECTION
1. After installation, clean gatesets to remove any surface dirt, grime, oily substances etc;
2. Protect the installed components to prevent damage from subsequent works until completion of the works;
3. Enclose in corrugated carton paper and polythene wrapped with moulded polystyrene as transportation protection against damp and scratching. Avoid premature delivery to site;
4. Return to site on completion of the building works and carefully remove wrapping.

COM7.W015.8  EQUIPOTENTIAL BONDING TO GATESETS
1. When the gatesets are installed before the Occupation Permit for the domestic block is issued, comply with the following:
   a. Provide equipotential connection for gateset by the following:
      i. Weld one end of the stainless steel earthing lug to GMS track or jamb for gateset and;
      ii. Form a 5 mm diameter hole at the other end of the earthing lug for connection of bonding conductor by Nominated Sub-contractor for Electrical Installation.
   b. As COM2.W465 (6).
2. When the gatesets are installed after the Occupation Permit for the domestic block is issued, comply with the following:
   a. Provide equipotential connection for gateset by the following:
      i. Weld one end of the stainless steel earthing lug to GMS track or jamb for gateset; and
      ii. Form a 5 mm diameter hole at the other end of the earthing lug for connection of bonding conductor; and
      iii. Connect earthing lug of gateset to earthing terminal of door bell with provided bonding conductor.
   b. Ensure that the bonding for metal gateset is electrical sound and the result complies with the CoP for the Electricity (Wiring) Regulation and BS 7671 by proper measurement with records at good time. Rectify as early as possible those parts of equipotential bonding system that are found to be not electrical conductive.

COM7.W020.8  GATESET ASSEMBLY
1. The horizontal alignment at the top level of Approved steel rollers of the bottom hangers should be levelled (p.d.±1 mm). The size of the rolled top rail including the opening width should be consistent particularly at the position of the open end;
2. The size of the rolled grille bars should be consistent particularly at the gap position and the acceptable gap dimensions at the junction between vertical and horizontal grille bars is 0.5 mm each on both top and bottom faces of the vertical / horizontal grilles;

3. All moulding residues of plastic or nylon part should be neatly trimmed or cut before fixing;

4. Only stainless steel rivets are allowed for fixing and should be closely fixed onto the grilles bars to ensure no protrusion;

5. No concavity at the position of punching slots of any surfaces should be ensured;

6. Bulking at stainless steel striking plate is not acceptable;

7. All holes for screw fixing shall be sealed with sealant before installation of screws;

8. All parts and accessories, such as stainless steel thumbturn cover, should be ground to smooth edge.

**TOLERANCES**

**COM7.W110.8 GENERAL**

Refer to Appendix H "Schedule of Tolerances" to this Specification taking into account that any tolerance application permissible under this Specification should not in any case jeopardize the installation requirements and design intent of the gateset in accordance with the standard Drawings.

**COM7.W200.8 MOCK UP**

Provide full scale mock up for different types of gatesets at flat entrance of sample flats as instructed by the CM and obtain Approval prior to proceeding with the installation work.
TESTING

SURVEILLANCE TESTS FOR GALVANIZED MILD STEEL GATESETS

COM7.T010.A SURVEILLANCE TESTS

1. Testing Arrangements:
   a. When Instructed, surveillance tests shall be carried out by the CM, a Direct Contractor or the Housing Department Material Testing Laboratory;
   b. Comply with the following pertaining to surveillance tests:
      i. Provide attendance on the Site;
      ii. Provide, deliver and collect samples etc. as directed by the CM or as specified.

2. Testing Samples:
   a. Provide one set of test sample from the batch of material delivered to Site under the delivery note as specified in COM7.M010 (3)(a) or as instructed by the CM;
   b. One set of test sample shall consist of two representative gateset specimens. Sample shall be completed with fittings and accessories as to be installed, including typical section of members, track and guide rail, stainless steel roller, steel anchor bolts and lock to ensure normal operation. Bear all cost for any replacement of samples.

3. Testing methods:
   a. As per COM7.M010 (2)(a);

4. Non-compliance:
   a. In the event that the testing samples fail to meet the testing requirements, follow either one of the following actions:
      i. Remove the representative batch off Site; or
      ii. Carry out re-test for the representative batch in accordance with the testing methods as specified in sub-clause (3) in a laboratory that complies with the requirements stated in PRE.B9.570 on three separate sets of samples selected by the CM from the representative batch. In case of any one sample fails the re-test, remove the representative batch off Site.
   b. When the representative batch of gatesets is removed off Site, replace with another new batch and carry out test in accordance with the testing methods as specified in sub-clause (3) in a laboratory that complies with the requirements stated in PRE.B9.570 for one sample selected by the CM from the replacing batch. In case of such test fails, follow action stated in sub-clause (4)(a);
   c. Bear all associated costs for the test and re-test required in sub-clauses (4)(a) and (4)(b). No extension of time will be allowed.

ON SITE VERIFICATION TEST FOR GATESET LOCK

COM7.T020.A VERIFICATION TEST ON NO REPEAT OF KEY CHANGES

1. Testing Arrangements:
a. Random verification tests shall be carried out by the CM to ensure that the individual key changes will not repeat for the gatesets of domestic units in the Works as specified in sub-clause (7) of IRO1.M750. The verification test shall be witnessed by the gateset supplier / manufacturer;

b. Comply with the following pertaining to the tests:
   i. Produce keys for the gatesets installed as directed by the CM;
   ii. Provide attendance on the Site.

2. Testing Samples:
   a. One set of test sample shall consist of three representative installed gatesets completed with locks selected by the CM, with one gateset from each of the high, mid and low zones of a domestic block, a total of three selected gatesets per block. The representative batch implies the locks of all the gatesets installed in the block.

3. Testing method:
   a. After all gatesets are installed, randomly select 60 keys not designated to open the lock of the three selected gatesets. Divide the keys into three lots of 20 keys for each of the three zones. At each zone, insert the 20 keys individually into the gateset lock to check all of them cannot open the lock. After testing, check the gateset lock is in working order using its own set of key.

</table>

   * Use different set of randomly selected keys not designated to open the lock of the selected gateset test sample for each zone.

   b. Repeat the test for all domestic blocks of the Works.

4. Non-compliance:
   a. In the event that any selected lock fails to meet the acceptance standard as specified in sub-clause (3)(a);
      i. Submit remedial proposal for CM’s approval to remove and replace the gateset locks; or
      ii. Carry out re-test for the representative batch in accordance with the testing methods as specified in sub-clause (3) on three separate sets of samples selected by the CM from the representative batch for each failed lock;
      iii. In the event that all the re-test passed, remove and replace the failed locks;
      iv. In the event that any selected lock of the re-test fails to meet the acceptance standard as specified in sub-clause (3)(a), submit remedial proposal for CM’s approval to remove and replace all the gateset locks.

   b. When the locks of the representative batch of gatesets are removed and replaced in accordance with sub-clause (4)(a), carry out test in accordance with the testing methods as specified in sub-clause (3) for one set of samples selected by the CM from the replacing batch. In case of such test fails, follow action stated in sub-clause (4)(a);

   c. Bear all associated costs for the test and re-test required in sub-clauses (4)(a) and (4)(b). No extension of time will be allowed.
COM8 ROLLER SHUTTERS AND DOORS

DESIGN

GENERAL

COM8.D010.8 CONTRACTOR'S RESPONSIBILITY
Take responsibility for the detail design of roller shutters specified in this Worksection and their installation, employing either:
1. The roller shutters manufacturer; or
2. An installation sub-contractor approved by the roller shutter manufacturer.

COM8.D020.8 GENERAL DESCRIPTION
Roller shutter comprising horizontal slats interlocking throughout their entire length, forming a continuous hinge and:
1. In accordance with Drawings;
2. Shutter type: open grille or solid slate or insulated as specified on the Drawings;
3. Basic material: hot dip zinc coated steel, aluminium, stainless steel, plastic or other materials as specified on the Drawings;
5. Finishes: hot dip zinc coated or anodised or powder coated as specified on the Drawings;
6. Features and fittings: as specified on the Drawings;
7. Equipotential bonding: provide earthing lug(s) for equipotential bonding connection of the roller shutter and doors.

COM8.D030.8 MATERIALS AND WORKMANSHIP
1. Comply with the relevant provisions of Worksection MET1 in respect of all materials and workmanship;
2. As COM2.W465 (6).

OPERATING MECHANISM

COM8.D040.8 SELF CLOSING SHUTTERS
Manually operated through an internal self-closing mechanism, opened and shut using lifting handles or a pole and hook and with an adjustable mechanism to control the effort required to raise or lower the door.

COM8.D050.8 MANUALLY OPERATED SHUTTERS
Operated by means of an endless chain fitted with a spur or worm reduction gear to prevent the shutter falling or rising without manual operation of the chain.

COM8.D060.8 ELECTRICALLY OPERATED SHUTTERS
1. Remote controlled, opened by an electric motor;
2. Comply with the "Code of Practice for Installation of Electrically Operated Sliding Gates, Sliding Glass Doors and Roller Shutters" published by the Electrical and Mechanical Services Department;
3. Design installation complete with:
   a. Electric motors;
   b. Associated overload protections;
   c. Gearing drive mechanism;
   d. Gear box;
   e. Open and close limit switches;
   f. Emergency stop;
   g. Any other control devices or mechanisms recommended by the shutter manufacturer.

4. Provide full details of:
   a. Motors;
   b. Gearing;
   c. Drive mechanism;
   d. Control mechanism.

5. Totally enclosed three phase motors are preferred, with accessible motors, driving gears, limit switches and control mechanism for inspection and servicing;

6. An isolating switch provided by others with an adequate power supply, to allow for the isolation of electricity supply during inspection and servicing;

7. Provide auxiliary manually operating gear. Ensure change over is easily effected without climbing up to the gearing drive mechanism to engage or disengage manual operation;

8. Provide an interlock switch to prevent locked roller shutters from operating electrically. Mount the interlock switch on a stationary part of the door (such as guide rails) not on any moving part of the shutters.

CONSTRUCTION

COM8.D110.8 WIND LOAD
Design and construct external shutters, gear and fastenings to withstand a wind load as required in the current Code of Practice on Wind Effects, Hong Kong.

COM8.D120.8 STEEL SLATS
Fit ends of alternate hot dip zinc coated steel slats with a malleable iron end stop riveted on to prevent lateral movement and protect the shutter against wear.

COM8.D130.8 HORIZONTAL BARREL FOR CARRYING SHUTTER CURTAIN
Ensure:
1. Barrel is of sufficient diameter and strength to resist deflection;
2. There are enough counter balance springs to enable the shutter to be balanced correctly in all positions;
3. Barrel is rust proofed steel.

COM8.D140.8 BARREL SUPPORT
Shutter and barrel support to provide sufficient bearing. Provide brackets with appropriate fixings for attaching to the soffit, face or side of opening.

COM8.D150.8 VERTICAL GUIDES
Vertical channel guides to be:
1. Of adequate size and depth as COM8.D110;
2. Provided with appropriate fixings for attaching to the soffit, face, jamb or side openings or base and apex in the case of movable mullions;
3. Manufactured from hot dip zinc coated steel, anodised aluminium, stainless steel or other materials as shown on the Drawings.

COM8.D160.8 HOODS AND CASINGS
1. Fully braced and supported to prevent sagging or distortion;
2. With access doors or plates as appropriate to allow routine inspection and servicing;
3. Manufactured from hot dip zinc coated steel, anodised aluminium, stainless steel or other materials as shown on the Drawings.

COM8.D170.8 LOCKING DEVICE
Design shutters with a locking device and two malleable iron shoot bolts of an Approved type. Fit shoot bolts to the bottom bar at either end of all shutters to assist holding the shutter under high wind conditions.

COM8.D180.8 FITTINGS AND FIXINGS
Ensure screws, bolts and fixing lugs are supplied as necessary for the assembling and fixing of the roller shutters.

COM8.D190.8 RUST PROOFING
Ensure all ungalvanized steel is painted with one coat of zinc phosphate primer before despatch to Site.

FIRE RESISTING DOORS AND SHUTTERS

COM8.D210.8 STANDARD
Comply with the requirements of BS 476:Part 22:1987 for roller shutters for the period of fire resistance specified.

COM8.D220.8 PERFORMANCE
Fire resisting roller shutters and doors must be self-closing, activated by fusible links, electronic heat or smoke detectors. Provide certificates of tests.

SUBMISSION

COM8.D310.8 SHOP DRAWINGS
Provide and obtain Approval of shop drawings before manufacturing.

COM8.D320.8 INSTRUCTION MANUALS
Provide two instruction manuals giving detailed operating and maintenance instructions that include:
1. Wiring and schematic drawings where applicable;
2. Schedule of component parts;
3. Price list of recommended spares.
COM9  COOKING BENCH / SINK UNITS

DESIGN

SUBMISSION

COM9.D110.8  SHOP DRAWINGS
Submit shop drawings to CM for approval prior to the commencement of fabrication and ordering of materials.
MATERIALS

GENERAL

COM9.M010.A  COOKING BENCH / SINK UNIT

1. Submission Requirements:
   a. At sample submission and approval stage, submit one sample of the cooking bench / sink unit for CM's approval together with all the following substantiation for CM's information:
      i. Job reference;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer;
      iv. Original or a certified true copy each of the certification to ISO 9001 and ISO 14001 for the manufacturing plant. If the cooking bench and sink unit are not manufactured in the same plant, the certification is required for all manufacturing plants. If a copy of the ISO certificate is submitted, it shall be certified true by the certification bodies or by the QCM. The certification bodies shall be as follows:

<table>
<thead>
<tr>
<th>ISO</th>
<th>Certification Body</th>
</tr>
</thead>
<tbody>
<tr>
<td>ISO 9001</td>
<td>The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.</td>
</tr>
<tr>
<td>ISO 14001</td>
<td>The certification body shall be accredited by the Hong Kong Accreditation Service (HKAS), or the China National Accreditation Service (CNAS), or an accreditation body which has entered into a mutual recognition agreement with HKAS.</td>
</tr>
</tbody>
</table>

v. Original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports for polymer resin worktop showing full compliance with the requirements in COM9.M150 for CM's information:
   - The date of the test shall be generally within five years prior to the notified date for commencement of the Works;
   - The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a) above, or at a time not later than the delivery of the material as mentioned in sub-clause (3)(a) below;
   - In the event that no test report has been submitted for CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be granted.

vi. Installation procedure of the cooking bench / sink unit;
vii. Confirmation in writing with a declaration from the cooking bench / sink unit supplier / manufacturer that the bonding agent used for bonding stainless steel to concrete components are in compliance with the prescribed limits of VOC content as set out in the Air Pollution Control (Volatile Organic Compounds) Regulation;

viii. Submit a sample board similar to the one maintained by the Housing Department showing the quality and accessories for the proposed cooking bench / sink unit. When the cooking bench / sink unit are supplied for domestic blocks, submit an additional sample board of the approved sample for keeping in the Housing Department’s Sample Display Gallery if the material has not been approved for use in a public housing project in the past five years prior to the notified date for commencement of the Works.

2. Quality Requirements:
   a. Cooking bench / sink unit comprising:
      i. A polymer resin worktop cooking bench with bullnosed front edge and coved back upturn as specified in COM9.M120;
      ii. A reinforced concrete sink top with a single bowl stainless steel sink;
      iii. Reinforced concrete supporting legs finished with epoxy paint to all exposed surfaces;
      iv. Stainless steel earthing lugs for stainless steel supporting frames and sink unit;
      v. All necessary fixing accessories including concrete inserts, galvanized mild steel angle brackets, fixing bolts, stainless steel supporting frames, stainless steel screw caps etc..
   b. Standard of quality of the cooking bench / sink units shall be comparable with the benchmark samples maintained by the Housing Department.

3. On Site Delivery Verification
   a. At delivery stage, submit to the CM the following documents:
      i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under the sub-clause (1)(a);
      ii. Original or certified true copy of Certificate of Origin for every batch of delivery. One batch being the material quantity covered under each delivery note;
      iii. Delivery notes for all material delivered to Site.
   b. Carry out and submit report on the following verifications for cooking bench / sink unit upon delivery on Site. Prior to carrying out the verifications, inform the CM who may present to witness the verifications:
      i. Method:

<table>
<thead>
<tr>
<th>Verification Items</th>
<th>Method</th>
<th>Acceptance Standards</th>
</tr>
</thead>
<tbody>
<tr>
<td>Delivery Note</td>
<td>Document Check</td>
<td>Complete with information of serial number as COM9.M020</td>
</tr>
<tr>
<td>Dimension Check</td>
<td>By measurement</td>
<td>As shown on Drawings; to Approved sample and COM9.M040</td>
</tr>
<tr>
<td>Surface Quality</td>
<td>Visual</td>
<td>No damage, no staining, no blemish</td>
</tr>
</tbody>
</table>
ii. Frequency:

<table>
<thead>
<tr>
<th>Items</th>
<th>Sampling Frequency</th>
<th>Representative Batch</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dimension Check</td>
<td>1 sample for every 100 pieces or part thereof</td>
<td></td>
</tr>
<tr>
<td>Surface Quality</td>
<td>1 sample for every 100 pieces or part thereof</td>
<td>Same batch of material delivered to Site under one Delivery Note</td>
</tr>
<tr>
<td>Sink unit</td>
<td>1 sample for every 100 pieces or part thereof</td>
<td></td>
</tr>
<tr>
<td>Stainless steel supporting frame</td>
<td>1 sample for every 100 pieces or part thereof</td>
<td></td>
</tr>
<tr>
<td>Polymer resin worktop</td>
<td>1 sample for every 100 pieces or part thereof</td>
<td></td>
</tr>
</tbody>
</table>

c. Where any of the verifications fail to meet the acceptance standards, either:
   i. Remove the representative batch off Site; or
   ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.

**COM9.M020.8 SERIAL NUMBER**

Print on the bottom of each unit and on each of its detached parts a unique serial number. Repeat the serial number on all packaging. Keep a separate sheet record identifying the date of manufacture.

**COM9.M030.8 SAMPLES**

Keep the Approved sample available for inspection on Site until completion of the cooking bench/sink unit installation work.

**COM9.M040.8 DIMENSIONAL ACCURACY**

See Appendix H of this Specification for permissible tolerances in major dimensions of the cooking bench/sink units.

**STAINLESS STEEL SHEET**

**COM9.M110.8 STAINLESS STEEL SHEET FOR SINK UNIT**

To BS EN 10095:1999:
1. Grade 304 in accordance with MET1.M060;
2. Finish No 2R;
3. Minimum thickness of 0.8 mm.

**STAINLESS STEEL SUPPORTING FRAME**

**COM9.M115.8**  
**STAINLESS STEEL SUPPORTING FRAME FOR COOKING BENCH**  
To BS EN 10095:1999:
1. Grade 304 in accordance with MET1.M060;
2. Section size and thickness: as shown on Drawings.

**POLYMER RESIN WORKTOP**

**COM9.M120.8**  
**POLYMER RESIN WORKTOP FOR COOKING BENCH**
1. Colour: white solid colour;
2. Thickness: 12 mm to maximum 13 mm;
3. The quality requirements for the polymer resin worktop are as follows:

<table>
<thead>
<tr>
<th>Items</th>
<th>Test Method</th>
<th>Acceptance Standards</th>
</tr>
</thead>
</table>
Cross-cut test: Rating 5 – cuts are smooth, no finish removed, except for small chips at the intersections of the cuts and an occasional small chip along the cut |
| ii. Light Resistance         | NEMA LD3-2005 Cl. 3.3 | Slight effect – a change in colour or surface finish visible only at certain angles and directions |
| iii. Boiling Water Resistance | NEMA LD3-2005 Cl. 3.5 | No effect - no change in colour or surface finish                                      |
| iv. High Temperature Resistance | NEMA LD3-2005 Cl. 3.6 | No effect - no change in colour or surface finish                                      |
| v. Ball Impact Resistance    | NEMA LD3-2005 Cl. 3.8 | No fracture by the polished stainless steel ball dropped from vertical height of 900 mm |
| vi. Coefficient of Linear Thermal Expansion | ASTM D696-03 | Not more than 3.02 x 10^-5 / °C                                                      |
| vii. Resistance to fungi     | ASTM G21-96 (Reapproved 2002) | Observed fungal growth on specimens: None (Rating 0)                               |
| viii. Flame Spread Index     | ASTM E84-12b          | Class A of NFPA 101: Flame Spread Index 0 - 25                                     |
| ix. Smoke Developed Index    | ASTM E84-12b          | Class A of NFPA 101: Smoke Developed Index 0 - 450                                 |
| x. Water Absorption          | ASTM D570-98 (Reapproved 2010) | 24 hour immersion: not more than 0.08%                                           |
xi. Wear and Cleanability

<table>

### FIXING AND POINTING MATERIALS

**COM9.M210.8** ANCHORS AND FIXING BOLTS

For supporting legs and frames of cooking bench/sink units:

1. For concrete block/concrete walls: proprietary type of stainless steel fixing bolts to Approval;
2. For proprietary types of partition walls, use fixings as recommended by partition manufacturer.

**COM9.M220.8** BONDING AGENT

1. For bonding stainless steel to concrete components: proprietary type of bonding agent to Approval;
2. In compliance with the prescribed limits of VOC content as set out in the Air Pollution Control (Volatile Organic Compounds) Regulation.

**COM9.M230.8** SILICONE SEALANT

1. In compliance with WAT5.M110;
2. Silicone sealant to BS 5889:1989, Type B (non-acidic type).

**COM9.M240.8** CEMENT MORTAR

For bedding concrete support legs to floors: cement : sand mix with water : cement : sand ratio of 0.5:1:3 and produced in accordance with the requirements of Worksection MAS3.

**COM9.M250.8** EARTHING LUG

25 mm x 1.5 mm thick stainless steel earthing lug for equipotential bonding connection, or otherwise as indicated on Drawings.
WORKMANSHIP

SUPPORTING LEGS

COM9.W010.8 CRACK REPAIR IDENTIFICATION AND RESPONSIBILITY

1. In accordance with clause 58(2) of the Conditions of Contract, all visual cracks discovered within the hardened concrete at any time prior to the issue of the final certificate will be regarded as defective. In this respect the provision of BS 8110:1985 relating to the permitted calculated maximum crack width will not apply;

2. Take responsibility and liability for any such crack defect as sub-clause (1), other imperfection or fault under clause 58(2) of the Conditions of Contract, unless such cracks are proved to be due to the Authority’s design fault. Where cracks are proven to be due to the design fault of the Authority any expense incurred by the Contractor for investigation and remedial work will be paid in accordance with clause 58(3) of the Conditions of Contract;

3. Where directed by the CM, investigate and repair visual cracks in accordance with the procedures and methods as specified in this sub-section. Notwithstanding the above provision, where Instructed replace sink units found to be defective.

COM9.W020.8 CLASSIFICATION AND REMEDIAL REPAIR OF CRACKS

1. Crack width classification:
   a. Fine: maximum width at any point 0.3 mm or less;
   b. Coarse: maximum width at any point greater than 0.3 mm;

2. Determine crack width at the surface of the concrete with either the aid of a transparent sheet marked with lines of different widths or, by examining the crack with a low powered microscope incorporating a measuring graticule;

3. Determine crack depth by one of the following procedures:
   a. Where the line of the crack on one surface can be traced on another surface parallel to the first surface, or where the crack can be seen to transverse two adjacent surfaces in different planes, it is deemed to be a through crack;
   b. Where a crack follows an irregular pattern on one surface of an element only and is branched at a minimum of two points, it is deemed to be a non-through crack;

4. a. Prior to commencement of repairs submit a method statement of the materials and the method to be used for Approval;
   b. Use the following methods for rectifying cracks:
      i. Fine non-through crack: brush into crack cement grout or a mixture of cement and water until the crack appears to be filled;
      ii. Coarse non-through crack: cut a V-groove and fill with proprietary repair mortar;
      iii. Through cracks: seal by arranging for a low viscosity polymer resin to flow under the influence of gravity or injection into the crack to fill it and harden therein.
POLYMER RESIN WORKTOP

COM9.W050.8 MINOR REPAIR TO POLYMER RESIN WORKTOP
Seek CM’s approval for repair minor visual scratch and other imperfection to the quality of the Approved sample. Notwithstanding the above provision, replace defective polymer resin worktop where Instructed.

INSTALLATION

COM9.W110.8 FIXING COOKING BENCH/SINK UNITS
1. Check units have no missing or dislodged concrete inserts, and components are free from scratches, cracks, dents, voids and other damage;
2. Assemble and set units correctly in relation to position on plan and height above finished floor level;
3. Fix units using stainless steel supporting frames, brackets and bolts specified and as indicated on the Drawings;
4. Apply cement mortar bedding between support leg and floor;
5. Seal joints between top and wall and between sink leg and unit with silicone sealant applied in accordance with Worksection WAT5;
6. Protect units from damage and maintain protective film intact.

COM9.W120.8 EQUIPOTENTIAL BONDING TO COOKING BENCH/SINK UNITS
1. Provide equipotential bonding connection for stainless steel supporting frames of cooking bench and sink units by:
   a. Weld one end of the earthing lug to sink and stainless steel supporting frames; and
   b. Form a 5 mm diameter hole at the other end of the earthing lug for connection of bonding conductor by the Nominated Sub-contractor for Electrical Installation.
2. As COM2.W465 (6).

ACCURACY AND TOLERANCES

COM9.W210.8 ERECTION ACCURACY
Refer to Appendix H, "Schedule of Tolerances" to this Specification.

PROTECTION

COM9.W310.8 PROTECTION OF FINISHES
1. Protect sink stainless steel surface and polymer resin worktop with removable adhesive film;
2. Remove protective film on 5% of installed sinks for inspection;
3. Remove all protection before completion of the Works unless approved by the CM.
COM10 GLASS PANELS

DESIGN

GENERAL

COM10.D010.8 SPECIFICATION REQUIREMENTS
Design, construct, fix and glaze the glass panel balustrades or fire resistant glazing system in accordance with this Worksection and the relevant clauses of:
1. MET1 General Metalwork;
2. COM4 Glazing;
3. WAT5 Sealants.

COM10.D020.8 SHOP DRAWINGS
When proprietary design of glass panel balustrades or fire resistant glazing system is used by Contractor:
1. Provide shop drawings with technical substantiation for construction showing details of the members and fixings of glass panel and obtain Approval prior to commencement of fabrication of the elements;
2. For glass panel balustrades, appoint a Registered Structural Engineer registered with the Building Authority of the Government of the Hong Kong Special Administrative Region for the design of the glass protective barrier. The Registered Structural Engineer shall certify and sign all shop drawings and technical substantiation including calculations.

COM10.D030.8 METHOD STATEMENT
Submit method statement detailing the installation procedure (including procedure for reglazing and torque of fixing bolts) and obtain Approval prior to starting fabrication.

COM10.D040.8 SAMPLES
Submit samples of each type of glass, sealants, distance pieces and setting blocks and obtain Approval prior to starting fabrication.

COM10.D050.8 MOCK UP
Provide full scale mock up for glass panel balustrade and obtain Approval prior to proceeding with the installation work.

COM10.D060.8 FIRE RESISTANCE PERFORMANCE OF THE FIRE RESISTANT GLAZING SYSTEM
1. Fire resistant glazing systems consisting of one or more transparent or translucent panes shall be designed with a suitable method of mounting, such as frames, seals and fixing materials, capable of satisfying the specified fire resistance criteria;
DESIGN PARAMETERS

COM10.D110.8 GENERAL
The design parameters specified in COM10.D120 to COM10.D150 apply when the Contractor is required to submit shop drawings and valid fire resistance test reports for the proprietary design of glass panel balustrades or fire resistant glazing systems.

COM10.D120.8 MINIMUM HORIZONTAL IMPOSED LOADS
Calculate to demonstrate the glass panel balustrade or fire resistant glazing system must resist the following, whichever shall produce the more adverse effects:
1. The minimum horizontal imposed loads as specified in accordance with the Building (Construction) Regulations for the following when separately applied:
   a. Areas where crowd load is not expected;
   b. Places of assembly and all panic barriers.
2. Wind load where applicable.

COM10.D130.8 DEFLECTION LIMITS
1. Design glass panel balustrade or fire resistant glazing systems to resist the most unfavourable combination of imposed and wind loads with an adequate margin of safety against collapse and without unacceptable deflections or distortions;
2. For glass panel balustrades, draw particular attention to the following deflection limits which are in addition to any recommendations for limiting deflection under full load given in the appropriate structural codes for the material to be used and in which event, apply the most onerous limit:
   a. Horizontal displacement of any part of the glass panel balustrade: not exceed 25 mm;
   b. For bolt fixing of glass barriers under the design loads, design the barrier such that the relative in-plane movement of the bolted connections in the same glass panel do not exceed 2 mm;
   c. When the glass components are subjected to half the most unfavourable combination of imposed and wind loads, the horizontal displacement of any point of the glass component, relative to its fixings, shall not exceed the following:
      i. The smaller of 12.5 mm or \(L/125\) for infill panels, where \(L\) is the longest dimension of the glass for fully framed infill panels; or the span between the supporting frames for two-edge framed infill panels; or the maximum space between support points for clipped infill panel; or the span between the bolt connectors for point supports infill panels;
      ii. 10 mm for free-standing glass panel balustrade.

COM10.D140.8 FIXING
1. Design fixings, the frame section of the glass panel balustrade, the clips, the bolted connectors and their fixings or connections to the main frame to withstand the design loads transferred through the glass infill panels;
2. Design all joints to provide the full strength of the members being joined. Take into account particularly the material into which the fixing is placed, the spacing between fixings, the edge distance, and the position of reinforcement in the concrete;
3. Refer to manufacturer's recommendation when using proprietary fixing products.
COM10.D150.8  HANDRAIL ATTACHMENT FOR FREE-STANDING GLASS PANEL BALUSTRADE

Calculate to demonstrate handrail attached to free-standing glass panel balustrade must behave in the following manner should a glass panel fracture:

1. Remain in position;
2. Do not fail if the design load is applied across the resulting gap.
MATERIALS

COM10.M010.8 METALWORKS
As specified in Worksection MET1.

COM10.M020.8 GLASS
1. As specified in COM4.M010 to COM4.M130;
2. Comply with the impact test requirements for safety glazing materials given in recognised testing standards. The type of glass shall achieve impact resistance not inferior to the impact class A of BS 6206:1981 when the free path is greater than 1500 mm. Submit test certificates from the manufacturer of the glass material to prove its impact resistance.

COM10.M030.8 SETTING BLOCKS
Rot-proof, non-absorbent and load bearing, capable of maintaining the requisite edge clearance without presenting local areas of stress to the glass though being non-compressible or non-resilient and as COM4.M420.

COM10.M040.8 DISTANCE PIECES
Resilient, non-absorbent, generally of plasticized PVC complying with BS 2571:1990 softness number 35 to 45:
1. Length: 25 mm minimum;
2. Thickness: equal to the front and back clearance, thus retaining the glass firmly in the frame so that it cannot be displaced;
3. Depth: giving 3 mm minimum cover of sealant.

COM10.M050.8 SEALANTS
1. As specified in WAT5.M110 to WAT5.M170 for glass balustrades;
2. In compliance with glass manufacturer’s instructions for installation at fire resistant glazing systems to satisfy the specified fire resistance criteria.
WORKMANSHIP

GENERAL

COM10.W010.8 STANDARD

COM10.W020.8 DELIVERY
Ensure glass is kept dry and clean during delivery.

COM10.W030.8 STORAGE
Store glass vertically in a well-ventilated location, protected from condensation and other moisture.

COM10.W040.8 FIRE RESISTANT LAMINATED SAFETY GLASS
Install in accordance with the manufacturer’s recommendations to satisfy the specified fire resistance criteria.

FIXING GLASS GENERALLY

COM10.W110.8 EDGE COVER
Provide a minimum 15 mm edge cover with sealant for glass infill panels.

COM10.W120.8 CLIP FIXING OF GLASS INFILL PANEL
For clipped infill panel, position the clips around the periphery of the infill panel at a maximum spacing of 600 mm. Each clip shall be not less than 50 mm in length and give a minimum depth of cover of 25 mm to the glass panel.

COM10.W130.8 BOLT FIXING OF GLASS INFILL PANELS
1. Use toughened glass where glass is supported by bolt connections through holes in the glass;
2. Surround bolts through holes in the glass with incompressible bushes 2 mm to 3 mm thick, and use 1 mm thick incompressible fibre gaskets under clamping plates;
3. a. Clamping plates and gaskets on both sides of the glass provide a minimum of 50 mm diameter cover to the glass;
b. Clamping plates: not less than 6 mm thick in steel or 10 mm thick in other suitable metals.

COM10.W140.8 FREE-STANDING GLASS PANEL BALUSTRADE
Depth of clamping at base fixing of free-standing glass panel balustrade that does not rely on bolts through glass: not less than 75 mm.

COM10.W150.8 BOLT FIXING OF FREE-STANDING GLASS PANEL BALUSTRADE
1. Point fixing clamps:
   a. Fixing clamps on each side: not less than 100 mm x 150 mm and minimum 12 mm thick;
   b. Fixing clamps for every 1 m length of balustrade: not less than two;
2. Continuous fixing clamps:
a. Fixing clamps on each side of the glass: not less than 100 mm wide and minimum 12 mm thick;
b. Clamps: continuous for the entire length of the glass pane and have a maximum bolt spacing of 500 mm.

COM10.W160.8 POSITIONING SETTING BLOCKS
Position the setting blocks as near to the quarter points as possible. Where it is necessary to avoid undue deflection of the frame section, position the setting blocks as follows:
1. Not less than 30 mm from the corner of the glass;
2. In positions to coincide with the frame section fixing points, if these are between 30 mm from the corner and the quarter points.

COM10.W170.8 POSITIONING DISTANCES PIECES
1. Position distance pieces as follows:
   a. First distance piece: at approx. 50 mm from the corner;
   b. Remainder: at approx. 300 mm centres or less.
2. Never coincide a distance piece with a setting block position.

COM10.W180.8 SILICONE SEALANT
Where specified, seal the joint between the glass and bead with an Approved silicone sealant.

FINISHING

COM10.W210.8 BROKEN OR DAMAGED GLAZING
Replace glass or fixing materials broken or damaged before completion of the works and make good the adjoining areas.
COM11 RADIO FREQUENCY IDENTIFICATION AND WEB-BASED DATABASE SYSTEM FOR BUILDING COMPONENTS

DESIGN

GENERAL

COM11.D010.A RADIO FREQUENCY IDENTIFICATION (RFID) SYSTEM

1. Provide, operate, and maintain a RFID System for the following building components in accordance with this Worksection and COM11.APPEND1 to COM11.APPEND5 and other relevant Worksections of this Specification:
   a. Precast Concrete Facades (CON5 and CON7);
   b. Aluminium Windows and Louvres (COM2);
   c. Timber Doorsets (COM5);
   d. Gatesets (COM7);
   e. Volumetric Precast Bathrooms (VPB) including Combined VPB components (CON8);
   f. Volumetric Precast Kitchen (VPK) including Combined VPK and Combined VPB and VPK components (CON8).

2. Install approved RFID tags to the respective building components at the place of manufacture to record the manufacturing process, the logistics in delivery and the installation detail of the building components as indicated in COM11.APPEND1 to COM11.APPEND5. The workflow and data fields specified in COM11.APPEND1 to COM11.APPEND5 may be subject to amendments to suit the manufacturing processes proposed by the Contractor and agreed by CM.

COM11.D020.8 MAIN COMPONENTS OF THE RADIO FREQUENCY IDENTIFICATION (RFID) SYSTEM

Provide all required facilities and services for the RFID System to support the operation of the RFID System, including but not limited to:

1. RFID tags;
2. RFID readers: at least two numbers for each manufacturing factory of building components specified in COM11.D010 and at least …… numbers on site;
3. RFID Web-based Database System as specified in COM11.D050;
4. Middleware for the readers;
5. Networking infrastructure, equipment and services connecting the RFID devices and workstations (wired or wireless);
6. Internet connection for all locations involved in the workflow;
7. Servers and workstations for all RFID devices, including web and application servers, database servers;
8. Security facility for all RFID devices; and
9. All other resources to ensure the operation of the RFID System meet the service level requirements.
**COM11.D030.8 OUTLINE OF THE OPERATION OF THE RADIO FREQUENCY IDENTIFICATION (RFID) SYSTEM**

The RFID System provided shall follow the workflow outlined in COM11.APPEND1 to COM11.APPEND5 which shall include but not limit to following sequences:

1. Provide and install RFID tags in building components as specified in COM11.D010;
2. During the manufacturing, record the date and time for each tagged building components via RFID readers at locations / steps specified and then upload these data to the RFID Web-based Database System as specified in COM11.D050;
3. During the delivery and on site installation, record the date and time for each tagged building components via the RFID reader at locations / steps specified and then upload these data to the RFID Web-based Database System as specified in COM11.D050;
4. Through the RFID Web-based Database System via internet, authorized users can be able to view, search, sort and identify logistics workflow in the manufacturing, delivery and installation of every building component with RFID tags installed and follow the workflow as specified in COM11.APPEND1 to COM11.APPEND5.

**COM11.D040.8 SUPPLY OF RFID TAGS AND RFID READERS**

Make available all approved RFID tags and approved RFID readers and other equipment according to COM11.APPEND10 at a date not more than …… days after the notified date for commencement of the Works.

**COM11.D050.8 RFID WEB-BASED DATABASE SYSTEM**

1. Provide, operate and maintain a RFID System from a date not more than …… days after the notified date for commencement of the Works until the expiry of Maintenance Period, in the manufacturing, delivery and installation processes for building components as specified in COM11.D010. The RFID Web-based Database System shall comply with COM11.APPEND1 to COM11.APPEND5;

**SUBMISSIONS**

**COM11.D110.8 PROVISIONAL APPROVAL**

Submit the following items to the CM for provisional approval as specified in COM11.D010 at a date not more than …… days after the notified date for commencement of the Works:

1. One sample of each type of RFID tag to be used in the RFID System;
2. Fixing method of RFID tags;
3. RFID tags shall be embedded in building components as specified in COM11.D010. Where embedment of RFID tag in the building component is not feasible, alternative fixing method shall be submitted to the CM for approval;
4. Shop drawings of building components showing location of RFID tags in each type of building component;
5. The proposed RFID Web-based Database System as specified in COM11.M210;
6. The proposed RFID Reader to be used in the RFID System; and
COM11.D120.8 PROGRAMME
Indicate the installation programme of RFID tags, including the duration for the verification of proper functioning of all tags by RFID readers, in the manufacturing programme of building components as required in other Worksections of this Specification.

RESOURCES

COM11.D210.8 RFID PROJECT COORDINATOR
1. The Contractor shall appoint one full time RFID Project Coordinator to deliver the services including but not limited to, the provision of operation, support and maintenance service of all RFID related works including the RFID Web-based Database System. The RFID Project Coordinator is responsible for monitoring/controlling data input, and various related processes in the on-going support and delivery of the services;

2. The RFID Project Coordinator shall liaise with the vendors for the provision of the RFID Web-based Database System and the Contractor shall provide necessary IT support for the RFID Project Coordinator to ensure the proper and effective operation/maintenance of the whole System;

3. A RFID Project Coordinator shall have:
   a. Level 2/Grade E or above in five subjects including Mathematics in the Hong Kong Certificate of Education Examination (HKCEE), or equivalent (the five subjects include Chinese Language and English Language);
   b. met the language proficiency requirements of Level 2 or above in Chinese Language and English Language in HKCEE, or equivalent ("Grade E" in Chinese Language and English Language (Syllabus B) in previous HKCEE is accepted as comparable to "Level 2" in Chinese Language and English Language in the 2007 HKCEE and henceforth);
   c. good knowledge in Chinese and English word processing and in the application of common business software (including Microsoft Word and Excel); and
   d. a minimum two years' working experience in the application of common business software.
MATERIALS

RADIO FREQUENCY IDENTIFICATION TAGS

COM11.M010.8 STANDARD
1. RFID tag shall:
   a. Comply with ISO 18000:2004, Part 6B or Part 6C, or relevant standards when other frequency range is proposed by the Contractor and approved by CM;
   b. Be of 'passive' type with all inlays protected by outlays;
   c. Be pre-bagged with a print out record or a soft copy showing the unalterable serialized Tag Identifier (TID) of each tag inside.
2. RFID tags embedded in the building components shall be capable of withstanding all induced stresses arising from the manufacturing process and transportation and site operations and shall remain functional after the installation of the building components on Site. In addition, it shall exhibit:
   a. Good durability for environment and conditions during the manufacturing process after it was embedded in the building components;
   b. Good abrasion resistance; and
   c. Good chemical resistance.
3. Tag number including TID and user-defined serial number of all RFID tags to be used in the Contract shall be registered in the RFID Web-based System prior to the commencement of manufacturing process of building components. The registered tag number list shall be delivered to CMR for information and record.

COM11.M020.8 TECHNICAL PERFORMANCE
RFID tags shall be capable of achieving the following performance:
1. Good functional conditions for serving the temperature, conditions and environment anticipated during the manufacturing process of the building components;
2. Sufficient storage capacity for all the data indicated in COM11.APPEND1 to COM11.APPEND6; being able to protect memory;
3. When embedded in the proposed locations in the building components:
   a. Free from interferences by metal;
   b. Detectable to facilitate data transfer by the RFID reader at a reasonable distance during the quality control inspections, delivery and when installed.
4. Unalterable serialized Tag Identifier (TID) exists;
5. Protected by write-proof and kill-proof password.

RADIO FREQUENCY IDENTIFICATION READERS

COM11.M110.8 STANDARD
RFID readers shall:
1. Comply with the exemption requirements under the Telecommunication (Telecommunications Apparatus) (Exemption from Licensing) (Amendment) Order 2005, under the Telecommunication Ordinance (Cap. 106); and
2. Be of portable handheld type.
COM11.M120.8  MIDDLEWARE FOR DATA TRANSFER WITH RFID TAGS
1. Submit to demonstrate to the CM the performance of all RFID supporting software complying with workflows as specified in COM11.APPEND1 to COM11.APPEND5 for data preparation, capture and submission amongst RFID tags, RFID readers and the RFID Web-based Database System specified in COM11.D010 at a date not more than …… days after the notified date for commencement of the Works;
2. RFID reader program shall have the following function:
   a. Multiple tags scanning for input of data, including but not limited to delivery date and site arrival date of scanned building component tags specified in COM11.D010;
   b. Displays on screen to show a list of scanned tags with RFID tag number and building component type and the accumulated number of scanned tags of one selected building component type in each scan;
   c. Batch input to enable user to select one authorized workflow checkpoint for applying one data entry to all scanned building components.

COM11.M130.8  TECHNICAL PERFORMANCE
RFID readers shall be compatible with RFID tags using in the project and capable of achieving and performing functions specified and/or required in the supporting RFID Web-based Database System.

RADIO FREQUENCY IDENTIFICATION (RFID) WEB-BASED DATABASE SYSTEM

COM11.M210.8  RADIO FREQUENCY IDENTIFICATION (RFID) WEB-BASED DATABASE SYSTEM
1. Provide, operate and maintain a RFID Web-based Database System for uploading all RFID data as specified in COM11.D030 and to prepare relevant tabulated data. The Contractor shall submit the details of RFID Web-based Database System to the CM as specified in COM11.D110 for approval at a date not more than ….. days after the notified date for commencement of the Works. The RFID Web-based Database System shall be:
   a. Website readily accessible on internet by CMRs and authorized users with proper security measures, including but not limited to individual user accounts and passwords. Users account shall be locked after a pre-defined number (configurable) of unsuccessful logon attempts. The system must provide facilities to monitor unsuccessful logon attempts. Reports shall be available for analysis of such attempts;
   b. All RFID data and specified information shall be uploaded within the time schedule for submission specified in this specification;
   c. All data shall be uploaded to Housing Authority’s system when instructed by the CM;
   d. A user logon session shall be logged off automatically by the System if it is unattended for a certain period of time;
   e. Logical access to the applications and system utilities shall be restricted to authorized users and the type of access rights granted to them shall be governed by the individual user account and password.
2. Requirements on website
   a. All data and information shall be made available for viewing and downloadable by Project Officers or authorized users;
b. Data and related information shall be shown in chronological order of the manufacturing time of the building components or as instructed by the CM;

c. Change control: The date of any data uploaded on to the website shall be included in each report for change control. Any amendment to the data shall be notified and carried out by authorized personnel of the Contractor with proper version control;

d. Performance:

Indices to the data and information to be retrieved from the RFID Database System via internet shall be shown within 30 seconds and be shown in the order of the RFID tag number, chronological order of the manufacturing date, or other similar criteria as requested via the web site by the CM or authorized users.

i. Retrieval of the selected report shall be completed within about 30 seconds;

ii. The RFID Database website shall be able to support at least 20 concurrent users.

e. Availability: The RFID Web-based Database System shall be available at all time around the clock, and availability of the System shall not be less than 98% within the hours from 7:00 am to 10:00 pm, and shall not be less than 95% during other hours. The Contractor shall report its RFID Web-based Database System availability to the CM upon request;

f. Search: Search facilities shall be provided to search data and reports by RFID tag number, building component serial number, manufacturing date, component type, delivery date, installation date, installed location in blocks, floors, and flat number or other similar criteria as instructed by the CM;

g. Browser support: The System shall support Internet Explorer version 7.0 or above;

h. Security:

i. Website shall only be accessible to authorized users with individual User ID and password;

ii. The System shall require users to change passwords within a specific range of time agreed by the CM and support users to change their password as required. All passwords shall be encrypted and invisible on the screen when type in;

iii. The Contractor shall maintain, update a list of the User IDs and Passwords, and report to the CM whenever there is a change;

iv. Data shall be encrypted and secured when transmitted over the internet;

v. The Contractor shall maintain a logging of the browsers of the website, and have it readily available for inspection;

vi. The System shall be protected by reliable antivirus software with the latest virus definition updated.

i. RFID Alert Function: The system shall have alert and reporting function as specified in COM11.APPEND9.

3. The Contractor shall submit typical user-interface layouts to the CM for approval. The user-interface shall be easy-to-use and selections by mouse click are used as far as possible. The user-interface layout sequence is as follows:

a. Prompt and authenticate user ID and password to enter RFID data and information;

b. Prompt and authenticate user ID to enter into Project reports;

c. Select type of building component;

d. Browse / download data, information, or reports;

e. Exit website by a logout process.
4. When instructed by the CM, for each building component as specified in COM11.D010, the Contractor shall produce electronic data file on RFID data, information, reports and/or test reports, and transmit to a Housing Authority web-based system. The input formats of each type of RFID tagged building component are given in COM11.APPEND1 to COM11.APPEND5 to the Specification;

5. The user-interface of the RFID-Web-based Database System shall follow the layout as specified at COM11.APPEND6. The Contractor may submit alternative design to the CM for approval;

6. When instructed by the CM, submit summary report to demonstrate the performance of the RFID-Web-based Database System to fulfil the requirements stipulated in the above sub-clause 2;

7. The Contractor shall review and report the performance of the RFID Web-based Database System monthly or at intervals agreed by the CM. The review shall include:
   a. Achievement of the performances as stated at above clauses;
   b. Feedback received and remedial and follow-up actions as raised;
   c. Results of planned/random inspections on the performance of the System;
   d. Nonconformities, including but not limited to missing entries and incorrect timestamp, and the corresponding remedial proposal;
   e. Other relevant information.

COM11.M220.8 BACKUP AND RECOVERY OF PROGRAMME AND DATA

1. Back up regularly the System, including configuration files and all data, in a full-scale and centralized approach. Appropriate system/application/system data files backups are required every time when there is change of system, change of application or change of system data files;

2. Periodically archive all data and information in the RFID Web-based Database System into removable media (e.g. DVD-RW) and deliver to CM. The period is defined by CM.

COM11.M230.8 INTEGRITY OF DATA

1. Take reasonable precautions to preserve the integrity of data in the RFID Web-based Database System and to prevent any corruption or loss;

2. Take such steps as are necessary to ensure that, in the event of any corruption or loss of Data howsoever caused, it is in a position to restore or procure the restoration of Data; and

3. At the request by CM in the event of any corruption or loss of Data and without prejudice to any other remedies that may be available to it either under the Contract or otherwise, restore or procure the restoration of Data to its state immediately prior to the said corruption or loss.

COM11.M240.8 HANDLING OF DATA

1. All data, information and related document in the RFID Web-based Database System for the Contract are properties of HA. The Contractor shall not disclose, transmit, copy any of them to other parties in any form without the approval from CM;

2. Upon the expiry of the RFID System or as instructed by CM, the Contractor shall copy all data, and information in the database of the RFID Web-based Database System into removable media (e.g., DVD-RW) and submit to CM.
COM11.M250.8  REMOVAL OF EQUIPMENT AND DATA UPON COMPLETION

1. Upon the expiry of the RFID System or as instructed by CM, unless otherwise approved by CM, remove the RFID devices and associated equipment installed in the site. The removal shall be carried out with method and procedures as approved by CM;

2. Upon the expiry of the RFID System or as instructed by CM, unless otherwise approved by CM, delete all data and information of the contract from the RFID Web-based Database System. The removal shall be carried out with method and procedures as approved by CM.
WORKMANSHIP

INSTALLATION OF RFID TAGS

COM11.W010.8 INSTALLATION OF RFID TAGS
Install RFID tags at the locations detailed in COM11.APPEND7, by using the approved fixing method during the manufacturing process of building components. Alternative RFID tags installation locations may be proposed to CM for approval.

COM11.W020.8 REPLACEMENT OF INSTALLED TAGS
In the event that a RFID tag fails to be detected by the RFID reader or becomes damaged after installation to the building component, replace the non-functional/damaged tag immediately. When replacement of RFID tag in the building component is not feasible, alternative remedial measures shall be submitted to CM for approval.

DATA TRANSFER

COM11.W110.8 DAILY UPLOADING OF DATA AND RECORDS
1. Upload daily all data, records and information of building components installed with RFID tags to the RFID Web-based Database System as indicated in COM11.APPEND1 to COM11.APPEND5 via internet;
2. Unless otherwise instructed by CM, complete daily uploading:
   a. At the casting yard or place of manufacturing of the respective building components for daily productions and testing;
   b. At the Site after installation of the respective building components.

COM11.W120.8 CORRECTNESS OF DATA
1. Check the correctness of data each time after uploading of data to the RFID Web-based Database System as indicated in COM11.APPEND1 to COM11.APPEND5;
2. Inform CM immediately of any non-matching data.

COM11.W130.A VIEWING OF RECORDS
1. Make available the data, record and information uploaded to the RFID Web-based Database System for viewing and downloading by the CM and his representatives if required;
2. All reports and colour photographs including those taken by digital cameras if provided in the RFID Web-based Database System shall be legible.

DATA FORMAT

COM11.W210.8 DOCUMENT FORMAT
The data, record and information uploaded to the RFID Web-based Database System shall be in unalterable format such as Adobe "Portable Document Format" (PDF) or other similar format approved or specified by CM.

COM11.W220.8 SECURITY
1. Access to the RFID Web-based Database System shall be via internet and shall be restricted and secured by individual user ID and password;
2. The Contractor shall only allow authorized users to access the RFID Web-based Database System.

COM11.W230.8 CHANGE CONTROL
1. The date of the data, record and information uploaded to the RFID Web-based Database System shall be included for change control purposes;
2. Any amendment to the database shall be notified and carried out by the Contractor's authorized person with proper change control in line with the hard copy records.

COM11.W240.8 HARDWARE AND SOFTWARE
The Contractor shall provide his own computer hardware and software for the development and access to the RFID Web-based Database System.

COM11.W250.8 TAG STRUCTURE
The encoding structure for the data to be stored in the RFID tags shall be in accordance with COM11.APPEND8.
TESTING

FIELD TRIAL AND SYSTEM ACCEPTANCE TEST OF RFID SYSTEM

COM11.T010.8 SYSTEM ACCEPTANCE TEST
1. Carry out System Acceptance Tests with the CM or his representatives. The Contractor shall set up the environments for the System Acceptance Tests and prepare test plan and testing data for such acceptance test;
2. Provide guidelines for the operation of the System; and
3. Carry out the System Acceptance Test before the field trial as specified in COM11.T020 and the manufacturing of the building components as specified in COM11.D010. The System Acceptance Test shall demonstrate:
   a. The functions in website, including but not limit to, single search, multiple search, export to excel file and multiple fill as specified in COM11.APPEND6;
   b. The Alert Function as specified in COM11.M210;
   c. The capability of RFID reader program to scan and show proper RFID Tag number and User Information as specified in COM11.APPEND8.

COM11.T020.8 FIELD TRIAL AND DEMONSTRATION
1. Prepare field trial of the RFID System on receipt of the provisional approval specified in COM11.D110;
2. Carry out field trial to demonstrate:
   a. The proper data transfer in the RFID Web-based Database System at the casting yard or place of manufacturing and on Site and complete in good time before the commencement of tag installation to the building components;
   b. The proper multiple scan and batch input functions as specified in COM11.M120;
3. Further field trials shall be made until the CM is satisfied with the performance of the RFID system before Approval.

COM11.T030.8 PROCEDURE
1. A test sample for field trial shall comprise RFID tag, RFID reader, RFID supporting software, the RFID Web-based Database System, computer hardware and software necessary for the data transfer in the RFID system;
2. Unless otherwise agreed by CM, provide one test sample for each type of building components;
3. Perform data preparation, capture and submission to the RFID Web-based Database System at the casting yard or place of manufacturing and on Site and verify the correctness of data in the RFID System.
APPENDIX COM11/I

COM11.APPEND1.8CONCEPTUAL WORKFLOW FOR THE RFID SYSTEM - PRECAST CONCRETE FAÇADE

SYSTEM SET UP

Start

Contractor set up a RFID System

Contractor submit RFID hardware; the proposed RFID Middleware* and RFID Web-based Database System to the CM for approval

CM Approved**

Carry out Field Trials and System Acceptance Tests

System satisfactory

Establish User Accounts and the System is ready for production use

---

* Middleware = Software for the communication/data transfers amongst RFID tags, RFID Readers/ and the RFID Web-based Database System.

** The provisional approval from CM as per COM11.D110.
If aluminium window(s) to be installed in the precast elements (e.g. precast façade, volumetric precast bathroom, etc.), read also the RFID tag(s) of respective aluminium window(s) to record the installation date and time.
Users can access the RFID Web-based Database System via internet

Data in the RFID Reader and all other necessary data uploaded to the RFID Web-based Database System via internet

Install the façade in location

The RFID Reader automatically record the date and time of façade installation

Read the RFID tag by the RFID Reader

The RFID Reader automatically record the date and time of façade arrival

Facade delivered on site

Plant

Export related data to HA’s system

Finish

The Contractor may make use of the System to record other data such as Finishes, Tile adhesive, Tile Grout, Aluminum Window, Conduit and etc. (All optional)

Note
(1) This field of data to be stored in the user memory of RFID tags installed;
(2) Real time record with reference to the built-in clock inside the reader or other date definition agreed by the CM;
(3) Data to be input after the building component is installed in its final location;
(4) Resident Supervisor (RS) inspection to be carried out before the concreting of the precast façade;
(5) The "Remarks" field is to record any other information related to the component, e.g. any relevant tests carried out to the component;
(6) Unalterable unique TID is assigned by the manufacturer of RFID tags;
(7) RFID tag no. to be stored in the format of Electronic Product Code (EPC).
APPENDIX COM11/II

COM11.APPEND2.8CONCEPTUAL WORKFLOW FOR THE RFID SYSTEM - ALUMINIUM WINDOW

SYSTEM SET UP

Start

Contractor set up a RFID System

Contractor submit RFID hardware; the proposed RFID Middleware* and RFID Web-based Database System to CM for approval

CM Approved**

Carry out Field Trial and System Acceptance Tests

No

System Satisfactory

Establish User Accounts and the System is ready for production use

* Middleware = Software for the communication/data transfers amongst RFID tags, RFID Readers/ and the RFID Web-based Database System.

** The provisional approval from CM as per COM11.D110.
**PLANT**

1. **Start**
2. **Manufacturing of the window**
3. **Install RFID tag in the window**
4. **Read the RFID tag by the RFID Reader**
5. **Window leaving the factory to site/precast façade plant**
6. **Read the RFID tag by the RFID Reader**
7. **Site/Plant**

Additional Diagram Details:
- **Users can access the RFID Web-based Database System via internet**
- **Data in the RFID Reader and all other necessary data uploaded to the RFID Web-based Database System via internet**
- **Related the RFID Tag number with window serial number**
- **The RFID Reader automatically record the production date and time**
- **Export related data to HA’s system**
For aluminium windows to be installed in precast elements (e.g., precast façade, volumetric precast bathroom, etc.), read the RFID tag to record the date and time of aluminium window arrival to precast factory and store the data in the datafield of "Site Arrival Date".

For aluminium windows to be installed in precast elements, read the RFID tag before concreting the related precast element to record the casting date of the precast element as the date and time of installation of aluminium window.
### Data Fields for data to be stored and maintained in the RFID Web-based Database System and RFID tags installed in Aluminum Window

The Contractor may make use of the system to record other data such as test reports, mill certificates, shop drawings and etc. (All optional)

Note

1. This field of data to be stored in the user memory of RFID tags installed;
2. Real time record with reference to the built-in clock inside the reader or other date definition agreed by the CM;
3. Data to be input after the building component is installed in its final location;
4. The "Remarks" field is to record any other information related to the component, e.g. any glazing pre-installed;
5. Unalterable unique TID is assigned by the manufacturer of RFID tags;
6. RFID tag no. to be stored in the format of Electronic Product Code (EPC);
7. For aluminium window to be installed in precast elements, date of arrival to precast factory to be stored in the data field for "Site Arrival Date";
8. For aluminium window to be installed in precast elements, date of casting for the respective precast element to be stored in the data field for "Installation Date";
9. For aluminium window to be installed in common areas, the following abbreviation to be stored in the data field of "Flat Number":

- ST – Staircase
- PD – Pipe Duct Room
- FS – FS Pump Room
- EM – Electrical Meter Room
- SW – Switch Room
- SR – Store Room
- TB – T.B.E Room
- CD – Cable Duct Room
- WC - Toilet
LM – Lift Machine Room  CO – Corridor  LL – Lift Lobby
RS – Refuse Storage & Material Recovery Room
For other areas, abbreviation to be proposed by the Main Contractor for CMR’s agreement.
APPENDIX COM11/III

COM11.APPEND3.8CONCEPTUAL WORKFLOW FOR THE RFID SYSTEM - TIMBER DOOR

SYSTEM SET UP

![](image)

1. **Start**
   - Contractor set up a RFID System

2. Contractor submit RFID hardware; the proposed RFID Middleware* and RFID Web-based Database System to CM for approval

3. **CM Approved**
   - Carry out Field Trial and System Acceptance Tests

4. **No**
   - System Satisfactory
     - Establish User Accounts and the System is ready for production use

---

* Middleware = Software for the communication/data transfers amongst RFID tags, RFID Readers/and the RFID Web-based Database System.

** The provisional approval from CM as per COM11.D110.
PLANT

Start

Manufacturing of the timber door

Install RFID tag in the timber door

Read the RFID tag by the RFID Reader

Timber door leaving the factory to site

Read the RFID tag by the RFID Reader

Site

Users can access the RFID Web-based Database System via internet

Data in the RFID Reader and all other necessary data uploaded to the RFID Web-based Database System via internet

Related the RFID Tag number with timber door serial number

The RFID Reader automatically record the production date and time

Export related data to HA's system
Users can access the RFID Web-based Database System via internet.

- Data in the RFID Reader and all other necessary data uploaded to the RFID Web-based Database System via internet.
- The RFID Reader automatically records the date and time of timber door arrival.
- The RFID Reader automatically records the date and time of timber door installation.
- Read the RFID tag by the RFID Reader.
- Install the timber door in location.
- Read the RFID tag by the RFID Reader.
- Finish.

Export related data to HA’s system.

COM11.APPEND7.A

Locations of RFID Tags

Location of RFID Tags:
(A1) Precast Facade

Notes:
1. Dimensions for the location of the RFID tag are approximate figures.
2. Alternative dimensions can be proposed to contract manager for approval.
3. Drawings are not to scale.
4. The approximate position of RFID tag should be as shown on the drawings.
5. See (A2) for detail ‘A’.
Location of RFID Tags:
(A2) Precast façade

NOTES:
1. DIMENSIONS FOR THE LOCATION OF THE RFID TAG ARE APPROXIMATE FIGURES.
2. ALTERNATIVE DIMENSIONS CAN BE PROPOSED TO CONTRACT MANAGER FOR APPROVAL.
3. DRAWINGS ARE NOT TO SCALE.
4. THE APPROXIMATE POSITION OF RFID TAG SHOULD BE AS SHOWN ON THE DRAWINGS.
Location of RFID Tags:
(B) Aluminum Window
Location of RFID Tags:
(C) Timber Door

ELEVATION

* THE DIMENSION CAN BE VARY TO PREVENT THE CLASHING WITH THE DOOR HINGE.

SOLID WOOD LIPPING
( CAUTION IN THE NAILING PROCESS OF THE SOLID WOOD LIPPING TO PREVENT DAMAGE OF THE RFID TAG )

DETAIL 'A'
( VIEW FROM TOP )
Location of RFID Tags:
(D) Metal Gateset
Location of RFID Tags:

(E) Volumetric Precast Bathroom

NOTES:
1. Dimensions for the location of the RFID tag are approximate figures. Exact locations are to be determined on factory.
2. Alternative dimensions can be proposed to contract manager for approval.
3. Drawings are not to scale.
Location of RFID Tags:
(F) Volumetric Precast Kitchen

NOTES:
1. DIMENSIONS FOR THE LOCATION OF THE RFID TAG ARE APPROXIMATE FIGURES, EXACT LOCATIONS ARE TO BE DETERMINED ON FACTORY.
2. ALTERNATIVE DIMENSIONS CAN BE PROPOSED TO CONTRACT MANAGER FOR APPROVAL.
3. DRAWINGS ARE NOT TO SCALE.
APPENDIX COM11/VIII

FIELD TRIAL AND SYSTEM ACCEPTANCE TEST OF RFID SYSTEM

COM11.APPEND8.A  RFID TAG STRUCTURE

The encoding structure for data to be stored in RFID tags should be as follows:

<table>
<thead>
<tr>
<th>Unique Tag Identifier (TID) assigned by Tag Manufacturer (Unalterable)</th>
<th>User-defined Serial Number – RFID Tag Number stored in the form of Electronic Product Code (EPC) (Write-protected)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Company Prefix</td>
<td>Individual Asset Reference</td>
</tr>
<tr>
<td>MC Prefix</td>
<td>Version</td>
</tr>
<tr>
<td>(i)</td>
<td>(ii)</td>
</tr>
</tbody>
</table>

e.g.

RFID Tag Number stored in the form of EPC in hexadecimal: **341800230101171234000001**

34180 02 3 0 101 171234 000001  
(i) (ii) (iii) (iv) (v) (vi)

**Unique Tag Identifier (TID):**  Each RFID Tag shall have a unique TID assigned by Tag manufacturer. The TID must be unique for the same manufacturer. This TID is unalterable. At least 20-bit shall be provided.

**User-defined Serial Number:** The user-defined serial number is a GIAI number in accordance with GS1 EPC GIAI-96 standard and shall be used as the RFID tag number. The GIAI number shall be stored in EPC number area in the form of Electronic Product Code. The GIAI number shall comprise of company prefix and individual asset reference of which at least 82-bit shall be provided. The user-defined serial number should be at the beginning blocks of the EPC memory for tags with more than 96-bit memory.

**Company Prefix:** Company prefix shall comprise the data of MC prefix, version and memory reserved for future extension.

**MC Prefix (i):** The MC prefix shall denote the Contractor. The coding number of the Contractor shall be in accordance with the information provided by the CM. At least 8-bit shall be provided.

**Version (ii):** The version of EPC scheme shall be defined by the Contractor. At least 4-bit shall be provided.

**Reserved (iii):** At least 4-bit reserved memory shall be provided for future extension.
Individual Asset Reference: Individual asset reference shall comprise the data of product ID and serial number in system of the building component.

Product ID (iv): The product ID shall denote the type of building components. The coding number of the type of building components shall be in accordance with the information provided by the CM. At least 10-bit shall be provided.

Contract Number (v): The HA’s Contract Number in the RFID web-based system. For example, Contractor Number 20171234 will be shown as 171234 in the RFID Tag Number. At least 24-bit shall be provided.

B.C. System Serial Number (vi): A serial number shall be defined and assigned by the Contractor or the building components manufacturer for each building component to be used in the Contract. The serial number shall not be repeated. At least 24-bit shall be provided.

User Information: The information specified in APPENDIX COM11/I to /V including Contract Number, Contractor and Type of Building Component shall be stored in the user memory in the following sequence:

e.g.
User Information: 20171234-ABCDEFG-PCF
20171234 – ABCDEFG – PCF
(1) (2) (3)
(1) HA’s Contract Number (Maximum 8 characters)
(2) Name of the Contractor (Maximum 7 characters) * Abbreviation shall be in accordance with the information provided by the CM
(3) Type of Building Components (Maximum 3 characters)
* e.g. PCF for Precast Façade
     ALW for Aluminium Window
     TID for Timber Door
     MEG for Metal Gateset
     VBK for Volumetric Precast Bathroom and / or Volumetric Precast Kitchen

Remarks:
(i) Each data field shall be separated by dash ” – ” or a space.
APPENDIX COM11/IX

FIELD TRIAL AND SYSTEM ACCEPTANCE TEST OF RFID SYSTEM

COM11.APPEND9.A RFID ALERT FUNCTION

1. Data Accuracy Alert: The system shall issue alert to RFID Project Coordinator for follow-up action when the following situations are triggered (the following criteria can be set as default and can be altered subject to the CM’s agreement):

   a. Missing entries in certain conditions:
      i. Whenever the Manufacturing / Casting Date is input according to COM11.APPEND1 to COM11.APPEND5, any missing entries listed below shall automatically trigger Alert Category I:

      | Entry Name according to COM11.APPEND1 to COM11.APPEND5 |
      |----------------------------------------------------------|
      | (1) Type of Building Component                             |
      | (2) Tag Identifier (TID)                                   |
      | (3) RFID Tag No.                                           |
      | (4) Contract Number                                        |
      | (5) Contract Description                                    |
      | (6) Contractor                                             |
      | (7) Manufacturer                                           |
      | (8) Manufacturer’s Address                                  |

      ii. Whenever the Delivery Date is input according to COM11.APPEND1 to COM11.APPEND5, any missing entries listed below shall automatically trigger Alert Category II:

      | Entry Name according to COM11.APPEND1 to COM11.APPEND5 |
      |----------------------------------------------------------|
      | (1) Serial No of Building Component                       |

      iii. Whenever any of latter workflow checkpoint’s data field according to the sequence stated in sub-clause (b)(i) below is input but the former one is missing, the system shall automatically trigger Alert Category III.

   b. Doubtful timestamps: Alert Category IV shall be automatically triggered if the following situations happen:

      i. Reverse timestamp: Whichever two of the following dates have been input according to COM11.APPEND1 to COM11.APPEND5, the occurrence of improper date reversing the latter sequence:

<pre><code>  | Sequence | Entry Name                              |
  |----------|-----------------------------------------|
  | Precast Concrete Facade according to COM11.APPEND1 |
  | (1)      | RS Inspection Date                      |
  | (2)      | Casting Date                            |
  | (3)      | Delivery Date                           |
  | (4)      | Site Arrival Date                       |
</code></pre>
<table>
<thead>
<tr>

<td></td>
</tr>
<tr>
<td>(1)</td>
<td>Manufacturing Date &amp; Delivery Date</td>
</tr>
<tr>
<td>(2)</td>
<td>Site Arrival Date &amp; Installation Date</td>
</tr>
</tbody>
</table>

| Group | the dates in the same Group below shall not be the same |
iii. Unreasonable long period: If the Delivery Date and Site Arrival Date have been input according to COM11.APPEND1 to COM11.APPEND5 and if they lapse more than 7 days.

2. Reporting System:
   a. Data Accuracy Alerts to RFID Project Coordinator:
      i. In case the situation mentioned in sub-clause (1) above is triggered, the system automatically generates email of alert sending to RFID Project Coordinator’s delegated email address for follow-up actions;
      ii. The email of alert shall contain the list of inaccurate cases generated by the system the date before the issuance of email of alert;
      iii. The list of the inaccurate cases reported shall be provided in excel format as attachment to the email of alert. The details of the subject building component as indicated in COM11.APPEND1 to COM11.APPEND5 and information triggering the alert shall be shown.
   b. Alert Summary Report for Outstanding Inaccurate Cases:
      i. The system can allow RFID Project Coordinator or authorized users to generate an Alert Summary Report which show and preview the up-to-date outstanding inaccurate cases;
      ii. The Alert Summary Report shall be provided in excel format. The details of the subject building component as indicated in COM11.APPEND1 to COM11.APPEND5, total number of each type of building component tagged, total number of each type of building component offending inaccurate cases and the breakdown of each type of Alert Category shall be shown.
APPENDIX COM11/X

COM11.APPEND10.8 RFID DEVICE REQUIREMENTS

The RFID tags and RFID readers shall meet the following requirements:

<table>
<thead>
<tr>
<th>Part</th>
<th>Requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Hard Tag</strong></td>
<td></td>
</tr>
<tr>
<td>Standards supported</td>
<td>UHF EPC Class 1 Gen 2 compatible</td>

</tr>
<tr>
<td>UHF Module Testing Software</td>
<td>Able to read User Memory and to display User Memory in character format</td>
</tr>
</tbody>
</table>

Note 1  Read range depends on the tag IC, used frequency band, tagged object, reader configuration, reader power, and the environmental conditions (moisture content, temperature, etc.)
COM12  PLASTIC FOLDING DOORS

MATERIALS

PLASTIC FOLDING DOORS

COM12.M010.8  PLASTIC FOLDING DOORS

1. Submission Requirements:
   a. At sample submission and approval stage, submit a sample of the proposed plastic folding door for the CM's approval together with all the following substantiation for the CM's information:
      i. Catalogue, brand name / model name and job reference of the product;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer;
      iv. Shop drawings and installation methods.
   b. Submit original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2)(b) for the CM's information:
      i. The date of the test shall be generally within three years prior to the notified date for commencement of the Works or at an earlier date for domestic blocks subject to the CM's consideration on the track records as maintained by the Housing Department;
      ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material to Site;
      iii. In the event that no test report has been submitted for the CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

2. Quality Requirements:
   a. Extruded plastic folding doors of robust design and smooth sliding and folding operation shall comprise of the following:
      i. Double ply door leaves with rigid joint;
      ii. Caps at top and bottom of door leaves and stiles;
      iii. Vertical twin rollers securely connected to the door leaves. For leading door leaf, two nos. vertical twin rollers shall be provided;
      iv. Plastic top rail;
      v. Closure channel for lead side and closure channel with hooks for end side;
      vi. Magnetic catch;
      vii. Plastic lock with plastic or corrosion resisting metal latch and with door handles on both sides. The lock shall be operated from inside bathroom without key. In case of emergency, the lock can be released by coin operated emergency bolt action or similar operation from outside.
   b. The quality and performance requirements are as follows:
<table>
<thead>
<tr>
<th>Items</th>
<th>Test Method</th>
<th>Acceptance Standards</th>
</tr>
</thead>
<tbody>
<tr>
<td>Endurance Test</td>
<td>To move the plastic folding door repeatedly backwards and forwards over a</td>
<td>No damage, crack, deformation and serious</td>
</tr>
<tr>
<td></td>
<td>distance equal to at least 90% of the full travel distance of the plastic</td>
<td>wear and tear</td>
</tr>
<tr>
<td></td>
<td>folding door from the closed position for 60,000 cycles with 7 second per</td>
<td></td>
</tr>
<tr>
<td></td>
<td>cycle. The operation rest for one hour at 5,000 cycle interval.</td>
<td></td>
</tr>
</tbody>
</table>
WORKMANSHIP

PLASTIC FOLDING DOORS

COM12.W010.8   PLASTIC FOLDING DOORS

1. Install the plastic folding doors in accordance with manufacturers’ instructions;
2. The clear door width shall not be less than 750 mm after the installation of the plastic folding door.
TESTING

SURVEILLANCE TESTS

COM12.T010.A SURVEILLANCE TESTS FOR PLASTIC FOLDING DOORS

1. Testing Arrangements:
   a. When Instructed, surveillance tests shall be carried out by the CM, a Direct Contractor or the Housing Department Material Testing Laboratory;
   b. Comply with the following pertaining to surveillance tests:
      i. Provide attendance on the Site;
      ii. Provide, deliver and collect samples etc. as directed by the CM.

2. Testing Samples:
   a. Provide one set of test sample from the batch of material delivered to Site;
   b. One set of test sample shall consist of one plastic folding door. Sample shall consist of the complete set of components as to be installed to ensure normal operation. Bear all cost for any replacement of samples.

3. Testing methods:
   a. As per COM12.M010 (2)(b).

4. Non-compliance:
   a. In the event that the testing samples fail to meet the testing requirements, follow either one of the following actions:
      i. Remove the representative batch off Site; or
      ii. Carry out re-test for the representative batch in accordance with the testing methods as specified in sub-clause (3) above in a laboratory that complies with the requirements stated in PRE.B9.570 on three separate sets of samples selected by the CM from the representative batch. In case any one sample fails the re-test, remove the representative batch off Site.
   b. When the representative batch of plastic folding doors is removed off Site, replace with another new batch and carry out test in accordance with the testing methods as specified in sub-clause (3) above in a laboratory that complies with the requirements stated in PRE.B9.570 for one sample selected by the CM from the replacing batch. In case of such test fails, follow action stated in sub-clause (4)(a);
   c. Bear all associated costs for the test and re-test required in sub-clauses (4)(a) and (4)(b). No extension of time will be allowed.

FIN1 PLASTERED AND RENDERED FINISHES

MATERIALS

CEMENT AND LIME

FIN1.M010.A CEMENT

1. Submission Requirements:
   a. At sample submission and approval stage, submit a sample of the proposed material for CM’s approval together with all the following substantiation for CM’s information:
      i. Catalogue, brand name, and job reference of the material;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer;
      iv. When the material is supplied, plain or prebagged, for domestic blocks, except for the ancillary facilities at lower floors, also include the following in the submission:
         - Original or a certified true copy of the ISO 9001 certificate for the manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by a certification body or by the QCM. The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS;
         - For ordinary cement in grey colour, submit also original or a certified true copy of the product conformity certificate to the "Product Conformity Certification Scheme For Cement Products" published by the Hong Kong Concrete Institute. The product conformity certificate shall be issued by a certification body accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS. If a photocopy of the product conformity certificate is submitted, it shall be certified true by the certification body or by the QCM.
   b. A summary of the test results under the audit testing of the "Product Conformity Certification Scheme For Cement Products". The summary shall be prepared by the accredited laboratory carried out the testing or the certified manufacturer. If so directed by the CM, submit a full set of the audit test reports to the CM for record;
   c. Original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2) for CM’s information unless the test requirements are covered by the scope of the "Product Conformity Certification Scheme For Cement Products":
      i. The date of the test shall be generally within three years prior to the notified date for commencement of the Works;
ii. The test reports shall either be submitted at the sample submission and approval stage as per sub-clause (1)(a), or at a time not later than the delivery of the material as per sub-clause (3)(a);

iii. In the event that no test report has been submitted for CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

2. Quality Requirements:
   a. Cement to be Portland cement type CEM I in BSEN 197-1:2000;
   b. Strength class to be 52.5N, unless otherwise specified or approved by the CM.

3. On Site Delivery Verification:
   a. At delivery stage, submit the following documents:
      i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (1)(a); one batch being the material quantity covered under each delivery note;
      ii. Delivery notes for all material delivered to Site.
   b. Carry out and submit report on the following verifications for cement upon delivery on Site. Prior to carrying out the verifications, inform the CM who may present to witness the verifications:
      i. Method:
         | Verification Items | Method               | Acceptance Standards                                      |
         |---------------------|----------------------|-----------------------------------------------------------|
         | Delivery note       | Document Check       | Information recorded in the delivery notes to be same as the material delivered. |
         | Material and        | Visual               | To Approved sample                                        |
         | packaging           |                      |                                                           |
         | Expiry Date         | Check information    | Minimum 6 months from the date of delivery               |
         |                     | printed on the       |                                                           |
         |                     | packaging            |                                                           |
      ii. Frequency:
         Carry out verification for one packaged bag per every delivery of the material made to Site under each delivery note submitted in sub-clause (3)(a).
   c. Where any of the verifications fail to meet the acceptance standards, either:
      i. Remove the representative batch off Site and one batch being the material quantity covered under each delivery note; or
      ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.

FIN1.M020.8  LIME

1. Submission Requirements:
   a. At sample submission and approval stage, submit a sample of the proposed material for the CM's approval together with all the following substantiation for the CM's information:
      i. Catalogue, brand name, and job reference of the material;
      ii. Name, address and contact person of the local supplier;
iii. Name, address and contact person of the manufacturer.

b. Original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2) for the CM's information:

i. The date of the test shall be generally within three years prior to the notified date for commencement of the Works;

ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material as mentioned in sub-clause (3)(a);

iii. In the event that no test report has been submitted for the CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

2. Quality Requirements:

a. Hydrated lime to BS 890:1995;

b. In sealed bags bearing the manufacturer's name or brand.

3. On Site Delivery Verification:

a. As per FIN1.M010 (3).

FIN1.M030.8  LIME PUTTY
Prepared in accordance with BS 5492:1990, by adding hydrated lime to water and mixing to a thick, creamy consistency, allow to stand for a minimum of 16 hours before use.

FIN1.M110.8  UNDERCOAT FOR SOLID BACKGROUND
Retarded hemihydrate gypsum browning plaster to BS 1191:Part 1:1973, Class B, Type a1, mixed with sand, 1 : 2.

FIN1.M120.8  UNDERCOAT FOR METAL LATHING
Retarded hemihydrate gypsum lathing plaster to BS 1191:Part 1:1973, Class B, Type a2, mixed with sand, 1 : 1.5.

FIN1.M130.8  FINISH COAT
Retarded hemihydrate gypsum finish plaster to BS 1191:Part 1:1973, Class B, Type b1, with or without lime putty to a maximum of 25%.

FIN1.M210.A  ACOUSTIC PLASTER

1. Submission Requirements:

a. At sample submission and approval stage, submit a sample of the proposed material for CM's approval together with all the following substantiation for CM's information:

i. Catalogue, brand name, and job reference of the material;

ii. Name, address and contact person of the local supplier;

iii. Name, address and contact person of the manufacturer;

iv. The manufacturer’s confirmation in writing that the plaster is asbestos free.
b. Submit original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2)(b) and (2)(c) for CM’s information:
   i. The date of the test shall be generally within three years prior to the notified date for commencement of the Works;
   ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material to Site;
   iii. In the event that no test report has been submitted for CM’s information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

c. Submit the manufacturer’s method statement of application.

2. Quality Requirements:
   a. A proprietary plaster including all ancillary materials shall be an approved proprietary brand to suit the specified acoustic performance;
   b. Absorption coefficients and Noise Reduction Coefficient (NRC) rating with test conducted according to ASTM C423;
   c. Fire and safety requirements:
      i. Non-inflammable and shall not sustain any combustion;
      ii. Achieve, within the cavity, Class 1 classifications when tested in accordance with BS 476-7 and an index of Performance (1) not exceeding 12 and a sub-index (i) not exceeding 6 when tested in accordance with BS 476-6.
   d. Asbestos free;
   e. Resistant to bacteria, mold and mildew;
   f. Comply with the prescribed limits of VOC content as set out in the Air Pollution Control (Volatile Organic Compounds) Regulation;
   g. Applied by an applicator authorized by the supplier or manufacturer.

3. On Site Delivery Verification:
   a. At delivery stage, submit the following documents:
      i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (1);
      ii. Delivery notes for all material delivered to Site.
   b. Carry out and submit report on the following checking for materials upon delivery on Site. Prior to carrying out the checking, inform the CM who may present to witness the checking:
      i. Method:
         | Checking Items       | Method      | Acceptance Standards                                      |
         |----------------------|-------------|-----------------------------------------------------------|
         | Delivery note        | Document Check | Information recorded in the delivery notes to be same as the material delivered |
         | Material and packaging | Visual     | To Approved sample                                      |
         | Expiry Date          | Check information printed on the delivery notes | Minimum 6 months from the date of delivery                |
      ii. Frequency:
PLASTERED AND RENDERED FINISHES

Carry out checking for one packaged bag per every delivery of materials made to Site under each delivery note submitted in sub-clause (3)(a).

c. Where any of the checking failed to meet the acceptance standards, remove the delivery off Site.

WATER

FIN1.M310.8 WATER
Provide water in accordance with PRE.B10.1210 to PRE.B10.1260. The water shall be of quality deemed suitable for concrete when tested by the methods in BS 3148.

AGGREGATES

FIN1.M402.N SAND GENERALLY
1. Use manufactured sand in compliance with FIN1.M405 for local production of cement mortar for use in plastering, rendering, floor screeding, in situ wall and floor finishes and tiling works under Worksections FIN1, FIN3, FIN4 and FIN5. Cement mortar shall include but not be limited to:
   a. Locally produced cement mortar (wet); and
   b. Locally manufactured pre-mixed mortar (dry).
2. Manufactured sand is defined as crushed fine aggregates processed to improve the particle shape and grading for enhancing the performance of the material. The processing applied to the crushed fine aggregate may include grinding, screening and cleaning;
3. Should there be genuine difficulties in using manufactured sand, e.g. supply shortages, submit justification and seek the CM’s approval for substitution of manufactured sand. If the CM is satisfied that there is genuine difficulty in procuring manufactured sand and upon the CM’s approval, clean natural sand complying with the technical specifications and other associated requirements as per FIN1.M410 shall be adopted. Bear all additional cost incurred and no extension of time will be granted;
4. For avoidance of doubt, the requirement for use of manufactured sand is not applicable to pre-mixed mortar (dry) which is factory-produced in the Mainland or other countries by weighted combination of plaster raw materials and chemicals, and is supplied to construction sites in bags.

FIN1.M405.N MANUFACTURED SAND
1. Submission Requirements:
   a. At sample submission and approval stage, submit sample(s) of the proposed manufactured sand used for site mixing, or used as aggregates in factory produced cement mortar, for the CM’s approval together with all the following substantiation for the CM’s information:
      i. Source of supply of the material;
      ii. Name, address and contact person of the supplier;
      iii. Original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance of the manufactured sand with the physical and chemical properties set out in sub-clauses (2)(c), (2)(d), (2)(e) & (2)(f). The date of the test report shall not be earlier than one year prior to the notified date for commencement of the Works. Samples shall be taken in accordance with the procedures described in Section 8 of CS3:2013, or as agreed with the CM.
2. Quality Requirements:
   a. Manufactured sand shall be crushed fine aggregates processed to improve the particle shape and grading to enhance the performance of the crushed fine aggregates. The process applied to the crushed fine aggregates may include grinding, screening and cleaning. Recycled aggregates may be used for production of manufactured sand subject to the prior approval of the CM. Aggregates from marine source and all-in aggregates shall not be used;
   b. Manufactured sand shall be:
      i. Clean, hard, durable and obtained from an Approved source;
      ii. Having an oven-dried particle density not less than 2,000kg/m³. Lightweight aggregates and heavyweight aggregates are not applicable.
   c. Geometrical Requirements:
      i. Aggregate size
         Manufactured sand for cement mortar is limited to fine aggregates with an upper sieve size of not larger than 5.0 mm. Depending on the thickness of mortar application and the surface finish specified, select upper sieve size of aggregates between 5.0 mm and 2.36 mm. Do not use coarse aggregates unless approved otherwise;
      ii. Grading
         - The grading of the manufactured sand; i.e. C (coarse graded), M (medium graded) or F (fine graded), as determined in accordance with Section 10 of CS3:2013, shall be declared and documented by the manufactured sand producer or supplier. This grading shall comply with both the overall limits and the limits for the declared grading given in Table 1 and Table 2 below for fine aggregates of size 0/5.0 mm and 0/2.36 mm respectively. Not more than one in ten consecutive samples shall have a grading outside the limits for the declared grading;

</tbody>
</table>
- Manufactured sand for cement mortar not incorporating lime shall conform to the grading limits set out in Table 1, whilst manufactured sand for cement mortar incorporating lime shall conform to the grading limits set out in Table 2. Lime shall be hydrated lime to BS EN 459-1, delivered in sealed bags bearing the manufacturer’s name or brand;

- Manufactured sand of grading C (coarse graded) shall not be used unless prior approval from the CM is obtained.

iii. Fines content

The amount of material passing the 75 µm test sieve, as determined in accordance with Section 10 of CS3:2013, shall not exceed the quantities given in Table 3;

Table 3 - Limit for fines content

<table>
<thead>
<tr>

<td>1.0</td>
</tr>
</tbody>
</table>

v. Angularity

The shape of manufactured sand shall be sub-angular, sub-rounded or rounded. Angular manufactured sand is unacceptable.

d. Physical Requirements:

i. Particle Density

The oven-dried particle density of manufactured sand, as determined in accordance with Section 17 of CS3:2013, shall not be less than 2,000 kg/m³;

ii. Durability

- Drying Shrinkage

The drying shrinkage of the manufactured sand, as determined in accordance with Section 20 of CS3:2013, shall not exceed 0.075%;

- Alkali-silica Reactivity
The linear expansion of mortar-bars immersed in NaOH solution at elevated temperature, as determined in accordance with Section 22 of CS1:2010, shall be evaluated using Equation 22-1 of CS1:2010. The potential alkali-reactivity of manufactured sand can then be obtained from Table 10 of CS1:2010. Alternatively, the concrete prism test in accordance with Section 23 of CS1:2010 may also be used and the potential alkali-reactivity of manufactured sand can then be obtained from Table 13 of CS1:2010. Manufactured sands that fall into the alkali “Reactive” category shall not be used unless prior approval of the CM is obtained.

e. Chemical Requirements:
   i. Chlorides - Water-soluble Chloride Ion Content
      - The water-soluble chloride ion content of natural aggregates of the manufactured sand shall be determined in accordance with Cl. 21.3 of Section 21 of CS3: 2013;
      - Acid-soluble Chloride Ion Content
         The acid-soluble chloride ion content of recycled aggregates of the manufactured sand shall be determined in accordance with Cl. 21.4 of Section 21 of CS3: 2013;
      - Chloride Ion Content
         The total chloride ion contents of natural aggregates and recycled aggregates of manufactured sand shall not exceed 0.03% by mass.

   ii. Sulphur Containing Compounds
      - Acid-Soluble Sulphate Content;
      - The acid-soluble sulphate content of natural aggregates of manufactured sand, as determined in accordance with Clause 21.5 of Section 21 of CS3:2013, shall not exceed 0.8% by mass;
      - The acid-soluble sulphate content of recycled aggregates of manufactured sand, as determined in accordance with Clause 21.5 of CS3:2013, shall not exceed 1.0% by mass;
      - Total Sulphur Content
         The total sulphur content of natural aggregates of manufactured sand, as determined in accordance with Cl. 21.6 of Section 21 of CS3:2013, shall not exceed 1.0% by mass.

f. Other constituents:
   i. Manufactured sand shall be clean and free of organic substances. The manufactured sand supplier or mortar producer shall demonstrate that the supplied manufactured sand is clean and free of organic substances or alternatively the presence of organic substances does not affect the stiffening or hardening of the mortar;

   ii. The presence of organic substances in the form of humus shall be determined in accordance with Cl.21.7 of Section 21 of CS3:2013. Where the test result under Cl.21.7 is negative, the manufactured sand shall be considered to be free of organic substances. Otherwise, the manufactured sand shall be further tested in accordance with Section 22 of CS3:2013 to assess the effect of organic substances on the stiffening time and compressive strength of mortar. The organic substances to be of such proportion that:
- the stiffening time of mortar test specimens does not increase by more than 120 minutes; and
- the 28-day compressive strength of mortar test specimens does not decrease by more than 20%.

3. On Site Delivery Verification:
   a. At delivery stage, submit the following documents:
      i. Written confirmation that the material delivered to Site conforms with the Approved sample(s) submitted under sub-clause (1);
      ii. Delivery notes for all material delivered to Site;
      iii. Reports giving test results for the physical and chemical properties of manufactured sand as set out in sub-clauses (2)(c)(ii), (2)(d) and (2)(e), to be submitted every three months starting from the first delivery of manufactured sand, or mortars produced with manufactured sand as aggregates, unless agreed otherwise by the CM. The issue date of test reports shall be within three months for grading and six months for other properties counting from the date of submission;
      iv. In the event that no test report as required in sub-clause (3)(a)(iii) has been submitted when materials are delivered to Site, or any of the test results fail to meet the specified requirement, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.
   b. Submit the following document for verification upon delivery on Site:
      i. Method
         | Verification Items                        | Method                              | Acceptance Standards                      |
         | Supplier’s Certificate of Origin and delivery note | Check information printed on the delivery notes | Supplier same as the supplier declared as per sub-clause (1)(a)(ii) |
         | Reports for manufactured sand as per sub-clause (3)(a)(iii) | Document check | Compliance with sub-clauses (2)(d)(ii), (2)(e) and (2)(f) |
      ii. Frequency
         Carry out one set of verification for the delivery of manufactured sand or mortar containing manufactured sand as aggregate to Site under a delivery note submitted in sub-clause (3)(a) as follows:
         | Verification Items                        | Frequency                          |
         | Supplier’s Certificate of Origin and delivery note | Every batch                         |
         | Reports for manufactured sand as per sub-clause (3)(a)(iii) | Once every three months starting from the first delivery of manufactured sand or mortar |
   c. Where any of the verifications fail to meet the acceptance standards, remove the delivery off Site.

FIN1.M410.A SAND OTHER THAN MANUFACTURED SAND

1. Submission Requirements:
   a. At sample submission and approval stage, submit a sample of the proposed material for the CM's approval together with all the following substantiation for the CM's information:
      i. Source of supply of the material;
ii. Name, address and contact person of the supplier.

b. Submit original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2) for the CM's information:
   i. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material to Site;
   ii. In the event that no test report has been submitted for the CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

2. Quality Requirements:
   a. Clean, hard, durable crushed rock, gravel or clean sand; free from salt and its quality shall comply with the "quality of sand" as stated in BS 1199:1976 Amendment No.3;
   b. The quantity of clay, fine silt and fine dust present, when determined in accordance with BS812: Section 103.1:1985, must not exceed 10% by weight.

3. On Site Delivery Verification:
   a. At delivery stage, submit the following documents:
      i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (1);
      ii. Delivery notes for all material delivered to Site.
   b. Submit the following document for verification upon delivery on Site:
      i. Method:

<table>
<thead>
<tr>
<th>Verification Items</th>
<th>Method</th>
<th>Acceptance Standards</th>
</tr>
</thead>
<tbody>
<tr>
<td>Supplier’s Certificate of Origin and delivery note</td>
<td>Document Check</td>
<td>Source of origin in the Certificate of Origin and delivery note are the same</td>
</tr>
</tbody>
</table>

   ii. Frequency:
   Carry out verification for every delivery of materials made to Site under each delivery note submitted in sub-clause (3)(a).

   c. Where any of the verifications fail to meet the acceptance standards, remove the delivery off Site.

FIN1.M420.A  GRADING OF SAND FOR MIXES WITHOUT LIME
1. When manufactured sand is used as aggregates, comply with the grading requirements of manufactured sand under FIN1.M405 (2)(c) for mixing with other constituents;
2. When sand other than manufactured sand is used;
   a. The grading of sand shall comply with Type A under Table 1 of BS 1199:1976 Amendment No.3;
   b. Sand other than 6.30 mm in size, whose grading falls outside the limits as set out in the table stated in sub-clause (2a) above by a total amount of not exceeding 5% will be accepted.

FIN1.M430.A  GRADING OF SAND FOR MIXES WITH LIME
1. When manufactured sand is used as aggregates, comply with the grading requirements of manufactured sand under FIN1.M405 (2)(c) for mixing with other constituents;
2. When sand other than manufactured sand is used;
a. The grading of sand shall comply with Type B as stated under Table 1 of BS 1199:1976 Amendment No.3;
b. Sand other than 6.30 mm in size, whose grading falls outside the limits as set out in the table as stated in sub-clause (2a) above by a total amount of not exceeding 5% will be accepted.

FIN1.M440.A  EXPOSED AGGREGATE RENDER/SHANGHAI PLASTER
1. Shanghai plaster shall be applied in two coats, each 10 mm thick;
2. The base coat shall consist of cement and sand in the proportions 1:3 by volume;
3. The finishing coat shall consist of cement and granite, white stone or marble chippings in the proportions 1:1 by volume. The chippings shall be:
a. Graded from 3 mm to 5 mm;
b. Free from dust;
c. In the proportions given in the following table for the colour of finish required:

<table>

FIN1.M450.8  PAPER PULP
Do not use.

FIN1.M460.C  READY-MIXED (DRY) MORTARS AND READY-TO-USE (WET) MORTARS FOR RENDERING AND PLASTERING
1. Terminology:
a. Ready-mixed mortar refers to dry bagged mortar which is ready mixed only requiring the addition of water for applications where flexibility of supply is demanded;
b. Ready-to-use mortar refers to factory produced mortar which is supplied ready for use.
2. Submission Requirements:
   a. At sample submission and approval stage, submit a sample of the proposed material for the CM's approval together with all the following substantiation for the CM's information:
      i. Catalogue, brand name, and job reference of the material;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer;
      iv. When the material is supplied for domestic blocks, except for the ancillary facilities at lower floors, also include the following in the submission:
- Original or a certified true copy of the ISO 9001 certificate for the manufacturing plant for the CM's inspection. If a copy of the ISO certificate is submitted, it shall be certified true by a certification body or by the QCM. The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.

b. Original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (3) for the CM's information:
   
i. The date of the test shall be generally within three years prior to the notified date for commencement of the Works or at an earlier date for domestic blocks subject to the CM's consideration on the track records as maintained by the Housing Department;
   
ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material as mentioned in sub-clause (4)(a);
   
iii. In the event that no test report has been submitted for the CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

c. Manufacturer’s written confirmation for the CM's information providing the Declared Value for the workable life for the ready-to-use (wet) mortar, all as defined under BS EN 998-1;

d. When the ready-mixed or ready-to-use mortars for use in plastering, rendering and other architectural finishing works are locally produced, manufactured sand in lieu of river sand shall be used. Comply with the submission requirements for manufactured sand as per FIN1.M405 (1);

e. Ready-mixed mortar used as lining materials for water tanks in direct contact with potable water shall comply with the relevant submission requirement as per PLU1.M1110.

3. Quality Requirements:
   
a. To BS EN 998-1:2003, including requirements of "Evaluation of conformity" on Initial type tests and Factory Production Control;
   
b. The properties and performance requirements shall be type GP (General purpose rendering / plastering mortar) for hardened mortar as specified in BS EN 998-1: 2003 when used internally:

<table>

</tbody>
</table>
c. Mortar for structures for potable water shall be non-toxic, shall not promote microbial growth, shall not impart a taste, odour, cloudiness or discolouration to the water after disinfection and washing out at completion stage, in compliance with the requirements of the Water Authority;

d. Ready-mixed mortar used as lining materials for water tanks in direct contact with potable water shall comply with the relevant quality requirement as per PLU1.M1110.

4. On Site Delivery Verification:
   a. At delivery stage, submit the following documents:
      i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (2);
      ii. Delivery notes for all material delivered to Site.

   b. Carry out and submit report on the following verifications upon delivery on Site. Prior to carrying out the verifications, inform the CM or his representatives who may present to witness the verifications:
      i. Method:

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

   ii. Frequency:
      - For ready-mixed mortar, one set of verification should be carried out for one packaged bag per every delivery of ready-mixed mortar made to Site under each delivery note submitted in sub-clause (4)(a);
      - For ready-to-use mortar, one set of verification should be carried out for the delivery of mortar by mixer truck to Site in a day under the delivery note submitted in sub-clause (4)(a).

   c. Where any of the verifications fail to meet the acceptance standards, remove the delivery off Site;

   d. When the ready-mixed or ready-to-use mortars for use in plastering, rendering and other architectural finishing works are locally produced, manufactured sand in lieu of river sand shall be used. Comply with the on site delivery verification requirements for manufactured sand as per FIN1.M405 (3).
RENDERS

FIN1.M510.8  UNDERCOATS GENERALLY
Cement and sand or granite fines, 1 : 3.

FIN1.M520.8  RENDERS FOR TILE AND MOSAIC FINISHES
To BS 5385:Part 2:1991, cement and sand or granite fines, 1 : 3.

FIN1.M530.8  FINISH COAT FOR INTERIOR PAINT FINISHES
Cement, lime and sand or granite fines, 1 : 3 : 6.

FIN1.M540.8  FINISH COAT FOR EXTERIOR PAINT FINISHES
Cement and sand or granite fines, 1 : 3.

FIN1.M550.8  FINISH COAT FOR EXPOSED AGGREGATE RENDER/SHANGHAI PLASTER
Cement and stone chippings, 1 : 1:
1. Colour: as shown on Drawings;
2. Cement: colour as appropriate for required finish colour (see table to clause FIN1.M440).

FIN1.M560.8  PFA IN CEMENTITIOUS RENDERS
Cementitious render mixes containing a blend of Ordinary Portland Cement and Pulverized Fuel Ash may be offered as a substitute for those specified in this Worksection provided that:
2. Not more than 25% by weight of the cementitious content of the proposed mix comprises PFA;
3. The physical properties and workability of the proposed mix can be demonstrated to be equivalent to or better than those of the specified mixes to the CM's satisfaction;
4. Setting and hardening times will not be so affected as to compromise the construction programme;
5. The PFA cement mortar is a manufactured product pre-mixed off-site and delivered in bulk by mixer trucks to Site;
6. No site mixing is allowed and storage of PFA on Site is not permitted.

LIME PLASTERS

FIN1.M610.8  UNDERCOATS FOR SOLID BACKGROUNDS
Cement, lime, sand, 1 : 1: 4.

FIN1.M620.8  UNDERCOATS FOR METAL LATHING
Cement, lime, sand, 1 : 2: 6.

FIN1.M630.8  FINISHING COAT
Cement, lime and sand, 1 : 1 : 4.

FIN1.M640.8  PAPER PULP PLASTER
Do not use.
PLASTERED AND RENDERED FINISHES

FIN1 > MATERIALS

SPECIALIST RENDERS

FIN1.M710.8 DECORATIVE FINISHES
Proprietary products obtained from Approved manufacturers.

ADMIXTURES FOR CEMENTITIOUS RENDERS

FIN1.M810.8 GENERAL
Ensure that the chloride ion content of admixtures for renders containing embedded metal does not exceed 2% by mass of the admixture or 0.03% by mass of the cement, whichever is the less.

FIN1.M820.8 PIGMENTS FOR PORTLAND CEMENT AND PORTLAND CEMENT PRODUCTS
A proprietary product to BS EN 12878:1999.

FIN1.M830.8 ACCELERATING ADMIXTURES

FIN1.M840.8 RETARDING ADMIXTURES

FIN1.M850.8 WATER REDUCING ADMIXTURES

FIN1.M860.8 SUPERPLASTICISERS

FIN1.M870.8 WATER RESISTING ADMIXTURE
1. A proprietary product;
2. The water resisting admixture shall comply with the following:
   a. Do not cause any hazard or injury to the operatives;
   b. Compatible with all other contacting materials.
3. Materials for construction of components in contact with potable water shall be non-toxic, shall not promote microbial growth and shall not impart a taste, odour, cloudiness or discolouration to the water after disinfection and washing out at completion stage in compliance with the requirements of the Water Authority.
4. Store the material in a cool, well ventilated and covered storage accommodation.

FIN1.M880.A WATER RESISTING ADMIXTURE FOR TANKS FOR POTABLE WATER
1. Water resisting admixture used as lining materials for water tanks in direct contact with potable water shall comply with:
   a. Quality requirements as FIN1.M870; and
   b. Relevant quality requirement as per PLU1.M1110.
2. Submit manufacturer’s written confirmation to declare that the admixture is safe for use for construction of components in contact with potable water, and comply with relevant submission requirement as per PLU1.M1110.
ANCILLARY MATERIALS

FIN1.M910.8 SPATTERDASH
1. For concrete substrate that has been set and cured, the spatterdash shall be cement and coarse sand or granite fines, 1:2, mixed with an Approved proprietary bonding agent in accordance with the manufacturer's recommendations for the application;
2. When a proprietary surface applied bond coat is proposed by the Contractor as an alternative to replace the spatterdash bonding compound in sub-clause (1) and approved by the CM, its application procedures as recommended by the manufacturer must be strictly followed. Take extreme care during application and inspection of the work.

FIN1.M920.8 BONDING AGENT
An Approved proprietary product:
1. Compatible with both the background and the subsequent application;
2. Designated as suitable for internal or external use;
3. Either for surface application or integral mixing;
4. In compliance with the prescribed limits of VOC content as set out in the Air Pollution Control (Volatile Organic Compounds) Regulation.

FIN1.M930.8 PLAIN EXPANDED METAL LATHING
To BS 1369:Part 1:1987:
1. Reference number: L3, expanded metal lath G275;
2. Size: minimum 5 mm across short way of mesh;
3. Weight: not less than 1.6 kg/m² ± 15%;

FIN1.M940.8 RIBBED EXPANDED METAL LATHING
To BS 1369:Part 1:1987:
1. Reference number: RL5, ribbed lath G275;
2. Size: minimum 5 mm across short way of mesh;
3. Weight: not less than 2.25 kg/m² ± 15%;

FIN1.M950.8 BEADS AND STOPS
1. Stainless steel corner beads, plaster stops and movement joint stops with expanded metal wings and obtained from an Approved manufacturer;
2. As an alternative to sub-clause (1) above, proprietary plastic beads or stops for use in internal areas may be proposed subject to CM's approval.

FIN1.M970.8 WIRE NETTING
To BS 1485:1983 and:
1. Mesh size: 25 mm;
2. Wire designation: 19;

FIN1.M980.8 STAPLES
FIN1.M990.8  TYING WIRE
1.22 mm diameter annealed steel wire, galvanized to BS 443:1982.

FIN1.M995.8  COMPRESSIBLE JOINT FILLER
WORKMANSHIP

GENERAL

FIN1.W010.8 STANDARDFIN1.W010.8
Generally comply with the following:
1. BS 5262:1991 in respect of external rendering;
2. BS 5492:1990 in respect of internal plastering.

FIN1.W020.8 CONSTRUCTION MOCK-UP
Construct a Construction Mock-up of around 5 m² as PRE.B9.440 for each different type of plastered and rendered surfaces showing the workmanship of each construction layer including background preparation through to the installation of finishes, including E&M works and accessories etc., as directed by CM.

FIN1.W030.8 READY-MIXED (DRY) MORTAR AND READY-TO-USE (WET) MORTAR FOR PLASTERING AND RENDERING APPLICATION
1. Submit method statement detailing the application procedure of ready-mixed and ready-to-use plaster or render finishes including preparation of the substrate for receiving plaster or render finishes for Approval;
2. Demonstrate the application method at the Construction Mock Up in accordance with FIN1.W020 before use.

FIN1.W040.8 MOVEMENT JOINTS
1. Construct movement joints as shown on the Drawings and as specified in Worksection CON6;
2. Ensure the joint cavity all the way back to the concrete substrate is free from mortar and incompressible material;
3. Ensure the movement joints extend through the combined depth of the tiles, tile bedding and render substrate.

FIN1.W050.8 HANDLING AND STORAGE OF GYPSUM PLASTERS
Ensure that gypsum plaster is delivered to Site in sealed containers and:
1. Store in weathertight structures with a raised floor;
2. Store different types of consignments separately;
3. Use plaster in the order of delivery.

FIN1.W060.8 ADMIXTURES
Mix and apply admixtures in accordance with manufacturer's instructions.

BACKGROUND PREPARATION FOR PLASTER AND RENDERING

FIN1.W110.8 GENERAL
To BS 5385:1995 and BS 8000:Part 10:1995 and comply with the following:
1. Use high pressure water jet to remove efflorescence, laitance, oil, formwork release agent, grease, dirt and loose materials from the concrete surfaces prior to application of subsequent finishes;
2. Allow minimum 4 weeks continuous drying out for new concrete wall after curing before cement sand plastering / rendering commence;
3. Allow additional 2 weeks drying out after application of cement sand plastering / rendering to concrete wall before tiling. Extend drying time in damp weather conditions and adjust programme to ensure satisfactory installation;
4. Protect the prepared concrete surfaces from the weather and contamination from concreting run-offs.

FIN1.W120.8 CONCRETE BACKGROUNDS GENERALLY
Hack off extraneous concrete projections.

FIN1.W130.8 PREPARING HARDENED CONCRETE TO RECEIVE CEMENTITIOUS RENDERS
Either:
1. Prepare surface by:
   a. Shortly before applying the finish, thoroughly hacking the concrete surface to remove any laitance or, where Approved, with an electric spade;
   b. Thoroughly cleaning and wetting the surface as required, to adjust its suction, before applying finish and remove surplus water;
   c. Brushing neat cement slurry into the damp surface immediately before applying the finish; or
2. Apply bonding agent in accordance with the manufacturer's recommendations.

FIN1.W140.8 PREPARING HARDENED CONCRETE TO RECEIVE GYPSUM PLASTERS
Apply bonding agent in accordance with the manufacturer's recommendations.

FIN1.W150.8 JUNCTIONS BETWEEN DISSIMILAR SOLID BACKGROUNDS
At junctions between different backgrounds, like concrete and blockwork, or where the same finish is to be applied to surfaces in differing planes, fix a strip of steel lathing as FIN1.W310.

FIN1.W160.8 JUNCTIONS BETWEEN PANEL WALL PARTITIONS AND OTHER BACKGROUNDS
As MAS1.W1140.

FIN1.W170.8 DUBBING OUT
When necessary to correct inaccuracies in the background, dub out:
1. In layers of a maximum thickness of 10 mm;
2. In the same mix as the first coat;
3. Allowing each coat to dry out before applying the next;
4. Cross scratching each coat to provide a key for the next;•
5. To a total thickness not exceeding 25 mm.

APPLYING SPATTERDASH TO NEW CONCRETE

FIN1.W210.8 APPLYING SPATTERDASH
1. Apply spatterdash to concrete vertical surfaces and soffits immediately after striking formwork;
   a. Throw on spatterdash to give an overall coverage of thin coating of rough texture such that;
      i. Uncovered areas do not exceed 0.01 m²;
ii. Spacing between strokes is less than 50 mm;
iii. Uncovered area at wall edges is less than 50 mm.
b. After hardening and curing, use high pressure water jet to clean off dust and loose particles before applying subsequent finishing coat.

2. Use spatterdash as late-applied mechanical key to concrete with bonding agent if late application of spatterdash is proposed by the Contractor and subject to satisfaction of the CM.

FIN1.W240.A JOINT INSPECTION TO SPATTERDASH
1. Carry out joint inspection with the CM or his representatives to minimum 10% of spatterdash on floor to floor basis;
2. After hardening and curing, check the adhesion of the spatterdash coat by brushing with a stiff wire brush;
3. Where spatterdash is easily removed, completely remove loosened spatterdash. Re-apply and re-inspect after 7 days;
4. Do not start subsequent works on any affected area until re-inspection is to CM's satisfaction.

FIXING STEEL LATHTING

FIN1.W310.A FIXING METHODS
Fix taut, with the long dimension of mesh running at right angles to the supports where provided, and:
1. To concrete, brickwork, blockwork or cement-sand backfilling, with 40 mm long nails or staples or with explosive cartridges when agreed by the CM or his representatives at 300 mm centres staggered and fitted with appropriate sized washers;
2. To timber, with staples at not more than 100 mm centres;
3. To steelwork, with tying wire at not more than 100 mm centres;
4. Extend at least 150 mm to either side of the junction with the fixing methods as above at junctions between dissimilar solid backgrounds or discontinuous constructions.

FIN1.W320.8 LAPS
Secure laps with tying wire at 75 mm centres and lap:
1. 25 mm minimum, generally;
2. 50 mm where end laps occur between supports.

FIN1.W330.8 CUT ENDS
Apply one coat of bituminous paint or zinc rich primer to cut ends.

MIXING PLASTERS AND RENDERS

FIN1.W410.8 GAUGE BOXES
Measure constituents by volume, using clean gauge boxes of sizes to suit the volumes required.

FIN1.W420.A MIXING RENDERS
To BS 8000:Part 10:1995:
1. By mechanical mixer or, where Approved, by hand on a clean, close-boarded platform;
2. Cement: manufactured sand ratio of 1:3 by volume in general unless otherwise specified;
3. Avoid too strong or too wet render mix which will increase the render drying shrinkage;
4. Without over-mixing renders containing plasticizers;
5. Dry constituents before mixing with lime putty or water;
6. Mixing render shall be in accordance with BS 8000: Part 10: 1995. Too strong or too wet render mix that will increase the render drying shrinkage should be avoided;
7. Using the minimum amount of water to achieve the required consistency and workability; making due allowance for the moisture content of manufactured sand (or sand). The water: cement ratio should be not more than 3:5 by volume.

**FIN1.W430.8 MIXING GYPSUM PLASTERS**

To BS 8000:Part 10:1995:
1. Mix plasters for hand application by hand unless otherwise Approved;
2. Allow for the moisture content of sand in sanded mixes;
3. Do not use admixtures.

**FIN1.W440.8 LIMITS ON USE OF MIXED MATERIAL**

1. Use within one hour of mixing, with the exception of those added with retarding admixture, and:
   a. Do not use after the initial set has taken place; and
   b. Do not reconstitute material.
2. Submit compatibility report and method statement if use of pulverised fuel ash is proposed.

**FIN1.W450.8 USE OF SUPERPLASTICIZERS**

Use strictly in accordance with the manufacturer's recommendations and adjust the mix proportions of the render accordingly.

**APPLYING RENDER**

**FIN1.W510.8 KEYING UNDERCOATS**

Cross scratch undercoats to provide key for each subsequent coat.

**FIN1.W520.8 RENDER FOR TILE OR MOSAIC FINISH**

To BS 5385:Part 1:1995 and BS 5385:Part 2:1991 with particular attention to the following:

1. For render applied in a single coat:
   a. For manual application, to a maximum thickness of 10 mm; for mechanical applications, comply with manufacturer's recommendations;
   b. Where localized undulation is greater than 10 mm, apply in two coats as specified in sub-clause (2) below for manual applications.
2. For render applied in more than one coat adopting manual application:
   a. Undercoat not exceeding 10 mm thick;
   b. Second coat not exceeding 10 mm thick and should not be thicker than the undercoat;
   c. Comb undercoat to provide the key for the second coat, and allow undercoat to harden and dry out as stated in FIN1.W1210;
d. When the total thickness exceeds 20 mm, add metal lathing in the undercoat to CM's approval.

3. For subsequent tile finishes with cement sand bedding, comb the top coat of the render lightly to form the key; and for tile finishes with cementitious adhesive bedding, provide the top coat with wood float finish;

4. For subsequent mosaic finishes with cement sand bedding or cementitious adhesive bedding, provide the top coat of the render with float finish by polystyrene or wood to form the key.

**FIN1.W530.8**  
**RENDER FOR PAINT FINISH**

Apply in two coats as follows:

1. Undercoat not exceeding 10 mm thick scratched to form key;
2. Finish coat to be one of the following as specified in Drawings:
   a. Finish coat for interior paint finishes as FIN1.M530, 5 mm thick trowelled smooth;
   b. Finish coat for exterior paint finishes as FIN1.M540, not exceeding 10 mm thick trowelled smooth in accordance with clause FIN1.W910.

**FIN1.W540.8**  
**WATERPROOF RENDERING FOR STANDARD DOMESTIC**

Incorporate water resisting admixture into render strictly in accordance with the manufacturer's recommendations and apply in two coats as follows:

1. Undercoat not exceeding 10 mm thick;
2. Finish coat:
   a. Not exceeding 10 mm thick with the surface lightly scratched to form a key where tiles are to be fixed; or
   b. As FIN1.M540, 5 mm thick trowelled smooth where paint is to be applied.

**FIN1.W550.8**  
**EXPOSED AGGREGATE RENDER/SHANGHAI PLASTER**

Apply in two coats, as follows:

1. Undercoat 10 mm thick;
2. Finish coat 10 mm thick;
3. Before the finish coat has set, scrub off the surface to expose the aggregate.

**APPLYING LIME PLASTERS**

**FIN1.W610.8**  
**KEYING UNDERCOATS**

Cross scratch undercoats to provide a key for subsequent coats.

**FIN1.W620.8**  
**SOLID BACKGROUNDS**

1. Apply in two coats on walls as follows:
   a. Undercoat not exceeding 10 mm thick;
   b. Cement, lime, sand finishing coat, 5 mm thick.
2. Apply in one coat to soffits as FIN1.M630 not exceeding 10 mm.

**FIN1.W630.8**  
**METAL LATHING INTERNALLY**

Apply in three coats to a total thickness not exceeding 13 mm measured from the face of the lathing as follows:

1. First and second undercoats to a thickness not exceeding 8 mm;
2. Finish coat of cement, lime, sand, 5 mm thick, or of gypsum plaster gauged with lime, 5 mm thick, and brought to a smooth finish.
FIN1.W640.8 EXTERNAL ANGLES
Finish external angles, except those to beam soffits, with returns 50 mm wide in Keene's cement, on a cement sand render backing as FIN1.M510, with a slightly rounded arris.

APPLYING GYPSUM PLASTER

FIN1.W710.8 KEYING UNDERCOATS
Cross scratch undercoats to provide a key for subsequent coats.

FIN1.W720.8 SOLID BACKGROUNDS
Apply in two coats to a total thickness not exceeding 10 mm, as follows:
1. Undercoat;
2. Finish coat trowelled to a smooth finish.

FIN1.W730.8 METAL LATHING
Apply in three coats to a total thickness not exceeding 13 mm, measured from the outer face of the lathing, as follows:
1. First and second undercoats;
2. Finish coat trowelled to a smooth finish.

ARRISES, BEADS, STOPS AND CORNICES

FIN1.W810.8 ARRISES
Form arrises to be square or pencil round as shown on Drawings.

FIN1.W820.8 FIXING BEADS AND STOPS
Fix corner beads, plaster stops and movement joint stops with nails, staples or plaster dabs and trowel the finish coat flush with the outer edge of the beads or stops to manufacturer's recommendations.

FIN1.W830.8 CORNICES
Form coved or moulded cornices either:
1. With a backing of cement, sand render, 1 : 3 and a finish coat identical to that used on the adjacent wall, finished with a steel template, to a smooth finish; or
2. With pre-formed sections, fixed in accordance with the manufacturer's recommendations.

SURFACE FINISHES

FIN1.W905.8 GENERAL
Finish plaster and render the surfaces as shown on the Drawings and in accordance with the following clauses in this sub-section to the same standard of workmanship as Approved in the Construction Mock-up specified in PRE.B9.440.

FIN1.W910.8 SMOOTH FINISH
Finish with a steel trowel to a smooth surface, free of blemishes.

FIN1.W920.8 WOOD FLOAT FINISH
Finish with a dry wood float to give an overall even surface.
FIN1.W930.8 TEXTURED FINISH
Finish by stippling, scraping, brushing with a stiff brush or other means to produce an Approved textured surface.

FIN1.W940.8 ROUGH CAST FINISH
Throw a wet mix of aggregate and cementitious material onto the undercoat.

FIN1.W950.8 MACHINE APPLIED, TEXTURED FINISH
Apply in accordance with the manufacturer's recommendations.

ACOUSTIC PLASTER

FIN1.W1010.8 MIXING AND APPLYING
Mix and apply by special spray equipment:
1. In accordance with the manufacturer's recommendations;
2. Number of coats and total thickness: as shown on Drawings.

SPECIALIST RENDERS

FIN1.W1110.8 APPLICATION
Employ an Approved firm for the application of all resin, epoxy, urethane and acrylic based decorative finishes.

DRYING OUT AND CURING

FIN1.W1210.8 UNDERCOATS
Allow undercoats to dry out for 7 days before the application of a subsequent coat.

FIN1.W1220.8 PREMATURE DRYING
Prevent excessively rapid or localised drying out of wall or ceiling finishes by an Approved means.

ACCURACY AND TOLERANCES

FIN1.W1310.8 GENERAL
Comply with the requirements of Appendix H "Schedule of Tolerances" to this Specification and:
1. Finish wall and ceiling finishes to a true plane and to the correct line and level;
2. Ensure angles are true right angles unless otherwise required, with walls and reveals plumb and square.

PROTECTION AND CLEANLINESS

FIN1.W1410.8 PROTECTION OF EXISTING WORK
Protect existing work with boards, dust sheets and the like. Clean any droppings on existing work off immediately.

FIN1.W1420.8 PROTECTION OF NEW FINISHES
Prevent all finishes from discolouration or damage until completion.
FIN.W1430.8  CLEANLINESS
Keep plant and tools clean and free from all traces of previous mixes.
TESTING

SURVEILLANCE TESTS

FIN1.T010.A

SURVEILLANCE TESTS FOR READY-MIXED (DRY) MORTAR FOR PLASTERING AND RENDERING

1. Test Arrangements:
   a. When instructed, surveillance tests shall be carried out by the CM, a Direct Contractor or the Housing Department Material Testing Laboratory;
   b. Comply with the following pertaining to surveillance tests:
      i. Provide attendance on the Site;
      ii. Provide, deliver and collect samples etc. as specified or as directed by the CM.

2. Testing Samples:
   a. Provide one set of test sample from the batch of material delivered to Site under the delivery note as specified in FIN1.M460 (3)(a) or as instructed by the CM. One batch being the material quantity covered under each delivery note;
   b. One set of test sample shall consist of one packaged bag of ready-mixed mortar.

3. Testing methods:
   As per FIN1.M460 (2)(b).

4. Non-compliance:
   a. In the event that the testing samples fail to meet the testing requirements, follow either one of the following actions:
      i. Remove the representative batch off Site; or
      ii. Carry out re-test for the representative batch in accordance with the testing methods as specified in sub-clause (3) in a laboratory that complies with the requirements stated in PRE.B9.570 on three separate sets of samples selected by the CM from the representative batch. In case of any one sample fails the re-test, remove the representative batch off Site.
   b. When the representative batch of ready-mixed mortar is removed off Site, replace with another new batch and carry out test in accordance with the testing methods as specified in sub-clause (3) in a laboratory that complies with the requirements stated in PRE.B9.570 for one sample selected by the CM from the replacing batch. In case of such test fails, follow action stated in sub-clauses (4)(a);
   c. Bear all associated costs for the test and re-test required in sub-clauses (4)(a) and (4)(b). No extension of time will be allowed.
FIN2 PLASTERBOARD

MATERIALS

PLASTERBOARD

FIN2.M005.8 SUBMISSIONS
1. An Approved proprietary plasterboard system;
2. Submission Requirements:
   a. At sample submission and approval stage, submit a sample of the proposed materials for the CM's approval together with all the following substantiation for the CM's information:
      i. Catalogue, brand name, and job reference of the materials;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer.
   b. Original or a certified true copy of the ISO 9001 certificate for the manufacturing plant for the CM's inspection. If a copy of the ISO certificate is submitted, it shall be certified true by a certification body or by the QCM. The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS;
   c. Original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the specified quality requirements for the CM’s information. The date of the test shall be generally within five years prior to the notified date for commencement of the Works;
   d. Submit shop drawings of the plasterboard System, including fixing and jointing details, and method statement for Approval six months prior to fabrication.

FIN2.M010.8 GYPSUM PLASTERBOARD
1. To BS 1230:Part 1:1985 with square edges;
2. Thickness: as shown on Drawings.

STUDDING

FIN2.M110.8 TIMBER STUDDING
1. Timber quality as Worksection TIM1;
2. Design partition width: as shown on Drawings;
3. Size and arrangement of studding as per manufacturer’s recommendations.

FIN2.M120.8 STEEL STUDDING
Galvanized steel support system to BS 7364:1990:
1. Design partition width: as shown on Drawings;
2. Minimum thickness of steel in studs: 0.55 mm;
3. Stud profile: 'C' 'T' or 'Z';
4. Size and arrangement of studding as per manufacturer’s recommendations.
FIRE RATED BOARDS

FIN2.M130.N FIRE RESISTANCE RATED ENCLOSURE SYSTEM

1. Submission Requirements:
   a. At sample submission and approval stage, submit a sample of materials including all accessories of the proposed enclosure system for CM's approval together with all the following substantiation for CM's information:
      i. Catalogue, brand name, and job reference of the materials;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer;
      iv. Details with illustration/photos of packaging of the fire resistance rated board upon delivery to site.
   b. Original or a certified true copy of the ISO 9001 certificate for the manufacturing plant for CM's inspection. If a copy of the ISO certificate is submitted, it shall be certified true by a certification body or by the QCM. The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS;
   c. Original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test report and assessment report, if applicable, showing full compliance with the applicable requirements at sub-clause (2) for CM’s information.
      i. The date of fire test report to be either –
         - Generally within five years prior to the notified date for commencement of the Works when the manufacturing plant at sub-clause (1)(b) is certified with a third party product conformity scheme such as CE Marking (CE), FM Approvals, Underwriters Laboratories (UL), Certifire, or an equivalent scheme; or
         - Generally within three years prior to the notified date for commencement of the Works.
      ii. The date of assessment report to be within five years prior to the notified date for commencement of the Works.
   d. Job reference of minimum five local projects installed with the system and completed within five years prior to the notified date for commencement of the Works;
   e. Six months prior to installing the enclosure system at either internal or external areas, submit the following for approval –
      i. Shop drawings showing the board dimensions, thickness, supporting member size, maximum fixing spacing, joint and corner details, maintenance access locations complete with signage, access opening details, etc.;
      ii. Installation method statement;
      iii. For installation at ceiling of non-enclosed area with wind load of ….. kPa, submit structural calculations on the fire resistance rated enclosure system, including the enclosure board, supporting frame and all associated fixings in accordance with the relevant Code of Practice. Structural calculation shall be prepared, endorse and submitted by RSE.

2. Quality Requirements:
   a. An Approved proprietary fire resistance rated enclosure system comprising of fire resistance rated panel or board, supporting structure and accessories;
b. Fire resistance rating of the system shall meet the project requirements as shown on Drawings;

c. Comply with the following requirement standards or equivalent international standards:
   i. BS 476 Part 4 : 1970 - Non-combustible;
   ii. BS 476 Part 7 : 1997 - Class 1 on surface spread of flame;
   iii. BS 1902: 1990 - Less than 15 x 10^-6K-1 for coefficient of thermal expansion;

d. The Fire Resistance Rated Enclosure System installed at ceiling of non-enclosed areas to meet the structural requirements at sub-clause (1)(e)(iii);

e. General requirements:
   i. Not affected by temperature and humidity;
   ii. Does not contain asbestos or formaldehyde, benzene or harmful radioactive elements;
   iii. Does not produce smoke or toxic substance in case of fire;
   iv. Resistant to rot, fungus and vermin attack;
   v. Apply finishes in accordance with the manufacturer’s recommendations;
   vi. Co-ordinate and provide access openings with signs.

f. Metallic Fire Resistance Rated Enclosure System –
   i. A system of composite panels fixed to galvanized steel supports; composite panel to comprise of fibre reinforced cement core mechanically bonded to min. 0.5mm thick punch hole galvanized steel sheets on both outer surfaces;
   ii. Comply with the following requirement standards or equivalent international standards:
      - BS 5669 Part 1 : 1989 or BS EN 310 : 1993 – Flexural strength min. 180N/mm² (Uniform Distributed Load);
      - BS EN 12467 : 2000 – Flexural strength min. 80MPa (Point Load);
      - ASTM C518: 1991 - Less than 0.130W/m°K at 20°C for thermal conductivity.

   g. Non-metallic Fire Resistance Rated Enclosure System –
      i. A system of either fibre reinforced cement or calcium silicate boards fixed to metal supports;
      ii. Comply with the following requirement standards or an equivalent international standard:
         - BS 5669 Part 1 : 1989 or BS EN 310 : 1993 – Flexural strength min. 7.0N/mm² (longitudinal) and 5.0 N/mm² (transverse) (Uniform Distributed Load);
         - ASTM C518: 1991 - Less than 0.250W/m°K at 40°C for thermal conductivity.

3. On Site Delivery Verification:
   a. At delivery stage, submit the following documents:
      i. Written confirmation that the material delivered to Site conforms to the Approved sample submitted under sub-clause (1);
      ii. Delivery notes for all material delivered to Site;
iii. Written confirmation from the supplier in sub-clause (1)(a)(ii) stating the Batch or Lot number of the fire rated resistance panel or board.

b. Submit the following document for verification upon delivery on Site:

i. Method:

<table>
<thead>
<tr>
<th>Verification Items</th>
<th>Method</th>
<th>Acceptance Standards</th>
</tr>
</thead>
<tbody>
<tr>
<td>Supplier’s Certificate of Origin and delivery note</td>
<td>Document Check</td>
<td>Source of origin stated in the Certificate of Origin and delivery note are the same</td>
</tr>
<tr>
<td>Batch or Lot number of panels or boards delivered to Site</td>
<td>Document Check</td>
<td>Batch or Lot number stated in Supplier’s confirmation letter is same as that of the boards delivered to Site.</td>
</tr>
<tr>
<td>Packaging</td>
<td>Visual</td>
<td>Same as submission at sub-clause (1)(a)(iv)</td>
</tr>
</tbody>
</table>

ii. Frequency:

Carry out verification for every delivery of materials made to Site under each delivery note submitted in sub-clause (3)(a).

c. Where any of the verifications fail to meet the acceptance standards, remove the representative batch of material off Site.

**FIXING AND JOINTING MATERIALS**

**FIN2.M210.8 NAILS FOR FIXING PLASTERBOARD**

2.65 mm galvanized steel nails with jagged shanks, to BS 1202:Part 1:1974 and

1. 30 mm long for plasterboard not exceeding 12.7 mm thick;
2. 40 mm long for plasterboard not exceeding 19 mm thick;
3. Fixing arrangement as per manufacturer’s recommendations.

**FIN2.M220.8 JOINT REINFORCEMENT**

1. Jute scrim cloth, not less than 90 mm wide;
2. As recommended by manufacturer of plasterboard.

**FIN2.M230.8 BEADS AND STOPS**

1. As FIN1.M950;
2. Proprietary plastic beads and stops as per manufacturer’s recommendations.

**FIN2.M240.8 SCREWS FOR FIXING TO STEEL STUDDING**

1. Self-drilling, self-tapping, plated, cross-head, countersunk screws, as recommended by the studding system manufacturer;
2. Screws for fixing to steel studding as per manufacturer’s recommendations.

**FINISHING PLASTER**

**FIN2.M310.8 BOARD FINISH PLASTER**

Retarded hemihydrate gypsum plaster to BS 1191:Part 1:1973, Class B, Type 'b2'.

Specification Library 2018 Edition (Batch 2)
WORKMANSHIP

HANDLING AND STORAGE

FIN2.W010.8  PLASTERBOARD
1. Carry plasterboard on edge;
2. Stack plasterboard inside a building, flat, on a level surface and clear of the floor;
3. Keep the plasterboard dry and free of mould growth, programming deliveries to ensure that storage on site is kept to a minimum during periods of high humidity.

FIN2.W020.8  GYPSUM PLASTER
Ensure that gypsum plaster is delivered to Site in sealed containers and:
1. Store in weathertight structures with a raised floor;
2. Store different types of consignments separately;
3. Use plaster in the order of delivery.

FIXING PLASTERBOARD

FIN2.W110.8  GENERAL
2. In accordance to the approved method statement.

FIN2.W120.8  FIXING TO TIMBER BEARERS
Nail boards:
1. At each support;
2. At 150 mm centres;
3. At a minimum of 15 mm from the edge of each board;
4. Leaving a gap of 3 mm to 5 mm between the edges of the boards.

FIN2.W130.8  FIXING TO STEEL STUDDING
Erect studding and fix plasterboard, all to the studding manufacturer's sitework instructions and:
1. Screw fix plasterboard sheets generally at 300 mm centres;
2. Screw fix plasterboard to 200 mm centres to all external angles.

FIN2.W140.8  JOINTING
1. Fill joints with board finish plaster;
2. Press strips of reinforcement into the plaster, trowel flat and allow to set but not to dry before general plastering commences.

FIN2.W150.8  ACCURACY AND TOLERANCES
Comply with the requirements of Appendix H "Schedule of Tolerances", to this Specification and:
1. Finish wall and ceiling finishes to a true plane and to the correct line and level;
2. Ensure angles are true right angles unless otherwise required, with walls and reveals plumb and square.
FINISHING

FIN2.W210.8 PREPARATION
Fill all nail and screw heads and other imperfections with board finish plaster and allow to set but not to dry before general plastering commences.

FIN2.W220.8 APPLYING BOARD FINISHING PLASTER
Apply gypsum plaster as one finishing coat:
1. To a thickness not exceeding 3 mm;
2. Trowelled to a smooth surface using as little water as possible.

FIN2.W230.8 FIXING BEADS AND STOPS
As FIN1.W820.

FIN2.W240.8 ARRISSES
Finish arrises to be square or pencil round as specified in Drawings.

FIN2.W250.8 PROTECTION
Protect all finishes from discolouration or damage until completion of the Works.
FIN3 SCREEDS

MATERIALS

GENERAL

FIN3.M010.8 STANDARDS
Unless otherwise specified in this Worksection, supply materials for and lay screeds in accordance with the relevant provisions of:
1. BS 8204:Part 1:1999;

CEMENT AND AGGREGATES

FIN3.M110.8 CEMENT
As FIN1.M010.

FIN3.M120.8 PFA IN SCREED MIXES
Screed mixes containing a blend of Ordinary Portland Cement and Pulverized Fuel Ash may be offered as a substitute for those specified in this Worksetion provided that:
2. Not more than 25% by weight of the cementitious content of the proposed mix comprises PFA;
3. The physical properties and workability of the proposed mix can be demonstrated to be equivalent to or better than those of the specified mixes to the CM's satisfaction;
4. Setting and hardening times will not be so affected as to compromise the construction programme.

FIN3.M130.A SAND GENERALLY

FIN3.M140.8 GRADING OF SAND FOR SCREEDS
As FIN1.M420.

FIN3.M150.8 LIGHTWEIGHT AGGREGATES
Either:
1. 5 mm exfoliated vermiculite to BS 3797:1990; or
2. Lightweight beads or granules of Approved proprietary manufacture.

FIN3.M160.8 COARSE AGGREGATE FOR SCREEDS 48 MM THICK AND OVER
Aggregate graded from 10 mm down with at least 75% being retained on a 5mm BS Test Sieve, as determined by the particle size distribution method in accordance with BS 812:Section 103.1:1985.

FIN3.M170.B READY-MIXED (DRY) MORTARS AND READY-TO-USE (WET) MORTARS FOR SCREEDS
1. Terminology:
a. Ready-mixed mortar refers to dry bagged mortar which is ready mixed only requiring the addition of water for applications where flexibility of supply is demanded;

b. Ready-to-use mortar refers to wet mortar which is factory produced and supplied ready for use.

2. Submission Requirements:

a. At sample submission and approval stage, submit a sample of the proposed material for CM's approval together with all the following substantiation for CM's information:
   i. Catalogue, brand name, and job reference of the material;
   ii. Name, address and contact person of the local supplier;
   iii. Name, address and contact person of the manufacturer;
   iv. When the material is supplied for domestic blocks, except for the ancillary facilities at lower floors, also include the following in the submission:
      - Original or a certified true copy of the ISO 9001 certificate for the manufacturing plant for CM's inspection. If a copy of the ISO certificate is submitted, it shall be certified true by a certification body or by the QCM. The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.

b. Original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (3) for CM's information:
   i. The date of the test for the mortar shall be generally within three years prior to the notified date for commencement of the Works or at an earlier date for domestic blocks subject to CM's consideration on the track records as maintained by the Housing Department;
   ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material as mentioned in sub-clause (4)(a);
   iii. In the event that no test report has been submitted for CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

c. When the ready-mixed or ready-to-use mortars for use in screeding works are locally produced, manufactured sand in lieu of river sand shall be used. Comply with the submission requirements for manufactured sand as per FIN1.M405 (1).

3. Quality Requirements:

a. To requirements of:
   i. BS 4721:1981; or
   ii. BS EN 13813:2002, including requirements of "Evaluation of conformity" on Initial type tests and Factory Production Control.

b. The properties and performance requirements shall comply with the class achieving:

<table>
<thead>
<tr>
<th>Item</th>
<th>Method of Test</th>
<th>Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Compressive strength</td>
<td>EN 1015-11</td>
<td>&gt; 25 N/mm²</td>
</tr>
</tbody>
</table>
c. When the ready-mixed or ready-to-use mortars for use in screeding works are locally produced, manufactured sand in lieu of river sand shall be used. Comply with the quality requirements for manufactured sand as per FIN1.M405 (2).

4. On Site Delivery Verification:
   a. At delivery stage, submit the following documents:
      i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (2);
      ii. Delivery notes for all material delivered to Site.
   b. Carry out and submit report on the following verifications upon delivery on Site. Prior to carrying out the verifications, inform the CM who may present to witness the verifications:
      i. Method:
         | Verification Items       | Method                  | Acceptance Standards                                                                 |
         |--------------------------|-------------------------|--------------------------------------------------------------------------------------|
         | Delivery note            | Document Check          | Material information recorded in the delivery notes to be same as the material delivered |
         | Ready-mixed mortar       | Visual                  | To Approved sample                                                                   |
         | Material and package     | Visual                  | Minimum 6 months from the date of delivery                                           |
         | Expiry Date              | Check information printed on package |                                                                                     |
         | Manufactured sand (if used) | See FIN1.M405 (3)        | See FIN1.M405 (3)                                                                   |
         | Ready-to-use mortar      |                         |                                                                                     |
         | Manufactured sand (if used) | See FIN1.M405 (3)         | See FIN1.M405 (3)                                                                   |
      ii. Frequency:
         - For ready-mixed mortar, one set of verification should be carried out for one packaged bag per every delivery of ready-mixed mortar made to Site under each delivery note submitted in sub-clause (4)(a);
         - For ready-to-use mortar, one set of verification should be carried out for the delivery of mortar by mixer truck to Site in a day under the delivery note submitted in sub-clause (4)(a).
   c. Where any of the verifications fail to meet the acceptance standards, remove the delivery off Site;
   d. When the ready-mixed or ready-to-use mortars for use in screeding works are locally produced, manufactured sand in lieu of river sand shall be used. Comply with the on site delivery verification requirements for manufactured sand as per FIN1.M405 (3).

WATER

FIN3.M210.8 WATER
As FIN1.M310.
SCREEDS

FIN3.M310.8 SCREEDS BETWEEN 25 MM AND 48 MM THICK
Consisting of cement and sand or granite fines, 1 : 3, mixed with the minimum of water consistent with workability.

FIN3.M320.8 SCREEDS 48 MM THICK AND OVER
Comprising a fine concrete mix of cement, sand or granite fines and coarse aggregate, 1 : 1.5 : 3.

FIN3.M330.8 LIGHTWEIGHT AGGREGATE SCREEDS FOR ROOFS
Consisting of cement and lightweight aggregate, 1 : 8 unless otherwise indicated by the manufacturer's recommendations.

FIN3.M340.8 LIGHTWEIGHT AGGREGATE SCREEDS FOR FLOORS
Consisting of cement and lightweight aggregate, 1 : 6 unless otherwise indicated by the manufacturer's recommendations.

FIN3.M350.8 AIR ENTRAINSED SCREEDS
Having a maximum dry density of 1200kg/m³.

FIN3.M360.8 TOPPING FOR LIGHTWEIGHT SCREEDS
Consisting of cement and sand 1 : 4.

ANCILLARY MATERIALS

FIN3.M410.8 ADMIXTURES
1. Chloride ion content to FIN1.M810;

FIN3.M420.8 BONDING AGENT
As FIN1.M920.

FIN3.M430.8 AIR ENTRAINING ADMIXTURE FOR LIGHTWEIGHT SCREEDS
An Approved proprietary product to BS 4887 capable of producing a screed of the required density.

FIN3.M440.8 VAPOUR BARRIER
80 microns thick polyethylene sheet.

FIN3.M450.8 MOVEMENT JOINTS
As CON6.

FIN3.M460.8 WATER RESISTING ADMIXTURE
As FIN1.M870.

FIN3.M470.8 WATER RESISTING ADMIXTURE FOR TANKS FOR POTABLE WATER
As FIN1.M880.
WORKMANSHIP

BASE PREPARATION

FIN3.W010.8  GENERAL
1. Remove efflorescence, laitance, oil, grease, all traces of release agents, dirt and loose material by dry brushing and scraping;
2. Protect surfaces from the weather and ensure they are completely compatible with the finish to be applied before starting work.

FIN3.W020.8  PREPARATION OF HARDENED OR EXISTING CONCRETE
Either:
1. Prepare surface by:
   a. Shortly before applying the finish, thoroughly hacking the concrete surface to remove any laitance and to expose the aggregate;
   b. Thoroughly cleaning and wetting the surface as required, to adjust its suction before applying screed and remove surplus water;
   c. Brushing neat cement slurry into the damp surface immediately before applying the finish; or
2. Apply bonding agent in accordance with the manufacturer's recommendations.

MIXING SCREED MORTARS

FIN3.W110.8  GENERAL
1. Measure constituents by volume, using clean gauge boxes of sizes to suit the volumes required;
2. Make an appropriate allowance for bulking. The proportions given in this Worksection allow for the use of dry sand.

FIN3.W120.A  MIXING
Mix:
1. By mechanical mixer or, where Approved, by hand on a clean, closeboarded platform;
2. Without overmixing mortars containing plasticizers;
3. Dry constituents before mixing with water;
4. Using the minimum amount of water to achieve the required consistency and workability; making due allowance for the moisture content of manufactured sand (or sand). The water: cement ratio should be not more than 3:5 by volume.

FIN3.W130.8  LIMITS ON USE OF MIXED MATERIAL
Use within one hour of mixing and do not:
1. Use screed mortar after the initial set has taken place;
2. Reconstitute screed mortar.

FIN3.W140.8  READY-MIXED MORTARS AND READY-TO-USE MORTARS FOR SCREEDS
Mix to BS 4721:1981 and use strictly in accordance with manufacturer's recommendations for screeds.
THICKNESSES OF SCREEDS

FIN3.W210.8 BONDED TO HARDENED CONCRETE
Lay screed to the level shown on the Drawings in a layer normally up to 40 mm thick and with a minimum thickness of 25 mm at any point. Thickness of the screed may be increased to above 40 mm as and when indicated on the Drawings.

FIN3.W220.8 UNBONDED
Lay screeds not fully bonded to the base to the levels shown on the drawings in a layer up to and exceeding 70 mm thick and with a minimum thickness of 50 mm at any point, excluding the applied tile finish unless otherwise specified in the drawings.

FIN3.W230.8 FLOATING SCREEDS
Lay screed to the level shown on the Drawings in a layer up to and exceeding 90 mm thick and with a minimum thickness of 65 mm at any point, excluding the applied tile finish.

FIN3.W240.8 LIGHTWEIGHT SCREEDS
Lay screed to the level shown on the Drawings in a layer up to and exceeding 90 mm thick and with a minimum thickness of 65 mm at any point, excluding the toping.

FIN3.W250.8 TOPPING FOR LIGHTWEIGHT SCREEDS
Finish lightweight screeds with a topping of 15 mm minimum thickness.

LAYING SCREEDS

FIN3.W310.8 GENERAL
To BS 8000:Part 9:1989, lay and compact screeds level or to falls as shown on the Drawings or as otherwise required.

FIN3.W320.8 MECHANICAL APPLICATION
Submit method statement for mechanical method of applying screeding for Approval before use.

FIN3.W330.8 LAYING SCREEDS
Lay screeds to BS 8204:Part 1:1999 with particular attention to the following:
1. In areas of 24 m² and larger:
   a. Not greater than 3 to 4 m width and 5 to 6 m length for screed of all thickness; and the joints of the bays shall follow any movement joints of the base slab;
   b. With the length of each bay not greater than 1.5 times its width;
   c. In a chequerboard pattern.
2. In areas or rooms smaller than 24 m²:
   a. To whole area or room, or as sub-clauses (1)(a) and (1)(b); and
   b. Form a construction joint at door openings, or along the shortest distance across the area or room.
3. In corridors:
   a. To the full corridor width;
   b. In alternating bays not exceeding 6 m in length, and the joints of the bays shall follow any movement joint of the base slab.
4. Allowing a minimum of 12 hours to elapse between the laying of screeds in adjoining bays, connecting areas or rooms, or alternate bays;
5. As an alternative to sub-clause (4) above, the Contractor may propose to lay screeds in adjoining bays, connecting areas or rooms, and alternate bays with appropriate removable joint filler boards. Submit proposal with method statement to CM for approval.

FIN3.W336.8 VERIFICATION OF BONDED SCREED
To BS 8204:Part 1:1999 with particular attention to the following:
1. Arrange CM to select verification locations when the maximum effect of drying shrinkage of screed has taken place and before applying tile;
2. Perform one set of verification for every 10 floors or part thereof on floor to floor basis;
3. Verify the screed bonding by tapping or dragging a rod or a mallet on the surface. Hollow sound and when accompanied by lifting of bay edges or at cracks, or when not to the satisfaction of CM, propose remedial method(s) and make good the unsatisfactory areas to the satisfaction of CM;
4. Make reference to the Construction Mock-up as per PRE.B9.440 for surface roughness;
5. Record the verifications, together with the date, location reference and any other relevant information and submit two copies of the completed record to the CM.

FIN3.W340.8 LAYING LIGHTWEIGHT SCREEDS
Lay topping monolithically with the screed.

FIN3.W350.8 VAPOUR BARRIER
Loose lay a vapour barrier under lightweight roof screeds, lapping 150 mm at joints.

FIN3.W360.8 ADMIXTURES
Mix and apply admixtures in accordance with manufacturer's instructions.

FINISHES

FIN3.W410.8 GENERAL
Apply screeds on the surfaces as shown on the Drawings and in accordance with the following clauses in this sub-section to the same standard of workmanship as approved in the Construction Mock-up specified in PRE.B9.440.

FIN3.W420.8 SMOOTH FINISH
Finish with a steel trowel to a smooth surface, free of blemishes.

FIN3.W430.8 WOOD FLOAT FINISH
Finish with a dry wood float to give an even overall surface.

FIN3.W440.8 TEXTURED FINISH
Finish by stippling, scraping, brushing with a stiff brush or other means to produce an Approved textured surface.

FIN3.W450.8 SURFACES FOR FLEXIBLE SHEET AND TILE FINISHES
Finish with a smooth surface as specified in FIN3.W420.

FIN3.W460.8 SCREEDS FOR RIGID TILE AND SLAB TILE FINISHES
Finish screeds to receive rigid tile or slab finishes with a wood float finish in accordance with FIN3.W430.
MOVEMENT JOINTS

FIN3.W510.8 GENERAL
Construct movement joints as shown on the Drawings and as specified in Worksection CON6.

FIN3.W520.8 MECHANICAL MOVEMENT JOINTS
Install in accordance with the Drawings and with the manufacturer's recommendations.

ROOF SCREEDS PENETRATED BY PIPES

FIN3.W610.8 SCREEDS PENETRATED BY PIPES LESS THAN 50 MM IN DIAMETER
Form a surround of cement and sand or granite fines, 1 : 3, 150 mm × 150 mm around the pipe sleeve, projecting 150 mm above the finished roof level and:
1. Finish the top to a slope;
2. Form combined surrounds for groups of pipes.

DRYING OUT AND CURING

FIN3.W710.8 CURING SCREEDS
Where exposed to direct wind and sunlight, immediately after laying, protect surface of screed as follows:
1. Cover the surface as soon as it is sufficiently hardened, with canvas, waterproof sheeting, mats or a layer of damp sand;
2. Keep these covering layers constantly wet for a minimum period of 7 days.

PROTECTION AND CLEANLINESS

FIN3.W810.8 PROTECTING EXISTING WORK
Protect existing work with boards, dust sheets and the like. Clean off any droppings on existing work immediately.

FIN3.W820.8 CLEANLINESS
Keep plant and tools clean and free from all traces of previous mixes.

FIN3.W830.8 PROTECTING NEW SCREEDS
Protect screeds from wear and other damage until the final floor finish is laid.

TOLERANCES

FIN3.W910.8 GENERAL
Refer to Appendix H "Schedule of Tolerances" to this Specification.
FIN4 INSITU WALL AND FLOOR FINISHES

MATERIALS

CEMENT

FIN4.M010.8 CEMENT
As FIN1.M010.

AGGREGATES

FIN4.M110.A SAND GENERALLY

FIN4.M120.8 GRADING OF SAND
As FIN1.M420.

FIN4.M130.8 STONE
Crushed grey granite or white stone to BS 882:1992, graded from 10 mm to 3 mm and free from dust.

FIN4.M140.8 READY-MIXED MORTARS AND READY-TO-USE MORTARS
As FIN1.M460 for in-situ wall finish.
As FIN3.M170 for in-situ floor finish.

WATER

FIN4.M210.8 WATER
As FIN1.M310.

MIX PROPORTIONS

FIN4.M310.8 CEMENT AND SAND OR GRANITE FINES
Cement and sand or granite fines in the proportion 1 : 3.

FIN4.M320.8 GRANOLITHIC
1. Mix granolithic in the proportions shown in the following table, relating to the types of finish shown or scheduled on the Drawings:

<table>
<thead>
<tr>
<th>Type</th>
<th>Cement</th>
<th>Granite Fines or Sand</th>
<th>Granite Aggregate</th>
<th>White/Coloured Stone</th>
<th>Surface Finish</th>
<th>Suggested location</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>1</td>
<td>1</td>

<td></td>
<td></td>
<td>or Rubbed</td>
<td></td>
</tr>
<tr>
<td>C</td>
<td>1</td>
<td></td>
<td>2</td>
<td></td>
<td>Washed</td>
<td></td>
</tr>
</tbody>
</table>

Specification Library 2018 Edition (Batch 2)
2. Add minimum amount of water to give sufficient workability for laying and compacting.

FIN4.M330.8 TERRAZZO
1. First coat cement and sand or granite fines 1:3;
2. Finishing coat in one of the proportions shown in the following table:

<table>
<thead>
<tr>
<th>Type</th>
<th>Coloured Cement</th>
<th>Marble Aggregate</th>
<th>Grade of Aggregate (mm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>1</td>
<td>2</td>
<td>5 to 3</td>

</tr>
<tr>
<td>C</td>
<td>1</td>
<td>3</td>
<td>10</td>
</tr>
</tbody>
</table>

ANCILLARY MATERIALS

FIN4.M410.8 PIGMENTS FOR CEMENT
As FIN1.M820.

FIN4.M420.8 BONDING AGENT
As FIN1.M920.

FIN4.M430.8 SURFACE HARDENER
A proprietary liquid hardener and dust proofer to Approval.

FIN4.M440.8 HARDENING ADMIXTURE
1. A proprietary product to Approval;
2. In compliance with the prescribed limit of VOC content as set out in the Air Pollution Control (Volatile Organic Compounds) Regulation.

FIN4.M450.8 METAL DIVIDING STRIP
1. Material: brass, stainless steel or aluminium as shown on Drawings;
2. Thickness: as shown on Drawings;
3. Size: to the full depth of the finish.

FIN4.M460.8 PLASTIC DIVIDING STRIP
1. Colour: as shown on Drawings;
2. Thickness: as shown on Drawings;
3. Size: to the full depth of the finish.

FIN4.M470.8 NON-SLIP COMPOUND INSERT
A compound of cement and carborundum dust in the proportion, 1 : 1, for filling into a pre-formed groove.
FIN4.M480.8  NON-SLIP INSERT STRIPS

An Approved proprietary insert strip:
1. Size: as shown on Drawings;
2. Colour: as shown on Drawings;
3. Slightly rounded on the top.
WORKMANSHIP

GENERAL

FIN4.W010.8 STANDARD

FIN4.W020.8 CONSTRUCTION MOCK-UP
Construct a Construction Mock-up of around 5 m² as PRE.B9.440 for each different type of in-situ wall and floor finishes showing the workmanship of each construction layer including background preparation through to the installation of finishes, including E&M works and accessories etc. as directed by the CM.

FIN4.W030.8 MECHANICAL APPLICATION
1. Do not use mechanical method of application without Approval for finishes other than cement sand or granite fine finish;
2. Submit method statement for mechanical method of applying finishes for Approval before use.

FIN4.W040.8 MOVEMENT JOINTS GENERALLY
Construct movement joints as shown on the Drawings and as specified in Worksection CON6.

FIN4.W050.8 MECHANICAL MOVEMENT JOINTS
Install in accordance with the Drawings and with the manufacturer's recommendations.

BASE PREPARATION

FIN4.W110.8 GENERAL
1. Remove efflorescence, laitance, oil, grease, all traces of release agents, dirt and loose material by dry brushing and scraping;
2. Protect surfaces from the weather and ensure they are completely compatible with the finish to be applied before starting work.

FIN4.W120.8 JUNCTIONS BETWEEN DISSIMILAR BACKGROUNDS
At backgrounds in the same plane or where the same finish is to be applied to surfaces in differing planes, fix a strip of steel lathing as FIN1.W310.

FIN4.W130.8 HARDENED OR EXISTING CONCRETE
1. Prepare surface by:
   a. Thoroughly hacking the concrete surface to remove any laitance and to expose the aggregate shortly before applying the finish;
   b. Thoroughly cleaning and wetting the surface as required, to adjust its suction, shortly before applying the finish;
   c. Brushing neat cement slurry into the damp surface immediately before applying the finish; or
2. Apply bonding agent in accordance with the manufacturer's recommendations.
MIXING MORTARS AS A FINISH

FIN4.W170.8 SITE MIX MORTAR
As FIN3.W110 to FIN3.W130 for in-situ floor finish;
As FIN1.W420 for in-situ wall finish.

FIN4.W180.8 READY-MIXED MORTARS AND READY-TO-USE MORTARS
As FIN3.W140 for in-situ floor finish;
As FIN1.W030 for in-situ wall finish.

APPLYING FINISHES GENERALLY

FIN4.W210.8 ACCURACY AND TOLERANCES
Refer to and comply with the requirements of Appendix H "Schedule of Tolerances" to this Specification and:
1. Finish wall and ceiling finishes to a true plane and to the correct line and level;
2. Ensure angles are true right angles unless otherwise required, with walls and reveals plumb and square.

FIN4.W220.8 LEVELS AND FALLS
Lay and compact finishes level or to falls and currents as shown on the Drawings or as otherwise required.

FIN4.W225.8 LAYING CEMENT AND SAND OR GRANITE FINES FINISH

FIN4.W230.8 FINISHING FLOORING
Finish surfaces as specified for individual materials as soon as compaction is completed, and:
1. Do not bring excessive laitance to the surface, removing any which appears;
2. Do not wet the surface;
3. Repeat the trowelling process or power floating at least three times at intervals within ten hours of laying.

FIN4.W240.8 DIVIDING STRIPS
Bed the dividing strip through the whole thickness of the finishing coat from top of finish to concrete wall or floor and do not haunch them prior to laying the base.

FIN4.W250.8 NON-SLIP COMPOUND INSERT
Fill the compound into the pre-formed grooves, slightly round the top and project from the finished surface by 3 mm.

FIN4.W260.8 NON-SLIP INSERT STRIPS
Bed the strip into the pre-formed grooves and project from the finished surface by 3 mm.

APPLYING GRANOLITHIC AND TERRAZZO

FIN4.W310.8 THICKNESSES
Apply granolithic and terrazzo to the minimum thicknesses given in the following table:
<table>
<thead>
<tr>
<th>Location</th>
<th>Granolithic Thicknesses</th>
<th>Terrazzo Thicknesses</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>First Coat (mm)</td>
<td>Finishing Coat (mm)</td>

</tr>
</tbody>
</table>

**FIN4.W315.8 LAYING GRANOLITHIC FLOOR**

1. To BS 8204:Part 2:2002 with particular attention to the following:
   a. Prepare concrete base in accordance with FIN4.W130;
   b. Brush a thin layer of neat cement grout into the surface of concrete base. A proprietary bonding agent may be added to the cement grout;
   c. Divide granolithic floor into panels with each bay not exceeding 15 m², and the length of each bay not greater than 1.5 times its width for bonded construction;
   d. Daywork joints between bays should be straight untreated vertical butt joint;
   e. Form contraction joints by sawing through the finish within 7 days of laying at 6 to 8 m in both directions;
   f. Expansion joints may be necessary subject to the location, and especially where it is exposed to weather.

2. Comply also with the following:
   a. Lay two coats if the total thickness is greater than 40 mm;
   b. Minimum thickness of first and finishing coat as FIN4.W310 for bonded construction;
   c. The finishing coat shall not be thicker than the first coat; neither coat shall be less than 20 mm thick;
   d. Both coats shall have the same mix proportions, place the finishing coat immediately on the first coat when compacted thoroughly;
   e. No pipe or conduit shall be laid in the granolithic floor finish.

**FIN4.W320.8 COLOURED GRANOLITHIC AND TERRAZZO**

Mix using pigmented cement and apply the second coat after the first has set.

**FIN4.W330.8 TROWELLED FINISH GRANOLITHIC**

Where a trowelled finish is shown or scheduled on the Drawings, either:
1. Finish with a steel trowel to a smooth surface, free of blemishes; or
2. Finish with a dry wood float to give an even overall surface.

**FIN4.W340.8 RUBBED FINISH GRANOLITHIC**

Where a rubbed finish is shown or scheduled on the Drawings, bring to a trowelled finish and after the granolithic has set, rub down with fine carborundum stone to form a smooth surface and to expose the aggregate.
FIN4.W350.8  **WASHED FINISH GRANOLITHIC**
Where a washed finish is shown or scheduled on the Drawings, bring to a trowelled finish and before the granolithic has set, brush off the surface to expose the aggregate.

FIN4.W360.8  **APPLYING TERRAZZO**
To BS 8204:Part 4:1993 with particular attention to the following:
1. Minimum thickness of first and finishing coat as FIN4.W310;
2. Unless specified in Drawings, divide terrazzo work into panels not exceeding 1 m²., with the length of each panel not greater than 3 times its width and separated by dividing strips while the screed is still in a workable condition;
3. Prepare concrete base in accordance with FIN4.W130;
4. Lay first coat of cement sand screed in accordance with FIN3.W330;
5. Lay finishing coat of terrazzo on the screed within 2 days after curing;
6. Grind surface to expose aggregate and produce a smooth finish after completion of laying for a minimum of 4 days;
7. Fill any voids with matching cement;
8. Apply one coat of wax polish to all wall finishes;
9. Do not highly polish or wax polish floor finishes.

FIN4.W410.8  **APPLYING TWO COAT COLOURED FINISH**
Where coloured cement and sand or granite fines is shown or scheduled on the Drawings, lay in two coats as follows:
1. First coat using ordinary cement to a minimum thickness of 10 mm and lightly scratch to form a key;
2. Finishing coat using pigmented cement, to a minimum thickness of 5 mm, applied after the first coat has set.

FIN4.W510.8  **WALL FINISHES**
Prevent excessively rapid or localised drying out of wall finishes by an Approved method.

FIN4.W520.8  **CURING FLOOR FINISHES**
Where exposed to direct wind and sunlight immediately after laying, protect surface of finish as follows:
1. Cover the surface as soon as it is sufficiently hardened, with canvas, waterproof sheeting, mats or a layer of damp sand;
2. Keep these covering layers constantly wet for a minimum period of 7 days.

FIN4.W610.8  **PROTECTION**
Protect all finishes from discolouration or damage until completion.

FIN5  FLOOR AND WALL TILES AND SLABS

GENERAL

WALL TILING WORKS IN BUILDINGS OR STRUCTURES

FIN5.G010.8 PERFORMANCE REQUIREMENTS
1. Design, install and test individual components and materials of the tile fixing system of the wall tiling works to fulfil the following:
   a. No disintegration of the wall tiling works such as visible de-bonding, delamination or bulging out of the wall tiles and the like;
   b. No damage of the tiling surfaces;
   c. Plane of adjacent tiles and alignment of joints shall be within the tolerance as specified in TOL.FIN5; and
   d. No growth of mould and no peeling off of the grouting. No discolouration of the proprietary or coloured grouting.
2. Comply with the acceptance standards for the Pull-off tests specified in FIN5.T150 (3)(c).

FIN5.G020.8 CONTRACTOR’S DESIGN AND BUILD TILE FIXING SYSTEM OF THE WALL TILING WORKS
1. Design and build a tile fixing system complying with the following requirements:
   a. In full compliance with the performance requirements as specified in FIN5.G010;
   b. Do not alter the types, profiles, dimensions, pattern, colour, texture and appearance of the wall tiles and grout as specified in the Specification and as shown in the Drawings;
   c. Do not alter construction of the reinforced concrete walls, panel wall partitions, brick and block walls;
   d. Do not alter the clear width of the passageway and the doorway;
   e. Do not induce mismatched junction assembling details of the adjoining components and finishes;
   f. Compatible with the installation of waterproofing system where required;
   g. Do not lower the quality standard of the original design as shown on Drawings;
   h. Meet all prevailing regulations and standards;
   i. Allow for any additional components, materials, fixing systems, changes to interfacing details etc. which are required for achieving the performance requirements as specified in FIN5.G010;
   j. Demonstrate to the satisfaction of the CM prior to the ordering of any proposed materials that the submitted proposal for the tile fixing system of wall tiling works complies with the minimum pull-off strengths by carrying out a Pull-off test in accordance with FIN5.T150 on a test mock-up sample on site;
   k. Allow for the sequence and timing for Approvals and carrying out the works without affecting the overall progress;
   l. Have no additional time or cost adjustment implications to the Contract.
2. Submit the tile fixing system for CM's Approval except when the tile fixing system or method of the wall tiling works as may be shown on the Drawings and/or described in the Specification, which is provided on a without liabilities basis, are adopted.

**SLIP RESISTANCE REQUIREMENTS**

**FIN5.G050.N SLIP RESISTANCE OF FLOOR SURFACE MATERIALS**

1. The requirements under this clause apply to all floor surface materials including floor tiles and slabs under FIN5, and floor surface materials of other Worksection as specified;

2. Slip resistance of floor surface materials shall be measured by Wet Pendulum Test conducted in accordance with AS 4586-2013 using:
   a. Slider 96 rubber for materials used in internal areas;
   b. Slider 55 rubber for materials used in external areas.

3. For internal areas, the slip resistance value (SRV) of floor surface materials measured by wet pendulum test, and if applicable, the displacement space measured by displacement volume test, both conducted in accordance with AS 4586-2013 shall be equal to or above the lower limit of the prescribed classification in the table below:

<table>
<thead>
<tr>
<th>Accommodation</th>
<th>Location</th>
<th>Classification according to AS 4586-2013</th>
</tr>
</thead>
<tbody>
<tr>
<td>Domestic flats</td>
<td>Kitchen, bathroom, toilet</td>

5. Submission requirements:

Submit the original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (3) or sub-clause (4) as appropriate for CM's information. The date of the tests shall be generally within three years prior to the notified date for commencement of the Works. Submission of test reports required under this clause shall form part of the submission requirement for the individual floor surface materials.

6. Verification test requirement:

Observe and comply with the requirements of verification test for slip resistance of floor surface materials under FIN5.T180.
MATERIALS

GENERAL

FIN5.M005.N SUBMISSION AND DELIVERY VERIFICATION REQUIREMENTS

1. The requirements under this clause apply to all tile and slab materials under FIN5.

2. At sample submission and approval stage
   a. submit a sample of the proposed material for CM's approval together with all the following substantiation for CM's information:
      i. Catalogue, brand name / model name and job reference of the product;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer.
   b. submit confirmation of compliance with specification requirements, including the original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the quality requirements as appropriate for CM's information:
      i. The date of the test shall be generally within three years prior to the notified date for commencement of the Works;
      ii. The test reports shall either be submitted at the sample submission and approval stage or at a time not later than the delivery of the material to Site;
      iii. In the event that no test report has been submitted for CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

3. On Site delivery verification:
   a. At delivery stage, submit the following documents:
      i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (2)(a);
      ii. Original or certified true copy of the Certificate of Origin for every batch of delivery. One batch being the material quantity covered under each delivery note;
      iii. Delivery notes for all material delivered to Site.
   b. Carry out and submit report on the following verifications for the material upon delivery on Site. Prior to carrying out the verifications, inform the CM who may be present to witness the verifications:
      i. Method:

<table>

c. Where any of the verifications fail to meet the acceptance standards, either:
i. Remove the representative batch off Site; or
ii. When agreed by the CM, repeat all verification items on three separate samples each with 3 pieces of tiles selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.

CERAMIC TILES GENERALLY

FIN5.M010.A STANDARD
1. Where applicable, tiles and accessories must comply generally with BS EN 14411:2006;
2. Slip resistance of floor surface materials shall comply with and be measured by Wet Pendulum Test all in accordance with FIN5.G050.

FIN5.M020.A CONSISTENT SUPPLY
Obtain all the tiles and accessories in a specified range from the same Approved manufacturer and ensure that they match in colour, texture, slip resistance and batch number.

CERAMIC FLOOR TILES

FIN5.M110.A SPECIALS AND SPECIAL FITTING TILES
Where ceramic floor tiles and floor quarries are specified as "including specials", ensure that the full range of accessories and fittings are available. All tiles and fittings shall be from the same manufacturer and shall match in colour, texture and slip resistance.

FIN5.M120.A FLOOR TILES AND NOSING TILES
1. To BS EN 14411:2006:
   a. Extruded to Group AIₐ or Group AIₖ or Group AIIₐ; or Dry-pressed to Group BIₐ or Group BIIₐ or Group BIIₖ;
   b. With water absorption not exceeding 6%;
   c. Size: as shown or scheduled on Drawings;
   d. Colour: as shown on Drawings or to Approval.
2. Including specials and special fitting tiles as in FIN5.M110 and where shown or scheduled on Drawings;
3. Slip resistance in compliance with FIN5.G050;
4. Observe and comply with the submission and on-site delivery verification requirements as per FIN5.M005.
FIN5.M130.A  CLAY QUARRY TILES
1.  To BS EN 14411:2006:
   a.  Extruded to Group AII or Group AIIa. Either pressed or not pressed:
      i.  The water absorption shall not exceed 10%;
      ii.  Size: as scheduled on the Drawings;
      iii. Colour: as shown on Drawings or to Approval;
      iv.  Including specials and special fitting tiles as in FIN5.M110 and where shown or scheduled on Drawings;
      v.  Non-slip surface: as shown on Drawings or to Approval.
2.  Slip resistance in compliance with FIN5.G050;
3.  Observe and comply with the submission and on-site delivery verification requirements as per FIN5.M005.

FIN5.M140.A  NON-SLIP TILES
Where tiles are described on the Drawings or in this Specification as "non-slip" or "anti-slip", ensure that they are suitably embossed or treated with carborundum, or a similar grit, to provide an anti-slip surface with slip resistance in compliance with FIN5.G050.

FIN5.M150.A  CANTON TILES
1.  Hard, sound, square, well burnt and free from twists, cracks or other defects throughout;
2.  Size: uniformly, between 300 mm and 400 mm square and between 30 mm to 35 mm thick;
3.  Slip resistance in compliance with FIN5.G050;
4.  Observe and comply with the submission and on-site delivery verification requirements as per FIN5.M005.

FIN5.M160.A  NON-SLIP TACTILE HOMOGENEOUS FLOOR TILES
1.  Quality requirements:
   a.  Tiles with raised profiles and suitably embossed to provide a distinctively textured walking surface easily detected by foot and cane for guidance of the visually impaired;
   b.  To Group BIa or Group BIb of BS EN 14411: 2006, matt finish with anti-stain coating;
   c.  Types: three types of tactile tiles to be used at location as shown on the Drawings:
      i.  Hazard warning tiles with raised dots arranged in square grid for indication of hazard;
      ii.  Directional tiles with raised strips for indication of direction; and
      iii. Positional tiles with raised dots arranged in staggered position for indication of change of direction;
   d.  Nominal size: as shown on the Drawings;
   e.  Colour: Contrasting colour against floor background as shown on the Drawings or to Approval;
   f.  Slip resistance in compliance with FIN5.G050.
2.  Observe and comply with the submission and on-site delivery verification requirements as per FIN5.M005.

FIN5.M170.A  NON-SLIP HOMOGENEOUS FLOOR TILES
1.  In addition to the submission requirements in FIN5.M005 (2), submit:
a. When the material is supplied for domestic blocks, except for the ancillary facilities at lower floors, also include the following in the submission:
   i. Original or certified true copies of certification to ISO 9001 and ISO 14001 for the manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by the certification bodies or by the QCM. The certification bodies shall be as follows:

<table>
<thead>
<tr>
<th>ISO</th>
<th>Certification Body</th>
</tr>
</thead>
<tbody>
<tr>
<td>ISO 9001</td>
<td>The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.</td>
</tr>
<tr>
<td>ISO 14001</td>
<td>The certification body shall be accredited by the Hong Kong Accreditation Service (HKAS), or the China National Accreditation Service (CNAS), or an accreditation body which has entered into a mutual recognition agreement with HKAS.</td>
</tr>
</tbody>
</table>

   ii. Original or a certified true copy of the product conformity certificate to the "Product Conformity Certification Scheme For Ceramic Tiles" published by the Hong Kong Concrete Institute. The product conformity certificate shall be issued by a certification body accredited by Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS. If a photocopy of the product conformity certificate is submitted, it shall be certified true by the certification body or by the QCM.

   b. A summary of the test results under the audit testing of the "Product Conformity Certification Scheme For Ceramic Tiles". The summary shall be prepared by the accredited laboratory carried out the testing or the certified manufacturer. If so directed by the CM, submit a full set of the audit test reports to the CM for record;

   c. Original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clauses (2)(a)(i)&(ii) for CM's information unless the test requirements are covered by the scope of the "Product Conformity Certification Scheme For Ceramic Tiles".

2. Quality Requirements:
   a. To Group BL_a or Group BL_b of BS EN 14411: 2006;
      i. With dimensions and surface quality, physical and chemical properties complying with the acceptance standards stated in BS EN 14411: 2006 in particular Table G.1 for Group BL_a or Table H.1 for Group BL_b for non-slip homogeneous floor tiles;
      ii. With a water absorption property not exceeding 3%;
      iii. Nominal size: as scheduled on the Drawings;
      iv. With logo-key integrated at back of tiles.
   b. Slip resistance in compliance with FIN5.G050;
   c. Colour: as shown on the Drawings or to Approval.

3. Observe and comply with the submission and on-site delivery verification requirements as per FIN5.M005.
CERAMIC WALL TILES

FIN5.M210.B  GLAZED CERAMIC WALL TILES

1. In addition to the submission requirements in FIN5.M005 (2), submit:
   a. When the material is supplied for domestic blocks, except for the ancillary facilities at lower floors, also include the following in the submission:
      i. Original or certified true copies of certification to ISO 9001 and ISO 14001 for the manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by the certification bodies or by the QCM. The certification bodies shall be as follows:

<table>
<thead>
<tr>
<th>ISO</th>
<th>Certification Body</th>
</tr>
</thead>
<tbody>
<tr>
<td>ISO 9001</td>
<td>The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.</td>
</tr>
<tr>
<td>ISO 14001</td>
<td>The certification body shall be accredited by the Hong Kong Accreditation Service (HKAS), or the China National Accreditation Service (CNAS), or an accreditation body which has entered into a mutual recognition agreement with HKAS.</td>
</tr>
</tbody>
</table>

   ii. Original or a certified true copy of the product conformity certificate to the "Product Conformity Certification Scheme for Ceramic Tiles" published by the Hong Kong Concrete Institute. The product conformity certificate shall be issued by a certification body accredited by Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS. If a photocopy of the product conformity certificate is submitted, it shall be certified true by the certification body or by the QCM.

   b. A summary of the test results under the audit testing of the "Product Conformity Certification Scheme for Ceramic Tiles". The summary shall be prepared by the accredited laboratory carried out the testing or the certified manufacturer. If so directed by the CM, submit a full set of the audit test reports to the CM for record;

   c. Original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2)(a)(i)&(ii) for the CM's information unless the test requirements are covered by the scope of the "Product Conformity Certification Scheme For Ceramic Tiles";

   d. Glazed ceramic wall tiles used as lining materials for water tanks in direct contact with potable water shall comply with the relevant submission requirement as per PLU1.M1110.

2. Quality Requirements:
   a. Extruded to Group AIII or dry-pressed to Group BIII of BS EN 14411:2006:
      i. With dimensions, surface quality, physical and chemical properties complying with the acceptance standards stated in BS EN 14411:2006 in particular Table F.1 for Group AIII tiles or Table L.1 for Group BIII tiles;
      ii. With a water absorption property exceeding 10% but not exceeding 18%);
      iii. Nominal size: as shown on the Drawings;
      iv. With cushion edges and round edges as shown on Drawings;
      v. With logo-key integrated at back of tiles.
b. Colour: as shown on the Drawings or to Approval;
c. Glazed ceramic wall tiles used as lining materials for water tanks in direct contact with potable water shall comply with the relevant quality requirement as per PLU1.M1110.

3. Observe and comply with the submission and on-site delivery verification requirements as per FIN5.M005.

FIN5.M220.A HOMOGENEOUS WALL TILES

1. In addition to the submission requirements in FIN5.M005 (2), submit:
   a. When the material is supplied for domestic blocks, except for the ancillary facilities at lower floors, also include the following in the submission:
      i. Original or a certified true copy of the ISO 9001 certificate for the manufacturing plant. The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS. If a copy of the ISO certificate is submitted, it shall be certified true by the certification body or by the QCM.
   b. Original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2)(a)(i) & (ii) for CM's information.

2. Quality Requirements:
   a. To Group BIa or Group BIb of BS EN 14411: 2006:
      i. With dimensions, surface quality, physical and chemical properties complying with the acceptance standards stated in BS EN 14411:2006 in particular Table G.1 for Group BIa or Table H.1 for Group BIb for the homogeneous wall tiles;
      ii. With a water absorption property not exceeding 3%;
      iii. Nominal size: as scheduled on the Drawings;
      iv. With square edges;
      v. With logo-key integrated at back of tiles.
   b. Colour: as shown on the Drawings or to Approval.

3. Observe and comply with the submission and on-site delivery verification requirements as per FIN5.M005.

FIN5.M230.A EXTERNAL FACING TILES

1. In addition to the submission requirements in FIN5.M005 (2), submit:
   a. When the material is supplied for domestic blocks, except for the ancillary facilities at lower floors, also include the following in the submission:
      i. Original or a certified true copy of the ISO 9001 certificate for the manufacturing plant. The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS. If a copy of the ISO certificate is submitted, it shall be certified true by the certification body or by the QCM.
   b. Original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2)(a)(i) & (ii) for CM's information;
   c. Submit confirmation that the proposed colour ranges are in accordance with sub-clause (2)(b) below.

2. Quality Requirements:
a. To Group BIa or Group BIb of BS EN 14411: 2006;
   i. With dimensions, surface quality, physical and chemical properties
      complying with the acceptance standards stated in BS EN 14411: 2006 in
      particular Table G.1 for Group BIa or Table H.1 for Group BIb for external
      facing tiles;
      ii. With water absorption property not exceeding 3%;
      iii. Type: with cushion edges as shown on Drawings;
      iv. Nominal size: as shown on the Drawings;
      v. With logo-key integrated at the back of tiles.

b. Colour: as shown on Drawings or to Approval.

3. Observe and comply with the submission and on-site delivery verification
   requirements as per FIN5.M005.

FIN5.M240.A

HOMOGENEOUS COVED SKIRTING TILES

1. In addition to the submission requirements in FIN5.M005 (2), submit:
   a. When the material is supplied for domestic blocks, except for the ancillary
      facilities at lower floors, also include the following in the submission:
      i. Original or a certified true copy of the ISO 9001 certificate for the
         manufacturing plant. The certification body shall either be accredited by the
         Hong Kong Accreditation Service (HKAS) or an accreditation body which
         has entered into a mutual recognition agreement with HKAS. If a copy of
         the ISO certificate is submitted, it shall be certified true by the certification
         body or by the QCM.
      b. Original or certified true copy (issued or certified by the laboratory that
         complies with PRE.B9.570) of the test reports showing full compliance with the
         requirements of sub-clause (2)(a)(i)&(ii) for CM's information.

2. Quality Requirements:
   a. Group BIa or Group BIb of BS EN 14411: 2006:
      i. With dimensions, surface quality, physical and chemical properties
         complying with the acceptance standards stated in BS EN 14411:2006 in
         particular Table G.1 for Group BIa or Table H.1 for Group BIb for the
         homogeneous coved skirting tiles;
      ii. With water absorption property not exceeding 3%;
      iii. Nominal size: as scheduled on the Drawings;
      iv. With logo-key integrated at back of tiles.
   b. Colour: to match floor tile or as shown on the Drawings or to Approval.

3. Observe and comply with the submission and on-site delivery verification
   requirements as per FIN5.M005.

CERAMIC AND VITREOUS MOSAIC TILES

FIN5.M310.A

GLAZED CERAMIC MOSAIC TILES

1. In addition to the submission requirements in FIN5.M005 (2), submit confirmation
   that the proposed colour ranges are in accordance with sub-clause (2)(a)(iii) below;

2. Quality Requirements:
   a. To Group BIb of BS EN 14411: 2006:
      i. With water absorption exceeding 6% but not exceeding 10%;
      ii. Size: as scheduled on the Drawings;
iii. Colour: as shown on Drawings or to Approval;
iv. With square edges.

3. Observe and comply with the submission and on-site delivery verification requirements as per FIN5.M005.

**FIN5.M320.A UNGLAZED VITREOUS MOSAIC WALL TILES**

1. In addition to the submission requirements in FIN5.M005 (2), submit:
   a. When the material is supplied for domestic blocks, except for the ancillary facilities at lower floors, also include the following in the submission:
      i. Original or a certified true copy of the ISO 9001 certificate for the manufacturing plant. The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS. If a copy of the ISO certificate is submitted, it shall be certified true by the certification body or by the QCM.
   b. Confirmation that the colour ranges of the proposed brand are in accordance with sub-clause (2)(b) below.

2. Quality Requirements:
   a. To Group BL or Group B1b of BS EN 14411: 2006:
      i. With dimensions, surface quality, physical and chemical properties complying with the acceptance standards stated in BS EN 14411:2006 in particular Table G.1 for Group BL, or Table H.1 for Group B1b for unglazed vitreous mosaic wall tiles;
      ii. With water absorption property not exceeding 3%;
      iii. Nominal sizes: as shown on Drawings.
   b. Colour: generally in the ranges of light, medium and dark, and as shown on Drawings or to Approval.

3. Observe and comply with the submission and on-site delivery verification requirements as per FIN5.M005.

**GLASS MOSAIC TILES**

**FIN5.M330.A GLASS MOSAIC TILES**

1. In addition to the submission requirements in FIN5.M005 (2), submit:
   a. When the material is supplied for domestic blocks, except for the ancillary facilities at lower floors, also include the following in the submission:
      i. Original or a certified true copy of the ISO 9001 certificate for the manufacturing plant. The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS. If a copy of the ISO certificate is submitted, it shall be certified true by the certification body or by the QCM.
   b. Confirmation that the colour ranges of the proposed brand are in accordance with sub-clause (2)(b) below.

2. Quality Requirements:
   a. Fully vitrified glass mosaic tiles, regular in shape, free from cracks and sharp edges and:
      i. Dimensions and surface quality:

#### iv. Of uniform size as shown on Drawings.
b. Colour: generally in the ranges of light and medium as shown on Drawings or to Approval.

3. Observe and comply with the submission and on-site delivery verification requirements as per **FIN5.M005**.

**TERRAZZO**

FIN5.M510.A  TERRAZZO FLOOR TILES
To BS 4131:1973 and:
1. Size: as shown on Drawings;
2. Colour: as shown on Drawings;
3. Surface finish: as shown on Drawings;
4. Slip resistance in compliance with **FIN5.G050**;
5. Observe and comply with the submission and on-site delivery verification requirements as per **FIN5.M005**.

**NATURAL AND RECONSTITUTED STONE**

FIN5.M610.A  MARBLE SLABS
Of the quality and colours selected by the CM and:
1. Free from flaws and defects throughout;
2. Size on face as shown on the Drawings;
3. Thickness: 20 mm or as otherwise shown on the Drawings;
4. Surface finish as follows or as shown or scheduled on drawings:
   a. Highly polished;
   b. Matt finish.
5. Slip resistance in compliance with **FIN5.G050** for slabs installed as floor surface material;
6. Subject to the Approval of a sample submitted before any order being placed;
7. Observe and comply with the submission and on-site delivery verification requirements as per **FIN5.M005**.

FIN5.M620.A  GRANITE SLABS
Of the quality and colours selected by the CM and:
1. Free from flaws and defects throughout;
2. Size on face as shown on the Drawings;
3. Thickness: 20 mm or as otherwise shown on the Drawings;
4. Surface finish as follows or as shown or scheduled on drawings:
   a. Highly polished;
   b. Matt finish;
   c. Flamed finish.
5. Slip resistance in compliance with **FIN5.G050** for slabs installed as floor surface material;
6. Subject to the Approval of a sample submitted before any order being placed;
7. Observe and comply with the submission and on-site delivery verification requirements as per **FIN5.M005**.
**MARBLE AND GRANITE WALL TILES**

1. Maximum thickness of 7 mm;
2. Other requirements except the dimension of thickness:
   a. As FIN5.M610 for marble;
   b. As FIN5.M620 for granite.

**NON-SLIP ARTIFICIAL GRANITE AND AGGLOMERATED MARBLE TILES**

1. Size: as shown or scheduled on the Drawings;
2. Colour: all colour range;
3. With skirting tiles, tactile tiles and corner nosing tiles for steps;
4. Slip resistance in compliance with FIN5.G050;
5. Observe and comply with the submission and on-site delivery verification requirements as per FIN5.M005.

**CONCRETE FLOOR TILES**

Plain concrete or granolithic to BS 1197:Part 2:1973, and

1. Size: As shown or scheduled on drawings;
2. Colour: to Approval;
3. Surface finish: to Approval;
4. Slip resistance in compliance with FIN5.G050;
5. Observe and comply with the submission and on-site delivery verification requirements as per FIN5.M005.

**CEMENT**

As FIN1.M010.

**WATER**

In accordance with PRE.B10.1210 to PRE.B10.1260.

**SAND GENERALLY**

**GRADING OF SAND**

As FIN1.M420.

**CEMENT SLURRY**

1. Plain or coloured cement and water mixed to a creamy consistency;
2. Do not use white cement except otherwise stated.

**SEMI-DRY MIX**

To BS 5385:Part 5:1994 with particular attention to the following:

1. Cement and sand, 1 : 3 to 4 mix;
2. Water cement ratio ranging from 0.55 to 0.6.
**FIN5.M870.8**  MORTAR FOR CEMENT SAND MORTAR BEDDING FIXING  
Cement and sand, 1 : 3 mix.

**FIN5.M880.8**  BEDDING FOR MARBLE AND GRANITE FLOOR SLABS  
Cement and sand, 1 : 3 mix.

**FIN5.M890.8**  PLASTERS FOR MARBLE AND GRANITE WALL TILES  
To BS 5492:1990 Table 1 and 2.

**FIN5.M900.8**  FIXINGS FOR MARBLE AND GRANITE WALL SLAB  
1. Dowel, adjustable plates, angle brackets, connecting bolts, washers, shins, anchor bolts shall be of stainless steel grade 304 for internal use or grade 316 for external use as in MET1.M060;  
2. Stainless steel dowels shall be:  
   a. No less than 3 mm diameter for wall slabs with nominal thickness of 30 mm or less;  
   b. No less than 4.7 mm diameter for wall slabs with nominal thickness of 40 mm.  
3. Fixing methods in accordance with the Drawings or Approved shop drawings and relevant statutory requirements.  
4. At delivery stage, carry out and submit report of Chemical Drop Test according to MET1.M060 for grade 316 stainless steel fixing parts.

**FIN5.M920.8**  POINTING FOR MARBLE AND GRANITE FLOOR SLABS  
1. Coloured cement and sand, 1 : 3 mix for 3 mm and above tile joint;  
2. Neat coloured cement grout for narrow joints;  
3. Colour: as shown on Drawings or to Approval.

**FIN5.M930.8**  POINTING FOR MARBLE AND GRANITE WALL TILES  
1. Cementitious pointing:  
   a. 4 : 1 cement sand mortar for narrow joints with width at 1 mm to 2 mm;  
   b. 1 : 3 cement sand mortar for joints with width at 3 mm or more.  
2. Sealant pointing:  
   a. To BS 8298:1989 Table 8 and WAT5, 1 part polyurethane sealant or 1 part polysulphide;  
   b. Other types of sealant may be submitted subject to the CM's approval;  
   c. Obtain information from the sealant manufacturer that the sealant will not stain the stone;  
   d. In compliance with the prescribed limits of VOC content as set out in the Air Pollution Control (Volatile Organic Compounds) Regulation.  
3. Colour of the mortar and sealant: as shown on Drawings or to Approval.

**FIN5.M940.8**  GROUT FOR FLOOR TILING  
Cement and sand, 1 : 1 mix, mixed to a paste with a minimum of water.

**FIN5.M950.8**  GROUT FOR MOSAIC TILING  
White or ordinary cement mixed to a paste with a minimum of water, for tile joint not greater than 3 mm wide or cement and sand, 1 : 3 mix, for joint greater than 3 mm wide.

**FIN5.M960.8**  GROUT FOR GLAZED WALL TILING  
White cement mixed to a paste with a minimum of water, for tile joint not greater than 3 mm wide or cement and sand 1 : 3 mix for joint greater than 3 mm wide.
FIN5.M970.8 GROUT FOR EXTERNAL FACING TILES
Cement mixed to a paste with a minimum of water, for tile joint not greater than 3 mm wide or cement and sand 1 : 3 mix for joint greater than 3 mm wide.

FIN5.M980.8 PROPRIETARY GROUT
1. Approved proprietary manufacturer and product;
2. In compliance with the prescribed limits of VOC content as set out in the Air Pollution Control (Volatile Organic Compounds) Regulation.

FIN5.M990.8 BONDING AGENT
As FIN1.M920.

FIN5.M995.8 MOVEMENT JOINTS FOR MARBLE AND GRANITE WALL TILES AND FLOOR SLABS
Unless otherwise indicated on the Drawings or instructed by the CM:
1. Sealant: 1 part polyurethane to WAT5.M150 and in compliance with the prescribed limits of VOC content as set out in the Air Pollution Control (Volatile Organic Compounds) Regulation;
2. Back-up material to WAT5 with particular attention to the following:
   a. Compatible with the Approved sealant;
   b. Circular section strip of cellular rubber or cellular polyethylene.

TILE ADHESIVES AND GROUTING

FIN5.M1010.B TILE ADHESIVES AND TILE GROUT
1. Submission Requirements:
a. At sample submission and approval stage, submit a sample of the proposed tile adhesives and tile grout for the CM's approval together with all the following substantiation for the CM's information:
   i. Catalogue, brand name / model name and job reference;
   ii. Name, address and contact person of the local supplier;
   iii. Name, address and contact person of the manufacturer;
   iv. Where applicable, either the document from the manufacturer showing his authorization for the supplier as the agent / distributor in Hong Kong or document from the supplier showing the appointment of the manufacturer and manufacturer's agreement for the production of the proposed product;
   v. Detailed Method Statement for the installation of the tiling systems, showing all work procedures from the preparation of background through to the cleaning of the completed assembly;
   vi. Proposed arrangement for the quarantine material verification test specified in sub-clause (5), including delivery programme, quantity of each batch of delivery and storage location of tile adhesive delivered to Site and to manufacturer's factory of precast concrete components;
   vii. When the tile adhesives and grout are supplied for domestic blocks, except for the ancillary facilities at lower floors, also include the following in the submission:
- Submit one sample board similar to the one maintained by the Housing Department showing the quality, detailed method statement and work procedures of the adhesives and grout. When the proposed brand of tile adhesive or grout has not been approved by HA for use in a construction project in the past five years prior to the notified date of commencement of the Works, submit an extra set of identical sample for retention by the Housing Department upon approval of sample;

- Original or a certified true copy each of the certification to ISO 9001 and ISO 14001 for the manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by the certification bodies or by the QCM. The certification bodies shall be as follows:

<table>
<thead>
<tr>
<th>ISO</th>
<th>Certification Body</th>
</tr>
</thead>
<tbody>
<tr>
<td>ISO 9001</td>
<td>The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.</td>
</tr>
<tr>
<td>ISO 14001</td>
<td>The certification body shall be accredited by the Hong Kong Accreditation Service (HKAS), or the China National Accreditation Service (CNAS), or an accreditation body which has entered into a mutual recognition agreement with HKAS.</td>
</tr>
</tbody>
</table>

- Original or a certified true copy of the product conformity certificate to the "Product Conformity Certification Scheme for Tile Adhesives" published by the Hong Kong Concrete Institute. The product conformity certificate shall be issued by a certification body accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS. If a photocopy of the product conformity certificate is submitted, it shall be certified true by the certification body or by the QCM.

viii. When the tile adhesive is used for fixing external wall tiles, confirmation from the tile adhesive manufacturer that the tile adhesive is suitable for external applications.

b. A summary of the test results under the audit testing of the "Product Conformity Certification Scheme for Tile Adhesives". The summary shall be prepared by the accredited laboratory carried out the testing or the certified manufacturer. If so directed by the CM, submit a full set of the audit test reports to the CM for record;

c. Original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2)(b), (2)(c), (2)(d) & (2)(i) for the CM's information unless the test requirements are covered by the scope of the "Product Conformity Certification Scheme for Tile Adhesives":

i. The date of the test shall be generally within two years prior to the notified date for commencement of the Works or at an earlier date for domestic blocks subject to the CM's consideration on the track records as maintained by the Housing Department;

ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material as mentioned in sub-clause (3)(a);
iii. In the event that no test report has been submitted for the CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

d. Tile grout used as lining materials for water tanks in direct contact with potable water shall comply with the relevant submission requirement as per PLU1.M1110.

2. Quality Requirements:

a. Cement based compatible with the substrate and tiles to be installed;

b. For glass mosaic tiles and other tile types (except homogeneous tiles) of size below 300x300 mm, use tile adhesive to BS EN 12004:2007 normal setting cementitious type class C1 with minimum tensile adhesive strength as follow:

<table>
<thead>
<tr>
<th>Characteristic</th>
<th>Requirement</th>
<th>Test Method</th>
</tr>
</thead>
<tbody>
<tr>
<td>Initial tensile adhesion strength</td>
<td>≥ 0.5 N/mm²</td>
<td>8.2 of BS EN 1348:2007</td>
</tr>
<tr>
<td>Tensile adhesion strength after water immersion</td>
<td>≥ 0.5 N/mm²</td>
<td>8.3 of BS EN 1348:2007</td>
</tr>
<tr>
<td>Tensile adhesion strength after heat ageing</td>
<td>≥ 0.5 N/mm²</td>
<td>8.4 of BS EN 1348:2007</td>
</tr>
<tr>
<td>Tensile adhesion strength after freeze-thaw cycles</td>
<td>≥ 0.5 N/mm²</td>
<td>8.5 of BS EN 1348:2007</td>
</tr>
<tr>
<td>Open time: tensile adhesion strength</td>
<td>≥ 0.5 N/mm² after not less than 20 min</td>
<td>BS EN 1346:2007</td>
</tr>
</tbody>
</table>

c. For homogeneous tiles and other tile types of size 300x300 mm or above, use tile adhesive to BS EN 12004:2007 improved cementitious type class C2E with additional characteristics and minimum tensile adhesive strength as follow:

<table>
<thead>
<tr>
<th>Characteristic</th>
<th>Requirement</th>
<th>Test Method</th>
</tr>
</thead>
<tbody>
<tr>
<td>High initial tensile adhesion strength</td>
<td>≥ 1 N/mm²</td>
<td>8.2 of BS EN 1348:2007</td>
</tr>
<tr>
<td>High tensile adhesion strength after water immersion</td>
<td>≥ 1 N/mm²</td>
<td>8.3 of BS EN 1348:2007</td>
</tr>
<tr>
<td>High tensile adhesion strength after heat ageing</td>
<td>≥ 1 N/mm²</td>
<td>8.4 of BS EN 1348:2007</td>
</tr>
<tr>
<td>High tensile adhesion strength after freeze-thaw cycles</td>
<td>≥ 1 N/mm²</td>
<td>8.5 of BS EN 1348:2007</td>
</tr>
<tr>
<td>Extended open time: tensile adhesion strength</td>
<td>≥ 0.5 N/mm² after not less than 30 min</td>
<td>BS EN 1346:2007</td>
</tr>
</tbody>
</table>

d. Tile grout to ANSI A118.6:1992, in particular the following:

<table>
<thead>
<tr>
<th>Items</th>
<th>Test Method</th>
<th>Acceptance Standards</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>Linear Shrinkage</td>
<td>ANSI A118.6:1.992 Clause H4.3</td>
<td>1 day shrinkage &lt; 0.1% 7 days shrinkage &lt; 0.2%</td>
<td>Cast and store grout specimens at 21° - 25°C, 45 - 55% R.H.</td>
</tr>
<tr>
<td>Water Absorption</td>
<td>ANSI A118.6:1.992 Clause H3.4</td>
<td>From 50% R.H. to immersion &lt; 5% From immersion to dry &lt; 7%</td>
<td>Determine water absorption from 50% R.H. to immersion and from immersion to dry.</td>
</tr>
<tr>
<td>Compatibility with Tile Adhesive</td>
<td>BS 5980:1980 Appendix D with modification.</td>
<td>Requirements of BS 5980:1980 are taken greater than or equal to 950 N for 14 days in laboratory condition and greater than or equal to 560 N for 7 days curing in laboratory condition followed by 7 days immersion in water. Laboratory Condition: 20°C ±2°C 45 to 75% R.H.</td>
<td>A layer of tile grout (1.5 mm thick) is applied over tile adhesive 1.5 mm thick (brand to be the one selected by the CM) which shall have been embedded in standard test piece tiles to harden for 24 hours. Ten such assemblies are prepared and cured for 14 days at laboratory condition and then subject to tensile force. Further ten assemblies are required for similar tensile tests under 7 days curing at laboratory condition followed by 7 days immersion in water.</td>
</tr>

</table>

e. Colour: white or grey for tile adhesive and to Approval for tile grout;

f. Packed in three ply together with preparation procedures and application methods. Minimum one set of the preparation procedures and application methods shall be printed in Chinese and diagrammatic forms for each lot that is delivered to site;

g. Brand name, batch number, type and class, manufacturing date, shelf life, pot life and open time to be clearly printed on outside of package;

h. No prior soaking of tiles is required;

i. Tile adhesive compatibility with panel wall to be demonstrated via the following test method:

i. Test against the panel wall partition selected for the Contract complete with moisture sealer. Acceptance standard to be minimum 0.3 N/mm²;

ii. Select four specimens of 200x200 mm ceramic glazed wall tile and fix the four tiles vertically without additional support according to the manufacturer's specification;

iii. The interval between applying tile adhesive and placing tiles is not more than 5 minutes. Record the extent to which slip occurs per the first minute after placing tile specimen. The tile specimens are fixed by adhesive tape to prevent further slip;

iv. The sample shall be subjected to tests of Tensile Adhesion Strength with an adhesive not exceeding 3 mm in final bed thickness;

v. Pull off tiles on a minimum of 28 days after fixing;

vi. Attach an aluminium / steel dolly onto the surface of the specimen by a suitable adhesive resin;
vii. Use strong adhesive tape to fix the position of dolly until strength of the resin is developed as advised by the resin manufacturer;
viii. Connect the dolly to the Pull-off Test device. The pull-off equipment shall be capable of increasing the load steadily without jerking at a rate of (250 + 50) N/s, and must be provided with a measurement device which shall retain the maximum force exerted, the so-called failure load to the nearest 0.01KN. The measurement inaccuracy of the equipment must be less than 2%, in accordance with accuracy Grade 2 of BS 1610: Part 1: 1985;
ix. Apply a tensile force gradually by the device;
x. Record the failure force, location of failure and any other observations or abnormalities;
ni. Record the force from the readout unit;
xii. Repeat steps as described in sub-clauses (vi) to (xi) until Pull-off Tests to all four tiles are completed;
xiii. Take photographs.

j. In compliance with the prescribed limits of VOC content as set out in the Air Pollution Control (Volatile Organic Compounds) Regulation;
k. Tile grout used as lining materials for water tanks in direct contact with potable water shall comply with the relevant quality requirement as per PLU1.M1110.

3. On Site Delivery Verification:
a. At delivery stage, submit the following documents:
i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (1)(a);
ii. Original or certified true copy of the Certificate of Origin, batch number and manufacturing date for every batch of delivery. One batch being the material quantity covered under each delivery note;
iii. Delivery notes for all material delivered to Site.
b. Carry out and submit report on the following verifications for tile adhesive and grout upon delivery on Site. Prior to carrying out the verifications, inform the CM or his representatives who may present to witness the verifications:
i. Method:

<table>
<thead>
<tr>
<th>Verification Items</th>
<th>Method</th>
<th>Acceptance Standards</th>
</tr>
</thead>
<tbody>
<tr>
<td>Material and Packaging</td>
<td>Visual</td>
<td>To Approved Sample</td>
</tr>
<tr>
<td>Lot Number / Batch Number</td>
<td>Document Check</td>
<td>Same as delivery note</td>
</tr>
<tr>
<td>Expiry Date</td>
<td>Check information</td>
<td>Minimum 6 months from the date of delivery</td>
</tr>
<tr>
<td></td>
<td>printed on the</td>
<td></td>
</tr>
<tr>
<td></td>
<td>packing</td>
<td></td>
</tr>
</tbody>
</table>

ii. Frequency:
Carry out verification on one sample per every delivery of tile adhesive or grout made to Site under each delivery note submitted in sub-clause (3)(a).
c. Where any of the verifications fail to meet the acceptance standards, either:
i. Remove the representative batch off Site; or
ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM; one sample being one packaged bag / container of tile adhesive or grout. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.

4. Delivery Verification at Manufacturer's Factory of Precast Concrete Components:
   a. At delivery stage, submit the following documents to the CM or his representatives resident at manufacturer's factory:
      i. Written confirmation that the material delivered to the manufacturer's factory conforms with the Approved sample submitted under sub-clause (1)(a);
      ii. Original or certified true copy of the Certificate of Origin, batch number and manufacturing date for every batch of delivery. One batch being the material quantity covered under each delivery note;
      iii. Delivery notes for all material delivered to the manufacturer's factory.
   b. Carry out the following verifications for tile adhesive and grout upon delivery to the manufacturer's factory and in the presence of the CM or his representatives resident at manufacturer's factory:
      i. Method:
         
         | Verification Items       | Method                  | Acceptance Standards                          |
         |--------------------------|-------------------------|-----------------------------------------------|
         | Material and Packaging   | Visual                  | To Approved Sample                            |
         | Lot Number / Batch Number| Document Check          | Same as delivery note                         |
         | Expiry Date              | Check information printed on the packing | Minimum 6 months from the date of delivery |
         | Shelf Life               | Check information printed on the packing | Not expired                                   |

      ii. Frequency:
      Carry out verification for one packaged bag / container per every delivery of tile adhesive or grout made to the manufacturer's factory under each delivery note submitted in sub-clause (4)(a).
   c. Where any of the verifications fail to meet the acceptance standards, either:
      i. Remove the representative batch off the manufacturer's factory; or
      ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM; one sample being one packaged bag / container of tile adhesive or grout. In case of failure of any verification to any one sample, remove the representative batch off the manufacturer's factory, bear all associated costs, and no extension of time will be allowed.

5. Quarantine for Material Verification Test
   a. Save as stated in sub-clause (5)(e), each batch of tile adhesive delivered to Site and to manufacturer’s factory of precast concrete components shall be subject to material verification test specified in the respective specification in FIN5.T105 and FIN5.T108. No tile adhesive shall be used in permanent works or precast concrete components during the material verification test unless approved by the CM under sub-clause (5)(d);
b. In the event that the tile adhesive delivered to Site is stored on Site during the material verification test to be conducted as specified in FIN5.T105, comply with the following requirements for storing the delivered materials:
   i. Store the tile adhesive in a cool, well-ventilated and covered storage accommodation on Site and in accordance with manufacturer's recommended ambient storage conditions;
   ii. Provide a record of the batch number, manufacturing date, quantity and storage location of each batch for CM's record.

c. In the event that the tile adhesive delivered to the manufacturer’s factory is stored in the manufacturer's factory during the material verification test to be conducted as specified in FIN5.T108, comply with the following requirements for storing the delivered materials:
   i. Store the tile adhesive in a cool, well-ventilated and covered storage accommodation in the manufacturer's factory and in accordance with manufacturer's recommended ambient storage conditions;
   ii. Provide a record of the batch number, manufacturing date, quantity and storage location of each batch to the CM or his representatives resident at manufacturer's factory for record.

d. In the event of circumstances where the contractor considers necessary to use the tile adhesive in permanent works or precast concrete components during the material verification test as stipulated in sub-clause (5)(a), seek Approval in advance of the material delivery with full substantiation and proposed measures to safeguard against the risk of material non-compliance;

e. Unless otherwise instructed by the CM, sub-clauses (5)(a), (5)(b), (5)(c) and (5)(d) are not applicable to tile adhesive solely used for nosing tile or non-slip tactile homogeneous floor tile on precast staircase.

FIN5.M1020.A  EPOXY BASED TILE ADHESIVE
1. An Approved single component epoxy tile adhesive installed to manufacturer’s instructions;
2. Quality performance to comply with BSEN 12004:2007 Reaction Resin Adhesive requirements, or equivalent, as follows:

<table>
<thead>
<tr>
<th>Characteristic</th>
<th>Requirement</th>
<th>Test Method</th>
</tr>
</thead>
<tbody>
<tr>
<td>Initial shear adhesion strength</td>
<td>≥ 2 N/mm²</td>
<td>7.3 of BSEN 12003: 2008</td>
</tr>
<tr>
<td>Shear adhesion strength after water immersion</td>
<td>≥ 2 N/mm²</td>
<td>7.4 of BSEN 12003: 2008</td>
</tr>
<tr>
<td>Open time: tensile adhesion strength</td>
<td>≥ 0.5 N/mm² after not less than 30 min</td>
<td>BSEN 1346:2007 (1)</td>
</tr>
</tbody>
</table>

(1) Back buttering shall be applied on tiles in the test of open time.
3. Brand name, batch number, type and class, manufacturing date, shelf life or expiry date, pot life and open time to be clearly printed on outside of the package. Carry out verifications at delivery stage and inform the CM who may present to witness the verifications;
4. In compliance with the prescribed limits of VOC content as set out in the Air Pollution Control (Volatile Organic Compounds) Regulation.
CEMENT SAND MORTAR WITH LATEX

FIN5.M1050.A  CEMENT SAND MORTAR WITH LATEX FOR DIRECT APPLICATION OF TILING ON CONCRETE SURFACES

1. Submission Requirements:
   a. At sample submission and approval stage, submit a sample of the proposed latex for use with cement sand mortar for CM's approval together with all the following substantiation for CM's information:
      i. Catalogue, brand name / model name and job reference;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer;
      vi. Detailed Method Statement for the installation of the tiling systems, showing all work procedures from the preparation of background, measuring and mixing of constituents, fixing of tiles through to the cleaning of the completed assembly;
      v. Proposed arrangement for the quarantine material verification test specified in sub-clause (5), including delivery programme, quantity of each batch of delivery and storage location of latex delivered to Site and to manufacturer's factory of precast concrete components;
      vi. Original or a certified true copy of the certification to ISO 9001 for the manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by the certification body or by the QCM. The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition arrangement with HKAS.
   b. Original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2)(b) for CM's information:
      i. The date of the test shall be generally within three years prior to the notified date for commencement of the Works;
      ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material as mentioned in sub-clause (3)(a);
      iii. In the event that no test report has been submitted for CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be entitled.

2. Quality Requirements:
   a. Approved latex, cement and sand of mix proportion recommended by the latex manufacturer and compatible with the substrate and tiles to be installed;
   b. The quality and performance requirements are as follows:

<table>
<thead>
<tr>
<th>Characteristic</th>
<th>Requirement</th>
<th>Test Method</th>

Specification Library 2018 Edition (Batch 2)

Tensile adhesion strength after freeze-thaw cycles ≥ 1 N/mm² 8.5 of BSEN 1348: 2007 (1)
Open time: tensile adhesion strength ≥ 0.5 N/mm² after not less than 30 min BSEN 1346:2007 (1)(2)

(1) Fine-graded sand of 600 μm grain size shall be used.
(2) Back buttering shall be applied on tiles in the test of open time.

c. Brand name, batch number, type and class, manufacturing date, shelf life or expiry date, pot life and open time to be clearly printed on outside of the latex package;

d. In compliance with the prescribed limits of VOC content as set out in the Air Pollution Control (Volatile Organic Compounds) Regulation.

3. On Site Delivery Verification:

a. At delivery stage, submit the following documents:
   i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (1)(a);
   ii. Original or certified true copy of the Certificate of Origin, batch number and manufacturing date for every batch of delivery. One batch being the material quantity covered under each delivery note;
   iii. Delivery notes for all material delivered to Site.

b. Carry out and submit report on the following verifications for the latex upon delivery on Site. Prior to carrying out the verifications, inform the CM who may present to witness the verifications:

   i. Method:

<table>

</tbody>
</table>

   ii. Frequency:
   One set of verification should be carried out for every delivery of latex made to Site under each delivery note submitted in sub-clause (3)(a).

c. Where any of the verifications fail to meet the acceptance standards, either:
   i. Remove the representative batch off Site; or
   ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be entitled.

4. Delivery Verification at Manufacturer's Factory of Precast Concrete Components:

a. At delivery stage, submit the following documents to the CM or his representatives resident at manufacturer's factory:
i. Written confirmation that the material delivered to the manufacturer's factory conforms with the Approved sample submitted under sub-clause (1)(a);

ii. Original or certified true copy of the Certificate of Origin, batch number and manufacturing date for every batch of delivery. One batch being the material quantity covered under each delivery note;

iii. Delivery notes for all materials delivered to the manufacturer's factory.

b. Carry out the following verifications for latex upon delivery to the manufacturer's factory and in the presence of the CM or his representatives resident at manufacturer's factory:

i. Method:

<table>

</tr>
</tbody>
</table>

ii. Frequency:

One set of verification should be carried out for every delivery of latex made to the manufacturer's factory under each delivery note submitted in sub-clause (4)(a).

c. Where any of the verifications fail to meet the acceptance standards, either:

i. Remove the representative batch off the manufacturer's factory; or

ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off the manufacturer's factory, bear all associated costs, and no extension of time will be entitled.

5. Quarantine for Material Verification Test

a. Each batch of latex delivered to Site and to manufacturer's factory of precast concrete components shall be subject to material verification test specified in the respective specification in FIN5.T106 and FIN5.T109. No latex shall be used in permanent works or precast concrete components during the material verification test unless approved by the CM under sub-clause (5)(d);

b. In the event that the latex delivered to Site is stored on Site during the material verification test to be conducted as specified in FIN5.T106, comply with the following requirements for storing the delivered materials:

i. Store the latex in a cool, well-ventilated and covered storage accommodation on Site and in accordance with manufacturer's recommended ambient storage conditions;

ii. Provide a record of the batch number, manufacturing date, quantity and storage location of each batch for CM's record.
c. In the event that the latex delivered to the manufacturer's factory is stored in the manufacturer's factory during the material verification test to be conducted as specified in FIN5.T109, comply with the following requirements for storing the delivered materials:

i. Store the latex in a cool, well-ventilated and covered storage accommodation in the manufacturer's factory and in accordance with manufacturer's recommended ambient storage conditions;

ii. Provide a record of the batch number, manufacturing date, quantity and storage location of each batch to the CM or his representatives resident at manufacturer's factory for record.

d. In the event the contractor considers necessary to use the latex in permanent works or precast concrete components during the material verification test as stipulated in sub-clause (5)(a), seek Approval in advance of the material delivery with full substantiation and proposed measures to safeguard against the risk of material non-compliance.

ANCILLARY MATERIALS

FIN5.M1110.8 NON-SLIP SURFACE
Anti-slip system for surface treatment of granite floor tiles to CM's Approval.

FIN5.M1120.8 MOVEMENT JOINTS FOR CERAMIC AND MOSAIC TILES
Sealant and back-up material to WAT5 and to BS 5385:Part 1:1995 with particular attention to paragraph 2.10.
WORKMANSHIP

GENERAL

FIN.010.8  STANDARD
Except where otherwise specified carry out:
1. Internal ceramic wall tiling and mosaics generally in accordance with BS 5385-1:1995;
2. External ceramic wall tiling and mosaics generally in accordance with BS 5385-2:1991;
3. Internal ceramic floor tiling and mosaics generally in accordance with BS 5385-3:1989;

FIN.020.8  PREPARATION OF CONCRETE SURFACES FOR DIRECT APPLICATION OF TILING
Either:
1. Prepare the surface by:
   a. Thoroughly hack the concrete surface to remove any laitance and to expose the aggregates;
   b. Thoroughly clean and wet the surface shortly before applying the finish;
   c. Brush neat cement slurry into the damp surface immediately before applying the finish; or
2. Apply proprietary bonding agent in accordance with the manufacturer's recommendations.

FIN.025.8  CUTTING TILES
To BS 8000:Section 11.1:1989:
1. Cut tiles neatly and accurately;
2. Maintain general joint width along cut edges;
3. Cut and fit tiling neatly around pipes, electrical boxes, etc.

FIN.030.8  CLEANLINESS
Clean all tiling as the work progresses, removing bedding mortar, adhesive, and grout from the tile surfaces at each stage, as soon as the initial set has taken place and before the material has fully hardened. Cleaning tiles at a later stage using corrosive cleaning agent will not be permitted.

FIN.040.8  CUT MITRES ETC
Cut mitres and the like only when tiles are specified without special tiles and, when a full range of tile fittings is unavailable.

FIN.050.8  CONSTRUCTION MOCK-UP
Construct a Construction Mock-up of around 5 m² each for the wall and floor installations in accordance with PRE.B9.440 for:
1. Wall tiling at lift lobby, bathroom and kitchen:
a. Where applicable, show the workmanship of each construction works including spatterdash, rendering, substrate preparation, junctions, jointing including movement joints, sealant, moisture sealer, E&M works and accessories, waterproofing, skirting, floor drain, bond coat, bedding, tiles laying and pointing, cleanliness etc., as directed by the CM.

2. Floor tiling at lift lobby, bathroom and kitchen:
   a. Where applicable, show the workmanship of each construction layer including substrate preparation, angles fillet, layers of waterproofing, floor drains, floor screed, bond coat, bedding, jointing including movement joints, tiles laying and pointing, cleanliness and etc., as directed by the CM.

3. Fixing marble and granite wall slab:
   a. Where applicable, show the workmanship of all fixing methods, movement joints, back-filling and pointing, cleanliness and etc., as directed by the CM.

4. When granite or marble vertical installation is used, construct a mock up ...... m wide by ...... m high to demonstrate workmanship of all construction details as shown in the approved shop drawings as per FIN5.W440, including but not limited to fixing and hanging methods, joints including movement joints if provided, and sub-frame structure etc..

FIN5.W060.8 TILE JOINT TREATMENT
1. Remove any dust or debris that is collected in the tile joints prior to grouting;
2. Proprietary grouts: do not wet joint cavities prior to grouting if proprietary grout is used particularly when fixing with adhesive or according to the manufacturer's recommendation;
3. Cement grouts: wet the joint cavities prior to grouting;
4. Use plastic string or strip to form the required width of joints in lieu of cross-shaped spacers for both ceramic and homogeneous wall tiles. Do not leave behind any plastic tile spacers or string in the tiling work.

FIN5.W070.8 TILING WORKS ADJOINING FRAMES OF TIMBER DOOR AND HOSE REEL CABINETS
1. Fix tiling works around the door frames in accordance with Drawings;
2. Do not fix tiles over frames of timber doors and cabinets.

LAYING FLOOR TILES

FIN5.W120.8 CEMENT : SAND MORTAR BEDDING METHOD
To BS 5385:Part 3:1989 with particular attention to clause 24.1:
1. Soak tiles in clean water as required in accordance with the manufacturers' instruction and allow to drain;
2. Dampen the screed with clean water to reduce suction if required;
3. Lay 1 : 3 cement and sand bedding mortar over the screed, spread and trowel to the thickness as shown on Drawings;
4. Spread the back of the tiles with slurry and immediately lay and tamp them firmly into the bedding, forming straight and even joints, 3 mm wide unless shown otherwise on Drawings;
5. Allow the bedding to set and grout up joints, cleaning any surplus grout from the face of the tiles as the work proceeds.

FIN5.W130.8 CEMENT-BASED ADHESIVE BEDDING METHOD
To BS 5385-3:1989 with particular attention to clause 24.4:
1. Fix tiles with adhesive and ensure the tile adhesive is prepared and mixed in accordance with the manufacturer's recommendations;
2. Grout up joints using proprietary grout in accordance with the grout manufacturer's recommendations.

FIN5.W140.8 SEMI-DRY METHOD
Do not use.

FIN5.W150.8 LAYING TACTILE HOMOGENEOUS FLOOR TILES
1. Avoid as much as practicable the cutting of tiles;
2. Normal tile to tile joints to be the same as that for adjacent general flooring;
3. In order not to cause any disruption to the tactile guide path, keep away accessories such as metal grating and manhole covers which will cause a disruption to the floor pattern.

FIN5.W160.8 TRAFFIC ON NEWLY LAID FLOORS
Do not allow traffic on newly laid floors until 4 days have elapsed since completion of laying. Permit only light traffic for a further period of ten days.

FIXING WALL TILES

FIN5.W210.8 CEMENT : SAND MORTAR BEDDING METHOD
To BS 5385-1:1995 with particular attention to clause 4.2.3.5.
1. Bonding coat referred to in sub-clause 4.2.3.5.1 to be in accordance with FIN5.M860;
2. Soak tiles in clean water for a minimum of 30 minutes, stack to drain and fix as soon as the surface water has drained from them. Do not soak homogeneous wall tiles;
3. Tiles to be cleaned free of dust and loose powder before application;
4. Dampen the wall render with clean water, sufficiently to prevent it absorbing water from the bedding mortar;
5. Butter the back of each tile with cement and water slurry and tamp it firmly into position so that the bed is uniformly spread throughout to a minimum thickness of 3 mm and not more than 6 mm at localised areas for rectification of slight variations in the trueness of the render background;
6. Form joints 1.5 mm wide for tiles up to 150 x 150 mm and 3.0 mm wide for tiles of 200 x 200 mm and over, unless shown otherwise on Drawings. Ensure the required joint width is provided through the entire depth of the tile joint;
7. Clean tiles and joints before the bedding hardens;
8. Grout the joints at least 24 hours after fixing the tiles and clean off surplus grout as the work proceeds.

FIN5.W220.8 CEMENT-BASED ADHESIVE BEDDING METHOD
To BS 5385-1:1995:
1. Site demonstration is to be carried out by the adhesive supplier on the whole application procedures before commencing the tiling works;
2. Tiles to be cleaned free of dust and loose powder and left thoroughly dry before immediate application;
3. Do not wet tiles when fixing with tile adhesives unless stated in the manufacturer's recommendation;
4. Prepare and mix tile adhesive in strict accordance with the manufacturer's recommendation;
5. Apply the adhesive by notched trowelling and buttering method;
6. Apply and press the adhesive into the surface to give a bed thickness of about 3 mm before combing the adhesive with a notched trowel of size recommended by the manufacturer. Do not apply more adhesive on the wall than can be covered with tiles within the "open time" of the adhesive;
7. Butter a thin coating of adhesive over the back of tile to fill the ribs or keys before pressing and tamping the tiles in position on the combed adhesive bed to spread the adhesive evenly over the back of tile;
8. There should be no significant increase in the final bed thickness;
9. Form joints to width specified against respective tile sizes;
10. Grout up joints using proprietary grout in accordance with the grout manufacturer's recommendations;
11. Cleaning of tiles to be in accordance with FIN5.W030.

**FIN5.W230.8 FIXING TO PANEL WALL PARTITIONS**

1. Fix wall tiles using a proprietary adhesive in accordance with FIN5.M1010. Apply adhesive in accordance with FIN5.W220;
2. Grout up joints using a proprietary grout in accordance with FIN5.M1010. Apply tile grout in accordance with the grout manufacturer's recommendation.

**FIN5.W240.8 FIXING TO BLOCKWORK OR CONCRETE**

1. Fix wall tiles using proprietary adhesive in accordance with FIN5.M1010 on single coat render in accordance with FIN1.W520 (1); or
2. Fix wall tiles using a proprietary adhesive in accordance with FIN5.M1010 on two coats render in accordance with FIN1.W520 (2); and
3. Grout up joints using proprietary grout in accordance with FIN5.M1010. Apply tile grout in accordance with the grout manufacturer's recommendation.

**FIN5.W250.8 DIRECT APPLICATION OF TILING ON CONCRETE SURFACE WITH CEMENT SAND MORTAR MIXED WITH LATEX BEDDING**

1. Demonstration on Site and at manufacturer's factory of precast concrete components, where applicable, shall be carried out by the latex manufacturer on the whole application procedures before commencing the tiling works;
2. Tiles shall be cleaned, free of dust and loose powder and left thoroughly dry before immediate application;
3. Do not wet tiles when fixing with cement sand mortar with latex unless otherwise stated in the manufacturer’s recommendation;
4. Sand shall be stored on impervious sheet and keep under cover before use;
5. Prepare and mix latex, cement and sand in strict accordance with the manufacturer's recommendation;
6. Apply the cement sand mortar with latex by notched trowelling and buttering method to thickness 12mm and in strict accordance to the detailed method statement. Take extreme care during application and inspection of the work. Do not apply more cement sand mortar with latex on the wall than can be covered with tiles within the "open time" of the latex;
7. Form joints to width specified against respective tile sizes;
8. Grout up joints using proprietary grout in accordance with the grout manufacturer's recommendations;
9. Cleaning of tiles to be in accordance with FIN5.W030.
FIXING MOSAIC TILES

FIN5.W310.8 FIXING TO FLOOR BY CEMENT SAND MORTAR BEDDING METHOD
To BS 5385-3:1989 with particular attention to clause 33.2 and the following:
1. Dampen the floor screed with clean water sufficiently to prevent it absorbing water from the bedding mortar;
2. Lay 1 : 3 cement and sand bedding mortar over the screed, spread and wood float finish to a minimum thickness as shown on Drawings;
3. Pre-grout the bed side of the mosaic tiles using the same colour neat cement as the final grout. Where joints are wider than 2 mm, or thickness of the mosaic tiles are greater than 4 mm, use 1 : 1 cement sand grout;
4. When using taped-backed or mesh-backed mosaic, spread and trowel over the bed with 2 mm thick slurry of neat cement or 1 : 1 cement sand;
5. Place sheets of mosaic tiles in position and tamp them firmly into the bedding, and maintain straight and regular joints between sheets;
6. Remove the backing paper, complete the final straightening and rub the surface with grout, coloured as required, to fill the joints and clean any surplus from the face of the mosaic as the work proceeds.

FIN5.W315.8 FIXING TO FLOOR BY CEMENT-BASED ADHESIVE BEDDING METHOD
To BS 5385-3:1989 with particular attention to clause 33.1 and the following:
1. Fixing mosaic with adhesive in accordance with the manufacturer's recommendations;
2. Grouting the joints with a proprietary grout applied in accordance with the grout manufacturer's recommendations.

FIN5.W320.8 FIXING TO WALLS BY CEMENT SAND MORTAR BEDDING METHOD
1. To BS 5385-1:1995 with particular attention to clause 5.4.2 for internal wall;
2. To BS 5385-2:1991 with particular attention to clause 27.2 for external wall;
3. Dampen the wall render with clean water, sufficiently to prevent it absorbing water from the bedding mortar;
4. Precast the back of sheets of mosaic tiles with precast materials to FIN5.M860;
5. Place sheets of mosaic tiles in position and tamp them firmly into the bedding, maintaining straight and regular joints;
6. Remove the backing paper, complete the final straightening and rub the surface with grout, coloured as required, to fill the joints and clean any surplus from the face of the tiles as the work proceeds;

FIN5.W330.8 FIXING TO WALLS BY CEMENT-BASED ADHESIVE BEDDING METHOD
1. To BS 5385:Part 1:1995 with particular attention to 5.4.1 for internal wall;
2. To BS 5385:Part 2:1991 with particular attention to 27.1 for external wall;
3. Fixing mosaic with adhesive in accordance with FIN5.W220;
4. Grouting the joints with a proprietary grout applied in accordance with the grout manufacturer's recommendations.

FIN5.W340.8 FIXING TO WALLS BY CEMENT SLURRY BEDDING METHOD
1. Dampen the wall surface sufficiently to prevent it absorbing water from the cement slurry;
2. Coat the surface of the wall with cement slurry in accordance with FIN5.M860 of the same colour of the final grout in one operation and coat the backs of the sheets of mosaic tiles with cement slurry, immediately before fixing;
3. Place sheets of mosaic tiles in position and tamp them firmly in maintaining straight and regular joints;
4. Remove the backing paper, complete the final straightening and rub the surface with grout, coloured as required, to fill the joints and clean any surplus from the face of the tiles as the work proceeds.

FIN5.W350.8 FIXING TO PANEL WALL PARTITIONS
Fix mosaic tiles as FIN5.W330.

FIN5.W360.8 FIXING GLASS AND GLAZED MOSAIC TO PRECAST FACADE
1. Use cement-based adhesive bedding method as FIN5.W330;
2. Fix mosaic tiles before erection, or after erection with Approval.

MARBLE AND GRANITE SLAB OR TILE FINISHES

FIN5.W405.8 APPLY PLASTERS FOR MARBLE AND GRANITE WALL TILES
As Worksection FIN1.

FIN5.W410.8 LAYING MARBLE AND GRANITE FLOOR SLABS
To BS 5385:Part 5:1994 with particular attention to the following alternative methods:
1. Lay floor slabs solid on screed base as follows:
   a. Lay bedding mortar to a minimum thickness of 20 mm, maximum 30 mm and finish with a perfectly level, even surface;
   b. Butter slabs completely with neat cement slurry, use white cement for light colour granite; a water resistant bonding agent may be incorporated in the slurry;
   c. Tap each slab firmly into position using rubber mallet;
   d. Lay slabs with joints at 1 mm to 2 mm wide for smooth finish, 6 mm wide for textured and riven finishes, and 2 mm wide for other finishes in general;
   e. Point joints and clean off any surplus grout as the work proceeds.
2. Lay floor slabs solid on concrete base with semi-dry mix method as follows:
   a. Wet the base for several hours, brush clean the base before the bedding is laid;
   b. Within 30 minutes before bedding, brush a thin layer of neat cement slurry into the base concrete;
   c. Spread the semi-dry mix to the minimum thickness of 25 mm, and to the maximum of 70 mm without fall or 100 mm with fall, and compact thoroughly;
   d. Spread and trowel an even layer of 2 mm thick cement slurry over the bedding;
   e. Follow sub-clauses (1)(b) to (1)(e) above.

FIN5.W420.8 FIXING MARBLE AND GRANITE WALL SLABS
1. Unless otherwise shown on Drawings, fix to BS 8298:1989 with particular attention to the following:
   a. Fix at a distance of 25 mm or more from structural surfaces;
   b. Partially fill the holes with cement and sand (1:3 mix) packing or approved resin before the dowels are inserted and grout the gaps between the dowels and the preformed pocket with slurry or resin before the slabs are fixed in position;
   c. Unless indicated otherwise on Drawings, provide 5 mm wide, open butt joints between the slabs, or 3 mm wide for those on the ground floor. Install back-up material and point with sealant to FIN5.M930;
   d. At vertical movement joints, stones should be supported by separated fixings as shown on the Drawings or Approved shop drawings.
2. Comply also with the following:
   a. Drill edges of slabs to receive stainless steel fixing dowels at approximately 450 mm centres;
   b. Drill slabs to receive stainless steel cramps and fixing methods at approximately 350 mm centres and solidly bed cramps to the structure and hooks to the backs of the slabs.

FIN5.W430.8 FIXING MARBLE AND GRANITE WALL TILES
1. Application of plaster, prior to fixing of tiles, as FIN5.W405;
2. Unless otherwise shown on Drawings, fix tiles to BS 5385:Part1:1995 with particular attention to the following:
   a. Fix marble or granite tile after plasterwork is dry throughout or at least 4 weeks after plasterwork is completed;

FIN5.W440.8 SHOP DRAWINGS
For wall facing slabs, submit shop drawings of anchor details, with calculations by a Registered Structural Engineer, prior to installation.

FIN5.W450.8 FINISHING
1. Cover all marble and granite flooring and wall facing slabs with a sealer;
2. For floors, use proprietary anti-slip system in accordance with the manufacturer's recommendations.

FIN5.W460.8 PROTECTION
Protect all marble and granite flooring and wall facing slabs with a suitable covering until completion.

TOLERANCES

FIN5.W610.8 GENERAL
Refer to Appendix H "Schedule of Tolerances" to this Specification.
TESTING

MATERIAL VERIFICATION TEST FOR TILE ADHESIVE

FIN5.T105.A MATERIAL VERIFICATION TEST FOR TILE ADHESIVE DELIVERED TO SITE

1. Test Arrangements:
   a. For each batch of tile adhesive delivered to Site under each delivery note as specified in FIN5.M1010 (3)(a), material verification test shall be carried out by the CM, a Direct Contractor or the Housing Department Material Testing Laboratory;
   b. Comply with the following pertaining to material verification test:
      i. Provide attendance on the Site;
      ii. Provide, deliver and collect samples etc. as specified or as directed by the CM.
   c. The material verification test shall require a minimum of 7 weeks commencing from the date of delivering the test sample to the laboratories;
   d. During the material verification test, handle tile adhesive delivered to Site as follows:
      i. Store the tile adhesive on Site in accordance with FIN5.M1010 (5)(b);
      ii. If the use of tile adhesive in the tiling works during the material verification test is approved by the CM as specified in FIN5.M1010 (5)(d), submit full record of the locations where each batch of the tile adhesive has been installed.

2. Testing Samples:
   a. Provide one set of test sample for every 60,000 kg of tile adhesive or part thereof from the batch of material delivered to Site under the delivery note as specified in FIN5.M1010 (3)(a) or as instructed by the CM;
   b. One set of test sample shall consist of one bag of tile adhesive.

3. Testing methods:
   As per FIN5.M1010 (2)(b) and FIN5.M1010 (2)(c);

4. Non-compliance:
   a. In the event that the testing sample fails to meet the testing requirements, follow either one of the following actions:
      i. Remove the representative batch including material already incorporated into the permanent work off Site. Reinstall that part of the work damaged, disturbed or affected by the removal of tile adhesive to the satisfaction of the CM; or
ii. Submit a written request to the CM applying for re-testing three separate sets of sample selected by the CM from the representative batch. When the CM agrees to carry out the re-test, comply with sub-clauses (1)(b) and (2)(b) and provide sufficient sets of sample pertaining to material verification test. Bear all associated costs for the re-test which shall be conducted as specified in sub-clauses (1)(a) and (3) and no extension of time will be allowed. In case of any one selected sample fails the re-test, remove the representative batch of tile adhesive including material already incorporated into the permanent work off Site and reinstate that part of the work damaged, disturbed or affected by the removal of tile adhesive to the satisfaction of the CM. No extension of time will be allowed.

5. Material Verification Test for the Replaced Tile Adhesive:
   a. When the representative batch of tile adhesive is removed off Site and replaced with another new batch, the new batch of tile adhesive shall be subject to material verification test as specified in sub-clauses (1), (2), (3) and (4);
   b. Bear all associated costs for the test and re-test and no extension of time will be allowed.

FIN5.T106.A MATERIAL VERIFICATION TEST FOR LATEX DELIVERED TO SITE

1. Test Arrangements:
   a. For each batch of latex delivered to Site under each delivery note as specified in FIN5.M1050 (3)(a), material verification test shall be carried out by the CM, a Direct Contractor or the Housing Department Material Testing Laboratory;
   b. Comply with the following pertaining to material verification test:
      i. Provide attendance on the Site;
      ii. Provide, deliver and collect samples etc. as specified or as directed by the CM.
   c. The material verification test shall require a minimum of 7 weeks commencing from the date of delivering the test sample to the laboratories;
   d. During the material verification test, handle latex delivered to Site as follows:
      i. Store the latex on Site in accordance with FIN5.M1050 (5)(b);
      ii. If the use of latex in the tiling works during the material verification test is approved by the CM as specified in FIN5.M1050 (5)(d), submit full record of the locations where each batch of latex mixed with cement sand mortar has been installed.

2. Testing Samples:
   a. Provide one set of test sample for every 6000 litres of latex or part thereof from the batch of material delivered to Site under the delivery note as specified in FIN5.M1050 (3)(a) or as instructed by the CM;
   b. One set of test sample shall consist of one drum of latex, cement and sand sufficient for carrying out the test.

3. Testing methods:
   As per FIN5.M1050 (2)(b);

4. Non-compliance:
   a. In the event the testing sample fails to meet the testing requirements, follow either one of the following actions:
      i. Remove the representative batch including material already incorporated into the permanent work off Site. Reinstate that part of the work damaged, disturbed or affected by the removal of cement sand mortar with latex to the satisfaction of the CM; or
ii. Submit a written request to the CM applying for re-testing three separate sets of sample selected by the CM from the representative batch. When the CM agrees to carry out the re-test, comply with sub-clauses (1)(b) and (2)(b) and provide sufficient sets of sample pertaining to material verification test. Bear all associated costs for the re-test which shall be conducted as specified in sub-clauses (1)(a) and (3) and no extension of time will be entitled. In case of any one selected sample fails the re-test, remove the representative batch of latex including material already incorporated into the permanent work off Site and reinstate that part of the work damaged, disturbed or affected by the removal of cement sand mortar with latex to the satisfaction of the CM. No extension of time will be entitled.

5. Material Verification Test for the Replaced Latex:
   a. When the representative batch of latex is removed off Site and replaced with another new batch, the new batch of latex shall be subject to material verification test as specified in sub-clauses (1), (2), (3) and (4);
   b. Bear all associated costs for the test and re-test and no extension of time will be entitled.

FIN5.T108.A MATERIAL VERIFICATION TEST FOR TILE ADHESIVE DELIVERED TO MANUFACTURER’S FACTORY OF PRECAST CONCRETE COMPONENTS

1. Test Arrangements:
   a. For each batch of tile adhesive delivered to the manufacturer's factory under each delivery note as specified in FIN5.M1010 (4)(a), material verification test shall be carried out by the CM or his representatives resident at manufacturer's factory, a Direct Contractor or the Housing Department Material Testing Laboratory;
   b. Comply with the following pertaining to material verification test:
      i. Provide attendance at the manufacturer's factory;
      ii. Provide, deliver and collect samples etc. as specified or as directed by the CM.
   c. The material verification test shall require a minimum of 7 weeks commencing from the date of delivering the test sample to the laboratories;
   d. During the material verification test, handle tile adhesive delivered to the manufacturer's factory as follows:
      i. Store the tile adhesive at the manufacturer's factory in accordance with FIN5.M1010 (5)(c);
      ii. If the use of tile adhesive in the tiling works during the material verification test is approved by the CM as specified in FIN5.M1010 (5)(d), submit to the CM or his representatives resident at manufacturer's factory the full record of the precast concrete elements in which each batch of the tile adhesive has been installed.

2. Testing Samples:
   a. Provide one set of test sample for every 60,000 kg of tile adhesive or part thereof from the batch of material delivered to the manufacturer's factory under the delivery note as specified in FIN5.M1010 (4)(a) or as instructed by the CM;
   b. One set of test sample shall consist of one bag of tile adhesive.

3. Testing methods:
   As per FIN5.M1010 (2)(b) and FIN5.M1010 (2)(c).

4. Non-compliance:
a. In the event that the testing sample fails to meet the testing requirements, follow either one of the following actions:
   i. Remove the representative batch including material already incorporated into the precast concrete elements off the manufacturer's factory. Reinstate that part of the precast concrete elements damaged, disturbed or affected by the removal of tile adhesive to the satisfaction of the CM; or
   ii. Submit a written request to the CM applying for re-testing three separate sets of sample selected by the CM from the representative batch. When the CM agrees to carry out the re-test, comply with sub-clauses (1)(b) and (2)(b) and provide sufficient sets of sample pertaining to material verification test. Bear all associated costs for the re-test which shall be conducted as specified in sub-clauses (1)(a) and (3) and no extension of time will be allowed. In case of any one selected sample fails the re-test, remove the representative batch of tile adhesive including material already incorporated into the precast concrete elements off the manufacturer's factory and reinstate that part of the precast concrete elements damaged, disturbed or affected by the removal of tile adhesive. No extension of time will be allowed.

5. Material Verification Test for the Replaced Tile Adhesive:
   a. When the representative batch of tile adhesive is removed off the manufacturer's factory and replaced with another new batch, the new batch of tile adhesive shall be subject to material verification test as specified in sub-clauses (1), (2), (3) and (4);
   b. Bear all associated costs for the test and re-test and no extension of time will be allowed.

FIN5.T109.A MATERIAL VERIFICATION TEST FOR LATEX DELIVERED TO MANUFACTURER'S FACTORY OF PRECAST CONCRETE COMPONENTS

1. Test Arrangements:
   a. For each batch of latex delivered to the manufacturer's factory under each delivery note as specified in FIN5.M1050 (4)(a), material verification test shall be carried out by the CM or his representatives resident at manufacturer's factory, a Direct Contractor or the Housing Department Material Testing Laboratory;
   b. Comply with the following pertaining to material verification test:
      i. Provide attendance at the manufacturer's factory;
      ii. Provide, deliver and collect samples etc. as specified or as directed by the CM.
   c. The material verification test shall require a minimum of 7 weeks commencing from the date of delivering the test sample to the laboratories;
   d. During the material verification test, handle latex delivered to the manufacturer's factory as follows:
      i. Store the latex at the manufacturer's factory in accordance with FIN5.M1050 (5)(c); or
      ii. If the use of latex in the tiling works during the material verification test is approved by the CM as specified in FIN5.M1050 (5)(d), submit to the CM or his representatives resident at manufacturer's factory the full record of the precast concrete elements in which each batch of the latex mixed with cement sand mortar has been installed.

2. Testing Samples:
FLOOR AND WALL TILES AND SLABS

FIN5 > TESTING

1. Provide one set of test sample for every 6000 litres of latex or part thereof from
the batch of material delivered to the manufacturer's factory under the delivery
note as specified in FIN5.M1050 (4)(a) or as instructed by the CM;
2. One set of test sample shall consist of one drum of latex, cement and sand
sufficient for carrying out the test.

3. Testing methods:
  a. In the event that the testing sample fails to meet the testing requirements, follow
     either one of the following actions:
     i. Remove the representative batch including material already incorporated
        into the precast concrete elements off the manufacturer's factory. Reinstate
        that part of the precast concrete elements damaged, disturbed or affected by
        the removal of cement sand mortar with latex to the satisfaction of the CM;
        or
     ii. Submit a written request to the CM applying for re-testing three separate
         sets of sample selected by the CM from the representative batch. When the
         CM agrees to carry out the re-test, comply with sub-clauses (1)(b) and (2)(b)
         and provide sufficient sets of sample pertaining to material verification test.
         Bear all associated costs for the re-test which shall be conducted as
         specified in sub-clauses (1)(a) and (3) and no extension of time will be
         entitled. In case of any one selected sample fails the re-test, remove the
         representative batch of latex including material already incorporated into
         the precast concrete elements off the manufacturer's factory and reinstate
         that part of the precast concrete elements damaged, disturbed or affected by
         the removal of the cement sand mortar with latex. No extension of time
         will be entitled.
5. Material Verification Test for the Replaced Latex:
  a. When the representative batch of latex is removed off the manufacturer's
     factory and replaced with another new batch, the new batch of latex shall be
     subject to material verification test as specified in sub-clauses (1), (2), (3) and
     (4);
  b. Bear all associated costs for the test and re-test and no extension of time will be
     entitled.

SURVEILLANCE TESTS

FIN5.T110.A SURVEILLANCE TEST FOR TILE GROUT

1. Test Arrangements:
  a. When Instructed, surveillance tests shall be carried out by the CM, a Direct
     Contractor or the Housing Department Material Testing Laboratory;
  b. Comply with the following pertaining to surveillance tests:
     i. Provide attendance on the Site;
     ii. Provide, deliver and collect samples etc. as specified or as directed by the
         CM.
2. Testing Samples:
  a. Provide one set of test sample from the batch of material delivered to Site under
     the delivery note as specified in FIN5.M1010 (3)(a) or as instructed by the CM;
  b. One set of test sample shall consist of one bag of tile grout.
3. Testing methods:
As per FIN5.M1010 (2)(d);

4. Non-compliance:
   a. In the event that the testing samples fail to meet the testing requirements, follow either one of the following actions:
      i. Remove the representative batch off Site; or
      ii. Carry out re-test for the representative batch in accordance with the testing methods as specified in sub-clause (3) in a laboratory that complies with the requirements stated in PRE.B9.570 on three separate sets of samples selected by the CM from the representative batch. In case of any one sample fails the re-test, remove the representative batch off Site.
   b. When the representative batch of tile grout is removed off Site, replace with another new batch and carry out test in accordance with the testing methods as specified in sub-clause (3) in a laboratory that complies with the requirements stated in PRE.B9.570 for one sample selected by the CM from the replacing batch. In case of such test fails, follow action stated in sub-clause (4)(a);
   c. Bear all associated costs for the test and re-test required in sub-clauses (4)(a) and (4)(b). No extension of time will be allowed.

FIN5.T130.A SURVEILLANCE TEST FOR FLOOR SURFACE MATERIALS

1. When Instructed, surveillance tests shall be arranged by the CM for the following materials:
   a. Floor surface materials for installation in domestic flats;
   b. Tactile homogeneous floor tiles irrespective of whether the tiles are for installation in internal or external areas.

2. Test Arrangements:
   a. Surveillance tests shall be carried out by the CM or his representatives, a Direct Testing Contractor or the Housing Department Material Testing Laboratory;
   b. Comply with the following pertaining to surveillance tests:
      i. Provide attendance on the Site;
      ii. Provide, deliver and collect samples etc. as specified or as directed by the CM.

3. Test Samples:
   a. Provide one set of test sample for each type of floor surface materials including tactile homogeneous floor tiles if applicable from the batch of material delivered to Site under one delivery note or as instructed by the CM;
   b. One set of test sample shall consist of five individual test specimens.

4. Test Method:
   a. Laboratory wet pendulum friction test in accordance with AS 4586-2013;
   b. Acceptance standard:
      Minimum Slip Resistance Value (SRV) as per FIN5.G050.

5. Non-compliance:
   a. In the event that the test samples fail to meet the testing requirements, follow either one of the following actions:
      i. Remove the representative batch off Site; or
      ii. Carry out re-test for the representative batch in accordance with the testing methods as specified in sub-clause (4) in a laboratory that complies with the requirements stated in PRE.B9.570 on three separate sets of samples selected by the CM from the representative batch. In case of any one sample fails the re-test, remove the representative batch off Site.
b. When the representative batch of tactile homogeneous floor tile is removed off Site, replace with another new batch and carry out test in accordance with the testing methods as specified in sub-clause (4) in a laboratory that complies with the requirements stated in PRE.B9.570 for one sample selected by the CM from the replacing batch. In case of such test fails, follow action stated in sub-clause (5)(a);

c. Bear all associated costs for the test and re-test required in sub-clauses (5)(a) and (5)(b). No extension of time will be allowed.

ON-SITE VERIFICATION TESTS

FIN5.T150.A IN-SITU PULL-OFF TESTS ON COMPLETED TILES

1. Test Arrangements:
   a. Carry out tests by employing a laboratory that complies with the requirements stated in PRE.B9.570.

2. Testing Samples:
   a. For domestic blocks, carry out test for each zone of each block as follows:
      i. When tiles are fixed with cement-based adhesive bedding on panel wall, on rendering over concrete substrate or direct on concrete substrate, or fixed with cement slurry on rendering over concrete substrate, a zone in a domestic block means every 5 typical floors or part thereof, unless:
         - if all samples of two immediate preceding and consecutive zones passed the testing requirements in compliance with sub-clause (3), the meaning of a zone in the domestic block shall be changed to every 10 typical floors or part thereof. Provided always that if any sample(s) subsequent to the aforesaid change of zoning fails to meet the testing requirements in compliance with sub-clause (3), the aforesaid change of zoning shall cease to apply once and for all under the domestic block and a zone thereafter means every 5 typical floors or part thereof for the remaining floors in the domestic block.
      ii. When tiles are fixed with cement sand mortar with latex direct on concrete substrate, a zone in a domestic block means every 5 typical floors or part thereof;
      iii. Two samples of wall tile specimen for each of the following locations in every zone selected by the CM - each sample comprises one wall tile specimen selected by the CM and samples are not to be taken on tiles installed over waterproofing layers:
         - Typical floor lift lobby;
         - Kitchen;
         - Bathroom.
   b. For non-domestic blocks, carry out test for each zone of each non-domestic block as follows:
      i. When tiles are fixed with cement based adhesive on panel wall, on rendering over concrete substrate, or direct on concrete substrate, or fixed with cement slurry on rendering over concrete substrate, a zone in a non-domestic block means every 500m² of installation or part thereof, unless:
- if all samples of two immediate preceding and consecutive zones passed the testing requirements in compliance with sub-clause (3), the meaning of a zone in the non-domestic block shall be changed to every 1,000m² of installation or part thereof. Provided always that if any sample(s) subsequent to the aforesaid change of zoning fails to meet the testing requirements in compliance with sub-clause (3), the aforesaid change of zoning shall cease to apply once and for all under the non-domestic block and a zone thereafter means every 500m² of installation or part thereof for the remaining installation in the non-domestic block.

ii. When tiles are fixed with cement sand mortar with latex direct on concrete substrate, a zone in a non-domestic block means every 500m² of installation or part thereof;

iii. Two samples of wall tile specimen for each zone; each sample comprises of one wall tile specimen selected by the CM. Samples are not to be taken on tiles installed over waterproofing layers.

3. Testing Methods:
   a. To comply with the following:
      i. Carry out Pull-off tests after a minimum of 28 days after tile fixing. Except for the tiles installed at facades, the Pull-off test shall be carried out within 60 days after fixing;
      ii. The pull-off equipment shall be capable of increasing the load steadily without jerking at a rate of (250 + 50) N/s, and must be provided with a measurement device which shall retain the maximum force exerted, the so-called failure load to the nearest 0.01KN. The measurement inaccuracy of the equipment must be less than 2%, in accordance with accuracy Grade 2 of BS 1610:Part 1:1985;
      iii. Saw cut the tested portion through to the substrate;
      iv. Attach an aluminium/steel dolly onto the surface of the tile by a suitable adhesive resin;
      v. Use strong adhesive tape to fix the position of dolly until strength of the resin is developed as advised by the resin manufacturer;
      vi. Apply a tensile force gradually by the device;
      vii. Record the failure force, location of failure and any other observations or abnormalities;
      viii. Record the force from the readout unit;
      ix. Repeat steps as specified in sub-clauses (3)(a)(i) to (3)(a)(viii) until Pull-off tests to all selected tiles are completed;
      x. Take photographs;
      xi. Make good the testing areas to satisfaction of the CM.
   b. The report for Pull-off test shall contain the following data and information:
      i. The calculated tensile adhesion strength of individual tile and tile adhesive to the nearest 0.001 N/mm²;
      ii. The pull-off load to the nearest 0.01 kN;
      iii. The type of failure;
      iv. The area of test piece to the nearest 1 x 1 mm;
      v. A description of the test piece tile;
      vi. A description of the tested substrate;
vii. The thickness of the tile adhesive bedding or mortar bedding as appropriate;
viii. The age of the bedding at the time of testing;
ix. A description of the pulling equipment by stating the make, type, test capacity and measurement range;
x. The size, the thickness and material of the dolly;
xi. The type of epoxy resin;
xii. The date of the test;
xiii. Photographs.
c. Acceptance standard for the Pull-off test shall be:
i. Minimum 0.5 N/mm² for concrete substrate, except that for glass mosaic tiles which would be 0.3 N/mm²;
ii. Minimum 0.3 N/mm² for panel wall.

4. Non-compliance:
a. In the event that any one sample in a zone fails to meet the testing requirements as specified in sub-clause (3), take three separate samples for re-test on the same type of locations or works executed by the respective gang(s) of labourers all as selected by the CM within the same zone as specified in sub-clauses (2)(a) and (2)(b);
b. Where any of the re-tests fails to meet the testing requirements as specified in sub-clause (3), comply with the following:
i. Remove all the tiling works executed on the date(s) same as the date(s) of execution of the re-test samples and the initial test samples in the said zone or part thereof executed by the respective gang(s) of labourers irrespective of the type of locations. Should there be no daily labour record for tracking down the respective gang(s) of labourers, remove all the tiling works executed on the date(s) same as the date(s) of execution of the re-test samples and the initial test samples in the said zone or part thereof regardless of whether they are executed by the respective gang(s) of labourers;
ii. Re-install the tiling works and re-test the rectified areas in accordance with sub-clauses (2), (3) and (4) but with the application of such sub-clauses limited to the rectified areas only; and
iii. Observe further re-testing requirements stipulated in sub-clause (5) below.
c. Bear all associated costs including further re-tests and no extension of time will be allowed.

5. For the purpose of sub-clause (4)(b)(iii), comply with the further re-testing requirements as follows:
a. Take three additional separate samples for further re-test on the same type of locations or works executed by the respective gang(s) of labourers all as selected by the CM within the said zone as specified in sub-clauses (2)(a) and (2)(b);
b. Where any of the further re-tests fails to meet the testing requirements as specified in sub-clause (3), the Contractor may elect to comply with either (i) or (ii) of the following:
i. Remove all the tiling works executed by the respective gang(s) of labourers within the said zone or part thereof irrespective of the date(s) of execution of the further re-test samples. Re-install the tiling works. Re-test the rectified areas in accordance with sub-clauses (2), (3) and (4) but with the application of such sub-clauses limited to the rectified areas only; or
ii. Carry out the following:

- Remove all the tiling works executed on the date(s) same as the date(s) of execution of the further re-test samples in the said zone or part thereof executed by the respective gang(s) of labourers irrespective of the type of locations. Should there be no daily labour record for tracking down the respective gang(s) of labourers, remove all the tiling works executed on the date(s) same as the date(s) of execution of the further re-test samples in the said zone or part thereof regardless of whether they are executed by the respective gang(s) of labourers. Re-install the tiling works. Re-test the rectified areas in accordance with sub-clauses (2), (3) and (4) but with the application of such sub-clauses limited to the rectified areas only; and

- Conduct further re-tests in accordance with sub-clause (5)(a) and repeat conducting such further re-tests when any one of the re-test samples fails until the test result(s) verify that the tiling works in the said zone or part thereof comply with the specified requirements. Remove all defective tiling works identified in such further re-tests in the manner as stipulated in sub-clause (5)(b)(ii)(a). Re-install the tiling works. Re-test the rectified areas in accordance with sub-clauses (2), (3) and (4) but with the application of such sub-clauses limited to the rectified areas only.

**VERIFICATION TEST FOR FLOOR SURFACE MATERIALS**

**FIN5.T180.N**

**VERIFICATION TEST FOR SLIP RESISTANCE OF FLOOR SURFACE MATERIALS**

1. Test Arrangements:
   a. Verification tests shall be carried out by the CM or his representative, a Direct Testing Contractor or the Housing Department Material Testing Laboratory upon delivery of material to Site under a delivery note as directed by the CM. A representative batch means the material delivered to Site under the same delivery note;
   b. Comply with the followings pertaining to verification tests:
      i. Provide attendance on the Site;
      ii. Provide, deliver and collect samples etc. as directed by the CM or as specified.

2. Test Samples:
   a. Samples shall be selected by the CM and witnessed by representative of the Contractor;
   b. Provide one set of test sample of any sizes or types of floor surface materials from any one batch of material delivered to Site under a delivery note as selected by the CM;
   c. One set of test sample shall consist of five individual test specimens.

3. Test Method:
   a. Laboratory wet pendulum friction test in accordance with AS 4586-2013;
   b. Acceptance standard:
      Minimum Slip Resistance Value (SRV) as per FIN5.G050.

4. Non-compliance:
a. In the event that the testing sample fails to meet the acceptance standard as specified in sub-clause (3)(b), follow either one of the following actions:
   i. Remove the representative batch of material off Site; or
   ii. Carry out re-test for the representative batch of material in accordance with the test methods as specified in sub-clauses (3)(a) and (3)(b) in a laboratory that complies with the requirements stated in PRE.B9.570 on three separate sets of samples selected by the CM from the representative batch. In case of any one sample set fails the re-test, remove the representative batch of material off Site.

b. When the representative batch of material is removed off Site, replace with another new batch and carry out test in accordance with the testing methods as specified in sub-clauses (3)(a) and (3)(b) in a laboratory that complies with the requirements stated in PRE.B9.570 for one set of test sample selected by the CM from the replacement batch. In case of such test fails, follow action stated in sub-clauses (4)(a);

c. Bear all associated costs for the test and re-test required in sub-clauses (4)(a) and (4)(b). No extension of time will be allowed.
FIN6 FLEXIBLE SHEET AND TILE FINISHES

MATERIALS

GENERAL

FIN6.M010.8 QUALITY GENERALLY
Obtain and fix materials of an Approved type and colour and in accordance with the remaining clauses in this Worksection.

FIN6.M020.8 SAMPLES
Submit samples of all tile and sheet products for Approval.

FIN6.M030.N SLIP RESISTANCE
Slip resistance of all flexible sheet and tile materials under FIN6 shall comply with FIN5.G050.

PVC TILES AND SHEET

FIN6.M110.8 SEMI-FLEXIBLE TILES
To BS 3260:1969, size and thickness as shown on Drawings.

FIN6.M120.8 UNBACKED FLEXIBLE TILES
To BS 3261:1973: Type B, size and thickness as shown on Drawings.

FIN6.M130.8 UNBACKED FLEXIBLE SHEET
To BS 3261:1973: Type A, thickness as shown on Drawings.

FIN6.M140.8 FOAM BACKED SHEET
To BS 5085: Part 2 and:
1. With a wearing sheet of PVC sheet to BS 3261:1973: Type A;
2. Thickness as shown on Drawings.

FIN6.M150.8 COVED SKIRTINGS
Obtained from the same Approved manufacturer as the adjacent PVC material and matching in colour and texture.

LINOLEUM

FIN6.M210.8 SHEET AND TILES
To BS 6826:1987, thickness as shown on Drawings.

RUBBER

FIN6.M310.8 SHEET AND TILES
Solid rubber to BS 1711:1975, thickness as shown on Drawings.
FIN6.M320.8  NON-SLIP TACTILE SYNTHETIC RUBBER FLOOR TILES
Tiles with raised profiles to provide a distinctively textured walking surface easy
detectable by foot and cane for guidance of the visually impaired.
1. Type: Two types of tactile tiles to be used as shown or scheduled on drawings:
   a. Tiles with raised dots for indication of hazard or orientation; and
   b. Tiles with raised strips for indication of direction.
2. Size, thickness, profile & location: as shown or scheduled on drawings;
3. Colour: to Approval;
4. To be slip-resistant;

ANCILLARY MATERIALS

FIN6.M410.8  ADHESIVE
1. As recommended by the manufacturer of the material being fixed;
2. In compliance with the prescribed limits of VOC content as set out in the Air
   Pollution Control (Volatile Organic compounds) Regulation.

FIN6.M415.8  ADHESIVE FOR FIXING TACTILE SYNTHETIC RUBBER FLOOR TILE
1. Epoxy-resin-base bonding system, which must be confirmed by the manufacturer
   for the rubber tactile tiles that it is compatible with the tile material;

FIN6.M420.8  PVC WELDING RODS
Of Approved manufacture, coloured to match the material being joined.

FIN6.M430.8  POLISH
An Approved type of non-slip emulsion polish recommended by the manufacturer of the
material being finished.
WORKMANSHIP

GENERAL

FIN6.W010.8 GENERAL

FIN6.W020.8 DAMAGED MATERIALS
Do not use tiles or sheet which have deteriorated in stock or which have a tendency to curl at the edges or corners.

FIN6.W030.8 PREPARATION OF LAYING SURFACE
Thoroughly clean the screed or wall rendering or concrete surfaces and:
1. Ensure that it is free from all loose particles, laitance, traces of grease, oil, paint, wax, dirt or dust;
2. Fill all cracks, minor holes or crevices with a suitable filler recommended by the manufacturer of the material to be laid.

LAYING SHEET AND TILES

FIN6.W110.8 GENERAL
Lay all tiles and floor and wall sheeting strictly in accordance with the manufacturer's instructions, with any pattern in accordance with the Drawings.

FIN6.W120.8 PRE-HEATED TILES
When required by the manufacturer's instructions:
1. Pre-heat tiles to a temperature just sufficient to give the required pliability;
2. Do not pre-heat single tiles.

FIN6.W130.8 APPLYING ADHESIVE
Apply in a thin film and spread evenly with a plain or notched trowel in accordance with the manufacturer's recommendations and ensure that:
1. Where a notched trowel is used:
   a. The notches are the size recommended by the manufacturer;
   b. It is renewed periodically to ensure the correct spread of adhesive.
2. Only sufficient adhesive is applied to prevent subsequent bleeding;
3. Clean off all excess adhesive as the work proceeds.

FIN6.W140.8 JOINTING AND CUTTING
Closely butt joints and cut accurately perpendicular to the finish surface, to an agreed design or as indicated on the Drawings, using only the minimum of jointing.

FIN6.W150.8 JOINTING PVC SHEET
Weld joints to form a continuous surface, with PVC welding rods.

FIN6.W160.8 FIXING TACTILE SYNTHETIC RUBBER FLOOR TILES
Fix the rubber tiles with adhesive as specified in FIN6.M415 in accordance with the following:
1. Prepare the laying surface in accordance with FIN6.W030;
2. Mix and apply the adhesive all in accordance with manufacturer's recommendations.

**FIN6.W170.8**  
**DEFECTIVE AREAS**  
Relay any areas insufficiently bonded or showing an uneven surface.

**FINISHING**

**FIN6.W210.8**  
**CLEANING**  
After laying, thoroughly clean the surface with water and a detergent as recommended by the finish manufacturer.

**FIN6.W220.8**  
**POLISHING**  
Apply two coats of polish in accordance with the manufacturer's recommendations.

**FIN6.W230.8**  
**PROTECTION**  
Protect floors with a suitable covering.

**TOLERANCES**

**FIN6.W310.8**  
**GENERAL**  
Refer to Appendix H "Schedule of Tolerances" to this Specification.
FIN7 PAINTING MATERIALS

GENERAL

FIN7.M010.8 PAINTS AND DECORATIVE MATERIALS
All paints and decorative materials must be:
1. Of an Approved type, brand and colour;
2. Supplied in sealed containers each containing the name and information of the supplier, the manufacturer label and printed instructions;
3. In compliance with the prescribed limits of VOC content as set out in the Air Pollution Control (Volatile Organic Compounds) Regulation.

FIN7.M015.8 WATER BASED PAINTS
All water based paints must comply with the following environmental requirements:

<table>
<thead>
<tr>
<th>Material Contents</th>
<th>Requirements</th>
<th>Testing Standards</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Formaldehyde</td>
<td>&lt;=100 mg/kg</td>
<td>Guo Biao 18582 - 2008</td>
</tr>
<tr>
<td>2. Heavy Metal</td>
<td></td>
<td></td>
</tr>
<tr>
<td>a. Lead</td>
<td>&lt;= 90 mg/kg</td>
<td>Guo Biao 18582 - 2008</td>
</tr>
<tr>
<td>b. Chromium</td>
<td>&lt;= 60 mg/kg</td>
<td>Guo Biao 18582 - 2008</td>
</tr>
<tr>
<td>c. Cadmium</td>
<td>&lt;= 75 mg/kg</td>
<td>Guo Biao 18582 - 2008</td>
</tr>
<tr>
<td>d. Mercury</td>
<td>&lt;= 60 mg/kg</td>
<td>Guo Biao 18582 - 2008</td>
</tr>
</tbody>
</table>

FIN7.M016.8 SOLVENT BASED PAINTS
All solvent based paints must comply with the following environmental requirements:

<table>
<thead>
<tr>
<th>Material Contents</th>
<th>Requirements</th>
<th>Testing Standards</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Benzene</td>
<td>&lt;=0.3%</td>

<td>Guo Biao 18581 - 2009</td>
</tr>
<tr>
<td>d. Mercury</td>
<td>&lt;= 60 mg/kg</td>
<td>Guo Biao 18581 - 2009</td>
</tr>
</tbody>
</table>

FIN7.M020.8 UNIFORM SUPPLY
1. Where possible, obtain all the materials in a coating system from the same manufacturer;
2. Furnish the CM with two copies of the manufacturer's data sheets for the proposed paints.
PESTICIDES AND PRESERVATIVES

FIN7.M110.8 RUST INHIBITOR
An Approved proprietary chemical agent which converts rust to iron phosphate.

FIN7.M120.8 ANTI-MOULD LIQUID
An Approved fungicidal solution.

FIN7.M130.8 PESTICIDAL COATING
Containing an Approved pesticide:
1. Registered under Pesticides Ordinance;
2. Safe to use for its purpose without causing hazards;
3. Effective in killing all stages of insect infestation and protecting timber from subsequent insect attack;
4. Colourless or coloured;
5. It shall be suitable for overpainting where treated surfaces are likely to be exposed or in contact with a painted finish.

FIN7.M140.8 WOOD PRESERVATIVE
1. An Approved proprietary brand to BS 1282:1999;
2. Safe to use for its purpose without causing hazards;
3. Coloured unless otherwise approved;
4. It shall be suitable for overpainting where treated surfaces are likely to be exposed or in contact with a painted finish.

FIN7.M150.8 WATER REPELLENT LIQUID
Silicone based or other Approved water repellent.

PRIMING PAINTS AND SEALERS

FIN7.M210.8 WOOD PRIMERS
1. Aluminium primer to BS 4756:1998: Type 1 for brush application to woodwork;
2. For timber doorsets, use primer recommended by the manufacturer of the finishing paint system.

FIN7.M220.8 METAL PRIMERS
One of the following as recommended by the manufacturer of the finishing paint system:
1. Zinc phosphate primer;

FIN7.M230.8 PRIMERS FOR GALVANIZED SURFACES
1. Submission Requirements:
   a. At sample submission and approval stage, submit a sample of the proposed water based anti-corrosion primer for the CM's approval together with all the following substantiation for the CM's information:
      i. Catalogue, brand name / model name and job reference of the material;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer;
iv. Where applicable, either the document from the manufacturer showing his authorization for the supplier as the agent / distributor in Hong Kong or document from the supplier showing the appointment of the manufacturer and manufacturer's agreement for the production of the proposed product;

v. When the primer is supplied for domestic blocks, except for the ancillary facilities at lower floors, also include the following in the submission:
   - Original or a certified true copy of the ISO 9001 certificate for the manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by a certification body or by the QCM. The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.

b. Submit original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2)(b) for the CM’s information:
   i. The date of the test shall be within three years prior to the notified date for commencement of the Works;
   ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material to Site;
   iii. In the event that no test report has been submitted for the CM’s information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

2. Quality Requirements:
   a. Water based anti-corrosion primer:
      i. Resins shall be based upon acrylic resin.
   b. The quality and performance requirements are as follows:

<table>
<thead>
<tr>
<th>Items</th>
<th>Method</th>
<th>Acceptance Standards</th>
</tr>
</thead>
<tbody>
<tr>
<td>Content of zinc phosphate</td>
<td>Atomic Absorption Analysis</td>
<td>Min. 10%</td>
</tr>
<tr>
<td>Viscosity, (Kerb Units) Procedure B</td>
<td>ASTM D562-81</td>
<td>min. 70 KU max. 85 KU</td>
</tr>
<tr>
<td>Drying time - surface drying</td>
<td>BS 3900-C2:1994</td>
<td>max. 1.5 hours</td>
</tr>
<tr>
<td>Drying time - hard drying</td>

<td>BS 3900-C6:2000</td>
<td>max. 45 μm</td>
</tr>
<tr>
<td>Adhesion</td>
<td>BS 3900-E6:1992 Class 1</td>
<td>The dried primer film should show no failure on a cross cut test when applied to a untreated galvanized iron panel and dried for 7 days.</td>
</tr>
</tbody>
</table>

**FIN7.M240.8 METAL PRIMERS FOR POLYURETHANE FINISHES**

Polyurethane primer, as recommended by the paint finish manufacturer.
FIN7.M250.8 SEALERS FOR PLASTER, MASONRY ETC
An Approved alkali resistant primer sealer or other sealer as recommended by an Approved finishing paint manufacturer.

FIN7.M260.8 FLOOR SEALER
An Approved resin based sealer or other sealer as recommended by an Approved finishing paint manufacturer.

PAINTS

FIN7.M340.A ANTI-MOULD INTERNAL EMULSION PAINT
1. Submission Requirements:
   a. At sample submission and approval stage, submit a sample of the proposed internal emulsion paint for CM's approval together with all the following substantiation for CM's information:
      i. Catalogue, brand name / model name and job reference of the material;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer;
      iv. Where applicable, either the document from the manufacturer showing his authorization for the supplier as the agent / distributor in Hong Kong or document from the supplier showing the appointment of the manufacturer and manufacturer's agreement for the production of the proposed product;
      v. When the internal emulsion paints are supplied for domestic blocks, except for the ancillary facilities at lower floors, also include the following in the submission:
         - A sample board showing the quality, detail technical information and application procedures for the proposed internal emulsion paint;
         - Original or a certified true copy each of the certification to ISO 9001 and ISO 14001 for the manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by the certification bodies or by the QCM. The certification bodies shall be as follows:

<table>
<thead>
<tr>
<th>ISO</th>
<th>Certification Body</th>
</tr>
</thead>
<tbody>
<tr>
<td>ISO 9001</td>
<td>The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.</td>
</tr>
<tr>
<td>ISO 14001</td>
<td>The certification body shall be accredited by the Hong Kong Accreditation Service (HKAS), or the China National Accreditation Service (CNAS), or an accreditation body which has entered into a mutual recognition agreement with HKAS.</td>
</tr>
</tbody>
</table>

   vi. Written confirmation from suppliers or manufacturers that the proposed internal emulsion paint is with anti-mould properties.
   b. Submit original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2)(b) for CM's information:
      i. The date of the test shall be within three years prior to the notified date for commencement of the Works or at an earlier date for domestic blocks subject to CM's consideration on the track records as maintained by the Housing Department;
ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material as mentioned in sub-clause (3)(a);

iii. In the event that no test report has been submitted for CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

2. Quality Requirements:
   a. Water based emulsion paint in accordance with sub-clause (2)(b) comprising:
      i. One sealer coat;
      ii. Minimum two finishing coats;
      iii. Colour: to Approval.
   b. The quality and performance requirements are as follows:

<table>
<thead>
<tr>

3. On Site Delivery Verification:
   a. At delivery stage, submit the following documents:
      i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (1)(a);
      ii. Original or certified true copy of the Certificate of Origin for every batch of delivery. One batch being the material quantity covered under each delivery note;
      iii. Delivery notes for all material delivered to Site.
b. Carry out and submit report on the following verifications for internal emulsion paint upon delivery on Site. Prior to carrying out the verifications, inform the CM who may present to witness the verifications:

i. Method:

<table>
<thead>
<tr>
<th>Verification Items</th>
<th>Method</th>
<th>Acceptance Standards</th>

</tr>
</tbody>
</table>

c. Where any of the verifications fail to meet the acceptance standards, either:

i. Remove the representative batch off Site; or
ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.

FIN7.M350.8 TEXTURED EMULSION PAINT
Water based acrylic emulsion paint textured with a finely dispersed aggregate by spray method or stone texture effect by trowel.

FIN7.M370.A ANTI-MOULD EXTERNAL EMULSION PAINT
1. Submission Requirements:
   a. At sample submission and approval stage, submit a sample of the proposed external emulsion paint for CM's approval together with all the following substantiation for CM's information:
      i. Catalogue, brand name / model name and job reference of the material;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer;
      iv. Where applicable, either the document from the manufacturer showing his authorization for the supplier as the agent / distributor in Hong Kong or document from the supplier showing the appointment of the manufacturer and manufacturer's agreement for the production of the proposed product;
      v. When the external emulsion paints are supplied for domestic blocks, except for the ancillary facilities at lower floors, also include the following in the submission:
         - A sample board showing the quality, detail technical information and application procedures for the proposed external emulsion paint;
         - Original or a certified true copy each of the certification to ISO 9001 and ISO 14001 for the manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by the certification bodies or by the QCM. The certification bodies shall be as follows:

<table>
<thead>
<tr>
<th>ISO</th>
<th>Certification Body</th>
</tr>
</thead>
<tbody>
<tr>
<td>ISO 9001</td>
<td>The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.</td>
</tr>
<tr>
<td>ISO 14001</td>
<td>The certification body shall be accredited by the Hong Kong Accreditation Service (HKAS), or the China National Accreditation Service (CNAS), or an accreditation body which has entered into a mutual recognition agreement with HKAS.</td>
</tr>
</tbody>
</table>

   vi. Written confirmation from suppliers or manufacturers that the proposed internal emulsion paint is with anti-mould properties.

   b. Submit original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2)(b) for CM's information:
      i. The date of the test shall be within three years prior to the notified date for commencement of the Works or at an earlier date for domestic blocks subject to CM's consideration on the track records as maintained by the Housing Department;
ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material as mentioned in sub-clause (3)(a);

iii. In the event that no test report has been submitted for CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

2. Quality Requirements:

   a. Water based external emulsion paint in accordance with sub-clause (2)(b) comprising:
      
      i. One sealer coat;
      
      ii. Minimum two finishing coats;
      
      iii. Colour: to Approval.

   b. The quality and performance requirements are as follows:

<td>Min. 1,500 cycles A dry film of the paint shall withstand the specified cycles of scrubbing without exposing the contrasting colour of the undercoat to a total length of more than 10 mm in the direction of the stroke.</td>
</tr>
</tbody>
</table>
c. Determination of algal resistance:

i. General:

- The test screens only the Trentepohlia Odorata species for algal resistance in emulsion paints for decorative purposes to be used on buildings in Hong Kong. It has been found that this species predominates on surfaces of most of the local buildings, besides being the first to colonise such surfaces;

- A suitable level of an effective non-mercurial algicide shall be used. The level used should not render the finish or its film hazardous to health. The algicide used shall be one that is resistant to solar irradiation, consistent with the climatic conditions in Hong Kong.

ii. Testing apparatus:

- Sterilized petri dish, ca. 90 mm diameter;

- Shelf with fluorescent lighting, such that the light intensity incident to the test surface is 1,000 to 1,400 lux. This can be done by installing 2 tubes of 40-watt cool fluorescent lamp, ca. 25 cm apart on horizontal level and ca. 60 cm above the test surface;

- Autoclave, 1.2 to 1.5 kgf/cm²;

- All chemicals, water and non-disposable containers and tools used for the test must be sterilized by an autoclave under the pressure of 1.2 to 1.5 kgf/cm² for 20 minutes.

iii. Reagents:

- Sterilized Bold Basal medium;

- Algae culture, predominantly Trentepohlia Odorata, maintained in Bold Basal medium.

iv. Testing procedure:

- Preparation of paint film: two coats of paint under test are applied to the interior bottom and vertical surface of the petri dish. The first coat of paint is allowed to dry overnight before the second coat is painted;
- Pre-ageing of paint film: the paint film prepared is allowed to stand at room temperature for 3 days followed by 168 hours UV ageing in accordance with ASTM G53-96. The following operating cycles shall be used:
  - 8 hours - lights on at 55°C;
  - 4 hours - condensation on and lights off at 45°C;
  - Light source - UV fluorescent lamps B313.
- After the ageing, allow the dish to stand at room temperature for 24 hours;
- Inoculation with algae culture: homogenise the algae culture with a tissue grinder shortly before inoculation. Adjust the concentration of the culture to 0.3 ± 0.1 mg/L chlorophyll with Bold Basal medium;
- Add 2 ml of the algae culture into the petri dish. Spread the culture to the painted surface as evenly as possible. Add the same quantity of algae culture into a blank petri dish to serve as control for the test. The same lot of algae culture is used for inoculating both the test sample and the blank dish. Replace the dish with cover after the inoculation. Subsequent operations are done on both the sample under test and on the blank;
- Exposure under lights: the petri dish is subject to exposure under fluorescent lighting at room temperature. Lighting cycle is 12 hours on followed by 12 hours off. Keep the paint film moistened by adding drops of diluted Bold Basal medium (1 part Bold Basal medium to 3 parts distilled water by volume) periodically. Normally this will require no more than 1 ml per 2 days. The petri dish is kept covered during the exposure period;
- The exposure period is 8 weeks from the day of inoculation of algae culture;
- The test is conducted in duplicate for both the paint sample and the blank.

v. Interpretation of results:
- At the end of the test, compare the growth intensity of algae on the paint sample with that of the blank control. The paint sample is deemed to pass the test if the algae culture is killed, as evidenced by the bleaching of the green colour, against the increase in algal growth in the blank petri dish;
- If no increase in growth is observed in the blank dish, the results are invalid and the test shall be repeated.

3. On Site Delivery Verification:
   a. At delivery stage, submit the following documents:
      i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (1)(a);
      ii. Original or certified true copy of the Certificate of Origin for every batch of delivery. One batch being the material quantity covered under each delivery note;
      iii. Delivery notes for all material delivered to Site.
b. Carry out and submit report on the following verifications for external emulsion paint upon delivery on Site. Prior to carrying out the verifications, inform the CM who may present to witness the verifications:

i. Method:

<table>

c. Where any of the verifications fail to meet the acceptance standards, either:

i. Remove the representative batch off Site; or
ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.

FIN7.M380.8 MULTI-COLOUR PAINT
An Approved brand comprising a base coat and hardwearing top coat incorporating a pigmented spatter coat.

FIN7.M400.8 EXTERNAL TEXTURED PAINT
An Approved, heavy duty masonry paint, incorporating a fine aggregate filler.

FIN7.M410.8 FIRE RETARDANT PAINT
1. An Approved intumescent paint which, when used alone, or in conjunction with other paints and applied to combustible substrates in accordance with manufacturer’s tested system, achieves a Class 1 surface spread of flame rating when tested to BS 476:Part 7:1997;
2. Comply with the latest Code of Practice for Fire Safety in Buildings and the applicable Fire Services Department Circular Letter requirements and guidelines;
3. Submit details of the paint including catalogue, brand name / model name, job reference and the manufacturer’s method statement for the application for the CM’s information.

FIN7.M420.8 COLD CURE EPOXY PAINT
An Approved two pack type non-flammable solvent free epoxy resin coating; primer if required, is to be of the same painting system.

FIN7.M430.8 POLYURETHANE PAINT
A two pack type and part of an Approved system.

FIN7.M440.8 CHLORINATED RUBBER PAINT
Part of an Approved system, comprising primers, undercoats and finishes.

FIN7.M450.8 MICACEOUS IRON OXIDE PAINT
Part of an Approved system.

FIN7.M460.8 BLACK BITUMASTIC PAINT
Tar based, complying with BS 1070:1993:Type B (quick drying).

FIN7.M470.8 BLACK BITUMEN COATING SOLUTION
To BS 3416:1991:Type 1, for general purposes.

FIN7.M480.8 FLUORESCENT PAINT
1. Water or oil base as shown on Drawings;
2. Undercoat: white synthetic paint.

FIN7.M490.8 REFLECTING PAINT
Consisting of:
1. Undercoat: white synthetic paint;
2. Finish coat: white synthetic paint with a high gloss finish and a surface coating of fine grained reflective aggregate.
FIN7.M500.8 METALLIC PAINT
Composed of acrylic resin solution base mixed with:
1. Finely divided aluminium to give a bright finish; or
2. Finely divided copper or copper alloy to give a bronze finish.

FIN7.M510.8 HEAT RESISTING PAINT
Heat resisting primer, undercoat and Approved enamel finish.

FIN7.M520.8 ACID RESISTING PAINT AND THINNER
An Approved brand resistant to attack by all commonly used commercial acids and alkalis.

FIN7.M530.8 BLACK ENAMEL
High grade, quick drying black japan capable of drying to a perfectly smooth, hard and elastic surface within 12 hours at 16ºC.

FIN7.M560.8 CHALKBOARD PAINT
An Approved, hard drying, flat black or dark green paint, containing a fine abrasive.

FIN7.M570.A SYNTHETIC PAINT
1. Submission Requirements:
   a. At sample submission and approval stage, submit a sample of the proposed synthetic paint for CM's approval together with all the following substantiation for CM's information:
      i. Catalogue, brand name / model name and job reference of the synthetic paint;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer;
      iv. Where applicable, either the document from the manufacturer showing his authorization for the supplier as the agent / distributor in Hong Kong or document from the supplier showing the appointment of the manufacturer and manufacturer's agreement for the production of the proposed product;
      v. When the synthetic paints are supplied for domestic blocks, except for the ancillary facilities at lower floors, also include the following in the submission:
         - A sample board showing the quality, detail technical information and application procedures for the proposed synthetic paint;
         - Original or a certified true copy each of the certification to ISO 9001 and ISO 14001 for the manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by the certification bodies or by the QCM. The certification bodies shall be as follows:

<table>
<thead>
<tr>
<th>ISO</th>
<th>Certification Body</th>
</tr>
</thead>
<tbody>
<tr>
<td>ISO 9001</td>
<td>The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.</td>
</tr>
</tbody>
</table>
ISO 14001  The certification body shall be accredited by the Hong Kong Accreditation Service (HKAS), or the China National Accreditation Service (CNAS), or an accreditation body which has entered into a mutual recognition agreement with HKAS.

b. Submit original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2)(b) for CM's information:

i. The date of the test shall be within three years prior to the notified date for commencement of the Works or at an earlier date for domestic blocks subject to CM's consideration on the track records as maintained by the Housing Department;

ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material as mentioned in sub-clause (3)(a);

iii. In the event that no test report has been submitted for CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

2. Quality Requirements:

a. Solvent based or water based synthetic paint in accordance with sub-clause (2)(b) comprising:

i. One sealer or primer coat;

ii. Minimum two finishing coats;

iii. Colour: to Approval.

b. The quality and performance requirements are as follows:

c. Where any of the verifications fail to meet the acceptance standards, either:
i. Remove the representative batch off Site; or

ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.

FIN7.M580.A MULTI-LAYER ACRYLIC PAINT

1. Submission Requirements:
a. At sample submission and approval stage, submit a sample of the proposed multi-layer acrylic paint for CM's approval together with all the following substantiation for CM's information:
i. Catalogue, brand name / model name and job reference of the material;
ii. Name, address and contact person of the local supplier;
iii. Name, address and contact person of the manufacturer;
iv. Where applicable, either the document from the manufacturer showing his authorization for the supplier as the agent / distributor in Hong Kong or document from the supplier showing the appointment of the manufacturer and manufacturer's agreement for the production of the proposed product;

v. Documents from the supplier or manufacturer showing the appointment of the applicators for the proposed multi-layer acrylic paint.

b. When the multi-layer acrylic paints are specified for domestic blocks, submit the following within six months from commencement of the superstructure work of domestic blocks:

i. For multi-layer acrylic paints with texture, submit a sample board similar to the ones maintained by the Housing Department with a 'Visual Sample Board' and the data of minimum coverage rate of the proposed system:
   • 1.3 kg/m² to 3.8 kg/m² (Medium texture) for external walls;
   • 0.9 kg/m² to 3.8 kg/m² (Fine texture) for corridor walls.

to show that the quality and appearance of the paint is not below the standard of the benchmark sample boards. Submit an additional sample board of the approved sample for keeping in the Housing Department’s Sample Display Gallery if the material has not been approved for use in a public housing project in the past five years prior to the notified date for commencement of the Works;

ii. Technical information details and application procedures for the proposed multi-layer acrylic paint;

iii. Original or a certified true copy each of the certification to ISO 9001 and ISO 14001 for the manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by the certification bodies or by the QCM. The certification bodies shall be as follows:

<table>
<thead>
<tr>
<th>ISO</th>
<th>Certification Body</th>
</tr>
</thead>
<tbody>
<tr>
<td>ISO 9001</td>
<td>The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.</td>
</tr>
<tr>
<td>ISO 14001</td>
<td>The certification body shall be accredited by the Hong Kong Accreditation Service (HKAS), or the China National Accreditation Service (CNAS), or an accreditation body which has entered into a mutual recognition agreement with HKAS.</td>
</tr>
</tbody>
</table>

iv. The product conformity certificate as prescribed in sub-clause (1)(c) below.

c. Product conformity certificate for multi-layer acrylic paints supplied for domestic blocks:

i. Submit within the time period specified in sub-clause (1)(b) the original or a certified true copy of the product conformity certificate pursuant to the "Product Conformity Certification Scheme for Paint Products" (PCCS-PP) published by the Hong Kong Association for Testing, Inspection and Certification Limited. The product conformity certificate shall be issued by a certification body accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a multilateral recognition arrangement with HKAS. If a photocopy of the product conformity certificate is submitted, it shall be certified true by the certification body or by the QCM:
ii. Submit together with the product conformity certificate a summary of the test results under the audit testing of the PCCS-PP. The summary shall be prepared by the accredited laboratory carrying out the testing or the certified manufacturer. If so directed by the CM, submit a full set of the audit test reports to the CM for record;

iii. If the product conformity certificate cannot be attained or submitted in compliance with sub-clause (1)(c)(i) above, it shall be submitted as early as possible within 24 months from the date for commencement of the Works provided that the original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2)(b) are submitted at the sample submission and approval stage for CM’s information. The date of the test shall be within three years prior to the notified date for commencement of the Works;

iv. In the event of failure to submit the product conformity certificate for CM’s information in compliance with sub-clauses (1)(c)(i) to (1)(c)(iii) above, the CM may order the removal of materials or delivered products off Site. The Contractor shall be responsible for all rectification works required as a result of removal of the materials or delivered products off Site, bear all associated costs and no extension of time will be granted.

d. Submit the original or a certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2)(b) for CM's information, unless the product conformity certificate as prescribed in sub-clause (1)(c) has been submitted and all the requirements are covered by the scope of the PCCS-PP:

i. The date of the test shall be within three years prior to the notified date for commencement of the Works;

ii. The test reports shall be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a).

2. Quality Requirements:

a. Water based multi-layer acrylic paint in accordance with sub-clause (2)(b) comprising:

i. One sealer coat;

ii. One main texture coat for multi-layer acrylic paint with texture;

iii. Minimum two finishing coats;

iv. Colour: to Approval.

b. The quality and performance requirements are as follows:

c. When the multi-layer acrylic paints are supplied for domestic blocks, standard of visual quality of painted surface shall be comparable with the benchmark samples maintained by Housing Department.

3. On Site Delivery Verification:
   a. At delivery stage, submit the following documents:
      i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (1)(a);
      ii. Original or certified true copy of the Certificate of Origin for every batch of delivery. One batch being the material quantity covered under each delivery note;
      iii. Delivery notes for all material delivered to Site.
   b. Carry out and submit report on the following verifications for multi-layer acrylic paint upon delivery on Site. Prior to carrying out the verifications, inform the CM or his representatives who may present to witness the verifications:

c. Where any of the verifications fail to meet the acceptance standards, either:
   i. Remove the representative batch off Site; or
   ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.

FIN7.M585.8  
**DOORSET PAINT**

An Approved proprietary water based paint product comprising:

1. Undercoat: one coat, type as recommended by the paint manufacturer;
2. Finishing coat: minimum three coats of cellulose lacquer.

FIN7.M590.8  
**TEXTURED SPRAYED PAINT COATING**

1. Textured spray paint coating of solvent based polyurethane of all colour range and comprising:
   a. Sealer;
   b. Texture base;
   c. Undercoat;
   d. Top coat.
2. The paint system shall comply with the following requirements:

| i. Chemical Resistance        | BS 3900 : Part G8: | No discoloration, cracking, peeling after immersion of:
| 1993                          | DIN 53168: 1982    | 720 hours in 5% NaCl solution. |
| 14.14                         |                     | 720 hours in 100% mineral spirit. |
| j. Fire Resistance            | Conforms to the fire-resistance material no. 0001 authorized by The Ministry of Construction in Japan. |

3. Submit the following to CM for approval:
a. Manufacturers product data sheet or catalogue in sufficient detail to reveal the characteristics of the ingredients and their properties;

b. Supporting laboratory test data, performance test reports; including requirements listed in sub-clause (2) above;

c. Full specification for surface preparation and method of application;

d. Comprehensive colour chart;

e. Delivery schedule to job site;

f. Colour sample board of size not smaller than 600 x 600 mm for each and every colour specified by the CM (the colour of the painted sampled panel must be identical to the ones specified for application on the job site.);

g. Previous jobs references.

CLEAR WOOD TREATMENTS

FIN7.M610.8 LINSEED OIL
To BS 6900:1987.

FIN7.M620.8 STAINS FOR VARNISHING OR POLISHING
An Approved water or spirit based stain suitable for use under varnish or wax polish.

FIN7.M630.8 SELF FINISHED STAINS
An Approved proprietary brand.

FIN7.M640.8 COPAL VARNISH
No. 1, extra pale quality for internal use only.

FIN7.M650.8 SYNTHETIC VARNISH
Long linseed oil alkyd type for internal or external use.

FIN7.M660.8 POLYURETHANE VARNISH
For internal or external use:
1. Moisture cure oil, modified one pack type for internal use only;
2. Isocyanate cure, two pack type for internal or external use.

FIN7.M670.8 WAX POLISH
An Approved proprietary brand suitable for floors, furniture and joinery as required.

FIN7.M680.8 CELLULOSE LACQUER
An Approved proprietary brand.

ANCILLARY MATERIALS

FIN7.M710.8 KNOTTING FOR METAL
An Approved proprietary brand of knotting suitable for application to coated metal pipes.

FIN7.M720.8 KNOTTING FOR WOOD
To BS 1336:1971.

FIN7.M730.8 STOPPING FOR INTERNAL WOODWORK
Linseed oil putty to BS 544:1969, tinted to match painted surface if required.
FIN7.M740.8 **STOPPING FOR EXTERNAL WOODWORK**
Approved proprietary oil based lead-free product.

FIN7.M750.8 **FILLER FOR PLASTER SURFACES**
Either:
1. Plaster of Paris to BS 1191:Part 1:1973:grade A; or
2. An Approved proprietary brand.

FIN7.M760.8 **SURFACE FILLER FOR WOOD**
An Approved proprietary brand.

FIN7.M770.8 **WHITE SPIRIT**
To BS 245:1976.

FIN7.M780.8 **STONE CLEANER AND SEALER**
Appropriate chemical solutions from an Approved manufacturer.

FIN7.M790.A **SKIM COAT FOR PAINT FINISHES**
1. Submission Requirements:
   a. At sample submission and approval stage, submit a sample of the proposed skim coat for CM's approval together with all the following substantiation for CM's information:
      i. Catalogue, brand name / model name and job reference;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer;
      iv. Written confirmation from paint suppliers and skim coat suppliers that the paint finishes and the skim coat are compatible and the paint finishes will not adversely affect the performance of the skim coat and vice versa;
      v. Method statement for the application of skim coat on various substrates and for various paint finishes;
      vi. When the skim coat is supplied for domestic blocks, except those for the ancillary facilities at lower floors, include the following in the submission:
         - Original or a certified true copy of the ISO 9001 certificate for the manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by a certification body or by the QCM. The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.
   b. Submit original or certified true copy (issued or certified by the laboratory that complies with **PRE.B9.570**) of the test reports showing full compliance with the requirements of sub-clause (2)(c) for CM's information:
      i. The date of the test shall be within three years prior to the notified date for commencement of the Works;
      ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material as mentioned in sub-clause (3)(a);
      iii. In the event that no test report has been submitted for CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

2. Quality Requirements:
a. Pre-packed skim coat mix shall be mechanically mixed with the amount of water as specified by the manufacturer;

b. The pH value of the hardened skim coat before painting shall not be more than 10;

c. The quality and performance requirements are as follows:

<table>
<thead>
<tr>
<th>Items</th>
<th>Test Method</th>
<th>Acceptance Standards</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>Initial tensile adhesion strength</td>
<td>BSEN 1015: Part 12: 2000</td>

<td>Applicable to non-cementitious skim coat only - Resistance to mould growth</td>
<td>BS 5980: 1980 Appendix B</td>
<td>No sign or evidence of mould growth.</td>
<td></td>
</tr>
</tbody>
</table>

d. Curing conditions:
   i. Initial tensile adhesion strength:
      - Condition the test specimens under a temperature of 27±2°C at a relative humidity of 55±5% for 27 days;
      - Bond the pull-head plates to the test specimens;
      - After a further 24 hours storage under a temperature of 27±2°C at a relative humidity of 55±5%, determine tensile adhesion strength according to BS EN 1015:Part 12:2000.
   ii. Tensile adhesion strength after water immersion:
      - Condition the test specimens under a temperature of 27±2°C at a relative humidity of 55±5% for 7 days;
      - Immerse in water at temperature of 27±2°C for 20 days;
      - Remove the test specimens from the water, wipe with a cloth and bond the pull-head plates to the test specimens;
After a further 7 hour immerse the test specimens in water at temperature of a 27±2ºC;

- Remove the test specimens from water the following day and immediately determine tensile adhesion strength according to BS EN 1015:Part 12:2000.

iii. Tensile adhesion strength after heat ageing:

- Condition test specimens under a temperature of 27±2ºC at a relative humidity of 55±5% for 14 days;
- Place the test specimens in an air-circulating oven at 70±2ºC for a further 14 days;
- Remove the test specimens from the oven and bond the pull-head plates to the test specimens;
- Condition the test specimens for a further 24 hours at temperature of 27±2ºC at a relative humidity of 55±5%;
- Determine tensile adhesion strength according to BS EN 1015:Part 12:2000.

iv. Tensile adhesion strength after freeze-thaw cycles:

- Condition test specimens under a temperature of 27±2ºC at a relative humidity of 55±5% for 7 days;
- Immerse the test specimens in water for 21 days;
- Carry out 25 freeze-thaw cycles with each freeze-thaw cycle as follows:
  - Remove the test specimens from the water and lower the temperature to -15±3ºC within 2 hr ± 20 min.;
  - Maintain the test specimens at -15±3ºC for 2 hr ± 20 min.;
  - Immerse in water at 20±3ºC and raise the temperature to 15±3ºC and maintain this temperature for 2 hr ± 20 min..
- Allow the test specimens to reach standard conditions in air after the last cycle and determine the tensile adhesion strength according to BS EN 1015:Part 12:2000.

e. Packed in three ply paper and 1 ply ethylene together with preparation procedures and application methods. Minimum one set of the preparation procedures and application methods shall be printed in Chinese and diagrammatic forms for each lot that is delivered to site;
f. Brand name, batch number, shelf life, pot life and open time to be clearly printed on outside of package.

3. On Site Delivery Verification:

a. At delivery stage, submit the following documents:

i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (1)(a);

ii. Original or certified true copy of the Certificate of Origin for every batch of delivery. One batch being the material quantity covered under each delivery note;

iii. Delivery notes for all material delivered to Site.

b. Carry out and submit report on the following verifications for skim coat upon delivery on Site. Prior to carrying out the verifications, inform the CM who may present to witness the verifications:
i. Method:

<table>
<thead>
<tr>
<th>Verification Items</th>
<th>Method</th>
<th>Acceptance Standards</th>
</tr>
</thead>
<tbody>
<tr>
<td>Material and Packaging</td>
<td>Visual</td>
<td>To Approved Sample</td>

<tr>
<td>Lot No. / Batch No.</td>
<td>Document Check</td>
<td>As Approved</td>
</tr>
<tr>
<td>Expiry Date</td>
<td>Check information printed on the packing</td>
<td>Not expired</td>
</tr>
</tbody>
</table>

ii. Frequency:

One set of verification should be carried out for every delivery of skim coat made to Site under each Delivery Note submitted in sub-clause (3)(a).

c. Where any of the verifications fail to meet the acceptance standards, either:

i. Remove the representative batch off Site; or

ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.
WORKMANSHIP

GENERAL

FIN7.W010.8 STANDARD
Carry out painting generally in accordance with BS 6150:1991 and this Specification.

FIN7.W020.8 HEALTH AND SAFETY
Do not use materials or working practices which would result in any hazard or injury to operatives or to others in the vicinity of the Site.

FIN7.W030.8 HANDLING AND STORAGE
1. Store the materials on the Site or in the Contractor's workshops etc in cool, well ventilated, covered storage accommodation;
2. Fit the entrance door to the store with a "NO SMOKING" sign and provide a suitable fire extinguisher, immediately outside the entrance door for use in the event of a fire in the store.

FIN7.W040.8 PROTECTION OF EXISTING SURFACES
Protect surfaces, fittings, furniture and the like by suitable and Approved means.

FIN7.W050.8 CLEANLINESS
Remove and clean off all splashes whilst work is in progress and:
1. Make good any damage;
2. Leave the work and all areas in which the work was executed clean and perfect on completion.

FIN7.W060.8 COLOURS
Carry out decoration in colours Natural Colour System or to BS 4800: 1989 or to master colour chart by paint manufacturer as selected by the CM.

FIN7.W070.8 SAMPLE OF FINISHED WORK FOR CONSTRUCTION MOCK-UP
Provide the following and obtain Approval before commencing the work:
1. Paint sample of finished works;
2. A Construction Mock-up:
   Construct a Construction Mock-up of around 5 m² as PRE.B9.440 for painted surfaces showing the workmanship of each construction layer including preparation, applying primers, undercoats, and finishing coats etc. as applicable and as directed by CM.

FIN7.W080.8 DISPOSAL OF TINS
All paint tins shall be disposed as recycle materials after use of the contents.

PREPARATION - DEFINITION OF TERMS

FIN7.W110.8 PAINTING
Unless specifically stated to the contrary, the term "Painting work" includes also all preparatory and paint application works as defined in the remaining clauses of this subsection necessary to:
1. Produce a first class finish, free of all blemishes, blisters and weeps;
2. Avoid brush marks.

FIN7.W120.8 WASH DOWN
Depending on the context, means:
1. The removal, with clean water, of all dirt not absorbed into the surface of a material not previously decorated; or
2. The removal, with clean water, of existing limewash, non-washable distemper or similar material not absorbed into the decorated surfaces; or
3. The removal of dirt from and the cleaning down of existing washable distempered, cement painted, synthetic painted and similarly decorated surfaces with sugar soap powder, mixed with water, followed by further applications of clean water.

FIN7.W130.8 BROOM DOWN
Means the thorough dry brushing of any surface with a stiff broom or brush so as to remove all cobwebs, dust or loose particles of previous finishes.

FIN7.W140.8 SCRAPE
Means the removal of all existing coats of paint, limewash, colourwash, distemper etc by the use of scraping tools, without the use of chemical solvents or heat and without damage to the underlying material. Make good any such damage at own expense. Wash down the surface after scraping.

FIN7.W150.8 WIRE BRUSH
Means the thorough brushing down of the surface with a wire brush.

FIN7.W160.8 STRIP
Means the complete removal, without damage to the underlying surface, of all existing coats of limewash, distemper, paints or other decorative material by means of washing and scraping, together with the application of chemical solvents or heat, if necessary. After the use of any chemical solvents, wash down the surface and neutralise in accordance with the manufacturer's recommendations.

FIN7.W170.8 STOP (PLASTER)
Means the careful trimming of the edges of all holes, cracks or crevices of any description and filling to produce an even, flat surface and touching up all patches with a coat of sealer prior to repainting.

FIN7.W180.8 STOP (WOODWORK)
Means the cleaning out and filling of all holes, cracks and crevices etc.

FIN7.W190.8 KNOT (METAL PIPES)
Means the application of one coat of patent knotting to the surface of any bitumen coated pipe.

FIN7.W200.8 KNOT (WOODWORK)
Means the application of a sufficient number of coats of knotting over all knots in the wood to prevent the bleeding of resin through the subsequent decoration.

FIN7.W210.8 RUB DOWN
Means the rubbing of newly prepared surfaces, or surfaces of existing paint remaining after preparation for redecoration, with Approved waterproof glass paper, sand paper, pumice stone or similar, to give a true and keyed surface for new paint.
FIN7.W220.8  FILL
Means the filling of the grain with surface filler.

PREPARATION - UNDECORATED SURFACES

FIN7.W310.8  GENERAL
Remove all dust, dirt, stains, efflorescence, grease, loose material and stepped joints. Provide a level surface and, unless otherwise specified, prepare new surfaces for decoration in accordance with the remaining clauses in this sub-section.

FIN7.W320.8  PLASTERED AND RENDERED SURFACES
Wash down, stop and rub down.

FIN7.W325.8  INTERNAL FAIR-FACED CONCRETE, PLASTERED SURFACES AND PANEL WALL PARTITIONS TO DOMESTIC BLOCKS
Apply cementitious skim coat of Approved type in 2 coats and sand down after the second coat.

FIN7.W330.8  CONCRETE, MASONRY AND ROOF TILES
Broom down

FIN7.W340.8  STRUCTURAL STEELWORK
As Worksection STR1.

FIN7.W350.8  UNCOATED IRON AND STEEL
Clip off and remove all scale and rust, wire brush to leave a bare, clean surface and apply a rust inhibitor at least twelve hours prior to painting with the primer specified.

FIN7.W360.8  ZINC COATED IRON AND STEEL
Clean down and apply Approved primer.

FIN7.W370.8  COATED IRON AND STEEL PIPES
Clean down and knot.

FIN7.W380.8  COPPER
Where exposed copper is scheduled to be painted, wash with soap and warm water, rub down with coarse emery cloth and apply a coat of one part acetone to two parts of benzole prior to priming.

FIN7.W390.8  WOODWORK TO RECEIVE PAINT
Knot, prime, stop and rub down surfaces.

FIN7.W400.8  WOODWORK TO RECEIVE PRESERVATIVES AND PESTICIDES
Broom down surfaces.

FIN7.W410.8  WOODWORK TO RECEIVE LINSEED OIL
Rub smooth and brush clean.

FIN7.W420.8  WOODWORK TO RECEIVE CLEAR FINISHES
Rub down and fill surfaces to receive stain, varnish, wax polish or lacquer.

FIN7.W430.8  WOODWORK TO RECEIVE CHALKBOARD PAINT
Wash down surfaces.
FIN7.W440.8 ABSORBENT FIBRE BASED BOARDS
Broom down, punch down nail heads, stop all nail and screw holes, rub down and leave with a texture to match the surrounding surfaces.

FIN7.W450.8 FIBRE CEMENT
Broom down, using appropriate safety equipment to prevent the inhalation of dust and ensuring that:
1. Dust is kept down by spraying with water;
2. Operatives are provided with half mask (orinasal) respiratory protection.

FIN7.W460.8 SURFACES TO RECEIVE POLYURETHANE OR COLD-CURE EPOXY PAINTS
Fill surfaces with an Approved epoxy filler.

PREPARATION - DECORATED SURFACES

FIN7.W510.8 GENERAL
Remove all dust, dirt, stains, efflorescence, grease and loose material and, unless otherwise specified, prepare existing decorated surfaces for decoration in accordance with the remaining clauses in this sub-section.

FIN7.W520.8 SURFACES SUBJECT TO MOULD GROWTH
Wash down with one coat of anti-mould liquid before preparation of the surface for decoration and ensure that surfaces are entirely clean of old mould growth and spores.

FIN7.W530.8 LIMEWASHED OR WHITENED SURFACES
Scrape, broom down, stop, apply and bring forward bare spots with new material.

FIN7.W540.8 WASHABLE AND NON-WASHABLE DISTEMPERS
Strip off distempered washable sealer or non-washable distempered surfaces completely, wash down, stop, seal and prepare to receive new paint system as scheduled.

FIN7.W550.8 EMULSION PAINTED SURFACES
Scrape, wash down, stop, apply and bring forward bare spots with new material.

FIN7.W560.8 SYNTHETIC PAINTED SURFACES OTHER THAN METAL AND WOOD
Scrape, wash down, stop, rub down and apply primer to and bring forward bare spots with undercoat.

FIN7.W570.8 BLACK BITUMINOUS COATED SURFACES
Spot prime bare areas with black bituminous coating.

FIN7.W580.8 UNGALVANIZED IRON AND STEEL
Wash down, scrape, chip off and wire brush to remove all scale and rust, rub down, apply rust inhibitor and primer to bare areas or to such additional areas as directed and bring forward with undercoat.

FIN7.W590.8 PAINTED, ZINC COATED IRON AND STEEL
Wash down, scrape and remove all scale and rust, rub down and apply specified primer to and bring forward bare spots with undercoat.
FIN7.W600.8 SYNTHETIC PAINTED WOODWORK
Wash down, scrape, rub down, knot, prime and stop, and bring forward bare spots with undercoat.

FIN7.W610.8 POLYURETHANE OR EPOXY PAINTED WOODWORK
Wash down, scrape, rub down, stop and apply epoxy filler to, and bring forward bare spots with undercoat.

FIN7.W620.8 VARNISHED WOODWORK
Wash down, scrape, rub down and bring forward bare spots with varnish.

FIN7.W630.8 WAXED AND LACQUERED WOODWORK
Rub down, fill and again rub down to produce a smooth surface for refinishing.

FIN7.W640.8 WAXED FLOORS
Clean with wire wool or sand down as shown on Drawings.

FIN7.W650.8 STRIPPING EXISTING DECORATIONS
1. Where Instructed, strip existing decoration which is in a poor condition or which is to be replaced by a different type of finish;
2. After stripping, prepare surfaces as required for the type of finish to be applied.

APPLYING PAINTS GENERALLY

FIN7.W710.8 AMBIENT CONDITIONS
No painting works shall be carried out in adverse weather conditions such as extremely cold, raining, foggy, high humidity and where there is excessive dust in the air. Application of paints shall be in strict accordance with manufacturer's specification.

FIN7.W720.8 SURFACE CONDITION
1. Prior to application of skim coat, ensure that:
   a. Surfaces shall be level and free from stepped joints, structural cracks, broken edges, honey-combing, excessive blowholes or other irregularities;
   b. All holes, cracks and other defects in the surfaces have been made good.
2. After application of skim coat and one sealer coat of paint and before application of subsequent coat, ensure that:
   a. Blemishes shall be avoided;
   b. Surfaces shall be free from pin-holes, blowholes and blisters or other irregularities to ensure that they are smooth, clean and level to receive paint.
3. Before a subsequent coat is applied, surfaces shall be clean and dry after any previous coatings have hardened and rub down smooth with fine glass paper.

FIN7.W730.8 IRONMONGERY AND HARDWARE
1. If painting operations is obstructed, remove all articles of ironmongery, hardware etc before painting and replace, with matching screws, and plugs if required, of suitable sizes, after completion;
2. If painting operations is not obstructed, protect fittings and other surfaces with covers as appropriate;
3. Leave everything clean and completely free from all paint stains, splashes and the like.
FIN7.W740.8 MIXING AND APPLYING
Mix and apply paints in accordance with the manufacturer's recommendations.

FIN7.W750.8 THINNING
Only thin paints with Approval and in accordance with the manufacturer's recommendations.

FIN7.W760.8 BRUSH APPLICATION
Apply coatings with brushes of a suitable size, with flat wall brushes not less than 150 mm wide and:
1. Well brush each coat into the surface so that every part, including junctions and angles etc, is adequately covered;  
2. Take care to avoid brush marks and an excessive or uneven thickness of paint film, particularly at edges, angles and junctions;  
3. Apply the coating carefully so that the finished surface is free of unsightly marking due to excessive sanding; or inconsistent brush/roller marks;  
4. Cut in neatly and cleanly without splashing or marking adjacent surfaces.

FIN7.W770.8 THICKNESSES OF COATS
Ensure the thicknesses of individual coats and the total thicknesses of paint systems fall within the standard thicknesses recommended by the manufacturers unless specified otherwise in this Worksection.

FIN7.W780.8 SUCCESSIVE COATS
Apply successive coats of paint in slightly differing tints.

FIN7.W790.8 APPLICATION BY ROLLERS, CLOTHS AND GLOVES
Do not use rollers, cloths or gloves for the application of decorative coatings unless otherwise Instructed or Approved.

FIN7.W800.8 MECHANICAL APPLICATION
Mechanical spraying machines may be used instead of brush application for emulsion paint except in proximity to pipework along corridor ceilings unless the pipework are protected with covers.

FIN7.W810.8 SURFACES LIKELY TO BECOME INACCESSIBLE
Prime and paint surfaces prior to fixing.

FIN7.W820.8 WEATHERSTRIPPING
Do not paint weatherstripping on metal windows and doors.

FIN7.W830.8 TOUCHING UP
Where Instructed, touch up coated surfaces on completion.

FIN7.W840.8 CLEANLINESS
Keep surfaces clean and free of dust during coating and drying.

FIN7.W850.8 PROTECTION OF NEWLY COATED SURFACES
1. Protect freshly applied surface coatings from damage;  
2. Exhibit "WET PAINT" signs in English and Chinese and provide protective barriers where necessary.
APPLYING PRIMERS

FIN7.W910.8  GENERAL
Work primer into surface, angles, joints and end grain and:
1. Ensure that priming coats are of adequate thickness to suit the surface porosity;
2. Ensure that any primed surfaces that have deteriorated on site or in transit are touched up or re-primed;
3. Apply priming coats on new work before the articles are fixed in position.

FIN7.W920.8  METAL SURFACES
Apply primer to metal surfaces on the same day as they have been cleaned.

FIN7.W930.8  WASH AND ETCH PRIMERS
Allow wash and etch primers to harden before applying subsequent priming coats.

FIN7.W940.8  REBATES, GLAZING BEADS AND PUTTY
1. Apply a suitable primer for the glazing compounds specified in Worksection COM4 to glazing beads and rebates, before glazing;
2. Seal putty fronting with a suitable primer and paint system.

APPLYING UNDERCOATS AND FINISHING COATS

FIN7.W1010.8  UNDERCOATING
1. Apply in an even film over all surfaces, avoiding uneven thicknesses at edges and angles;
2. If the undercoating of any specified paint system is available only in white, apply an additional finishing coat in place of the second undercoat.

FIN7.W1020.8  FINISHING COATS GENERALLY
Apply in an even film over all surfaces and avoid brush marks, sags, runs and other defects.

FIN7.W1030.8  TWO FINISHING COATS
Where two hard gloss finishing coats are specified:
1. Apply the second coat when the first is dry and within 48 hours of the first or as per manufacturer's recommendations;
2. Rub down with medium/fine glass paper between coats to provide a key.

WATER REPELLENT LIQUID

FIN7.W1110.8  APPLICATION
Brush, clean down and apply one coat of water repellent liquid in accordance with the manufacturer's recommendations.

EXTERNAL TEXTURED PAINT

FIN7.W1310.8  APPLICATION
Allow a minimum drying time of 12 hours between coats unless required otherwise by the manufacturer's recommendations.
PESTICIDES AND PRESERVATIVES

FIN7.W1410.8 APPLYING PESTICIDAL COATINGS
Where specified elsewhere in this Specification, or shown on Drawings, apply over the entire surface in bands 75 mm wide in accordance with manufacturer's instructions.

FIN7.W1420.8 TIMBER PRESERVATIVE TREATMENT
Where timber is specified to be preservative treated elsewhere in this Specification or shown on Drawings:

1. Ensure that the timber has the correct moisture content before commencing the application of preservative;
2. Carry out treatment after all cutting and drilling;
3. Apply preservative to all the surfaces of the timber in accordance with the manufacturer's recommendations;
4. Stack the treated timber to dry out before priming and fixing.

BLACK BITUMEN COATING SOLUTION

FIN7.W1510.8 APPLYING COATINGS TO RECEIVE PLASTERS AND RENDERS

1. Blend the coating with clean, sharp sand while it is still tacky;
2. Ensure that the final covering is applied as soon as possible after the black bitumen coating.

BLACK ENAMEL

FIN7.W1610.8 APPLICATION
Work the paint well in with the brush and ensure that the finished surface is hard and elastic when dry.

REFLECTING PAINT

FIN7.W1710.8 APPLYING REFLECTIVE AGGREGATE
Apply reflective aggregate at the rate of 0.6 kg/m² while the finishing coat is still wet.

CLEAR WOOD TREATMENTS

FIN7.W1810.8 LINSEED OIL
Allow a minimum drying time of two hours between coats.

FIN7.W1820.8 WAX POLISH ON JOINERY
Apply with a soft cloth and:

1. Allow a minimum drying time of four hours between coats;
2. Brush the surface with a soft brush to obtain an eggshell finish.

FIN7.W1830.8 WAX POLISH FLOOR FINISHES
Apply with a weighted felt pad or an electric polisher.

FIN7.W1840.8 CELLULOSE LACQUER
Apply:
1. Undercoats and rub down with "flour grade" glass paper after each coat;
2. Final coat and polish to produce a finish free from marks and imperfections.

SIGNWRITING

FIN7.W1910.8 PAINTING LETTERS, CHARACTERS AND FIGURES
Paint to the sizes required on the Drawings in a thick coat of synthetic paint so that they stand out boldly and solidly, free from brush marks.

MULTI-LAYER ACRYLIC PAINT

FIN7.W2010.8 GENERAL
Prepare the surface and apply acrylic paint strictly in accordance with the manufacturer's recommendations for the following:
1. One sealer coat;
2. One main texture coat;
3. Minimum two finishing coats.

PAINTING TO KITCHEN, BATHROOM, FLAT ENTRANCE AND EXIT STAIRCASE DOORSETS IN DOMESTIC

FIN7.W2110.8 GENERAL
Carry out spray painting in the supplier's workshop prior to delivery to Site and in accordance with the paint manufacturer's recommendations and the requirements as specified below.

FIN7.W2120.8 SAMPLES OF FINISHED WORK
1. Prior to the order of the paints, submit a sample, for Approval, consisting of two sets of the upper half of the finished doorsets indicating materials used for the filler, undercoat and finishing coats proposed and the standard of workmanship on the paint application;
2. The Approved sample will be used as an acceptance standard for the workmanship of the spray paint finish application.

FIN7.W2130.8 COLOURS
The colour of the finishing coats of the whole doorset will be selected from the 'NCS' colour range or to master colour chart by paint manufacturer as selected by the CM.

FIN7.W2140.8 SURFACE PREPARATION
1. Fill all surface irregularities with filler or stopper as recommended by the paint manufacturer;
2. Leave to dry and sand down until smooth;
3. Ensure all surfaces to be painted are smooth, clean, dry and free from oil or grease and other contaminants.

FIN7.W2150.8 AMBIENT CONDITIONS
Do not commence painting in weather conditions with relative humidity above the limit specified by the paint manufacturer.
FIN7.W2160.8 APPLICATION OF PAINT
1. Apply one coat of undercoat by spray or by brush. Sand down and dust off;
2. Carry out thinning in accordance with the manufacturer's recommendation;
3. Allow sufficient time for the undercoat to dry before sanding and overcoating as recommended by the manufacturer;
4. Apply a minimum of three finishing coats by spray until the finished surfaces are smooth and free from wood grain. Ensure the working pressure of the pump, the nozzle size, the thinning process and the minimum recoating time satisfies the manufacturer's recommendations.

FIN7.W2170.8 DRYING AND PACKAGING
After application, leave to dry for a period of time before packing as recommended by the paint manufacturer. Wrap doorsets with uncoated white paper or equivalent material as recommended by the paint manufacturer. Do not use plastic coated materials or coloured paper for wrapping.

FIN7.W2180.8 PAINTING TO GALVANIZED SURFACES
Paint galvanized surfaces as follows:
1. Lightly sand the galvanized surfaces;
2. Remove grease, dirt, contaminants and white storage stain from the galvanized surfaces using cleanser recommended by paint suppliers for at least two times;
3. Apply water based anti-corrosion primer to the galvanized surfaces in accordance with manufacturer's recommendation;
4. Apply undercoat not less than 7 days from the date of applying the water based anti-corrosion primers or the number of days as recommended by manufacturer. Prior to applying the undercoat, remove dirt and grease from the surfaces;
5. Prior to applying the topcoat, remove dirt and grease from the surfaces.

FIN7.W2210.8 GENERAL
Prepare and apply paints and coatings in the number of coats specified in the tables in the remaining clauses of this sub-section. Unless stated otherwise, treat internal and external surfaces the same.

**PIPEWORK AND MACHINERY**

**FIN7.W2405.8**  
**GENERAL**
All pipework installations shall not be painted unless otherwise specified.

**FIN7.W2410.8**  
**INSULATED PIPES**
1. Colour code all insulated pipes and trunking concealed in ducts or behind suspended ceilings and not normally accessible;
2. Plaster all insulated pipes and trunking running in accessible vertical ducts or in normally visible positions and paint in the appropriate colour code or with appropriate colour code bands.

**FIN7.W2420.8**  
**UNINSULATED PIPES**
Whether concealed or visible, paint either in the appropriate colour code or as required by the CM and with the appropriate colour code bands.

**FIN7.W2430.8**  
**PAINTING MACHINERY**
Unless otherwise specified, paint all machinery in green, 14 E 51, to BS 4800: 1989.
FIN7.W2460.8 CAST IRON PIPES
Paint cast iron pipes and fittings with at least 2 coats of bitumen to BS 3416: 1991 after installation.

FIN7.W2465.8 GALVANIZED PIPES
Paint galvanized pipes and fittings to this Worksection.

FIN7.W2470.8 REFRIGERANT PIPES
Bright polish and lacquer visible, uninsulated copper pipes and fittings.

FIN7.W2475.8 PAINTING UPVC PIPES
1. Paint all external uPVC water supply pipes exposed to sunlight and on roof and canopy with an Approved white acrylic paint;
2. uPVC pipes to be painted shall be cleaned, prime coated with appropriate primer and completed with two coats of white acrylic paint in accordance with the paint manufacturer’s recommendation.

FIN7.W2480.8 METALWORK IN REFRIGERATOR SPACES
Finish all metalwork inside cold stores and similar refrigerator spaces in a mould resistant paint, suited to low temperature application, to the satisfaction of the CM.

FIN7.W2490.B PIPELINE IDENTIFICATION
Paint pipes and pipelines either in the colours shown in the schedule in FIN7.W2500 and FIN7.APPEND2 or as directed, and comply with the following:
1. Apply the basic identification colour banding with or without 100mm wide colour code indication at all junctions, at both sides of valves, service appliances, bulkheads, wall penetrations and at any other locations where identification is necessary or directed by the CM;
2. Paint valves with the appropriate identification colour except for those on pipelines coded for fire service supply which must be painted red;
3. Indicate the direction of flow in the pipeline by means of an arrow over the basic identification colour, painted in white or other colour as directed by the CM in order to contrast clearly with the basic identification colour;
4. Apply the direction of flow marking for drainage pipes via sump pump system. The marking is not required for drainage pipes with flow by gravity fall.

FIN7.W2520.8  **PAINTING TO PIPEWORK AND EXPOSED METALWORK TO BUILDING SERVICES INSTALLATIONS**
Prime and paint two undercoats and one finishing coat of gloss synthetic paint to surface mounted town gas pipework, LPG pipework, and exposed metal conduit, trunking and cable trays of the electrical installation.
TESTING

SURVEILLANCE TESTS FOR PAINTS

FIN7.T050.A

SURVEILLANCE TESTS

1. Testing Arrangements:
   a. When Instructed, surveillance tests shall be carried out by the CM, a Direct Contractor or the Housing Department Material Testing Laboratory;
   b. Comply with the following pertaining to surveillance tests:
      i. Provide attendance on the Site;
      ii. Provide, deliver and collect samples etc. as directed by the CM or as specified.

2. Testing Samples:
   a. Provide one set of test sample from the batch of material delivered to Site under the delivery note as specified in the following for each type of paint or as instructed by the CM:
      i. FIN7.M340 (3)(a) for anti-mould internal emulsion paint;
      ii. FIN7.M370 (3)(a) for anti-mould external emulsion paint;
      iii. FIN7.M570 (3)(a) for synthetic paint;
      iv. FIN7.M580 (3)(a) for multi-layer acrylic paint with texture coat; or
      v. FIN7.M580 (3)(a) for multi-layer acrylic paint without texture coat.
   b. For emulsion and synthetic paint, one set of test sample shall consist of one container per different major colour of finishing paint or as instructed by the CM;
   c. For multi-layer acrylic paint, one set of test sample shall consist of one container each of sealer, texture coat and one container per different major colour of finishing paint or as instructed by the CM.

3. Testing methods:
   a. As per FIN7.M340 (2)(b) for anti-mould internal emulsion paint;
   b. As per FIN7.M370 (2)(b) for anti-mould external emulsion paint;
   c. As per FIN7.M570 (2)(b) for synthetic paint;
   d. As per FIN7.M580 (2)(b) for multi-layer acrylic paint with texture coat;
   e. As per FIN7.M580 (2)(b) for multi-layer acrylic paint without texture coat;
   f. As per Part 5 of Schedule 1 in Air Pollution Control (Volatile Organic Compounds) Regulations for volatile organic compound content of paints;
   g. As per FIN7.M015 for water based paints;
   h. As per FIN7.M016 for solvent based paints.

4. Non-compliance:
   a. In the event that the testing samples for any type of paint fail to meet the testing requirements, follow either one of the following actions:
      i. Remove the representative batch of that type of paint off Site; or
ii. Carry out re-test for the representative batch of that type of paint in accordance with the testing methods as specified in sub-clauses (3)(a), (3)(b), (3)(c), (3)(d) or (3)(e) in a laboratory that complies with the requirements stated in PRE.B9.570 on three separate sets of samples selected by the CM from the representative batch for that type of paint. In case of any one sample fails the re-test, remove the representative batch of that type of paint off Site.

b. When the representative batch of that type of paint is removed off Site, replace with another new batch and carry out test in accordance with the testing methods as specified in sub-clauses (3)(a), (3)(b), (3)(c), (3)(d) or (3)(e) in a laboratory that complies with the requirements stated in PRE.B9.570 for one sample selected by the CM from the replacing batch. In case of such test fails, follow action stated in sub-clauses (4)(a);

c. Bear all associated costs for the test and re-test required in sub-clauses (4)(a) and (4)(b). No extension of time will be allowed.
APPENDIX FIN7/I

FIN7.APPEND1.8 ACCELERATED TESTS FOR RESISTANCE TO FUNGAL AND ALGAL GROWTH OF PAINT

1. Scope:
   An accelerated test method for assessing the resistance to fungal and algal growth of paint applied in the laboratory to specified fungi and algae found on the surfaces of buildings in Hong Kong.

2. Biological safety precautions:
   a. The accelerated test shall be carried out in certified or equivalent microbiology laboratory;
   b. The operator has formal microbiological training and practices with good microbiological precaution especially reference to biosafety;
   c. The treatment and handle of the biohazards shall follow the instruction and guidelines of the Department of Health, the Government of Hong Kong Special Administration Region;
   d. Containment of the micro-organisms shall be practised as far as possible;
   e. Prevention of spillage and practice of spraying using diluted bleaching solution to contaminated areas shall be practised;
   f. All the used materials shall be autoclaved before disposal.

3. Principle:
   a. Sterilized inert petri dish / multi-well plate / 6-well plate are painted. Each test fungus or alga is inoculated into individual coated petri dish / multi-well plate / 6-well plate with suitable strength nutrient broth. The inoculated petri dish / multi-well plate / 6-well plate are then incubated in an incubator under specified conditions and inspected at specified intervals for fungal and algal growth;
   b. The nutrient broth provides the start-up resources for test fungus and alga to initiate growth. As incubation period lasts, test fungus and alga if viable needs to consume the nutrient in the paint coating. Viable fungus will spread from the inocula to the nutrient broth and painted surface of petri dish / multi-well plate / 6-well plate. Viable alga will form visible green patches in the nutrient broth and painted surface;
   c. Coating resistance to microbial attack is determined by the residual viability of the artificially inoculated micro-organism. Viability refers to gain in population size, biomass and spread of micro-organism;
   d. Colony spread in terms of area coverage is an identified property for rating the filamentous growth format of a micro-organism. However, for unicellular or slow-growth micro-organisms which do not spread their colonies in fast manner, their density of the colonies might need to be assessed. Dead algae may autodegrade their organelles and biomolecules, leading to decolorization (loss of the green colour) in contrast to the live green algal patches / dots / spots. Area coverage, colony density and colour are needed for interpretation of the growth of micro-organism.

4. Testing apparatus and materials:
   a. Sterilized petri dish / multi-well plate / 6-well plate;
   b. Sterilized pipette tips (0.2, 1 and 5 mL);
   c. Sterilized potato dextrose broth (PD);
   d. Sterilized modified Allen's medium;
   e. Sterilized distilled water;
f. Sterilized Eppendorf tubes (1.8 mL);
g. Sterilized Falcon tubes (15 mL, 50 mL);
h. Sterilized plastic bags;
i. A set of Pipetteman (0.2, 1 and 5 mL);
j. Paint samples and brushes;
k. An illuminated incubator;
l. Digital camera for recording;
m. Fungal and algal cultures;
n. Biosafety cabinet class II or equivalent;
o. 70% alcohol for cleaning, diluted bleaching solution for disinfection;
p. Bunsen burner, town gas;
q. Vortex mixer for mixing;
r. Haemocytometer for determining the concentration of spore / cell in a suspension;
s. Autoclave, 1.2 to 1.5 kgf/cm²;
t. Water, non-disposable containers and tools used in the test must be sterilized by an autoclave under the pressure of 1.2 to 1.5 kgf/cm² for 20 minutes.

5. Preparation of paint samples:
Each paint sample consists of two test paints and a control.

a. Test paint:
i. The paint shall be used before their expire dates;
ii. Thoroughly mix and dilute the paint for coating according to the manufacturer's instruction;
iii. Apply by brushing two coats of paint to the surface of petri dish / multi-well plate / 6-well plate. Allow the first coat of paint to dry for at least 4 hours before the second coat is applied;
iv. Allow the coating to dry for one day before use.

b. Control:
i. Uncoated petri dish / multi-well plate / 6-well plate contain suitable strength nutrient broth for fungus and alga to grow;
ii. If fungus or algal growth of growth rank at or above 1 in the petri dish / multi-well plate / 6-well plate is not obtained at day 7, carry out reinoculation. This may be owing to insufficient inoculum size, poor incubation conditions in terms of environmental or nutrient conditions. Check the incubation conditions. Replenishment of the suitable strength nutrient broth may be needed;
iii. Fungus or algal growth of growth rank above 2 at day 28 in the petri dish / multi-well plate / 6-well plate indicates viability of the fungal and algal cultures for the validity of the test results. If such result is not obtained, repeat the test with viable test micro-organisms under confirmed standardized conditions with proper nutrient composition.

6. Microbiological tests

a. Local species of fungi and algae for test which are available in School of Life Sciences, the Chinese University of Hong Kong:
i. Fungal species
   - Cladosporium cladosporides strain HK-1
   - Trichoderma viride strain HK-1
ii. Algal species
   - *Chlorella pyrenoidosa* strain HK-1
   - *Scenedesmus sp.* strain HK-1

b. Preparation of cultures:
   i. Fungal culture
   Maintain a fungal culture on potato dextrose agar (PDA) of composition (g/L): potato starch, 4; dextrose, 20; agar, 15 for 7 days at 28-30°C in darkness to prepare an active growing log-phase culture.

   ii. Algal culture
   Maintain an algal culture in a modified Allen's broth of pH 6.3 with composition shown in table below for 14 days under illumination at 25°C:

<table>

<td>0.005</td>
</tr>
</tbody>
</table>

c. Preparation of inoculum:
   i. Prepare a liquid suspension of fungal culture as follows:
   - Use sterilized loop to scrape the spores / hyphal fragments from a fully grown fungal plate culture onto 1 mL nutrient broth (prepared in 1/10 strength of PD) using aseptic technique;
   - To facilitate an even fungal suspension, a non-ionic surfactant, e.g. 0.05% Tween 80, may be added;
   - Prepare an inoculum for a fungus at 10⁸ spore / hyphal fragments per mL for test;
   - Use a haemocytometer for measurement to ensure that each inoculum contains not less than 10⁸ spore / hyphal fragments per mL. If this level is not present, repeat the preparation for that species using a fresh plate culture.

   ii. Prepare a liquid suspension of algal culture as follows:
- Use pipetting to transfer and inoculate an algal inoculum to nutrient broth using aseptic technique;
- Prepare an inoculum for an alga at 10^8 cells per mL for test;
- Use haemocytometer for measurement to ensure that each inoculum contains not less than 10^8 cell per mL. If this level is not present, use centrifugation to concentrate the algal suspension.

d. Inoculation:
   i. Thoroughly mix the inoculum using vortex mixer for 1 minute before inoculation;
   ii. Using aseptic technique, 1 volume of the inoculum is inoculated into 10 volumes of the nutrient broth (1/10 strength PD for the fungus and modified Allen medium for the alga) in the coated petri dish / multi-well plate / 6-well plate as follows:
      - 1 mL inoculum into 9 mL medium in a 9 cm petri dish; or
      - 0.05 mL inoculum into 0.45 mL medium in a 96 multi-well plate; or
      - 0.5 mL inoculum into 4.5 mL medium in a 6-well plate;
      - Use sterilized 5 mL cut-off pipette tip for the transfer of the fungal inoculum which contains spores and hyphal fragments and sterilized 1 mL pipette tip for the algal inoculum which contains unicellular cells.
   iii. Add the same quantity of inoculum into the same quantity of nutrient broth for the control;
   iv. Take digital photo records of the paint samples and control just after inoculation;
   v. Cover the inoculated petri dish / multi-well plate / 6-well plate. Seal the container with paraffin for safe transport and process.

e. Incubation:
   i. The inoculated petri dish / multi-well plate / 6-well plate with cover of the plate in place are incubated in a conventional incubator with an illumination cycle. The incubation conditions are: 28 ± 2°C and 12 hour light – 12 hour dark cycle.

7. Observation and data record:
   a. Observe the paint samples as follows and assess the fungal and algal growth using the growth rank in sub-clause (8)(d):
      i. Observe the paint and control samples at day 7. Carry out reinoculation to paint samples and control if the growth rank is 1 or less. Replenishment of nutrient broth to prevent dry up of the test culture may be performed;
      ii. Observe the paint and control samples at day 14. Replenishment of nutrient broth to prevent dry up of the test culture may be performed;
      iii. Observe the paint and control samples at day 28.
   b. Take digital photo records of the paint and control samples at day 7, day 14 and day 28 for comparison;
   c. Use the record sheet in sub-clause (9) to record the growth rank.

8. Assessment criteria for resistance to growth:
   a. The assessment is a semi-quantitative assessment with visual examination of micro-organism growth according to the principle described in sub-clause (3) above;
b. Following the assessment made in (a) above, growth of a micro-organism shall be rated by comparing its area spread, colony density and colour on the day of assessment to the situation at day 1 (to be expressed as percentage) and then ranked as follows:

i. Rank 0, No growth observed in the broth and container wall;
ii. Rank 1, trace growth ($\leq 15\%$);  
iii. Rank 2, light growth ($> 15\%$ but $\leq 40\%$);  
iv. Rank 3, medium / moderate growth ($> 40\%$ but $\leq 70\%$);  
v. Rank 4, heavy growth ($>70\%$).

c. Only when the growth rank of the test micro-organism in the control is above 2 at day 28 as described in sub-clause (5)(b)(iii), the test result of the paint sample is accepted for conclusion;

d. For the two replicates of the test paint, take the average of the growth rank and round up the figure for report in the record sheet;

e. Resistance Index:

A resistance index is calculated from the growth ranks of the test micro-organisms of the same fungal or algal group in the paint sample.

i. When one of tested micro-organisms could establish on a paint coating, its colony will shield the paint biocide favouring the landing and establishment of more micro-organisms. Thus the highest growth rank among the tested micro-organisms of the same fungal or algal group is then reported as the resistance index of the paint sample as follows:

- Fungal resistance:
  - the highest growth rank of the 5 tested fungal species
- Algal resistance:
  - the highest growth rank of the 2 tested algal species.

9 Test report:

The test report shall include the following information:

a. The type and identification of the product tested;

b. A reference to this test method;

c. Any deviation, by agreement or otherwise, from the procedure described;

d. The assessment using the record sheet below;

e. Digital photo records of paint samples just after incubation, at day 7, day 14 and day 28;

f. The date of the assessments.

FIN8 PROPRIETARY SUSPENDED CEILINGS

DESIGN

GENERAL

FIN8.D010.8 DRAWINGS AND SCHEDULES
Read this Specification in conjunction with layout Drawings and finishing schedules.

FIN8.D020.8 STANDARD

FIN8.D030.8 CEILINGS SUBJECT TO EXTERNAL CONDITIONS
Design ceilings in locations subject to external conditions:
1. In accordance with the Code of Practice for Wind Effects for Hong Kong;
2. To withstand without distortion, damage, corrosion or other damage:
   a. Maximum external temperature: 36°C;
   b. Minimum external temperature: 0°C;
   c. Maximum external relative humidity: 90%.

FIN8.D040.8 ACCESS
Provide, as an integral part of the ceiling system and in the positions indicated on Drawings, suitable means of access to:
1. Permit the inspection and maintenance of any services contained within the ceiling cavity or integrated with the ceiling system;
2. Enable the ceiling components to be cleaned and maintained in accordance with the manufacturer’s recommendations.

FIN8.D050.8 SERVICES
Allow for the incorporation of the following services at the locations as shown on Drawings:
1. Luminaires;
2. Heating, ventilating or air conditioning registers, ducts and fittings;
3. Fire detection and extinguishing equipment.

FIN8.D060.8 SHOP DRAWINGS
Provide the CM in adequate time to permit Approval process and subsequent production of detail drawings sufficient to illustrate:
1. The suspension system, methods and location of attachment to the building structure;
2. The relationship of the system to the building services and the location of all access panels;
3. All cavity fire barriers and the location and methods of fire stopping around service pipes and ducts penetrating such barriers and ceilings scheduled to be fire resisting;
4. Reveals to any openings and rooflights.
FIN8.D070.8 CERTIFICATION
Obtain from the supplier and submit to the CM in adequate time before the commencement of erection of suspended ceilings on Site, certificates proving compliance with the fire performance requirements of this Specification. Such certificates must be the result of independent testing carried out by a laboratory accredited by HOKLAS or an equivalent authority.
MATERIALS

GENERAL

FIN8.M010.8 COMPONENT MATERIALS
Construct the suspended ceiling from materials which:
1. Do not contain any asbestos. Obtain from the system manufacturer, a certificate of compliance with this requirement and submit it to the CM;
2. Are non-toxic on physical contact or by inhalation of any gases produced;
3. Do not emit unpleasant odours;
4. Are resistant to infestation by vermin and the growth of moulds and mildews;
5. Can be cleaned on their exposed surfaces, using routine methods.

PANEL SYSTEM

FIN8.M110.8 SUSPENDED CEILING
1. To BS 8290:Part 2:1991;
2. Grid dimensions, suspension system and soffit panels are as shown on Drawings;
3. Fire performance:
   a. Fire resistance: tested in accordance with BS 476:Part 22:1987 to fulfil the fire resisting hours as shown on Drawings;
   b. Surface spread of flame classification: Class 1 when tested in accordance with BS 476:Part 7:1987;
   c. Index of Performance (I) not exceeding 12 and sub index (i) not exceeding 6 when tested in accordance with BS 476:Part 6:1989.

FIN8.M120.8 SAMPLES
Submit samples of the grid, the suspension system and the soffit or infill panels for Approval.

ALUMINIUM CELL SYSTEM

FIN8.M210.8 SUSPENDED CEILING
To BS 8290:Part 2:1991 and:
1. Suspension system: comprising a combination of galvanized mild steel and aluminium as follows:
   a. Suspension brackets: extruded aluminium;
   b. Accessories: galvanized steel runner splices, sliding clips etc.;
2. Grid sections: main and cross runners of 'U' profile strip:
   a. Thickness: 0.5 mm;
   b. Overall dimensions: as shown on Drawings;
   c. Including cut-outs in main runners to locate cross runners;
   d. With cross runners provided with hooked ends for connection and location in both horizontal and vertical directions.
3. Hangers: designed to facilitate the adjustment of the ceiling height and to support the weight of the ceiling with all fittings and attachments and not less than 4 mm in diameter;
4. Cells: 0.5 mm thick 'U' profile strip sections with inward returns at edges of 2.5 mm; dimensions as shown on Drawings;

5. Panels: strip cellular panels with dimension as shown on Drawings:
   a. Alloy designation: AA5050;
   b. Finish: stoved enamel.

6. Edging strip: 0.7 mm thick aluminium sheet forming the shape of the edge strip where shown on Drawings:
   a. Alloy designation: AA5050;
   b. Finish: stoved enamel.

**FIN8.M220.8 SAMPLES**

Submit samples of the grid, suspension system, the cells and colour samples for Approval.

**FIN8.M230.8 SPARE PARTS**

Provide extra 5% of the total amount of the suspended ceiling panels on the typical floor of Concord Block as the spare parts for maintenance.

**ANCILLARY MATERIALS**

**FIN8.M310.8 CAVITY BARRIERS AND FIRE STOPPING**

Provide, as specified in the Project Specific Specification and at the locations as shown on Drawings:
   1. Cavity barriers, purpose designed to prevent the spread of fire through the ceiling void for the periods shown on Drawings;
   2. Fire stopping around any service pipes penetrating such cavity barriers or ceiling soffits specified to be fire resisting.

**FIN8.M320.8 INSULATION**

Where shown on Drawings, provide a continuous insulation as specified in the Project Specific Specification.

**FIN8.M330.8 SOFFIT FIXINGS**

Either:
   1. Approved sockets, anchors or other fixings cast into the slab; or
   2. Approved proprietary plugs or self-drilling anchors.
WORKMANSHP

GENERAL

FIN8.W010.8 APPROVED FIXING SUB-CONTRACTOR
Employ a specialist Sub-contractor, for the fixing of suspended ceilings, who is:
1. Licensed by the manufacturer to fix his system and whose operatives are appropriately trained in all aspects of the work;
2. Operating a Quality Assurance system certified under ISO 9001 or an Approved equivalent scheme.

INSTALLING CEILINGS

FIN8.W110.8 GENERAL
Comply with:
1. All relevant provisions of BS 8290:Part 3:1991;
2. The manufacturer's recommendations.

FIN8.W120.8 HANDLING AND STORAGE
Take delivery, handle and store suspended ceiling components:
1. Store tiles/boards on a smooth, flat base and in conditions of temperature and humidity similar to those in which they are to be fixed;
2. Protect tiles/boards and accessories from damage and distortion. Retain any protective coverings in place for as long as possible.

FIN8.W130.8 INSTALLATION CONDITIONS
Ensure that the building is fully enclosed and in proper condition with regard to cleanliness, humidity and temperature and all wet work is complete and dry at the date programmed for installation.

FIN8.W140.8 SETTING OUT
1. Ensure that all lighting, ventilation and fire protection services, having elements which are to be incorporated in the ceiling, have been installed and are accurately located relative to the ceiling grid, and that common datums have been used throughout;
2. Set out accurately, according to the Approved shop drawings, without visible undulations and with all visible lines straight and parallel with right angles accurate at 90º, or in accordance with any special setting out requirements;
3. Carry out all cutting at perimeters.

FIN8.W150.8 FIXING TRIMS
Fix all cover strips and edge trims etc in accordance with the manufacturer's recommendations.

FIN8.W160.8 CAVITY BARRIERS
Install cavity barriers at locations as shown on Drawings. Work in conjunction with ceiling fixers where necessary. Ensure barriers fully seal cavity/void, paying particular attention to seals around building services etc.

IRO1 IRONMONGERY

MATERIALS

GENERAL

IRO1.M010.8 SAMPLES
Obtain and submit samples of all ironmongery for Approval in accordance with PRE.B9.410.

IRO1.M020.8 MANUFACTURER'S INSTRUCTIONS
At the same time as submission of the samples, obtain for the Works one complete set of the manufacturer's ironmongery fixing and maintenance instructions.

IRO1.M030.8 CERTIFICATION
Obtain and submit to the CM full documentary evidence, including manufacturer's catalogues, test certificates etc. that indicate supplied ironmongery fully meets the requirements of this Specification.

IRO1.M040.8 PRODUCT RANGE
1. Where specified, obtain ironmongery and associated fittings from the same product range of coordinated components of matching style, finish and from a single source of manufacture unless otherwise Approved;

2. Where specified, obtain locks for gatesets of matching finish and flat entrance doors from at least 2 different sources of manufacturers in equal share distributed among the gatesets and flat entrance doors when the total number of domestic flats is more than the effective key combinations from a single source confirmed by the supplier.

IRO1.M050.8 IRONMONGERY SCHEDULE
Supply ironmongery as scheduled on drawings and in compliance with IRO1 generally.

1. After Approval of ironmongery samples, supply the CM with a consolidated ironmongery schedule, for Approval, giving the following information on a door by door format:
   a. Manufacturer and component references including products range;
   b. Fire resistance requirements including door fire rating and provision of smoke stops as applicable;
   c. Door thicknesses and handing;
   d. Suiting and master keying arrangements;
   e. Incorporating appropriate information provided on the Drawings and schedules;
   f. Any other requirements shown on the drawings.

2. The Approved schedule will form the basis for provision of ironmongery for the Contract. No alteration to the Approved schedule will be permitted without Approval.
IR01.M060.8 SUPPLY AND PACKAGING

Ensure ironmongery and associated fixings are delivered to site suitably boxed and:

1. Marked to indicate content and site installation requirements;
2. Delivered in sets where appropriate and when so delivered each set must be bagged and labelled indicating door number to which it will be affixed.

IR01.M070.8 KEYS

1. Material: brass or nickel plated brass;
2. Ensure each lock is supplied with a minimum of three keys supplied by the lock manufacturer. Keys forwarded to the CM shall be kept on a metal split ring with a plastic tag showing the location the lock to be installed;
3. Master keying system to the locks shall be supplied as shown in the ironmongery schedule. Forward master keys direct to the CM;
4. For security locks for installation in the high security premises such as the Cash and Shroff Offices, comply with the following:
   a. Prior to ordering, agree with the CM the method of ordering, supply, fixing and maintenance of security arrangements;
   b. Only obtain duplicate keys from original manufacturer;
   c. Master keying is not permitted.

FINISHES TO COMPONENTS

IR01.M110.8 STAINLESS STEEL

To BS EN 10095:1999.

IR01.M120.8 NICKEL AND CHROMIUM ELECTROPLATING

To BS 1224:1970.

IR01.M130.8 ZINC ELECTROPLATING ON IRON AND STEEL

To BS 1706:1990.

IR01.M140.8 ANODIC OXIDATION COATING ON ALUMINIUM

To BS 1615:1987:Grade AA10.

IR01.M150.8 PHOSPHATE TREATMENT OF IRON AND STEEL

To BS 3189:1991.

IR01.M160.8 CONCEALED COMPONENTS

Manufacturer's standard finishes to concealed components, including lock bodies is acceptable provided where applicable, they are in accordance with this Specification.

HINGES

IR01.M210.8 CLASSIFICATION

1. To BS 7352:1990;
2. The following classifications for hinges are referred to in this Specification and on the Drawings:
   a. Class A1: Extra heavy duty;
   b. Class A: Heavy duty;
   c. Class B: Standard duty;
   d. Class C: Light duty.

IRO1.M220.8  THICKNESS
Hinge thickness specified to be measured adjacent the knuckle.

IRO1.M230.8  CLASS A1 BRASS BUTT HINGES
1. Material: nickel plated brass;
2. Thicknesses: 4.5 mm;
3. Construction: set screw fixed, non-removable stainless steel pin complete with four permanent attached ball bearings.

IRO1.M240.8  CLASS A1 STAINLESS STEEL HINGES
1. Material: satin finished stainless steel, grade 304 in accordance with MET1.M060;
2. Thickness: 3.3 mm;
3. Construction: non-removable stainless steel pin, with four sets of anti-friction bearings.

IRO1.M250.8  CLASS A AND CLASS B BRASS BUTT HINGES
1. Material: brass;
2. Thickness: 3.9 mm;
3. Construction: non-removable stainless steel pin with four sets of stainless steel washers;
4. Finish: as shown on Drawings.

IRO1.M260.8  CLASS A STAINLESS STEEL HINGES
1. Material: satin finished stainless steel, grade 304 in accordance with MET1.M060;
2. Thickness: 3.0 mm;
3. Construction: non-removable stainless steel pin, with at least two sets of anti-friction stainless steel bearings.

IRO1.M270.8  CLASS A STEEL BUTT HINGES
1. Material: zinc plated steel with steel washers;
2. Thickness: 2.5 mm.

IRO1.M280.8  CLASS B BRASS LIFT OFF OR REMOVABLE PIN HINGES
1. Material: brass;
2. Thickness: 3.9 mm;
3. Finish: as shown on Drawings.
IRO1.M290.8  CLASS B STAINLESS STEEL Hinges
1. Material: satin finished stainless steel, grade 304 in accordance with MET1.M060;
2. Thickness: 2 mm;
3. Construction: four nylon bushed bearings.

IRO1.M300.8  CLASS B STEEL BUTT HINGES
1. Material: zin plated steel with nylon washers;
2. Thickness: 2 mm.

IRO1.M310.8  CLASS B SPECIAL HINGES
From the product range as IRO1.M040,
1. Type: falling or rising butts, parliament or other hinges as shown on Drawings;
2. Material: solid brass, stainless steel or anodized aluminium as shown on the Drawings, with hardened bearing surfaces;
3. Finish: as scheduled on Drawings.

IRO1.M320.8  CLASS C BRASS BUTT HINGES
To BS 7352:1990:
1. Material: brass;
2. Thickness: 2.35 mm;
3. Construction: stainless steel pin with 4 sets of stainless steel washers;
4. Finish: as shown on Drawings.

IRO1.M330.8  CLASS C STAINLESS STEEL HINGES
1. Material: satin finished stainless steel, grade 304 in accordance with MET1.M060;
2. Thickness: 1.6 mm.

IRO1.M340.8  CLASS C SPECIAL HINGES
From the product range as IRO1.M040:
1. Type: backflap, continuous or other hinges as shown on Drawings;
2. Material: solid brass or stainless steel as shown on Drawings;
3. Finish: as scheduled on Drawings.

IRO1.M350.8  SPRING HINGES
1. Type: single action;
2. Material: stainless steel;
3. Fire performance: spring hinges, fitted to appropriately rated fire door, to be tested and certified to BS 476:Part 22:1987 to confirm compliance with the fire resistance requirements shown on the Drawings.

IRO1.M360.8  FIXINGS FOR CLASS A1, A AND B HINGES
Fixing screws to match hinge material:
1. Supply hinges complete with screws and / or bolts, nuts and spring washers:
a. No. of screws per hinge: 8 nos.;
b. Gauge: 12 SG, smaller gauge permitted for 2 mm thick hinges;
c. Length:
   i. 32 mm for fixing to timber;
   ii. End of bolt to extend minimum 5mm from face of nut for fixing to metal
door leaf and frame;
   iii. Use one nut per bolt unless otherwise Approved.

2. Holes arrangement for hinges:
   a. Staggered arrangement for fixing to timber;
   b. Template arrangement for fixing to metal.

3. All hinges to have 8 number of counter sunk holes;

4. Depth of pre-drilled holes in door leaves prior to hinge fixing is half the length of
screw.

**FIXINGS FOR CLASS C HINGES**

Fixing screws to match hinge material:

1. Supply hinges complete with screws:
   a. No. of screws per hinge: 6;
   b. Gauge: 6 SG;
   c. Length: To suit fixing application.

2. All hinges to have 6 number of counter sunk holes in staggered or template
arrangement as applicable;

3. Depth of pre-drilled holes in door leaves prior to hinge fixing is half the length of
screw.

**FLOOR SPRINGS**

**FLOOR SPRINGS**

1. Submission Requirements:
   a. At sample submission and approval stage, submit a sample of the proposed
floor spring complete with all accessories for the CM's approval together with
all the following substantiation for the CM's information:
      i. Catalogue, brand name / model name and job reference of the material;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer;
      iv. Where applicable, either the document from the manufacturer showing his
authorization for the supplier as the agent distributor in Hong Kong; or the
document from the supplier showing the appointment of the manufacturer
and manufacturer's agreement for the production of the proposed product;
      v. Original or a certified true copy each of the certification to ISO 9001 and
ISO 14001 for the manufacturing plant. If a copy of the ISO certificate is
submitted, it shall be certified true by the certification bodies or by the
QCM. The certification bodies shall be as follows:
b. Submit original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of IRO1.M410 for the CM's information:

i. The date of the test shall be within five years prior to the notified date for commencement of the Works or at an earlier date for domestic blocks subject to the CM’s consideration;

ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material;

iii. In the event that no test report has been submitted for the CM’s information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

IRO1.M410.8  CLASSIFICATION

1. To BS EN 1154:1997 or ANSI A156.4-2000;
2. Certified as tested 2,000,000 cycles to ANSI A156.4-2000 for floor spring use in building entrances.

IRO1.M420.8  FIRE PERFORMANCE

Floor springs, fitted to appropriately rated fire door, to be tested and certified to BS 476:Part 22:1987 to confirm compliance with the fire resistance requirements shown on the Drawings.

IRO1.M430.8  CONSTRUCTION

1. Action: single or double as shown on the Drawings;
2. Construction:
   a. Hydraulic check spring mechanisms sealed into an oil or hydraulic fluid filled box;
   b. Complete with a loose protective steel box for fixing into concrete floors;
   c. With detachable cover plate;
   d. With mechanical back check effective for the opening angle of the floor spring;
   e. With hold-open feature as shown on the Drawings;
   f. Floor spring shall be capable of handling the weight of door;
   g. Centre hung pivots for double acting doors and offset pivots with cover caps for single acting doors. Pivots shall be constructed of steel;
h. The non-adjustable bottom strap designed to suit type, size and weight of door, but not less than 160 mm long and holed for four screw fixings;

i. For fitting to metal doors the floor springs to be constructed as above except that a non-ferrous strap is incorporated to suit profile of the doors bottom rail and the top centre of the doors top rail.

3. Adjustment:
   a. Within the box to provide full horizontal movement for door alignment, final positioning and height and adjustment;
   b. After installation the position of the floor spring within the loose protection box must be adjustable;
   c. The top pivot for double action floor springs must be adjustable.

4. Finish:
   a. Exposed parts of floor spring to match same standard as other door ironmongery;
   b. Top plate: satin finished stainless steel, grade 316 in accordance with MET1.M060.

5. Barrier free access requirements for floor springs to be used for doors/ gates at common areas:
   a. Closing period:
      For interior doors/gates, a period of at least 3 seconds measured from an open position of 70° to a point 75 mm from the closed position measured from the leading edge of the door.
   b. Opening force:
      Shall allow doors/gates to be opened with horizontal forces of not more than 30N.

**OVERHEAD DOOR CLOSERS**

**IRO1.M530.A**

1. Submission Requirements:
   a. At sample submission and approval stage, submit a sample of the proposed overhead door closers complete with all accessories for CM's approval together with all the following substantiation for CM's information:
      i. Catalogue, brand name / model name and job reference of the material;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer;
      iv. Where applicable, either the document from the manufacturer showing his authorization for the supplier as the agent / distributor in Hong Kong; or the document from the supplier showing the appointment of the manufacturer and manufacturer's agreement for the production of the proposed product;
      v. When the overhead door closer is supplied for domestic blocks, except for the ancillary facilities at lower floors, comply with the following particular requirements:
- Submit a sample board with accessories mounted on board, similar to the one maintained by the Housing Department showing the quality, components and internal construction for the overhead door closers, for comparison of the standard of visual quality with the benchmark samples maintained by the Housing Department;

- Submit an additional sample board of the approved sample for keeping in the Housing Department’s Sample Display Gallery if the material has not been approved for use in a public housing project in the past five years prior to the notified date for commencement of the Works;

- Original or a certified true copy each of the certification to ISO 9001 and ISO 14001 for the manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by the certification bodies or by the QCM. The certification bodies shall be as follows:

<table>
<thead>
<tr>
<th>ISO</th>
<th>Certification Body</th>
</tr>
</thead>
<tbody>
<tr>
<td>ISO 9001</td>
<td>The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.</td>
</tr>
<tr>
<td>ISO 14001</td>
<td>The certification body shall be accredited by the Hong Kong Accreditation Service (HKAS), or the China National Accreditation Service (CNAS), or an accreditation body which has entered into a mutual recognition agreement with HKAS.</td>
</tr>
</tbody>
</table>

- Submit original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2)(c) for CM’s information:
  
i. The date of the test shall be within three years prior to the notified date for commencement of the Works or at an earlier date for domestic blocks subject to CM's consideration on the track records as maintained by the Housing Department;
  
ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material as mentioned in sub-clause (3)(a);
  
iii. In the event that no test report has been submitted for CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

2. Quality Requirements:

- Overhead door closer to BS EN 1154:1997 except clause 7.2 and to comply with the following:
  
i. To the product range as IRO1.M040;
  
ii. Horizontal pattern with regular arm unless otherwise required or scheduled;
  
iii. Capable of being fitted to door handing and of closing door positively;
  
iv. With one or more control valves to regulate closing speed;
  
v. Latch control to BS EN 1154:1997 sub-clause 5.2.12;
vi. Select the appropriate sizes of overhead door closers as scheduled on Drawings and to select Size 4 closers for those door closers of parallel arm installation type;

vii. Finish:
- Where closers supplied with separate covers, the covers are to be rust proof steel plated or finished to the approval of the CM.

viii. Barrier free access requirements for door closers to be used for doors to exit staircases, protected lobbies and common areas:
- Closing period: for interior doors, a period of at least 3 seconds measured from an open position of 70 degrees to a point 75 mm from the closed position measured from the leading edge of the edge of the door;
- Opening force: shall allow exterior and interior doors to be opened with forces of not more than 30 N and 22 N respectively;
- Fire rated doors installed along accessible route shall be opened with horizontal force of not more than 30N.

b. Classification according to BS EN 1154:1997:

i. Category of use: Grade 3 for closing doors from at least 105° open and Grade 4 for closing doors from 180° open;

ii. Durability: Grade 8, tested to 500,000 test cycles;

iii. Door closer power size:
- According to Table 1 of BS EN 1154:1997 as tabulated below;
- Power size of 3 for door required to have fire resistance period installed along accessible route.

### Door leaf width and closing moment:

<table>
<thead>
<tr>
<th>Door closer power size</th>
<th>Recommended door leaf width mm max.</th>
<th>Test door mass kg</th>
<th>Closing moment N.m min. Between 0° and 4°</th>
<th>Closing moment N.m max. Between 88° and 92°</th>
<th>Closing moment N.m min. Any other angle of opening</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td>Between 0° and 4°</td>
<td>Between 88° and 92°</td>

</tr>
</tbody>
</table>
iv. Fire resistance: Grade 1, identified as suitable for use on fire / smoke door assemblies, or to comply BS 476:Part22:1987;

v. Safety: Grade 1, met the Essential Requirements of safety in use;

vi. Corrosion resistance: Grade 2 with moderate resistance for the closers installed at domestic flats and public areas.

c. Performance requirements as follows:

i. For the test Sample B as stated in BS EN 1154:1997, comply with the mechanical performance and durability as follows (two samples at maximum and minimum strength for adjustable strength closers):

<table>
<thead>
<tr>
<th>Items</th>
<th>Reference in BS EN 1154:1997</th>
<th>Acceptance Standards</th>
</tr>
</thead>
<tbody>
<tr>
<td>Set test door to required mass for strength of closer on test.</td>
<td>7.3.1 para. 1</td>
<td>-</td>
</tr>
<tr>
<td>Open door to determine maximum opening angle.</td>
<td>7.3.1 para. 2; 5.2.7</td>
<td>The test door shall be opened: - Grade 3 - from at least 105° open - Grade 4 - from 180° open. The door closer shall control the door from a minimum angle of 70°, down to the closed position.</td>
</tr>
<tr>
<td>Cycle opening to 90° and allowing to close to 0°, in a time of 3 to 7 seconds, 5000 times.</td>
<td>7.3.2; 7.3.3.1</td>
<td>-</td>
</tr>
<tr>
<td>Measure torques and calculate efficiency over region 0° to 4°.</td>
<td>7.3.4.1; 7.3.4.2; 5.2.3 - 5.2.5</td>
<td>Measure the closing moments and opening moments to meet requirements in the Table of sub-clause (2)(b). Calculate the door closer efficiency and verify that the value is in accordance with the Table in sub-clause (2)(b). For door closer with a range of power sizes, the power size used for the testing shall be stated in the test report.</td>
</tr>
<tr>
<td>Measure closing time.</td>
<td>7.3.4.3; 5.2.6</td>
<td>Verify that the closing time from 90° is capable of adjustment to between 3 seconds and 20 seconds.</td>
</tr>
<tr>
<td>Closing overload test set abuse weight to value in table, set weight to be arrested at door position 15°. Set closer to close from 90° in 10 seconds. Allow weight to close door from 90° for 10 times.</td>
<td>7.3.4.4; 5.2.8</td>
<td>Able to withstand the closing overload test.</td>
</tr>
<tr>
<td>All closers cycle for a total of 500000 cycles. Measure closing time.</td>
<td>7.3.5.1; 7.3.6.1</td>
<td>The door closer shall be rejected if closing time from 90° to the fully closed position is more than 2 times, or less than 0.7 times the value after 5000 test cycles.</td>
</tr>
</tbody>
</table>
Calculate efficiency over region 0° to 4°.  
Measure the closing moments and opening moments to meet requirements in the Table of sub-clause (2)(b). Calculate the door closer efficiency and verify that the value is in accordance with the Table in sub-clause (2)(b). For door closer with a range of power sizes, the power size used for the testing shall be stated in the test report.

Measure closing time.  
Verify that the closing time from 90° open to fully close is not less than 20 seconds.

Closing overload test set abuse weight to value in table, set weight to be arrested at door position 15°. Set closer to close from 90° in 10 seconds. Allow weight to close door from 90° for 10 times.

Note: There shall be no fluid leakage or damage (that would adversely affect the performance) to the door closer throughout the tests.

For the test Sample C as stated in BS EN 1154:1997, comply with the corrosion resistance as follows (one sample set to minimum strength for adjustable closers):

<table>

</table>

3. On Site Delivery Verification:
   a. At delivery stage, submit the following documents:
      i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (1)(a);
      ii. Original or certified true copy of Certificate of Origin for every batch of delivery. One batch being the material quantity covered under each delivery note;
      iii. Delivery notes for all material delivered to site.
   b. Carry out and submit report on the following verifications for overhead door closers upon delivery on Site. Prior to carrying out the verifications, inform the CM who may present to witness the verifications:
      i. Method:
<table>
<thead>
<tr>
<th>Verification Items</th>

<tr>
<td>Logo and label check</td>
<td>1 sample for each delivery</td>
<td>Same batch of material delivered to Site under one Delivery Note</td>
</tr>
</tbody>
</table>

c. Where any of the verifications fail to meet the acceptance standards, either:
   i. Remove the representative batch off Site; or
   ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.

**SECURITY LOCKS**

**IRO1.M610.8 CLASSIFICATION**

The following classification relating to security locks are referred to in this Specification and on the Drawings:

1. Class A: security locks to BS 3621:1980;
2. Class B: locks manufactured to BS 3621:1980, with additional features, like security bolt, to comply with the performance requirements of BS 5872:1980:Category B. Locks and latches.

**IRO1.M620.8 SECURITY LOCKS**

1. Construction:
   a. 5 levers minimum or if pin or disc mechanism a minimum of 6 pin or disc tumblers or more than one row of pins and rollers with rows set in same plane;
   b. Forends: double thickness;
   c. Rebating sets: where applicable, capable of fitting to rebated doors with 12.5 mm or 25 mm deep rebates. Rebate depths as indicated on the Drawings;

2. Finish:
   a. Exposed parts: satin finished stainless steel, grade 316 for external and grade 304 for internal installations, both in accordance with MET1.M060;
   b. Rebating sets: matching nickel plated brass.
LOCKS AND LATCHES

IRO1.M710.8 CLASSIFICATION

The following classification relating to locks and latches are referred to in this Specification and on the Drawings:

1. Class A: to BS 5872:1980:Category B, certified as tested to 500,000 operations for locks and 1,000,000 operations when in conjunction with lever handles;

2. Class B: to BS 5872:1980:Category A, certified as tested to 300,000 operations for locks, latches, bored locks or latch sets and 150,000 operations for cylinder rim night latches. With dimensions to BS 5872:1980.

IRO1.M720.8 CONSTRUCTION

1. To BS 5872:1980:
   a. 3 Levers and 6,000 differs minimum;
   b. Cylinder locks: not less than standard 6 pin cylinders;
   c. Rebating sets: where applicable, capable of fitting to rebated doors with 12.5 mm or 25 mm deep rebates. Rebate depth as indicated on the Drawings;
   d. Where to receive lever or knob furniture: to BS 4951:1973:Category 1. Where springing system cannot meet requirements of BS 4951:1973, handles must be spring loaded. If in order to meet requirements of BS 4951:1973, handles require bolting through the lock, the lock must be drilled at 38 mm centres horizontally or vertically to accommodate bolts.

2. Master keying: as IRO1.M070;

3. Identification: stamp locks with lock number as agreed with the CM;

4. Finish:
   a. Forend and strike plate: satin finished stainless steel, grade 316 for external and grade 304 for internal installations, both in accordance with MET1.M060;
   b. Rebating sets: satin finished stainless steel or nickel plated brass;
   c. Finish and plating to match standard of other door ironmongery.

5. Suppliers’ written confirmation of the number of effective differs for the lockcases and undertaking that the individual key changes will not repeat for the flat entrance door of all domestic units in the Works.

IRO1.M730.A CYLINDER RIM DRAWBACK LOCKS

1. Submission Requirement:
   a. At sample submission and approval stage, submit a sample of the proposed material complete with all accessories for CM’s approval together with all the following substantiation for CM’s information:
      i. Catalogue, brand name / model name and job reference of the material;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer;
      iv. When the cylinder rim drawback lock is supplied for domestic blocks, except for the ancillary facilities at lower floors, also include the following in the submission:
- One sample board similar to the one maintained by the Housing Department showing the cylinder rim drawback lock and accessories. Submit one extra sample board when the proposed lock has not been approved for use in any Housing Department’s new works projects in the past three years prior to the notified date for commencement of the Works;

- Original or a certified true copy of the ISO 9001 certificate for the manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by a certification body or by the QCM. The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.

b. Submit original or certified true copy (issued or certified by the laboratory that complies with \texttt{PRE.B9.570}) of the test reports showing full compliance with the requirements of sub-clauses (2)(a) and (2)(b) for CM’s information:

i. The date of the test shall be within three years prior to the notified date for commencement of the Works;

ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material as mentioned in sub-clause (3)(a);

iii. In the event that no test report has been submitted for CM’s information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

2. Quality Requirements:

a. Lock to BS 3621:1980 and BS 5872:1980:

i. Cylinder rim drawback lock with pull handle;

ii. Deadbolt double thrown, locked or unlocked by key outside, thumb turn operated inside;

iii. Latch bolt withdrawn by key outside and handle inside;

iv. Backset: 60 mm minimum;

v. Minimum 6 pin or disc tumblers;

vi. Suitable for ½ hour fire resisting period door.

b. Properties: performance to BS 3621:1980;

c. Finish: chrome plated finish for exposed cylinder and pull handle.

3. On Site Delivery Verification:

a. At delivery stage, submit the following documents:

i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (1)(a);

ii. Original or certified true copy of Certificate of Origin for every batch of delivery. One batch being the material quantity covered under each delivery note;

iii. Delivery notes for all material delivered to Site.
b. Carry out and submit report on the following verifications for cylinder rim drawback locks upon delivery on Site. Prior to carrying out the verifications, inform the CM who may present to witness the verifications:

i. Method:

<table>
<thead>
<tr>
<th>Verification Items</th>
<th>Method</th>
<th>Acceptance Standards</th>

<tr>
<th>Verification Items</th>
<th>Sampling Frequency</th>
<th>Representative Consignment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Surface Quality Check</td>
<td>1 sample for every 500 sets or part thereof</td>
<td>500 sets</td>
</tr>
<tr>
<td>Logo and label check</td>
<td>1 sample for every 500 sets or part thereof</td>
<td>500 sets</td>
</tr>
</tbody>
</table>

c. Where any of the verifications fail to meet the acceptance standards, either:

i. Remove the representative batch off Site; or

ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time.

IRO1.M740.A MORTICE DEAD LOCKS

1. Submission Requirement:

a. At sample submission and approval stage, submit a sample of the proposed material complete with all accessories for CM's approval together with all the following substantiation for CM's information:

i. Catalogue, brand name / model name and job reference of the material;

ii. Name, address and contact person of the local supplier;

iii. Name, address and contact person of the manufacturer;

iv. When the mortice dead lock is supplied for domestic blocks, except for the ancillary facilities at lower floors, also include the following in submission:

- One sample board similar to the one maintained by the Housing Department showing the mortice dead lock and accessories. Submit one extra sample board when the proposed lock has not been approved for use in any Housing Department’s new works projects in the past three years prior to the notified date for commencement of the Works;
- Original or a certified true copy of the ISO 9001 certificate for the manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by a certification body or by the QCM. The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.

b. Submit original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clauses (2)(a) and 2(b) for CM's information:
   i. The date of the test shall be within three years prior to the notified date for commencement of the Works;
   ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material as mentioned in sub-clause (3)(a);
   iii. In the event that no test report has been submitted for CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

2. Quality Requirements:
   a. Locks to BS 5872:1980:
      i. Key operated outside and no operation for door opening from inside unless specified in Drawings;
      ii. Backset: Length to suit the design dimension of door and frame for ease of operation, and in no case less than 50 mm;
      iii. Minimum 6 pin or disc tumblers;
      iv. Master-keyed;
      v. Suitable for ½ hour fire resisting period or a fire resisting period as specified in the Drawings.
   b. Properties: performance to BS 3621:1980;
   c. Finish: chrome plated or satin stainless steel for exposed cylinder and pull handle.

3. On Site Delivery Verification:
   a. At delivery stage, submit the following documents:
      i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (1)(a);
      ii. Original or certified true copy of Certificate of Origin for every batch of delivery. One batch being the material quantity covered under each delivery note;
      iii. Delivery notes for all material delivered to Site.
   b. Carry out and submit report on the following verifications for mortice dead locks upon delivery on Site. Prior to carrying out the verifications, inform the CM who may present to witness the verifications:
      i. Method:
**Verification Items** | **Method** | **Acceptance Standards**
--- | --- | ---
Surface Quality Check | Visual | No discolouration, no damage, no staining, no blemish
Logo and label check | Visual | Same as the CM's Approval sample

**ii. Frequency:**

<table>
<thead>
<tr>
<th>Verification Items</th>
<th>Sampling Frequency</th>
<th>Representative Consignment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Surface Quality Check</td>
<td>1 sample for every 500 set or part thereof</td>
<td>500 set</td>
</tr>
<tr>
<td>Logo and label check</td>
<td>1 sample for every 500 set or part thereof</td>
<td>500 set</td>
</tr>
</tbody>
</table>

c. Where any of the verifications fail to meet the acceptance standards, either:

i. Remove the representative batch off Site; or

ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.

**IRO1.M750.8 LOCKS FOR GATESETS**

1. Submission Requirement:

a. At sample submission and approval stage, submit a sample of the proposed material complete with all accessories for the CM's approval together with all the following substantiation for the CM's information:

i. Catalogue, brand name / model name and job reference of the material;

ii. Name, address and contact person of the local supplier;

iii. Name, address and contact person of the manufacturer;

iv. When the lock is supplied for domestic blocks, except for the ancillary facilities at lower floors, also include the followings in submission:

   - One sample board similar to the one maintained by the Housing Department showing the lock and accessories. Submit one extra sample board when the proposed lock has not been approved for use in any Housing Department’s new works projects in the past three years prior to the notified date for commencement of the Works;

   - Original or a certified true copy of the ISO 9001 certificate for the lock’s manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by a certification body or by the QCM. The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.
v. Lockset details: Specification, drawings and sample of the lockset completely describes the gateset lock's construction including materials used, together with a certificate from the lockset supplier confirming compliance of the lockset with the quality requirements in sub-clause (2).

b. Submit original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clauses (2)(c) (i) for the CM's information:
   i. The date of the test shall be within three years prior to the notified date for commencement of the Works;
   ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material;
   iii. In the event that no test report has been submitted for the CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

c. Upon delivery of gateset, submit an undertaking in writing together with the lockset supplier’s written confirmation that the number of effective differs for the lockcases installed in the gatesets and the corresponding individual key changes will not repeat for the gateset of domestic units in the Works.

2. Quality Requirements:
   a. Operation:
      i. To be locked by operating the thumbturn device without key from inside and by key from outside;
      ii. Openable by operating the thumbturn device from inside when locked;
      iii. From outside operable by key when locked.
   b. Keys: ensure each lock is supplied with a minimum of three keys provided by the manufacturer and kept on a metal split ring with a plastic tag showing the serial number of the gateset;
   c. Lockcase:
      i. Compliance with BS 5872:1980, item A12, 13, 14, 15, 19 & 21;
      ii. Cylinder to be minimum 6 pin/discs, complete with 4 mushroom drivers / notching. Number of effective differs to be 6000 minimum;
      iii. Suitable for installing into the gateset;
      iv. All exposed parts to be non-rusting material.
   d. Thumbturn device: Recessed type designed to prevent operation of the thumbturn device from outside by any means of tools intruding through the grille of the gateset;
   e. Strike plate to be completed with strike box, all in stainless steel.

IRO1.M760.A LEVER HANDLE FURNITURE AND LOCKS

1. Submission Requirements:
   a. At sample submission and approval stage, submit a sample of the proposed lever handle furniture and locks for CM's approval together with all the following substantiation for CM's information:
      i. Catalogue, brand name / model name and job reference of the material;
ii. Name, address and contact person of the local supplier;

iii. Name, address and contact person of the manufacturer;

iv. Where applicable, either the document from the manufacturer showing his authorization for the supplier as the agent / distributor in Hong Kong; or the document from the supplier showing the appointment of the manufacturer and manufacturer’s agreement for the production of the proposed product;

v. When the lever handle furniture and locks are supplied for domestic blocks, except for the ancillary facilities at lower floors, also include the following in the submission:

- Submit a sample board, with accessories mounted on board, similar to the one maintained by the Housing Department showing the quality, components and internal construction for the lever handle furniture and locks, for comparison of the standard of visual quality with the benchmark samples maintained by the Housing Department;

- Submit an additional sample board of the approved sample for keeping in the Housing Department’s Sample Display Gallery if the material has not been approved for use in a public housing project in the past five years prior to the notified date for commencement of the Works;

- Original or a certified true copy each of the certification to ISO 9001 and ISO 14001 for the manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by the certification bodies or by the QCM. The certification bodies shall be as follows:

<table>
<thead>
<tr>
<th>ISO</th>
<th>Certification Body</th>
</tr>
</thead>
<tbody>
<tr>
<td>ISO 9001</td>
<td>The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.</td>
</tr>
<tr>
<td>ISO 14001</td>
<td>The certification body shall be accredited by the Hong Kong Accreditation Service (HKAS), or the China National Accreditation Service (CNAS), or an accreditation body which has entered into a mutual recognition agreement with HKAS.</td>
</tr>
</tbody>
</table>

vi. Method statement for installation which shall cover all types of locks and cases of different door thickness.

b. Submit original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2)(d) for CM’s information:

i. The date of the test shall be within three years prior to the notified date for commencement of the Works or at an earlier date for domestic blocks subject to CM's consideration on the track records as maintained by the Housing Department;

ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material as mentioned in sub-clause (3)(a);

iii. In the event that no test report has been submitted for CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.
c. Suppliers’ written confirmation of the number of effective differs for the lockcases and undertaking that the individual key changes will not repeat for the flat entrance door of all domestic units in the Works.

2. Quality Requirements:
   a. Locks to BS 5872:1980:
      i. To suit door thickness as shown on the Drawings. Blocking is not permitted;
      ii. Lever handles on both sides with latches and locks as shown on the Drawings;
      iii. Spacing between the follower-to-keyway centres shall not be less than 70 mm;
      iv. Locks for flat entrance door shall comply with the following requirements:
         - Backset: 64 mm minimum unless otherwise shown on the Drawings;
         - Latchbolt shall be withdrawn by lever handles on both sides;
         - Double throw deadbolt shall be locked or unlocked by cylinder key outside and cylinder turn inside;
         - Minimum 6 pin or disc tumblers;
         - Minimum 6000 key changes.
   b. Finish to exposed parts:
      i. As shown on the drawings; or
      ii. Satin finished stainless steel grade 316 for external installations and grade 304 for internal installations in accordance with MET1.M060.
   c. Locks for entrance and kitchen door to be suitable for 1 hour and ½ hour fire resisting period respectively;
   d. The quality performance requirements are as follows:

<table>
<thead>
<tr>
<th>Test Items</th>

</table>
3. On Site Delivery Verification:
   a. At delivery stage, submit the following documents:
      i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (1)(a);
      ii. Original or certified true copy of Certificate of Origin for every batch of delivery. One batch being the material quantity covered under each delivery note;
      iii. Delivery notes for all material delivered to Site.
   b. Carry out and submit report on the following verifications for lever handle door furniture and locks upon delivery on Site. Prior to carrying out the verifications, inform the CM who may present to witness the verifications:
      i. Method:
         
         | Verification Items | Method   | Acceptance Standards |
         |--------------------|----------|----------------------|
         | Surface Quality    | Visual   | No discolouration, no damage, no staining, no blemish |
         | Logo and label check | Visual  | Same as the CM's Approval sample |
         | Length of spindle  | By Measurement | IRO1.M830 |

      ii. Frequency:
         
         | Test Items       | Sampling Frequency | Representative Batch |
         |------------------|---------------------|----------------------|
         | Surface Quality  | 1 sample for each delivery | Same batch of material delivered to Site under one Delivery Note |
         | Logo and label check | 1 sample for each delivery | Same batch of material delivered to Site under one Delivery Note |
         | Length of spindle | 1 sample for each delivery | Same batch of material delivered to Site under one Delivery Note |

c. Where any of the verifications fail to meet the acceptance standard, either:
   i. Remove the representative batch off Site; or
   ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.

IRO1.M765.8 LEVER HANDLE FURNITURE AND LOCKS WITH PLATE

1. Submission Requirements: as per IRO1.M760;
2. Quality Requirements:
a. Locks to BS 5872:1980:
   i. To suit door thickness as shown on the Drawings. Blocking is not permitted;
   ii. Lever handles integrated with cast stainless steel plate (overall minimum dimension 240x50x10 mm), spring loaded capable of returning the fitting to its original position after use and with latches and locks as shown on the Drawings;
   iii. Spacing between the follower-to-keyway centres shall not be less than 70 mm;
   iv. Locks for flat entrance door shall comply with the following requirements:
      - Backset: 64 mm minimum unless otherwise shown on the Drawings;
      - Latchbolt shall be withdrawn by lever handles on both sides;
      - Double throw deadbolt shall be locked or unlocked by cylinder key outside and cylinder turn inside;
      - Minimum 6 pin or disc tumblers;
      - Minimum 6000 key changes.

b. Finish to exposed parts: as per IRO1.M760;

c. Fire resisting period of locks: as per IRO1.M760;

d. Quality performance requirements: as per IRO1.M760.

3. On Site Delivery Verification: as per IRO1.M760.

**KNOBSETS**

1. To BS 5872:1980 and from the product range as IRO1.M040:
   a. To suit door thickness. Blocking is not permitted;
   b. Backset: 70 mm minimum unless otherwise shown on the Drawings or scheduled is permitted to increase to 127 mm by use of adaptor;
   c. Knobsets with latches: fitted with anti-thrust action (automatic dead locking) in the latch;

2. Finish: finish to exposed parts as shown on the Drawings:
   a. Satin finished stainless steel, grade 316 for external and grade 304 for internal installations, both in accordance with MET1.M060;
   b. Satin anodised aluminium.

**LOCK AND LATCH FURNITURE**

**CLASSIFICATION**

The following classifications relating to lock and latch furniture are referred to in this Specification and on the Drawings:

1. Class A: to BS 4951:1973:Category 1, suitable for heavy duty use, certified as tested to 1,000,000 operations minimum;

2. Class B: to BS 4951:1973:Category 2, suitable for general residential use, certified as tested to 300,000 operations minimum.
IRO1.M820.8  FIRE PERFORMANCE

Lock and latch furniture and accessories as fitted to fire rated doors shall be supported by and installed in accordance with the door's fire test or assessment reports.

IRO1.M830.8  CONSTRUCTION

Knobs or lever handles with rose or back plates to BS 4951:1973 from the product range as IRO1.M040:

1. Type as shown on the Drawings;

2. Spring loaded knobs and lever handles capable of returning the fitting to its original position after use without the assistance of locker latch spring unless specifically designed for this operation;

3. Centre between keyhole and spindle: 57 mm;

4. Spindle: 7.6 mm or 8 mm square section, projecting 12 mm minimum into lever or knob fitting. In the event of fully floating spindle or spindle fixing with screws to lever or knob in both sides, the spindle shall be of such length that when the spindle is engaged to full depth of the hole of lever or knob in one side, it shall allow a minimum of 12 mm engagement in the other side of lever or knob after passing through the cored hole of the door. Spindle system capable of transmitting loads defined in BS 4951:1973. Otherwise bolt fittings through door and lock at 38 mm centres.

5. Finish: knob and lever handles: finish as shown on the Drawings as:

   a. Satin finish stainless steel, grade 316 for external and grade 304 for internal installations, both in accordance with MET1.M060.

   b. Satin anodised aluminium.

PANIC FITTINGS

IRO1.M1010.8  CLASSIFICATION

The following classifications relating to panic fittings are referred to in this Specification and on the Drawings:

1. Class A: type certified for use on fire rated doors;

2. Class B: for use on other types of door.

IRO1.M1020.8  CONSTRUCTION

1. To BS 5725:Part 1:1981 and ensuit with matching product range as IRO1.M040. Type of fitting as shown on the Drawings:

   a. Operation:

      i. Horizontally activated bar across inside face of the door operated when pushed anywhere along its effective length in direction of exit and or moved in a downward arc;

      ii. Panic fittings with two point locking vertical shoots: to have automatic catches holding bolts in withdrawn position when doors opened and automatically releasing bolts on closing of the door;

      iii. Where panic fittings capable of opening from other side of door and being locked, the lock operation must not interfere with exit from the inside.
b. With anti-thrust devices to prevent operation by other means than specified above.

c. Body, push bar and covers to be of rolled steel section, zinc plated steel or pressure die cast aluminium;

d. Stainless steel bolt heads and die cast aluminium catch cover.

2. Finish: to suit other door ironmongery and:

a. Satin finished stainless steel, grade 316 for external and grade 304 for internal installations, both in accordance with MET1.M060; or

b. Satin anodised; or

c. Sprayed and stoved enamelled finish.

DOOR FURNITURE

IRO1.M1110.8  TYPE AND RANGE
From matching coordinated range as IRO1.M040. Type of furniture as shown on the Drawings.

IRO1.M1120.8  FLUSH BOLTS
Comprising:
1. Lever action bolt, 9.5 mm minimum diameter shoot;
2. Holed shoots, plate or keeper for head fixing excluding floor socket for bottom fixing;
3. Fit easy clean floor sockets in wet areas.

IRO1.M1130.8  SURFACE BOLTS
Comprising:
1. Straight barrel bolt, 9.5 mm minimum diameter shoot;
2. Holed shoot, plate or keeper for head fixing or dust excluding floor socket for bottom fixing;
3. Fit easy clean floor sockets in wet areas.

IRO1.M1140.8  INDICATOR BOLTS
Comprising:
1. Coin operated emergency bolt action;
2. Red and green indicator.

IRO1.M1150.8  PUSH AND KICK PLATES
1. Material: as applicable:
   a. Satin finished stainless steel plate minimum 1.0 mm thick;
   b. Satin anodised aluminium plate minimum 2.0 mm thick.
2. Features: countersunk drilled at not more than 225 mm centres to receive 8 gauge screws for kick plates and 6 gauge screws for push plates; with corners radiused and no sharp arrises;
3. Size: to provide 4 mm gap between edge of door or door frame which ever is closer.
IRO1.M1160.8  DOOR STOPs
Type as applicable:
1. Floor mounted: with more than one floor fixing point to prevent rotation or bending at fixing;
2. Wall mounted: concealed fixing with sufficient projection to prevent impact damage to door and ironmongery.

IRO1.M1170.8  DOOR HOLDERS
Floor mounted type that allows for replacement of spring mechanism and opening for cleaning.

IRO1.M1180.8  CABIN HOOKS
Appropriate type with staples securely fixed by welding or brazing to back plate.

IRO1.M1190.8  LIMIT AND FRICTION STAYS
Appropriate type capable of limiting door opening and retaining in the open position.

IRO1.M1200.8  DOOR SELECTORS
To BS EN 1158:1997.
1. Size: to suit depth of rebate and width of door leaves;
2. Type: on external doors opening outward, use screwed under frame pattern type.

IRO1.M1210.8  DOOR CHAINS
1. Short metal chain assembly complete with matching finished No. 10 x 30 mm long woodscrews, 2 No. to secure chain plate, 4 No. to secure anchor plate;
2. Chain assembly secured by bridge plate passing through end link of chain;
3. When in fixed position capable of withstanding test loading of gradually applied tensile load of 2 kN that subjects staple and chain to direct tension and the anchor plate to shear when staple and plate screwed to Grade ‘A’ timber in pre-bored partly drilled holes.

IRO1.M1215.8  SECURITY DOOR GUARD (DOOR LIMITER)
1. Security door guard comprised of:
   a. chrome platted zinc alloy ball catch and with the movable arms stay at the nominal positions 0°, 90° and 180°, all within the tolerance limits of ±5°;
   b. grade 304 stainless steel pivots;
   c. grade 304 stainless steel fixing screws.
2. Capable to withstand substantial impact load when engaged;
3. After installation, the movable arm staying at the normal position measured within the range of 90° to 100° to the door surface shall not touch the ball catch when the door is being closed.

IRO1.M1220.8  DOOR VIEWERS
A type with viewing angle not less than 180° supported by and installed in accordance with the door’s fire test or assessment reports.
**IRO1.M1230.8**  **HAT AND COAT HOOKS**
A type with a minimum two screw fixings.

**IRO1.M1240.8**  **ALUMINIUM INDICATOR SIGN PLATES**
1. Material: satin anodised aluminium plates not less than 1.6 mm thick;
2. Countersunk drilled at not less than 225 mm centres to receive 6 gauge screw fixings;
3. With corners radiused and no sharp arrises;
4. Size: to provide 4 mm gap between edge of door or door frame whichever is closer.

**IRO1.M1250.8**  **EXIT SIGNS**
Comply with relevant requirements at Building and Fire Services Regulations / Code of Practice.

**IRO1.M1260.8**  **FIRE SAFETY SIGNS**
To BS 5499:Part 1:1990.

**IRONMONGERY FOR JOINERY FITTINGS**

**IRO1.M1310.8**  **TYPE AND QUALITY**
Ironmongery to drawers, cupboards and other joinery fittings to match quality and finish of door ironmongery and from coordinated range as IRO1.M040. Type of ironmongery as shown on the Drawings.

**IRO1.M1320.8**  **FINISH**
As applicable and to match other ironmongery and door furniture:
1. Stainless steel;
2. Satin anodised aluminium;
3. Chromium plated brass.

**IRO1.M1330.8**  **IRONMONGERY**
1. Hinges: Class C;
2. Standard drawer lock comprising:
   a. Cast zinc with brass or chromium plated brass cap;
   b. Size of cap: Approximately 22 mm diameter;
   c. Four tumbler cylinder and 4 mm thick brass bolt;
3. Cash drawer locks with brass spring loaded bolt;
4. Flush or surface bolts with 6 mm minimum diameter shoot;
5. Bales catches: Comprising 9.5 mm diameter ball mounted in a face plate with matching striking plate;
6. Door catches: Magnetic type within plastic casing. Overall length 45 mm minimum;
7. Flush pulls:
IRONMONGERY

a. Size: 100 mm x 500 mm x 18 mm deep;
b. Fixings: 4 No. countersunk screws;

8. Drawer pulls:
a. 7.5 mm diameter rod twice bent to form handle 100 mm x 25 mm overall. Each leg drilled and tapped 15 mm minimum to receive 3 mm threaded rod;
b. Threaded rods fitted with 2 No. flat washers and fixing nuts.

LETTER BOX LOCKS

IRO1.M1610.8 LOCKS
Camlocks:
1. Type: having 500 minimum key combinations for each lock model when used in residential blocks. If the total number of domestic flats in a block is more than the key combinations, locks supplied by different sources of manufacturers in equal share can be used;
2. Finish: chromium plated;
3. Construction:
a. 19 mm minimum diameter barrel and bright chrome finish;
b. 500 minimum key combinations;
c. Locking mechanism:
   i. Require key to turn through 90° to unlock letter box;
   ii. Traps key in lock in unlocked position;
   iii. Frees key in locked position.

IRO1.M1620.8 SCHEDULE
Provide CM with schedule showing different numbers of all letter box locks prior to installation.

SUNDARY FITTINGS AND FIXINGS

IRO1.M1715.8 CURTAIN TRACKS
An Approved proprietary type complete with matching fitting from the same manufacturer.

IRO1.M1720.A SHOWER CURTAIN RAILS
1. Submission Requirements:
a. At sample submission and approval stage, submit a set of sample of the proposed shower curtain rail and accessories for CM's approval together with all the following substantiation for CM's information:
   i. Catalogue, brand name / model name and job reference of the material;
   ii. Name, address and contact person of the local supplier;
   iii. Name, address and contact person of the manufacturer;
iv. Where applicable, either the document from the manufacturer showing his authorization for the supplier as the agent / distributor in Hong Kong; or the document from the supplier showing the appointment of the manufacturer and manufacturer's agreement for the production of the proposed product;

v. When the shower curtain rails are supplied for domestic blocks, except for the ancillary facilities at lower floors, also include the following in the submission:

- One sample board, with accessories mounted on board showing the quality of the components and fixings. Submit one extra sample board when the proposed rail has not been approved for use at Housing Department’s new works projects in the past three years prior to the notified date for commencement of the Works;

- Original or a certified true copy of the certification to ISO 9001 for the manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by the certification bodies or by the QCM. The certification body shall be as follows:

<table>
<thead>
<tr>
<th>ISO</th>
<th>Certification Body</th>
</tr>
</thead>
<tbody>
<tr>
<td>ISO 9001</td>
<td>The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.</td>
</tr>
</tbody>
</table>

vi. Shop drawings and method statement for installation to both reinforced concrete wall and panel wall.

b. Submit original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2)(b) for CM's information:

i. The date of the test shall be within three years prior to the notified date for commencement of the Works or at an earlier date for domestic blocks subject to CM's consideration on the track records as maintained by the Housing Department;

ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material as mentioned in sub-clause (3)(a);

iii. In the event that no test report has been submitted for CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

2. Quality Requirements:

a. Stainless steel hollow tube of grade 316 or glass reinforced plastic, size as shown on Drawings with matching, purpose made, end flange fixings;

b. Test Reports to demonstrate that the shower curtain rail proposed is suitably and adequately designed / fabricated to meet the functional and hygienic requirements. Testing shall cover the following aspects:

i. Single point loading;

ii. Three point loading;

iii. Uniform loading;

iv. Bending;
v. Crushing strength;
vi. Endurance;
vii. Fungal resistance;
viii. Surface hardness.

3. On Site Delivery Verification:
   a. At delivery stage, submit the following documents:
      i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (1)(a);
      ii. Original or certified true copy of Certificate of Origin for every batch of delivery. One batch being the material quantity covered under each Delivery Note;
      iii. Delivery Notes for all material delivered to Site.
   b. Carry out and submit report on the following verification items upon delivery on Site. Prior to carrying out the verifications, inform the CM who may present to witness the verifications:
      i. Method:
         | Verification Items   | Method    | Acceptance Standards                   |
         |----------------------|-----------|----------------------------------------|
         | Screw fixing         | Visual    | Same as the CM's Approval sample       |
         | Wall thickness of rail| Measurement | Same as the CM's Approval sample       |
      ii. Frequency:
         | Test Items           | Sampling Frequency | Representative Batch |                   |
         | Screw fixing and Wall thickness of rail | 1 sample for each delivery | Same batch of material delivered to Site under one Delivery Note |                   |
   c. Where any of the verifications fail to meet the acceptance standard, either:
      i. Remove the representative batch off Site; or
      ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.

**IRO1.M1730.8**  **TOWEL RAILS OR GRAB BAR**
Stainless steel heavy duty hollow tube as MET1.M050 with matching, purpose made end flange fixings.

**IRO1.M1740.8**  **FIXING SCREWS**
Stainless steel, brass or aluminium as applicable to BS 1210:1963, with countersunk heads and, unless otherwise specified, to match ironmongery being fixed.
METALLIC WARNING, POSITIONAL AND DIRECTIONAL TACTILE INDICATORS

IRO1.M1750.8 METALLIC WARNING, POSITIONAL AND DIRECTIONAL TACTILE GROUND SURFACE INDICATOR

1. Approved proprietary system complying with the following:
   a. Individually drilled-in type metallic tactile ground surface indicators of high mechanical strength, durable and suitable for both interior and exterior environments;
   b. The indicator with the anchorage stud shall be of Grade 316 stainless steel one piece forged or cast, machine finished or electropolished;
   c. Submit a laboratory test report for the CM’s information at sample submission stage to show that the slip resistance results of the tactile indicator is compatible with that of the non-slip tactile homogeneous floor tiles as per FIN5.M160;
   d. Top profile of circular warning tactile indicator to be:
      i. Domical or flat, with raised or engraved groove pattern;
      ii. Centre infill, if provided, shall be heavy duty / high durability bonded aluminium oxide / carborundum grain infill in black, yellow or of a colour contrasting to the ground surface.
   e. Top profile of longitudinal directional tactile indicator to be:
      i. Flat with raised or engraved groove pattern;
      ii. Centre infill, if provided, shall be heavy duty / high durability bonded aluminium oxide / carborundum grain infill in black, yellow or of a colour contrasting to the ground surface.
   f. Overall depth of the tactile indicator to be minimum 15mm measured including the raised indicator and anchorage stud. Directional tactile indicator to have minimum 3 anchorage studs per strip. Anchorage stud shall be minimum 5mm in diameter forged or cast with the indicator;
   g. Tactile indicators for installation at floor mat or carpet shall be installed with an interconnecting base plate fit in between base substrate and carpet / underlay.

2. Installation:
   a. Submit method statement for installation onto different floors including positioning template, drilling holes, use of adhesive / sealant for fixing the indicators in place etc. with due consideration of the substrates. Cores pre-drilled into the hard surface is required when installed on hard surfaces;
   b. Install in strict accordance with the manufacturer’s instructions;
   c. Layout and pattern of the tactile indicators shall be in strict compliance with the Buildings Department “Design Manual: Barrier Free Access 2008”.

POWERED PEDESTRIAN DOOR SYSTEM

IRO1.M1810.8 POWERED SLIDING DOOR SYSTEM

Powered sliding door system to BS 7036:Part 1 & 2:1996 and EMSD Code of Practice for Installation of Electrically Operated Sliding Gates, Sliding Glass Doors and Rolling Shutters comprising:
1. Sliding door leaves and side screens with dimensions and details shown in the Drawings;

2. Operator which shall comply with the following requirements:
   a. Suit the door construction, configuration, location and frequency of use and operate at 230/240vAC 50Hz;
   b. Allow adjustment of opening and closing speed, hold open time, backcheck and power and allow manual override, in case of power failure;
   c. A suitable type that will not compromise the fire rating of fire rated doors and shall be linked to fire alarm systems to close automatically in case of fire.

3. Activation devices: motion or presence activators;

4. Safety devices: force limitation device for door leaves, hold-open beam at 200 mm and 1000 mm above the finished floor level and presence sensing safety devices;

5. Breakout facility: full breakout whereby sliding door leaves and side-screens can be pushed outward manually to allow emergency escape.

**IRO1.M1820.8**  
**SUBMISSIONS**

Submit the following for CM's approval before the commencement of the fabrication:

1. Product data including description of materials, components, fabrication, finishes and installation;

2. Shop drawings including elevations, sections and details indicating dimensions, materials, and fabrication of door leaves, side screens, frames, operator, activation devices, safety devices, anchors, hardware, accessories, builder's works requirement etc.;

3. Operation and Maintenance Manual including spare parts list.

**IRO1.M1830.8**  
**TESTING AND COMMISSIONING**

Upon completion of the installation, carry out a testing and commissioning of the powered sliding door system including verification of the detection zone.

**IRO1.M1840.8**  
**INSTRUCTION MANUALS**

Provide two copies of as-built drawings and two copies of Operation and Maintenance Manual.
WORKMANSHIP

FIXING IRONMONGERY

IRO1.W010.8 MANUFACTURER'S INSTRUCTIONS
Where applicable fix ironmongery and fittings in accordance with manufacturer's instructions.

IRO1.W020.8 MORTICINGDoORS AND FRAMES
1. Ensure mortices provide tight and secure fitting for ironmongery especially into fire rated doors and frames;
2. Protect items morticed into fire rated doors and frames with an Approved type of intumescent material as detailed in the Fire Test Report.

IRO1.W030.8 SCREW FIXINGS
1. Screw into drilled pilot hole using correctly sized screw driver;
2. Do not hammer screws to any depths into holes;
3. Replace all burred screw heads at own expense.

IRO1.W040.8 PLUGGING
Where appropriate, screw or bolt into appropriate plugs inserted into construction.

IRO1.W045.8 FIXING DOORSET IRONMONGERY
1. Fix ironmongery in positions shown on the Drawings;

IRO1.W050.8 FIXING PULL HANDLES AND PUSH PLATES
1. Face fix with 4 No. screws minimum per handle;
2. Bolted through with 6 mm diameter minimum bolts and stabilised by a face fixing or semi-recessed washer on one side of door;
3. Fix in pairs by through bolting.

IRO1.W060.8 FIXING FLOOR SPRING
1. Coordinate with hardware manufacturers, door suppliers to establish location, reinforcement requires etc. for the fixing details;
2. Use bolts and nuts for fixings when necessary. No welding is allowed;
3. Provide access panel for the bottom strap and for the top centre of centre hung pivots to facilitate future maintenance and inspection;
4. Provide stainless steel safety chain as shown on the Drawings.

IRO1.W070.8 FIXING LETTER BOX LOCKS
Fix lock, to face of letter box doors with fixing nuts threaded into lock barrel to rear face of locks.
IRONMONGERY

IRO1.W080.8 FIXING CURTAIN TRACKS
As IRO1.W010 and;
1. Fix 13 No. runners per metre of track and all other accessories including brackets, stopped ends and overlap set;
2. Where specified install cord sets and leave in correct working order.

IRO1.W090.8 FIXING SHOWER CURTAIN RAILS
1. Plug and screw end flanges to concrete, panel or masonry walls with stainless steel screws or bolts provided by the curtain rail manufacturer and install in accordance with the manufacturer’s recommendations;
2. Coordinate to conceal the earthing wire if provided.

IRO1.W100.8 FIXING TOWEL RAILS
1. Plug and screw end flanges to concrete and masonry walls with stainless steel screws;
2. Coordinate to conceal the earthing wire.

IRO1.W120.8 ADJUSTMENT
On completion, oil and adjust all ironmongery as appropriate to leave in perfect working order.

IRO1.W130.8 PROVISION AND STORAGE OF KEYS
Arrange with CM safe storage and handling of keys until handing them over to CM on completion.

FIXING DOORSET IRONMONGERY SUPPLIED FOR DOMESTIC FLATS

IRO1.W210.8 IRONMONGERY POSITIONING
Fix in positions as shown on Drawings.

IRO1.W220.8 HINGE FIXING POSITIONS

INSPECTION OF FLOOR SPRING SYSTEM DURING MAINTENANCE PERIOD

IRO1.W310.A INSPECTION OF FLOOR SPRING SYSTEM DURING MAINTENANCE PERIOD
1. Conduct half-yearly inspection of the installed floor spring system with the CM or his representatives at the 6th, the 12th, the 18th and the 24th month from the date of completion of the Works certified by the CM or where the Works are completed in Sections, from the date of completion of the respective Section;
2. The inspection shall include checking the safety and proper operation of the floor spring system including the conditions of all component parts the physical mounting and alignment;
3. Complete, sign and submit inspection form in prescribed format to the CM or his representatives for witnessing after each inspection;

4. Bear all costs of repair and replacement of any component due to defective design, materials or workmanship, which appear within the Maintenance Period.
TESTING

SURVEILLANCE TESTS

IRO1.T030.A SURVEILLANCE TESTS FOR OVERHEAD DOOR CLOSER

1. Testing Arrangements:
   a. When Instructed, surveillance tests shall be carried out by the CM, a Direct Contractor or the Housing Department Material Testing Laboratory;
   b. Comply with the following pertaining to surveillance tests:
      i. Provide attendance on the Site;
      ii. Provide, deliver and collect samples etc. as directed by the CM or as specified.

2. Testing Samples:
   a. Provide one set of test sample from the batch of material delivered to Site under the delivery note as specified in IRO1.M530 (3)(a) or as instructed by the CM;
   b. One set of test samples shall consist of two overhead door closers and the associated accessories, fastenings and fixings necessary to ensure normal operation or as instructed by the CM.

3. Testing methods:
   As per IRO1.M530 (2)(c);

4. Non-compliance:
   a. In the event that the testing samples fail to meet the testing requirements, follow either one of the following actions:
      i. Remove the representative batch off Site; or
      ii. Carry out re-test for the representative batch in accordance with the testing methods as specified in sub-clause (3) in a laboratory that complies with the requirements stated in PRE.B9.570 on three separate samples selected by the CM from the representative batch. In case of any one sample fails the re-test, remove the representative batch off Site.
   b. When the representative batch of material is removed off Site, replace with another new batch and carry out test in accordance with the testing methods as specified in sub-clause (3) in a laboratory that complies with the requirements stated in PRE.B9.570 for one set of samples selected by the CM from the replacing batch. In case of such test fails, follow action stated in sub-clauses (4)(a);
   c. Bear all associated costs for the test and re-test required in sub-clauses (4)(a) and (4)(b). No extension of time will be allowed.

IRO1.T040.A SURVEILLANCE TESTS FOR LEVER HANDLE DOOR FURNITURE AND LOCKS

1. Testing Arrangements:
   a. When Instructed, surveillance tests shall be carried out by the CM, a Direct Contractor or the Housing Department Material Testing Laboratory;
b. Comply with the following pertaining to surveillance tests:
   i. Provide attendance on the Site;
   ii. Provide, deliver and collect samples etc. as directed by the CM or as specified.

2. Testing Samples:
   a. Provide one set of test sample from the batch of material delivered to Site under the delivery note as specified in IRO1.M760 (3)(a) or as instructed by the CM;
   b. One set of test sample shall consist of six lever handle furniture and lock and the associated accessories, fastenings and fixings necessary to ensure normal operation or as instructed by the CM.

3. Testing methods:
   As per IRO1.M760 (2)(d);

4. Non-compliance:
   a. In the event that the testing samples fail to meet the testing requirements, follow either one of the following actions:
      i. Remove the representative batch off Site; or
      ii. Carry out re-test for the representative batch in accordance with the testing methods as specified in sub-clause (3) in a laboratory that complies with the requirements stated in PRE.B9.570 on three separate samples selected by the CM from the representative batch. In case of any one sample fails the re-test, remove the representative batch off Site.
   b. When the representative batch of material is removed off Site, replace with another new batch and carry out test in accordance with the testing methods as specified in sub-clause (3) in a laboratory that complies with the requirements stated in PRE.B9.570 for one sample selected by the CM from the replacing batch. In case of such test fails, follow action stated in sub-clauses (4)(a);
   c. Bear all associated costs for the test and re-test required in sub-clauses (4)(a) and (4)(b). No extension of time will be allowed.

MAS1 BRICKWORK, BLOCKWORK AND PANEL PARTITIONS

MATERIALS

BRICKS

MAS1.M010.8 BRICK DIMENSIONS
As shown on Drawings.

MAS1.M020.8 CLAY BRICKS GENERALLY
Approved, well burnt, hard, sound, square and clean.

MAS1.M030.8 CONCRETE BRICKS
1. Submission Requirements:
   a. At sample submission and approval stage, submit a sample of the proposed material for CM's approval together with all the following substantiation for CM's information:
      i. Catalogue and job reference of the product;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer.
   b. Submit original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2) for CM's information:
      i. The date of the test shall be generally within three years prior to the notified date for commencement of the Works;
      ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material as mentioned in sub-clause (1)(c);
      iii. In the event that no test report has been submitted for CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.
   c. At delivery stage, submit the following documents:
      i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (1)(a);
      ii. Delivery notes for all material delivered to site.
2. Quality Requirements:
   b. Size: 225 x 105 x 70 mm nominal;
   c. Minimum compressive strength: 7.0 MPa.
MAS1.M040.8  **BRICKS FOR FAIR FACED WORK**

Selected for evenness of texture, sharpness of arris and uniformity of colour.

MAS1.M050.8  **FACING BRICKS**

1. Submission Requirements:
   a. As MAS1.M030 (1).

2. Quality Requirements:
   a. To BS 3921:1985;
   b. Type: as shown on Drawings;
   c. Colour/texture: as shown on Drawings.

MAS1.M060.8  **FIRE BRICKS**

Imported, refractory, fireclay bricks, of the best quality, light in colour, uniform in texture and:

2. Class: to BS 3056;
3. Tested: to BS 1902.

**BLOCKS**

MAS1.M110.8  **CONCRETE BLOCKS**

1. Submission Requirements:
   a. As MAS1.M030 (1).

2. Quality Requirements:
   b. Average crushing strength of a randomly selected sample of 10 blocks shall be not less than 7.0 MPa and no individual test result shall be less than 2.8 MPa;
   c. Size: as shown on Drawings.

MAS1.M120.8  **CONCRETE BLOCKS FOR FAIR FACED WORK**

Selected for evenness of texture and sharpness of arris.

MAS1.M130.8  **CONCRETE HOLLOW BLOCKS**

1. Submission Requirements:
   a. At sample submission and approval stage, submit a sample of the proposed material for the CM's approval together with all the following substantiation for the CM's information:
      i. Catalogue and job reference of the product;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer.
   b. Submit original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2) for the CM's information:
i. The date of the test shall be generally within three years prior to the notified date for commencement of the Works;

ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material as mentioned in sub-clause (1)(c);

iii. In the event that no test report has been submitted for the CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

c. At delivery stage, submit the following documents:

i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (1)(a);

ii. Original or certified true copy of the Certificate of Origin for every batch of delivery. One batch being the material quantity covered under each delivery note;

iii. Delivery notes for all material delivered to site.

2. Quality Requirements:

   b. Average crushing strength of a randomly selected sample of 10 blocks shall be not less than 5.0 MPa of the gross area unless otherwise specified and no individual test result shall be less than 2.8 MPa;

   c. Size: as shown on Drawings.

MAS1.M140.8 GLASS BLOCKS

1. To BSEN 1051:Part 1:2003 or Approved equivalent;

2. For panel construction, complete with expansion strips, panel reinforcing, panel anchors, asphaltic emulsion and sealants. See Drawings for pattern and size.

PANEL WALL PARTITIONS

MAS1.M210.A PANEL WALL PARTITIONS FOR DOMESTIC FLATS

1. Submission Requirements:

   a. At sample submission and approval stage, submit a sample of the proposed panel wall partitions for CM's approval together with all the following substantiation for CM's information:

      i. Catalogue, brand name / model name and job reference;

      ii. Name, address and contact person of the local supplier;

      iii. Name, address and contact person of the manufacturer;

      iv. Confirmation that the manufacturing plant have:

         - Automatic weighing, recording and printing equipment for the preparation of the aggregates, mechanical mixing of batching;

         - Curing facilities in accordance with CS1:2010, or other to be Approved;

         - Weather protected production area.
v. Where applicable, either the document from the manufacturer showing his authorization for the supplier as the agent / distributor in Hong Kong or document from the supplier showing the appointment of the manufacturer and manufacturer's agreement for the production of the proposed product;

vi. Original or a certified true copy of product conformity certificate for the panel walls of fire rated construction. The certification shall be to the "Product Conformity Certification Scheme For Passive Fire Protection Products" published by the Hong Kong Institute of Steel Construction. The product conformity certificate shall be issued by a certification body accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS. If a photocopy of the product conformity certificate is submitted, it shall be certified true by the certification body or by the QCM. The product conformity certificate shall cover:

- The tests in accordance with BS 476:Part 20:1987 and BS 476:Part 22:1987 and certified as being capable of resisting the action of fire for the specified periods by a laboratory which must be accredited for the specified test by HKAS under the Hong Kong Laboratory Accreditation Scheme (HOKLAS), or an equivalent organization which has signed a mutual recognition agreement with HOKLAS with appropriate qualifications and experience in fire resisting construction.

vii. The detail specification of the panel walls selected for the product conformity certification audit testing by the certification body, together with drawings and photographs sufficient to completely describe the panel wall partition construction and materials used;

viii. A copy of the fire test reports, assessment reports or fire test certificate which are certified true by the accredited laboratory or QCM and generally within 5 years prior to the notified date for commencement of the Works;

ix. Manuals showing:

- General product information, packaging, handling and site storage (include product labelling sample);

- General proprietary specifications (dimensional properties, density, FRR, characteristic strength, standard deviation, tolerance and shrinkage properties of panels and non-shrink mortar);

- Full dimensional drawings of all types of panels (showing profiles, reinforcement arrangements together with the corresponding manufacturing tolerance, areas of local strengthening with non-shrinkage cement sand mortar or other Approved materials filled up the core holes (if any) for inserting the anchors, typical ceiling conduits connection openings, jointing details and mechanical fixing, fixing details of panel wall to the underside of ceiling slab, fixing details of the support for overhead door panel to adjoining panel walls, etc.);

- General layout, elevations and details to panel wall partition for typical flats;
- Installation procedure and method statement including - erection of panel walls and overhead door lintel panels, treatment to joints and surface of panels. Suggestion for fixing of doors, cabinet, cooking bench and sink unit, wash hand basin and minor fixtures, repair methods to minor surface hairline cracks and extent of cracks allowed;

- All installation accessories and materials (completed with proprietary products catalogue attached and highlighted to relevant information) included - joint fibre tape, moisture sealer, joint sealant, bonding agent, non-shrink cement sand mortar / grout, crack repairing materials and fixing anchors, fixing accessories, etc..

x. Characteristic strength data as per sub-clause (2)(b);

xi. When the panel wall partitions are supplied for domestic blocks, also include the following in the submission:

- Submit a sample board similar to the ones maintained by the Housing Department with accessories mounted on boards showing the quality, detailed method statement and work procedures. Submit an additional sample board of the approved sample for keeping in the Housing Department’s Sample Display Gallery if the material has not been approved for use in a public housing project in the past five years prior to the notified date for commencement of the Works;

- Original or a certified true copy each of the certification to ISO 9001 and ISO 14001 for the manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by the certification bodies or by the QCM. The certification bodies shall be as follows:

<table>
<thead>
<tr>
<th>ISO</th>
<th>Certification Body</th>
</tr>
</thead>
<tbody>
<tr>
<td>ISO 9001</td>
<td>The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.</td>
</tr>
<tr>
<td>ISO 14001</td>
<td>The certification body shall be accredited by the Hong Kong Accreditation Service (HKAS), or the China National Accreditation Service (CNAS), or an accreditation body which has entered into a mutual recognition agreement with HKAS.</td>
</tr>
</tbody>
</table>

b. Submit original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2)(d) for CM's information:

i. The date of the test shall be generally within five years prior to the notified date for commencement of the Works or at an earlier date for domestic blocks subject to CM's consideration on the track records as maintained by the Housing Department;

ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material as mentioned in sub-clause (3)(a);

iii. In the event that no test report has been submitted for CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

c. Before mass production, submit the following information for Approval:
i. Shop drawings of electrical conduit system complete with its accessories.

2. Quality Requirements:
   a. The panel wall partitions are to be a proprietary system, homogeneous across the entire section, compatible with the building structure and building works:
      i. Light-weight to be handled manually on site;
      ii. Nominal width to be 600 mm, height and thickness to refer to drawings;
      iii. Complete with pre-installed electrical conduits system made either of steel or PVC. If PVC conduits are used, there shall be minimum 30mm cover from the finished surface;
      iv. For 25mm diameter conduit installed in 85mm thick panel wall, the conduit shall be made of steel and terminated at PVC boxes for mounting of wiring accessories;
      v. All panel wall partitions delivered to Site to be individually marked with the production number and date of production, which shall be visible after erection;
      vi. Each panel wall partition has to be provided with means on top of the partition for connecting to the underside of the ceiling slab by mechanical fixings;
      vii. In addition to mechanical fixings to the underside of the ceiling slab, each panel wall partition installed as a lintel above doorway has to be supported by galvanised steel brackets fixed at the sides to the adjoining panels;
      viii. The panel wall hollow holes next to the corners and door openings to be either solid or filled up with non-shrink cement mortar. Where wash basins, cooking bench and sink units are attached to the panel wall partitions, the hollow holes at such locations to be either solid or filled up with non-shrink cement mortar up to 1100 mm from the bottom of the partitions;
      ix. All joints and pockets to be fully grouted with non-shrink grouting / mortar. All vertical and horizontal joints to be covered with a minimum 50 mm wide fibre glass reinforcement tape;
      x. Tensile pull-off strength of minimum 0.3 N/mm² when tested to method specified in FIN5.M1010 sub-clauses (2)(i)(vi) to (2)(i)(xi).

b. Characteristic strength of the panel wall partitions shall be in accordance with MAS1.M250;

c. Standard of visual quality shall be comparable with the benchmark samples maintained by the Housing Department;

d. The quality and performance requirements are as follows:

</table>
xi. Set up for Watertightness, Tile Removal and Chasing tests:

- Set up Test Areas A, B, C as per testing details given below;
- Apply the recommended moisture sealer to the surface of the panel wall system facing the wet side of all 3 Test Areas;
- For Test Area A, apply to the wet side the recommended sealant and tape to all vertical joints including those between the panel wall and the concrete wall. Install 200 x 200 mm tiles from the ceiling down to 605 mm from the structural floor;
- For Test Area B, apply sealant as per Area A and form non-shrink cement / sand angle fillet and apply cold applied waterproofing material in accordance with Contract Drawings;
- For Test Area C, along the entire length of the wall, chase 50 mm high x 37.5 mm deep conduit openings at 300 mm height at both sides of the wall. Install along its length 20 mm diameter uPVC electrical conduits. Refill the openings with the recommended refilling compound;
- After the above works are adequately cured, the following tests shall be carried out with an accredited laboratory.

xii. Detail testing method for Watertightness, Tile Removal and Chasing tests:

- Tile removal demonstration (Test Area A) - 'L' shape wall in bathroom:
  - Carry out the tile removal demonstration by hydraulic tools simulating the future user's decorator's normal tile removal practice to all tiled surfaces. The tile removal to both sides of the party wall are to be carried out simultaneously;
  - Carry out the large soft body impact tests of Annexes C & E of BS 5234:Part 2 to the party wall after the tiles have been removed. The impact point shall be at the mid-point of the central panel of the party wall.

- Watertightness test (Test Area B) - 'L' shape wall in bathroom (to be different from Test Area A):
  - Carry out the watertightness test to the non-tiled L-shaped section;
  - The water shall be applied using a common domestic telephone type shower head fitted to 13 mm diameter pipe at a water pressure of 210 to 240 kPa (30 to 35 psi). The pressure gauge shall be located at a distance not exceeding 1500 mm from the shower head;
  - The shower head is moved to and fro along the tested surface, at a perpendicular distance of 300 – 600 mm from the wall or floor surface;
  - Spray water evenly to the walls up to a height of 1500 mm above finished floor level for 2 minutes duration.

- Chasing demonstration (Test Area C) - party wall between kitchens of two flat units:
  - Carry out the large soft body impact tests of Annexes C & E of BS.5234:Part 2 to the party wall after the wall has been chased. The impact point shall be at the mid-point of the central panel of the party wall.
3. On Site Delivery Verification:
   a. At delivery stage, submit the following documents:
      i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (1)(a);
      ii. Original or certified true copy of Certificate of Origin for every batch of delivery. One batch being the material quantity covered under each delivery note;
      iii. Delivery notes for all material delivered to Site;
      iv. Type Testing Certificates for electrical conduits and fittings as per MAS1.M560 and MAS1.M690;
      v. Work Completion Certificates:
         - Form WR1(A) specified by Electrical and Mechanical Services Department duly signed in both Part 1 and 2 by a Registered Electrical Contractor and a Registered Electrical Worker, certifying that the pre-installed conduit system installation is in full compliance with the Specification and the Code of Practice for the Electricity (Wiring) Regulations;
         - A single certificate can be issued for the production lot covered under one delivery note as per sub-clause (3)(a)(iv). Each certificate shall show the production number as per sub-clause (2)(a)(iv).
   b. Carry out and submit report on the following verifications for panel wall partitions upon delivery on Site. Prior to carrying out the verifications, inform the CM including building services site staff who may present to witness the verifications:
      i. Method:
<table>

<td>Same batch of material delivered to Site under one delivery note</td>
</tr>
</tbody>
</table>

(c. Where any of the verifications, except for pre-installed conduit system installation, fail to meet the acceptance standards either:

i. Remove the representative batch off Site; or

ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.

d. Where any of the verifications among the 0.1% selected panel wall samples with pre-installed conduit system installation fails to meet the acceptance standards:

i. Further inspect on 0.3%, or at least 3 nos. samples random selected from the same batch;

ii. In case of any anomalies found again, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.

e. The selected panel wall partitions can be re-used again after the verification subject to approval by the CM.

**MAS1.M250.8**

**CHARACTERISTIC STRENGTH ESTABLISHMENT FOR PANEL WALL PARTITIONS**

Characteristic strength establishment is to be based on the following or similar:

1. 100 Nos. of concrete cube samples are to be made at spot in the casting yard in 3 different casting days;

2. Samples of panel wall products manufactured in one casting day using the same batch of concrete from which the cubes are taken should be selected for testing in accordance with **MAS1.M210 (2)(d)(vi)**;

3. The cubes should be sampled and made in accordance with CS1:2010, or other methods to be Approved, and tested for compression strength at 28 days by HOKLAS accredited laboratories;

4. Establish an estimate of the characteristic strength (fcu) in accordance with Clause 6.5.2 of BS6089 and Table 7 of BS2846:Part 3:1975. fcu can be determined from the distribution of standard cube results using the expression fcu = mean concrete cube strength minus 1.93 x standard deviation;
5. When the test stipulated in sub-clause (2) is satisfactory, the characteristic strength of the panel wall resulting from the above estimation is to be the established characteristic strength and used as fcu for monitoring purpose as required in MAS1.W1220.

**ANCILLARY MATERIALS**

**MAS1.M310.8  BED-JOINT REINFORCEMENT**

1. Material: stainless steel grade 304 for external and galvanized steel for internal use;
2. Width: 40 - 50 mm less in width than wall or leaf;

**MAS1.M320.8  PLAIN EXPANDED METAL LATH**

To BS 1369:Part 1:1987:

1. Reference number: L3, expanded metal lath G275;
2. Size: minimum 5 mm across short way of mesh;
3. Weight: not less than 1.6 kg/m² ± 15%;

**MAS1.M330.8  TIES BETWEEN WALL ENDS AND CONCRETE**

To be one of the following:

1. 6 mm diameter steel rods, 350 mm long, painted with 2 coats of bituminous paint;
   or
2. 20 x 3 mm steel flats, 350 mm long, fanged at each end; or
3. Strips of brickwork reinforcement, as MAS1.M310 (2), 350 mm long in the following widths:
   a. For 100-105 mm walls: 60 mm;
   b. For 200-225 mm walls: 110 mm.
   Strips to be fixed by shot firing may be reduced in length, subject to Approval;
4. Other methods approved by CM.

**MAS1.M340.8  TIES FOR WALLS BUILT AGAINST CONCRETE**

Formed from 20 x 3 mm thick steel strip, 150 mm long, fanged at both ends and galvanized after manufacture.

**MAS1.M350.8  MOVEMENT JOINT MATERIALS**

Comprising:

1. Joint filler: mineral wool quilt or equivalent compressible, fire resistant non-combustible material to BS 476:Part 4:1970;
2. Restraint brackets: as shown on Drawings.

**MAS1.M360.8  MORTAR**

As specified in Worksection MAS3.
JOINT SEALANT

1. Location:
   a. See MAS1.W1040 for glass blocks;
   b. See MAS1.W1200 for partitions in bathrooms and kitchen areas.

2. As WAT5.M310.

SAMPLES

Submit samples of each type of brick and block for Approval in accordance with the requirements PRE.B9.410.

PRE-INSTALLED STEEL CONDUIT SYSTEM IN PANEL WALL PARTITIONS

STANDARD

MINIMUM SIZE OF CONDUIT

1. Minimum outside diameter: 20 mm;
2. Where special situations demand, use 16 mm conduit subject to prior approval being obtained from CM.

CONDUIT FITTINGS

1. All conduit fittings: comply with BS EN 61386-1:2008 or IEC 61386-1:2008;
2. Bushes and plugs: brass;
3. Do not use solid or inspection tee-pieces, couplers or elbows.

METAL BOXES FOR ACCESSORIES

1. Metal boxes for the enclosure of electrical accessories in conduit installation: comply with IEC 60670-1:2002 with dimensions to BS 4662:2006(2009) and complete with one earthing terminal;
2. Use 35 mm and 47 mm deep boxes to house accessories such as domestic switches, socket outlets, etc.;
3. Use 16 mm and 25 mm deep boxes to house specially designed electrical accessories of shallow pattern subject to prior Approval.

CLASS OF PROTECTION AGAINST CORROSION

1. Steel conduits: have Class 4 protection against corrosion in accordance with BS 4568:Part 1:1970 (1993) or BS EN 61386-1:2008 or IEC 61386-1:2008 i.e. heavy protection both inside and outside (e.g. hot-dip zinc coating or sherardizing);
2. Steel conduit fittings: have Class 4 protection in accordance with BS EN 61386-1:2008 or IEC 61386-1:2008 i.e. heavy protection both inside and outside (e.g. hot-dip zinc coating or sherardizing);
3. Metal boxes for the enclosure of electrical accessories: have resistance to corrosion in accordance with IEC 60670-1:2002.

MAS1.M560.8 TYPE-TESTING FOR ELECTRICAL STEEL CONDUITS AND FITTINGS

1. The conduits and conduit fittings shall be type-tested for complete compliance with the following standards by an Independent Accredited Laboratory or an Independent Short-Circuit Testing Organisation:-

<table>
<thead>
<tr>
<th>Conduits &amp; fittings</th>
<th>Standards</th>
</tr>
</thead>
<tbody>
<tr>
<td>Conduit fittings</td>
<td>BS EN 61386-1:2008 or IEC 61386-1:2008</td>
</tr>
</tbody>
</table>

PRE-INSTALLED PVC CONDUIT SYSTEM IN PANEL WALL PARTITIONS

MAS1.M610.8 STANDARD OF CONDUITS

All PVC conduits: comply with IEC 61386-21:2002 or BS EN 61386-21:2004; heavy mechanical strength, rigid, plain and non-thread type.

MAS1.M620.8 MINIMUM SIZE OF CONDUIT

1. Nominal diameter: 20 mm to 32 mm;
2. Where special situations demands, use 16 mm conduit subject to prior approval being obtained from CM.

MAS1.M630.8 PVC CONDUIT FITTINGS

2. Same make as PVC conduits.

MAS1.M640.8 PVC BOXES FOR ACCESSORIES

1. PVC boxes: fitted with metal inserts for all screw holes;
2. Minimum wall thickness: 2 mm and moulded in one piece;
3. Interchangeable with steel boxes;
4. Same make as PVC conduits.

MAS1.M650.8 COLOUR

All PVC conduits, fittings and boxes: white in colour.

MAS1.M660.8 MECHANICAL PROPERTIES

1. Withstand forces encountered in conduit wiring system application;
2. Complete with provision for prevention of deformation.

MAS1.M670.8 FLAME RESISTANCE
All PVC conduits, fittings and boxes shall be non-flame-propagating and self-extinguishing.

MAS1.M680.8 TEMPERATURE CLASSIFICATION
1. For all PVC conduits, fittings and boxes, comply with the temperature classification of -5°C in accordance with IEC 61386-1:2008 or BS EN 61386-1:2008;
2. For PVC conduits, where the ambient temperature at the country of manufacture is likely to be below -5°C, the temperature classification is -25°C.

MAS1.M690.8 TYPE-TESTING FOR ELECTRICAL PVC CONDUITS AND FITTINGS
1. Rigid plain PVC conduits and conduit fittings shall be type-tested for complete compliance with the following standards British Standards by an Independent Accredited Laboratory or an Independent Short-Circuit Testing Organisation:

<table>
<thead>
<tr>
<th>Conduits &amp; fittings</th>
<th>Standards</th>
</tr>
</thead>
<tbody>
<tr>
<td>PVC circular conduit boxes</td>
<td>IEC 60670-1:2002 or BS EN 60670-1:2008 BS 4607: Part 5:1982(1988) with the following conditions: a. The marking of the PVC circular conduit boxes shall be 60/10 kg. b. The PVC circular conduit boxes shall be type-tested to 10 kg suspended load.</td>
</tr>
</tbody>
</table>
WORKMANSHIP

LAYING BRICKS AND BLOCKS GENERALLY

MAS1.W010.8 BRITISH STANDARD
Comply with BS 8000:Part 3:1989 in respect of:
1. Materials, handling and preparation (section 2);
2. Brick/block walling generally (subsection 3.1);
3. Jointing and pointing (subsection 3.2);
4. Fair faced masonry (subsection 3.5);
5. Constructional details (subsection 3.7).

MAS1.W020.8 HANDLING AND STORAGE
1. Unload and handle bricks and blocks without soiling, chipping or subjecting to other damage;
2. Stack bricks and blocks on level hardstandings and protect from damage and contamination.

MAS1.W030.8 JOINTS
Lay bricks or blocks on a full bed of mortar with the joints filled solid to a nominal thickness of 10 mm.

MAS1.W040.8 LOAD-BEARING BRICK WALLS
Lay single frog bricks with the frog uppermost and fill with mortar.

MAS1.W050.8 BED-JOINT REINFORCEMENT
Lay reinforcement to blockwork as follows:
1. At the vertical spacing intervals given in the following Table, unless otherwise specified:

<table>
<thead>
<tr>
<th>Vertical spacing of bed-joint reinforcement</th>
</tr>
</thead>
<tbody>
<tr>
<td>Length to height ratio of blockwork panel (l:h)</td>
</tr>
<tr>
<td>--------------------------------------------</td>
</tr>
<tr>
<td>2:1</td>
</tr>
<tr>
<td>2.5:1</td>
</tr>
<tr>
<td>3:1</td>
</tr>
<tr>
<td>4:1</td>
</tr>
</tbody>
</table>

2. Flush up blockwork with mortar to provide a full even bed. Lay reinforcement in the mortar and complete joint to normal thickness;
3. Keep reinforcement 20 mm minimum back from external and 12 mm minimum back from internal building faces;
4. Lap reinforcement 225 mm at joints in length and fully at angles;
5. Openings: extended bed-joint reinforcement 600 mm minimum distance beyond either side of openings.

MAS1.W060.8  **PROTECTIVE SKIN WALLS TO ASPHALT TANKING**
Lay half brick thick skin, forming a 40 mm space between skin and tanking flushed up with mortar course by course as courses are laid.

**SAMPLES OF FINISHED WORK**

MAS1.W110.8  **SAMPLES OF FINISHED WORK**
1. Prepare sample panels of faced brickwork and fair faced brickwork and blockwork, including pointing, in accordance with PRE.B9.430;
2. Panel size: not less than 1 m².

MAS1.W120.8  **CONSTRUCTION MOCK-UP**
Construct a Construction Mock-up of about 5 m² as PRE.B9.440 for panel wall partitions. Where applicable, show the workmanship of each construction works including fixing brackets, bedding, jointing, joint reinforcement, lintel fixing, door frame fixing, installation of E&M works and accessories, grouting, sealing, waterproofing, moisture sealer and etc., all as per the installation manual and as directed by CM.

**PRECAUTIONS AGAINST ADVERSE WEATHER**

MAS1.W210.8  **DRY WEATHER**
Wet bricks and blocks, in accordance with manufacturer's recommendations, for the minimum period necessary to prevent premature drying out of the mortar.

MAS1.W220.8  **WET WEATHER**
Protect freshly laid brickwork and blockwork during periods of heavy rain and at the completion of each day's work.

**DIMENSIONS AND ACCURACY**

MAS1.W310.8  **COURSING BRICKWORK**
Gauge brick courses with four courses and four joints to 320 mm.

MAS1.W320.8  **ACCURACY**
1. Keep courses level and perpends vertically in line;
2. Plumb quoins and other angles as the work proceeds.

**FACEWORK**

MAS1.W410.8  **COLOUR MIXING**
Distribute facing bricks and selected bricks for fair faced work, of varying colour, evenly throughout the work.
BRICKWORK, BLOCKWORK AND PANEL

MAS1.W420.8 UNIFORMITY
Carry up work without allowing any portion to rise more than 900 mm above any other at any time.

MAS1.W430.8 PROTECTION
Protect all facework until practical completion.

BONDING

MAS1.W510.8 BRICK WALLS LESS THAN ONE BRICK THICK
Lay brick walls of 70 mm and 105 mm thickness in stretcher bond.

MAS1.W520.8 BRICK WALLS ONE BRICK THICK AND OVER
Lay brick walls 225 mm thick and over in English bond unless otherwise specified.

MAS1.W530.8 PERPENDS IN BRICKWORK
Lay bricks:
1. Throughout the work with the perpends in any course not less than a quarter of a brick from those in the course below;
2. In faced brickwork and fair faced brickwork and blockwork with joints to an even and regular pattern.

MAS1.W540.8 BLOCKWORK
Lay blocks:
1. In stretcher bond;
2. In fair faced work with joints to an even and regular pattern.

TYING TO CONCRETE

MAS1.W610.8 TYING ENDS OF MASONRY WALLS TO CONCRETE
Cast in, cut and pin or shot fire ties to concrete at 320 mm centres vertically, projecting 250 mm into brick or block walls.

MAS1.W620.8 MASONRY BUILT AGAINST FACE OF CONCRETE
Cast in or cut and pin ties to concrete at 900 mm centres horizontally, 320 mm centres vertically and staggered, projecting 75 mm into brick/block walls.

MAS1.W630.8 MOVEMENT JOINTS
Construct joints as shown on Drawings and:
1. Fix brackets at the required centres;
2. Pack filler into joint ensuring no voids remain.
# FINISHING JOINTS

**MAS1.W710.8**  
**CONCEALED FACES**  
Strike joints off flush.

**MAS1.W720.8**  
**FAIR FACED WORK**  
Fill joints as the work proceeds to provide a smooth surface, flush with the brick or block face.

**MAS1.W730.8**  
**FACEWORK**  
Finish joints either with:
1. A trowelled, weathered joint as the work proceeds; or
2. The joints raked out to a depth of 10 mm as the work proceeds. Point up with a weathered joint on completion.

**MAS1.W740.8**  
**BRICKWORK FACES TO BE PLASTERED OR RENDERED**  
Rake out joints to a depth of 10 mm as the work proceeds.

**MAS1.W750.8**  
**CLEANLINESS**  
Clean off all mortar droppings as the work proceeds.

## OPENINGS

**MAS1.W810.8**  
**BUILDING TO STRUCTURAL SOFFITS**  
Form movement joint adjacent structural soffits using joint filler and restraint brackets as **MAS1.M350** and/or as shown on Drawings.

**MAS1.W820.8**  
**LINTELS**  
Build in lintels with design and materials similar to that used in the adjacent walling:
1. Panel wall – lintel shall be with characteristics strength as per **MAS1.M250**;
2. Blockwork wall – lintel shall be of concrete grade as per **CON4.M210** and reinforcement details as per **CON4.W110**.

**MAS1.W830.8**  
**SOLID FRAMES**  
Bed solid door and window frames and the like with mortar similar to that used in the adjacent walling.

**MAS1.W840.8**  
**HOLES AND CHASES FOR SERVICES INSTALLATION**  
Leave, form or cut chases, holes, recesses and reveals in walls to receive frames, rainwater or other pipes, conduits, electric cables and the like as required. Make good with mortar similar to that used in the adjacent walling on completion of the services installation.

**MAS1.W850.8**  
**DISCONTINUOUS CONSTRUCTION**  
Where brickwork or blockwork bonding is discontinued by the installation of a conduit:
1. Lay two 6 mm diameter tie rods, projecting 250 mm on both sides of the point of discontinuity at every third course;
2. Cover up conduit by packing joints solid with mortar similar to that used in the adjacent walling after conduits and junction boxes have been installed;
3. Fix a strip of steel lathing prior to the application of plaster or render.

FLASHINGS AND SKIRTINGS

MAS1.W910.8 TURNING IN FLASHINGS AND SKIRTINGS
1. Rake out joints to a depth of 25 mm;
2. Point flashings and skirtings in mortar similar to that used in adjacent walling.

MAS1.W920.8 ASPHALT SKIRTINGS
Rake out and cut bricks to form a 25 x 25 mm groove for turn in of asphalt skirtings.

MAS1.W930.8 POINTING METAL FLASHINGS
Point in mortar similar to that used in the adjacent walling.

GLASS BLOCKS

MAS1.W1010.8 ERECTION GENERALLY
Install in accordance with the manufacturer's site work instructions.

MAS1.W1020.8 PREPARATION
Paint all sides of structural opening to receive glass block panels with two coats of bituminous paint.

MAS1.W1030.8 LAYING BLOCKS
Lay blocks in cement/lime mortar and point both sides.

MAS1.W1040.8 MOVEMENT JOINTS
Allow the clearance at the head and jambs of block panels and fill gap with joint filler and sealant all in accordance with Worksection WAT5 and the glass block manufacturer's recommendations.

MAS1.W1050.8 REINFORCEMENT
Build in strips of reinforcement and carry ends of strips across the clearance gap and build into or secure to jambs of the opening in an Approved manner and in accordance with the manufacturer's recommendations.

PANEL WALL PARTITIONS

MAS1.W1100.8 ERECTION GENERALLY
Erect and install the panel wall partitions in accordance with the manufacturer's recommendations unless specified otherwise in this Worksection.
MAS1.W1120.8 PANEL THICKNESS
Construct 150 mm thick panels in one or two skins in accordance with the manufacturer's recommendations.

MAS1.W1130.8 TREATMENT OF VOIDS, RECESSES, REBATES, GROOVES AND JOINTS
Except for circumstances covered at MAS1.W1150, grout and fill up all voids, recesses and rebates in the following joints in accordance with the panel manufacturer's recommendations:

1. Joints between individual panels;
2. Joints between ceilings and top of panels;
3. Joints between floors and bottom of panels;
4. Joints between walls and end of panels;
5. Joints between windows and door frames and end of panels.

MAS1.W1140.8 TREATMENT AT CORNERS, INTERSECTIONS AND JUNCTIONS WITH BUILDING STRUCTURES
Erect, fix and finish all in accordance with the panel manufacturer's recommendations appropriate to surrounding construction.

MAS1.W1150.8 JOINT REINFORCEMENT
Apply reinforcement or joint fibre tape composed of fiberglass mesh to vertical joints and junctions to surfaces to be tiled or rendered, internally and externally, particularly in the following locations:

1. All joints between individual panels;
2. All junctions between panels and concrete, blockwork, and other partition panels;
3. All joints between skins of panels at free ends of partitions where the panel wall partitions are constructed in two skins.

MAS1.W1160.8 SURFACES TO BE PAINTED
In accordance with panel manufacturer's recommendation:

1. Flush joint all vertical joints between surfaces of individual panels;
2. Apply material as recommended by the manufacturer to smooth and to flush all voids, irregularities and uneven surfaces and across vertical joints of panel wall partitions, with 50 mm wide reinforcement tape across vertical joints.

MAS1.W1170.8 ARRIVES
Ensure ends of panels at all corners and door and window jambs are square edged.

MAS1.W1180.8 ADJUSTMENT FOR CONCRETE TOLERANCES
Carry out all necessary adjustment by cutting, jointing and filling to panels to accommodate permissible tolerances on concrete.

MAS1.W1190.8 CONDUITS AND SWITCH/SOCKET BOXES
Treat in accordance with the panel manufacturer's recommendations and:

1. Cut chases, recesses, notches and the like for the installation of concealed conduits and switch/socket boxes, where required;
2. Make good all such chases, recesses, notches and the like on completion of the electrical installation.

**MAS1.W1200.8 PANELS IN BATHROOM AREAS**

Apply sealant, in accordance with Worksection WAT5, to fill vertical joints and intersections of the panels and also at their junctions with the concrete structure around the bath/shower area, in accordance with the panel manufacturer's recommendations, to render the joints waterproof where such gaps occur on bathroom side of the panel.

**MAS1.W1210.8 PANELS IN BATHROOM AND KITCHEN AREAS**

Apply moisture sealer, to the surface of the panel facing the interior of the kitchen and bathroom in accordance with the manufacturer's recommendations to render the panel waterproof after making good of all chases, recesses, notches and the like, cut or formed for conduits and switch/socket boxes.

**MAS1.W1220.8 CONTINUOUS MONITORING OF CHARACTERISTIC STRENGTH FOR PANEL WALL PARTITIONS**

Continuous monitoring is to be as follows or similar:

1. In accordance with CS1:2010, take one sample to make 2 test cubes (150 mm x 150 mm x 150 mm) for each casting day or every 100 m³ of material used whichever is the greater; send the test cubes to an Approved HOKLAS accredited (or equivalent) laboratory for compression test on 28 days cube strength and submit the test result to CM for record;

2. Submit an analysis and a summary of the test result showing compliance with this clause in an agreed format to CM in monthly intervals for the production of panel wall partitions delivered to Site;

3. If the difference between the compressive strengths of 2 test cubes made from one sample of material exceeds 15% of the averaged test result;
   a. Use the higher of the compressive strengths of the 2 test cubes to assess compliance as stated in sub-clause (4)(a);
   b. Do not use the test results for that sample to assess compliance as set out in sub-clause (4)(b) nor to calculate the standard deviation.

4. The results of tests for compressive strength at 28 days of material must comply with the following acceptance criteria:
   a. No individual test result is less than the characteristic strength established in MAS1.M250 minus 2 MPa; and
   b. The average of any 4 consecutive test results must exceed the characteristic strength. Where there are less than four available test results, treat the average of the first two or first three consecutive test results in the same manner as groups of four consecutive test results.

5. Follow up action to be carried out upon failure to comply with either of the acceptance criteria in sub-clause (4) above:
   a. CM to randomly select panel walls from the batch produced in the casting day affected for a door slam test. If erection of panel wall has commenced, door slam test is to be carried out at a location directed by the CM; except for the sizes and dimensions of the panel walls and doors, other specified test requirements are not to be varied. If the sample fails to comply with the requirements of door slam test, remove all the affected batches of panel walls from the site and make necessary replacement and rectification works;
b. Submit investigation report to give explanation for the non-compliance and rectification works required.

6. When the calculated standard deviation of a set of 40 consecutive test results exceeds the standard deviation established in the 100 cubes exercise (SD100) by 30%, double the sampling frequency as mentioned in sub-clause (1). If the calculated standard deviation of a set of 40 consecutive test results exceeds the SD100 by 60%, stop the production until the problems in quality control be identified and rectified.

TOLERANCES

MAS1.W1310.8 GENERAL
Refer to Appendix H "Schedule of Tolerances" to this Specification.

MAS1.W1320.8 MANUFACTURING TOLERANCE
Refer to TOL.MAS1.310 in Appendix H to this Specification.

PRE-INSTALLED STEEL CONDUIT SYSTEM IN PANEL WALL PARTITIONS

MAS1.W1410.8 STEEL CONDUIT INSTALLATION
1. Pre-install galvanised steel conduit system complete with metal boxes, or with PVC boxes if otherwise specified, to IEC 60670-1:2002 with dimensions to BS 4662:2006(2009) and steel draw wires for panel wall partitions as indicated on the Drawings;

2. During manufacturing process of the panel walls, pre-installed conduits and accessories therein shall not be subjected to any attempts that cause adverse effect to their shape properties and mechanical strength;

3. All pre-installed conduits shall run vertically in panel wall partitions;

4. Provide slots at upper ends of panel walls;

5. Whenever necessary, make allowance for alignment of conduits between panel walls and ceiling slabs for subsequent interconnection of conduits by Nominated Sub-contractor for electrical installation;

6. All PVC conduits for interconnection shall have concrete, cement, plaster or similar cover to prevent penetration of cables inside conduits by nails, screws and the like; otherwise, means of mechanical protection to the PVC conduits to comply with the Code of Practice for Electricity (Wiring) Regulation shall be provided by the Main Contractor;

7. Comply with the panel wall manufacturer's recommendations to make good all such slots, recesses, notches and the like on completion of the electrical installation;

8. Provide steel draw wires for the complete conduit installation for panel wall partitions.

MAS1.W1420.8 SHOP DRAWINGS OF CONDUITS
Prepare shop drawings, coordinate and agree with the Nominated Sub-contractor for electrical installation and the supplier for panel wall partitions before submitting shop drawings for approval.
MAS1.W1430.8 SUBMISSION AND APPROVAL OF CONDUITS
Submit for approval technical details, samples and type-tested certificates for the conduit system as specified in clause MAS1.M560.

MAS1.W1435.8 WORK COMPLETION CERTIFICATION FOR ELECTRICAL CONDUIT SYSTEM INSTALLATION IN PANEL WALL PARTITIONS
1. All conduits and accessories installed have to be certified by at least Grade A2 of Registered Electrical Workers (REW);
2. Provide CM and the Nominated Sub-contractor for electrical installation each a copy of the Work Completion Certificate for record.

MAS1.W1440.8 CONDUIT BENDS
Internal radius: at least 2.5 times the outside diameter of the conduit.

MAS1.W1450.8 BENDING, JOINTING AND TERMINATING OF CONDUITS
Follow conduit manufacturers' recommendation for:
1. Method of carrying out the conduit bends and conduit joints;
2. Method of fixing conduits to boxes without spouts;
3. Use of tools and materials recommended by the manufacturer of the conduits.

MAS1.W1460.8 SPACING BETWEEN CONDUITS
In general, separate adjacent or parallel conduits by a spacing of not less than 25 mm. The strength of the panel wall partitions should not be reduced if the spacing between conduits is less than 25 mm.

MAS1.W1470.8 TERMINATION OF STEEL CONDUITS AT METAL CASING
1. Where a steel conduit terminates at a metal casing, use a coupler or a brass adaptor for flexible conduit together with a brass male bush;
2. Screw the brass male bush into the coupler or adaptor from the inside of the metal casing through a clearance hole drilled in the metal casing to suit the bush;
3. Screw both the conduit and the bush tightly into the coupler or adaptor so as to grip the metal casing securely for mechanical and electrical continuity;
4. Threads on the steel conduit shall be at least half the coupler length, and no threads on the metal casing shall be allowed;
5. Fix securely the connection between the flexible conduit and the adaptor and the connection shall be effectively watertight.

MAS1.W1480.8 PREVENTION OF INGRESS OF FOREIGN MATTER
1. Plug all open ends of the conduit termination, which are liable to be filled with water, moisture or other foreign matter, with Approved conduit stopping plugs; do not use paper or rag materials for this purpose;
2. Plug conduit boxes in similar circumstances similarly to prevent concrete or plaster from entering the boxes during the building construction.
**MAS1.W1490.8 PREVENTION OF ACCUMULATION OF WATER OR MOISTURE**
Lay the conduits in such manners to prevent accumulation of condensed moisture in any part of the installation. Also take due care to prevent the ingress of water into the conduits from leakage in walls and ceilings of the building structure.

**MAS1.W1500.8 SWABBING OUT OF CONDUITS**
Where required, swab conduits out and free them from moisture before wiring work is commenced. Carry out the swabbing operation under the supervision of the authorised representative of the CM. Use only Approved draw-in tape or steel wire of appropriate size and absorbent cloth.

**MAS1.W1510.8 TOOLS**
1. Tighten conduit bushes, couplers and similar items with Approved tools;
2. Form conduit bends on an Approved bending machine, and do not flatten the conduits at bends.

**MAS1.W1520.8 CUTTING OF HOLES**
Drill holes in metal work for the termination of conduits on Site with a twist drill of the correct size or by means of an Approved hole cutting device.

**MAS1.W1530.8 REMOVAL OF BURRS AND SHARP EDGES**
Remove burrs and sharp edges from the ends of conduits before they are installed.

**MAS1.W1540.8 MAKING GOOD OF DAMAGED COATING**
Where the protective coating on a steel conduit has been damaged after installation, paint such surface with at least two coats of an Approved anti-rust paint to prevent corrosion.

**MAS1.W1550.8 EARTHING FOR PRE-INSTALLED STEEL CONDUIT**
The pre-installed steel conduit and metal box in the panel walls shall not form part of the earthing system of the electrical installation. Separate circuit protective conductor (CPC) in compliance with the Code of Practice for Electricity (Wiring) Regulation will be provided by Nominated Sub-contractor for electrical installation. However, the metal box shall itself be earthed to the corresponding accessories, which shall be undertaken by the same Nominated Sub-contractor with cost borne by the Main Contractor.

**PRE-INSTALLED PVC CONDUIT SYSTEM IN PANEL WALL PARTITIONS**

**MAS1.W1610.8 CONDUITS INSTALLATION IN PANEL WALL**
1. All PVC conduits pre-installed inside panel wall partitions for cable wiring shall be set at minimum 30 mm from the final finished surface of the panel wall inclusive of finishing materials as shown on the Drawings to prevent penetration of cables inside conduits by nails, screws and the like;
2. During the manufacturing process of the panel walls, the PVC conduits and accessories therein shall not be subjected to a temperature exceeding 60°C or other attempts that cause adverse effect to their shape, properties and mechanical strength;
3. All pre-installed conduits shall run vertically in panel wall partitions;
4. Provide slots at upper ends of panel walls;
5. Whenever necessary, make allowance for alignment of conduits between panel walls and ceiling slabs for subsequent interconnection of conduits by Nominated Sub-contractor for electrical installation;
6. Comply with the panel wall manufacturer's recommendations to make good all such slots, recesses, notches and the like on completion of the electrical installation;
7. Provide steel draw wires for the complete conduit installation in panel wall partitions.

**MAS1.W1620.8 SHOP DRAWINGS OF CONDUITS**

Prepare shop drawings, coordinate and agree with the Nominated Sub-contractor for electrical installation and the supplier for panel wall partitions before submitting shop drawings for approval.

**MAS1.W1630.8 SUBMISSION AND APPROVAL OF CONDUITS**

Submit for Approval technical details, samples and type-tested certificates for the conduit system as specified in clause MAS1.M690.

**MAS1.W1640.8 CONDUIT BENDS**

Internal radius: at least 4 times the outside diameter of the conduit.

**MAS1.W1650.8 BENDING, JOINTING AND TERMINATING OF CONDUITS**

Follow conduit manufacturers' recommendation for:
1. Method of carrying out the conduit bends and conduit joints;
2. Method of fixing conduits to boxes without spouts;
3. Use of tools and materials recommended by the manufacturer of the conduits.

**MAS1.W1660.8 SPACING BETWEEN CONDUITS**

In general, separate adjacent or parallel conduits by a spacing of not less than 25 mm, the strength of the panel wall partitions should not be reduced if the spacing between conduits is less than 25 mm.

**MAS1.W1670.8 PREVENTION OF INGRESS OF FOREIGN MATTER**

1. Plug all open ends of the conduit termination, which are liable to be filled with water, moisture or other foreign matter, with Approved conduit stopping plugs; do not use paper or rag materials for this purpose;
2. Plug conduit boxes in similar circumstances similarly to prevent concrete or plaster from entering the boxes during the building construction.

**MAS1.W1680.8 PREVENTION OF ACCUMULATION OF WATER OR MOISTURE**

Lay the conduits in such manners to prevent accumulation of condensed moisture in any part of the installation. Also take due care to prevent the ingress of water into the conduits from leakage in walls and ceilings of the building structure.
TESTING

SURVEILLANCE TESTS FOR PANEL WALL PARTITIONS

MAS1.T105.A SURVEILLANCE TESTS

1. Test Arrangements:
   a. When Instructed, surveillance tests shall be carried out by the CM, Direct Testing Contractor or the Housing Department Material Testing Laboratory;
   b. Comply with the following pertaining to the surveillance tests:
      i. Provide attendance on the Site or on the manufacturing factory;
      ii. Provide, deliver and collect samples etc. as directed by the CM or as specified.

2. Test Samples:
   a. Provide one set of test samples from the batch of material delivered to Site under the delivery note as specified in MAS1.M210 (3)(a) or provide one set of test samples directly selected in the manufacturing factory (hereinafter referred to as the "representative batch") or as instructed by the CM;
   b. For Fire Resistance Test, one set of test samples shall consist of 10 pieces of panel wall partitions, including the associated fastenings and fixings necessary to ensure normal installation or as instructed by the CM;
   c. For Strength and Robustness Tests, one set of test samples shall consist of 10 pieces of panel wall partitions, including the associated fastenings and fixings necessary to ensure normal installation or as instructed by the CM;
   d. For inspection of wall materials, consistency, size, spacing and location of reinforcement, one set of test samples shall consist of 1 piece of panel wall partition.

3. Test methods:
   a. For Fire Resistance Test, as per MAS1.M210 (2)(d) test item (i);
   b. For Strength and Robustness Tests, as per MAS1.M210 (2)(d) test item (vi);
   c. For inspection of wall materials, consistency, size, spacing and location of reinforcement, open up the panel wall partition for measurement as per the Approved submissions.

4. Non-compliance:
   a. In the event that any of the test samples fails to meet the test requirements, follow either one of the following actions:
      i. Remove the representative batch off Site; or
      ii. Apply to the CM for re-test for the representative batch in accordance with the testing methods as specified in sub-clause (3) by Direct Testing Contractor or by a laboratory that complies with the requirements stated in PRE.B9.570 for one separate set of samples selected by the CM from the representative batch. The CM shall have the discretion to approve or not the commissioning of the latter laboratory for the re-test. In case any one sample for the re-test fails, remove the representative batch off Site.
b. When the representative batch of panel wall is removed off Site, replace with another new batch (hereinafter referred to as the "replacement batch"). Apply to the CM for test in accordance with the test methods as specified in sub-clause (3) by Direct Testing Contractor or by a laboratory that complies with the requirements stated in PRE.B9.570 for one set of samples selected by the CM from the replacement batch. The CM shall have the discretion to approve or not the commissioning of the latter laboratory for the test. In case any one sample fails the test, follow action stated in sub-clauses (4)(a);

c. Bear the costs of any failed surveillance tests and all associated costs for the test(s) and re-test(s) required in sub-clauses (4)(a) and (4)(b). No extension of time will be allowed.
MAS2 STONEWORK

MATERIALS

STONE

MAS2.M010.8 GRANITE
1. Obtain locally; and
2. Free from defects which may adversely affect the strength or appearance of the stone.

MAS2.M020.8 CLADDING STONE
As shown on Drawings.

ANCILLARY MATERIALS

MAS2.M110.8 MORTAR
As specified in Worksection MAS3.

MAS2.M120.8 DAMP PROOF COURSE
To BS 6398:1983, but not hessian based types.

MAS2.M130.8 WALL TIES FOR FACING CONCRETE AND BRICKWORK
Stainless steel flat strip and:
1. Not less than 40 mm wide by 3 mm thick and 175 mm long;
2. Fanged at both ends.

MAS2.M140.8 TIES FOR JUNCTIONS WITH CONCRETE OR BRICKWORK
Stainless steel flat strip and:
1. 20 mm wide by 3 mm thick and 350 mm long;
2. Fanged at both ends.

MAS2.M150.8 JOINT FILLER BACK-UP MATERIAL AND BOND BREAKER
As Worksection WAT5.

MAS2.M160.8 JOINT SEALANT
As WAT5.M310.
SAMPLES

MAS2.M210.8 SAMPLES
Submit samples of stone for ashlar walling for Approval in accordance with PRE.B9.410 before ordering.
WORKMANSHIP

GENERAL

MAS2.W010.8 STANDARD
Comply generally with the requirements of BS 5390:1976.

SAMPLE PANELS

MAS2.W110.8 SAMPLES OF FINISHED WORK
Prepare sample panels, approximately 1 m² of stone walling, including pointing, in accordance with PRE.B9.430.

PREPARATION OF STONE

MAS2.W210.8 RANDOM RUBBLE
Prepare stones to an irregular shape and roughly cut:
1. Height: 75 - 300 mm;
2. Minimum depth: 75 mm;
3. Length on bed: 75 - 600 mm;
4. With the length or depth on bed of each stone greater than the height.

MAS2.W220.8 SQUARED RUBBLE
Prepare stones roughly square as follows:
1. Height: 75 - 300 mm, varying in 75 mm stages;
2. Depth: 100 - 150 mm;
3. Length on bed: 100 - 600 mm;
4. With the length or depth on bed of each stone greater than the height.

MAS2.W230.8 SQUARED, COURSED RUBBLE
Prepare stones roughly square as follows:
1. Height: 75 - 300 mm, to suit courses of regular height varying from 150 - 250 mm;
2. Depth: 100 - 150 mm;
3. Length on bed: 100 - 600 mm;
4. With the length or depth on bed of each stone greater than the height.

MAS2.W240.8 ASHLAR BLOCKS
Work the exposed and joint faces of each stone to a square and true, plane surface, free from hollow or rough areas and:
1. With exposed faces finely squared and dressed;
2. Stones not less than 300 mm high;
3. Each stone clearly marked to indicate its position in the finished work.

**TRANSPORTING, STORING AND HANDLING**

**ASHLAR BLOCKS**

**MAS2.W310.8 TRANSPORTING**

Transport stone:
1. With the minimum of handling;
2. With the stones stacked carefully on the vehicle, using packing pieces to prevent damage.

**MAS2.W320.8 STORAGE**

Store stones in stacks, on battens and protect from the rain.

**MAS2.W330.8 HANDLING**

Provide adequate lifting plant to unload and handle the stones into position.

**LAYING RUBBLE WALLING**

**MAS2.W410.8 GENERAL**

Lay stones on a full and even bed of mortar in accordance with Worksection MAS3 with joints filled and between 5 and 15 mm wide.

**MAS2.W420.8 RANDOM RUBBLE**

Lay stones of random shapes and sizes, bonded together over each face of the wall and:
1. Select and rough dress the stones to keep joint widths to a minimum;
2. Provide at least one bonding stone per m² of 450 x 150 mm minimum dimensions carried through the full thickness of the wall as illustrated in figure a. of Appendix MAS2/I to this Worksection;
3. Do not permit any more than three stones to be adjacent to a vertical joint.

**MAS2.W430.8 SQUARED RUBBLE**

Lay stones of random sizes so that they are properly bonded together with continuous, straight horizontal joints as illustrated in figures b and e of Appendix MAS2/I to this Worksection, with vertical joints kept to a minimum.

**MAS2.W440.8 SQUARED RUBBLE BROUGHT UP TO COURSES**

Lay stones of random sizes so that they are properly bonded together and brought to level, horizontal joints at maximum centres of 750 mm, to line up with quoin and jamb stones as shown in figures c and e of Appendix MAS2/I to this Worksection.

**MAS2.W450.8 SQUARED, COURSED RUBBLE**

Lay stones in regular courses as shown in figures d and e of Appendix MAS2/I to this Worksection.
**STONEWORK**

**MAS2.W460.8  SQUARED RUBBLE OVER 300 MM THICK**

Construct as shown in figure e of Appendix MAS2/I to this Worksection and:

1. Walls faced one side:
   a. Construct one face in roughly squared stones to a minimum thickness of 300 mm with a backing of random rubble;
   b. Provide at least two regularly spaced bonding stones per square metre carried through the whole thickness of the walling or 450 mm into the backing whichever is the less;

2. Walls faced both sides:
   a. Construct both faces in roughly squared stone to a minimum thickness of 150 mm with a core of random rubble;
   b. Provide bonding stones as specified in sub-clause (1)(b) above, but carried either through the whole thickness of the walling or 450 mm into the core.

**MAS2.W470.8  POINTING**

1. Rake out joints to a depth of 15 mm as the work proceeds;

2. Point in cement mortar with a flush, weathered or recessed joint on completion.

**MAS2.W480.8  MOVEMENT JOINTS**

Install movement joints, to coincide with those in the structural background in accordance with the relevant provisions of the Workmanship Section of Worksection WAT5.

**LAYING ASHLAR**

**MAS2.W510.8  LAYING AND JOINTING GENERALLY**

1. Lay stones on a full, even bed of mortar with all joints filled;

2. Joint width: 5 mm.

**MAS2.W520.8  BONDING**

Lay stones to bond together throughout the wall and to the backing using projecting bonding stones.

**MAS2.W530.8  POINTING**

1. Rake out joints to a depth of 15 mm as the work proceeds;

2. Point, using bedding mortar, with a flush joint on completion.

**BUILDING AGAINST OTHER STRUCTURAL ELEMENTS**

**MAS2.W610.8  FACING OTHER STRUCTURAL ELEMENTS**

For stone walling built as a facing to concrete or brickwork:

1. Cast in or build in for a depth of 100 mm at least 5 No wall ties per m² to project 75 mm into the stone walling;
2. Fill the joint between the stone walling and the backing with mortar.

MAS2.W620.8 JUNCTIONS WITH OTHER STRUCTURAL ELEMENTS
At junctions of stone walling with concrete or brickwork, cast or build in ties at minimum centres of 450 mm vertically, projecting 250 mm into walling.

ACCURACY AND TOLERANCES

MAS2.W710.8 GENERAL
Refer to Appendix H "Schedule of Tolerances" to this Specification.

NATURAL STONE CLADDING

MAS2.W810.8 FIXING
Fix stone claddings in accordance with BS 8298:1989 and as shown on Drawings.

PROTECTION AND CLEANING

MAS2.W910.8 PROTECTION
1. Protect newly erected stonework against inclement weather and firmly fix adequate protection to prevent damage to all arrises and projections;
2. Keep facework clean during construction and until completion.

MAS2.W920.8 CLEANING
Clean off and leave stonework perfect immediately before handing over.

MAS2.W930.8 CLEANING ASHLAR
Clean off, rub down and leave stonework perfect immediately before handing over.
APPENDIX MAS2/I

MAS2.APPEND1.8  TYPES OF RUBBLE WALLING

a)  Random rubble

b)  Squared rubble

c)  Squared rubble brought up to courses

d)  Squared coursed rubble

e)  Squared rubble walls - Sections:

- Not exceeding 300 mm
- Exceeding 300 mm and faced both sides
- Exceeding 300 mm and faced one side
MAS3 MORTAR

MATERIALS

CEMENT AND LIME

MAS3.M010.8 CEMENT
1. Ordinary or rapid hardening Portland cement: as FIN 1.M010;
2. Sulphate resisting cement: to BS 4027:1996;

MAS3.M020.8 HIGH ALUMINA CEMENT

MAS3.M030.8 LIME
As FIN1.M020.

MAS3.M040.8 LIME PUTTY
Prepared in accordance with BS 5492:1990, clause 39.1 by adding hydrated lime to water and mixing to a thick, creamy consistency, after which the putty must be left for a minimum of 16 hours before use.

AGGREGATES AND WATER

MAS3.M110.8 SAND
1. Submission Requirements:
   As FIN1.M410 (1);
2. Quality Requirements:
   a. Clean, hard, durable crushed rock, gravel or clean sand, free from salt and its quality shall comply with the “quality of sand” as stated in BS 1199:1976 Amendment 3, and shall conform to the following grading limits:

<table>
<thead>
<tr>
<th>BS Test Sieve</th>
<th>Percentage by weight passing BS Test Sieve</th>
</tr>
</thead>
<tbody>
<tr>
<td>5.00 mm</td>
<td>100</td>
</tr>
<tr>
<td>2.36 mm</td>
<td>90-100</td>
</tr>
<tr>
<td>1.18 mm</td>
<td>70-100</td>
</tr>
<tr>
<td>600 microns</td>
<td>40-100</td>
</tr>
<tr>
<td>300 microns</td>
<td>5-70</td>
</tr>
<tr>
<td>150 microns</td>
<td>0-15</td>
</tr>
</tbody>
</table>

   b. Sand, other than the 5.00 mm size, falling outside the grading limits shown in the above table by no more than 5%, may be accepted subject to Approval;
c. The proportion of clay, fine silt or dust present, when determined according to BS 812:Section 103:1:1985, must not exceed 10% by weight.

3. On Site Delivery Verification:
   a. As FIN1.M410 (3).

**MAS3.M120.8 SAND FOR FAIR FACED WORK**
As specified in MAS3.M110, but free from all salts likely to cause efflorescence.

**MAS3.M130.8 AGGREGATE FOR FIREBRICK MORTAR**
Fine, crushed firebrick.

**MAS3.M140.8 WATER**
As FIN1.M310.

**ADDITIVES AND ADMIXTURES**

**MAS3.M210.8 PLASTICIZER**

**MAS3.M220.8 WATER RESISTING ADMIXTURE**
As FIN1.M870.

**MAS3.M230.8 SHRINKAGE REDUCING ADMIXTURE**
1. An Approved proprietary product, free from chlorides, nitrates and sulphates;
2. Submit manufacturer’s written confirmation to declare that the admixture is safe for use for construction of components in contact with potable water.

**SPECIALIST MORTARS**

**MAS3.M305.8 GENERAL SUBMISSION REQUIREMENTS FOR SPECIALIST MORTARS**
1. At sample submission and approval stage, submit a sample of the specialist mortar for the CM's approval together with all the following substantiation for the CM's information:
   a. Catalogue, brand name, and job reference of the material;
   b. Name, address and contact person of the local supplier;
   c. Name, address and contact person of the manufacturer;
   d. When the material is supplied for domestic blocks, or domestic floors above non-domestic floors, also include the following in the submission:
      i. Original or a certified true copy of the ISO 9001 certificate for the manufacturing plant for the CM's inspection. If a copy of the ISO certificate is submitted, it shall be certified true by a certification body or by the QCM. The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.
2. Submit original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the Quality Requirements for the CM's information:
   a. The date of the test shall be generally within three years prior to the notified date for commencement of the Works;
   b. The test reports shall either be submitted at the sample submission and approval stage, or at a time not later than the delivery of the material;
   c. In the event that no test report has been submitted for the CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

MAS3.M310.8 MORTAR FOR FIREBRICK
An Approved proprietary fire cement mortar.

MAS3.M320.8 MORTAR FOR ASHLAR WALLING
Cement and finally crushed stone, mixed 1 : 3 in proportion.

1. Submission Requirements as MAS3.M305;
2. Quality Requirements:
   a. To BS 4721:1981 and ensure mix used is suited to its intended use;
   b. Comprising:
      i. Cement, lime and sand as specified in this Worksection;
   c. With composition and properties in accordance with BS 4721:1981 tables 3 and 4, composition and specified properties of ready-to-use mortars;
   d. The minimum mean compressive strength of cement and cement / lime mortar, when tested in accordance with clause 12 of BS 4551:Part 1:1998, is as follows:

<table>
<thead>
<tr>
<th>Type of Mortar by proportions of Cement:Lime:Sand</th>
<th>Mean Compressive Strength at 28 Days as Determined by Site Test</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 : 0 to 0.25 : 3</td>
<td>11.0 MPa</td>
</tr>
<tr>
<td>1 : 1 : 5 to 6</td>
<td>2.5 MPa</td>
</tr>
<tr>
<td>1 : 2 : 8 to 9</td>
<td>1.0 MPa</td>
</tr>
</tbody>
</table>

3. On Site Delivery Verification:
   a. At delivery stage:
      i. Written confirmation that the materials delivered to Site is in accordance with the Approved sample submitted under sub-clause (1)(a);
      ii. Delivery notes for all material delivered to Site.
   b. Carry out and submit report on the following verifications for ready-mixed mortars upon delivery on Site. Prior to carrying out the verifications, inform the CM who may present to witness the verifications:
      i. Method:

<table>
<thead>
<tr>
<th>Verification Items</th>
<th>Method</th>
<th>Acceptance Standards</th>
</tr>
</thead>
</table>
### Delivery note | Document Check | Material information recorded in the delivery notes to be same as the material delivered.
---|---|---
Material and packaging | visual | To approved sample
Expiry date | Check information printed on packaging | Minimum 6 months from the date of delivery

**ii.** Frequency:

Carry out verification for one packaged bag per every delivery of ready-mixed mortar to Site under each delivery note submitted in sub-clause (3)(a).

c. Where any of the verifications fail to meet the acceptance standards, remove the delivery off Site.

### MAS3.M340.8  NON-SHRINK CEMENT MORTAR

1. Submission Requirements as MAS3.M305;
2. Non-structural use only;
3. 1:3 cement and sand;
4. With minimum amount of water to achieve a consistency that is suitable for completely filling up voids or making up fillets;
5. The mix shall contain a shrinkage reducing admixture to MAS3.M230;
6. Not applicable to non-shrink cement mortar as used in the panel wall partitions;
7. Where it may be in contact with the Approved panel wall partition system, it shall be compatible with the panel wall partition system;
8. As an alternative and subject to the CM's approval, pre-bagged non-shrink cement mortar with its volume control mechanism in compliance with Types A, B or C under Table 1 of ASTM C1107 - 99 may be proposed to be used, with particular attention to the following:
   a. Early age height change shall be within 0% to +4%; and
   b. Hardened grout or mortar height change shall be within 0% to +0.3%.

### MAS3.M350.8  FIRE RATED MORTAR

1. Submission Requirements as MAS3.M305;
2. An Approved proprietary fire rated mortar;
3. To BS 476:Part20:1987 or BS EN:1366:Part3:2009 with the test carried out and report prepared by a laboratory recognised by the Hong Kong Laboratory Accreditation Scheme; or
4. Accredited by a third party product conformity scheme such as CE Marking, FM Approvals, Underwriters Laboratories (UL), BM Trada or Certifire, etc..
WORKMANSHIP

MIXING MORTAR

MAS3.W010.8 GAUGE BOXES
Measure constituents by volume, using clean gauge boxes of sizes to suit the volumes required.

MAS3.W020.8 MIXING
Mix:
1. By mechanical mixer or where Approved, by hand on a clean, closeboarded platform;
2. Without overmixing mortars containing plasticizers;
3. Dry constituents before mixing with lime putty or water;
4. Using the minimum amount of water to achieve the required consistency.

MIX PROPORTIONS AND USES

MAS3.W110.8 USE OF PLASTICIZERS
Use strictly in accordance with the manufacturer's recommendations and adjust the mix proportions of the mortar accordingly.

MAS3.W120.8 LIMITS ON USE OF MIXED MORTAR
Use mortar within one hour of mixing and do not:
1. Use mortar after the initial set has taken place;
2. Reconstitute mortar.

MAS3.W130.8 SAND
The proportions given in this Worksection allow for the use of dry sand and an appropriate allowance must be made for bulking.

MAS3.W140.8 CEMENT MORTAR
Cement and sand, ratio 1 : 3.

MAS3.W150.8 CEMENT/LIME MORTAR FOR EXTERNAL WALLS

MAS3.W160.8 CEMENT/LIME MORTAR FOR INTERNAL WALLS
Cement, lime putty and sand, ratio 1 : 2 : 9.

MAS3.W170.8 CEMENT/LIME MORTAR FOR CHINESE TILING
MAS3.W180.8 **WATERPROOF CEMENT MORTAR**
1. 50kg of cement to 150kg of sand to 5kg of waterproofing water resisting admixture, or in such ratio as may be recommended by the admixture manufacturer;
2. Submit manufacturer’s written confirmation to declare that the waterproof cement mortar is safe for use for construction of components in contact with potable water.

MAS3.W190.8 **FIREBRICK MORTAR**
Either:
1. High alumina cement and aggregate mixed 1 : 2; or
2. Proprietary product used neat.

MAS3.W200.8 **TYPES OF MORTAR**
Use mortars as follows:
1. Cement mortar for:
   a. Work below damp proof course;
   b. Chimney stacks above roof level;
   c. Brickwork of 70 and 105 mm thickness;
   d. Concrete blockwork not exceeding 150 mm thick;
   e. Load bearing walls;
   f. Brickwork in engineering bricks;
   g. Pointing where directed by the CM and where the bedding mortar is cement mortar;
2. Firebrick mortar for firebrick work;
3. Cement/lime mortar in all other cases;
4. Ready-to-use mortar: use in situations (1) and (3) above.

GENERAL METALWORK

DESIGN

FALL ARREST SYSTEM

MET1.D010.8 CONTRACTOR'S RESPONSIBILITY

1. Design and install the fall arrest system specified in this Worksection, employing either:
   a. The fall arrest system manufacturer; or
   b. An installation sub-contractor approved by the fall arrest system manufacturer.

2. Bear full responsibility for the design of the fall arrest system notwithstanding that the design or details of the fall arrest system are accepted by the CM.

MET1.D020.8 GENERAL DESCRIPTION

1. The fall arrest system shall be designed to safely arrest personnel who accidentally fall at their work place in accordance with the following:
   a. The system shall be suitable for 2-person (with a design load of 100 kg per person) operation;
   b. The system shall allow the users to attach or detach themselves at any point along the system. The system shall take into consideration the features, installations and changes in level in the work zone so that during system attachment, the users shall be able to walk along and reach every part of the work zone without detaching themselves from the system and the shuttle shall glide along the cable and any intermediate bracket or corner unit automatically unless protective railing or similar protective measures together with adequate warning is provided at the point of detachment;
   c. The fall arrest system shall be a proprietary system consisting of a stainless steel horizontally mounted life-line cable which serves as an attachment point for the travel restraint safety harnesses of the system and complete with all necessary components and accessories such as end clevis, tensioners, intermediate brackets, energy absorbers, corner units, end anchor, bolts and nuts;
   d. Each cable shall be mounted in accordance with the Drawings and Specification at a reachable height not lower than waist level on the external walls to cover the designated areas unless it is proven to be impractical for safety, security and / or technical reasons. The cable fixings shall be able to withstand force generated by any fall of the worker and shall ensure minimal dynamic friction to the cables. End unit tensioners shall be provided for the fall arrest system to ensure that the cables are maintained in the required positions and at working tension. A minimum of two (2) lanyard connectors with travel restraint safety harnesses shall be provided for each fall arrest system;
   e. The fall arrest system shall comply with the following standards or other EN standards whenever applicable:
      i. EN 795 Class C (system);
      ii. EN 354 (lanyard);
      iii. EN 355 (energy absorber);
iv. EN 361 (harness);
v. EN 364 (testing);
vi. BS 7883:2005 (Code of Practice for anchor device conforming to BS EN 795).
f. Each fall arrest system shall be installed so that the users are able to put on the travel restraint safety harnesses and attach to or detached from the system at the safety zone of the building or suitable protected area or the protected access / egress of the work zone. The system shall ensure that users are prevented from falling from any unprotected edges of the canopy, roof or the like by adopting suitably designed lanyard length;
g. Coordinate the fall arrest system with other building services to avoid clashes with the pipes, cables etc..

2. The design, materials, method of fabrication, assembly, erection, fastening, method of support and the like for the fall arrest system shall be in strict compliance with the manufacturer's recommendations. No additional equipment shall be used without written permission of the manufacturer;

3. Location and spacing of all anchor points shall be proposed by the system manufacturer. Fixing and supporting details shall be designed to be compatible with the waterproofing system at the location of fixing where appropriate;

4. Provide and mount an aluminium identification plate for each fall arrest system at a visible area at the access point of the fall arrest system. The identification plate shall record the following information:
   a. System reference number;
   b. Maximum number of person allowed;
   c. Maximum weight of person allowed;
   d. Maximum length of lanyard to be used;
   e. Commission date;
   f. Service due date.

5. Provide training courses as follows:
   a. One session of training course for 25 users upon completion of the installation;
   b. Another session of training course for 25 users within the Maintenance Period;
   c. Additional sessions of training course as instructed by the CM.

MET1.D030.8 MATERIALS AND WORKMANSHIP

1. Comply with the relevant provisions of Worksection MET1 in respect of all materials and workmanship;

2. All main body of the system components and accessories such as end clevis, tensioners, intermediate brackets, energy absorbers and corner units, bolts & nuts, anchors, screws, and other fixing shall be manufactured from stainless steel. Rivet shall not be allowed unless otherwise approved by the CM;

3. Install in accordance with Approved shop drawings. Lifeline systems shall be installed under the supervision and direction of the manufacturer's authorized and trained competent person employed by Contractor's specialist sub-contractor;

4. Install anchorage and fasteners to obtain the allowable working loads listed on the engineering data sheet and in accordance with this Specification;

5. For anchorage drilled into concrete, comply with the following:
a. Follow instructions of the anchorage system manufacturer;
b. Do not cut or damage reinforcement;
c. Clean drill hole to remove debris and contaminants;
d. Install anchorage at indicated locations and embedment depth;
e. When clearance and spacing of anchorage is not indicated on drawings, install at locations recommended by the manufacturer so as to obtain maximum working loads in accordance with the distances provided on the engineering data sheet.

MET1.D040.8 SUBMISSIONS
1. Submit original or certified true copy of certification to ISO 9001 for the fall arrest system manufacturer to CM;
2. Submit shop drawings with schedule of works, installation method, details and specifications of the relevant components for CM's approval prior to manufacturing the component parts of the fall arrest system in factory;
3. Submit for CM's record the design calculation and the layout plan of the fall arrest system, which shall be duly endorsed by the manufacturer's authorized and trained competent person employed by the Contractor's specialist sub-contractor. Attach with the submission an output of fall-simulation analysis (from manufacturer's approved programme) of each complete fall arrest system including system span, bracket spacing, quantity of intermediate bracket and corner unit etc. The fall-simulation analysis shall take into consideration of any obstacles beneath the work zone;
4. Submit training certificate of the manufacturer's authorized and trained competent person employed by the Contractor's specialist sub-contractor to the CM for approval prior to the installation.

MET1.D050.8 INSPECTION AND COMPLETION CERTIFICATES
1. The manufacturer's authorized and trained competent person shall inspect and make all final adjustments for proper operation when the lifeline system is installed and properly tensioned;
2. Arrange on site trial and make modification as may be necessary to demonstrate that the design and operation of the full system comply with the statutory requirements and the specification for acceptance by the CM prior to project completion;
3. Submit for CM's record the completion certificate signed by the manufacturer's authorized and trained competent person. The certificate shall record all information as shown on the identification plate of the fall arrest system.

MET1.D052.8 COMMISSIONING AND REPORT
1. Engage an independent qualified engineer (Registered Professional Engineer – RPE) to carry out load test to each individual end bracket. The RPE shall be of the relevant discipline and registered under the Engineers Registration Ordinance (Cap. 409);
2. Submit a commissioning and system checking report prepared and certified by the RPE that the installed system is safely installed and ready for operation.
MET1.D060.8 MAINTENANCE MANUALS

1. Provide CM with two hard copies and one electronic copy of the maintenance manual for the completed works. The manual shall include, but not be limited to, the following information:
   a. Name, address and telephone number of each firm and/or sub-contractor involved in the supply of materials, components, assembles and finishes;
   b. A clear and concise description of the construction method used to form the various areas of proposed design on the particular project;
   c. Copies of materials and components certification and test reports as required by this Specification;
   d. A method statement showing the means of access to all parts of the features and their safe loading;
   e. Recommendations for routine maintenance, cleaning, suitable cleaning agents and any lubrication/adjustments to the working parts;
   f. A full set of construction drawings, updated to include any changes that have been made up to the time of completion;
   g. The terms and conditions of any guarantees relating to the installed system.

2. The manuals shall be signed by the manufacturer's authorized and trained competent person employed by the Contractor's specialist sub-contractor to certify that all information contained therein is correct.

MET1.D070.8 INSPECTION DURING MAINTENANCE PERIOD

1. Provide inspection during Maintenance Period as follows:
   a. Conduct regular annual inspection of the fall arrest system and submit inspection reports to representative of Housing Authority confirming that all components of the system, lanyard and harness are in order and indicating clearly any parts or components that require repairs or replacement. The content of the report shall be approved by the CM and signed by the manufacturer's authorized and trained competent person employed by the Contractor's specialist sub-contractor;
   b. Provide safety check of the system as considered necessary by the CM and such inspection / checking shall be free of charge if the system is under normal use.

2. Bear all costs for making good the following defective design, material and workmanship which appear within the Maintenance Period for the fall arrest system including components of the personal safety kit:
   a. Any abnormal deterioration, discolouring, deformation, de-figuring, weathering of the work;
   b. Failure of operating parts to function normally;
   c. Structural failure due to pressures and forces up to specified limits;
   d. Deterioration of discoulouration of stainless steel finishes;
   e. Corrosion of any component materials.

MULTI-SENSORY MAP

MET1.D110.8 CONTRACTOR'S RESPONSIBILITY

1. Design and install multi-sensory map which shall fulfill the following objectives:
a. Be used as a map by the general public;
b. Be used as a tactile map by the visually impaired;
c. Be displayed in high contrasting colour and equipped with audible system for use by the visually impaired.

2. Before the commencement of the fabrication of the multi-sensory map, provide a letter from an organization of the visually impaired, the Hong Kong Society for the Blind confirming that the Braille shown in the shop drawings has been proof read and the design of the multi-sensory map is suitable for use by the visually impaired;

3. Make submission in accordance with MET1.D130;

4. Upon completion of the installation of the multi-sensory map and the testing and commissioning, provide a letter from the organization of the visually impaired confirming that the multi-sensory map has been properly installed on Site, the text and legend in Braille shown is accurate and the completed installation is ready for operation as per MET1.W655.

MET1.D120.8 GENERAL DESCRIPTION

1. Multi-sensory map shall show the following:
   a. Estate: the general layout of the estate and tactile guide paths leading from the main estate entrances to the domestic blocks, major estate facilities including welfare premises, community facilities, estate management office, major transport link etc. as shown on the Drawings;
   b. Commercial centre: the general layout of the commercial centre and tactile guide paths leading from the main entrances to lift zone, multi-sensory map and functional areas including information counter, public toilets at the main entrance floor etc. as shown on the Drawings.

2. Multi-sensory map shall comprise of the following:
   a. Tactile map of 2 mm thick stainless steel plate with aluminium top plate coated with automotive paint as tactile features and backed by a 5 mm thick stainless steel base plate. The tactile map shall be in high contrasting colour to assist persons with low vision to read the map;
   b. Stainless steel tactile symbols for staircases, ramps, lifts, escalators, main entrances, "You are here", tactile guide path etc. as shown on the Drawings;
   c. Text and legend in Chinese, English and Braille. Braille shall be of stainless steel and in Cantonese and English. The Chinese, English and other markings shall be silkscreen on colour coated aluminium and electric etched on stainless steel;
   d. An audio system that comprises a sound generator, a timer and loudspeakers. The audio system shall operate on 220V AC. The sound generator shall produce a musical homing signal and a pre-recorded clear vocal description of the routing and destination of the tactile guide path, using audio files in a memory card. An adjustable timer shall control the daily operating period of the system. The loudspeakers shall be of the suitable type, wattage and arrangement that provide the optimal audio performance. A fuse shall be provided to protect the electrical circuits;
   e. Vocal description of the routing and destination of the tactile guide paths in Cantonese and English activated by pressing the buttons, located at the underside of either the lower left or lower right corner of the multi-sensory map with one button for Cantonese and one button for English;
f. Stainless steel stand with stainless steel sign casing of galvanized mild steel frame and stainless steel tapping rail.

3. Tactile features, tactile symbols and Braille shall be firmly fixed to the stainless steel plate. No adhesive fixing and welding shall be allowed;

4. Sharp edges and corners shall be avoided;

5. The design of the multi-sensory map should take into account the envisaged use of persons with a disability and wheelchair users; including extra consideration in relation to access and manoeuvring space;

6. The multi-sensory map shall be inclined at 30º to 45º from the vertical and the lower edge of the multi-sensory map shall be at 900 mm to 1200 mm above the finished floor level;

7. The orientation of the multi-sensory map shall match with the orientation of the estate when the map is viewed;

8. The entire multi-sensory map shall be electrically earthed in accordance with the safety requirements stipulated in Electricity Ordinance;

9. Allow access panel at a convenient location for maintenance operation and repair services to the audible system.

**MET1.D130.8 SUBMISSIONS**

1. Submit the following for the CM's approval before the commencement of the fabrication of the multi-sensory map:
   
a. Shop drawings of the multi-sensory map including tactile map for the general layout shown on the Drawings in sub-clause 1 of MET1.D120, text, legend, colours of the map, audible system, stand etc.;

b. Schematic diagrams for the audible system;

c. Script of the audible messages in both Chinese and English;

d. Operation manuals for audible system, etc.;

e. Installation method and builder's works requirement;

f. Letter as specified in sub-clause (2) of MET1.D110.

2. When the installation is complete, submit
   
a. Operation and maintenance manual;

b. Letter as specified in sub-clause (4) of MET1.D110.

**COURT ENTRANCE METAL GATE FOR SSF**

**MET1.D210.8 DESIGN RESPONSIBILITY**

Appoint a Design Certifying Consultant for the design of the court entrance metal gate. Design the court entrance metal gate in accordance with the requirements of Contract Drawings, this Worksection and the relevant clauses of MET1.

**MET1.D220.8 GATE OPERATION**

Ensure the operation of gate is in a smooth and quiet manner.
MET1.D230.8  **GATE COLOUR AND FINISH**

Submit proposed colour and finish of gate to CM for approval. Treat and finish all exposed steel and galvanized steel surfaces, including portions of the component parts forming moveable joints, pre-drilled screw holes, hinges and handles as specified in Worksection MET1.

MET1.D240.8  **SHOP DRAWINGS**

Submit shop drawings for CM's approval, prior to the commencement of ordering of material. Drawings must include:

1. Fixing details of entrance gate to walls/ posts and floors;
2. Positions of anchor bolts;
3. Details of hinge, roller (with brand name if applicable), completed with lubricated bearings, threaded hangers, connection bars etc. including materials specification and dimension;
4. Welding details of components and parts;
5. Details and sections to show sizes, profiles and fixings of assembling and concealed parts;
6. Fixing details of equipotential bonding connection for the gateset;
7. The Design Certifying Consultant referred to in MET.D210 shall certify and sign all shop drawings and technical substantiation including structural calculations.
MATERIALS

IRON AND STEEL

MET1.M010.8 STRUCTURAL STEEL
As specified in Worksection STR1.

MET1.M020.8 GREY CAST IRON
To BS 1452:1990, Grade 150.

MET1.M030.8 GALVANIZED PLAIN STEEL SHEET AND COIL
1. Hot dip zinc coated to BS EN 10142:2000; or
2. Hot dip coated to BS EN 10346:2009; or

MET1.M040.8 GALVANIZED STEEL TUBING
To BS 1387:1985.

MET1.M050.8 STRUCTURAL STAINLESS STEEL TUBES
To BS 6323:Parts 1 and 8:1982, of the 18/9 chromium nickel group with surface finish as specified from the following:
1. Mill finish: No. 2B;
2. Polished finish: No. 4.

MET1.M060.A STAINLESS STEEL PLATE, SHEET AND STRIP
1. Grade:
   a. as shown below or scheduled on Drawings;
   b. Grade 304: To BS EN 10088-1:2005 Number 1.4301 or ASTM A959-09 S30400 or JIS G4304:2005 SUS304;
   c. Grade 316: To BS EN 10088-1:2005 Number 1.4436 or ASTM A959-09 S31600 or JIS G4304:2005 SUS316.
2. Use stainless steel Grade 304 for general usage including external areas. Use stainless steel Grade 316 in public latrines, seacoast, industrial and heavily polluted areas unless stated otherwise;
3. Thickness: as shown or scheduled on drawings;
4. Finish:
   a. To BS EN 10095 or approved equivalent;
   b. As shown or scheduled on Drawings unless specified from the following:
      i. Cold rolled: No. 2B (mill finish);
      ii. Cold rolled special finishes: No. 2J (hairline / satin finish), No. 2P (mirror finish).
5. At delivery stage, submit the following documents:
a. Manufacturer's certificate:

Provide the original or a certified true copy of the manufacturer's certificate of compliance with chemical analysis for each consignment delivered to Site. The certificate shall:

i. State the standard that the material complies with;

ii. Show that the material has been tested and found to comply with the chemical composition specifically required under the standard quoted in 5(a) above.

b. Written confirmation that the materials delivered to Site conform with the requirements stated at sub-clause (1) above;

c. Delivery notes when delivered to Site.

6. On Site Delivery Verification (for grade 316 stainless steel items):

a. Verification required at delivery stage for the following items:

i. Railing at parapet;

ii. Door leaf, frame and hinges at main entrances to domestic blocks, external E&M rooms;

iii. Stainless steel steps inside potable water tanks;

iv. As directed by the CM.

b. Chemical Drop Test:

Carry out and submit report on the following verifications for items stated in sub-clause 5(a) using an Approved proprietary chemical test kit to distinguish the grade of stainless steel. Prior to carrying out the verifications, inform the CM who may present to witness the verifications:

i. Method:

<table>
<thead>
<tr>
<th>Verification Items</th>
<th>Method</th>
<th>Acceptance Standards</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Railing at parapet;</td>
<td>Proprietary Chemical drop test (e.g. single drop of solution to distinguish between low and high molybdenum content)</td>
<td>Change of colour at the tested spot matching the colour indicated at the test chemical’s instruction / catalogue</td>
</tr>
<tr>
<td>- Door leaf, frame &amp; hinges at main entrances to domestic blocks, external E&amp;M Rooms;</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- S/S steps inside potable water tanks</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

ii. Frequency:

<table>
<thead>
<tr>
<th>Items</th>
<th>Sampling Frequency</th>
<th>Representative Batch</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>[the batch of material delivered to Site under one Delivery Note]</td>
</tr>
</tbody>
</table>
- Railing at parapet;  
- Door leaf, frame & hinges at main entrances to domestic blocks, external E&M Rooms;  
- S/S steps inside potable water tanks

<table>
<thead>
<tr>
<th>Item</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>One test sample per item per batch</td>
<td>Same batch of material delivered to Site under one Delivery Note</td>
</tr>
</tbody>
</table>

c. When any of the verifications fail to meet the acceptance standards, either:  
i. Remove the representative batch off Site; or  
ii. When agreed by the CM, carry out verification using an Approved test method for identification of the grade of stainless steel on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.

**MET1.M070.8**  
**SLOTTED STEEL ANGLE**  
Self-finished to BS 4345:1968. Fittings to be cadmium plated.

**MET1.M080.8**  
**GALVANIZED STEEL INSERT CHANNELS FOR CONCRETE**  
An Approved type with expanded polystyrene temporary filler and matching sliding fixing device.

**MET1.M090.8**  
**STEEL WIRE MESH**  
1. Hot-dip galvanized and welded to form a square or oblong mesh to BS EN 10223-4:2012;  
2. Wire mesh for rat guard to be grade 304 stainless steel.

**NON-FERROUS METALS**

**MET1.M110.8**  
**ALUMINIUM ALLOY PLATE, SHEET AND STRIP**  
Of the specified designation to BS 1470:1987.

**MET1.M120.8**  
**ALUMINIUM ALLOY SECTIONS**  
1. Bars, extruded tube sections and hollow sections: to BS 1474:1987, alloy designation 6063;  

**MET1.M130.8**  
**STRUCTURAL ALUMINIUM SECTIONS**  
To BS 1161:1977.

**MET1.M140.8**  
**BRASS RODS AND SECTIONS**  
To BS 2874:1986, designation CZ106, condition M.
FIXINGS FOR METALWORK

MET1.M210.8 GENERAL
Ensure fixings are of the same material to which they are to be fixed.

MET1.M220.8 STUD ANCHORS AND FIXING BOLTS
Approved proprietary expansion bolts and used in accordance with the manufacturer's recommendations.

MET1.M230.8 ADHESIVE FOR BONDING METAL TO WOOD AND METAL TO METAL COMBINATIONS
1. In compliance with the prescribed limits of VOC content as set out in the Air Pollution Control (Volatile Organic compounds) Regulation;

ARTICLES TO BE COATED

MET1.M310.8 METAL ARTICLES TO BE COATED
Ensure metal articles are designed in accordance with the recommendations and relevant part of BS 4479 prior to coating.

EQUIPOTENTIAL BONDING CONNECTION

MET1.M410.8 EARTHING LUG
1. Unless otherwise specified on Drawings, provide earthing lug(s) to extraneous conducive parts including the following which are not exhaustive:
   a. Burglar bars;
   b. Grilles;
   c. Railing;
   d. Handrail;
   e. Cat ladder.
2. Earthing lug shall be of minimum 1.5 mm thick steel plates electroplated zinc galvanized to BS EN10346:2009, Coating Designation Z200 and 14 μm. The cut edges of earthing lug shall be painted with zinc-rich primer to BS 4652:1995.

MULTI-SENSORY MAP

MET1.M510.8 STAINLESS STEEL
To BS EN 10095:1999:
1. Grade 316 for in accordance with MET1.M060.

MET1.M520.8 ALUMINIUM ALLOY
Alloy designation 6061.
WORKMANSHIP

SAMPLES AND PROTOTYPES

MET1.W010.8 SAMPLES
Submit samples as Worksection PRE.B9.

MET1.W020.8 PROTOTYPE
Obtain Approval of prototype before starting fabrication of repetitive components.

FABRICATION

MET1.W110.8 GENERALLY
During fabrication:
1. Protect all surfaces that will be visible in the finished work;
2. Mitre junctions of identical sections;
3. Assemble moving parts to move freely and without binding;
4. Remove all burrs and sharp arrises which will be visible after fixing or be a hazard to the user.

MET1.W120.8 SLOTTED STEEL ANGLE
Cut square and securely bolt together using nuts, bolts and washers and angle braces as necessary.

MET1.W130.8 FIXING STEEL MESH
Fix at 75 mm centres to:
1. Steel framing by:
   a. Tack welding; or
   b. Tying with 2 mm galvanized tying wire.
2. Wood framing with 1.8 x 25 mm galvanized staples.

MET1.W140.8 CASTINGS
Sound, free from bubbles, cracks or other defects and to include the construction of patterns and moulds as required.

WELDING AND BRAZING

MET1.W210.8 WELDING GENERALLY
1. Remove grease, dirt, moisture, oxide and scale from the edges to be welded;
2. Use clamps or jigs, where practical, to ensure accuracy;
3. Fully fuse joints throughout with no holes, pores or cracks;
4. Protect self-finished surfaces from weld splutter;
5. Grind butt welds, visible in completed work, smooth and flush. Grind smooth fillet welds, if required;

**MET1.W220.8 ALUMINIUM WELDING**

1. Tungsten Inert Gas (TIG) welding of aluminium to BS 3019:Part 1:1984;

**MET1.W230.8 STAINLESS STEEL WELDING**

**MET1.W240.8 WELDING OF GALVANIZED OR ZINC SPRAYED COATED METALWORK**

1. Submit proposals for Approval to carry out welding in continuous runs;
2. Allow for making good damage to zinc sprayed coating or galvanizing and for treatment of welds with two coats of zinc-rich priming paint to BS 4652:1995.

**MET1.W250.8 BRAZING**

**MET1.W260.8 JOINTING GALVANIZED STEEL TUBING**

Carefully notch, fit and weld galvanized steel tubing to produce accurate joints. Grind smooth and treat with two coats of zinc rich priming paint to BS 4652:1995, Type 2.

**FINISHES TO IRON AND STEEL**

**MET1.W310.8 ELECTROPLATED ZINC COATING**

To BS 1706:1990, Class A and 0.025 mm thick.

**MET1.W320.8 ZINC SPRAYED COATING**

To BS 2569:Part 1:1964, nominal thickness 0.2 mm, unless otherwise specified.

**MET1.W330.8 HOT DIP GALVANIZING**

1. To BS EN ISO 1461:2009;
2. The minimum coating thickness:

<table>
<thead>
<tr>
<th>Article Thickness</th>
<th>Minimum Mean Coating Thickness</th>
</tr>
</thead>
<tbody>
<tr>
<td>&gt;6 mm</td>
<td>85 μm</td>
</tr>
<tr>
<td>&gt;3 mm to ≤6 mm</td>
<td>70 μm</td>
</tr>
<tr>
<td>≥1.5 mm to ≤3 mm</td>
<td>55 μm</td>
</tr>
<tr>
<td>&lt;1.5 mm</td>
<td>45 μm</td>
</tr>
</tbody>
</table>

3. Unless Approved, all components are to be galvanized after fabrication and welding;
4. The hot dip galvanizing is to be carried out by galvanizers with ISO 9001 certification. Submit the name of galvanizer for Approval;
5. Submit original invoice/delivery note and galvanizing certification for each delivery. These documents shall include the following information:
   a. Project title/number;
   b. Name of galvanizer;
   c. Types and dimensions of articles;
   d. Quantities.

6. Attach a durable identification tape or tag to each batch of galvanized articles indicating the project title, galvanizing certification number and name of galvanizer;

7. For galvanized steel items that are to be painted, no passivation shall be carried out.

MET1.W350.8 DAMAGE TO ZINC COATINGS AND GALVANIZING
Make good damage and treat cut ends of galvanized sections with two coats of zinc-rich priming paint to BS 4652:1995.

MET1.W360.8 CHROMIUM PLATING
To BS 1224:1970:
1. Service condition number: 3 (Severe);
2. Surface finish: as specified from the following:
   a. Bright finish;
   b. Dull finish;
   c. Satin finish.

FINISHES TO ALUMINIUM

MET1.W410.8 NATURAL FINISH
As specified from the following:
1. Mill finish;
2. Polished finish;
3. Polished finish and treated with a protective lacquer.

MET1.W420.8 NATURAL ANODISED FINISH
To BS EN 12373-1:2001:
1. Thickness grade: Class15 for interior work;
2. Thickness grade: Class20 for exterior work;
3. Surface texture: as specified from the following:
   a. Matt finish;
   b. Satin finish;
   c. Bright finish;
   d. Polished finish.

MET1.W430.8 COLOUR ANODISED FINISH
To BS 3987:1991,
1. Average thickness of coating not less than 25 microns;
2. Surface finish: as specified from the following:
   a. Matt finish;
   b. Satin finish;
   c. Bright finish;
   d. Polished finish.

MET1.W440.8  PROPRIETARY ANODISED FINISH
Approved proprietary anodic film finish of thickness and colour as specified.

PROTECTION OF METALWORK

MET1.W510.8  PROTECTION OF METALWORK FINISHES
1. Protect all decorative finishes to metalwork against damp, scratching and other damage;
2. Apply a strippable coating or masking tape to all stainless steel, anodised aluminium or similar surfaces and only remove as and when necessary for construction or prior to inspection for handover;
3. Remove surplus adhesive from metalwork with non-damaging solvent and wash down.

MET1.W520.8  AVOIDANCE OF ALUMINIUM IN CONTACT WITH OTHER MATERIALS
Avoid contact in the completed work between aluminium and concrete, mortar plaster or similar materials.

MET1.W530.8  PROTECTION OF ALUMINIUM IN CONTACT WITH OTHER MATERIALS
1. Ensure surfaces are clean, dry and thoroughly degreased with an Approved organic solvent, roughened if necessary by mechanical means prior to application to ensure paint adhesion;
2. Protect aluminium surfaces in contact with concrete, mortar plaster or similar materials with one coat of bituminous paint or Approved tape;
3. Do not apply bituminous paint over painted or etch primed surfaces.

MET1.W540.8  AVOIDING BI-METALLIC CONTACT
Avoid contact in the completed work between the following metals:
1. Aluminium alloys and copper alloys, nickel, lead or stainless steel;
2. Iron and steel and copper alloys;
3. Zinc (including galvanizing) and copper alloys or nickel.

MET1.W550.8  PROTECTION OF BI-METALLIC CORROSION
1. Ensure surfaces are clean, dry and thoroughly degreased with an Approved organic solvent, roughened if necessary by mechanical means prior to application to ensure paint adhesion;
2. Protect metal to metal contact as specified in MET1.W540 by coating the contact surface with bituminous paint, protective tape or other Approved means;
3. Do not apply bituminous paint over painted or etch primed surfaces.

MET1.W560.8 SITE STORAGE
Store metalwork off a levelled, well-drained and maintained hard-standing ground and in a manner which will not result in damage, deformation or contamination.

EQUIPOTENTIAL BONDING

MET1.W610.8 EQUIPOTENTIAL BONDING
1. Unless otherwise specified on Drawings, provide equipotential bonding connection for each extraneous conducive parts by:
   a. Weld one end of 1.5 mm thick galvanised mild steel earthing lug(s) to the extraneous conducive parts; and
   b. Provide a 5 mm diameter hole at the other end for connection of the bonding conductor by the Nominated Sub-contractor for Electrical Installation;
   c. Ensure that full electrical continuity is maintained between all the component elements of the metallic fixture.
2. As COM2.W465 (6).

MULTI-SENSORY MAP

MET1.W655.8 TESTING AND COMMISSIONING
1. Upon completion of the installation of the multi-sensory map, carry out a testing and commissioning of the multi-sensory map in the presence of the organization of the visually impaired to ensure the multi-sensory map is properly installed and ready for operation;
2. Rectify defects identified by the organization of the visually impaired;
3. Provide a letter as specified in sub-clause (3) of MET1.D110.

MET1.W660.8 INSTRUCTION MANUALS
Provide two copies of as-built drawings and instruction manuals giving detailed operation and maintenance instructions.

COMPLETION

MET1.W710.8 ON COMPLETION
Lubricate and adjust moving components and leave in perfect working order on completion.

PLU1 WATER SUPPLY

GENERAL

PLU1.G010.8 SCOPE OF THE WORK

1. The works to be carried out under this Worksection shall include the complete plumbing installation for fresh and flush water supply, rainwater harvesting and fire services excepting the works undertaken by Nominated Sub-contractors all as shown on the Drawings and detailed in this Worksection including:

   a. Fresh and flush water supply installations commencing from the government mains at the entry of site boundary to and including individual sanitary fixtures, gas water heaters and taps. Part of the plumbing installation inside pump room, including the pumpsets, ball float valves etc., connection point inside the pump room will be carried out by the Nominated Sub-contractor for fire services and water pump installation where shown on the Drawings. The installation of gas water heater, if applicable, will be carried out by a separate gas water heater contractor. Pre-installed fresh water supply pipework, which will not be connected to the fresh water supply upon completion of work, will be installed as specified or as shown on the drawings;

   b. Rainwater harvesting pipework installation commencing from outlets of the rainwater storage tank to individual irrigation water points. Part of the rainwater harvesting installation inside pump room, including the pumpsets, ball float valves, filter, chlorination system, pipework etc., will be carried out by the Nominated Sub-contractor for fire services and water pump installation where shown on the Drawings;

   c. Fire services water pipework installation commencing from the government mains at the entry of the site boundary including the up-feed pipes to the fire services roof / transfer tank and, if applicable, down-feed pipes to the street fire hydrants. Part of the plumbing installation inside pump room, including the pumpsets, ball float valves etc., connection point inside the pump room will be carried out by the Nominated Sub-contractor for fire services and water pump installation where shown on the Drawings;

   d. Extend and connect the fresh, flush and fire services water pipes to the government mains outside the Site boundary, if applicable. Where shown in the Drawings, connection shall be made to existing in-service supply mains of adjacent Housing Authority estate instead of government mains.

2. The complete installation shall mean, not only the major items of equipment and apparatus conveyed in this Worksection, but all the incidental sundry components necessary for the complete execution of the works and for the proper operation of the installation with their labour charges, whether or not these supply components are mentioned in detail in the tender document;

3. Refer to Worksection PLU2 for the requirements on sanitary fixtures / appliances installation.
PLU1.G012.A  APPROVED CONTRACTOR FOR FRESH AND FLUSH WATER SUPPLY INSTALLATIONS

1. Employ a contractor under the Development Bureau’s List of Approved Suppliers of Materials and Specialist Contractors for Public Works, Plumbing Installation Category (PI List), and an associated Licensed Plumber (LP) as approved by the Water Authority, to carry out all fresh and flush water supply installations commencing from the government mains at the entry of site boundary to and including individual sanitary fixtures, gas water heaters and taps required under the Contract as described in PLU1.G010 (1)(a);

2. The plumbing installation sub-contractor employed under sub-clause (1) shall also carry out the above-ground drainage works required under the Contract;

3. Before employment of the plumbing installation sub-contractor and the associated LP in sub-clause (1), details of the plumbing installation sub-contractor and the associated LP, including the following, shall be submitted to the CM for approval:
   a. Plumbing installation sub-contractor: The certification of incorporation and its declaration of current cumulative workload in terms of number of flats under construction in hand;
   b. The LP: Name, plumber licence number, level of English proficiency (as described in PLU1.W110 (2)) and his declaration of current cumulative workload in terms of number of flats under construction in hand.

4. The plumbing installation sub-contractor and the associated LP in sub-clause (1) are allowed to undertake this Contract, provided that their respective current cumulative workload in hand plus their workload of this Contract does not exceed the following workload capping limit, in terms of number of flats under construction:
   a. Plumbing installation sub-contractor: 17,000;
   b. The LP: 8,500.

5. The workload under this Contract will be added to the current cumulative workload of the plumbing installation sub-contractor and the associated LP upon the CM’s approval as per sub-clause (3) and released upon practical completion of this Contract.

PLU1.G020.A  REGULATIONS AND STANDARDS

1. Comply with all statutory regulations together with any revisions or amendments made thereto. The following regulations and standards are particularly relevant:
   a. The Waterworks Ordinance and its Regulations;
   b. The Fire Services Ordinance and its Regulations;
   c. The Noise Control Ordinance;
   d. WSD Circular Letters issued by the Water Authority;
   e. Technical Requirements for Plumbing Works in Buildings issued by the Water Authority;
   f. Codes of Practice for Minimum Fire Services Installations and Equipment and Inspection, Testing and Maintenance of Installations and Equipment and Circular Letters issued by the Fire Services Department;
   g. Factories and Industrial Undertakings (Confined Spaces) Regulation;
   h. Where applicable, relevant sections of appropriate international standards on materials and workmanship as listed in PLU1.APPEND1.

PLU1.G030.A  PRECEDENCE

In case of conflict between the requirements among the publications referred to PLU1.G020, interpretation shall be in accordance with the following order of precedence unless otherwise directed by the Contract Manager:

1. Ordinances and Regulations, Laws of Hong Kong;
2. This Specification and/or the Drawings;
3. International standards.
MATERIALS

GENERAL

PLU1.M010.B SUBMISSION OF DOCUMENTS
1. This clause provides the general submission requirements for materials specified in PLU1 in addition to the requirements given in the individual clauses. Unless otherwise specified, comply with the submission requirements detailed in this clause in the submission of materials to the CM for approval;
2. Submit documents substantiating compliance with the requirements of the Water Authority:
a. For plumbing materials to be reported in Form WWO 1149, submit General Acceptance Letter issued by the Water Authority;
b. For plumbing materials not required to be reported in Form WWO 1149, submit documents as follows:
i. Certified true copy of the test reports issued by the accredited laboratory accepted by the Water Authority showing full compliance with the requirements of the Water Authority; or
ii. Copy of Certificate issued by Water Regulations Advisory Scheme of UK (WRAS) for testing in compliance with the relevant British Standard as listed on WSD webpage.
c. The QCM shall verify and confirm the validity and authenticity of the approval obtained from the Water Authority and / or the WRAS Certificate as appropriate.
3. For non-metallic components in contact with water intended for human consumption, submit test reports or test certificates to demonstrate compliance with the relevant requirements in BS 6920 as required by the Water Authority;
4. For materials where specified in PLU1 to be low metal leaching rate metallic plumbing products under the GA* Scheme of WSD, submit certified true copy of test reports to demonstrate compliance with AS/NZS 4020 as accepted by the Water Authority for joining the above Scheme;
5. Submission of Form WWO 1149 and the subsequent updating shall be made as soon as the proposed materials, or proposed changes of approved materials, are approved by the CM and before placement of order for such materials. All applications and forms for submission to the Water Authority shall be submitted to the CM for comment before submission and record after approval;
6. Test certificates and reports shall be issued by laboratories that comply with PRE.B9.570 and accepted by the Water Authority.

PIPES, FITTINGS AND JOINTS

PLU1.M110.A GENERAL
1. All pipes and fittings shall:
a. Conform to this Specification. Alternative materials may be used if approved by the CM;
b. Be constructed of materials suitable for the required working and test pressures and temperatures of the fluid carried;
c. Be capable of withstanding system working pressure and maximum static pressure that may arise upon failure of the associated pressure reducing devices;
d. Be of standard products. Do not use on-site fabricated and locally manufactured pipes and fittings except specified elsewhere or where shown on the Drawings or approved by the CM;

e. Comply with the requirement of the Water Authority for the intended application;

f. Be taken with all necessary precautions to avoid surface damage or contamination during shipping, handling, storage and fabrication;

g. Be provided with protective wrapping, including the pipe ends;

h. Comply with BS 6920 for non-metallic components in contact with water intended for human consumption.

2. The pipes, pipe fittings and jointing materials for fresh water application including soldering and brazing alloys for fresh water application shall comply with the following requirements:

a. Submission Requirements:
   At sample submission and approval stage, submit a sample of the proposed material for the CM's approval together with all the following substantiation for the CM's information:
   i. Catalogue, brand name / model name and job reference;
   ii. Name, address and contact person of the local supplier;
   iii. Name, address and contact person of the manufacturer;
   iv. Confirmation of compliance with statutory requirements in writing jointly signed by the Building Services Engineer of the Contractor and the LP;
   v. Other specified submission requirements for the materials.

b. On Site Delivery Verification:
   i. At delivery stage, submit the following documents for the CM’s information:
      - Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (2)(a) above;
      - Original or certified true copy of the Certificate of Origin and batch number for every batch of delivery with one batch being the material quantity covered under each delivery note; and
      - Delivery notes for material delivered to Site
   ii. For those materials with BSI Kitemark or possessing two stars status under WSD’s “General Acceptance Plus” (GA+) Scheme, the Certificate of Origin shall also indicate that they are manufactured from the factory under the corresponding product certification scheme;
   iii. Carry out and submit report on the material verification upon delivery to Site as applicable. Prior to carrying out the verifications, inform the CM or his representatives who may be present to witness the verifications.

3. All pipes and fittings shall be acknowledged by the Water Authority with permission given for proceeding with the approved plumbing works before installation;

4. Sample board:
   a. Provide a sample board to display samples of pipes, fittings and jointing materials and accessories to be used in the plumbing installation and listed in the Form WWO 1149 submitted to and approved by the Water Authority. The following items shall be included in the sample board as a minimum:
      i. Pipework, fitting and their support complete with fixing accessories;
      ii. Soldering and brazing alloys if used.
b. The sample board is to be kept by the CM on Site together with associated relevant certificates / test reports / catalogues / supporting documents upon submission of Form WWO 1149 to the Water Authority;

c. The sample board shall comply with the requirements of the Water Authority. Each sample, with clear numbering and labelling, shall be firmly fixed onto a rigid wooden or metal board. A list shall also be affixed on the sample board to show the item description, make and brand, country of origin and locations of installation;

d. Replace samples and relevant certificates / test reports / catalogues / supporting documents whenever amendment to Form WWO 1149 is made and approved by the Water Authority.

PLU1.M120.A COPPER PIPES

1. Be of seamless drawn copper tubes manufactured to BS EN 1057 with nominal wall thickness as below:

<table>
<thead>
<tr>
<th>Nominal Outside Diameter (mm)</th>
<th>Nominal Wall Thickness (mm)</th>
<th>Hardness / Temper</th>
</tr>
</thead>
<tbody>

</tr>
</tbody>
</table>

Note: HH - Half Hard R250
      HD - Hard Drawn R290

2. Copper pipe shall possess the Kitemark Certificate or Kitemark Licence to BS EN 1057 issued by the British Standards Institution or two stars status under WSD’s GA+ Scheme;

3. At sample submission and approval stage, submit a copy of the Kitemark Certificate or Kitemark Licence together with the associated test report demonstrating compliance with BS EN 1057, all issued by the British Standards Institution; or provide documentation to demonstrate the possessing for two stars status under WSD’s GA+ Scheme; for the CM’s information;

4. Take into account temper conditions after solder / brazed jointing or heat bending in determining their pressure withstanding capability;

5. Provide pipe markings in accordance with tube manufacturing standard BS EN 1057;

6. Copper pipes for cold water supply inside domestic flats shall be completed with factory applied plain polyethylene sheath to BS 3412. Copper pipes for cold water supply at external areas and common areas, including corridors, lobbies and plant rooms, shall be bare and without paint finishes;

7. Copper pipes for hot water supply inside and outside domestic flats shall be completed with factory applied castellated polyethylene sheath comply with BS 3412 and suitable for use up to 80°C;

8. If brazing or soldering alloy is used in the connection between water pipes:
   a. At sample submission and approval stage, submit supporting documents of brazing alloy and soldering alloy as per PLU1.M150 (1) and PLU1.M160 (1);
b. Soldering alloys with lead and brazing alloys with cadmium are not permitted in installations for water for human consumption;

c. Set up mock-up for internal and external brazing and soldering joint including those at external wall at the sample wing and sample flats as required under PRE.B4.080 and in fabrication workshop. Approved mock up jointing shall serve as benchmark standard of workmanship for plumbing installation;

d. At delivery stage, implement quarantine material verification as per PRE.B6.APPEND2;

e. Implement stringent sub-contractor supervision and on-site monitoring and testing to ensure that all workers shall use only brazing and soldering alloys approved by the Water Authority for jointing copper pipes according to the Approved Sub-contractors Management Plan for plumbing installation as per PRE.B6.APPEND2;

f. Declare that only the Water Authority approved brazing and soldering alloys are used on completion of the plumbing works and before cleansing and disinfection of the plumbing installation.

9. On Site Delivery Verification:

a. Further to the submission requirements at delivery stage in PLU1.M110 (2)(b), carry out and submit report on the following verifications as appropriate for material upon delivery on Site. Prior to carrying out the verifications, inform the CM or his representatives who may be present to witness the verifications:

i. Method:

<table>

</tr>
</tbody>
</table>

ii. Frequency:

Carry out verification for one sample per every delivery of material to Site under each delivery note. A representative batch means the material delivered to Site under the same delivery note.

b. Where any of the verifications fail to meet the acceptance standards, either:

i. Remove the representative batch off Site; or

ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be granted.
c. Observe and comply with the requirements of verification test for copper pipes delivered to site under PLU1.T094.

PLU1.M130.B COPPER PIPE FITTINGS

1. Copper and copper alloy fittings such as end feed capillary, integral solder capillary and compression type bushes, reducers, bends and tees: comply with BS EN 1254-1, 2, 4 & 5 or equivalent standard;

2. All copper and copper alloy fittings shall possess the Kitemark Certificate or Kitemark Licence to BS EN 1254-1, 2, 4 & 5 or equivalent standard issued by the British Standards Institution or two stars status under WSD’s GA+ Scheme. At sample submission and approval stage, submit a copy of the Kitemark Certificate or Kitemark Licence, together with the associated test report demonstrating compliance with BS EN 1254-1, 2, 4 & 5 or equivalent standard, all issued by the British Standards Institution; or provide documentation to demonstrate possessing two stars status under WSD’s GA+ Scheme; for the CM’s information;

3. For compression type fittings used for hot water pipework, submit type test reports issued by laboratories that comply with PRE.B9.570 for proving their suitability for use at a pressure (working and / or maximum static pressure that may arise upon failure of the associated pressure reducing devices) above that allowed at 80ºC in BS EN 1254-2 or equivalent standard by the following tests:
   a. Temperature cycling test of a pipe / fitting assembly of the compression type fittings to be carried out by alternately circulating water of 80ºC and 15ºC through it and pressurizing the assembly to the working or maximum static pressure, whichever is higher, for 2 minutes after it reaches 80ºC and 15ºC respectively in each cycle. A total of 400 cycles of test shall be performed;
   b. Pressure test of the pipe / fitting assembly to be carried out after the temperature cycling test at 1.5 times the working or maximum static pressure, whichever is higher, for 24 hours with its temperature maintained at 80ºC throughout the 24-hour period;
   c. The compression type fittings are to be regarded as capable of withstanding the working and maximum static pressure that may arise upon failure of the associated pressure reducing devices at 80ºC if no sign of deformation of the fittings and water leakage from the pipe / fitting assembly are observed / detected throughout the tests as mentioned in sub-clauses (3)(a) and (3)(b) above.

4. Provide written confirmation from the manufacturer on suitability of the compression type fittings for use with hot water pipework for application at 80ºC under the working and maximum static pressure at sample submission and approval stage;

5. Subject to sub-clause (7), use compression type fittings or solder or solder / brazed capillary fittings for pipe sizes up to and including 54 mm;

6. Subject to sub-clause (7), use brazed type bolted flange joints to and comply with BS EN 1092-3 or equivalent standard;

7. Unless otherwise specified or shown on the Drawings or approved by the CM, use the following types of joints and fittings:

<table>
<thead>
<tr>
<th>Application</th>
<th>Copper Pipe Size</th>
<th>Joint / Fitting</th>
</tr>
</thead>
<tbody>
<tr>

8. Use dielectric fittings or epoxy coated flange with gasket for connecting copper pipe to pipes and fittings made of other metals in order to prevent direct contact with different metals;

9. On Site Delivery Verification:

a. Further to the submission requirements at delivery stage in **PLU1.M110 (2)(b)**, carry out and submit report on the following verifications as appropriate for material upon delivery on Site. Prior to carrying out the verifications, inform the CM or his representatives who may be present to witness the verifications:

   i. Method:

   | Dimension Check | By Measurement | As Specified |

   ii. Frequency:

   Carry out verification for one sample per each type per every delivery of material to Site under each delivery note. A representative batch means the material of the same type delivered to Site under the same delivery note.

b. Where any of the verifications fail to meet the acceptance standards, either:

   i. Remove the representative batch off Site; or

   ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be granted.
c. When integral solder capillary copper pipe fittings are used, observe and comply with the requirements of verification test for solder in the pipe fittings delivered to site under PLU1.T095.

PLU1.M140.8  PREFORMED POLYETHYLENE SHEATHS FOR CAPILLARY TYPE JOINTS AND FITTINGS OF SHEATHED COPPER PIPES

Be of "clip-on" type preformed polyethylene sheaths to BS 3412 or of equivalent quality in accordance with manufacturer's recommendation. Thickness of sheaths shall not be less than that in straight pipes and suitable for use up to 80°C.

PLU1.M150.8  BRAZING ALLOYS FOR COPPER AND COPPER ALLOY CAPILLARY FITTINGS

1. Submission Requirements:
   Further to the submission requirements in PLU1.M110 (2)(a) and as per PLU1.M120 (8)(a):
   a. Submit the supporting document of brazing material which shall be a test certificate certifying that the brazing material complies with BS EN ISO 17672. The certificate shall be issued or certified by a laboratory accepted by the Water Authority and within 5 years from the date of issue;
   b. Submit a Sub-contractors Management Plan as per PRE.B6.APPEND2 covering quarantine material verification, stringent sub-contractor supervision and on-site monitoring to ensure that all workers shall use only Approved brazing materials for jointing of copper pipes. The role of the Licensed Plumber in supervision of the plumbing installation works shall be defined under the Sub-contractors Management Plan.

2. Comply with Table 6 Section VI of BS EN 1254-1; brazing alloys with cadmium are not permitted in installations for water for human consumption;

3. Use brazing alloy comply with BS EN ISO 17672;

4. Do not use flux when brazing copper-to-copper joints;

5. For joints other than copper to copper, use only a flux that is recommended by the brazing alloy manufacturer; or use a suitable type of adaptor subject to the CM’s approval;

6. Observe and comply with the requirements under PLU1.M120 (8).

PLU1.M160.8  SOLDERING ALLOYS FOR COPPER AND COPPER ALLOY CAPILLARY FITTINGS

1. Submission Requirements:
   Further to the submission requirements in PLU1.M110 (2)(a) and as per PLU1.M120 (8)(a):
   a. Submit the supporting document of soldering material which shall be a test certificate certifying that the soldering material complies with BS EN ISO 9453. The certificate shall be issued or certified by a laboratory accepted by the Water Authority and within 5 years from the date of issue;
   b. Submit a Sub-contractors Management Plan as per PRE.B6.APPEND2 covering quarantine material verification, stringent sub-contractor supervision and on-site monitoring to ensure that all workers shall use only Approved soldering materials for jointing of copper pipes. The role of the Licensed Plumber in supervision of the plumbing installation works shall be defined under the Sub-contractors Management Plan.

2. Comply with BS EN 1254-1, Table 6 Sections II & III; soldering alloys with lead are not permitted in installations for water for human consumption;

3. Use soldering alloy complying with BS EN ISO 9453;
4. Use of integral solder fittings is permitted provided that the integral soldering material complies with Table 6 of BS EN 1254-1 and BS EN ISO 9453;

5. Use only a non-corrosive type of flux that is recommended by the solder alloy manufacturer;

6. Observe and comply with the requirements under PLU1.M120 (8).

**PLU1.M170.B DUCTILE IRON PIPES, FITTINGS AND ACCESSORIES**

1. Ductile iron pipes: comply with BS EN 545;

2. Ductile iron pipe fittings and accessories: comply with BS EN 545;

3. Ductile iron pipe shall be coated with metallic zinc and bitumen finishing externally and lined with cement mortar internally;

4. Ductile iron pipe fittings and accessories shall be coated with metallic zinc and bitumen finishing externally and lined with cement mortar or epoxy internally. Epoxy coating shall be complied with BS EN 14901.

5. The minimum wall thickness of pipes and fittings, which has already taken into account the negative tolerance, shall comply with the following table:

<table>
<thead>
<tr>
<th>Nominal size DN</th>
<th>Class</th>
<th>Minimum wall thickness of pipes and fittings (mm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>80</td>
<td>100</td>

<td>8.00</td>
</tr>
</tbody>
</table>

6. Slip on flange adaptors:
   a. Be provided at check meters positions;
   b. Be designed and manufactured to suit the pipework installation. The flanges shall comply with BS EN 1092-2 PN 16 or PN 25 as appropriate;
   c. Be made of ductile iron to BS EN 545 and shall be coated with epoxy externally and internally comply with BS EN 14901;
   d. Stud bolts and nuts of the flange adaptors shall be made of stainless steel of Grade A4 to BS EN ISO 3506-1 and BS EN ISO 3506-2 respectively;
   e. Gaskets shall be made of Ethylene Propylene Diene Monomer (EPDM) if used for potable water, it shall comply with BS 6920;
   f. Be equipped with guide rod assembly to prevent damage from excessive movement. The assembly shall consist of guide rod plates, at least three guide rods each of minimum 16mm diameter and washers all made of stainless steel at least to BS EN 10088-3 Grade 1.4401 on both sides, and shall be fitted with resilient neoprene sleeves, resilient neoprene washers on at least one side of the assembly for isolating vibration transmission.

7. Ductile iron pipes and ductile iron pipe fittings shall possess the Kitemark Certificate or Kitemark Licence to to BS EN 545 issued by the British Standards Institution or two stars status under WSD’s GA+ Scheme.

8. At sample submission and approval stage, submit a copy of the Kitemark Certificate or Kitemark Licence, together with the associated test report demonstrating compliance with BS EN 545, all issued by the British Standards Institution, or provide documentation to demonstrate possessing two stars status under WSD’s GA+ Scheme, for the CM’s information.
9. On Site Delivery Verification:
   a. Further to the submission requirements at delivery stage in PLU1.M110 (2)(b), carry out and submit report on the following verifications as appropriate for material upon delivery on Site. Prior to carrying out the verifications, inform the CM or his representatives who may be present to witness the verifications:
      i. Method:
         | Verification Items       | Method     | Acceptance Standards                      |
         |--------------------------|------------|-------------------------------------------|
         | Material and Packaging   | Visual     | Same as the CM’s Approved Sample          |
         | Logo & Label Check       | Visual     | Same as the CM’s Approved Sample          |
         | Marking on pipe and fitting | Visual  | Same as the CM’s Approved Sample and Catalogue |
         | Surface Quality          | Visual     | No damage                                 |
         | Dimension Check          | By Measurement | As Specified               |
   ii. Frequency:
      - For ductile iron pipes, carry out verification for one sample per every delivery of material to Site under each delivery note. A representative batch means the material delivered to Site under the same delivery note;
      - For ductile iron pipe fittings and accessories, carry out verification for one sample per each type per every delivery of material to Site under each delivery note. A representative batch means the material of the same type delivered to Site under the same delivery note.
   b. Where any of the verifications fail to meet the acceptance standards, either:
      i. Remove the representative batch off Site; or
      ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be granted.

**PLU1.M180.8 GALVANIZED STEEL PIPES AND FITTINGS**

1. Galvanized steel pipes: comply with BS EN 10255 with screwing to BS EN 10226-1 and of medium grade for above ground installation and of heavy grade for below ground installation unless otherwise specified or shown on the drawings;
2. Pipe fittings: galvanized malleable cast iron to BS 143 and 1256 or BS EN 10242; Or galvanized wrought steel pipe fittings (screwed BS 21 R series thread) to BS EN 10241;
3. Mechanical couplings and fitting shall be as follows:
   a. As an alternative to flanged and screwed joints, grooved end mechanical couplings may be employed subject to the approvals of the Contract Manager,
b. Mechanical couplings shall be hot dip galvanized, self-centering, engaged and locked in place onto the grooved or shouldered pipe and pipe fitting ends. The result shall be in a positive watertight couple providing some allowance for angular pipe deflection, contraction and expansion. Coupling housing clamps shall consist of two or more malleable iron castings or rolled steel or ductile iron segment holdings with a composition water sealing gasket so designed that the internal water pressure increases in the water tightness of the seal. Sealing gasket shall be selected for the service and working temperature according to the manufacturer's recommendations. The coupling assembly shall be securely held together by two or more zinc plated track head square or oval-neck heat-treated carbon steel bolts and nuts. All pipe fittings connected to mechanical pipe couplings shall have groove and shouldered ends. Flanged or threaded end valves may be used with grooved adapters;

c. Coupling housing material of mechanical couplings shall be as follows:
   i. Ductile iron shall be to ASTM A536 or to BS EN 545 or BS EN 1563;
   ii. Rolled steel shall be to BS EN 10162.

d. Rubber gaskets shall be complied to the following standards:
   i. Hardness: ASTM D2240;
   ii. Tensile testing: ASTM D412;
   iii. Compression: ASTM D395;

**PLU1.M190.A STAINLESS STEEL PIPES**

1. All stainless steel pipes and fittings shall be approved by Water Regulations Advisory Scheme (WRAS) UK and the Water Authority as suitable for use locally in conformity with the Waterworks Ordinance and Regulations for the intended application and shall be of standard products supplied by ISO 9001 accredited manufacturers;

2. All pipes, including fasteners, shall be of stainless steel to BS EN 10088-1 Grade 1.4301;

3. Stainless steel pipes with nominal outside diameter up to and including 54mm shall be suitable for use with stainless steel non-welding type fittings, pickled and supplied in solution annealed condition to BS EN 10312, Series 2;

4. Stainless steel pipes with nominal outside diameter above 54mm to BS EN 10217-7 or BS EN 10312 Series 2, suitable for use with stainless steel non-welding type fittings supplied in the solution-annealed condition or pickled. For stainless steel pipes to BS EN 10217-7, the dimensions, wall thickness, tolerances and conventional masses per unit length of pipes shall be to BS EN ISO 1127 with minimum wall thickness as below:

<table>
<thead>
<tr>
<th>Nominal size (mm)</th>
<th>Outside diameter (mm)</th>
<th>Minimum wall thickness (mm)</th>

</tbody>
</table>

5. Submit sample of the pipes for the CM's approval prior to placing orders. Samples submitted for approval shall be accompanied by test reports of those test methods required in the relevant standards;
6. Provide test specimens from the materials delivered to site and carry out testing on dimension and chemical composition in accordance with the relevant BS by an Approved Accredited Laboratory as required by PRE.B9.570. Rate of sampling to be one pipe per batch (regardless of size) delivered to site unless otherwise specified; one batch being the material quantity covered under each delivery note;
   a. In the event that the sample fails to meet the testing requirements, follow either one of the following actions:
      i. Remove the batch off Site; or
      ii. Carry out re-test for the batch in accordance with the testing methods as specified on three separate samples (regardless of size) selected by the CM from the batch. In case of any one sample fails the re-test, remove the batch off Site.
   b. When the batch is removed off Site, replace with another new batch and carry out test for one sample (regardless of size) selected by the CM from the replacing batch. In case of such test fails, follow action stated in sub-clause (6)(a);
   c. Bear all associated costs for the test and re-test required.

7. On Site Delivery Verification:
   Further to the submission requirements at delivery stage in PLU1.M110 (2)(b).
   a. Submit the supplier’s original delivery note / invoice and mill certificates for all pipes before installation on site and shall include the following information on the items delivered:
      i. Manufacturer’s name, the date and place of manufacture;
      ii. Type, description and dimensions;
      iii. Heat number of pipes;
      iv. Quantities of items delivered;
      v. The grade and compositions of stainless steel pipes and international standard complied with;
      vi. Results of tests;
      vii. Pickling and surface treatment processed.
   b. Carry out and submit report on the following verifications as appropriate for material upon delivery on Site. Prior to carrying out the verifications, inform the CM or his representatives who may be present to witness the verifications:
      i. Method:

   ii. Frequency:
Carry out verification for one sample per every delivery of material to Site under each delivery note. A representative batch means the material delivered to Site under the same delivery note.

c. Where any of the verifications fail to meet the acceptance standards, either:
   i. Remove the representative batch off Site; or
   ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be granted.

PLU1.M191.B  STAINLESS STEEL PIPE FITTINGS

1. All stainless steel pipe fittings, including fasteners, shall be of stainless steel to BS EN 10088-1 Grade 1.4301;
2. Stainless steel pipe fittings shall be tested in compliance with AS 3688. Test report issued by laboratories that comply with PRE.B9.570 shall be submitted;
3. For all stainless steel non-welding type fittings, it shall be manufactured by loss wax investment casting or by stamping mould and welding, pickled and 100% inspected by hydrostatic testing. The minimum system working pressure and temperature of the fittings and pipe system shall be 20 bar and 80°C respectively;
4. All sealing gaskets shall be silicone rubber to BS 6920 and O-rings shall be of nitrile rubber (NBR) or Ethylene Propylene Diene Monomer (EPDM);
5. All stainless steel fasteners, including bolts, screws, studs and nuts, shall be Grade 4 to BS EN ISO 3506-1 & 2 unless otherwise specified and shall be assembled to manufacturer’s recommendations;
6. Use dielectric fittings or epoxy coated flange with gasket for connecting stainless steel pipe to pipes and fittings made of other metals except copper or copper alloy in order to prevent potential corrosion;
7. Submit sample of the pipe fittings for the CM's approval prior to placing orders. Samples submitted for approval shall be accompanied by test reports of those test methods required in the relevant standards;
8. Provide test specimens from the materials delivered to site and carry out testing on dimension and chemical composition in accordance with the relevant BS by an Approved Accredited Laboratory as required by PRE.B9.570. Rate of sampling to be one pipe fitting per batch (regardless of size and type) delivered to site unless otherwise specified; one batch being the material quantity covered under each delivery note;
   a. In the event that the sample fails to meet the testing requirements, follow either one of the following actions:
      i. Remove the batch off Site; or

---

**PLU.M200.8 UNPLASTICIZED PVC (UPVC) PIPES AND FITTINGS**

1. Pipes: comply with BS 3505, Class E or BS EN ISO1452-2 series S6.3 or higher to suit system working pressure and as shown on the Drawings;
2. Fittings: comply with BS 4346-1 in conjunction with BS EN ISO 1452-3 for fittings jointed by solvent cementing, comply with BS EN ISO 1452-3 for other fittings;
3. Colour: white unless approved by the CM;
4. Jointing compound: be of a type recommended by the manufacturer of the pipes and fittings;
5. External uPVC pipes exposed to sunlight and uPVC pipes on roof and canopy shall be painted with white acrylic paint.
PLU1.M210.A  STAINLESS STEEL TYPE EXPANSION JOINTS
Use for fresh and fire services water pipeworks passing through building expansion joints or other locations as shown on the Drawings and comply with the following requirements:

1. Be of axial pattern bellows type and able to withstand designed / allowable horizontal and vertical movement;
2. Be screwed ends to BS EN 10226-1, 2, 3 or flanged ends to BS EN 1092-1 as appropriate to facilitate replacement;
3. Be manufactured from stainless steel of BS EN 10088-1 Grade 1.4301 or equivalent standard, or other Approved material appropriate to the system;
4. Be designed to withstand the test pressure of the system and maximum static pressure that may arise upon failure of the associated pressure reducing devices. Testing pressure of the expansion joints shall be not less than 1.5 times of the system working pressure involved;
5. Be equipped with guide rod assembly to prevent damage from excessive movement. The assembly shall consist of guide rod plates, guide rods and steel washers on both sides, and shall be fitted with resilient neoprene sleeves, resilient neoprene washers on at least one side of the assembly for isolating vibration transmission;
6. Be the type accepted by the Water Authority and FSD. For sprinkler system, the expansion joints shall be installed and provided to comply the design requirement of LPC Sprinkler Rules incorporating BS EN 12845;
7. Submission Requirements:
Further to the submission requirements at delivery stage in PLU1.M110 (2)(b).
   a. Submit type hydraulic test certificates / reports issued by laboratories that comply with PRE.B9.570 and accepted by the Water Authority;
   b. Submit for Approval the installation length, material, rated movement (axial extension, axial compression, lateral deflection, angular rotation, or any combination thereof) and pressure ratings upon the CM's request;
   c. Submit details of anchors and guides installation in accordance with the recommendations of the expansion joint manufacturer for approval before manufacturing commences.
8. On Site Delivery Verification:
   a. Carry out and submit report on the following verifications as appropriate for material upon delivery on Site. Prior to carrying out the verifications, inform the CM or his representatives who may be present to witness the verifications:
      i. Method:
         | Verification Items        | Method  | Acceptance Standards                          |
         |---------------------------|---------|-----------------------------------------------|
         | Material and Packaging    | Visual  | Same as the CM’s Approved Sample              |
         | Logo & Label Check        | Visual  | Same as the CM’s Approved Sample              |
         | Marking on Expansion Joint| Visual  | Same as the CM’s Approved Sample and Catalogue|
         | Surface Quality           | Visual  | No damage                                      |
         | Dimension Check           | By Measurement | As Specified                              |
      ii. Frequency:
For each of the fresh water and fire services water applications, carry out verification on one sample for every 10 pieces or part thereof per every delivery of material to Site under each delivery note. A representative batch means the material for the same application delivered to Site under the same delivery note.

b. Where any of the verifications fail to meet the acceptance standards, either:
   Method:
   i. Remove the representative batch off Site; or
   ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be granted.

**PLU1.M220.A  STAINLESS STEEL FLEXIBLE CONNECTORS**

1. Use for fresh water pipeworks at pump room and other locations for pipeline vibration elimination where shown on the Drawings:
   a. Be of omega-shape, close pitch annular corrugation, and fabricated from stainless steel plates / sheets / strips;
   b. Be able to sustain a system working pressure compatible with the pipework with which the connectors are connected. Unless otherwise specified, the system working pressure shall not be less than 16 bar, a minimum test pressure of 1.5 times of the system working pressure and a minimum burst pressure of 40 bar;
   c. Include a bellow which shall be corrosion and abrasion resistant and complete with braiding. Should the convolution of the bellow not be gradually formed by continuous rolling in shape, appropriate heat treatment shall be conducted to release the internal stress imposed on the bellow during the forming process;
   d. Be of sufficient length for absorption of offset motion and effective isolation of vibration. The total stress on bellow due to internal pressure, offset motion and vibration shall not exceed the design endurance limit. Unless otherwise specified, the minimum rated lateral movement shall be as tabulated below:

<table>
<thead>
<tr>
<th>Nominal bore of braided bellow</th>
<th>Minimum rated lateral movement</th>
</tr>
</thead>
<tbody>
<tr>
<td>Up to 100 mm diameter</td>
<td>4 mm offset motion plus ±1 mm vibration</td>
</tr>
<tr>
<td>Above 100 mm diameter</td>
<td>6 mm offset motion plus ±1 mm vibration</td>
</tr>
</tbody>
</table>

e. Be comprised of the following component materials unless otherwise specified, and inert gas arc welding shall be used for the termination of bellow and braiding at the tube ends:
   i. Bellow: austenitic chromium nickel or austenitic chromium nickel molybdenum stainless steel sheet to BS EN 10029 or BS EN ISO 9445-2 or BS EN 10048 or BS EN 10051 or BS EN 10095;
   ii. Braiding: stainless steel wires or plates;
   iii. Flange: corrosion resistant carbon steel.
   f. Have any part which is in contact with the water of the same material as the bellow;
   g. Unless otherwise specified, be of flanged end connection. Flanges shall comply with BS EN 1092-1;
1. Use rubber flexible connectors for flush water and fire services water pipeworks at pump rooms and other locations for pipeline vibration elimination and use rubber expansion joints for flush water pipeworks passing through building expansion joints where shown on the Drawings and comply with the following requirements:

   a. Have identification markings for the brand name, model number, bellow material, braiding material, system working pressure and bellow nominal diameter;

   i. Be equipped with guide rod assembly to prevent damage from excessive movement. The assembly shall consist of guide rod plates, guide rods and steel washers, and shall be fitted with resilient neoprene sleeves and resilient neoprene washers on at least one side of the assembly for isolating vibration transmission.

2. Submission Requirements:

   Further to the submission requirements in PLU1.M110 (2)(b).

   a. Submit type hydraulic test certificates / reports issued by laboratories that comply with PRE.B9.570 and accepted by the Water Authority;

   b. Submit for Approval the installation length, material, rated movement (axial extension, axial compression, lateral deflection, angular rotation, or any combination thereof) and pressure ratings upon the CM’s request.

3. On Site Delivery Verification:

   a. Carry out and submit report on the following verifications as appropriate for material upon delivery on Site. Prior to carrying out the verifications, inform the CM or his representatives who may be present to witness the verifications:

      i. Method:

         | Verification Items       | Method    | Acceptance Standards                     |
         |--------------------------|-----------|------------------------------------------|
         | Material and Packaging   | Visual    | Same as the CM’s Approved Sample         |
         | Logo & Label Check       | Visual    | Same as the CM’s Approved Sample         |
         | Marking on Connector     | Visual    | Same as the CM’s Approved Sample         |
         | Surface Quality          | Visual    | No damage                                |
         | Dimension Check          | By        | As Specified                             |
         |                          | Measurement|                                        |

      ii. Frequency:

         For each of the fresh water and fire services water applications, carry out verification on one sample for every 10 pieces or part thereof per every delivery of material to Site under each delivery note. A representative batch means the material for the same application delivered to Site under the same delivery note.

   b. Where any of the verifications fail to meet the acceptance standards, either:

      i. Remove the representative batch off Site; or

      ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be granted.

PLU1.M230.8 RUBBER FLEXIBLE CONNECTORS/EXPANSION JOINTS

1. Use rubber flexible connectors for flush water and fire services water pipeworks at pump rooms and other locations for pipeline vibration elimination and use rubber expansion joints for flush water pipeworks passing through building expansion joints where shown on the Drawings and comply with the following requirements:
a. Be of double or multiple arch/sphere type;
b. Be able to sustain a system working pressure compatible with the pipework with which the connectors are connected. Unless otherwise specified, the system working pressure shall not be less than 16 bar, with a minimum test pressure of 1.5 times of the system working pressure and a minimum burst pressure of 55 bar;
c. Be non-toxic, corrosion and abrasion resistant and of sufficient length for effective isolation of vibration;
d. Be fitted with corrosion resistant steel or ductile iron floating flanges to BS EN 1092-1 or 2;
e. Include a flexible tube made of multiple layers of high tensile fabric reinforcement with EPDM, neoprene or synthetic rubber cover and liner. Tube end shall be of locked bead construction with steel wire bead ring and raised face;
f. Be equipped with guide rod assembly to prevent damage from excessive movement. The assembly shall consist of guide rod plates, guide rods and steel washers, and shall be fitted with resilient neoprene sleeves and resilient neoprene washers on at least one side of the assembly for isolating vibration transmission.

2. Submissions:
   a. Submit type hydraulic test certificates/reports issued by laboratories that comply with PRE.B9.570;
   b. Submit for Approval the installation length, material, rated movement (axial extension, axial compression, lateral deflection, angular rotation, or any combination thereof) and pressure ratings upon the Contract Manager's request.

PLU1.M240.8 CHLORINATED POLYVINYL CHLORIDE (CPVC) PIPES AND FITTINGS

1. Pipes: comply with BS EN ISO 15877-2;
2. Fittings: comply with BS EN ISO 15877-3 for pipe fittings;
3. System: comply with BS EN ISO 15877-1 and BS 6920 for non-metallic components in contact with water intended for human consumption;
4. Colour: white unless approved by the CM;
5. Jointing compound: be of a type recommended by the manufacturer of the pipes and fittings;
6. Provide pipe markings in accordance with BS EN ISO 15877-2;
7. Outdoor CPVC pipe and fittings shall be protected from ultraviolet attack by ultraviolet resistant paint or other effective means as recommended by the manufacturer;
8. Bending to CPVC pipe of diameter exceeding 25 mm is not allowed. Where there is site restriction and subject to the CM's approval, bending to CPVC pipe of diameter equal to or less than 25mm may be carried out only in strict accordance with manufacturer's instructions;
9. Mock-up or demonstration of CPVC pipe installation shall be carried out on the Site for the CM's inspection and approval prior to the commencement of installation works.

PLU1.M250.8 POLYTETRAFLUOROETHYLENE (PTFE) TAPES

1. Use PTFE tapes complying with BS 7786 to form a leak-free seal to screw joint;
2. When used under the conditions for which they are designated, PTFE tapes in contact with, or likely to come into contact with potable water shall comply with BS 6920.
FLANGES

PLU1.M310.A

1. Conform to BS EN 1092-1, 2 and 3 PN16 or PN25 to suit the pressure rating of the system;
2. Gasket to BS EN 681-1 and shall be suitable for the operation condition in which they are installed;
3. Submission Requirements:
   a. At sample submission and approval stage, submit a sample of the proposed material for the CM’s approval together with all the following substantiation for the CM’s information:
      i. Catalogue, brand name / model name and job reference;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer;
      iv. Other specified submission requirements for the materials.
4. On Site Delivery Verification:
   a. At delivery stage, submit the following information for the CM’s information:
      i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (3)(a);
      ii. Original or certified true copy of the Certificate of Origin and batch number for every batch of delivery. One batch being the material quantity covered under each delivery note;
      iii. Delivery notes for material delivered to Site.
   b. Carry out and submit report on the following verifications as appropriate for material upon delivery on Site. Prior to carrying out the verifications, inform the CM or his representatives who may be present to witness the verifications:
      i. Method:

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

ii. Frequency:
Carry out verification for one sample per each type of flange material per every delivery of material to Site under each delivery note. A representative batch means the material of the same type delivered to Site under the same delivery note.

   c. Where any of the verifications fail to meet the acceptance standards, either:
      i. Remove the representative batch off Site; or
ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be granted.

PLU1.M320.A PUDDLE FLANGES

1. Unless otherwise specified or Approved, the following pipe connections and all accessories for setting into the tanks shall be provided:

<table>
<thead>
<tr>
<th>Pipe Connection</th>
<th>Connection Fittings</th>
<th>Fire Services water tank, Rainwater collection tank and Rainwater mixing tank</th>
<th>Flush water tank</th>
<th>Fresh water tank</th>
</tr>
</thead>
<tbody>

2. Submission Requirements:
   a. At sample submission and approval stage, submit a sample of the proposed material for the CM’s approval together with all the following substantiation for the CM’s information:
      i. Catalogue, brand name / model name and job reference;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer;
      iv. Other specified submission requirements for the materials.

3. On Site Delivery Verification:
   a. At delivery stage, submit the following information for the CM’s information:
      i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (2)(a);
ii. Original or certified true copy of the Certificate of Origin and batch number for every batch of delivery. One batch being the material quantity covered under each delivery note;

iii. Delivery notes for material delivered to Site.

b. Carry out and submit report on the following verifications as appropriate for material upon delivery on Site. Prior to carrying out the verifications, inform the CM or his representatives who may be present to witness the verifications:

i. Method:

<table>

ii. Frequency:

For each of the fresh water, flush water and fire services water applications, carry out verification on one sample for every 10 pieces or part thereof per every delivery of material to Site under each delivery note. A representative batch means the material for the same application delivered to Site under the same delivery note.

c. Where any of the verifications fail to meet the acceptance standards, either:

i. Remove the representative batch off Site; or

ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be granted.

**PIPE BRACKETS AND SLEEVES**

**PLU1.M410.8**

**PIPE BRACKETS**

1. Be of sufficient strength to take the load with no noticeable deflection with clips detachable without disturbing the fixing;

2. Be of stainless steel at least to BS EN 10088-3 Grade 1.4301 unless otherwise specified;

3. Be welded to stainless steel rods / angles and lined with plastic which fitted between the pipe and the bracket;

4. Bolts, nuts and washers of the pipe brackets: stainless steel at least to BS EN 10088-3 Grade 1.4301;

5. Pattern, type and fixing ends / anchors of the pipe brackets: suitable for mounting onto the surface to which they are fixed;

6. Submit sample of the pipe brackets and anchors for the CM’s approval prior to installation.
PLU1.M420.8  PIPE BRACKET WITH VIBRATION ISOLATOR
1. Vibration isolator:
   a. Unless otherwise specified or approved by the Contract Manager, vibration isolator shall contain a steel spring with minimum 8mm pad of neoprene in series and enclosed in hanger box. The neoprene element shall be moulded with a rod isolation bushing that passes through the isolator hanger box. Spring diameter and isolator hanger box hole sizes shall be large enough to permit the hanger rod to swing through a 30 degrees arc before contacting the edge of the hole and short-circuiting the spring. The minimum static deflection of the spring shall be 20 mm;
   b. Select vibration isolator in accordance with manufacturer's recommendations and taking into account the weight distribution of the pipework, pipe anchor points, guide etc. so as to produce uniform deflections and to ensure that the vibration and noise generated from associated pipework would be isolated and would not be transmitted to other parts of the building, in particular, to avoid causing nuisance to the tenants of the domestic flats;
   c. Be responsible for and submit calculation to verify the correctness of selection and overall suitability of every vibration isolator as shown in the Drawings or specified in clause PLU1.W310 (3).
2. Pipe bracket:
   Details of the pipe bracket to be in accordance with PLU1.M410 wherever applicable;
3. Connection between vibration isolator and pipe bracket:
   Secure the pipe bracket firmly to the vibration isolator in accordance with manufacturer's recommendations.

PLU1.M430.8  PIPE SLEEVES
1. Diameter of pipe sleeves: as shown on the Drawings, otherwise at least one size larger than the pipe that passes through;
2. Except for pipes as given in sub-clause (3) below:
   a. For pipes passing through walls, slabs etc. which separate different fire compartments, use sleeves of galvanized steel to BS EN 10255 medium grade for pipe diameter below 150mm and carbon steel to BS EN 10217-1 for pipe diameter up to and above 150 mm. Pre-fabricated sleeves of hot dipped galvanized steel to BS EN 10346 can be used for pipe diameter up to and above 150mm subject to the Contract Manager's approval;
   b. For pipes passing through walls, slabs etc. within the same fire compartment, use sleeves of UPVC pipe to BS 3505 or BS EN ISO 1452-2;
   c. Where UPVC pipe passes through fire rated walls and floor slabs, provide an Approved type fire collar to BS 476-20 with equal or higher fire resistant rating than that of the walls and slabs;
3. For pipes passing through external basement walls where there is ground water pressure, use gunmetal or stainless steel to BS EN 10088-1 Grade 1.4301 or spheroidal graphite cast iron (ductile iron) to BS EN 545 puddle sleeves cast in basement wall for pipe connection.
**STRAINERS**

**PLU1.M510.B**

1. Be of Y-type or U-type (Bucket / Basket type) as shown on the Drawings with minimum free flow area ratio of 2 and the maximum aperture size to be of diameter 1.5mm for strainers of nominal size 100mm or below and of diameter 3.0mm for strainers of nominal size 150mm or above, unless otherwise specified;

2. Have the same nominal sizes as the pipes in which they are connected and shall be suitable for both working and test pressures of the pipework in which they are installed;

3. Be constructed of materials suitable for the required working and test pressures and temperature of the fluid carried with the minimum standards as indicated below:
   a. For nominal sizes up to and including 50mm (fresh water, fire services and flush water application):
      i. Body & cover: bronze to BS EN 1982 CuSn5Zn5Pb5;
      ii. Screen: stainless steel to BS EN 10088-1 Grade 1.4401.
   b. For nominal sizes above 50 mm (fresh water, fire services and flush water application):
      i. Body & cover: grey cast iron to BS EN 1561 EN-GJL-250, or spheroidal graphite cast iron (ductile iron) to BS EN 1563 EN-GJS-400-15 or BS EN 1563 EN-GJS-450-15 or BS EN 1563 EN-GJS-500-15;
      ii. Screen: stainless steel to BS EN 10088-1 Grade 1.4401;
      iii. Drain plug: malleable iron;
      iv. Stud and Nut: stainless steel to BS EN 10088-1 Grade 1.4401;
      v. Grey cast iron components shall be coated with an epoxy based material as specified in PLU1.M610.

4. All bronze type strainers shall be of screwed female end connection to BS EN 10226-1, 2, 3 and all grey cast iron type strainers shall be of flanged end connection to BS EN 1092-2;

5. U-type strainer shall be equipped with quick release cover composed of clamper and hand nuts which shall be so designed that the basket can be taken out for cleaning without using tools. Appropriate safety mechanism shall be incorporated in the quick release cover;

6. Submit test certificates / reports issued by laboratories that comply with PRE.B9.570 and are acceptable by the Water Authority, confirming that the strainers have been tested in conformity with this Specification;

7. Submission Requirements:
   a. At sample submission and approval stage, submit a sample of the proposed material for the CM's approval together with all the following substantiation for the CM's information:
      i. Catalogue, brand name / model name and job reference;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer;
      iv. Confirmation of compliance with statutory requirements in writing jointly signed by the Building Services Engineer of the Contractor and the LP;
      v. Other specified submission requirements for the materials.

8. On Site Delivery Verification:
   a. At delivery stage, submit the following information for the CM’s information:
i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (7)(a);

ii. Original or certified true copy of the Certificate of Origin and batch number for every batch of delivery. One batch being the material quantity covered under each delivery note;

iii. Delivery notes for material delivered to Site.

b. Carry out and submit report on the following verifications as appropriate for material upon delivery on Site. Prior to carrying out the verifications, inform the CM or his representatives who may be present to witness the verifications:

i. Method:

<table>
<thead>
<tr>

</tbody>
</table>

ii. Frequency:

For each of the fresh water, flush water and fire services water applications, carry out verification on one sample for every 10 pieces or part thereof per every delivery of material to Site under each delivery note. A representative batch means the material for the same application delivered to Site under the same delivery note.

c. Where any of the verifications fail to meet the acceptance standards, either:

i. Remove the representative batch off Site; or

ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be granted.

VALVES AND TAPS

PLU1.M610.A

GENERAL

1. Be designed and constructed of materials suitable for both the working and test pressure of the pipework in which they are installed and the temperature of the fluid carried. Be capable of withstanding system working pressure and maximum static pressure that may arise upon failure of the associated pressure reducing devices. Unless otherwise specified, all valves shall have a system working pressure of not less than 16 bar;

2. Comply with the following standards unless otherwise specified:

<table>
<thead>
<tr>
<th>Size of Valve</th>
<th>For nominal sizes up to and including 50mm</th>
<th>For nominal sizes above 50mm</th>
</tr>
</thead>
<tbody>
<tr>
<td>Standard of valve</td>
<td>Grading</td>
<td>Standard of valve</td>
</tr>
</tbody>
</table>
Gate valves | Copper alloy to BS EN 12288 | Cast iron to BS 5163-1 lin conjunction with BS EN 1074-1 and 2 | Grey cast iron to BS EN 1561 EN-GJL-250 Spheroidal graphite cast iron (ductile iron) to BS EN 1563 EN-GIS-400-15
---|---|---|---
Non-return valves | Copper alloy to BS 5154 | Cast iron to BS EN 12334 | Grey cast iron to BS EN 1561 EN-GJL-250 Spheroidal graphite cast iron (ductile iron) to BS EN 1563 EN-GIS-400-15
Globe valves | Copper alloy to BS 5154 | Cast iron to BS EN 13789 | Grey cast iron to BS EN 1561 EN-GJL-250 Spheroidal graphite cast iron (ductile iron) to BS EN 1563 EN-GIS-400-15
Globe stop and check valves | Copper alloy to BS 5154 | N/A | N/A
Ball valves | uPVC to BS EN ISO 1452-4 | N/A | N/A

3. Be pressure tested in accordance with the relevant British Standards / European Standards or international / national standards by the valve manufacturer before leaving the factory. Valves of the same type shall be from the same manufacturer;

4. Be of the type approved by the Water Authority. Submit type test reports / certificates issued by laboratories that comply with PRE.B9.570 and are acceptable by the Water Authority, confirming that the valves have been tested in conformity with this Specification. Provide the following type test reports / certificates wherever appropriate:
   a. Test certificates for valves in compliance with the standards quoted in sub-clause (2) above;
   b. Test certificates on composition analysis, chemical, physical and mechanical properties of the metallic materials for valves;
   c. Test certificates for resilient seating material and epoxy coating showing compliance with the physical property and thickness requirements of this Specification;
   d. In case of valves in fresh water application, test certificates issued by Water Regulations Advisory Scheme of UK or an equivalent organization for non-metallic materials of resilient seating and epoxy coating, showing compliance with the full tests of effect on water quality to BS 6920 for non-metallic components in contact with water intended for human consumption and suitable for fresh water usage.

5. Be of the same nominal size as the pipe in which they are installed except those for flow or pressure control such as modulating float valves or pressure reducing valves as shown on the Drawings;

6. Manually operated valves shall be closed by turning the handwheel in a clockwise direction when facing the handwheel. The handwheel shall be made of malleable iron or of composition having metal insert for securing positively to the stem;

7. Be located, as far as practicable, at convenient positions of operation from the floor unless otherwise specified or approved by the CM;

8. All valves shall be provided with an indicator to show the open and shut position;

9. Valves and cocks for installation in screwed joined pipework shall have taper screwed ends. Flanges of flanged valves shall be BS EN 1092-2 for PN16 rating or otherwise specified;

10. All copper alloy valves shall be of screw female end connection to BS EN 10226-1 and all grey cast iron and spheroidal graphite cast iron (ductile iron) valves shall be of the flanged end connections to BS EN 1092-2 and their bolts and nuts shall be to BS EN 1515-1;
11. Grey cast iron and spheroidal graphite cast iron (ductile iron) parts of all valves shall be coated with an epoxy based material both on internal and external surfaces. The following minimum thickness of epoxy coating shall apply:

<table>
<thead>
<tr>
<th></th>
<th>Electrostatically Fusion Powder Coated (μm)</th>
<th>Airless Sprayed Application (μm)</th>

<tr>
<td>i. Flat and pressurized parts</td>
<td>250</td>
<td>400</td>
</tr>
<tr>
<td>ii. Convex outer edges</td>
<td>150</td>
<td>300</td>
</tr>
</tbody>
</table>

12. Be robust and capable of withstanding hard water;

13. The valve and tap materials shall comply with the following requirements:
   a. Submission Requirements;
      At sample submission and approval stage, submit a sample of the proposed material for the CM’s approval together with all the following substantiation for the CM’s information:
      i. Catalogue, brand name / model name and job reference;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer;
      iv. Confirmation of compliance with statutory requirements in writing jointly signed by the Building Services Engineer of the Contractor and the Licensed Plumber;
      v. Other specified submission requirements for the materials.
   b. On Site Delivery Verification:
      i. At delivery stage, submit the following documents for the CM’s information:
         - Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (13)(a);
         - Original or certified true copy of the Certificate of Origin and batch number for every batch of delivery with one batch being the material quantity covered under each delivery note; and
         - Delivery notes for material delivered to Site.
      ii. For those materials with BSI Kitemark or two stars status under WSD’s GA+ Scheme, the Certificate of Origin shall also indicate that they are manufactured from the factory under the corresponding product certification scheme;
      iii. Carry out and submit report on the verification of materials as applicable for the material upon delivery to Site. Prior to carrying out the verifications, inform the CM or his representatives who may be present to witness the verifications.

14. Sample board:
   a. Provide a sample board to display samples of valves and taps to be used in the plumbing installation and listed in the Form WWO 1149 submitted to and approved by the Water Authority;
   b. The sample board is to be kept by the CM on Site together with associated relevant certificates / test reports / catalogues / supporting documents upon submission of Form WWO 1149 to the Water Authority;
c. The sample board shall comply with the requirements of the Water Authority. Each sample, with clear numbering and labelling, shall be firmly fixed onto a rigid wooden or metal board. A list shall also be affixed on the sample board to show the item description, make and brand, country of origin and locations of installation;
d. Replace samples and relevant certificates / test reports / catalogues / supporting documents whenever amendment to the Form WWO 1149 is made and approved by the Water Authority.

PLU1.M620.A  VALVES FOR FRESH WATER AND FIRE SERVICES APPLICATION
Be constructed to the following minimum standards, wherever applicable:
1. For nominal sizes up to and including 50mm:
   a. Body, bonnet and disc: bronze to BS EN 1982 CuSn5Zn5Pb5;
   b. Stem: brass to high tensile brass to BS EN 12163 or BS EN 12164 or BS EN 12167.
2. For nominal sizes above 50mm:
   a. Body and bonnet: grey cast iron to BS EN 1561 EN-GJL-250, or spheroidal graphite cast iron (ductile iron) to BS EN 1563 EN-GJS-400-15 or BS EN 1563-GJS-450 or BS EN 1563-GJS-500;
   b. Disc:
      i. Material same as body and bonnet and trimmed with bronze to BS EN 1982 CuSn5Zn5Pb5; or
      ii. Material same as body and bonnet and encapsulated with resilient material BS EN 681-1, Type WA, Hardness Category "70" with nominal thickness of minimum 1.5mm on the non-seating areas and 4.0mm on the seating areas, and in case for potable water application, showing compliance with full tests of effect on water quality to BS 6920 (no body seat is required); or
      iii. Solid bronze to BS EN 1982 CuSn5Zn5Pb5.
   c. Body Seat:
      i. Bronze to BS EN 1982 CuSn5Zn5Pb5; or
      ii. Resilient material to BS EN 681-1, Type WA, Hardness Category "70" with nominal thickness of minimum 4.0mm, and in case for potable water application, showing compliance with full tests of effect on water quality to BS 6920.
   d. Stem:
      i. For underground application or gate valve installed in fresh water or street fire hydrant system, stainless steel to BS EN 10088-3 Grade 1.4057;
      ii. For applications other than that mentioned in sub-clause (2)(c)(i) above, brass to high tensile brass to BS EN 12163 or BS EN 12164 or BS EN 12167 or stainless steel to BS EN 10088-3 Grade 1.4301, 1.4401, 1.4006, 1.4005, 1.4021 or 1.4057.

PLU1.M630.A  VALVES FOR FLUSH WATER APPLICATIONS
Be constructed to the following minimum standards, wherever applicable:
1. For nominal sizes up to and including 50 mm: use uPVC ball valves;
2. For nominal sizes above 50 mm:
   a. Body and bonnet: grey cast iron to BS EN 1561 EN-GJL-250, or spheroidal graphite cast iron (ductile iron) to BS EN 1563 EN-GJS-400-15 or BS EN 1563-GJS-450 or BS EN 1563-GJS-500;
   b. Disc:
i. Material same as body and bonnet and trimmed with zinc free bronze to BS EN 1982 CuSn10 or trimmed with austenitic chromium nickel stainless steel or austenitic chromium nickel molybdenum stainless steel to BS EN 10283 Grade 1.4308 or 1.4408; or

ii. Material same as body and bonnet and encapsulated with resilient material BS EN 681-1, Type WA, Hardness Category "70" with nominal thickness of minimum 1.5mm on the non-seating areas and 4.0mm on the seating areas, (no body seat is required); or

iii. Solid zinc free bronze to BS EN 1982 CuSn10.

c. Body Seat:
   i. Zinc free bronze to BS EN 1982 CuSn10 or austenitic chromium nickel stainless steel or austenitic chromium nickel molybdenum stainless steel to BS EN 10283 Grade 1.4308 or 1.4408; or
   ii. Resilient material to BS EN 681-1, Type WA, Hardness Category "70" with nominal thickness of minimum 4.0mm.

d. Stem: stainless steel to BS EN 10088-3 Grade 1.4301 or 1.4401 or 1.4057.

PLU1.M640.A NON-RETURN VALVES

1. Be of hinged swing or recoil type suitable for horizontal installations and spring type shall be of globe or wafer type, suitable for both vertical and horizontal installations unless otherwise specified or indicated on Drawings. Hinge pins shall be of brass / bronze for nominal size of 50mm or below and stainless steel for nominal size above 50mm and springs shall be of stainless steel;

2. Be of spring type or recoil type, unless otherwise approved by the CM, if the non-return valve is installed at pump discharge or with a water head exceeding 15 m to ensure silent shut-off operation;

3. Bronze swing non-return valves shall have screwed type cap and cast iron swing non-return valves shall have the cap and body bolted together to ensure a strong, tight closure;

4. Be designed to close before reversal of flow starts;

5. Recoil or spring type non-return valves shall have a flow area not less than the cross-sectional area of the connected pipework and shall be non-slam in operations;

6. Wafer type spring non-return valves will be acceptable, provided the body ends are capable of matching connecting flanges complying with the requirements of BS EN 1092-1, -2 and -3;

7. On Site Delivery Verification:
   a. Further to the submission requirements at delivery stage in PLU1.M610 (13)(b), carry out and submit report on the following verifications as appropriate for material upon delivery on Site. Prior to carrying out the verifications, inform the CM or his representatives who may be present to witness the verifications:
      i. Method:

Dimension Check | By Measurement | As Specified

ii. Frequency:
For each of the fresh water, flush water and fire services water applications, carry out verification on one sample for every 10 pieces or part thereof per every delivery of material to Site under each delivery note. A representative batch means the material for the same application delivered to Site under the same delivery note.

b. Where any of the verifications fail to meet the acceptance standards, either:
   i. Remove the representative batch off Site; or
   ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be granted.

PLU1.M650.B GATE VALVES, GLOBE VALVES AND GLOBE STOP AND CHECK VALVES
1. Types:
   a. Gate valves: full way solid or split wedge disc type with rising or non-rising stem;
   b. Globe valves: straight globe type with rising stem;
   c. Globe stop and check valves (refers to loose jumper type stopcock as per WSD’s requirements): screwdown pattern type with horizontal inlet and outlet connections and incorporating a loose jumper valve permitting flow in one direction only.
2. Provided with an indicator to show the open and shut position at critical locations for cast iron valves as shown on Drawings;
3. For copper alloy type valves, the bonnet shall be of the screwed type with ample threads to ensure positive sealing to the body;
4. For grey cast iron and spheroidal graphite cast iron (ductile iron) type valve, the body and bonnet shall be bolted together and the disc shall be guided;
5. The gland shall be fitted with non-asbestos packing and shall be bolted for grey cast iron and spheroidal graphite cast iron (ductile iron) valves;
6. Gate valve with nominal sizes up to and including 50mm for fresh water application shall be low metal leaching rate metallic plumbing products under the GA* Scheme of WSD.
Submit at sample submission and approval stage either:
   a. A copy of the Kitemark Certificate or Kitemark Licence, together with the associated test report demonstrating compliance with BS EN 12288, all issued by the British Standards Institution if available for the CM’s information; or
   b. Documentation to demonstrate possessing two stars status under WSD’s GA+ Scheme for the CM’s information; or
   c. Test report issued or certified by the laboratory accepted by the Water Authority demonstrating full compliance with BS EN 12288 for the CM’s information.
7. On Site Delivery Verification:
   a. Further to the submission requirements at delivery stage in PLU1.M610 (13)(b), carry out and submit report on the following verifications as appropriate for material upon delivery on Site. Prior to carrying out the verifications, inform the CM or his representatives who may be present to witness the verifications:

ii. Frequency:

- For copper alloy type valves, carry out verification on one sample for every 200 pieces or part thereof per every delivery of material to Site under each delivery note. A representative batch means the material delivered to Site under the same delivery note;
- For valve materials other than copper alloy type, for each of the fresh water, flush water and fire services water applications, carry out verification on one sample for every 10 pieces or part thereof per every delivery of material to Site under each delivery note. A representative batch means the material for the same application delivered to Site under the same delivery note.

b. Where any of the verifications fail to meet the acceptance standards, either:
   i. Remove the representative batch off Site; or
   ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be granted.

c. When gate valves with nominal sizes up to and including 50mm for fresh water application are used, observe and comply with the requirements of verification test for the gate valves delivered to site under PLU1.T096;

d. For globe stop and check valves with nominal sizes up to and including 40mm for fresh water application, observe and comply with the requirements of verification test for the gate valves delivered to site under PLU1.T098.

**PLU1.M660.8 BALL VALVES**

Use uPVC type ball valves which comply with the following:

1. Valve components:
   a. uPVC;
   b. Ball center-pivoted, smooth and spherical with a circular orifice, and seated on resilient seating suitable for tight shut off;
   c. Stem one-piece with O-ring made of Ethylene Propylene Diene Monomer (EPDM) for positive sealing of the body.

2. Valve operation:
   a. By wrench turned in a clockwise direction to close when facing the wrench;
   b. At fully open position of valve, wrench to be mounted parallel to the flow of passage through the ball;
c. Wrench to fully close valve at a quarter turn;

d. Provide suitable stops for both fully open and fully closed positions of valve.

3. Valve end connections and pressure standards:

a. Socket or union suitable for directly connecting the pipe to which it is installed;

b. Suitable for both the working and test pressure of the pipework in which it is installed with system working pressure of at least 10 bar at 35°C unless otherwise specified. Be capable of withstanding system working pressure and maximum static pressure that may arise upon failure of the associated pressure reducing devices;

4. Test certificate / report:

a. Submit type test certificates / reports issued by laboratories that comply with PRE.B9.570 and accepted by the Water Authority confirming that the valves have been tested in conformity with sub-clause 3(c).

**PLU1.M680.A DRAW OFF TAPS**

1. Comply with BS EN 200, unless otherwise specified or approved by the CM. Be of screw down type, easy-clean pattern body surface, and shall be with chromium plated unless otherwise approved by the CM. Submit sample for Approval prior to installation;

2. Decorative, electroplated materials such as nickel and / or chromium shall not be present on the internal surface of any of the components of the draw off taps that may come into contact with water;

3. On Site Delivery Verification:

   a. Further to the submission requirements at delivery stage in PLU1.M610 (13)(b), carry out and submit report on the following verifications as appropriate for material upon delivery on Site. Prior to carrying out the verifications, inform the CM or his representatives who may be present to witness the verifications:

      i. **Method:**

         | Verification Items       | Method   | Acceptance Standards                      |
         |--------------------------|----------|-------------------------------------------|
         | Material and Packaging   | Visual   | Same as the CM’s Approved Sample          |
         | Logo & Label Check       | Visual   | Same as the CM’s Approved Sample          |
         | Marking on Body          | Visual   | Same as the CM’s Approved Sample and Catalogue |
         | Surface Quality          | Visual   | No damage                                 |
         | Dimension Check          | By Measurement | As Specified                           |

   ii. **Frequency:**

      Carry out verification on one sample for every 200 pieces or part thereof per every delivery of material to Site under each delivery note. A representative batch means the material delivered to Site under the same delivery note.

   b. Where any of the verifications fail to meet the acceptance standards, either:

      i. Remove the representative batch off Site; or
ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be granted.

**PLU1.M690.8** BALL FLOAT VALVES FOR FLUSHING TANKS

Be of diaphragm type, plastic body to BS 1212-3 with rubber or plastic diaphragm, unless otherwise approved by the Contract Manager and be suitable for high, medium or low pressure as required. Be suitably coated to prevent corrosion on metal parts. Submit valve sample for Approval prior to installation.

**PLU1.M700.A** ANGLE VALVE FOR FLUSHING CISTERNs

1. Plastic type angle valve shall be used. It shall be type tested to comply with clause 8.1 on resistance of valve bodies to internal pressure and clause 8.4.2 on seat test of BS EN ISO 1452-4 with the approval of the Water Authority for use in flushing water plumbing system;
2. The valve shall be fully closed with the wrench or handle or knob operates at no more than a half turn;
3. The valve shall be provided with suitable stops for both fully open and fully closed positions;
4. The valve shall be suitable for both the working and testing pressure of the piping system in which it is installed with working pressure of at least 10 bar at 35°C unless otherwise specified.

**FIXED RATIO TYPE PRESSURE REDUCING VALVE**

**PLU1.M910.8** PERFORMANCE REQUIREMENTS

1. Comply with the following requirements:
   a. Able to maintain the outlet pressure as a fixed ratio of the inlet pressure, independent of the magnitude of the inlet pressure and the water flow across the valve;
   b. Of a size and pressure ratio as specified on the Drawings;
   c. With an operating pressure range suitable for the particular application and a rated system working pressure not less than 16 bar;
2. Submit details of the pressure reduction against flow rate and inlet pressure performance curve and submit test certificates / reports issued by laboratories that comply with PRE.B9.570 and accepted by the Water Authority confirming that the valve has been tested in accordance with the requirements of this Specification.

**PLU1.M920.A** FIXED RATIO TYPE PRESSURE REDUCING VALVE

1. Quality Requirements:
   Be of gunmetal body to BS EN 1982 CuSn5Zn5Pb5 (CC491K) for fresh and flush water or stainless steel body to BS EN 10283 Grade 1.4308 for fresh water and to BS EN 10283 Grade 1.4408 for flush water:
   a. Have a piston of straight through design, constructed of stainless steel at least to BS EN 10088-3 Grade 1.4301 for fresh water a BS EN 10088-3 Grade 1.4401 for flush water unless otherwise approved by the CM;
   b. With seats and O-ring seals of high grade synthetic rubber. In case of fresh water application, the non-metallic components / parts including lubricant / grease for PRV shall show compliance with the relevant requirements in BS 6920 as required by the WSD for non-metallic components in contact with water intended for human consumption;
c. Be provided with an arrow on the exterior to indicate the direction of flow;
d. Be of flanged end connection to BS EN 1092-1 or BS EN 1092-3 or screwed female end connection to BS EN 10226-1, 2, 3 fitted with suitable adaptor flange to BS EN 1092-1 or BS EN 1092-3 with bolts and nuts to BS EN 1515-1.

2. Testing of valves shall comply to BS EN 1567;

3. On Site Delivery Verification:
   a. Further to the submission requirements at delivery stage in PLU1.M610 (13)(b), carry out and submit report on the following verifications as appropriate for material upon delivery on Site. Prior to carrying out the verifications, inform the CM or his representatives who may be present to witness the verifications:
      i. Method:
         | Verification Items | Method   | Acceptance Standards                        |
         |--------------------|----------|---------------------------------------------|
         | Material and Packaging | Visual   | Same as the CM’s Approved Sample            |
         | Logo & Label Check | Visual   | Same as the CM’s Approved Sample            |
         | Marking on Valve   | Visual   | Same as the CM’s Approved Sample and Catalogue |
         | Surface Quality    | Visual   | No damage                                    |
         | Dimension Check    | By Measurement | As Specified                              |
   ii. Frequency:
      For each of the fresh water and flush water applications, carry out verification on one sample for every 100 pieces or part thereof per every delivery of material to Site under each delivery note. A representative batch means the material for the same application delivered to Site under the same delivery note.
   b. Where any of the verifications fail to meet the acceptance standards, either:
      i. Remove the representative batch off Site; or
      ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be granted.

CISTERNs AND TANKs

PLU1.M1110.A

GENERAL
1. Cisterns and tanks for intended applications shall comply with the requirements of the Water Authority;
2. Lining materials in direct contact with potable water in portable water tanks shall comply with the relevant requirements of BS 6920:2014 as follows:

<table>
<thead>
<tr>
<th>Type of Internal Lining Material</th>
<th>Testing Standards &amp; Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tile Grout</td>
<td>BS 6920-1:2014 Clause 4 to 8</td>
</tr>
<tr>
<td>Ceramic Tile</td>
<td>BS 6920-1:2014 Clause 8</td>
</tr>
<tr>
<td>Paint/Coating</td>
<td>BS 6920-1:2014 Clause 4 to 8</td>
</tr>
</tbody>
</table>
3. Licensed Plumber shall report the details of the lining materials to be used in potable water tanks for plumbing works in Form WWO 1149 for submission to WSD together with Form WWO 46;

4. The cisterns and tanks shall be provided with safety access to the roof of the tank and railings on the roof of the tank as shown on the Drawings for maintenance and cleansing;

5. Submission Requirements:
   a. At sample submission and approval stage, submit a sample of the proposed material for the CM's approval together with all the following substantiation for the CM's information:
      i. Catalogue, brand name / model name and job reference;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer;
      iv. Test reports or test certificates of lining materials in direct contact with potable water in portable water tanks to demonstrate compliance with sub-clause (2), and the corresponding General Acceptance Letter issued by the Water Authority;
      v. When fibreglass water tank is used, confirmation in writing with a declaration from the manufacturer of the fibreglass water tank that the fibreglass water tank comply with the quality requirement of PLU1.M1120 and contain no toxic material and is suitable for storage of potable water;
     vi. Other specified submission requirements for the materials.

PLU1.M1120.8 STAINLESS STEEL CISTERN, FIBRE GLASS WATER TANKS, COVERS, TANKS AND CYLINDERS
1. Fibreglass storage cisterns for potable water shall be of an approved type or certified to contain no toxic materials and to be suitable for storage of potable water;
2. For capacity equal to 1000 litres and below, be made of stainless steel to BS EN 10088-4 Grade 1.4301 for fresh water, fire services water and rainwater harvesting systems or to BS EN 10088-4 Grade 1.4401 for flush water system or be made of fibreglass reinforced plastic with minimum 3 mm thickness for fresh water, fire services water, flush water and rainwater harvesting systems;
3. For capacity above 1000 litres, be made of fibreglass reinforced plastic, manufactured to BS EN 13923;
4. Flat bottom and a top cover with suitable reinforcing and bracing;
5. Be non-insulated with no external bracings, ribs, hoops or supporting wires required;
6. Structural calculation shall be submitted at sample submission and approval stage if the capacity of fibre glass water tank exceeds 5000 litres.

PLU1.M1130.8 CISTERN / TANK COVERS
1. For stainless steel water tanks, be fitted with stainless steel access covers and frames, the grading and thickness of stainless steel shall be the same as stainless steel water tanks.;
2. For concrete fresh water, fire services water and rainwater harvesting water tanks, be fitted with stainless steel double sealed access covers and frames, the grading of stainless steel shall be BS EN 10088-3 Grade 1.4301 and with minimum thickness of 3 mm;
3. For concrete flush water tanks, be fitted with stainless steel access covers and frames, the grading of stainless steel shall be to BS EN 10088-3 Grade 1.4401 and with minimum thickness of 3 mm;

4. For fibre glass water tanks, be fitted with fibre glass access covers, the thickness of fibre glass shall be the same as fibre glass water tanks.

**STREET FIRE HYDRANTS**

**PLU1.M1210.8 PERFORMANCE REQUIREMENTS**

1. Be of pedestal type complying with the requirements of FSD;

2. Be of an accepted standard pattern with two 65 mm outlets and one 100 mm outlet;

3. Be capable of delivering not less than 2000 litres per minute (33.3 l/s) with a minimum running pressure of 170 kPa at the outlet when tested in accordance with the provision of BS 1042 with one 65 mm outlet working;

4. The minimum output as stated in sub-clause (3) above shall be made available from two 65 mm outlets of a system delivering at same time, i.e. a total output of not less than 4000 litres per minute (66.7 l/s) at 170 kPa;

5. The maximum pressure drop through the street fire hydrant shall not be greater than 380 kPa at a flow of 66.7 l/s with two 65 mm outlets delivering at the same time;

6. Be capable of withstanding a hydraulic pressure of 25 bar;

7. Should either flow or pressure performance as specified in sub-clause (3) or (4) above is found unsatisfactory in flow test resulting from the pressure drop across the street fire hydrant, the hydrant shall be replaced at no additional cost to the Contract.

**PLU1.M1220.8 HYDRANT CONSTRUCTION**

Be constructed of materials with the following minimum standards:

1. Hydrant body: ferrous casting to BS EN 1561 - Grey Cast-iron Castings, Grade EN-GJL-250 (5.1301) or BS EN 1563 spheroidal graphite cast iron (ductile iron) with a density of not less than 7200 kg/m³;

2. Caps: spheroidal graphite cast iron (ductile iron) casting to BS EN 1563 of Grade EN-GJS-450-10;

3. Inlet: 150mm PN16 flange to BS EN 1092;

4. Outlet pieces: bronze casting to BS EN 1982 for CuSn10Pb10-C (CC480K) with zinc content not exceeding 2 %; two 65 mm and one 100 mm male thread outlets to BS 336;

5. Screw for fixing outlet pieces: M20 stainless steel countersunk square head type to BS EN 10088-3 Grade 1.4301 with the square head being cut off after the tightening of the screws;

6. Rubber gaskets to BS EN 681-1:
   a. 2 mm thick rubber insertion between the body and the outlet pieces; and
   b. 6 mm thick rubber insertion between the outlet pieces and the caps.

7. Chains: stainless steel chains attaching the caps to the hydrant body to BS EN 10088-3 Grade 1.4301;

8. Internal protection: coating to BS EN 10300 Category 1, grade c or BS 3416 type 1;

9. Painting:
   a. One coat primer of epoxy resin with aluminium mastic paint (of colour different from the undercoat);
   b. One undercoat of epoxy resin paint of grey colour with a minimum total dry film thickness of 280 µm (including the coating thickness of item (a));
   c. One finishing coat of epoxy resin paint of colour to suit FSD requirements.

</table>
WORKMANSHIP

GENERAL

PLU1.W010.8 SITE STORAGE
1. Prior to installation, store all materials properly in accordance with the manufacturer's instructions to afford maximum protection against weather, corrosion, mechanical damage and other causes;
2. Store all pipes with closed ends;
3. Store pipes and fittings under cover and clear of a levelled, well-drained and maintained hard-standing ground;
4. Remove all damaged materials from site immediately.

PLU1.W020.8 SITE CLEANLINESS
1. Clean all pipes and fittings before erection to remove all scale, burrs, furs, sand, slag etc.;
2. Maintain cleanliness throughout erection by covering the exposed ends of the pipework.

PLU1.W030.8 PIPEWORK INSTALLATION
Unless otherwise specified, carry out pipe joint installation in accordance with BS EN 806-4.

PLU1.W040.8 PIPEWORK ROUTING
1. Coordinate the pipework installation with the work of other trades, services and structural beams and to allow for diversion of pipework to ascertain that the overall pipework is installed in a neat and tidy manner;
2. Cross-over of pipe to be kept minimum;
3. Avoid pipe runs above electrical installation as far as practicable;
4. Drawings supplied are diagrammatic and indicate only the approximate location and manner in which the pipework is to be installed.
5. Labeling system shall be provided on pipes inside pump rooms and at the lowest and highest locations of typical floors. Legibly marked with the black or white letters and arrows to indicate the type of service and direction of flow.

PLU1.W050.8 VENTING
1. Automatic air vents shall be provided as specified and at all high points of the system as shown on the Drawings;
2. Connections to the service pipes shall be made at the highest point to ensure complete venting. Automatic air vents shall be mounted so that the inlet connection is in an exact vertical plane. A lock shield valve shall be located between the service pipe and the automatic air vent;
3. Automatic air vents for water systems shall have bodies of brass, gunmetal or malleable iron, non-ferrous or stainless steel floats and guides, and noncorrodible valves and rubber seats. Connections to the pipework shall be via a screwed BSP (British Standard Parallel) or NPT (National Pipe Thread Tapered Thread) connection.
PLU1.W060.8  EASE OF DISMANTLING
Unless otherwise Approved, do not embed pipes in concrete or grout in or install in such a way as to make alterations difficult at a later date.

PLU1.W070.8  BENDS AND OFFSETS OF COPPER PIPEWORK
1. Bends and offsets of up to 90° can be formed in pipe sizes 15mm to 28mm provided they:
   a. Have a minimum centre line radius of more than or equal to 3.5 times the pipe diameter;
   b. Are only formed using tools specifically designed for that purpose, i.e. spring benders and formers;
   c. Are free of deformation that may restrict water flow.
2. Bends and offsets of up to 30° and have a minimum centre line radius of more than or equal to 3.5 times the pipe diameter can be formed in pipe sizes less than or equal to 28mm by heat bending / annealing techniques without the need for bending tools;
3. Where building design permits, offsets shall be achieved using 45° in preference to 90° bends.
4. The installations location of bends and offsets for the above mentioned shall be subjected to the Contract Manager approval.

PLU1.W080.8  COPPER PIPEWORK REQUIRING POLYETHYLENE SHEATH
1. Do not remove or damage the polyethylene sheath where bends are formed in copper pipes with factory applied polyethylene sheath;
2. Terminate factory applied polyethylene sheath at a consistent/uniform distance not more than twice the diameter of the pipe from the connecting copper fitting body.

PLU1.W090.8  UNDERGROUND PIPES
Follow procedures and requirements specified in Worksection DRA2 for excavation of underground pipes directly in trench.

PLU1.W100.8  PIPES ON FLAT ROOFS AND CANOPIES
Support pipes on flat roofs and canopies at least 150 mm above roof and canopy finish on concrete blocks with pipe clamps.

PLU1.W110.A  INSTALLATION CONTRACTOR AND ATTENDANCE FOR COMPLIANCE WITH REQUIREMENTS OF THE WATER AUTHORITY
1. Carry out all plumbing installation works mentioned in this Specification and shown on the Drawings, including, if applicable, connection work to the water town mains by contractors and associated Licensed Plumbers (LP) as approved by the Water Authority;
2. All fresh and flush water supply installations commencing from the government mains at the entry of site boundary to and including individual sanitary fixtures, gas water heaters and taps required under the Contract as described in PLU1.G010 (1)(a) shall be carried out by a plumbing installation sub-contractor and the associated LP employed under PLU1.G012 (1). The associated LP should have obtained Level 2 or above in English Language in the Hong Kong Diploma of Secondary Education Examination (HKDSEE), or Grade E or above in English Language (Syllabus B) in the Hong Kong Certificate of Education Examination (HKCEE), or equivalent. In case the LP cannot meet such requirement, the Contractor or the plumbing installation sub-contractor employed under PLU1.G012 (1) shall provide a competent personnel (e.g. registered engineer, relevant site personnel) with equivalent qualification in English to support the plumbing installation and associated works handled by the LP;
3. Submit and update all necessary applications and forms to the Water Authority and attend upon their representative for the purpose of tests and inspections for the plumbing installation. All applications and forms for submission to WSD shall be submitted to the CM for comment before submission to WSD and record after approval;

4. The LP referred to in sub-clause (1) shall:
   a. Submit material list to WSD under Form WWO 1149 and subsequent update as soon as the proposed materials, and / or proposed change of approved materials, which are approved by the CM, and before placement of order for such materials;
   b. Ensure that all pipes and fittings have been acknowledged by the Water Authority with permission given for proceeding with the approved plumbing works before installation;
   c. Carry out mandatory lead check for soldering materials in pipe-fittings with integral solder ring upon delivery to Site according to WSD Circular Letter No. 4/2020. Keep the batch delivery inventory record and the corresponding lead check test results with record photos of every batch of pipe-fittings with integral solder materials for subsequent inspections by the Water Authority when requested. Submit test records of lead checks for each batch of pipe-fittings with integral soldering materials to Water Authority together with Form WWO 46 Part IV;
   d. Supervise all plumbing installation works under his charge with attendance record submitted to the CM on monthly basis after commencement of plumbing installation works on Site;
   e. Attend the Contractor’s regular site meetings with Nominated Sub-contractors, Direct Contractors and utility undertaking as appropriate;
   f. Submit monthly report on quality control and progress for review at the site meetings. The report shall include progress of plumbing works, LP’s site inspection and site attendance records, record of material quarantine and verification tests, updated WSD submission record etc.;
   g. Attend regular site meetings if required by the CM;
   h. Upon completion of the plumbing installation works:
      i. Submit LP’s inspection report of the completed plumbing installation;
      ii. Declare that all pipes and fittings installed on Site have been approved by the Water Authority and registered with WSD under Form WWO 1149;
      iii. Declare that only cadmium-free category brazing alloy and lead-free category soldering alloy are used;
      iv. Declare that all pipes and fittings installed and any materials used for the construction and installation of the plumbing works are as prescribed by the Waterworks Regulations and approved by the Water Authority.
      i. Attend all WSD inspections.

5. The Contractor shall monitor the LP’s carrying out of duties as specified in sub-clause (4) above and ensure plumbing works under the LP are in full compliance with the Specification and as prescribed by the Waterworks Regulations;

6. The Contractor shall monitor the LP’s submission to WSD related to the Works. Contractor shall check the validity of the WSD Form and attachments before onward submission to the CM for comment / signing. The Contractor’s checking of the WSD submission forms, with declaration that the materials used and the construction of the plumbing works described therein are as prescribed by the Waterworks Regulations, shall be recorded in a standard form in PLU1.APPEND1 which shall be jointly signed by the LP and the Contractor and submitted to the CM for record;
7. The Contractor shall verify that the LP’s declaration under sub-clause (4)(h) are valid. The verification and the declaration shall be recorded in a standard form in PLU1.APPEND2 which shall be jointly signed by the LP and the Contractor and submitted to the CM for record.

PLU1.W120.8 REGISTERED FIRE SERVICES CONTRACTOR

Employ a registered Fire Services Contractor to carry out the installation work, subsequent testing and commissioning and make necessary submissions to FSD for the fire services installation carried out by Main Contractor such as street fire hydrant system and up-feed riser pipe to storage/transfer tank.

PLU1.W130.8 FIXED RATIO TYPE PRESSURE REDUCING VALVE

The Contractor shall visit the PRV installations half-yearly to carry out the following works:

1. Inspect pipes, valves, fittings and PRV according to manufacturer recommendation to ascertain that there is no seepage at the connecting joints or the breather hole of the PRV;

2. Inspect the upstream and downstream water pressure gauges to ascertain that the PRV under water supplies is functioning in a desirable range of working pressure. Provide labels and colour indicators to clearly indicate the working pressure range;

3. If inspection result reveals that there is inadequate (i.e. less than 80% of the required pressure reduction) or no reduction in system pressure or seepage is present at the connecting joint or breather hole of the PRV, to proceed with the following:
   a. Dismantle the PRV by disconnecting screw connector / seat holder / locking bush at both ends, and take out the piston and spring (if any) from the casing body;
   b. Thoroughly cleanse all removable parts, pistons, springs and the inside of the casing body and cover to remove all mud, dirt or other foreign matters;
   c. Replacing any elastic components / parts such as rubber / EDPM etc. including O-ring / seat rings / disc gaskets that are damaged, defective or missing. Lubricate such rings with appropriate grease as recommended by the supplier. In case of fresh water application, the replacement of non-metallic components / parts including lubricant / grease for PRV for use in contact with cold water intended for human consumption shall show compliance with the full tests of effect on water quality to BS 6920;
   d. Thoroughly cleanse and removing any surface oxidation / corrosion on the external surface of the PRV;
   e. Re-assemble the PRV to ensure that the joints are properly connected, there is no leakage and the pressure readings are in order. Replace any defective flange gasket or bolts / nuts. Keep the breather hole free of obstruction.

4. If the PRV is beyond repairs, replace the defective PRV with a new one which is in compliance with the Specification. If the pressure gauge is broken, faulty or leaking, replace the defective pressure gauge with new one which is in compliance with the Specification. Replace any pipes, valves, fittings and PRV parts that are found defective and suspected of being defective;

5. Submit Maintenance Report together with records of water pressure readings to the CM within 7 days upon completion of the half-yearly maintenance or rectification work.
PIEJOINT

PLU1.W210.8 GENERAL
1. Unless otherwise specified, store, handle and joint pipes and fittings in accordance with manufacturer's recommendations;
2. Do not make pipe joints in the thickness of any wall, floor, ceiling or beam;
3. Provide expansion joint for all pipework passing through any building expansion joint.

PLU1.W220.8 JOINTING GALVANIZED STEEL PIPES
1. Unless otherwise Approved, joint galvanized steel pipes of sizes up to and including 100mm with screwed fittings. Use screwed flanges only for connection to flanged end valves or equipment;
2. Unless otherwise Approved, joint galvanized steel pipes of size of 150mm and above with screwed fittings, screwed flanges or flanged fittings;
3. Do not joint galvanized steel pipes by welding unless approved by the CM;
4. Screwed fittings shall have pipe threads complying with BS EN 10226-1, 2, 3. Screwed joints shall have tapered threads and shall be made with Approved jointing material;
5. As an alternative to flanged and screwed joints, grooved end mechanical couplings may be employed subject to the approval of the CM:
   a. Before couplings are assembled, pipe ends and outsides of gaskets shall be lightly coated with suitable lubricant or graphite paste to facilitate installation;
   b. Pipe grooving shall be carried out by using proprietary grooving machine and in accordance with the pipe coupling manufacturer's latest specifications. The grooving shall be roll-grooved without the removal of any metal. Zinc coating damaged during the grooving operation of galvanized steel pipe shall be rectified by scrubbing clean the affected area and coated with a zinc rich galvanizing paint as recommended by the pipe manufacturer's subject to the approval by the CM;
   c. Unless otherwise specified, all mechanical couplings and fittings shall have a minimum system working pressure of not less than 1600kPa and the testing pressure shall not be less than 1.5 times the system working pressure;
   d. The electrical continuity of the mechanical couplings shall be effective and shall be verified by site measurement;
   e. The mechanical couplings and fittings shall comply with standards acceptable to Fire Services Department (FSD);
   f. The entire coupling installation shall be in accordance with the latest published selected manufacturer's recommendations.

PLU1.W230.8 JOINTING DUCTILE IRON PIPES
Unless otherwise specified, joint all ductile iron pipes as follows:
1. For above ground installation: with screwed flanges or flanged fittings;
2. For below ground installation: with flexible push-on type connection joints;
3. At master water meter and check meter positions: with slip-on flange adaptor in accordance with the requirements of Water Authority and as shown on Drawings;
4. Equip slip-on flange adaptor with guide rod assembly between flanges consisting of guide rod plates, at least three guide rods each of minimum 16mm diameter and washers all as shown on the Drawings. The guide rod assembly shall be made of stainless steel at least to BS EN 10088-3 Grade 1.4401. After installation of slip-on flange adaptor, fix and leave the guide rod assembly in position to prevent damage to the adaptor from excessive movement;
5. Provide durable marking on the pipe body to indicate the installed position of the slip-on flange adaptor for future checking of any dislocation of the adaptor;

6. After installation of all slip-on flange adaptors in a master water meter room or a check water meter cupboard/chamber, the Contract Manager shall select one installed slip-on type flange adaptor to be disconnected for checking the lap length of the adaptor on the pipe against the manufacturer's recommendation. Upon the Contract Manager's satisfaction on the lap length, connect the ductile iron pipes of the master water meter room or check water meter cupboard/chamber to the water supply.

**PLU1.W250.8** JOINTING COPPER PIPEWORK WITH COPPER ALLOY CAPILLARY FITTINGS BY BRAZING

Follow the following procedures:

1. Apply flux to the tube spigot and fitting socket when brazing;
2. Remove residual flux after brazing.

**PLU1.W260.8** JOINTING COPPER PIPEWORK BY SOLDERING

Follow the following procedures:

1. Remove copper oxide and dirt from pipe spigot and fitting socket prior to the application of soldering flux;
2. Apply flux sparsely and remove excess flux prior to heating;
3. Clean pipe joints with a damp cloth on completion to remove flux residues.

**PLU1.W270.8** CAPILLARY TYPE JOINTS AND FITTINGS OF SHEATHED COPPER PIPEWORK

Fit "clip-on" type preformed polyethylene sheaths to cover the capillary type joints and fittings after jointing of the pipework.

**PLU1.W290.8** JOINTING STAINLESS STEEL PIPES

1. Unless otherwise Approved, joint stainless steel pipes with nominal outside diameter up to and including 54mm with compatible stainless steel non-welding type fittings with stainless steel O-rings or nitrile rubber (NBR) O-rings and silicone gaskets.
2. Unless otherwise Approved, joint stainless steel pipes with nominal outside diameter above 54mm with compatible stainless steel non-welding type fittings with couplings and silicone gaskets.
3. Joint stainless steel pipes to ductile iron pipes with purpose made stainless steel flange adaptor in accordance with the manufacturer's recommendations.
4. All pipe installation to be carried out in strict accordance with the manufacturer's instructions. In addition to the requirements on Trade Tested Workers as specified in PRE.B6.065, all workers carrying out stainless steel pipes installation shall have received relevant training and be certified by recognised local institution, trade union or the pipe supplier.
5. All pipes shall be cut to square ends, free from harmful burrs and be prepared in accordance with the manufacturer's recommendations. Purpose made equipment recommended by the manufacturer shall be used for cutting the pipes and shall be submitted for the Contract Manager's approval.
6. All grooves on the pipes shall be roll-formed in accordance with the manufacturer's standards and recommendations. Purpose made equipment recommended by the manufacturer shall be used for forming the grooves and shall be submitted for the Contract Manager's approval.
PLU1.W291.8  JOINTING UNPLASTICIZED PVC (UPVC) PIPES
1. All pipes shall be cut to square ends, free from harmful burrs and be prepared in accordance with the manufacturer's recommendations. Purpose made equipment recommended by the manufacturer shall be used for cutting the pipes and shall be submitted for the CM's approval;
2. All uPVC pipes shall be jointed with sockets and fittings and as recommended by the uPVC pipes manufacturer;
3. Solvent cementing shall be used for all pipeworks. All the surfaces shall be cleaned with abrasive paper and spirit cleaner. In the application of solvent cementing, heat shall be avoided as the cement may dry before chemical bonding between the two surfaces is completed. Mating surfaces shall be turned for even spread of the solvent. Excessive cement shall be wiped off quickly;
4. Flanged joints shall be used where solvent cementing is not practicable and at locations to facilitate dismantling. Neoprene ring gaskets provided or approved by the flange manufacturer shall be used between flanges. The jointing compound for the pipe and flange must be applied in accordance with the jointing compound manufacturer's recommendation.

PLU1.W292.8  JOINTING CHLORINATED PVC (CPVC) PIPES
1. Use jointing compound as recommended by the manufacturer of the pipes and fittings. For pipe size above 50mm, primer is needed to prepare the bonding area for the additional of the cement. Refer to the manufacturer's recommendations for safety handling;
2. For solvent cementing, the solvent cement set and cure time shall be strictly conformed to the manufacturer's instructions; whereas, the required prolonged set and cure time shall be consulted and acquired from the manufacturer when the relative humidity is higher than 85% and / or the ambient temperature is below 10ºC;
3. After the pipework is installed and all solvent cement is fully cured, the system shall be pressure tested and checked for leaks using water. The method to test the water leakage of the system shall be carried out in accordance with the manufacturer's recommendations.

PLU1.W293.8  JOINTING CHLORINATED PVC (CPVC) PIPES TO DUCTILE IRON PIPES
1. Use CPVC flange joint as recommended by the manufacturer of the pipes and fittings for jointing CPVC pipes to ductile iron pipes of compatible size;
2. Flange joints shall incorporate an electrometric gasket between the mating faces to provide for seal. The gasket selected must be full-faced and have the hardness and thickness recommended by the manufacturer;
3. Flange joints shall be carefully aligned and the bolts inserted through matching holes. A flat washer shall be used beneath each nut and bolt head. The required bolt torque shall be carried out in strict accordance with the manufacturer's instructions.

PLU1.W294.8  JOINTING CHLORINATED PVC (CPVC) PIPES TO UNPLASTICIZED PVC (UPVC) PIPES
1. Use jointing compound as recommended by the manufacturer of the pipes and fittings for jointing CPVC pipes to uPVC pipes of compatible size. For pipe size above 50 mm, primer is needed to prepare the bonding area for the additional of the cement. Refer to the manufacturer's recommendations for safety handling;
2. Joint CPVC pipes to uPVC pipes of incompatible size with purpose made CPVC adaptor in accordance with the manufacturer's recommendations;
3. For solvent cement joints, the solvent cement set and cure time shall be strictly conformed to the manufacturer's instructions; whereas, the required prolonged set and cure time shall be consulted and acquired from the manufacturer when the relative humidity is higher than 85% and / or the ambient temperature is below 10°C;

4. For threaded pipe fittings, all taper pipe threads shall be gauged in accordance with ASTM F1498;

5. After the pipework is installed and all solvent cement is fully cured, the system shall be pressure tested and checked for leaks using water. The method to test the water leakage of the system shall be carried out in accordance with the manufacturer's recommendations.

**PIPEWORK SUPPORTS**

**PLU1.W310.8**

**GENERAL**

1. Support pipework in such a manner as to allow adequate movement for expansion and contraction;

2. Add neoprene or rubber to BS ISO 2028 vibration isolation pad of 6 mm thick between the pipe and bracket for the section of up-feed riser pipe running through the floor from outside the pump room to where the flexible connector is installed;

3. Do not mount pipe bracket inside pump room on wall and ceiling as far as practicable. If unavoidable, add neoprene or rubber to BS ISO 2028 vibration isolation pad of 6mm thick between the pipe and bracket for brackets mounted on wall; and add vibration isolator as PLU1.M420 for brackets mounted to ceiling or steel support frames;

4. Do not fix pipe bracket to copper pipe by means of brazing or soldering;

5. Provide pipe brackets at both sides of a metal valve installed in uPVC pipes of any size and other types of pipes with nominal size of 80mm or above;

6. Provide pipe brackets at both sides of a turning point of uPVC flush water pipe riser and down pipe at communal area;

7. Provide pipe brackets at both sides of a turning point before and after the check water meter position with slip-on flange adaptors installed.

8. Provide duct foot bend fittings and support at the lowest end of water risers of 80mm diameter and above. Fittings shall be constructed of materials suitable for use in the system and shall be capable of withstanding the system working pressure. Fittings shall be connected to the riser pipes with flange joints.

**PLU1.W320.8**

**PIPE BRACKET INTERVALS**

Install pipe bracket at intervals not exceeding those shown in the following table for straight runs, and with not less than one bracket per length of pipe. Short length of pipe can be without pipe bracket if approved by the Contract Manager. Support all pipework to ensure that it is free from excessive stress due to the weight of its contents, its own dead weight, and dynamic forces due to liquid movement and take particular care to ensure that the branch is not supporting the riser.

**PLU1.W330.8 ADDITIONAL REQUIREMENTS INSIDE MASTER WATER METER ROOM AND IN OPEN TRENCH FOR WATER SUPPLY PIPES**

1. Support pipes and valves at required levels by Grade 20/20D precast concrete wedges, blocks or cradles as Worksection CON1, or by other methods approved by the CM. Provide at least one support for each section of pipe and for each valve. The spacing between supports shall not exceed 3 m. Provide mounting brackets to support, and to constraint and limit movement of pipes;

2. Support bends and tees at required levels by 20/20D concrete thrust blocks as Worksection CON1; and embed bends and tees in Grade 20/20D concrete surround as Worksection CON1, for the full length of each thrust block. For vertical bends and tees where thrust blocks cannot be used, provide pipe brackets at both ends, if applicable, of each bend and tee to restrain and limit the movement of pipes;

3. All supports and brackets shall not obstruct the fixing and unfixing of bolts and nuts in the disconnection and reassembly of flange joints;

4. All concrete supports shall be anchored onto the floor by dowel bars except removable concrete supports at check meter positions as required by the Water Authority;

5. Design and submit layout and structural details of all concrete supports and sizes of mounting brackets to the CM for approval prior to any pipework installation.

**PIPE SLEEVE**

**PLU1.W410.8 FIXING PIPE SLEEVES**

1. Where pipes pass through walls, beams and floor/ceiling slabs, provide and fix sleeves with uniform annular clearance to allow for expansion and movement of pipe;

2. For pipes passing through walls and beams, fix sleeves that flush with the finished surfaces;

3. For pipe passing through floor slabs, fix sleeves in position with 100 mm projection above finished floor level and flush with the underside of the floor.
PLU1.W420.8 CAULKING PIPE SLEEVES AND PUDDLE SLEEVES
1. For metal sleeves used in walls and slabs within the same fire compartment, fill the full length of annular space between the sleeve and the pipe with mineral wool or Approved equivalent materials. Caulk both ends with mastic sealant;
2. For metal sleeves used in fire-rated walls and slabs within the same fire compartment, fill the full length of annular space between the sleeve and the pipe with non-flammable mineral wool or Approved equivalent materials. Caulk both ends with fire-rated mastic sealant which is durable and effective in sound insulation to maintain the required FRP of the walls/floor slabs;
3. For metal sleeves used in walls and slabs between fire compartments, fill the full length of annular space between the sleeve and the pipe with non-flammable mineral wool or Approved equivalent materials. Caulk both ends with fire-rated mastic sealant which is durable and effective in sound insulation to maintain the required FRP of the walls/floor slabs;
4. For puddle sleeves passing through external basement walls, gap between the sleeve and pipework shall be filled with mastic sealant approved by the Contract Manager.

PAINTING

PLU1.W510.8 GENERAL
Paint all pipes where specified in accordance with Worksection FIN7.

INSTALLATION OF VALVES

PLU1.W610.8 GENERAL
Unless otherwise specified, install the valve in accordance with manufacturer's recommendations.

PLU1.W620.8 NON-RETURN VALVE
When valve is installed vertically, ensure water flow is in an upward direction.

STREET FIRE HYDRANTS

PLU1.W720.8 FIXING
Install the street fire hydrant and associated valves as shown on the drawings given in the Water Authority Standard Drawings [Section 1 – Mainlaying] and FSD requirements.

PLU1.W730.8 ANNUAL INSPECTION, FINAL ACCEPTANCE TEST AND CERTIFICATE OF FIRE SERVICE INSTALLATIONS AND EQUIPMENT
1. Carry out annual inspection in accordance with Fire Services Department (FSD)'s requirements;
2. Comply with the following at the end of the Maintenance Period:
   a. Maintain the street fire hydrants in good condition;
   b. Carry out the final acceptance test for the street fire hydrants;
   c. Submit the Certificate of Fire Service Installations and Equipment (F.S. 251) to FSD,
3. Submit a copy of the Certificate (F.S. 251) to the Contract Manager within 14 days after the annual inspection and the final acceptance test respectively;
4. Copy, frame and display the Certificate (F.S. 251) together with a list of the fire services installation and equipment in a prominent area in accordance with the Contract Manager's instruction.

MAINTENANCE REQUIREMENT DURING MAINTENANCE PERIOD

PLU1.W750.8 STOP VALVES MANAGEMENT SYSTEM

1. Formulate a Stop Valves Management System (SVMS) as per FSD’s requirements for fire hydrant / hose reel and street fire hydrant systems (FH/HR and street FH systems), except those SVMS carried out by the Fire Services and Water Pump Nominated Sub-contractor, to facilitate the future estate / property management to monitor the status of the stop valves (SV) of the FH/HR and street FH systems including but not limited to connection piping from Master Water Meter Room to Fire Service Upfeed Pump Room, upfeed piping and street fire hydrant systems, under Worksection PLU1;

2. Under the SVMS, SVs refer to all essential valves which have to be kept open for proper functioning of the systems;

3. Contractor’s responsibilities under the SVMS are as follows:
   a. Keep track of the maintenance services and operation of the SVs for each of the FH/HR and street FH systems as required in a log book, which shall be submitted to the CM after completion of the Works for future maintenance and management of the systems;
   b. Provide each stop valve with a pull-up tamper-proof seal security tag using steel wire-rope with pad lock and labelling with unique tag number and a durable warning label placed inside a durable and readable plastic bag;
   c. Each stop valve shall carry an identification label with estate code, block code, floor number and valve number assigned by the Estate Management for easy identification and traceability of records. For SVMS hidden inside false ceiling or covered up area, a label shall be posted at a prominent location to show the position of the hidden SVMS;
   d. Affix a “Normally Open” weatherproof label to the valve body of each SV confirming the valve status;
   e. Maintain a proper registry of the serial numbers of the security tag. The registry shall be submitted to the CM after completion of the Works for future maintenance and management of the systems.

4. Co-ordinate with the Fire Services and Water Pump Sub-contractor to provide a dedicated cabinet for safe custody of keys of padlocks and registry information of the security tags provided by the Contractor and the Fire Services and Water pump Sub-contractor as specified;

5. Carry out regular monthly maintenance visits to ensure the SVs of the FH/HR and street FH systems are in proper operating status.

TANKS

PLU1.W810.8 CONNECTION TO CONCRETE TANKS

Unless otherwise specified or Approved, use puddle flange in accordance to PLU1.M320 for connection to tank.
COMMISSIONING REQUIREMENTS

PLU1.W910.8 GENERAL

1. Upon completion of installation of inside services, submit application to WSD for inspection and approval of the plumbing works. Comply with the WSD’s latest commissioning requirements for new plumbing works, in particular the newly installed inside services for potable water purposes;

2. After satisfactory completion of WSD’s final inspection, carry out systematic flushing, cleansing and disinfection of the installed fresh water mains and inside services before water supply is effected by the Water Authority as follows:
   a. Follow the WSD’s latest requirements and protocol including but not limited to systematic flushing, cleansing, disinfection, testing and inspection. The fresh water mains or inside services shall be put into operation within 7 days after the successful disinfection. Result of analysis shall be submitted to the CM in parallel;
   b. Prior to commencement of the systematic flushing, cleansing and disinfection works, submit for the CM’s information a detailed action plan which shall include but not be limited to the following items:
      i. Show the extent and sequence of systematic flushing, cleansing and disinfection work with vertical plumbing line diagram;
      ii. Provide programme and method statement for systematic flushing, including arrangement with WSD for provision of temporary water supply for systematic flushing if needed;
      iii. Provide programme and method statement for cleansing and disinfection of fresh water inside services and testing procedures for verifying the dosage of chlorine and residual chlorine level;
      iv. Agree with the Water Authority the locations for collecting water samples for bacteriological and chemical analysis;
      v. Liaise with the accredited laboratory for carrying out the sampling and analysis.
   c. Carry out systematic flushing of the installed fresh water inside services according to PLU1.W912;
   d. Carry out cleansing and disinfection of the installed fresh water inside services according to PLU1.W920. Cleansing and disinfection shall be in following sequence: sump tanks, up-feed pipework, roof tanks, down-feed pipework and finally plumbing fixtures and appliances;
   e. Carry out water sampling test in accordance with WSD’s latest protocol and guidelines for water sampling and testing as per PLU1.T070 (1). Results of all water samples shall meet the WSD’s latest testing parameters and acceptance criteria;
   f. If the result(s) of any water sampling tests failed to comply with WSD’s acceptance criterion, carry out flushing, cleansing and disinfection as appropriate for the part(s) of constructed potable water inside services represented by the failed sample(s) and collect water sample(s) at the same location(s) of failed sample(s) for retesting in accordance with the latest WSD’s requirements;
   g. Allow time and resources for carrying out systematic flushing, cleansing, disinfection and water sampling tests in compliance with WSD’s latest commissioning requirements for the installed inside services;
h. Result of analysis of cleansing and disinfection shall be endorsed by the Licensed Plumber as true record and submitted to the CM.

3. Carry out cleansing and flushing of all the water mains and inside services of flush water system and rainwater harvesting system after completion of the systematic flushing, cleansing and disinfection of fresh water inside services as per sub-clause (2)(c) and (2)(d) and before water supply is effected by the Water Authority as follows:
   a. Cleanse all the tanks and associated pipework of the flush water system and rainwater harvesting system according to PLU1.W950;
   b. Cleansing and flushing of flush water system shall be in following sequence: sump tanks, up-feed pipework, roof tanks, down-feed pipework and finally plumbing fixtures and appliances;
   c. Cleansing and flushing of rainwater harvesting system shall be in following sequence: roof collection tanks, break tank, mixing tank, up down-feed pipework and finally water irrigation point.

4. Allow time and resources for carrying out further cleansing, disinfection and 15-minute flushing at drinking water taps of individual flats;

5. Pre-installed fresh water supply pipework, if installed, shall be cleansed and disinfected in the same manner as fresh water pipe works in accordance with sub-clause (2) above, PLU1.W912, PLU1.W920, and PLU1.W960. After cleansing and disinfection, they shall be made dry and capped off at both ends of the pipe works;

6. Witness and endorse the systematic flushing, cleansing and disinfection process by the CM's Representative and the Contractor's Representative;

7. Carry out required rectification works for any defects caused during the process of systematic flushing, cleansing and disinfection without time and cost implication.

PLU1.W912.8 PROCEDURE FOR SYSTEMATIC FLUSHING FOR FRESH WATER SYSTEM

1. Strictly follow the latest systematic flushing protocol and requirements prescribed by WSD for systematic flushing;
2. All drinking water taps of the installed inside services should be thoroughly flushed throughout the systematic flushing cycles;
3. All strainers, if installed at the drinking water taps, must be removed before carrying out systematic flushing;
4. Keep record of systematic flushing using the record form prescribed by WSD for WSD’s checking;
5. Submit record of systematic flushing certified by the licensed plumber to the CM for record.

PLU1.W920.8 PROCEDURE FOR CLEANSING AND DISINFECTION OF FRESH WATER INSIDE SERVICES

1. Strictly follow the latest guideline on cleansing and disinfection of fresh water inside services prescribed by WSD.
2. Procedures for cleansing and disinfection all the tanks of fresh water system shall be as follows:
   a. Stop the pumps;
   b. Turn off the inlet and outlet valves of the water tank;
   c. Turn on the washout valve and drain the water tank completely. The Contractor shall carefully monitor the draining process and the flow condition so that the drainage system and the buffer tank will not overflow;
   d. Thoroughly cleanse the inside walls, ceiling and the bottom of the water tank and the inlet / outlet pipes with fresh water;
e. Spray with water to ensure that all dirt and debris are removed and drained away;
f. Turn off the washout valve;
g. Fill the water tank thoroughly with a solution of chloride of lime or bleaching powder containing at least 50 ppm of chloride solution;
h. Keep the water tanks under disinfection for a contact period of one (1) hour with an initial concentration of 50 ppm chlorine in water. If the free residual chlorine measured at the end of the contact period is less than 30 ppm, the disinfection process shall be repeated. Contractor shall indicate in the detailed action plan required under PLU1.W910 (2)(b) the contact period and the concentration of chlorine in water to be used for disinfection;
i. Rinse the water tank thoroughly with fresh water;
j. Take 2 sets of record photographs of the tank after cleansing;
k. Drain away the water through the washout pipe;
l. Fill the tank with water by turning on the inlet valve;
m. Turn on all the outlet valves;
n. Start the pump.

3. Procedures for cleansing and disinfecting the up-feed fresh water supply pipework shall be as follows:
a. Arrange the cleansing and disinfecting of up-feed fresh water supply pipework to suit the schedule for cleansing and disinfecting the sump and roof tanks;
b. Check the sump tank is cleansed and filled with a homogeneous solution of chloride of lime for disinfection. The concentration of the solution has to meet the requirement that when the up-feed water supply pipework is filled up with water, the chlorine in the water will be at least 50 ppm;
c. Turn on the inlet valves at the roof tanks and start the pump to fill up the up-feed pipework until the concentration of chlorine at least 50 ppm is confirmed via test kit approved by the CM, then stop the pump and turn off the inlet valves;
d. Keep the up-feed water pipe under disinfection for a contact period of one (1) hour with an initial concentration of 50 ppm chlorine in water. If the free residual chlorine measured at the end of the contact period is less than 30 ppm, the disinfection process shall be repeated. Contractor shall indicate in the detailed action plan required under PLU1.W910 (2)(b) the contact period and the concentration of chlorine in water to be used for disinfection;
e. Turn on the inlet valves at the roof tanks and operate the pump to thoroughly flush the up-feed water supply pipework with fresh water.

4. Procedures for cleansing and disinfecting the indirect fresh water supply pipework shall be as follows:
a. Check the roof tank (and the sump tank if the volume of the pipework to be cleansed exceeds the volume of the roof tank) is cleansed and filled with a homogeneous solution of chloride of lime for disinfection. The concentration of the solution has to meet the requirement that when the indirect fresh water supply pipework is filled up with water, the chlorine in the water will be at least 50 ppm;
b. Turn on all the main gate valves of the down-feed pipework on the roof level or on the floor below the roof, and the associated pipework of booster pump system, if any;
c. Check, if applicable, that the break tank is cleansed and filled with water;
d. Turn on the gate valves on the upstream of water meters;
e. Turn on all taps at all locations, including the fresh water pipework of water heater, until the concentration of chlorine at least 50 ppm is confirmed via test kit approved by the CM, then shut off the taps;

f. Keep the indirect fresh water supply pipework under disinfection for a contact period of one (1) hour with an initial concentration of 50 ppm chlorine in water. If the free residual chlorine measured at the end of the contact period is less than 30 ppm, the disinfection process shall be repeated. Contractor shall indicate in the detailed action plan required under PLU1.W910 (2)(b) the contact period and the concentration of chlorine in water to be used for disinfection;

g. Thoroughly flush the indirect fresh water supply pipework and turn on taps at all locations to ensure the entire pipework is thoroughly flushed with fresh water. Close all taps after flushing;

5. Procedure for cleansing and disinfection of direct fresh water supply system pipework shall be as follows:
   a. Turn off all the main gate valves of supply feed pipe;
   b. Turn on all the gate valves in front of water meters and taps;
   c. Turn off taps at all locations;
   d. Provide temporary water source, pump and any necessary equipment for filling the direct fresh water supply system pipework with homogeneous solution of chloride of lime for disinfection;
   e. Check the direct fresh water supply system pipework is cleansed and filled with a homogeneous solution of chloride of lime for disinfection. The concentration of the solution has to meet the requirement that when the direct fresh water supply pipework is filled up with water, the chlorine in the water will be at least 50 ppm;
   f. Turn on all taps at all locations, including the fresh water pipework of water heater, until the concentration of chlorine at least 50 ppm is confirmed via test kit approved by the CM, then shut off the taps;
   g. Keep the direct fresh water supply pipework under disinfection for a contact period of one (1) hour with an initial concentration of 50 ppm chlorine in water. If the free residual chlorine measured at the end of the contact period is less than 30 ppm, the disinfection process shall be repeated. Contractor shall indicate in the detailed action plan required under PLU1.W910 (2)(b) the contact period and the concentration of chlorine in water to be used for disinfection;
   h. Thoroughly flush the direct fresh water supply pipework and turn on taps at all locations to ensure the entire pipework is thoroughly flushed with fresh water. Close all taps after flushing;

PLU1.W950.8 PROCEDURE FOR CLEANSING FLUSH WATER SYSTEM AND RAINWATER HARVESTING SYSTEM

1. Procedures for cleansing all the tanks of flush water system shall be as follows:
   a. Stop the pumps;
   b. Turn off the inlet and outlet valves of the water tank;
   c. Turn on the washout valve and drain the water tank completely. The Contractor shall carefully monitor the draining process and the flow condition so that the drainage system and the buffer tank will not overflow;
   d. Thoroughly clean the inside walls, ceiling and the bottom of the water tank and the inlet / outlet pipes with fresh water;
   e. Spray with water to ensure that all dirt and debris are removed and drained away;
f. Turn off the washout valve;
g. Take 2 sets of record photographs of the tank after cleansing;
h. Fill the tank with water by turning on the inlet valve;
i. Turn on all the outlet valves;
j. Start the pump.

2. Procedures for cleansing all the tanks of rainwater harvesting system shall be as follows:
   a. Stop the pumps;
   b. Turn off the inlet and outlet valves of the water tank;
   c. Shut off the vortex filter or solenoid valve to stop rainwater flowing into rainwater collection tank;
   d. Turn on the washout valve and drain the water tank completely. The Contractor shall carefully monitor the draining process and the flow condition so that the drainage system and the buffer tank will not overflow;
   e. Thoroughly clean the inside walls, ceiling and the bottom of the water tank and the inlet / outlet pipes with fresh water;
   f. Spray with water to ensure that all dirt and debris are removed and drained away;
   g. Turn off the washout valve;
   h. Take 2 sets of record photographs of the tank after cleansing;
   i. Open the vortex filter or solenoid valve;
   j. Fill the tank with water by turning on the inlet valve;
   k. Turn on all the outlet valves;
   l. Start the pump.

3. Procedures for cleansing all the flush water system pipework shall be as follows:
   a. Check that the roof tank is cleaned and filled with water;
   b. Turn on all the main gate valves of the down-feed system at the roof level and, if applicable, to the break tank;
   c. Check, if applicable, that the break tank is cleaned and filled with water;
   d. Turn on all inlet valves of flushing cistern;
   e. Start flushing water cisterns on the top most floors and then moving downwards;
   f. Flush the water cisterns at the lowest floor of the down feed system and the floor above Pressure Reducing Valve (PRV) system or transfer tank, if applicable, twice, and at the remaining floors twice;
   g. Check for satisfactory flow at the water inlet and discharge, and any leaks at cisterns;
   h. If the flow is unsatisfactory, repair the cistern. Re-test until the flow is satisfactory.

4. Procedures for cleansing all the rainwater harvesting system pipework as follows:
   a. Check that the rainwater collection tank is cleaned and filled with water;
   b. Turn on all the main gate valves of the down-feed system at the roof level and, if applicable, to the break tank;
   c. Check that the break tank is cleaned and filled with water;
   d. Turn on all the valves of the irrigation system;
   e. Turn on all watering taps. Check for satisfactory flow at water taps and submit record;
   f. If flow of taps is unsatisfactory, cleanse the filter or repair the taps. Re-test until the flow is satisfactory;
g. Resume the system into normal operating condition with all the valves adjusted to their designated operating positions.

WORKS DURING MAINTENANCE PERIOD

PLU1.W960.8 CLEANSING AND DISINFECTION DURING MAINTENANCE PERIOD

1. Pursuant to and without affecting the generality of GCC Clause 10.1
   a. Execute all Maintenance Works as are instructed by the CM during the Maintenance Period to the water supply system;
   b. Include further cleansing and disinfection of water tanks and Maintenance Works to the supply pipework, as may be necessitated by:
      i. Incomplete cleansing prior to phased completion of the Works or completion of the Works;
      ii. Works and / or materials not in conformity with the Contract.

2. In compliance with sub-clause (1)(b) above, cleanse and disinfect all the completed fresh water tanks, direct and indirect fresh water supply pipework at a date to be instructed by the CM before occupation of a new building or a part of a new building:
   a. Submit a detailed action plan which shall include but not be limited to the following items for the CM's approval prior to commencement of the cleansing and disinfection works:
      i. Show the extent and sequence of cleansing and disinfection work with vertical plumbing line diagram;
      ii. Provide programme and method statement for cleansing and disinfection of fresh water inside services;
      iii. Provide testing procedures for verifying the dosage of chlorine and residual chlorine level.
   b. Cleanse and disinfect the completed fresh water tanks, up-feed, direct and indirect fresh water supply pipework according to PLU1.W920;
   c. Cleansing and disinfection shall be in following sequence: sump tanks, up-feed pipework, roof tanks, down-feed pipework and finally plumbing fixtures and appliances.

3. When Instructed by the CM within a period of 13 months commencing from the date of occupation permit (OP), or temporary occupation permit (TOP) as the case may be, in respect of the domestic blocks during mass intake of tenants / flat owners, carry out the 15-minute flushing at sink mixer for the individual domestic flats on advance notice of CM’s Representative all as specified under PRE.B6.650 (4).

PROTECTION

PLU1.W1010.8 SEALING THE SYSTEM
Seal off ends of pipes and openings during construction to prevent entry of foreign matter into the system.

PLU1.W1020.8 VALVES AND TAPS
House valves and taps installed in public areas or those not intended for public use in vandal-resistant and corrosion-resistant enclosures.

PLU1.W1030.8 PROTECTION OF UNDERGROUND PIPES
1. Protect underground pipes against corrosion and against mechanical damage;
2. Clean pipework after joining it and treat it with two coats of good quality bituminous paint to BS 3416 and wrap it with petrolatum tape for protection against corrosion due to water, salts, soil organics and rest it on concrete bed, sand or sieved soil or in concrete haunch or concrete surround before the trench is backfilled; 

3. Pressure test all underground pipework before the application of bituminous paint and petrolatum tape.

**PLU1.W1040.8 PIPES PASSING UNDER ROADS**

Where top of the pipe is less than 900 mm from finish level, surround the pipe by concrete in accordance to the Water Authority's requirement.

**WORKS OUTSIDE SITE BOUNDARY**

**PLU1.W1110.8 CONNECTION BY THE WATER AUTHORITY**

Cap the ends of main pipes to prepare for connection to street mains by the Water Authority if the project is not under Helping Business Programme.

**PLU1.W1120.8 NOTIFY THE WATER AUTHORITY FOR INSPECTION**

Notify the Water Authority to inspect completed pipework and valve pit prior to backfilling.

**CONNECTION OF UNDERGROUND WATER SUPPLY MAINS TO EXISTING IN-SERVICE MAINS**

**PLU1.W1210.8 PROCEDURE**

Connect to the supply mains as follows:

1. Submit proposed re-arrangement or tee-off (if any) to the Contract Manager for approval at least 24 hours prior to execution;

2. Identify existing live fresh, flush, and fire service supply mains by:
   a. Inspect as-built record drawings;
   b. Verify by valve operation. Close all the valves of the pipes and turn on valve of each pipe one by one to identify the type of each water pipes;
   c. Paint underground pipeworks of fresh, flush and fire service supply mains at both sides of isolating gate valves in colours as stated in FIN7.W2510.

3. Test turbidity to confirm salt water mains in accordance with PLU1.T110;

4. Provide temporary cover and lockable device for isolating valve pits;

5. Submit findings of the identification for inspection and confirmation by Estate Management Division;

6. Submit to Estate Management Division Form DCMP-F741 together with the Water Authority's Form 46 Part IV for making connections to existing in service supply mains within Housing Department estates;

7. Upon receipt of Part B of Form DCMP-F741, proceed with connection works;

8. Upon connection to supply mains, complete Part C of Form DCMP-F741 and submit to Estate Management Division together with a copy of Certificate Regarding Water Supply Connection issued by the Water Authority for record;

9. Remove temporary cover of the isolating valve pits after completion of the connection of supply mains.
PLU1.W1220.8  INSPECTION OF CONNECTION
Check all connected pipework to supply mains by valve operation. Close all the valves of the pipes and turn on valve of each pipe one by one to identify the type of each water pipe.
TESTING

GENERAL

PLU1.T010.8  PRE-TEST CLEANING
Before installations are subjected to inspection, testing and subsequent handover, clean thoroughly the entire installation internally and externally. Flush out all water installations with clean water. During the flushing operation, make provision to exclude filters, pumps, meters and any other item of plant which could be damaged during the cleaning operation.

PLU1.T020.8  PERFORMANCE TESTS, ADJUSTMENTS AND COMMISSIONING
1. Carry out complete performance tests for all equipment and systems installed, make all necessary adjustments including the setting of adjustable type pressure reducing valve and commission the installations in accordance with the manufacturers' instructions and to the satisfaction of the Contract Manager;
2. Prior to any tests, submit detailed procedures and a programme for testing and commissioning for the Contract Manager's approval;
3. Submit test reports to the Contract Manager for approval.

PLU1.T030.8  TEST INSTRUMENTS AND PERSONAL PROTECTIVE EQUIPMENT
1. Supply all instruments and personal protective equipment (PPE) required for inspection and testing of the installation;
2. Include, but not limited to, the following instruments required for inspection and testing purpose:
   a. Measuring tape;
   b. Hand pump;
   c. Pressure gauge;
   d. Water flow gauge;
   e. Chemical test kit which is accepted by the Water Authority and as selected by the CM for detecting the presence of lead.
3. Include, but not limited to, the following PPE required for inspection and testing purpose as recommended by the test kit supplier:
   a. Gloves for handling chemicals;
   b. Protective goggles or safety glasses with side shields;
   c. Respirator masks to avoid breathing of dust.

PLU1.T040.8  TESTING OF CONCEALED AND UNDERGROUND PIPEWORK
Before cover up of the pipework, invite the Contract Manager representative to check the pipework and witness for water pressure test in accordance with PLU1.T050. Result of water pressure test shall be satisfactory before cover up of the pipework. Submit test report for record within a week of the satisfactory test.

PLU1.T050.8  WATER PRESSURE TEST
1. Test water systems and circuits hydraulically to a minimum pressure of 1.5 times the system working pressure or a minimum of 10 bar whichever is the higher for a period of not less than one hour without leaks appearing. However, when test is carried out on copper piping with compression fittings only, the test period can be reduced to 15 minutes only;
2. Provide whatever hoses or drainage channels that are required to safely discharge the test water while carrying out these tests in order to ensure that no damage to the building and property will be caused by the test water;

3. Following the above, carry out a normal working test during which adjustments and regulation of valves shall be effected and each tap and shower shall be visually check for satisfactory rate of flow.

**PLU1.T060.8**

**FSD INSPECTION AND WITNESS OF TESTS**

Make necessary applications including submission of Form 501 to Fire Services Department and attend upon their representative for the purpose of tests and inspections for the fire services installation carried out by Main Contractor such as street fire hydrant system, up-feed riser pipe to storage/transfer tank.

**PLU1.T070.8**

**WATER QUALITY TEST BEFORE WATER SUPPLY IS GIVEN FROM THE WATER AUTHORITY**

Test on the quality of fresh water for human consumption shall be carried out on each fresh water system to the satisfaction of the CM and comply with the following:

1. Arrange with the Water Authority to collect samples at representative sampling point(s) as agreed by the Water Authority for water sampling tests before a supply is given as follows:
   a. Carry out the test after completion of the systematic flushing, cleansing and disinfection of the installed fresh water mains and inside services as specified in **PLU1.W910 (2)** to the satisfaction of the CM of the respective fresh water supply system;
   b. Agree with the Water Authority the locations for collecting water samples for water sampling tests;
   c. Carry out water sampling test in accordance with WSD’s latest requirements, protocol and guidelines for water sampling and testing. Collection, testing and analysis of the samples shall be carried out by an accredited laboratory accepted by WSD and/or Water Science Division of WSD. Results of all water samples shall meet the WSD’s latest testing parameters and acceptance criteria;
   d. In the event the samples failed to comply with the water quality requirements as referred to in sub-clause (1)(c) above, carry out investigation on the cause(s) and submit investigation results and details of all necessary rectification works to the CM for approval before carrying out of the approved rectification works. After completion of the rectification works, carry out cleansing and disinfection as appropriate for the part(s) of constructed potable water inside services represented by the failed sample(s) and collect water sample(s) at the same location(s) of failed sample(s) for retesting, all according to WSD’s latest requirements and guidelines. Bear all cost and expense in connection with the aforesaid investigation, rectification, cleansing and disinfection works and re-test(s) to ensure compliance of the required water quality requirements except if such investigation, rectification works and re-test(s) are the direct consequence of a conclusion from any test result(s) of the sample(s) taken at the user end of the first valve from the site boundary that water from the Water Authority failed to comply with the water quality requirements as referred to in sub-clause (1)(c);
e. Submit the detailed report on the selection of sampling points, sampling techniques, handling of water samples, water quality test results with original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements as referred to in sub-clause (1)(c) and the investigation results and approved rectification works as referred to in sub-clause (1)(d) for the CM's approval within 2 months from the date of the completion to the satisfaction of the CM of the cleansing of the plumbing installation as specified in PLU1.W910 (2) of the respective fresh water supply system.

PLU1.T091.8 AUDIT CHECK ON BRAZING ALLOY FOR COPPER AND COPPER ALLOY CAPILLARY FITTINGS

1. If brazing alloy is used in the connection between fresh water pipes, the CM may conduct testing of the jointing material to ensure the use of cadmium-free category brazing alloy;

2. Test Arrangements:
   a. Test shall be carried out by the CM's Representative, Direct Testing Contractor or the Housing Department Material Testing Laboratory;
   b. Comply with the following pertaining to the surveillance test:
      i. Provide attendance on the Site;
      ii. Provide, deliver and collect samples etc. as directed by the CM or as specified.
   c. The test shall be witnessed by representative of the plumbing sub-contractor and / or the Licensed Plumber.

3. Test Samples:
   Samples shall be selected by the CM's Representative. A zone in which samples are taken means every 10 typical floors or parts thereof for one domestic block, or designated area(s) of non-typical floor(s) as determined by the CM. Sampling shall cover minimum one joint from each selected pipe length within the zone.

4. Testing:
   a. Non-destructive test for the brazing material shall be conducted by appropriate means such as X-ray fluorescence (XRF) metal alloy identification as selected by the CM’s Representative(s);
   b. Acceptance standard:
      The result shall indicate that the brazing material complies with the specified standard of cadmium in PLU1.M150.

5. Non-compliance in initial test:
   a. In the event that any one sample fails to meet the acceptance standard as specified in sub-clause (4)(b), the CM will take three separate samples within the same zone for re-test as per sub-clauses (2), (3) and (4);
   b. Where any of the re-test samples fails to meet the acceptance standard as specified in sub-clause (4)(b), the Contractor may elect to comply with either (i) or (ii) of the following:
      i. Take sample of the brazing joint(s) in question and test the chemical composition by an independent laboratory accepted by the Water Authority at the Contractor’s time and costs. If it is verified that the material satisfies the acceptance standard as specified in sub-clause (4)(b), no rectification works are required. If it is verified that the material fails to satisfy the acceptance standard, rectify the pipework as per sub-clause (5)(b)(ii); or
ii. Rectify the whole length of the selected riser pipe(s) or branch pipe(s) within the zone on which selected sample(s) are taken for testing. Re-test the rectified areas in accordance with sub-clauses (2), (3), (4) and (5). Observe further re-testing requirements under sub-clause (6) below.

c. Bear all associated costs including further re-tests and no extension of time shall be allowed.

6. In the event that any riser pipe(s) or branch pipe(s) within a zone has to be rectified in accordance with sub-clause (5)(b)(ii), the CM will take three more separate samples within the same zone for further re-testing in accordance with sub-clauses (2), (3), (4) and (5);

7. The inspection and testing under sub-clauses (1) to (6) above shall not relieve the Contractor’s responsibility of material control, testing, site supervision and on-site monitoring etc. under the Approved Sub-contractors Management Plan.

PLU1.T092.8 AUDIT CHECK ON SOLDERING ALLOY FOR COPPER AND COPPER ALLOY CAPILLARY FITTINGS

1. If soldering alloy is used in the connection between fresh water pipes and end feed capillary or integral solder capillary fittings, the CM may conduct testing of the jointing material to ensure the use of lead-free category soldering alloy for initial pipework connection works or for water leakage repair works with additional soldering;

2. Test Arrangements:
   a. Test shall be carried out by the CM's Representative, Direct Testing Contractor or the Housing Department Material Testing Laboratory;
   b. Comply with the following pertaining to the surveillance test:
      i. Provide attendance on the Site;
      ii. Provide, deliver and collect samples etc. as directed by the CM or as specified.
   c. The test shall be witnessed by representative of the plumbing sub-contractor and / or the Licensed Plumber.

3. Test Samples:
   a. Samples shall be selected by the CM's Representative;
   b. For initial pipework connection, a zone in which samples are taken means a wing or part thereof of each typical floor for one domestic block, or a lobby of each typical floor for one domestic block, or designated area(s) of non-typical floor(s) as determined by the CM. Sampling shall cover minimum one joint from the pipework in each selected flat and / or minimum two joints from the pipework in each selected common area within the zone;
   c. For water leakage repair works with additional soldering, a zone in which samples are taken means a floor of a building under construction. Sampling shall cover minimum one joint for the repair work carried out during the same day, or as directed by the CM’s Representative.

4. Testing:
   a. Non-destructive screening test for lead content in soldering material shall be conducted by using a proprietary chemical test kit which changes colour when lead is detected, or other appropriate means such as X-ray fluorescence (XRF) metal alloy identification as selected by the CM’s Representative(s);
   b. Acceptance standard:
      The result shall indicate that the soldering material complies with the specified standard of lead in PLU1.M160.

5. Non-compliance in initial test:
a. In the event that any one sample fails to meet the acceptance standard as specified in sub-clause (4)(b), the CM will take three separate samples within the same zone for re-test as per sub-clauses (2), (3) and (4);

b. Where any of the re-test samples fails to meet acceptance standard as specified in sub-clause (4)(b), the Contractor may elect to comply with either (i) or (ii) of the following:

i. Take sample of the soldering joint(s) in question and test the chemical composition by an independent laboratory accepted by the Water Authority at the Contractor’s time and costs. If it is verified that the material satisfies the acceptance standard as specified in sub-clause (4)(b), no rectification works are required. If it is verified that the material fails to satisfy the acceptance standard, rectify the pipework as per sub-clause (5)(b)(ii); or

ii. Submit method statement for rectification works for the CM’s Approval. Rectify all pipework of the selected flat(s) and/or the selected common area(s) and/or the selected area used for water leakage repair works with additional soldering in which selected sample(s) are taken for testing. Re-test the rectified areas in accordance with sub-clauses (2), (3), (4) and (5). Observe further re-testing requirements under sub-clause (6) below for the initial pipework connection in the same zone.

c. Bear all associated costs including further re-tests and no extension of time shall be allowed.

6. In the event that any initial pipework connection has to be rectified in accordance with sub-clause (5)(b)(ii), the CM will take three more separate samples within the same zone for further re-testing in accordance with sub-clauses (2), (3), (4) and (5);

7. The inspection and testing under sub-clauses (1) to (6) above shall not relieve the Contractor’s responsibility of material control, testing, site supervision and on-site monitoring etc. under the Approved Sub-contractors Management Plan.

PLU1.T093.8

AUDIT CHECK ON COPPER PIPE MATERIAL

1. If copper pipe is used for fresh water application, CM may conduct testing of the copper pipe to ensure that its chemical composition complies with the specified standard;

2. Test Arrangements:
   a. Test shall be carried out by CM’s Representative, Direct Testing Contractor or the Housing Department Material Testing Laboratory;
   b. Comply with the following pertaining to the surveillance test:
      i. Provide attendance on the Site;
      ii. Provide, deliver and collect samples etc. as directed by CM or as specified.
   c. The test shall be witnessed by representative of the plumbing sub-contractor and/or the Licensed Plumber.

3. Test Samples:
   Samples shall be selected by CM’s representative. A zone in which samples are taken means every 2 typical floors or parts thereof for one domestic block, or designated area(s) of non-typical floor(s) as determined by the CM. Sampling shall cover minimum one spot from each selected pipe length within the zone.

4. Testing:
   a. Non-destructive X-ray fluorescence (XRF) metal alloy identification as arranged by the CM’s representative(s);
   b. Acceptance standard:
      The result shall indicate that the chemical composition of the copper pipe complies with the specified standards in PLU1.M120.
5. Non-compliance in initial test:
   a. In the event that any one sample fails to meet the acceptance standard as specified in sub-clause (4)(b), the CM will take three separate samples within the same zone for re-test as per sub-clauses (2), (3) and (4);
   b. Where any of the re-test samples fails to meet the acceptance standard as specified in sub-clause (4)(b), the Contractor may elect to comply with either (i) or (ii) of the following:
      i. Take sample of each copper pipe in question and test the chemical composition by an independent laboratory accepted by the Water Authority at the Contractor’s time and costs. If it is verified that the material satisfies the acceptance standard as specified in sub-clause (4)(b), no rectification works are required. If it is verified that the material fails to satisfy the acceptance standard, rectify the pipework as per sub-clause (5)(b)(ii); or
      ii. Remove and replace the pipework within the zone in which the selected sample(s) are taken for testing. Re-test the rectified areas in accordance with sub-clauses (2), (3), (4) and (5). Observe further re-testing requirements under sub-clause (6) below.
   c. Bear all associated costs including further re-tests and no extension of time shall be allowed.
6. In the event that any pipework within a zone has to be removed and replaced in accordance with sub-clause (5)(b)(ii), the CM will take three more separate samples within the same zone for further re-testing in accordance with sub-clauses (2), (3), (4) and (5);
7. The inspection and testing under sub-clauses (1) to (6) above shall not relieve the Contractor’s responsibility of material control, testing, site supervision and on-site monitoring etc. under the Approved Sub-contractors Management Plan.

PLU1.T094.B

VERIFICATION TESTS FOR COPPER PIPES AND FITTINGS DELIVERED TO SITE

1. Test Arrangements:
   a. Verification tests shall be carried out by the CM’s Representative, a Direct Testing Contractor or the Housing Department Material Testing Laboratory upon delivery of material to Site under a delivery note, or during the course of construction as directed by the CM. A representative batch means the material delivered to Site under the same delivery note;
   b. Comply with the followings pertaining to verification tests:
      i. Provide attendance on the Site;
      ii. Provide, deliver and collect samples etc. as directed by the CM or as specified.
2. Testing Samples:
   a. Samples shall be selected by the CM's Representative and witnessed by representative of the Contractor;
   b. Provide one test sample of any sizes of copper pipes and fittings from any one batch of material delivered to Site under the delivery note as specified in PLU1.M110 (2)(b) as selected by the CM;
   c. When instructed by the CM, provide another test sample of any sizes of copper pipes and fittings from any other batch of material delivered to Site under the delivery note as specified in PLU1.M110 (2)(b).
3. Testing Methods:
   a. Laboratory testing of the following as arranged by the CM’s Representative(s):
      i. Chemical composition of the copper pipe;
ii. Measure the thickness of copper pipe fittings cut into two half sections.

b. Acceptance standard:
   i. For the testing of chemical composition, the result shall indicate that the chemical composition of the copper pipe complies with the specified standards in PLU1.M120 or the test report showing the material composition which has been accepted by Water Authority;
   ii. For the thickness of copper pipe fittings, minimum wall thickness measured at any point shall in accordance with Table 5 of BS EN 1254-1.

4. Non-compliance:
   a. In the event that the testing sample fails to meet the acceptance standard as specified in sub-clause (3)(b), follow either one of the following actions:
      i. Remove the representative batch of material off Site; or
      ii. Carry out re-test for the representative batch of material in accordance with the testing methods as specified in sub-clauses (3)(a) and (3)(b) in a laboratory that complies with the requirements stated in PRE.B9.570 on three separate samples selected by the CM from the representative batch. In case of any one sample fails the re-test, remove the representative batch of material off Site.

   b. When the representative batch of material is removed off Site, replace with another new batch and carry out test in accordance with the testing methods as specified in sub-clauses (3)(a) and (3)(b) in a laboratory that complies with the requirements stated in PRE.B9.570 for one sample selected by the CM from the replacing batch. In case of such test fails, follow action stated in sub-clauses (4)(a);
   c. Bear all associated costs for the test and re-test required in sub-clauses (4)(a) and (4)(b). No extension of time will be allowed.

PLU1.T095.A VERIFICATION TESTS FOR SOLDER IN COPPER PIPE INTEGRAL SOLDER FITTINGS DELIVERED TO SITE

1. Test Arrangements:
   a. Verification tests shall be carried out by the CM's Representative, a Direct Testing Contractor or the Housing Department Material Testing Laboratory upon delivery of material to Site under a delivery note, or during the course of construction as directed by the CM. A representative batch means the material delivered to Site under the same delivery note;

   b. Comply with the followings pertaining to verification tests:
      i. Provide attendance on the Site;
      ii. Provide, deliver and collect samples etc. as directed by the CM or as specified.

2. Testing Samples:
   a. Samples shall be selected by the CM's Representative and witnessed by representative of the Contractor;

   b. Provide one test sample of any sizes of integral solder capillary fittings from any one batch of material delivered to Site under the delivery note as specified in PLU1.M110 (2)(b) as selected by the CM;

   c. When instructed by the CM, provide another test sample of any sizes of integral solder capillary fittings from any other batch of material delivered to Site under the delivery note as specified in PLU1.M110 (2)(b).

3. Testing Methods:
a. Laboratory testing of chemical composition of the soldering material for copper pipe fitting of integral solder capillary as arranged by the CM’s Representative(s);

b. Acceptance standard:
   The result shall indicate that the soldering material for copper pipe fitting of integral solder capillary complies with the specified standard in PLU1.M160 or the test report showing the material composition which has been accepted by Water Authority.

4. Non-compliance:
   a. In the event that the testing sample fails to meet the acceptance standard as specified in sub-clause (3)(b), follow either one of the following actions:
      i. Remove the representative batch of material off Site; or
      ii. Carry out re-test for the representative batch of material in accordance with the testing methods as specified in sub-clauses (3)(a) and (3)(b) in a laboratory that complies with the requirements stated in PRE.B9.570 on three separate sets of samples selected by the CM from the representative batch. In the event that the testing sample(s) fail to meet the acceptance standard as specified in sub-clause (3)(b), remove the representative batch of material off Site.

   b. When the representative batch of material is removed off Site, replace with another new batch and carry out test in accordance with the testing methods as specified in sub-clauses (3)(a) and (3)(b) in a laboratory that complies with the requirements stated in PRE.B9.570 for one test sample of integral solder capillary fittings selected by the CM from the replacing batch. In the event that the testing sample fails to meet the acceptance standard as specified in sub-clause (3)(b), carry out re-testing as specified in sub-clauses (4)(a);

   c. Bear all associated costs for the test and re-test required in sub-clauses (4)(a) and (4)(b). No extension of time will be allowed.

**PLU1.T096.B**

**VERIFICATION TESTS FOR GATE VALVES WITH NOMINAL SIZES UP TO AND INCLUDING 50MM FOR FRESH WATER APPLICATION DELIVERED TO SITE**

1. Test Arrangements:
   a. Verification tests shall be carried out by the CM or his representatives, a Direct Testing Contractor or the Housing Department Material Testing Laboratory upon delivery of material to Site under a delivery note, or during the course of construction as directed by the CM. A representative batch means the material delivered to Site under the same delivery note;

   b. Comply with the followings pertaining to verification tests:
      i. Provide attendance on the Site;
      ii. Provide, deliver and collect samples etc. as directed by the CM or as specified.

2. Testing Samples:
   a. Samples shall be selected by the CM or his representatives and witnessed by representative of the Contractor;

   b. For gate valve with the Kitemark Certificate or Kitemark Licence or possessing two stars status under WSD’s GA+ Scheme:
      i. Provide three test samples (one for testing of chemical composition and two for testing of metal leaching rate) of any sizes of gate valves from any one batch of material delivered to Site under the delivery note as specified in PLU1.M110 (2)(b) as selected by the CM;
ii. When instructed by the CM, provide another three test samples of any sizes of gate valves from any other batch of material delivered to Site under the delivery note as specified in PLU1.M110 (2)(b).

c. For gate valve without the Kitemark Certificate or Kitemark Licence or not possessing two stars status under WSD’s GA+ Scheme, when instructed by the CM, provide six test samples (two for testing of chemical composition and four for testing of metal leaching rate) of any sizes of gate valves from each batch of material delivered to Site under the delivery note as specified in PLU1.M110 (2)(b).

3. Testing Methods:

a. Laboratory testing of the following as arranged by the CM or his representatives;
   i. Chemical composition of the body, bonnet, disc and stem of gate valve; and
   ii. Metal leaching rate of the gate valve, which shall only be conducted when all results of the testing in sub-clause (i) complying with the acceptance standard as specified in sub-clause 3(b)(i).

b. Acceptance standard:
   i. For the testing of chemical composition, the result shall indicate that the chemical composition of the body, bonnet, disc and stem of gate valve complies with the specified standards in PLU1.M620 or the test report showing the material composition which has been accepted by Water Authority; and
   ii. For the testing of metal leaching rate, the result shall indicate the maximum allowable concentration of heavy metals of the extracts from the gate valve complies with the provisional guideline values as stipulated under the GA* Scheme of WSD.

4. Non-compliance:

a. In the event that the testing sample fails to meet the acceptance standard as specified in sub-clause (3)(b), follow either one of the following actions:
   i. Remove the representative batch of material off Site; or
   ii. Carry out re-test for the representative batch of material in accordance with the testing methods as specified in sub-clauses (3)(a) and (3)(b) in a laboratory that complies with the requirements stated in PRE.B9.570 on three separate sets of samples selected by the CM from the representative batch. In the event that any of these testing samples fail to meet the acceptance standard as specified in sub-clause (3)(b), remove the representative batch of material off Site.

b. When the representative batch of material is removed off Site, replace with another new batch and carry out test in accordance with the testing methods as specified in sub-clauses (3)(a) and (3)(b) in a laboratory that complies with the requirements stated in PRE.B9.570 for:
   i. Three samples (one for testing of chemical composition and two for testing of metal leaching rate) of gate valve with the Kitemark Certificate or Kitemark Licence or possessing two stars status under WSD’s GA+ Scheme; or
   ii. Six samples (two for testing of chemical composition and four for testing of metal leaching rate) of gate valve without the Kitemark Certificate or Kitemark Licence or not possessing two stars status under WSD’s GA+ Scheme, all selected by the CM from the replacing batch.
In the event that any of these testing samples fail to meet the acceptance standard as specified in sub-clause (3)(b), carry out re-testing as specified in sub-clauses (4)(a);

c. Bear all associated costs for the test and re-test required in sub-clauses (4)(a) and (4)(b). No extension of time will be allowed.

**PLU1.T097.B VERIFICATION TESTS FOR DUCTILE IRON PIPES AND FITTINGS DELIVERED TO SITE**

1. Test Arrangements:
   a. Verification tests shall be carried out by the CM or his representatives, a Direct Testing Contractor or the Housing Department Material Testing Laboratory upon delivery of material to Site under a delivery note, or during the course of construction as directed by the CM. A representative batch means the material delivered to Site under the same delivery note;
   b. Comply with the followings pertaining to verification tests:
      i. Provide attendance on the Site;
      ii. Provide, deliver and collect samples etc. as directed by the CM or as specified.

2. Testing Samples:
   a. Samples shall be selected by the CM or his representatives and witnessed by representative of the Contractor;
   b. Provide one test sample of any sizes of ductile iron pipes and one test sample of any sizes / types of ductile iron fittings from a batch of material delivered to Site under the delivery note as specified in PLU1.M110 (2)(b) as selected by the CM;
   c. When instructed by the CM, provide another test sample of any sizes of ductile iron pipes and another test sample of any sizes / types of ductile iron fittings from any other batch of material delivered to Site under the delivery note as specified in PLU1.M110 (2)(b).

3. Testing Methods:
   a. Laboratory testing of the external diameter, ovality, limit deviations on lengths and tensile properties of ductile iron pipes and fittings as arranged by the CM or his representatives;
   b. Acceptance standard:
      i. The result shall indicate that the external diameter, ovality, limit deviations on lengths and tensile properties of ductile iron pipes and fittings comply with the specified standards in PLU1.M170 or the test report showing the result which has been accepted by Water Authority.

4. Non-compliance:
   a. In the event that any of the testing samples fails to meet the acceptance standard as specified in sub-clause (3)(b), follow either one of the following actions:
      i. Remove the representative batch of material off Site; or
      ii. Carry out re-test for the representative batch of material in accordance with the testing methods as specified in sub-clauses (3)(a) and (3)(b) in a laboratory that complies with the requirements stated in PRE.B9.570 on three separate samples of ductile iron pipes and three separate samples of ductile iron fittings selected by the CM from the representative batch. In the event that any of the testing samples fails to meet the acceptance standard as specified in sub-clause (3)(b), remove the representative batch of material off Site.
b. When the representative batch of material is removed off Site, replace with another new batch and carry out test in accordance with the testing methods as specified in sub-clauses (3)(a) and (3)(b) in a laboratory that complies with the requirements stated in PRE.B9.570 for one sample of ductile iron pipe and one sample of ductile iron fitting selected by the CM from the replacing batch. In the event that any of the testing samples fails to meet the acceptance standard as specified in sub-clause (3)(b), carry out re-testing as specified in sub-clauses (4)(a);

c. Bear all associated costs for the test and re-test required in sub-clauses (4)(a) and (4)(b). No extension of time will be allowed.

GENERAL

PLU1.T098.N VERIFICATION TESTS FOR GLOBE STOP AND CHECK VALVES WITH NOMINAL SIZES UP TO AND INCLUDING 40MM FOR FRESH WATER APPLICATION DELIVERED TO SITE

1. Test Arrangements:
   a. Verification tests shall be carried out by the CM's Representative, a Direct Testing Contractor or the Housing Department Material Testing Laboratory upon delivery of material to Site under a delivery note, or during the course of construction as directed by the CM. A representative batch means the material delivered to Site under the same delivery note;
   b. Comply with the followings pertaining to verification tests:
      i. Provide attendance on the Site;
      ii. Provide, deliver and collect samples etc. as directed by the CM or as specified.

2. Testing Samples:
   a. Samples shall be selected by the CM's Representative and witnessed by representative of the Contractor;
   b. When instructed by the CM, provide two test samples of any sizes of globe stop and check valves from each batch of material delivered to Site under the delivery note as specified in PLU1.M110 (2)(b).

3. Testing Methods:
   a. Laboratory testing of chemical composition of the body, bonnet, disc and stem of globe stop and check valve as arranged by the CM’s Representative(s);
   b. Acceptance standard:
      The result shall indicate that the chemical composition of the body, bonnet, disc and stem of globe stop and check valve complies with the specified standards in PLU1.M620 or the test report showing the material composition which has been accepted by Water Authority.

4. Non-compliance:
   a. In the event that the testing sample fails to meet the acceptance standard as specified in sub-clause (3)(b), follow either one of the following actions:
      i. Remove the representative batch of material off Site; or
      ii. Carry out re-test for the representative batch of material in accordance with the testing methods as specified in sub-clauses (3)(a) and (3)(b) in a laboratory that complies with the requirements stated in PRE.B9.570 on three separate sets of samples selected by the CM from the representative batch. In the event that the testing sample fails to meet the acceptance standard as specified in sub-clause (3)(b), remove the representative batch of material off Site.
b. When the representative batch of material is removed off Site, replace with another new batch and carry out test in accordance with the testing methods as specified in sub-clauses (3)(a) and (3)(b) in a laboratory that complies with the requirements stated in PRE.B9.570 for two samples of globe stop and check valve, all selected by the CM from the replacing batch. In the event that the testing sample(s) fail to meet the acceptance standard as specified in sub-clause (3)(b), carry out re-testing as specified in sub-clauses (4)(a);

c. Bear all associated costs for the test and re-test required in sub-clauses (4)(a) and (4)(b). No extension of time will be allowed.

TESTING TURBIDITY FOR CONNECTION OF UNDERGROUND WATER MAINS TO EXISTING IN-SERVICE MAINS

PLU1.T110.8 TESTING PRIOR TO CONNECTION OF SUPPLY MAINS

Test fresh, flush and fire service supply mains prior to connection works as required by PLU1.W1210.

PLU1.T120.8 PROCEDURE

Test for development of white turbidity to identify salt water mains to satisfaction of the Contract Manager, as follows:

1. Collect two 10 ml samples in clean McCartney bottles from the supply mains under investigation;
2. Add two drops of barium chloride solution to one sample;
3. Shake to mix contents and wait for approximately 3 minutes for turbidity to develop;
4. Compare with the other sample for increase in white turbidity (which would indicate the presence of salt water);
5. In doubtful cases, seek record drawings as well as laboratory services for confirmation.

SURVEILLANCE TESTS FOR PIPES, FITTING AND VALVES

PLU1.T131.8 SURVEILLANCE TESTS FOR DRAW OFF TAPS

1. Testing Arrangements:
   a. When Instructed, surveillance tests shall be carried out by the CM's Representative, a Direct Contractor or the Housing Department Material Testing Laboratory;
   b. Comply with the following pertaining to surveillance tests:
      i. Provide attendance on the Site;
      ii. Provide, deliver and collect samples etc. as directed by the CM.

2. Testing Samples:
   a. When Instructed, provide one test sample from a batch of draw off tap delivered to Site under the delivery note as specified in PLU1.M610 (13)(b) selected by the CM’s Representative;
   b. Bear all cost for any replacement of samples.

3. Testing method:
   Open up inspection.

4. Acceptance standard:
The inspection shall reveal that no decorative, electroplated materials such as nickel and/or chromium coating are present on the internal surface of any of the components of the draw off tap that may come into contact with water.

5. Non-compliance:
   a. In the event that the testing sample fails to meet the testing requirements, follow either one of the following actions:
      i. Remove the representative batch off Site; or
      ii. Carry out further inspection for the representative batch in accordance with the testing method as specified in sub-clauses (3) and (4) in a laboratory that complies with the requirements stated in PRE.B9.570 on three separate sets of samples selected by the CM from the representative batch. In case any one sample fails the inspection, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.
   b. When the representative batch of draw off taps is removed off Site, replace with another new batch (hereinafter referred to as the “replacement batch”). Carry out test in accordance with the testing method as specified in sub-clauses (3) and (4) in a laboratory that complies with the requirements stated in PRE.B9.570 for one sample selected by the CM from the replacement batch. In case of such test fails, follow action stated in sub-clause (5);
   c. Bear all associated costs for the inspection(s) and further inspection(s) required in sub-clauses (5)(a) and (5)(b). No extension of time will be allowed.

*(Name of Consultant for Consultant Projects) via PCOW

From: (State Name of Contractor) ______________________________________________

Pursuant to sub-clause (6) of Specification Clause No. PLU1.W110, we attach for the CM’s processing / signing the following WSD Form(s) –
(please tick the box(s) whichever relevant)

(a) ☐ WWO 542 Application for Water Supply / Request for Work to be Carried out by the Water Authority
(b) ☐ WWO 132 Application for Certificate Regarding Water Supply Availability / Connection

(c) ☐ WWO 46 ☐ Part I Application for Constructing / Installation, Altering or Removing an Inside Service or Fire Service
    ☐ Part II
    ☐ Part IV

(d) ☐ WWO 1149 List of Pipes and Fittings to be Installed

2. We confirm that the above WSD Form(s) undercover of this declaration have been checked / verified by the Licensed Plumber, the Plumbing Sub-contractor and the Main Contractor. We hereby declare that -
(please tick the box(s) whichever relevant)

☐ The data entry in the Form is accurate.

☐ The pipes and fittings to be installed and any materials to be used for the construction, installation, alteration or removal of the Approved Plumbing Works covered by this Form, including those as listed on the attached Annex to this Form and those not listed, shall be as prescribed by the Waterworks Regulations.

☐ The pipes and fittings installed and any materials used for the construction, installation, alteration or removal of the Approved Plumbing Works covered by this Form are as prescribed by the Waterworks Regulations.

☐ The plumbing installation works for the captioned Contract have been completed in accordance with WSD Approved Drawings, WSD Circular Letters in force, the Specification and statutory requirements.

☐ The meter positions of the plumbing works of the captioned Contract are correct.

☐ Others, please state: _______________________________________________________

To: Contract Manager’s Representative (Attn: / ) *(Name of Consultant for Consultant Projects) via PCOW

From: (State Name of Contractor) __________________________________________________

1. Pursuant to sub-clause (7) of Specification Clause No. PLU1.W110, we confirm that plumbing installation works for the captioned Contract have been completed. We hereby declare that -
   a. All pipes and fittings installed on Site have been approved by WSD and registered with WSD under Form WWO 1149;
   b. Only cadmium-free category brazing alloy and lead-free category soldering alloy are used;
   c. All pipes and fittings installed and any materials used for the construction and installation of the plumbing works are as prescribed by the Waterworks Regulations and approved by the Water Authority.

2. The Licensed Plumber’s inspection report of the completed plumbing installation is submitted herewith.

For and on behalf of the Contractor

PLU2  SANITARY APPLIANCES

MATERIALS

GENERAL

PLU2.M010.8 SAMPLES
Comply with the requirements of PRE.B9.410 by submitting samples of the specified sanitary fittings for Approval.

PLU2.M020.8 STANDARDS
Ensure sanitary appliances submitted for Approval comply with the following standards as applicable:

1. Vitreous china:
   a. To BS 3402:1969;
   b. Colour: white unless otherwise specified;
   c. Ensuite, complete with all necessary fittings.
2. Waste and bath overflow chains and stays:
   a. To BS 3380:1982;
   b. Material: chromium plated brass.
3. Taps and combination tap assemblies:
   a. To BS 5412:1996;
   b. Material: chromium plated brass.

PLU2.M030.8 SANITARY APPLIANCES FOR STANDARD SCHOOLS
As scheduled on Drawings or Approved equivalent.

WCS AND CISTERNs

PLU2.M110.B CLOSE-COUPLED WC SUITES
1. Submission Requirements:
   a. At sample submission and approval stage, submit a sample of the proposed WC suites including their component float operated valves and flushing valves as a whole assembly for the CM’s approval together with all the following substantiation for the CM’s information:
      i. Catalogue, brand name / model name, type of trap and job reference of the product;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer;
      iv. Original or a certified true copy of the ISO 9001 certificate for the manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by a certification body or by the QCM. The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a multilateral recognition arrangement with HKAS;
v. Copy of the close-coupled water closet’s registration record under WSD’s Water Efficiency Labelling Scheme (WELS) on Water Closets certified true by a certification body or by the QCM, and the associated WSD’s valid General Acceptance of the flushing valves;

vi. Installation instruction of WC suites including the fixing of the flushing apparatus, the tools and method for tightening and connecting of pipes and components.

b. For close-coupled WC suites used in domestic blocks, except for the ancillary facilities at lower floors, submit original or a certified true copy of the product conformity certificate to the "Product Conformity Certification Scheme for Close-coupled Water Closet Suites with 6 Litre Flushing Capacity" (PCCS-WC) published by the Hong Kong Institution of Plumbing and Drainage Limited. The product conformity certificate shall be issued by a certification body accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a multilateral recognition arrangement with HKAS. If a photocopy of the product conformity certificate is submitted, it shall be certified true by the certification body or by the QCM:

i. The product conformity certificate shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a) above or at a time not later than 12 months from the date of commencement of the Works;

ii. In the event that the product conformity certificate has not been submitted for the CM's information, the CM may order the removal of materials or delivered products off Site. The Contractor shall bear all associated costs and no extension of time will be allowed.

c. Submit a summary of the test results under the audit testing of the PCCS-WC. The summary shall be prepared by the accredited laboratory carried out the testing or the certified manufacturer. If so directed by the CM, submit a full set of the audit test reports to the CM for record;

d. Submit original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2)(b) for the CM's information unless the test requirements are covered by the scope of the PCCS-WC:

i. The date of the test shall be generally within three years prior to the notified date for commencement of the Works or at an earlier date for domestic blocks subject to the CM's consideration on the track records as maintained by the Housing Department;

ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material as mentioned in sub-clause (4)(a);

iii. In the event that no test report has been submitted for the CM's information when the materials are delivered to Site, the Contractor shall remove all delivered materials off Site and bear all associated costs and no extension of time will be allowed.

2. Quality and Performance Requirements:

a. Unless otherwise specified, all close-coupled WC suites used shall be to Class 2 of BS EN 997:2012+A1:2015 with dual flush combining a maximum flush of 6 litres and a reduced flush no greater than two-thirds of the maximum flush volume and suitable for salt water with quality of vitreous china to BS 3402:1969 comprising:

i. Vitreous china washdown WC pan:
SANITARY APPLIANCES

- Horizontal outlet to BS EN 33:2011;
- Colour: as shown on Drawings or to Approval;
- Fixings to be in accordance with PLU2.M610 or as recommended by the manufacturer and approved by the CM;
- Length and size to fit design layout.

ii. Vitreous china flushing cistern:
- Close-coupled type as part of WC suite;
- Clearly marked internally with an indelible line to show the intended volume of flush, together with an indication of that volume;
- All necessary fixings with stainless steel grade 304 screws / bolts.

iii. Flushing apparatus:
- Valve type flushing apparatus;
- Overflow pipe and discharge to external;
- Flushing mechanism (push button) with protective coating;
- Flushing apparatus not fastened to the cistern cover to allow free lifting of the cover without damaging the flushing apparatus;
- The design of the components and fixing details shall prevent bursting and flooding when the connecting component fails;
- Properties of plastic materials shall be functional and durable in sustaining mechanical, dimensional and chemical stability, and suitable for use with salt water.

iv. Seat and cover:
- Plastic single ring to BS 1254:1981 (except the requirements on dimensions);
- Colour: as shown on Drawings to match WC pan;
- Complete with necessary fixings.

b. The quality and performance requirements are as follows:

i. WC pan:

3. All close-coupled WC suites used shall be registered products under WSD’s Water Efficiency Labelling Scheme (WELS) on Water Closets. The provisions of the scheme shall apply to the combination of a water closet pan and cistern i.e. the close-coupled suite, and comply with the following:

a. Carry a water efficiency label showing the products’ water consumption level and efficiency rating as follows:

<table>
<thead>
<tr>
<th>Locations / applications</th>

</tr>
</tbody>
</table>
b. Comply with the performance requirements specified in WSD’s scheme
document for WELS on Water Closets. These include flush volume for reduced
flush (for dual flush only), solid discharge for maximum flush, paper discharge
for reduced flush volume (for dual flush only), liquid contaminant dye retention
and wash of bowl. The flushing valve of water closet shall be tested in
accordance with the relevant requirements as specified in the Waterworks
Regulations (Cap. 102A) and comply with the standards specified for the
flushing valve of water closet by the Water Authority;
c. Manufactured under a design and production system operating according to a
recognized international quality system (such as ISO 9001 or equivalent);
d. Hold a valid WELS registration record with WSD’s General Acceptance of the
flushing valves of the corresponding water closets.

4. On Site Delivery Verification:
a. At delivery stage, submit the following documents:
   i. Written confirmation that the material delivered to Site conforms with the
      Approved sample submitted under sub-clause (1)(a);
   ii. Original or certified true copy of the Certificate of Origin for every batch of
delivery. One batch being the material quantity covered under each
delivery note;
   iii. Delivery notes for all material delivered to Site.
b. Carry out and submit report on the following verifications for WC suites upon
delivery on Site. Prior to carrying out the verifications, inform the CM or his
representatives who may present to witness the verifications:
   i. Method:

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

c. Where any of the verifications fail to meet the acceptance standards, either:
   i. Remove the representative batch off Site; or
   ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.

PLU2.M115.X  DELETED

PLU2.M120.8  WC PAN
Comprising:
1. Vitreous china washdown pan with horizontal outlet to BS 5503:Part 3:1990;

PLU2.M130.8  SQUATTING WC
Vitreous china washdown WC pan with integral treads and loose trap for fitting at floor level.

PLU2.M140.8  CISTERNs
To BS 1125:1987, comprising:
1. Flushing apparatus: valveless syphonic;
2. uPVC discharge pipe to BS 3505:1986 or BSEN 1452 Parts 1-5:2000;
3. Ball valve and overflow;
4. Type and material: low level plastic, high level plastic or low level vitreous china as shown on Drawings.

URINALS AND CISTERNs

PLU2.M210.8  BOWL URINAL SUITE
Comprising:
1. Vitreous china bowl to BS 5520:1977:
   a. Inlet supply: top for surface fixed pipework or back for concealed pipeworks;
b. Non-corroding, concealed, screw fixed brackets;
c. Colour: as shown on Drawings or to Approval.

2. Plastics waste outlet, 40 mm nominal size with backnut and plastics or stainless steel domed outlet grating.

PLU2.M220.8 FIRE CLAY SLAB URINALS
Fire clay slab type with graded single channel, outlet and grating and fluted non-slip treads:
1. Arrangement and dimensions as shown on the Drawings;
2. Water supply, waste disposal fittings as shown on the Drawings.

PLU2.M230.8 STAINLESS STEEL SLAB URINAL
To BS 4880:Part 1:1973 and:
1. Stainless steel spreaders, flush pipes and brackets;
2. Copper alloy outlet, 65 mm nominal size with backnut and hinged domed outlet grating;
3. Automatic plastics flushing cistern: to BS 1876:1990 non-corroding screw to the wall metal fixings;
4. Water supply fittings: as shown on Drawings;

PLU2.M240.8 CISTERNs
Comprising:
1. Vitreous china automatic flushing cistern to BS 1876:1990;
2. Chromium plated flush pipe and fixing clips;
3. Surface fixed or concealed chromium plated spreader;
4. Colour: as shown on Drawings and to match urinal.

WASH BASINS AND SINKS

PLU2.M310.A WALL HUNG OR COUNTER TOP OR SEMI-RECESSED WASH BASINS
1. Submission Requirements:
   a. At sample submission and approval stage, submit a sample of the proposed material for CM's approval together with all the following substantiation for CM's information:
      i. Catalogue, brand name / model name and job reference of the product;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer;
      iv. When the wash basins are supplied for domestic blocks, except for the ancillary facilities at lower floors, also include the following in the submission:
         - Original or a certified true copy of the ISO 9001 certificate for the manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by a certification body or by the QCM. The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.
   b. Submit original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2)(b) for CM's information:
i. The date of the test shall be generally within three years prior to the notified date for commencement of the Works;

ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material as mentioned in sub-clause (3)(a);

iii. In the event that no test report has been submitted for CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

c. Submit catalogue and test report (original or certified true copy issued or certified by the laboratory that complies with PRE.B9.570) showing compliance with sub-clause (2)(b)(v) for the proprietary screw anchors or threaded rods as specified in sub-clause (2)(a)(iii) for CM's agreement not later than the delivery of the material as mentioned in sub-clause (3)(a).

2. Quality Requirements:

a. Vitreous china wall hung or counter top or semi-recessed wash basin comprising:

i. Vitreous china wash basin to BS 1188:1974, with single faucet hole to CM's approval for monoblock basin mixer with aerator, pop up waste and flexible supply pipes:
   - Type: wall hung or counter top or semi-recessed as shown on Drawings;
   - Colour: as shown on Drawings or to Approval;
   - Size to fit design layout and with sufficient space between the wall surface and the basin mixer for the operation of the pop up waste;
   - Diameter of the central tap hole to BS EN 31:2011 sub-clause 3.1 and Table 1.

ii. Fixing for counter top or semi-recessed wash basins: in accordance with manufacturer's recommendations approved by the CM;

iii. Fixing for wall-hung wash basins: proprietary screw anchors or threaded rods with flexible washers, plastic plugs (other types to be Approved) and all necessary fixing accessories to suit the site conditions.

b. The quality and performance requirements are as follows:

3. On Site Delivery Verification:
   a. At delivery stage, submit the following documents:
      i. Written confirmation that the material delivered to Site conforms with the
         Approved sample submitted under sub-clause (1)(a);
      ii. Original or certified true copy of the Certificate of Origin for every batch of
          delivery. One batch being the material quantity covered under each
          delivery note;
      iii. Delivery notes for all material delivered to Site.
   b. Carry out and submit report on the following verifications for vitreous china
      wash basins upon delivery on Site. Prior to carrying out the verifications,
      inform the CM who may present to witness the verifications:
      i. Method:
         | Verification Items          | Method         | Acceptance Standards |
         |-------------------------------|----------------|----------------------|
         | Dimension Check               | By measurement | Same as the CM’s     |

c. Where any of the verifications fail to meet the acceptance standards, either:
   
   i. Remove the representative batch off Site; or
   
   ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.

**PLU2.M320.8 STAINLESS STEEL SINK**

Stainless steel non-magnetic and corrosive resistant and to BS 1244:Part 2:1988, comprising:

1. Bowl and drainer of steel grade 304S15 to BS 1449:Part 2:1983 with mill surface finish No.2A or with AISI 304 18/8, complete with 90 mm waste fittings, insert clips; rubber underlining, 0.8 mm thickness, polished finish;
2. Type: sit-on or inset type with number of bowls and drains as shown on Drawings;
3. Chromium plated brass chain and stay with rubber plug;
4. Pierced waste outlet to accommodate waste fitting;
5. Stainless steel drain outlets consisting of stainless steel strainer and fixing screws with PVC couplings for connection to 40 mm diameter PVC bottle traps and pipes;
6. Sound deadening pads fitted underneath sink and drainer;
7. 25 mm x 1.6 mm thick stainless steel earthing lug for equipotential bonding connection, or otherwise as indicated on Drawings.

**BATHS AND SHOWERS**

**PLU2.M410.A PORCELAIN ENAMELLED CAST IRON BATHS**

1. Submission Requirements:
   
   a. At sample submission and approval stage, submit a sample of the proposed material for CM's approval together with all the following substantiation for CM's information:
      
      i. Catalogue, brand name / model name and job reference of the product;
      II. Name, address and contact person of the local supplier;
      iiii. Name, address and contact person of the manufacturer;
      iv. When the cast iron baths are supplied for domestic blocks, except for the ancillary facilities at lower floors, also include the following in the submission:
- Original or a certified true copy of the ISO 9001 certificate for the manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by a certification body or by the QCM. The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.

b. Submit original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2)(b) for CM's information:

i. The date of the test shall be generally within three years prior to the notified date for commencement of the Works;

ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material as mentioned in sub-clause (3)(a);

iii. In the event that no test report has been submitted for CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

2. Quality Requirements:

a. Porcelain enamelled cast iron bath to BS 1189:1986 comprising:

i. Porcelain enamelled cast iron non-apron type bath with non-slip surface:
   - Colour: as shown on Drawings or to Approval.

ii. Adjustable cast iron feet capable of raising top of bath to the height as shown on Drawings;

iii. Chromium plated brass bath pop up drain and flexible overflow assembly;

iv. 1.5 mm removable enamelled pressed steel apron with skirting and fixing devices:
   - Colour: as shown on Drawings to match the bath.

b. The quality and performance requirements are as follows:

i. Cast iron bath tub and waste bodies:

**ii. Test Method No. 1:**

- Operate the pop up drain five times;
- Close the waste plug. Check if it is watertight fit in the waste body by filling 50 mm depth of water at 25 ± 1°C into the bath and observe for sign of water leakage 5 min. later. There shall be no sign of leakage. Drain the water and repeat the test if leakage is found. The specimen fails the test if watertightness cannot be achieved after three attempts;
- Fill the bath with known volume of water at 32 ± 1°C up to 400 mm depth, measured at mid-length of the bath. This procedure shall be completed in less than 5 minutes;
- Maintain the temperature at 32 ± 1°C during the test;
- Measure volume of the water left in the bath after 1 hour.

**3. On Site Delivery Verification:**

**a.** At delivery stage, submit the following documents:

i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (1)(a);

ii. Original or certified true copy of the Certificate of Origin for every batch of delivery. One batch being the material quantity covered under each delivery note;

iii. Delivery notes for all material delivered to Site.

**b.** Carry out and submit report on the following verifications for baths upon delivery on Site. Prior to carrying out the verifications, inform the CM who may present to witness the verifications:

i. **Method:**

### c. Where any of the verifications fail to meet the acceptance standards, either:

i. Remove the representative batch off Site; or

ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.

#### PLU2.M420.8 VITREOUS CHINA SHOWER TRAYS
Vitreous china, to BS 6340:Part 8:1985:
1. Length and size to fit design layout;
2. Colour: as shown on Drawings or to Approval.

#### PLU2.M430.A ACRYLIC SHOWER CUBICLE, SHOWER TRAY AND SLIDING SHOWER DOOR
1. Submission Requirements:
   a. At sample submission and approval stage, submit a sample of the proposed material for CM's approval together with all the following substantiation for CM's information:
      i. Catalogue, brand name / model name and job reference of the product;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer;
      iv. When the shower cubicle and shower trays are supplied for domestic blocks, except for the ancillary facilities at lower floors, also include the following in the submission:
         - Original or a certified true copy of the ISO 9001 certificate for the manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by a certification body or by the QCM. The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.
   b. Submit original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2)(b) for CM's information:
      i. The date of the test shall be generally within three years prior to the notified date for commencement of the Works;
      ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material as mentioned in sub-clause (3)(a);
iii. In the event that no test report has been submitted for CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

2. Quality Requirements:
      i. Acrylic shower cubicle or shower tray:
         - Length and size to fit design layout;
         - Colour: as shown on Drawings or to Approval;
         - Flat shower tray with adjustable feet and removable front panel. The shower trays shall be premounted and can be adjusted easily in height. The front panel shall be fixed at the frame by concealed clip system.
      ii. Sliding shower door:
         - Number and size of doors as shown on Drawings;
         - Fully framed shower enclosure constructed of PVC coated or powder coated epoxy finished aluminium framing with 5 mm thick (minimum) clear tempered safety glass and magnetic closure device;
         - Adjustability of the panel by two mounting profiles;
         - Ball-bearing wheels for the panels to enable easy sliding of the doors;
         - Door panels should be demountable for easy cleaning.
   b. The quality and performance requirements are as follows:
      i. Shower cubicle or shower tray:

<tbody>
<tr>
<td>BS 5266:1978 &amp; AMD 4641</td>
<td>Ease of Sliding: Force not less than 10 N and not exceeding 60 N applied at the hand-grip position to set the panel in motion. Each sliding door panel shall be tested separately.</td>
</tr>
<tr>
<td></td>
<td>Resistance to Excessive Operation Force: The force 150 N shall not cause a deflection of the stile greater than 3 mm and there shall be no permanent deflection on release of load. Each sliding door panel shall be tested separately.</td>
</tr>
<tr>
<td></td>
<td>Resistance to Accidental Loading: With the force 300 N applied, the stile shall not twist off the glazing and there shall not subsequently be any permanent deformation.</td>
</tr>
<tr>
<td>See methods given in (b)(ii) &amp; (b)(iii) below</td>
<td>Test on Endurance Performance: No damage after 100,000 cycling test, back and forth movement. Force not less than 10 N and not exceeding 60 N applied at the hand-grip position to set the panel in motion after cycling test.</td>
</tr>
<tr>
<td>BS 6340:Part 3: 1985 Appendix B</td>
<td>Leakage Test: Inspect at the other side of the door to check no water leakage / seepage. The sliding door assembly shall be tested.</td>
</tr>
</tbody>
</table>

ii. Test on endurance performance of sliding door:
- Install the specimen unit according to the manufacturer's specification;
- Connect the test door at the hand-grip position to mechanical system (see cycling test mechanism below) capable of producing a uniform back and forth movement to the test door;
- Move the test door back and forth over a full travel distance for 100,000 cycles;
- Set the speed of operation of the test door between successive open / close cycles to a minimum of 5 seconds and a maximum of 10 seconds.

iii. Cycling test mechanism:
- The mechanism shall provide smooth opening of the test door and return of the test door to the closed position;
- The mechanism shall be capable of providing 100,000 continuous cycles of open / close;
- Means shall be provided for recording the number of operating cycles;
- Check for damage, examine and record the wear and tear conditions and carry out "Ease of Sliding Test" after 5,000, 10,000, 20,000 cycles and therefore after every 20,000 cycles.

3. On Site Delivery Verification:
   a. At delivery stage, submit the following documents:
      i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (1)(a);
      ii. Original or certified true copy of the Certificate of Origin for every batch of delivery. One batch being the material quantity covered under each delivery note;
      iii. Delivery notes for all material delivered to Site.
b. Carry out and submit report on the following verifications for shower cubicle and tray upon delivery on Site. Prior to carrying out the verifications, inform the CM who may present to witness the verifications:
   i. Method:

<table>
<thead>
<tr>
<th>Verification Items</th>
<th>Method</th>
<th>Acceptance Standards</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dimension Check</td>
<td>By measurement</td>
<td>Same as the CM's Approved sample</td>

<tr>
<td>Surface Quality</td>
<td>Visual</td>
<td>No discolouration, no damage, no staining, no blemish, acceptable colour consistency</td>
</tr>
</tbody>
</table>

   ii. Frequency:

<table>
<thead>
<tr>
<th>Verification Items</th>
<th>Sampling Frequency</th>
<th>Representative Batch</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dimension Check</td>
<td>1 sample from each batch</td>
<td>Material delivered to Site under one delivery note specified in PLU2.M430 (3)(a)(ii)</td>
</tr>
<tr>
<td>Surface Quality</td>
<td>1 sample from each batch</td>
<td>Material delivered to Site under one delivery note</td>
</tr>
</tbody>
</table>

   c. Where any of the verifications fail to meet the acceptance standards, either:
   i. Remove the representative batch off Site; or
   ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.

**ANCILLARY MATERIALS**

**PLU2.M510.A  MIXERS (BATH / SHOWER, BASIN AND KITCHEN SINK) AND SHOWER HANDSETS**

1. Submission Requirements:
   a. At sample submission and approval stage, submit a sample of the proposed mixers and shower handsets for CM's approval together with all the following substantiation for CM's information:
      i. Catalogue, brand name / model name and job reference;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer;
      iv. Approval by the Water Authority with a valid approval document for the mixers;
      v. Where applicable, either the document from the manufacturer showing his authorization for the supplier as the agent / distributor in Hong Kong or document from the supplier showing the appointment of the manufacturer and manufacturer's agreement for the production of the proposed product;
      vi. Nominal flow rates of mixers and shower head;
vii. Calculation in accordance to the method described in BEAM Plus to demonstrate that the use of the proposed mixers and shower head in the project will lead to an annual saving of consumption of potable water of not less than 20%;

viii. When the mixers and shower handsets are supplied for domestic blocks, except for the ancillary facilities at lower floors, also include the following in the submission:

- Two identical panels with accessories mounted on boards similar to the one maintained by the Housing Department showing the quality and components for the mixers and shower handsets;
- Original or certified true copies of certification to ISO 9001 and ISO 14001 for the manufacturing plant. If the mixers and shower handsets are not manufactured in the same plant, the certification is required for all manufacturing plants. If a copy of the ISO certificate is submitted, it shall be certified true by the certification bodies or by the QCM. The certification bodies shall be as follows:

<table>
<thead>
<tr>
<th>ISO</th>
<th>Certification Body</th>
</tr>
</thead>
<tbody>
<tr>
<td>ISO 9001</td>
<td>The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.</td>
</tr>
<tr>
<td>ISO 14001</td>
<td>The certification body shall be accredited by the Hong Kong Accreditation Service (HKAS), or the China National Accreditation Service (CNAS), or an accreditation body which has entered into a mutual recognition agreement with HKAS.</td>
</tr>
</tbody>
</table>

ix. Confirmation of compliance with statutory requirements in writing jointly signed by the Building Services Engineer of the Contractor and the Licensed Plumber.

b. Submit original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with requirements of the Water Authority and the performance requirements of sub-clauses (2)(a)(iii), (2)(b)(iv), (2)(c)(v) and (2)(d)(iv) for CM's information:

i. The date of the test shall be generally within three years prior to the notified date for commencement of the Works or at an earlier date for domestic blocks subject to CM's consideration on the track records as maintained by the Housing Department;

ii. The test reports shall either be submitted at the sample submission and approval stage as per sub-clause (1)(a), or at a time not later than the delivery of the material as per sub-clause (3)(a);

iii. In the event that no test report has been submitted for CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

c. Submission of material list to WSD under Form WWO 46 and the subsequent updating shall be made as soon as the proposed materials, or proposed change of approved materials, are approved by the CM and before placement of order for such materials. All applications and forms for submission to WSD shall be submitted to the CM for comment before submission to WSD and record after approval;

d. Sample board:
i. Submit a sample board similar to the one maintained by the Housing Department showing samples of mixers and accessories to be used in the plumbing installation and listed in the Form WWO 1149 submitted to WSD as per PLU1.M010 (4). The sample board is to be kept by the CM on Site together with associated relevant certificates / test reports / catalogues / supporting documents upon submission of Form WWO 46 to the Water Authority;

ii. When the mixers and shower handsets are supplied for domestic blocks, submit an additional sample board of the approved sample for keeping in the Housing Department’s Sample Display Gallery if the material has not been approved for use in a public housing project in the past five years prior to the notified date for commencement of the Works;

iii. The sample boards shall comply with the requirements of the Water Authority. Each sample, with clear numbering and labelling, shall be firmly fixed onto a rigid wooden or metal board. A list shall also be affixed on the sample board to show the item description, make and brand, country of origin and locations of installation;

iv. Replace samples and relevant certificates / test reports / catalogues / supporting documents whenever amendment to Annex of Form WWO 46 is made and approved by the Water Authority.

2. Quality Requirements:

   a. Mixer (Bath / Shower):

      i. Design and construction requirements:

         - Bath mixer: single lever wall mounted type with double outlets and diverter for shower point connection with removable type aerator / strainer at the spout of the bath mixer;
         - Shower mixer: single lever wall mounted type with single outlet for shower point connection;
         - All taps identified for use on hot and cold water with either colour coding and / or character identification;
         - Corrosion resisting copper alloy with chrome plated finish to body of mixer;
         - Threaded end connection to mixer suitable for directly connecting the pipe to which it is installed. S-connection to be covered;
         - Nominal size of the mixer as shown on the Drawings;
         - Fixing to be in accordance with PLU2.M610 or as recommended by the manufacturer and approved by the CM.

      ii. Chemical and hygiene requirements:

         - All materials coming into contact with water intended for human consumption shall present no risk to health. They shall not cause any change of the drinking water in terms of quality, appearance, smell or taste;
         - Decorative, electroplated materials such as nickel and / or chromium shall not be present on the internal surface of any of the components of the mixer that may come into contact with water.

   iii. Pressure and temperature requirements:
iv. Performance requirements:

v. Method No.1:

- For Shower Mixer:
  - Refer to Appendix PLU2/I for arrangement of the testing set-up;
  - To test hot water side:
Set the lever handle of the mixer valve so that hot water side is fully open and cold water side is fully close. Allow maximum flow of water at 25°C ± 1°C and 7 l/min. ±2% to pass through the sample at the hot water side. Take reading of the pressure gauges to an accuracy of 2%.

Pressure drop should be taken as the difference in flow pressure between the inlet and outlet.

- For Bath Mixer:
  - Refer to Appendix PLU2/I for arrangement of the testing set-up;
  - Allow water at 25°C ± 1°C to pass through the sample at 7 l/min. ±2%;
  - To test hot water side:
    The diverter shall be set so that water is discharged only through the connection to the shower hose. Set the lever handle of the mixer valve so that hot water side is fully open and cold water side is fully close. Allow maximum flow of water at 25°C ± 1°C and 7 l/min. ±2% to pass through the sample at the hot water side. Take reading of the pressure gauges to an accuracy of 2%.
    Pressure drop should be taken as the difference in flow pressure between the inlet and outlet.

b. Mixer (Basin):
   i. Chromium plated brass monoblock basin mixer with non-ferrous or corrosion resisting pop-up waste and flexible hose assembly with stainless steel wire braiding;
   ii. Design and construction requirements:
      - Lever type fitted with removable type aerator / strainer at the spout;
      - Fixing to be in accordance with PLU2.M610 or as recommended by the manufacturer and approved by the CM.
   iii. Chemical and hygiene requirements:
      - All materials coming into contact with water intended for human consumption shall present no risk to health. They shall not cause any change of the drinking water in terms of quality, appearance, smell or taste;
      - Decorative, electroplated materials such as nickel and / or chromium shall not be present on the internal surface of any of the components of the mixer that may come into contact with water.
   iv. Water efficiency requirements:
      - Grade 2 under the Voluntary Water Efficiency Labelling Scheme on Water Taps by the Water Authority with nominal flow rate not less than 6 litres/minute;
      - The nominal flow rate shall satisfy the calculation in sub-clause (1)(a)(vii).
   v. Performance requirements:

### Resistance to Corrosion

- BS EN 13618 : 2011 : Cl. 4.2.3.9 & App B.8
- BS EN 12540 : 2000 : Cl.7.2.3
- Duration of corrosion test: Acetic acid salt spray test for 48 hours
- For surveillance test in **PLU2.T310**, fitting or integrated flange at the ends of the flexible hose is excluded from testing if original or certified true copy of the test report is submitted to show that the fitting is made from copper or copper alloy selected from materials specified in European copper and copper alloy product standards with max. Lead content <6%.

### Flexibility

- BS EN 13618 : 2011 : Cl. 4.2.3.11 & App B.9
- For surveillance test in **PLU2.T310**, length of test specimen \( L = \) length of flexible hose sampled from the site.

---

### c. Mixer (Kitchen Sink):

1. Chromium plated brass deck mounted kitchen sink mixer consisting of
   - Spouts of nominal thickness 0.6 to 0.8mm;
   - Flexible hose assembly with stainless steel wire braiding.

2. Design and construction requirements:
   - Single lever type;
   - All taps identified for use on hot and cold water with either colour coding and / or character identification;
   - Corrosion resisting copper alloy with chrome plated finish to body of mixer;
   - Fixing to be in accordance with **PLU2.M610** or as recommended by the manufacturer and approved by the CM;
   - Nominal size of the mixer as shown on the Drawings.

3. Chemical and hygiene requirements:
   - All materials coming into contact with water intended for human consumption shall present no risk to health. They shall not cause any change of the drinking water in terms of quality, appearance, smell or taste;
   - Decorative, electroplated materials such as nickel and / or chromium shall not be present on the internal surface of any of the components of the mixer that may come into contact with water.

4. Pressure and temperature requirements:
   - Suitability for both working and test pressure and temperature of the plumbing system in which it is installed.

5. Water efficiency requirements:
   - Grade 2 under the Voluntary Water Efficiency Labelling Scheme on Water Taps by the Water Authority with nominal flow rate not less than 6 litres/minute;

Resistance to Corrosion

| BS EN 13618 : 2011 : Cl. 4.2.3.9 & App B.8 |
| BS EN 12540 : 2000 : Cl.7.2.3 |
Duration of corrosion test : Acetic acid salt spray test for 48 hours
For surveillance test in PLU2.T310, fitting or integrated flange at the ends of the flexible hose is excluded from testing if original or certified true copy of the test report is submitted to show that the fitting is made from copper or copper alloy selected from materials specified in European copper and copper alloy product standards with max. Lead content <6%.

Flexibility

| BS EN 13618 : 2011 : Cl. 4.2.3.11 & App B.9 |
For surveillance test in PLU2.T310, length of test specimen L = length of flexible hose sampled from the Site.

**d. Shower Handset:**

i. **Shower Handsets consisting:**
   - 1000 mm shower rail;
   - 1500 mm flexible plastic shower hose;
   - Shower head with adjustable spray pattern;
   - Soap dish;
   - Fixing to be in accordance with PLU2.M610 or as recommended by the manufacturer and approved by the CM.

ii. **Shower hose:**
    - Design and construction requirements:
      - Corrosion resistant, flexible and of durable construction with lock nut / adapter at both ends for connection to mixer and shower head;
      - 1500 mm long.
    - Pressure and temperature requirements:
      - Suitability for both the working and test pressure and temperature of the plumbing system in which it is installed.

iii. **Shower head:**
    - Design and construction requirements:
      - Hand shower type, corrosion resistant and of durable construction with threaded ends for connecting to a shower hose.
    - Pressure and temperature requirements:
      - Suitability for both working and test pressure and temperature of the plumbing system in which it is installed.
    - Water efficiency requirements:
      - Grade 1 under the Voluntary Water Efficiency Labelling Scheme on Showers for Bathing under Water Authority with nominal flow rate not less than 7 litres/minute;
iv. Performance requirements:

<table>
<thead>
<tr>
<th>Items</th>
<th>Method</th>
<th>Acceptance Standards</th>
</tr>
</thead>
<tbody>
<tr>
<td>Flow Rate Test</td>
<td>In accordance with the testing methodology of &quot;Flow Rate Test&quot; specified in Water Authority's &quot;Voluntary Water Efficiency Labelling Scheme on Showers for Bathing&quot;</td>
<td>Flow rate to sub-clause 2(d)(iii)</td>
</tr>
<tr>
<td></td>
<td></td>
<td>The variation of the actual flow rates under dynamic pressures 150 kPa, 250 kPa and 350 kPa shall be within ±1 litre/minute of the nominal flow rate determined from the measured flow rates in this test.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>The difference between the highest and the lowest average flow rates measured in the nominal flow rate measurement shall not exceed 2.0 litre/minute.</td>
</tr>
<tr>
<td>Mean Spray Spread Angle</td>
<td>In accordance with the testing methodology of &quot;Mean Spray Spread Angle&quot; specified in Water Authority's &quot;Voluntary Water Efficiency Labelling Scheme on Showers for Bathing&quot;</td>
<td>The mean spread angle shall be between 0° and 8°.</td>
</tr>
<tr>
<td>Temperature Drop</td>
<td>In accordance with the testing methodology of &quot;Temperature Drop&quot; specified in Water Authority's &quot;Voluntary Water Efficiency Labelling Scheme on Showers for Bathing&quot;</td>
<td>The temperature drop shall not exceed 3°C.</td>
</tr>
<tr>
<td>Hot Water Resistance Test</td>
<td>Please refer to Method No. 2 as given below.</td>
<td>The maximum temperature measured at the shower head shall not be greater than 45°C and the maximum temperature measured at the shower hose shall not be greater than 55°C. No visual defect e.g. melting of any component. The sample shall be able to pass Flow Rate Test after being cooled for 5 minutes. No leakage or defect found in hydraulic test.</td>
</tr>
</tbody>
</table>

v. Method No. 2:

- Allow hot water at 76°C ± 1°C to pass through the sample for five minutes at a rate of 7 l/min.;
- Four random points evenly distributed across the surface of the shower head (two points at the handle) and four points along the length of the hose, measure the temperature at these locations to the nearest 0.1°C while the hot water is still running;
- Visually examine the sample for defect;
- Stop the hot water running, let the sample be cooled down to 25°C ± 1°C for five minutes;
- Carry out Flow Rate Test to the sample again;
- The hose shall also be subject to a static hydraulic pressure test of 5 bar for one minute. Observe for any sign of leakage and defect.

e. When the mixers and shower handset are supplied for domestic blocks, standard of visual quality shall be comparable with the benchmark samples maintained by the Housing Department.

3. On Site Delivery Verification:
   a. At delivery stage, submit the following documents:
      i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (1)(a);
      ii. Original or certified true copy of the Certificate of Origin for every batch of delivery. One batch being the material quantity covered under each delivery note;
      iii. Delivery notes for all material delivered to Site.
   b. Carry out and submit report on the following verifications for mixers and shower handsets upon delivery on Site. Prior to carrying out the verifications, inform the CM who may present to witness the verifications:
      i. Method:
         | Verification Items         | Method | Acceptance Standards |
         |----------------------------|--------|----------------------|
         | Surface Quality            | Visual | No damage, no staining, no blemish, appearance same as the CM's Approved sample. |
         | Design and Fixings         | Visual | Same as the CM's Approved sample and sub-clause 2(a)(i), 2(b)(ii), 2(c)(ii) and 2(d)(i) |
         | Logo and label check       | Visual | Same as the CM's Approval sample |
      ii. Frequency:
         | Verification Items         | Sampling Frequency | Representative Batch |
         |----------------------------|--------------------|----------------------|
         | Surface Quality            | 1 sample from each batch | Same batch of material delivered to Site under one delivery note |
         | Design and Fixings         |                    |                      |
         | Logo and label check       |                    |                      |
   c. Where any of the verifications fail to meet the acceptance standards, either:
      i. Remove the representative batch off Site; or
      ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.
   d. Observe and comply with the requirements of verification test for mixers delivered to site under sub-clause (4).
4. Open Up Inspections of mixers:
   a. Testing Arrangements:
      i. Open up inspection shall be carried out by the CM, a Direct Testing Contractor or the Housing Department Material Testing Laboratory upon delivery of material to Site under a delivery note, or during the course of construction as directed by the CM. A representative batch means the same type of mixer in the same batch of material delivered to Site under a delivery note as specified in sub-clause (3)(a)(ii);
      ii. Comply with the following pertaining to open up inspection:
         - Provide attendance on the Site;
         - Provide, deliver and collect samples etc. as directed by the CM.
   b. Testing Samples:
      i. Samples shall be selected by the CM and witnessed by representative of the Contractor;
      ii. Provide one test sample of mixer of bath / shower or basin or kitchen sink from a batch of material delivered to Site under the delivery note as specified in PLU2.M510 (3)(a)(ii) as selected by the CM;
      iii. When instructed by the CM, provide another test sample of mixer from any other batch of material delivered to Site under the delivery note as specified in PLU2.M510 (3)(a)(ii).
   c. Acceptance standard:
      The inspection shall reveal that decorative, electroplated materials such as nickel and / or chromium are not present on the internal surface of any of the components of the mixer that may come into contact with water;
   d. Non-compliance:
      i. In the event that the testing sample fails to meet the testing requirements, follow either one of the following actions:
         - Remove the representative batch off Site; or
         - Apply to the CM for further inspection for the representative batch in accordance with sub-clause (4)(c) on three separate samples selected by the CM. In case of failure of any inspection to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.
      ii. When the representative batch of mixers is removed off Site, replace with another new batch (hereinafter referred to as the "replacement batch"). Apply to the CM for inspection in accordance with sub-clause (4)(a), (4)(b), and (4)(c) above for the replacement batch. In case any one sample fails the inspection, follow the action stated in sub-clause (4)(d);
      iii. Bear the costs of any failed open up inspections and all associated costs for the inspection(s) and further inspection(s) required in sub-clauses (4)(d)(i) and (4)(d)(ii). No extension of time will be allowed.

PLU2.M530.8 VITREOUS CHINA SOAP HOLDERS
Vitreous china, semi-recessed type with drain spout on descending rim:
1. Length and size to fit design layout;
2. Colour: as shown on Drawings or to Approval.
PLU2.M540.8  STAINLESS STEEL TOILET PAPER HOLDER
Stainless Steel, surface mount type, polished surface with plastic roller, size as shown on Drawings.

PLU2.M550.8  VITREOUS CHINA TOILET PAPER HOLDER
Vitreous china, surface mount type, with plastic roller, size as shown on Drawings.

FIXING AND POINTING MATERIALS

PLU2.M610.8  FIXINGS
Provide the following as applicable to the sanitary appliances and mixers being fixed:
1. Fixings:
   a. Stainless steel grade 304 screws and plastic caps with plastic plugs or;
   b. Proprietary fixing screws and plastic caps with plastic plugs supplied by the same manufacturer of the sanitary appliances subject to CM's approval.
2. Fixing screws for WC pan and mixers shall be non-ferrous or corrosion resisting materials.

PLU2.M620.8  WC PAN BEDDING MATERIAL
White cement.

PLU2.M630.8  POINTING GROUT
White cement.

PLU2.M640.8  SILICONE SEALANT
As WAT5.M170.
WORKMANSHIP

GENERAL

PLU2.W010.8 BRITISH STANDARD
Comply with BS 8000:Part 13:1989, unless specified otherwise in respect of the following:
1. Materials handling and preparation (section 2);
2. Installation of sanitary appliances (sub-section 3.2);
3. Protection (sub-section 3.3).

PLU2.W020.8 HANDLING, STORAGE AND PROTECTION OF APPLIANCES
1. Store components off a levelled, well-drained and maintained hard-standing ground and in a manner which will not result in damage. Protect components from the weather;
2. Prevent contact with harmful elements, such as water, mud, plaster, cement etc;
3. Retain protective coverings in position for as long as possible and in place during fixing wherever practicable;
4. Use dust sheets or polythene sheets as protection when items do not have manufacturer's own packaging;
5. Prevent pre-finished surfaces from rubbing together;
6. Replace any units which have been chipped or scratched either before or after fixing.

JOINTS

PLU2.W110.8 SEALANT JOINTS
Seal joints in accordance with Worksection WAT5 and BS 8000:Part 13:1989, paragraph 3.2.3.

FIXING WC SUITES

PLU2.W210.8 PEDESTAL WC PANS
1. Set pan correctly in relation to finished floor level by using bedding materials;
2. Fix pan securely to floor using fixings in PLU2.M610;
3. The fixing screws shall not damage the waterproofing in the floor slab.

PLU2.W220.8 SQUATTING WC PANS
Bed on concrete floor in cement and sand bedding mortar and joint to soil pipe in similar mortar.

PLU2.W230.8 HIGH OR LOW LEVEL FLUSHING CISTERNS
Fix at heights as recommended by the pan manufacturer on brackets screwed to the wall or with stainless steel screws and plastics plugs. Fix supplementary support brackets where supplied by the manufacturer.

PLU2.W240.8 CLOSE-COUPLED FLUSHING CISTERNs
Fix to WC pan with bracket and bolts supplied by the manufacturer and to wall with stainless steel screws and plastic plugs.
**SYPHONS AND VALVES TO FLUSHING CISTERNs**
Assemble and adjust syphon and operating mechanism; fit float operated valve for fixing to water supply and union for connection to overflow.

**FLUSH PIPES**
Assemble and adjust so that they empty completely after each flush.

**FIXING URINALS**

**SLAB TYPE**
1. Bed channel outlet to waste connector in proprietary jointing compound;
2. Bed treads in cement sand mortar (1 : 3) with fall towards channel;
3. Fill space behind slabs with cement sand mortar (1 : 5);
4. Rake out joints to a depth of 5 mm and point flush using a proprietary, white grout. Joint width to be 3 mm maximum.

**BOWL TYPE**
Fix bowl and division to wall at centres shown on Drawings using brackets, concealed hangers or screws supplied by manufacture.

**FLUSHING CISTERNs**
Fix at heights as shown on Drawings on brackets securely fixed to the wall or with stainless steel and plastics plugs. Fix supplementary support brackets where supplied by the manufacturer.

**FIXING BASINS**

**COUNTER TOP OR SEMI-RECESSED WASH BASINS**
1. Seat and fix according to the manufacturer's recommendations approved by CM;
2. Height of rim above finished floor level as shown on Drawings.

**WALL-HUNG WASH BASINS**
1. Fix wash basins directly to walls by installing proprietary screw anchors or threaded rods with flexible washers, plastic plugs (other types to be Approved) to pre-formed fixing holes at the back of the basins;
2. Height of rim above finished floor level as shown on Drawings.

**FIXING BATHS AND SHOWERS**

**BATHS**
Fix in accordance with the manufacturer's instructions.

**CLEARANCE FOR BATH TRAPS**
Pack where necessary to set the bath at a height to suit the depth of trap.

**BATH OVERFLOW**
Connect bath overflow to waste trap with proprietary trap connector or union.

**FIXING SHOWER DOORS**
Fix in accordance with manufacturer's instructions and with neoprene gasket seal between components and floor/wall.
PLU2.W550.8  FIXING SHOWER CUBICLE AND SHOWER TRAY
1. For vitreous china shower tray, fix in accordance with arrangement drawings. In-situ joints are to be watertight.
2. For acrylic shower tray, fix in accordance with manufacturer's instructions.

TAPS AND VALVES

PLU2.W610.8  TAPS AND MIXERS FITTED TO SANITARY APPLIANCES
Fix in position shown on Drawings or as instructed using fixings in PLU2.M610. Fix hot taps on the left unless otherwise instructed. Loosen and re-tighten the joint between body and head prior to fixing.

PLU2.W620.8  FLEXIBLE HOSE ASSEMBLY WITH STAINLESS STEEL WIRE BRAIDING
1. Follow the installation method of the flexible hose recommended by the flexible hose supplier;
2. Comply with the following for the installation of the flexible hose:
   a. Avoid twisting of the flexible hose during the installation;
   b. Use suitable length of flexible hose which is not too long to cause unnecessary bending or too short to cause tension. Allow a slight slack on the straight length of the flexible hose as illustrated at Appendix PLU/II to this Worksection;
   c. Observe minimum bending radius recommended by the flexible hose supplier if bending of the flexible hose is inevitable;
   d. Avoid acute bending of the flexible hose. Bending shall be formed by a specially made 90 degree bend component supplied by the flexible hose supplier;
   e. Use two wrenches in tightening the hose to the connection points of water supply pipes. Hold the flexible hose steady with one wrench while tighten the hose nut to the connection point with the other wrench as illustrated at Appendix PLU/II to this Worksection.
3. Replace any damaged, kinked, severely twisted or deformed flexible hose.

WASTE OUTLETS

PLU2.W710.8  BEDDING
Bed waste outlets to wash basins, sinks and baths in proprietary jointing compound.

ANCILLARY FIXINGS

PLU2.W810.8  SOAP HOLDERS
Fix with cement sand mortar to location as specified on Drawings.

PLU2.W820.8  TOILET PAPER HOLDERS
1. Fix vitreous china toilet paper holders with cement sand mortar to location as specified on Drawings;
2. Fix stainless steel toilet paper holders with stainless steel and plastic plugs to location as specified on Drawings.
EQUIPOTENTIAL BONDING

PLU2.W910.8  EQUIPOTENTIAL BONDING TO STAINLESS STEEL SINKS
1. Provide equipotential bonding connection for stainless steel sinks by:
   a. Weld one end of the earthing lug to sink; and
   b. Form a 5 mm diameter hole at the other end of the earthing lug for connection of bonding conductor by the Nominated Sub-contractor for Electrical Installation.
2. As COM2.W465 (6).

TOLERANCES

PLU2.W1100.8  GENERAL
Refer to Appendix H "Schedule of Tolerances" to this Specification.
TESTING

SURVEILLANCE TESTS FOR WCS

PLU2.T110.B

SURVEILLANCE TESTS FOR WC SUITES

1. Test Arrangements:
   a. When Instructed, surveillance tests shall be carried out by the CM, a Direct Contractor or the Housing Department Material Testing Laboratory;
   b. Comply with the following pertaining to surveillance tests:
      i. Provide attendance on the Site;
      ii. Provide, deliver and collect samples etc. as directed by the CM or as specified.

2. Testing Samples:
   a. Provide one set of test sample from the batch of material delivered to Site under the delivery note as specified in PLU2.M110 (4)(a) for WC suites or as instructed by the CM;
   b. One set of test sample shall consist of three specimens of WC pan, two specimens of cisterns, float-operated valves and flushing devices, or as instructed by the CM.

3. Testing methods:
   a. As per PLU2.M110 (2)(b).

4. Non-compliance:
   a. In the event that the testing sample fails to meet the testing requirements, follow either one of the following actions:
      i. Remove the representative batch off Site; or
      ii. Carry out re-test for the representative batch in accordance with the testing methods as specified in sub-clause (3) in a laboratory that complies with the requirements stated in PRE.B9.570 on three separate samples selected by the CM from the representative batch. In case of any one sample fails the re-test, remove the representative batch of Site.
   b. When the representative batch is removed off Site, replace with another new batch and carry out test in accordance with the testing methods as specified in sub-clause (3)(a) in a laboratory that complies with the requirements stated in PRE.B9.570 for one sample selected by the CM from the replacing batch. In case of such test fails, follow action stated in sub-clause (4)(a);
   c. Bear all associated costs for the test and re-test required in sub-clauses (4)(a) and (4)(b). No extension of time will be allowed.

SURVEILLANCE TESTS FOR MIXERS
(BATH/SHOWER/BASIN/KITCHEN SINK) AND SHOWER HANDSET

PLU2.T310.A

SURVEILLANCE TESTS

1. Test Arrangements:
   a. When Instructed, surveillance tests shall be carried out by the CM, a Direct Contractor or the Housing Department Material Testing Laboratory;
   b. Comply with the following pertaining to surveillance tests:
i. Provide attendance on the Site;
ii. Provide, deliver and collect samples etc. as directed by the CM or as specified.

2. Testing Samples:
   a. Provide test sample(s) as per sub-clause (2)(b) from the batch of material delivered to Site under the delivery note as specified in PLU2.M510 (3)(a) or as instructed by the CM;
   b. Test sample shall consist of:
      i. Four specimens for testing of bath / shower mixer;
      ii. Four specimens for testing of basin mixer;
      iii. Four specimens for testing of kitchen sink mixer;
      iv. Twelve specimens for testing of flexible hose assembly with stainless steel wire braiding;
      v. Two specimens for testing of shower handset;
         or as instructed by the CM.

3. Testing methods:
   a. As per PLU2.M510 (2)(a)(iv) for bath / shower mixer;
   b. As per PLU2.M510 (2)(b)(v) for basin mixer and flexible hose assembly with stainless steel wire braiding;
   c. As per PLU2.M510 (2)(c)(vi) for kitchen sink mixer and flexible hose assembly with stainless steel wire braiding;
   d. As per PLU2.M510 (2)(d)(iv) for shower handset.

4. Non-compliance:
   a. In the event that the testing samples for any type of mixer or shower handset fails to meet the testing requirements, follow either one of the following actions:
      i. Remove the representative batch of that type of mixer or shower handset off Site; or
      ii. Carry out re-test for the representative batch of that type of mixer or shower handset in accordance with the testing methods as specified in sub-clauses (3)(a), (3)(b), (3)(c) or (3)(d) in a laboratory that complies with the requirements stated in PRE.B9.570 on three separate samples selected by the CM from the representative batch. In case of any one sample fails the re-test, remove the representative batch of that type of mixer or shower handset off Site.
   b. When the representative batch of mixer or shower handset is removed off Site, replace with another new batch and carry out test in accordance with the testing methods as specified in sub-clauses (3)(a), (3)(b), (3)(c) or (3)(d) in a laboratory that complies with the requirements stated in PRE.B9.570 for one sample selected by the CM from the replacing batch. In case of such test fails, follow action stated in sub-clauses (4)(a);
   c. Bear all associated costs for the test and re-test required in sub-clauses (4)(a) and (4)(b). No extension of time will be allowed.

TIM1 CARPENTRY AND JOINERY MATERIALS

GENERAL

TIM1.M010.8 TIMBER QUALITY GENERALLY
To BS 1186:Part 1:1991, of mature growth, properly seasoned, sawn square and:
1. Free from wood wasp holes, large loose or dead knots, splits or other strength reducing defects;
2. The use of timber containing pin holes and worm holes will be permitted provided their extent is slight, in a small number of pieces, there is no active infestation, the strength of members is not impaired and they do not appear on the finished faces of joinery work.

TIM1.M020.8 STORAGE
1. Store timber in a dry, well ventilated place and protected from the weather;
2. Stack timber in such a manner as to prevent distortion.

TIM1.M030.8 AVERAGE PERMISSIBLE MOISTURE CONTENT
For timber incorporated into the work:
1. The average permissible moisture content is as follows:
   a. Internal timber for use in air conditioned space: 8% to 12%;
   b. Internal timber generally: 13% to 17%;
   c. Timbers with one face to the exterior of the building and one face to the interior (e.g. window frames): 13% to 17%;
   d. External timbers (e.g. fencing etc): 13% to 19%.

TIM1.M040.8 EXPOSED GRAIN FINISH
Submit samples of timber for joinery for Approval where the grain is to be left exposed or where the surfaces are to be varnished or similarly treated.

TIM1.M050.8 SOFTWOOD FOR CARPENTRY
1. To be of Cedar, Spruce or China Fir, or other as specified on Drawings;
2. Approval to be sought before use.

TIM1.M060.8 HARDWOOD FOR CARPENTRY AND JOINERY
1. Generally, to be best quality "San Cheung" (Kapore), Ash Wood or other hardwood as approved;
2. Use is permitted of best quality "Ying Muk" (Druen) for grounds and other similar backing pieces where not exceeding 1250 mm² sectional area;
3. To have minimum average density of 620 kg/m³ at 15% moisture content.

TIM1.M070.8  TEAK
To have minimum relative density of 650 kg/m³ at 15% moisture content.

TIM1.M080.8  FIRE RATED DOOR
1. Fire rated timber doors including frames, hinges, door closers and any other hardware complied with either set of standards below:
2. Test report shall be provided to indicate that the material, product or construction is capable of resisting the action of fire for the specified period. The test shall be carried out and the test report shall be prepared by a laboratory recognised by the Hong Kong Laboratory Accreditation Scheme.

TIMBER FLOORING

TIM1.M110.8  TIMBER STRIP FLOORING
Species and minimum finished thickness: as shown on Drawings.

TIM1.M120.8  WOOD BLOCK FLOORING
1. Species and minimum finished thickness: as shown on Drawings;
2. Block size: as shown on Drawings.

TIMBER BOARDING AND ISOLATED TRIMS

TIM1.M210.8  WOOD TRIMS
To BS 1186:Part 3:1990:
1. Timber species: as shown on Drawings.
2. Classification:
   a. Class CSH - Suitable for high quality finish or specialised trims;
   b. Classes 2 & 3 - Suitable for general purposes and a painted finish.
3. Surface category: exposed;
4. Profile sections as detailed on Drawings.

TIM1.M220.8  SKIRTINGS
1. Species and timber size: as shown on Drawings;
2. Profile: with arrised top edge.

WOOD-BASED PANEL PRODUCTS

TIM1.M310.8  PLYWOOD
1. To BS 6566:1985 and of the following grades, as specified:
a. "Grade 1 veneer" - hardwood, teak or beech faced as specified on Drawings, for natural finish;

b. "Grade 2 veneer" - luan faced for painting.

2. Generally, the bonding adhesive between veneers to be resin adhesive classified as moisture and weather resistant (MR) in BS 1203:1979. Use phenol formaldehyde resin adhesive classified as weather and boil proof (WBP) in BS 1203:1979, externally or in areas of high humidity.

3. Nominal standard thickness of plywood are: 3, 4, 5, 6, 9, 12, 15, 18 and 25 mm.

TIM1.M320.8 MARINE PLYWOOD
To BS 1088:1966 and BS 4079:1966, bonded with Type WBP adhesive between plies.

TIM1.M330.8 BLOCKBOARD
To BS 3444:1992, with Grade 1 or 2 veneer as specified, and bonded with Type MR adhesive.

TIM1.M340.8 HARDBOARD
To BS 1142:Part 2:1989, Type: "Standard (S)" or "Tempered (TN)".

TIM1.M350.8 INSULATING BOARD (SOFTBOARD)
To BS 1142:Part 3:1989, Type SBN.

TIM1.M360.8 MEDIUM DENSITY FIBREBOARD (MDF)
To BS 1142:1989:
1. Board type: moisture resistant grade (MDFMR) with density in excess of 600 kg/m³;
2. Thickness: as shown or scheduled on Drawings;
3. Fabrication:
   a. Cut panel to size and profile edges, as shown on Drawings;
   b. Fix panel with parallel threaded screws, threaded to the head of the screw, in pre-drilled pilot holes not less than 25 mm on the face or 70 mm on the edge from the corners of panel.

TIM1.M370.8 WOOD CHIPBOARD
To BS 5669, Type I Standard, unsanded or sanded, as specified.
Veneered chipboard to be an Approved proprietary brand.

NON-TIMBER QUILT, SHEET AND BOARD PRODUCTS

TIM1.M410.8 GLASS FIBRE INSULATION QUILT
Lightweight bonded mat weighing 12 kg/m³ uncompressed.

TIM1.M420.8 GLASS FIBRE INSULATION BOARD
Semi-rigid resin-bonded glass fibre board weighing 45-48 kg/m³.
POLYSTYRENE BOARD
To BS 3837, Type N, unless otherwise specified.

EXTRUDED POLYSTYRENE INSULATION BOARD
1. To be used for domestic flats only;
2. An Approved insulation board having the following properties:
   a. Thermal conductivity (K value): 0.031 W/mº K (at 31º C);
   b. Density: 32 (minimum) - 35 kg/m³;
   c. Coefficient of linear thermal expansion: 70 x 10⁻⁶ m/(mº C);
   d. Compressive strength: 300 kPa;
   e. Water absorption: <1 % volume;
   f. Water vapour transmission: 35 ng/Pa.sm².
3. Cell structure and properties: closed cell, maximum size 2.5 mm, resistant to heat transfer and moisture.

PVC AND ACRYLIC SHEET
An Approved type:
1. Material: PVC or acrylic;
2. Colour: as shown on Drawings;
3. Thickness: as shown on Drawings.

CEMENT BOARD
Do not use.

LAMINATED PLASTIC SHEET
1. General application:
   b. Class:
      i. Horizontal grade (H) or Vertical grade (V);
      ii. General purpose or moderate use (G);
      iii. Postforming grade (P) when specified on Drawings.
   c. Colour / sheen: as shown on Drawings;
   d. Thickness: as shown on Drawings;
   e. Submit sample for Approval;
2. Laminated plastic sheet for internal face of bathroom door to COM5.M430.

ACOUSTIC TILES
1. To be of an Approved proprietary brand meeting the requirements of CP 290:1973 and manufactured from the following materials:
   a. Wood or other organic fibre insulating board to BS 1142:1989, 12 mm (minimum) thick for 300 x 300 mm tiles;
b. Mineral fibre or wool insulating board 12 mm (minimum) thick for 400 x 400 mm tiles;

c. Approved multi-purpose, dimensionally stable building board 6 mm (minimum) thick.

2. To have a plain, perforated or fissured surface with a factory applied decorative finish. The edges to be square, bevelled, or bevelled and grooved to suit the suspension system;

3. Provide a certificate from the manufacturer confirming that the tiles are asbestos free.

**FIXINGS AND FASTENINGS**

**TIM1.M610.8** **NAILS GENERALLY**

Lengths of nails:

1. To be not more than total thickness of sections to be joined less 5 mm, or not less than twice the thickness of section through which nails are driven;

2. Where the thickness of the outer section through which nails are being driven is less than half that of the section to which nailing is being done, the depth of penetration of the nails into the latter to be not less than 10 times the diameter of the nails being used.

**TIM1.M620.8** **STEEL NAILS**

To BS 1202:Part 1:1974, with "bright" finish, unless otherwise specified.

**TIM1.M630.8** **WOOD SCREWS GENERALLY**

Lengths of screws:

1. To be not more than total thickness of sections to be joined, less 5 mm, or not less than one and a half times the thickness of section through which the screws are driven;

2. Where the thickness of the outer section being screwed is less than half that of the section to which screwing is being done, the depth of penetration of the screwing into the latter to be not less than the thickness of the outer section.

**TIM1.M640.8** **WOOD SCREWS**

To BS 1210:1963:

1. Material: brass, stainless steel, alloy or other non-corroding metal;

2. Head shape: counter sunk, unless otherwise specified.

**TIM1.M650.8** **SCREW CUPS**

To BS 1494:Part 2:1967:Table 13, surface pattern, brass or stainless steel, as specified.

**TIM1.M660.8** **MASONRY NAILS AND DRIVE PINS**

1. To be as specified;

2. Obtain Approval before use.
TIM1.M670.8 EXPLOSIVE CARTRIDGE FIXINGS
1. Obtain Approval before use;
2. All fixings to be in accordance with the Factories and Industrial Undertakings (Cartridge-Operated Fixing tools) Regulations.

TIM1.M680.8 PLUGS FOR FIXINGS
1. To hard base materials: proprietary plugs of plastic, soft metal, fibre or similar;
2. To soft base materials: proprietary fixings designed specifically for the particular situation;
3. Do not use plugs containing asbestos.

TIM1.M690.8 CRAMPS FOR FIXING DOOR AND WINDOW FRAMES TO MASONRY
30 x 3 mm galvanised steel flat cramps, 250 mm girth, turned up 75 mm minimum at one end and twice drilled to suit No. 12 gauge screws and fanged at other end.

TIM1.M700.8 EXPANDING ANCHOR FOR FIXING DOOR AND WINDOW FRAMES TO CONCRETE
1. Not less than 10 mm diameter proprietary expanding anchor, consisting of zinc electro-plated steel screw and zinc electro-plated steel sleeve. The anchor and sleeve shall be from the same manufacturer and packaged and supplied as a complete unit;
2. Minimum 30 mm effective anchorage depth in concrete. Application and fixing shall be in strict compliance with the manufacturer's recommendations.

TIM1.M701.8 EXPANDING ANCHOR FOR FIXING DOOR TO PANEL WALL
1. Not less than 10 mm diameter proprietary expanding anchor, consisting of zinc electro-plated steel screw and polyamide sleeve. The anchor and sleeve shall be from the same manufacturer and packaged and supplied as a complete unit;
2. Minimum 50 mm effective anchorage depth in panel wall. Application and fixing shall be in strict compliance with the manufacturer's recommendations.

TIM1.M710.8 ADHESIVES FOR WOOD
1. In compliance with the prescribed limits of VOC content as set out in the Air Pollution Control (Volatile Organic compounds) Regulation;
2. For internal use: synthetic resin adhesive to BS 1204:Part 1:1979, class MR moisture resistant and moderately weather-resistant;
3. For external use and internal use under very damp conditions: synthetic resin adhesive to BS 1204:Part 1:1979, class WBP weather-proof and boil-proof;
4. For fixing laminated plastic sheet: synthetic resin adhesive to BS 1204:Parts 1 and 2:1979, class WBP weather-proof and boil-proof;
5. Use a "warm-setting" grade of adhesive where the temperature exceeds 25°C;
6. Do not use animal glues.
SUNDRY ITEMS

TIM1.M810.8 WOOD PRESERVATIVE AND PESTICIDAL COATING
A specified in Worksection FIN7.

TIM1.M820.8 MOSQUITO GAUZE
1. Materials:
   a. Plastic covered glass fibre;
   b. Copper wire.
2. Mesh size: as shown on Drawings.
WORKMANSHIP

GENERAL

TIM1.W010.8  GENERALLY

TIM1.W020.8  TIMBER GENERALLY
1. Cut timber to required sizes and lengths as soon as practicable after the Works are begun;
2. Store cut timber dry under cover so that the air can circulate freely around it;
3. Stack cut timber off a levelled, well-drained and maintained hard-standing ground and in such a manner as to prevent distortion.

TIM1.W030.8  TIMBER DIMENSIONS
1. Dimensions of sections shown on Drawings are finished sizes. Allow for planing and sanding faces to finished sizes;
2. Sawn timber sections must hold at least the full dimensions specified;
3. Check site dimensions before prefabrication joinery fittings.

TIM1.W040.8  FINISH TO JOINERY
1. Plane timber for joinery on all faces;
2. Finish exposed faces to a fine glass-papered surface and round arrises to 1 mm radius.

TIM1.W050.8  FRAMED JOINERY GENERALLY
1. Ensure faces of framed joints are square and driven together to give a close, accurate fit;
2. Prepare and frame up joinery work with dry joints and store until required for fixing;
3. Before fixing, open up all joints and put together with white lead and wedge up. Replace any sections that have warped or developed shakes or other defects.

TIM1.W060.8  RUNNING BONDED JOINTS
To be cross-tongued, using teak tongues. Use double tongues for work over 40 mm thick.

TIM1.W070.8  PROTECTION OF FINISHED JOINERY
Protect from damage or discolouration.

TIM1.W080.8  PROTOTYPES
Prepare prototypes and obtain Approval for repetitive fittings before starting fabrication.

TIM1.W090.8  APPLICATION OF WOOD PRESERVATIVE AND PESTICIDAL COATING
1. As specified in Worksection FIN7;
2. Apply pesticide coating to the entire surface of timber forming all parts of doors, including frames and architraves all in accordance with FIN7.M140 and FIN7.W1410.

SECURING TIMBER SECTIONS

TIM1.W110.8 GENERAL
1. Plug and screw or secure timber sections by Approved means;
2. Check location of buried services before fixing to walls and other surfaces.

TIM1.W120.8 NAILING GENERALLY
1. Nail timber sections securely to the backing and ensure nails do not split the timber. Remove and replace any split timber;
2. Punch nail heads below timber surfaces visible in the completed work.

TIM1.W130.8 NAILING TIMBER WEATHER BOARDING
Nail weather boarding to timber framing with not less than two corrosion proofed nails in the width of each board at each framing member.

TIM1.W140.8 EXPLOSIVE CARTRIDGE FIXINGS
1. Use tools only of the indirect acting type, with pins and cartridges complying with the manufacturer's tool specification;
2. Ensure tools are operated only by persons holding a certificate of competency in the use of that tool.

TIM1.W150.8 SCREWING
When specified:
1. Screw timber sections to the backing including drilling pilot holes and countersinking heads flush with timber surface;
2. Use screwdriver to insert screws to full depth. Do not insert screws by hammer;
3. Countersink screw heads, a minimum of 5 mm below timber surfaces to be left with a natural finish. Glue in timber pellets to match the colour grain of the finished surface. Finish off flush with face.

TIM1.W160.8 FIXING PLASTIC SHEETS
Ensure all wood-based core materials for fixing laminated plastic sheets to have average moisture content of 8% to 12%.

TIM1.W170.8 ACOUSTIC TILES
Fix acoustic tiles and the like:
1. To timber battens with brass or other non-ferrous lost head nails as TIM1.M610 for fixing laminated plastic sheets;
2. Direct to continuous sub-base by means of an Approved adhesive used in accordance with the manufacturer's recommendations;
3. Fix to metal frame in accordance with manufacturer's recommendations and Approved shop drawings.
LAYING FLOORING

TIM1.W210.8 LAYING BOARDED OR STRIP FLOORING ON CONCRETE SUB-BASE
1. Work to sub-base:
   a. Lay at 350 mm centres, 50 x 40 mm timber battens pre-treated with wood preservative;
   b. Fix battens to sub-base with one of the following methods as shown on the Drawings:
      i. Plug and screw;
      ii. Proprietary floor clips, to suit batten size, spaced at 400 mm centres along length of batten and levelled, aligned and fixed in accordance with the manufacturer's instructions.
2. Laying flooring:
   a. Cross-tongue heading joints and stagger not less than two board widths apart;
   b. Cramp flooring as the work proceeds, to ensure tight and accurate fit along the whole length of the joint;
   c. Fix flooring with galvanized, sheradised or cadmium-plated wire nails;
   d. Face nail square edged flooring at each support with one nail placed just above the tongue and driven on skew. Punch nail heads flush.

TIM1.W220.8 LAYING WOOD BLOCK FLOORING
1. Work to sub-base:
   a. Ensure base to receive flooring is clean and dry.
2. Laying flooring:
   a. Fix blocks to screed with an Approved cold bitumen/rubber emulsion adhesive;
   b. Lay blocks to herringbone or basket pattern, as specified, with straight border two blocks (minimum) wide;
   c. Provide 5 mm expansion gap at perimeter of areas of wood block flooring, and fill with one of the following as specified:
      i. Cork strip;
      ii. Foam rubber strip.
3. Finishing flooring:
   a. Sand surface of wood block flooring with an electric surfacing machine using various grades of abrasive paper to obtain a smooth even surface ready to receive sealer or polish;
   b. Surfacing machine to be fitted with dust bag to control release of dust.

TIM1.W230.8 LAYING MOSAIC PARQUET FLOORING
1. Work to sub-base:
   a. Wood float finish and level tolerance of screeded base as Worksection FIN3;
   b. Ensure base to receive flooring is clean and dry.
2. Laying flooring:
a. On one coat of an Approved rubber emulsion adhesive applied to the base and back of the parquet with a serrated trowel;
b. To a basket pattern with straight borders three fingers (minimum) wide at junctions with different floor finishes.

3. Finishing flooring:
a. Sand surface of parquet flooring with an electric surfacing machine using various grades of abrasive paper to obtain a smooth even surface ready to receive sealer or polish;
b. Surfacing machine to be fitted with dust bag to control release of dust.

**TIMBER DOOR AND CUPBOARD CONSTRUCTION**

**TIM1.W310.8 LEDGED DOORS**
Construct hardwood ledged doors as follows:

1. Vertical boarding: 20 mm minimum thick, tongued and grooved in about 150 mm widths, v-jointed on face side;

2. Ledges:
   a. 5 mm thicker than boarding thickness;
   b. 100 mm wide for top ledge and 175 mm wide for middle and bottom ledges.

3. Nail boarding to ledges and screw ends of ledges to boarding.

**TIM1.W320.8 LEDGED AND BRACED DOORS**
Construct hardwood ledged and diagonal braced doors as follows:

1. Vertical boarding: 20 mm minimum thick, tongued and grooved in about 150 mm widths, v-jointed on face side;

2. Ledges:
   a. 5 mm thicker than vertical boarding thickness;
   b. 100 mm wide for top ledge and 175 mm wide for middle and bottom ledges.

3. Braces: 5 mm thicker than boarding thickness and 100 mm wide;

4. Nail boarding to ledges and screw ends of ledges to boarding. House braces to ledges and screw ends to boarding.

**TIM1.W330.8 FRAMED, LEDGED AND BRACED DOORS**
Construct hardwood doors as follows:

1. Framing: 45 mm minimum thickness with
   a. 115 mm wide stiles and top rail;
   b. 225 mm wide middle and bottom rails; and
   c. 100 mm wide braces.

2. Vertical boarding: 20 mm minimum thick, tongued and grooved in about 150 mm widths, v-jointed on face side.

**TIM1.W340.8 PANELLED DOORS**
Construct hardwood doors as follows except where indicated otherwise on Drawings:
1. Framing: 40 mm minimum thick, with 100 mm wide stiles, top rail and muntins and, 200 mm wide middle and bottom rails;

2. Flat panels: 20 mm thick;

3. Groove, rebate or leave open framing, as detailed on the Drawings for panels or glass.

TIM1.W350.8 TIMBER FLUSH DOORS

Construct doors as follows except where indicated otherwise on Drawings:

1. Facing material and grade:
   a. 3.2 mm standard hardboard;
   b. 5 mm plywood for painting;
   c. 5 mm hardwood or teak faced plywood for natural finish;
   d. Class HG laminated plastic bonded to 5 mm plywood.

2. Timber sizes; stiles and rails: width 75 mm generally; 100 mm wide for doors exceeding 900 mm wide or 2000 mm high;

3. Core infill:
   a. Hollow core: 25 mm horizontal battens at 150 mm centres, with blocking for lock fixing, door closers, and other ironmongery as specified;
   b. Solid core: 25 mm vertical battens tightly cramped together with the door facings fully bonded both sides.

4. Door lipping:
   a. Timber species: hardwood or teak, unless otherwise specified;
   b. 12 mm thick glued to all edges, generally;
   c. 25 mm thick to meeting edges of folding doors and meeting edges and heels of swing doors, rebated or rounded as detailed on Drawings.

TIM1.W360.8 CUPBOARD DOORS

Construct doors as specified except where indicated otherwise on drawings:

1. Plywood or blockboard panel, teak lipped on all edges. Faced both sides with laminated plastic sheet or prepared for painting.

TIM1.W370.8 CUPBOARD DRAWERS

Construct drawers as detailed on Drawings and comprising unless indicated otherwise:

1. Front: 20 mm thick teak, hardwood or plywood as indicated;

2. Sides and back: 15 mm thick hardwood or plywood as indicated;

3. Bottom: 5 mm thick plywood;

4. Construction: dovetail and frame together with bottom housed on three sides. Set drawers to slide on or with 15 x 15 mm hardwood screwed runners as indicated.

TIM1.W380.8 OPENING IN FLUSH DOORS

Provide lippings to openings as follows:

1. Timber species: hardwood;

a. Class: 2 or 3;
b. Exposure: exposed.

3. Timber sizes: 13 mm minimum thickness, including after rebating for glazing, but strictly in accordance with details.

**TIM1.W390.8 GLAZING BEADS**

1. Timber species: hardwood;
   a. Class: 2 or 3;
   b. Exposure: exposed.
3. Timber sizes: 13 mm minimum thickness after rebating but strictly in accordance with details;
4. Construction: mitre corners and fix glazing beads with brass screw and cups where shown on Drawings.

**FIXING DOOR AND WINDOW FRAMES**

**TIM1.W410.8 FIXING DOOR AND WINDOW FRAMES TO MASONRY**

Fix cramps to frames at 900 mm maximum centres with upper and lower cramps 300 mm maximum from the end of the jamb using two 12 SG screws and build in the other end.

**TIM1.W420.8 FIXING DOOR AND WINDOW FRAMES TO CONCRETE**

Secure frames to concrete walls with bolts at 900 mm maximum centres with the upper and lower bolts 300 mm (maximum) centres from the ends of the jamb, and fixed in accordance with the bolt manufacturers recommendations.

**TIM1.W430.8 ARCHITRAVES**

Architraves to be one length between angles. Mitre architraves at angle joints.

**FIXING SKIRTINGS**

**TIM1.W510.8 SKIRTINGS**

Secure to walls on sawn hardwood grounds.

WAT1  ASPHALT WORK

MATERIALS

MASTIC ASPHALT

WAT1.M010.8  MASTIC ASPHALT FOR ROOFING
To BS 6925:1988, Type R988 with limestone aggregate and manufactured with asphaltic cement specified under Table 1:
1. Column B (bitumen); or
2. Column T25 (25% ± 5% refined lake asphalt).

WAT1.M020.8  MASTIC ASPHALT FOR TANKING AND DAMP-PROOFING
To BS 6925:1988, Type T1097 with limestone aggregate and manufactured with asphaltic cement specified under Table 1:
1. Column B (bitumen); or
2. Column T25 (25% ± 5% refined lake asphalt).

ANCILLARY MATERIALS

WAT1.M110.8  ISOLATING MEMBRANE
Black sheathing felt to BS 747:1994:
1. Class: 4A(i);
2. Minimum weight: 17 kg per 810 mm wide by 25 m long roll.

WAT1.M120.8  BITUMEN DRESSING COMPOUND
Cut-back bitumen to BS 3690:Part 1:1989, Grade: 50 sec. at 40°C or other Approved grade.

WAT1.M130.8  REINFORCEMENT FOR KEYING ASPHALT
Plain expanded metal lath to BS 1369:Part 1:1987:
1. Thickness of lath: minimum 0.46 mm;
2. Size: minimum 10 mm across short way of mesh;
3. Weight: not less than 2.25 kg/m² ± 15%;

WAT1.M140.8  BITUMEN SOLUTION PRIMER FOR METAL
A proprietary type of thin black bitumen priming solution designed to provide a base for bituminous waterproofing coatings.

WAT1.M150.8  MORTAR FOR BEDDING CONCRETE ROOFING TILES
Cement and sand, 1 : 3, as Worksection MAS3.
**RUBBING SAND**

Clean sand passing a 600 micron BS Test Sieve but retained on one of 300 microns.

**SOLAR PROTECTION**

**GRANITE CHIPPINGS**

Best quality grey granite, free from brown and partially decomposed stone, graded to pass a BS Test Sieve of mesh size 5 mm but be retained on a sieve of mesh size 2.36 mm.

**WHITE STONE CHIPPINGS**

Baak Shek chippings, graded to pass a BS Test Sieve of mesh size 5 mm but be retained on a sieve of mesh size 2.36 mm.

**SOLAR REFLECTIVE PAINT**

1. An Approved bituminous based, aluminium paint; or
2. An Approved paint compatible with bituminous surfaces;
3. Do not used in dirty atmospheres which require periodical renewal.

**INSULATION**

Extruded polystyrene board to BS 3837:Part 2:1990 and:

1. CFC and HCFC free Zero Ozone Depletion Factor type;
2. Thermal conductivity (k): within range 0.025 to 0.034 W/mK;
3. Minimum compressive strength: 300 kPa;
4. With rebated edges;
5. Thickness: as indicated in the Drawings.

**CONCRETE ROOFING TILES**

1. Precast, vibrated concrete of cement, sand and dust-free aggregate, graded from 10 mm to 5 mm, mixed in the proportions of 1 : 2 : 4, cast into flat tiles;
2. Size: as shown on Drawings.

**INSULATING ROOFING TILES**

1. 300 mm or 400 mm square by 40 mm thick;
2. Density: 1250 kg/m³ ± 10%;
3. With a hard upper surface, suited to foot traffic;
4. Not five legged tiles.
WORKMANSHIP

GENERAL

WAT1.W010.8  CODE OF PRACTICE FOR ASPHALT ROOFING

WAT1.W020.8  CODE OF PRACTICE FOR ASPHALT TANKING AND DAMP PROOF COURSES

WAT1.W030.8  SUITABILITY OF BASE
Before laying asphalt ensure that:
1. The base is to even falls with no areas which will pond;
2. Surfaces to be covered are firmly fixed, clean, dry, smooth, free from contaminants, voids and protrusions;
3. All service pipes, pipe ducts, fittings, etc. which will penetrate the asphalt are in place and have been prepared as specified;
4. All cut and preformed chases are complete and not less than 25 mm x 25 mm in size;
5. External angles are chamfered where required to maintain the thickness of the asphalt coating.

PREPARATION

WAT1.W110.8  HEATING
1. Break blocks into pieces of suitable size, carefully stack in the cauldron or mixer, and gradually heat to a temperature not exceeding 230°C;
2. Agitate the asphalt continuously to prevent local overheating;
3. Provide suitable thermometers to ensure that the asphalt is heated to the correct temperature.

WAT1.W120.8  TRANSPORTING
1. Ensure asphalt is free from contamination;
2. Transport asphalt from the cauldron or mixer in buckets which have been coated with a fine, inert dust or cement;
3. Do not use ashes or oil to coat buckets.

WAT1.W130.8  LAYING ISOLATING MEMBRANE
On all surfaces less than 30° from the horizontal:
1. Loose lay black sheathing felt without sealing to the structure immediately prior to laying asphalt;
2. Lap 75 mm at joints.
**WAT1.W140.8**  **FIXING REINFORCEMENT**

Securely fix expanded metal lathing reinforcement with plugs and galvanized staples at 150 mm centres in both directions to:

1. Any vertical surface exceeding 300 mm in height;
2. Sloping surfaces exceeding 30° from the horizontal;
3. All timber surfaces to receive asphalt. Fix lathing to timber over the isolating layer;
4. Fixing lathing with long side of diamond horizontal, pitch of horizontal strands inclined upwards and butt jointed to continue mesh pattern;
5. Fix edges and stitch butt joints with staples at 75 mm centres.

**WAT1.W150.8**  **PRIMING METAL SURFACES TO RECEIVE ASPHALT**

1. Ensure surfaces are dry, clean, and free from dust, dirt, grease or other material which may affect adhesion;
2. Apply one coat of black bitumen priming solution as recommended by the manufacturer.

**LAYING ASPHALT**

**WAT1.W210.8**  **LAY ASPHALT**

1. To falls where indicated on the Drawings;
2. With separate coats breaking joint by at least 150 mm for horizontal work and 75 mm for vertical work;
3. To wood or metal gauges on horizontal surfaces to ensure the correct thickness of each coat;
4. Finish asphalt to a smooth flat surface, free from lipping, scars and other imperfections.

**WAT1.W220.8**  **ASPHALT THICKNESSES AND NUMBERS OF COATS**

1. Lay asphalt in accordance with the following table:

<table>
<thead>
<tr>
<th>Situation</th>
<th>Number of Coats</th>
<th>Minimum Total Thickness</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Horizontal roof surfaces and slopes not exceeding 30°</td>
<td>2</td>
<td>20 mm</td>
</tr>
<tr>
<td>b. Skirtings, upstands, drips and on slopes exceeding 30°</td>
<td>2</td>
<td>13 mm</td>
</tr>
<tr>
<td>c. Horizontal tanking or damp proof courses (except in the thickness of walls)</td>
<td>3</td>
<td>30 mm</td>
</tr>
<tr>
<td>d. Skirtings, upstands and drips greater than 300 mm in height and vertical tanking.</td>
<td>3</td>
<td>20 mm</td>
</tr>
<tr>
<td>e. Damp proof course in the thickness of walls.</td>
<td>1</td>
<td>15 mm</td>
</tr>
</tbody>
</table>

2. Situations 1 and 3: apply specified number of coats of equal thickness;
3. Situations 2 and 4: apply first coat thinly by metal trowel, in small dabs to completely cover surface and ensure full adhesion. Succeeding coat(s) to be applied by float.

**WAT1.W230.8  MAKING GOOD BLOWS ETC**

Pierce any blows formed during laying by the entrapment of air or moisture, and make good the affected part whilst the asphalt is still hot.

**WAT1.W240.8  INTERNAL ANGLES**

Form asphalt fillets at internal angles between horizontal and vertical surfaces as follows:

1. Applied in two coats of equal thickness;
2. Not less than 50 mm wide on face;
3. Continuous with the surfaces.

**WAT1.W250.8  EXTERNAL ANGLES**

Maintain the full thickness of asphalt specified at external angles between horizontal and vertical surfaces or between sloping surfaces.

**WAT1.W260.8  SKIRTINGS**

Unless shown otherwise on Drawings, form skirtings to a height above the finished roof level of 150 mm, with the top edge weathered and tucked into a groove with minimum dimensions of 25 mm deep \( \times \) 25 mm.

**WAT1.W270.8  RAINWATER OUTLETS**

1. Prime flanges of roof outlets with bitumen solution prior to applying asphalt;
2. Neatly dress asphalt into rainwater outlets and seal as required.

**WAT1.W280.8  FLASHINGS TO RAINWATER OUTLETS**

Carefully embed flashings into the first coat of asphalt and dress the second over it.

**WAT1.W290.8  PIPES PASSING THROUGH ASPHALT ROOFS**

1. Spot weld expanded metal lathing reinforcement to the sleeves of pipes passing through roofs and thoroughly clean and prime metal surfaces with bitumen solution;
2. Neatly dress asphalt around sleeves to a minimum height of 150 mm;
3. Form an asphalt angle fillet not less than 50 mm wide on face at the bottom.

**FINISHING ASPHALT**

**WAT1.W310.8  ROOF SURFACES**

Immediately on completion of laying and while the asphalt is still warm:

1. Rub sand well into the surface of the asphalt, using a clean, wooden float. Do not use a brush or broom to spread the sand;
2. Ensure that the entire horizontal surface of asphalt is treated. Do not sand-rub vertical surfaces or the finished surface of roofing asphalt which is to be surfaced with paving asphalt;
3. Prevent sand from spreading over exposed edges of bay.

WAT1.W320.8  TANKING AND DAMP PROOF COURSES
Finish with a light dusting of cement.

WAT1.W330.8  DAMP PROOF COURSING WITHIN WALLS
Embed granite chippings in the surface of the asphalt, whilst it is still hot, and leave proud of the surface to form a key.

SOLAR PROTECTION

WAT1.W410.8  STONE CHIPPINGS
1. Dress surface with bitumen compound applied at the rate of 3 kg/m²;
2. Spread stone chippings immediately at the rate of 15 kg/m² and lightly roll in. Remove any surplus chippings.

WAT1.W420.8  SOLAR REFLECTIVE PAINT
To unprotected surfaces:
1. Apply two coats at rates recommended by the manufacturer;
2. Allow the first coat to dry thoroughly before application of the second coat;
3. Maintain free from damage and other surface defects.

WAT1.W430.8  BEDDING CONCRETE ROOFING TILES
Bed tiles in mortar, thickness as indicated on drawings.

WAT1.W440.8  BEDDING INSULATING ROOFING TILES
Loose lay the tiles, pour hot bitumen between the joints and point.

WAT1.W450.8  EXPANSION JOINTS
Allow for expansion with:
1. A 75 mm space around perimeters, filled with bitumen;
2. 25 mm joints every 9 m² or per smaller area as shown on Drawings, filled with hot bitumen.

WAT1.W460.8  TRAFFIC ON ROOF TILING
Do not allow traffic on newly laid roofs until four days have elapsed since the completion of laying. Permit only light traffic for further period of ten days.

LAYING ROOF INSULATION

WAT1.W510.8  EXTRUDED POLYSTYRENE ROOF INSULATION
1. Support slab on both sides of cut whilst cutting to size;
2. Apply hot bitumen bonding compound to asphalt surface;
3. Allow bonding compound to become cool and tacky before laying insulation;
4. Lay insulant with staggered butt joints and apply pressure to ensure a continuous bond. Leave a 75 mm wide gap at abutment of insulant with vertical surfaces.
TESTING

SAMPLING AND TESTING MASTIC ASPHALT

WAT1.T010.8 GENERAL
1. Sampling and testing of mastic asphalt to be in accordance with BS 5284:1993;
2. Take a minimum 3 kg sample from each 10 tonnes of block material delivered to site and deliver to an Approved testing laboratory, as directed by the CM.

WAT1.T020.8 RESULTS
Ensure results are in accordance with BS 6925:1988. In the event of any asphalt failing to meet the specified requirements submit for CM’s agreement detailed proposals for taking up and replacing defective material.

ON-SITE VERIFICATION TESTS

WAT1.T030.8 WATER FLOOD TEST TO ROOF INSTALLATION
As WAT6.T125.
WAT2 BITUMEN FELT ROOFING

MATERIALS

ROOFING FELT

WAT2.M010.8 UNDERLAYERS
One of the following:
1. Bitumen felt to BS 747:1994
   a. Type: 3B;
   b. Nominal weight: 1.8 kg/m².
2. An Approved high performance elastomeric felt:
   a. With polyester reinforcement;
   b. Minimum core weight: 125 g/m²;
   c. With sanded finish.

WAT2.M020.8 TOP LAYER (CAP SHEET)
An Approved high performance elastomeric felt:
1. With polyester reinforcement;
2. Minimum core weight: 250 g/m²;
3. Finish:
   a. With mineral self finish where chippings are not required to be used;
   b. With sanded finish, where chippings are required to be used.

WAT2.M030.8 CERTIFICATION
Ensure that all rolls of felt delivered to site bear the manufacturer's trade mark and certification of their BS Type where applicable.

ANCILLARY MATERIALS

WAT2.M105.8 ADHESIVE AND ADHESIVE PRIMER GENERALLY
In compliance with the prescribed limits of VOC content as set out in the Air Pollution Control (Volatile Organic compounds) Regulation.

WAT2.M110.8 PRIMER
Unless otherwise recommended by the manufacturer of the bonding compound, cut-back bitumen with:
1. Maximum volatile solvent content: 60% by weight;
**WAT2.M120.8 BONDING COMPOUND**

Bitumen based adhesive for hot application and with the following softening points and penetration classifications:

1. For roofs with slopes up to and including 5°: 85/25 or 95/25;
2. For roofs with slopes over 5°: 115/15.

**WAT2.M130.8 COMPOUND FOR BEDDING CHIPPINGS**

Hot applied cut-back bitumen to BS 3690:Part 1:1989: Table 2; Grade: 50 sec at 40°C.

**WAT2.M140.8 NAILS**

For fixing felt to timber decks:

1. Material: galvanized steel or non-ferrous metal;
2. Length: 20 mm;
3. Shank diameter: 3 mm;
4. Head diameter: 11 mm.

**WAT2.M150.8 ROOF VENTS**

Plastic or non-ferrous metal of a proprietary type.

**WAT2.M160.8 RAINWATER OUTLETS**

1. A proprietary type; or
2. 450 mm x 450 mm x 1.8 mm thick lead slate perforated for and soldered to a 150 mm long outlet pipe of 1.8 mm thick lead to suit the internal bore of the rainwater downpipe.

**WAT2.M170.8 EDGE TRIM**

Non-ferrous trim pre-drilled for fixing with screws or nails.

**WAT2.M180.8 PIPE SLEEVES**

Comprising:

1. 450 mm x 450 mm x 1.8 mm thick lead slate perforated for and soldered to 150 mm high by 1.8 mm thick lead to clear the external diameter of the pipe;
2. Proprietary moulded plastic or rubber collar.

**WAT2.M190.8 MASTIC ASPHALT FOR FILLETS**

To BS 6925:1988, Type R988 with limestone aggregate and manufactured with asphaltic cement specified under Table 1, column T25 (25% ± 5%) refined lake asphalt.

**SOLAR PROTECTION**

**WAT2.M210.8 STONE CHIPPINGS**

1. Light coloured, hard and free from brown or partially decomposed stone;
2. Graded from 5 mm to 3 mm.
SAMPLES

WAT2.M410.8 SAMPLES

Submit samples of the following for Approval in accordance with the requirements of PRE.B9.410:

1. Elastomeric felts;
2. Roof vents;
3. Bonding compound;
4. Rainwater outlets;
5. Edge trims;
6. Pipe sleeves;
7. Stone chippings.
WORKMANSHIP

GENERAL

WAT2.W010.8 STANDARD
Lay bitumen felt roofing generally in accordance with BS 8217:1994.

PREPARATION FOR LAYING

WAT2.W110.8 CONDITION OF BASE
Before starting work, ensure that the base is clean and dry.

WAT2.W120.8 SETTING OUT FLAT ROOFS
1. Lay the first layer of felt at and parallel to the lower edge or eaves;
2. Lay subsequent layers in a similar manner to ensure that the laps do not obstruct the flow of water.

WAT2.W130.8 SETTING OUT PITCHED ROOFS
1. Lay felt in the direction of the slope;
2. Lay sheets with the exposed edges away from the prevailing wind.

WAT2.W140.8 MASTIC ASPHALT FILLETS
Form asphalt fillets in accordance with CP 144: Part 4:1970.

LAYING FELT

WAT2.W210.8 NUMBER OF LAYERS
Provide:
1. Two underlayers;
2. One top layer;
3. A surface dressing when not self finished.

WAT2.W220.8 LAPS
1. Lap felt 75 mm at side joints;
2. Lap felt 100 mm at end of each length;
3. Lay successive layers to break joint.

WAT2.W230.8 APPLYING BONDING COMPOUND
1. Do not heat bonding compound to a temperature greater than 220°C and provide thermometers to ensure accurate control of temperature;
2. Lay compound evenly at a temperature sufficient to ensure a satisfactory bond (180°C minimum unless stated otherwise by the manufacturer’s site work instructions).

**WAT2.W240.8 LAYING PROCEDURE FOR CONCRETE ROOFS**

1. Brush apply one coat of bitumen primer at the rate recommended by the manufacturer and allow to dry for at least 24 hours;
2. Partially bond first layer of felt to the base with bonding compound applied at the perimeter and in spots or strips at a rate of 0.5 kg/m²;
3. Roll first layer with a roller of 70 kg minimum weight, whilst the bonding compound is still hot and remove any compound squeezed out at the edges;
4. Fully bond subsequent layers in a continuous, even coating of bonding compound, applied at the rate of 1.5 kg/m² to the layer below;
5. Roll in accordance with sub-clause (3).

**WAT2.W250.8 LAYING PROCEDURE FOR TIMBER ROOFS**

1. Nail the first layer at 50 mm centres along all laps at a distance of 20 mm from the edge and elsewhere in rows 150 mm apart, in a staggered pattern at 300 mm centres;
2. Fully bond subsequent layers in a continuous, even coating of bonding compound, applied at the rate of 1.5 kg/m² to the layer below;
3. Roll bonded layers with a roller of 70 kg minimum weight whilst the bonding compound is still hot and remove any compound squeezed out at the edges.

**WAT2.W260.8 SKIRTINGS ON CONCRETE ROOFS**

1. Form 75 mm wide mastic asphalt fillet at base of skirting in two coats;
2. Carry up felt underlayers to form an upstand a minimum of 150 mm above the level of the roof;
3. Cover upstand with a mineral faced felt skirting of same weight and type as capping sheet;
4. Provide and fix a lead apron flashing over the felted upstand in accordance with Worksection WAT4 and as detailed on the Drawings.

**WAT2.W270.8 SKIRTINGS ON TIMBER ROOFS**

1. Provide a 200 mm timber upstand and fix securely to the roof deck with a timber angle fillet, measuring 75 mm on its exposed face, at its base;
2. Dress each layer of roofing felt over the upstand;
3. Provide and fix a lead apron flashing over the felted upstand in accordance with Worksection WAT4 and as detailed on the Drawings.

**WAT2.W280.8 VERGES AND GUTTERS**

1. Provide and fix a non-ferrous metal trim with compatible screws or nails and bond between layers of felt. Form a drip or dress into gutters as shown on Drawings; or
2. Form a welted drip.

**WAT2.W290.8 RAINWATER OUTLETS**

1. Lay roofing so that all falls and currents are directed towards rainwater outlets;
2. For proprietary rainwater outlet, dress all layers into the outlet and seal with bonding compound;
3. For perforated lead slate, dress flange of fabricated lead slate in between layers of felt, prime and seal with bonding compound.

WAT2.W300.8PIPED PASSING THROUGH ROOF
1. Cut and fit roofing around pipes;
2. Dress flange of sleeve between second and third layers, prime and seal in hot bonding compound;
3. Fit plastic or rubber collar with a 75 mm minimum lap over the upstand of the pipe sleeve.

SOLAR PROTECTION

WAT2.W410.8APPLYING CHIPPINGS
To areas without mineralised self finish:
1. Dress surface with bitumen compound at the rate of 3 kg/m²;
2. Evenly spread chippings at the rate of 15 kg/m² immediately after applying bitumen compound and lightly roll in;
3. Remove any loose chippings.
WAT3  SINGLE PLY ROOFING

MATERIAL

GENERAL

WAT3.M010.8  CONTRACTOR’S RESPONSIBILITIES
Take responsibility for the supply, delivery and fixing of single ply roofing membrane system including:

1. Satisfying the performance requirements of this Worksection;

2. Selecting, in conjunction with manufacturers and their licenced specialist fixing contractors, the most appropriate system for the proposed structure and conditions of operation for the specified life of the membrane;

3. The method and frequency of attachment where ballasting is not required, taking into account all predictable conditions of wind uplift, calculated in accordance with WAT3.M070;

4. Insulation layers where indicated in the Drawings;

5. Ballasting layers, where indicated in the Drawings.

WAT3.M020.8  MEMBRANE TYPE
The Contractor may tender for and supply any of the membrane types specified in this Worksection. If an alternative type of material is proposed, then it must comply with the general requirements of this Worksection and be Approved.

WAT3.M030.8  DESIGN LIFE
The roof membrane is required to remain watertight, under its original service conditions, for a period of not less than 20 years.

WAT3.M050.8  FIRE PERFORMANCE
The required fire performance classification (when tested in accordance with BS 476:Part 3:1975) of the membrane when applied to the substrates and in the circumstances that apply to this Contract is specified in Project Specific Specification.

WAT3.M060.8  THERMAL INSULATION
Incorporate a CFC and HCFC free Zero Ozone Depletion Factor type thermal insulation layer to produce a minimum U value for the roof area as specified in Project Specific Specification.

WAT3.M070.8  WIND UPLIFT
Comply with the Code of Practice on Wind Effects in Hong Kong. The proposed methods of securing the membrane must ensure that the membrane and any other part of the roofing system, will not be damaged or dislodged by any predictable wind condition.
CHEMICAL RESISTANCE

When the membrane is likely to come into contact with chemicals, it must be resistant to chemicals throughout its anticipated life.

SHEET MEMBRANES

REINFORCED POLYVINYL CHLORIDE (PVC)

An Approved proprietary product and as specified from the following:

1. Minimum thickness: 1.2 mm;
2. Minimum cover to reinforcement fabric: 0.4 mm;
3. Colour: light grey;
4. Finish: smooth and free of creases, folds, tears and other visible defects which may adversely affect the watertightness of the membrane;
5. Reinforcement fabric:
   a. Unwoven polyester or glass fibre for adhesive fixed and ballasted systems;
   b. Woven polyester for mechanically fixed systems.
6. Method of jointing: solvent or hot air welding;
7. Method of attachment:
   a. Full or partial bonding to the substrate;
   b. Loose laid and ballasted;
   c. Mechanically fixed.

CHLORINATED POLYETHYLENE (CPE)

An Approved proprietary product and as specified from the following:

1. Minimum thickness: 1.2 mm;
2. Minimum thickness of polyester backing fleece (where provided): 0.9 mm;
3. Colour: light grey;
4. Finish: free of creases and other surface defects which may adversely affect the watertightness of the membrane;
5. Reinforcement fabric (where provided): woven polyester;
6. Method of jointing: hot air or solvent welding;
7. Method of attachment:
   a. Full or partial bonding to the substrate;
   b. Loose laid and ballasted;
   c. Mechanically fixed.

FLEXIBLE CHLOROSULPHONATED POLYETHYLENE (CSM)

An Approved proprietary product, reinforced with woven polyester scrim for mechanically attached and ballasted systems or with a backing laminated for fully adhered systems, and as specified from the following:

1. Minimum thickness: 1.15 mm for mechanical attachment and 0.9 mm for fully adhered;
2. Minimum thickness of cover to fabric reinforcement, where provided: 0.3 mm;
3. Colour: white or light grey;
4. Finish: smooth and free of creases, folds, tears and other visible defects which may adversely affect the watertightness of the membrane;
5. Method of jointing: hot air welding only;
6. Method of attachment:
   a. Full or partial bonding to the substrate;
   b. Loose laid and ballasted;
   c. Mechanically fixed.

**WAT3.M140.8 POLYVINYL CHLORIDE/ETHYLENE VINYL-ACETATE TERPOLYMER (FLEXIBLE VET)**

An Approved proprietary product, homogeneous or reinforced with fleece backing, and as specified from the following:

1. Minimum thickness:
   a. Unbacked, homogeneous: 1.2 mm;
   b. With backing: 2.2 mm.
2. Minimum cover to reinforcement, when provided: 0.4 mm;
3. Colour: white or light grey;
4. Finish: smooth and free of creases, folds, tears and other visible defects which may adversely affect the watertightness of the membrane;
5. Method of jointing: solvent or hot air welding;
6. Method of attachment:
   a. Full or partial bonding to the substrate;
   b. Loose laid and ballasted;
   c. Mechanically fixed.

**WAT3.M150.8 ETHYLENE PROPYLENE DIENE MONOMER (EPDM)**

An Approved proprietary product, unreinforced and as specified from the following:

1. Minimum thickness: 1.0 mm;
2. Colour: black;
3. Finish: smooth and free of creases, folds, tears and other visible defects which may adversely affect the watertightness of the membrane;
4. Method of jointing: solvent based adhesives, proprietary adhesive tapes or hot-melt adhesive systems as appropriate;
5. Method of attachment:
   a. Full or partial bonding to substrate;
   b. Loose laid and ballasted;
   c. Mechanically fixed.
ANCILLARY MATERIALS

WAT3.M210.8 GENERAL
1. Ancillary materials, including adhesives, sealants, solvents, preformed corners, flashing materials, pipe sleeves and collars etc, must either be a part of the selected membrane system or be fully compatible with it and recommended for their intended use by the membrane manufacturer;
2. Adhesives, adhesive primer, sealant, and sealant primer shall be in compliance with the prescribed limits of VOC content as set out in the Air Pollution Control (Volatile Organic Compound) Regulation.

WAT3.M220.8 ISOLATION QUILT
For isolating the membrane from possible physical damage from the substrate or from ballasting layers:
1. Material: needled, non-woven polyester;
2. Minimum weight: 200 g/m².

WAT3.M230.8 BALLAST GRAVEL
Clean, large, well rounded stones, in the range 20 mm to 40 mm, without fines or sharps.

WAT3.M240.8 PAVERS
Precast concrete:
1. Size: 600 mm × 600 mm × 50 mm minimum thickness;
2. Weight: 110 kg/m² ± 10%.

WAT3.M250.8 THERMAL INSULATION FOR INVERTED ROOF
Extruded polystyrene board to BS 3837:Part 2:1990 and:
1. CFC and HCFC free Zero Ozone Depletion Factor type;
2. Thermal conductivity (k): within range 0.025 to 0.034 W/mK;
3. Minimum compressive strength: 300 kPa;
4. With rebated edges;
5. Thickness: as indicated in the Drawings.

WAT3.M260.8 CEMENT

WAT3.M270.8 SAND
As specified in MAS3.M110.

WAT3.M280.8 MORTAR FOR BEDDING CONCRETE ROOFING TILES
Cement and sand, 1: 4 mix.
SAMPLES

SAMPLES

Submit samples of the following for Approval in accordance with the requirements of PRE.B9.410:

1. Sheet membrane;
2. Adhesives;
3. Mechanical fixings;
4. Isolation quilt;
5. Ballast;
6. Thermal insulant.
WORKMANSHIP

GENERAL

WAT3.W010.8  APPROVED FIXING SUB-CONTRACTOR
Employ a specialist sub-contractor, for the fixing of single ply roofing, who is:

1. Licenced by the membrane manufacturer to fix his material and whose operatives are appropriately trained in all aspects of the work;

2. Operating a Quality Assurance system certified under ISO 9001 or an Approved equivalent scheme.

WAT3.W020.8  SURVEY
Ensure that the Approved specialist sub-contractor carries out a survey of the roof area prior to the commencement of fixing for the purpose of confirming the surfaces are acceptable and comply with the manufacturers recommendations for the application of the membrane. Submit such confirmation to the CM, in writing, at least 7 days before laying of the membrane starts on Site.

WAT3.W030.8  HANDLING AND STORAGE OF MATERIALS
Handle and store materials strictly in accordance with the manufacturer's recommendations and:

1. Keep sheeting rolls in clean, dry, cool accommodation, clear of the ground;

2. Store solvents, adhesives and any other material having a low flashpoint in secure, well ventilated accommodation which will ensure that there is no danger of accidental or deliberate ignition.

WAT3.W040.8  SUBSTRATE PREPARATION

1. Ensure that all substrates on which membranes are to be directly laid, have a smooth, even surface, free of protrusions, oil and grease and are dry and free of dust;

2. Remove all nibs of concrete and cement;

3. Carry out priming, sealing, crack filling and other preparation where necessary all in accordance with manufacturer's instructions;

4. Insulation must be lightly butted and any fasteners brought level to the surface.

WAT3.W050.8  FIXING GENERALLY
Fix roofing materials:

1. Strictly in accordance with the manufacturer's recommendations;

2. In accordance with this Specification except where this Specification is over-ridden by the manufacturer's recommendations, which must be regarded as paramount;

3. Ensure all junctions, joint details such as skirtings, coverings to kerbs, edges, expansion joints etc., and the joints around pipes, rainwater outlets and the like are properly executed;

4. Before commencing work, demonstrate on site compatibility of all adhesives and materials which must be certified as compatible by the supplier/manufacturer in writing;
5. Inform the CM upon completion of each layer of roofing system for inspection before execution of next layer.

**WAT3.W060.8**

**PLACING BALLAST LAYER**

Place isolation quilt over the roofing membrane, where required, and:

1. Carefully distribute gravel ballast, over areas as shown on Drawings, in a layer not less than 50 mm thick;
2. Place precast concrete pavers, on areas as shown on Drawings, taking care not to damage the membrane;
3. Commence placing the ballast layer concurrently with laying of the roofing membrane, ensuring that sufficient ballast is in place at the end of each day's work to prevent the dislodgement of any previously laid area of membrane.

**WAT3.W070.8**

**PROTECTION OF THE COMPLETED MEMBRANE**

Protect the completed membrane and:

1. Do not use the roof as a working platform and do not use the roof surface for the storage or mixing of materials;
2. Exercise care when handling builder's plant and scaffolding in the vicinity of the membrane;
3. Ensure that paint, oil, fuel, solvents or any other material, which may damage the membrane, do not come into contact with it.

**WAT3.W080.8**

**BEDDING CONCRETE ROOFING TILES**

As WAT1.W430.

**WAT3.W090.8**

**TRAFFIC ON ROOF TILING**

Do not allow traffic on newly laid roofs until four days have elapsed since completion of laying. Permit only light traffic for a further period of ten days.

**WAT3.W100.8**

**MAINTENANCE MANUAL**

Upon completion of work, submit one maintenance manual identifying:

1. Protect name;
2. Location and date;
3. Type of coating system applied;
4. Surfaces to which applied including sketches where necessary;
5. Recommendations for periodic inspections, care and maintenance;
6. Common causes of damage;
7. Instructions for temporary patching until permanent repair can be made.
TESTING

ON-SITE VERIFICATION TESTS

WAT3.T010.8 WATER FLOOD TEST TO ROOF INSTALLATION
As WAT6.T125.
WAT4    FLASHINGS

MATERIALS

METAL SHEET

WAT4.M010.8    LEAD SHEET
To BS 1178:1982, code number: 4.

WAT4.M020.8    ALUMINIUM SHEET
To BS 1470:1987:
1. Thickness: 0.9 mm;
2. Grade: 1050A;
3. Temper grade: O.

ANCILLARY MATERIALS

WAT4.M110.8    BITUMINOUS PAINT
To BS 6949:1991, Type 1.

WAT4.M120.8    ISOLATING TAPE
Self adhesive plastic tape.

SAMPLES

WAT4.M210.8    SAMPLES
Submit samples of the following for Approval in accordance with the requirements of
PRE.B9.410:
1. Metal sheet;
2. Bituminous paint;
3. Isolating tape.
WORKMANSHIP

FIXING METAL FLASHINGS

WAT4.W010.8 LEAD FLASHINGS
1. Form from sheets not more than 1500 mm long;
2. Let flashings into walls a minimum of 25 mm;
3. Secure with lead wedges and point with cement mortar;
4. Form 100 mm laps at joints in flashing;
5. Secure the lower edge with lead tacks at 750 mm minimum centres.

WAT4.W020.8 ALUMINIUM FLASHINGS
1. Form from sheets not more than 2000 mm long;
2. Let flashings into walls a minimum of 25 mm;
3. Secure with aluminium wedges and point with cement mortar;
4. Form a lap and a single lock welt at all joints;
5. Fold the lower edge under to provide additional stiffness.

WAT4.W030.8 ALUMINIUM IN CONTACT WITH CEMENTITIOUS MATERIALS
Coat with bituminous paint after forming any bends.

WAT4.W040.8 PREVENTION OF ELECTROLYTIC CORROSION
1. Prevent contact in the completed work between aluminium alloys and copper alloys, nickel, lead or stainless steel;
2. Where such contact is unavoidable, coat the contact surfaces with bituminous paint, isolating tape or other Approved means.
WAT5 SEALANTS

MATERIALS

JOINT FILLERS

WAT5.M010.8 JOINT FILLER
A waterproof, compressible, non-extruding, pre-moulded type, with a high recovery factor after compression, at temperatures below 50°C and Approved.

WAT5.M020.8 BACK-UP MATERIAL
Approved preformed cellular strip material which may also act as a bond breaker.

WAT5.M030.8 BOND BREAKER
Proprietary tape or similar strip material, as recommended by the sealant manufacturer, for use where a back-up material is either not used or does not perform as a bond breaker.

WAT5.M040.8 BACKING RODS FOR PRECAST FACADE UNITS
Polyethylene foam or Approved equivalent.

SEALANTS

WAT5.M110.8 GENERAL
1. Sealants, sealant primers and caulkking compound shall be in compliance with the prescribed limit of VOC content as set out in the Air Pollution Control (VOC) Regulation;
2. All sealants are subject to Approval, as specified in WAT5.M210.

WAT5.M120.8 TWO PART POLYSULPHIDE BASED SEALANT
To BS 4254:1983.

WAT5.M130.8 ONE PART GUN GRADE POLYSULPHIDE BASED SEALANT
To BS 5215:1986.

WAT5.M140.8 BUTYL MASTIC
Proprietary product.

WAT5.M150.8 ONE PART POLYURETHANE SEALANT
To BS 4254:1983, BS 5215:1986 and BS 5889:1989:
1. Grade: 1-part polyurethane or Approved equivalent;
2. Colour: standard grade or to Approval;
3. Elongation at break: to ISO 8339;
4. Paintability: well paintable;
5. Joint movement capacity: ±25%.

**WAT5.M160.8 ONE PART GUN GRADE SILICONE BASED SEALANT**
To BS 5889:1989, Type A satisfying the test for adhesion and tensile modulus after heat ageing specified in BS 4254:1983 and BS 5215:1986.

**WAT5.M170.8 ONE PART GUN GRADE SILICONE BASED SEALANT**
To BS 5889:1989, Type B.

**WAT5.M180.8 JOINT SEALANT FOR PRECAST FAÇADE UNITS**
Unless otherwise approved, construction sealant (Type F), design and selection to follow BS 6093:1993 and BS 6213:1982, and offering the following properties:
1. Movement capability of 25% (Class 25) in accordance with ISO 11600;
2. Tensile modules not exceeding 0.4 N/mm² at 23°C.

**WAT5.M190.8 PRIMER FOR SEALANTS**
As supplied and recommended by the sealant manufacturer.

**WAT5.M195.8 SEALANTS FOR PORTABLE WATER INSTALLATIONS**
Approved proprietary WRAS-approved products when sealant is in contact with portable water.

**WAT5.M200.A FIRE RATED SEALANTS**
1. Submission Requirements:
   a. At sample submission and approval stage, submit a sample of the proposed fire rated sealant for CM’s approval together with all the following substantiation for CM’s information:
      i. Catalogue, brand name / model name and job reference of the material;
      ii. Name, address and contact person of the local supplier / distributor;
      iii. Name, address and contact person of the manufacturer.
   b. Original or a certified true copy of the ISO 9001 certificate for the manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by a certification body or by the QCM. The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a multilateral recognition arrangement with HKAS;
   c. Either:
      i. Certified true copy of certificate for a third party product conformity scheme such as CE Marking (CE), FM Approvals, Underwriters Laboratories (UL), Certifire or an equivalent scheme showing full compliance of the proposed product with the requirements of sub-clause (2)(b). The date of tests under the scheme shall be within five years prior to the notified date for commencement of the Works; or
ii. Certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance of the proposed product with the requirements of sub-clause (2)(b). The date of the test shall be within three years prior to the notified date for commencement of the Works.

d. Shop drawings showing details of the fire rated sealants including manufacturers’ recommendations for the application for CM’s approval prior to commencement of work;

e. A sample of the ancillary material such as the backing material to achieve the required sealant depth.

2. Quality Requirements:

a. An Approved proprietary one part sealant suitable for the installed locations and capable of maintaining an effective barrier against flame, smoke and gases, fixed in accordance with the manufacturer’s recommendations to achieve the statutory required fire resistance performance;

b. Tested to BS 476-Part 20:1987 or BS EN 1366-Part 3:2009 and certified as being capable of resisting the action of fire for the specified periods by a laboratory accredited for the specific test by HKAS under the Hong Kong Laboratory Accreditation Scheme (HOKLAS), or an equivalent organization which has signed a mutual recognition agreement with HOKLAS with appropriate qualifications and experience in fire resisting construction;

c. Comply with the latest Code of Practice for Fire Safety in Buildings and the applicable Fire Services Department Circular Letter requirements and guidelines;

d. Backing material to achieve the sealant depth to be of mineral wool or close cell polyethylene foam rod or as shown in the relevant fire test report.

3. On Site Delivery Verification:

a. At delivery stage, submit the following documents:

i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (1);

ii. For products with a third part product conformity scheme as per sub-clause (1)(c)(ii) requirements, submit a Manufacturer Certificate from the local supplier / distributor as per sub-clause (1)(a)(ii) confirming the products delivered to Site comply with the third party product conformity scheme requirements;

iii. Delivery notes for all materials delivered to Site, including the following:

- Confirmation in writing on the serial number of the fire rated sealants delivered to Site; confirmation to be from the local supplier / distributor;

- Copy of docket showing the serial number of the fire rated sealants delivered to Site; copy to be provided by the manufacturer at sub-clause (1)(b).

b. Carry out and submit report on the following verifications upon delivery on Site. Prior to carrying out the verifications, inform the CM who may be present to witness the verifications:

i. Method:

<table>
<thead>
<tr>
<th>Verification Items</th>
<th>Method</th>
<th>Acceptance Standards</th>
</tr>
</thead>
</table>
### Delivery Note with content at sub-clause (3)(a)(iii)

- **Document check:** Visual
- **Material delivered is from the manufacturer in sub-clause (1)(b); Serial number same as sub-clause (3)(a)(iii)**
- **Package:** As per Approved sample

### ii. Frequency:

<table>
<thead>
<tr>
<th>Items</th>
<th>Sampling Frequency</th>
<th>Representative Batch</th>
</tr>
</thead>
<tbody>
<tr>
<td>Delivery Note Package, Serial number</td>
<td>1 sample from each batch</td>
<td>Individual</td>
</tr>
</tbody>
</table>

### c. Where any of the verifications fail to meet the acceptance standards, either:

1. Remove the representative batch off Site; or
2. When agreed by the CM, repeat all verification items on three separate sets of samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.

### SAMPLES

**WAT5.M210.8 SAMPLES**

1. Submit samples of the following for Approval in accordance with the requirements of PRE.B9.410:
   a. Joint fillers, bond breakers and back-up materials;
   b. Sealants.
2. Do not confirm orders until Approval has been obtained. Keep Approved samples at the place agreed by the CM for comparison with materials used in the works, which must conform with the samples set aside. Where there is a choice of material, colour or texture, submit samples for Approval. When Instructed, submit technical literature for materials specified.

### SCHEDULE OF SEALANTS

**WAT5.M310.8 SCHEDULE OF SEALANTS**

WORKMANSHIP

FORMING JOINTS IN CONCRETE CONSTRUCTION

WAT5.W010.8 GENERAL
Construct joints strictly in accordance with Drawings and manufacturer's recommendations.

WAT5.W020.8 PREPARATION OF JOINT
Keep edges true, free from cracks, spalling or other imperfections. Ensure that edges of joints are clean, dry and free from dust or grease.

WAT5.W030.8 PLACING CONCRETE AROUND JOINTS
Do not place concrete on both sides of a movement joint simultaneously.

WAT5.W040.8 JOINT FILLER IN CONCRETE
1. Fix to concrete with bituminous adhesive before casting the adjoining bay;
2. Form the joint sealing slot by casting in a removable former.

WAT5.W050.8 JOINTS AT FIRE RATED WALL
Form joints in full compliance with fire rated sealant manufacturer’s recommendations.

APPLYING SEALANTS

WAT5.W110.8 GENERAL
Apply sealants in accordance with BS 6213:1982 and:
1. Surfaces must be dry, clean and free of dust and oil. Application temperature between +5°C to 80°C;
2. Ensure that they are properly pressed home;
3. Finish with a smooth, regular surface;
4. Mask adjoining surfaces which would be impossible to clean if smeared with sealant;
5. Remove all excess sealant and smears caused by sealants, solvents, primers etc; used in sealing works, immediately and entirely from adjacent materials as the work proceeds.

WAT5.W120.8 PRIMING
Treat surfaces with a primer where recommended by the sealant manufacturer.

WAT5.W130.8 BOND BREAKERS
Apply bond breakers and back-up material where necessary to control the depth of the sealant, to facilitate tooling of the sealant and to prevent bonding to the back of the joint.
MIXING TWO PART SEALANTS
Mix according to the manufacturer’s instructions and until colour is uniform throughout.

APPLYING FIRE RATED SEALANTS
In accordance with shop drawings specified in sub-clause (1)(d) of WAT5.M200 and apply in full compliance with sealant manufacturer’s recommendations.

APPLYING SEALANTS TO PRECAST FACADE UNITS

GENERAL
Comply with other applicable requirements of this Worksection.

TWO STAGE JOINTS
When a two-stage joint is adopted, protect all sealant materials used in areas accessible to the public with non-shrink mortar or other Approved methods.

JOINT WIDTH
Unless otherwise Approved, the installed joint width must not be less than 6 mm nor greater than 30 mm.

SEALANT DEPTH

<table>
<thead>
<tr>
<th>Joints</th>
<th>Sealant Depth</th>
</tr>
</thead>
<tbody>
<tr>
<td>Joints up to 13 mm wide:</td>
<td>Equal to the joint width;</td>
</tr>
<tr>
<td>Joints over 13 mm wide:</td>
<td>Equal to one-half the width, but not less than 13 mm</td>
</tr>
</tbody>
</table>
WAT6 PROPRIETARY WATERPROOFING SYSTEMS

MATERIALS

COLD LIQUID APPLIED FLEXIBLE WATERPROOFING SYSTEM

WAT6.M010.A COLD LIQUID APPLIED FLEXIBLE WATERPROOFING SYSTEM FOR BATHROOM, KITCHEN AND REFUSE STORAGE AND MATERIAL RECOVERY ROOM

1. Submission Requirements:
   a. At sample submission and approval stages, submit a sample of the proposed material for CM's approval together with all the following substantiation for CM's information:
      i. Catalogue, brand name / model name and job reference of the material;
      ii. Name, address and contact person of the local supplier;
      iii. Name, address and contact person of the manufacturer;
      iv. Where applicable, either the document from the manufacturer showing his authorization for the supplier as the agent / distributor in Hong Kong or document from the supplier showing the appointment of the manufacturer and manufacturer's agreement for the production of the proposed product;
      v. Detailed Method Statement for the installation of the cold liquid applied flexible waterproofing system, showing all work procedures from the preparation of background through to the completion of the overlaid finishes;
      vi. Data sheet for minimum coverage rate of the waterproofing system and product identification number;
      vii. When the cold liquid applied flexible waterproofing systems are supplied for domestic blocks, except for the ancillary facilities at lower floors, also include the following in the submission:
         - Original or a certified true copy of the ISO 9001 certificate for the manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by a certification body or by the QCM. The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.
      b. Submit original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2)(f) for CM's information:
         i. The date of the test shall be generally within three years prior to the notified date for commencement of the Works;
ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material as mentioned in sub-clause (3)(a);

iii. In the event that no test report has been submitted for CM’s information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

2. Quality Requirements:
   a. Suitable for use in the intended areas of application;
   b. Compatible with all surfaces and materials, including ancillary materials, in contact with the waterproofing system as WAT6.M240;
   c. Crack-bridging capability up to 2mm;
   d. All components of the waterproofing system are non-toxic and do not cause any hazard or injury to operatives and occupants or to others in the vicinity of the Site;
   e. In compliance with the prescribed limit of VOC content as set out in the Air Pollution Control (Volatile Organic Compounds) Regulation;
   f. Applicable in a cold liquid form;
   g. The properties requirements are as follows:

<table>
<thead>
<tr>
<th>Properties</th>

</tbody>
</table>

h. Waterproofing quality test:
   i. Fabricate a carton box of size approximately 300mm x 300mm x 250mm high without a top. Use a piece of 400mm long x 72mm wide adhesive tape at the bottom to seal the box. The carton box should be strong enough to stand in its own weight;

   ii. Apply the number of coats of waterproofing material, with a minimum of two coats, and in thickness(es) (record in the test report), both in accordance with the manufacturer’s recommendation, to the inside surface of the carton box;
iii. Allow to cure under conditions at 23 ± 2°C with 50 ± 5% relative humidity for 7 days or at such a period recommended by the waterproofing membrane manufacturer (record in the test report);

iv. Upon expiration of the curing period, pour approximately 150mm depth of 3% sodium chloride solution into the carton box and maintain for 60 minutes;

v. Examine the bottom and sides of the carton box for any sign of leakage and other anomalies.

i. Compatibility test with Approved tile adhesive:
To BS5980:1980 Appendix D with the following modifications:

i. Level a jig as stated in BS5980:1980, Appendix D.2.1 on a firm surface by the levelling screws in the base and spirit level;

ii. Place a 101mm x 101mm x 9mm standard test piece tile, biscuit face uppermost, into the jig located against the outer L-shaped stop;

iii. Bond it to one side of a 75mm x 75mm x 8mm test piece tile in the jig with epoxy, use a spirit level and apply light pressure to level the top face, and ensure that the smaller tile is located against its inner L-shaped stop;

iv. Remove the jig and allow the epoxy to cure;

v. Apply the number of coats of waterproofing material, with a minimum of two coats, and in thickness(es), both in accordance with the manufacturer's recommendation, on the standard test piece tiles;

vi. Allow the waterproofing membrane to cure at 23 ± 2°C with 50 ± 5% relative humidity for 7 days or at such a period recommended by the waterproofing membrane manufacturer;

vii. A layer of Approved tile adhesive in thickness as recommended by the tile adhesive manufacturer shall be applied over the cured waterproofing membrane which have been embedded in standard test piece tiles. The final bed thickness of tile adhesive and waterproofing membrane (record in the test report) shall be the aggregate total of the required thicknesses of the both materials;

viii. Prepare 10 of such assembled samples and cure them for 14 days under laboratory condition i.e. 23 ± 2°C with 45% to 70% relative humidity. Prepare 10 more samples and cure them for 7 days under laboratory condition followed by immersing the samples in water for 7 days;

ix. Upon expiration of the curing (and immersion) period, insert the sample in the test unit holder mounted in the tensile testing machine, and subject the unit to a tensile stress at a crosshead speed of 5mm to 6mm/minute until failure occurs.

j. Compatibility test with Approved panel wall partition system:

i. Apply the moisture sealer to four pieces of 390 mm x 390 mm Approved panel wall partitions as recommended by the manufacturer of the panel wall partitions;
ii. Apply the number of coats of waterproofing material, with a minimum of two coats, and in thickness(es), both in accordance with the manufacturer's recommendation, on the surface of each panel wall partition with moisture sealer;

iii. Allow the waterproofing membrane to cure at 23 ± 2°C with a relative humidity of 50 ± 5% for 14 days or at such period recommended by the manufacturer;

iv. Attach a 200mm x 200mm pull head onto the surface of the waterproofing membrane by a suitable adhesive resin;

v. Connect the pull head to a pull-off testing equipment. The pull-off equipment shall be capable of increasing the load steadily without jerking at a rate of 5 to 6mm/minute, and must be provided with a measurement device which shall retain the maximum load to the nearest 10N. The measurement inaccuracy of the equipment must be less than 2%, in accordance with the accuracy Grade 2 of BS 1610:Part 1:1985;

vi. Apply a tensile force gradually by the pull-off equipment;

vii. Repeat the steps iv to vi until the pull-off test to all four tiles are completed.

k. Pull-off strength test:

To BS 8204:Part 3:1993 Annex B.3 with modifications to determine the bonding strength of the waterproofing material by means of pull-off test:

i. Test apparatus:
   - Metal disc of steel or aluminium alloy measured 50 ± 0.5 mm in diameter and not less than 15 mm thick, and with a means of connecting its center to the loading device as stated in sub-clause below;
   - Loading device which is capable of applying a gradually increasing load at a rate of 1.5 kN to 2.5 kN per minute up to 10 kN;
   - Measuring instrument which is readable to the nearest 25N and capable of measuring the magnitude of the applied load to an accuracy of ± 3%;
   - Ring mould measured 52 mm to 57 mm in outside diameter, 15 ± 5 mm high and 1 mm to 3 mm in wall thickness;
   - Conditioning room at 20 ± 3°C and 55 ± 5% relative humidity;
   - Coring machine with 50 mm diameter core bit;
   - Equipment for mixing and casting of a concrete panel;
   - Plywood mould of 700 mm x 300 mm x 200 mm for casting the concrete panel;
   - Epoxy resin for fixing the disc to the surface of flooring mix;
   - Mould oil.

ii. Preparation of concrete panel:
   - Paint the mould oil properly on all internal surfaces of the plywood mould by means of paintbrush;
   - Mix a batch of about 0.05m³ concrete using a pan mixer;
- Use the scoop to place the concrete in the mould in four approximately equal layers and compact each layer by means of compacting bar. The direction of casting is perpendicular to the length of the mould;

- After completion of compaction, the excessive concrete shall be removed and the top surface shall be trowelled using a scraper;

- The trowelled surface of the panel shall be wrapped completely with polythene;

- Demould the concrete panel after 24 hours;

- By means of coring machine, drill a 50mm diameter core hole into a mould face of panel to the depth of 15mm;

- Remove any loose material and dry the concrete surface using a hair dryer;

- Use epoxy resin to glue the 50 mm diameter disc to the cored surface;

- Connect the loading device perpendicular to the disc and carry out the test by applying a steadily increasing load at the rate of 1.5kN to 2.5kN per minute until failure occurs. If the tensile strength is greater than 2N/mm², the panel would be applicable for the subsequent testing mentioned in sub-clause (2)(j)(iii) below.

iii. Determination of bonding strength:

- Brush the concrete test surface vigorously with a wire brush under a stream of water and leave to dry for 24 hours;

- Apply the number of coats of waterproofing material, with a minimum of two coats, and in thickness(es) (record in the test report), both in accordance to manufacturer's recommendation, onto the concrete surface and leave to cure;

- During the procedure of making and testing of test samples, the environmental condition should be controlled at 20 ± 3º C and 55 ± 5% relative humidity;

- Use epoxy resin to glue the 50mm diameter disc to the waterproofing membrane;

- Test 6 samples after the waterproofing membrane has been laid for at least 14 days;

- Connect the loading device perpendicular to the disc and apply a steadily increasing load at the rate of 1.5kN to 2.5kN per minute until failure occurs.

iv. Results:

- Divide the maximum load by the test area, i.e. the area of the waterproofing membrane in contact with the flooring mix and concrete surface, and express the results to the nearest 0.1N/mm²;

- Calculate the mean values for the six samples tested.

1. Elongation property test:

To BS 903:Part A2:1995;

m. In compliance with the prescribed limit of VOC content as set out in the Air Pollution Control (Volatile Organic Compounds) Regulation.
3. On Site Delivery Verification:
   a. At delivery stage, submit the following documents:
      i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (1)(a);
      ii. Original or certified true copy of the Certificate of Origin for every batch of delivery. One batch being the material quantity covered under each delivery note;
      iii. Delivery notes for all material delivered to Site.
   b. Carry out and submit report on the following verifications for waterproofing material upon delivery on Site. Prior to carrying out the verifications, inform the CM who may present to witness the verifications:
      i. Method:

<table>
<thead>
<tr>
<th>Verification Items</th>
<th>Method</th>
<th>Acceptance Standards</th>
</tr>
</thead>
<tbody>
<tr>
<td>Manufacturer's Certificate of Origin &amp; delivery note</td>
<td>Document Check</td>
<td>From an Approved origin</td>
</tr>
<tr>
<td>Batch / Lot No.</td>
<td>Document Check and on packaging</td>
<td>Same as the delivery note</td>
</tr>
<tr>
<td>Expiry Date</td>
<td>Check information printed on the packaging</td>
<td>Minimum 6 months from the date of delivery</td>
</tr>
</tbody>
</table>

      ii. Frequency:

      Carry out verification for one sample per every delivery of cold liquid applied flexible waterproofing material delivered to Site under each delivery note submitted in sub-clause (3)(a).

   c. Where any of the verifications fail to meet the Acceptance Standards, either:
      i. Remove the representative batch off Site; or
      ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.

4. Delivery Verification at the manufacturer’s factory of precast concrete components for volumetric precast kitchens and bathrooms:
   a. At delivery stage, submit the following documents to the CM or his representatives resident at the manufacturer’s factory:
      i. Written confirmation that the material delivered to the manufacturer’s factory conforms with the Approved sample submitted under sub-clause (1)(a);
      ii. Original or certified true copy of the Certificate of Origin for every batch of delivery. One batch being the material quantity covered under each delivery note;
      iii. Delivery notes for all materials delivered to the manufacturer’s factory.
b. Carry out and submit report on the following verifications for waterproofing materials upon delivery to the manufacturer’s factory and in the presence of the CM or his representatives resident at the factory.

i. Method:

<table>
<thead>
<tr>
<th>Verification Items</th>
<th>Method</th>
<th>Acceptance Standards</th>
</tr>
</thead>
<tbody>
<tr>
<td>Manufacturer's Certificate of Origin &amp; delivery note</td>
<td>Document Check</td>
<td>From an Approved origin</td>
</tr>
<tr>

<td>Document Check and on packaging</td>
<td>Same as the delivery note</td>
</tr>
<tr>
<td>Expiry Date</td>
<td>Check information printed on the packaging</td>
<td>Minimum 6 months from the date of delivery</td>
</tr>
</tbody>
</table>

ii. Frequency:

Carry out verification for one sample per every delivery of cold liquid applied flexible waterproofing material delivered to the manufacturer’s factory under each delivery note submitted in sub-clause (4)(a).

c. Where any of the verifications fail to meet the Acceptance Standards, either:

i. Remove the representative batch off the manufacturer’s factory; or

ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off the manufacturer’s factory, bear all associated costs, and no extension of time will be allowed.

CEMENTITIOUS WATERPROOFING SYSTEM

WAT6.M110.8 CEMENTITIOUS WATERPROOFING SYSTEM FOR HARDENED CONCRETE

1. Submission Requirements:

a. At sample submission and approval stage, submit a sample of the proposed material for the CM's approval together with all the following substantiation for the CM's information:

i. Catalogue, brand name / model name, job reference and original manufacturer's technical data of materials and system;

ii. Name, address and contact person of the local supplier;

iii. Name, address and contact person of the manufacturer;

iv. Where applicable, either the document from the manufacturer showing his authorization for the supplier as the agents / distributors in Hong Kong or document from the supplier showing the appointment of the manufacturer and manufacturer's agreement for the production of the proposed product;

v. Detailed method statement and the project specific shop drawings for the application of the waterproofing system.

b. Submit original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2)(f) for the CM's information:
i. The date of the test shall be generally within three years prior to the notified date for commencement of the Works;

ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material to Site;

iii. In the event that no test report has been submitted for the CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

2. Quality Requirements:

   a. Proprietary hydrophobic waterproofing system for application to hardened concrete;

   b. Capable of waterproofing static cracks and capillaries;

   c. Compatible with host concrete and all surfaces and materials, including ancillary materials, in contact with the waterproofing system as WAT6.M240;

   d. Non-toxic;

   e. Suit the situation on which it is to be used;

   f. The materials used in the proprietary tanking system shall withstand the project specific sub-surface water conditions.

**SHEET OR LIQUID MEMBRANE WATERPROOFING SYSTEMS**

**WAT6.M220.A** SHEET OR LIQUID MEMBRANE WATERPROOFING SYSTEMS FOR ROOFING, LIFT PIT AND EXTERNAL TANKING

1. This clause is applicable to waterproofing systems for roofing, lift pit and external tanking in general. The specification for sheet membrane waterproofing system for use in basement and semi-basement external tanking is covered under WAT6.M230;

2. Submission Requirements:

   a. At sample submission and approval stage, submit a sample of the proposed material for CM's approval together with all the following substantiation for CM's information:

      i. Catalogue, brand name / model name, job reference and original manufacturer's technical data of materials and system;

      ii. Name, address and contact person of the local supplier;

      iii. Name, address and contact person of the manufacturer;

      iv. Where applicable, either the document from the manufacturer showing his authorization for the supplier as the agents / distributors in Hong Kong or document from the supplier showing the appointment of the manufacturer and manufacturer's agreement for the production of the proposed product;

      v. Detailed method statement and the project specific shop drawings for the installation of proprietary waterproofing system for roofing and external tanking, showing all work procedures of the proposed system;

      vi. When the systems are supplied for domestic blocks also include the following in the submission:
- Original or a certified true copy of the ISO 9001 certificate for the manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by a certification body or by the QCM. The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.

b. Submit original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (3)(b) for CM's information:

i. The date of the test shall be generally within three years prior to the notified date for commencement of the Works;

ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (2)(a), or at a time not later than the delivery of the material as mentioned in sub-clause (4)(a);

iii. In the event that no test report has been submitted for CM's information when the materials are delivered to Site, remove all delivered materials off Site, bear all associated costs and no extension of time will be allowed.

3. Quality Requirements:

a. Proprietary sheet membrane waterproofing systems for use in roofing, lift pit external tanking and other external tanking (excluding basement and semi-basement) as well as proprietary liquid membrane waterproofing systems for use in lift pit external tanking and other external tanking (excluding basement and semi-basement) shall:

i. Remain intact and waterproof throughout the warranty period;

ii. Provide with adequate means of dealing with condensation and thermal movement;

iii. Suit the types of roof access without impairment of performance; and

iv. Include the proprietary sheet or liquid membrane waterproofing materials and all ancillary materials, insulation materials, screeding, roofing tiles and other protective treatments necessary to satisfactorily complete the roofing and external tanking systems. All materials to be in accordance with manufacturer's specification unless otherwise specified.

b. The materials used in the proprietary tanking system shall withstand the project specific sub-surface water conditions as follows:

<table>

c. Compatible with all surfaces and materials, including ancillary materials in contact with the waterproofing system as WAT6.M240;
d. In compliance with the prescribed limit of VOC content as set out in the Air Pollution Control (Volatile Organic Compounds) Regulation.

4. On Site Delivery Verification:
   a. At delivery stage, submit the following documents:
      i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (1)(a);
      ii. Original or certified true copy of Certificate of Origin for every batch of delivery. One batch being the material quantity covered under each delivery note;
      iii. Delivery notes for all material delivered to Site.
   b. Carry out and submit report on the following verification for proprietary waterproofing systems upon delivery on Site. Prior to carrying out the verifications, inform the CM who may present to witness the verifications:
      i. Method:

<table>

   ii. Frequency:

   One set of verification should be carried out for every delivery of proprietary waterproofing systems for roofing and external tanking material delivered to Site under each delivery note submitted in sub-clause (3)(a).

c. Where any of the verifications fail to meet the Acceptance Standards, either:
   i. Remove the representative batch off Site; or
   ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site, bear all associated costs, and no extension of time will be allowed.

WAT6.M230.A SHEET MEMBRANE WATERPROOFING SYSTEM FOR BASEMENT AND SEMI-BASEMENT EXTERNAL TANKING

1. Submission Requirements:
   a. At sample submission and approval stage, submit material samples of the proposed waterproofing system for CM's approval. Submission should include the following substantiations:
i. Catalogue, brand name / model name, local job reference and original manufacturer's technical data of the proposed materials and system;

ii. Name, address and contact person of the local supplier;

iii. Name, address and contact person of the manufacturer;

iv. Where applicable, either the document from the manufacturer showing his authorization for the supplier as the agents / distributors in Hong Kong or document from the supplier showing the appointment of the manufacturer and manufacturer's agreement for the production of the proposed product;

v. Detailed method statement and project specific shop drawings for the application of the waterproofing system;

vi. Proposed testing method(s), major equipment list and programme for testing; and programme for allowing the Direct Testing Contractor (DTC) to carry out the on site verification tests or infra-red scanning, both at WAT6.T130 (3);

vii. Original or a certified true copy of the ISO 9001 certificate for the manufacturing plant. If a copy of the ISO certificate is submitted, it shall be certified true by a certification body or by the QCM. The certification body shall either be accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with HKAS.

b. Submit original or certified true copy (issued or certified by the laboratory that complies with PRE.B9.570) of the test reports showing full compliance with the requirements of sub-clause (2)(e) for CM’s information:

i. The date of the test shall be generally within three years prior to the notified date for commencement of the Works;

ii. The test reports shall either be submitted at the sample submission and approval stage as mentioned in sub-clause (1)(a), or at a time not later than the delivery of the material to Site;

iii. In the event that no test report has been submitted for CM's information when the materials are delivered to Site, commencement of waterproofing installation is not allowed until the relevant reports are submitted;

iv. Bear all additional time and costs arising from or in connection with non-compliance with the requirements on test report submission, including but not limited to those incurred in sub-clause (iii) above.

**Option 1**

2. Quality Requirements:

   System -

   a. The system to remain intact and waterproof throughout the warranty period. To be suitable for the situation where it is used, and include all ancillary materials complete with composite drainage layer at vertical surface.

   Material -

   b. Proprietary sheet membrane waterproofing material to be -

      i. Modified bitumen / asphalt based; or
ii. Polymer modified bitumen / asphalt, polymer or sodium bentonite carried on a high density polyethylene (HDPE) sheet with the polymer or sodium bentonite material to be in contact with the structural concrete wall or floor (or otherwise as recommended by the Contractor).

c. Elongation by minimum 100% and has the ability to bridge a crack in the substrate;

d. Non-toxic and compatible with the host concrete, all surfaces and materials, including ancillary materials, in contact with the waterproofing system as WAT6.M240;

e. Satisfy the following performance requirements:

<table>
<thead>
<tr>
<th>Performance</th>
<th>Standards</th>
<th>Minimum Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>i. Hydrostatic Pressure Resistance</td>
<td>ASTM D5385</td>
<td>45m</td>
</tr>
<tr>
<td>ii. Puncture Resistance</td>
<td>ASTM E154</td>
<td>200N</td>
</tr>
<tr>
<td>iii. Permeance</td>
<td>ASTM E96</td>
<td>3.0 ng/Pa.m2.s (max.)</td>
</tr>
</tbody>
</table>

f. In compliance with the prescribed limit of VOC content as set out in the Air Pollution Control (Volatile Organic Compounds) Regulation.

3. On Site Delivery Verification:

a. At delivery stage, submit the following documents:
   i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (1)(a);
   ii. Original or certified true copy of the Certificate of Origin for every batch of delivery. One batch being the material quantity covered under each delivery note;
   iii. Delivery notes for all material delivered to Site.

b. Carry out and submit report on the following verifications for waterproofing material upon delivery on Site. Prior to carrying out the verifications, inform the CM who may be present to witness the verifications:
   i. Method:

<table>
<thead>
<tr>
<th>Verification Items</th>
<th>Method</th>
<th>Acceptance Standards</th>
</tr>
</thead>
<tbody>
<tr>
<td>Manufacturer's Certificate of Origin &amp; delivery note</td>
<td>Document Check</td>
<td>From an Approved origin</td>
</tr>
<tr>
<td>Batch / Lot No.</td>
<td>Document Check and on packaging</td>
<td>Same as the delivery note</td>
</tr>
<tr>
<td>Expiry Date</td>
<td>Check information printed on the packaging</td>
<td>Minimum 6 months from the date of delivery</td>
</tr>
</tbody>
</table>

   ii. Frequency:

   One set of verification should be carried out for every delivery of the waterproofing material delivered to Site under each delivery note submitted in sub-clause (3)(a).

c. Where any of the verifications fail to meet the Acceptance Standards, either:
i. Remove the representative batch off Site; or

ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site;

iii. Bear all additional time and costs arising from or in connection with failure to meet the Acceptance Standards, including but not limited to those incurred in sub-clause (i) and (ii) above.

Option 2

2. Quality Requirements:

   System -
   a. The system to remain intact and waterproof throughout the warranty period. To be suitable for the situation where it is used, and include all ancillary materials complete with composite drainage layer at vertical and horizontal surfaces.

   Material -
   b. Proprietary sheet membrane waterproofing material to be -
      i. Modified bitumen / asphalt based; or
      ii. Polymer modified bitumen / asphalt, polymer or sodium bentonite carried on a high density polyethylene (HDPE) sheet with the polymer or sodium bentonite material to be in contact with the structural concrete wall or floor (or otherwise as recommended by the Contractor).

c. Elongation by minimum 100% and has the ability to bridge a crack in the substrate;

d. Non-toxic and compatible with the host concrete, all surfaces and materials, including ancillary materials, in contact with the waterproofing system as WAT6.M240;

e. Satisfy the following performance requirements:

<table>
<thead>
<tr>
<th>Performance</th>
<th>Standards</th>
<th>Minimum Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>i Hydrostatic Pressure Resistance</td>
<td>ASTM D5385</td>
<td>65m</td>
</tr>
<tr>
<td>ii Puncture Resistance</td>
<td>ASTM E154</td>
<td>400N</td>
</tr>
<tr>
<td>iii Permeance</td>
<td>ASTM E96</td>
<td>1.0 ng/Pa.m2.s (max.)</td>
</tr>
<tr>
<td>iv Lap Adhesion</td>
<td>ASTM D1876</td>
<td>1.0kN/m</td>
</tr>
</tbody>
</table>

f. In compliance with the prescribed limit of VOC content as set out in the Air Pollution Control (Volatile Organic Compounds) Regulation.

3. On Site Delivery Verification:

   a. At delivery stage, submit the following documents:
      i. Written confirmation that the material delivered to Site conforms with the Approved sample submitted under sub-clause (1)(a);
      ii. Original or certified true copy of the Certificate of Origin for every batch of delivery. One batch being the material quantity covered under each delivery note;
      iii. Delivery notes for all material delivered to Site.
b. Carry out and submit report on the following verifications for waterproofing material upon delivery on Site. Prior to carrying out the verifications, inform the CM who may be present to witness the verifications:

i. Method:

<table>
<thead>
<tr>
<th>Verification Items</th>
<th>Method</th>
<th>Acceptance Standards</th>
</tr>
</thead>
<tbody>
<tr>
<td>Manufacturer's Certificate of Origin &amp; delivery note</td>
<td>Document Check</td>
<td>From an Approved origin</td>
</tr>
<tr>
<td>Batch / Lot No.</td>
<td>Document Check and on packaging</td>
<td>Same as the delivery note</td>
</tr>
<tr>
<td>Expiry Date</td>
<td>Check information printed on the packaging</td>
<td>Minimum 6 months from the date of delivery</td>
</tr>
</tbody>
</table>

ii. Frequency:

One set of verification should be carried out for every delivery of the waterproofing material delivered to Site under each delivery note submitted in sub-clause (3)(a).

c. Where any of the verifications fail to meet the Acceptance Standards, either:

i. Remove the representative batch off Site; or

ii. When agreed by the CM, repeat all verification items on three separate samples selected by the CM. In case of failure of any verification to any one sample, remove the representative batch off Site;

iii. Bear all additional time and costs arising from or in connection with failure to meet the Acceptance Standards, including but not limited to those incurred in sub-clause (i) and (ii) above.

WAT6.M240.8 ANCILLARY MATERIALS

1. Ensure ancillary materials including plastic water bars, hydrophilic water stops, adhesives, sealants, solvents, preformed corners, flashing materials, pipe sleeves and collars, ballast, gravels, isolation quilt, protective coatings etc., must be either a part of the waterproofing membrane system or fully compatible with it and recommended for their intended use by the membrane manufacturer;

2. Adhesives, adhesive primer, sealant, and sealant primer shall be in compliance with the prescribed limits of VOC content as set out in the Air Pollution Control (Volatile Organic Compound) Regulation.

WAT6.M250.8 INSULATION MATERIALS

1. Obtain extruded polystyrene board with rebate edges, CFC and HCFC free zero Ozone Depletion Factor type to BS 3837:Part 2:1990;

2. Ensure insulation materials to be extra high duty grade with minimum compressive strength at 300kPa, thermal conductivity (k) within the range 0.025 to 0.034 W/mK and in thickness to the requirement as indicated in the drawings to complete system installation and to meet minimum insulation value for the roof as required;

3. Notwithstanding WAT6.M220 (2)(a), insulation materials can be obtained from other suppliers but must be certified as fully compatible to the system by the membrane manufacturer.
WAT6.M260.8 **ROOFING TILES AND OTHER FINISHING MATERIALS**

1. For accessible roof of public emergency and maintenance and where specified in drawings, use concrete roofing tiles and fittings to BS 473,550:1990. Size and thickness to finishing schedule of drawings;

2. For accessible roof as podium / garden and general public access and where specified in drawings, use tiles or other finishing materials as stated in finishing schedule of drawings;

3. For non-accessible roof: as WAT6.W290;

4. Notwithstanding WAT6.M220 (2)(a), insulation materials, roofing tiles and other finishing materials for accessible roof can be obtained from other suppliers but must be certified as fully compatible to the system by the membrane manufacturer.

WAT6.M270.8 **MAINTENANCE MANUAL**

Upon completion of the work, submit 2 copies (1 hard copy and 1 soft copy at PDF format in CD) of maintenance manual identified with project name, location and date and containing the following:

1. Type of system applied;
2. Surface to which the system was applied;
3. Shop drawings of the waterproofing works for the particular project;
4. Recommendations for periodic inspections, care and maintenance;
5. Identification of common cause of damage with instructions for temporary patching until permanent repair can be made.

WAT6.M280.8 **COMPOSITE DRAINAGE LAYER**

1. A 3-dimensional high compressive strength polymeric drainage core layer pre-bonded with a geotextile resistant to common ground water contaminants;

2. Materials of the composite drainage layer shall meet the following requirements:

<table>
<thead>
<tr>
<th>Performance</th>
<th>Standards</th>
<th>Minimum Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>i Thickness</td>
<td>-</td>
<td>9.5mm</td>
</tr>
<tr>
<td>ii Core compressive</td>
<td>ASTM D1621</td>
<td>550kPa (vertical)</td>
</tr>
<tr>
<td>Strength</td>
<td></td>
<td>700kPa (horizontal)</td>
</tr>
<tr>
<td>iii Core Flow Rate</td>
<td>ASTM D4716</td>
<td>150L/min/m</td>
</tr>
<tr>
<td>iv Fabric Flow Rate</td>
<td>ASTM D4491</td>
<td>5000L/min/m²</td>
</tr>
</tbody>
</table>
WORKMANSHIP

APPLYING COLD LIQUID APPLIED FLEXIBLE WATERPROOFING SYSTEM

WAT6.W010.8  GENERAL
Prepare and apply the Approved cold liquid applied flexible waterproofing system strictly in accordance with the manufacturer's recommendations.

WAT6.W012.8  CONSTRUCTION MOCK-UP
1. Prior to commencing installation of the cold liquid applied flexible waterproofing system to typical domestic floors, construct a full size construction mock-up on actual working surface of a bathroom and kitchen in accordance with PRE.B9.440 showing:
   a. Background preparation strictly in accordance with the manufacturer's recommendation on all types of substrates;
   b. All layers of the waterproofing system up to and including the finishes;
   c. Junction details with adjacent construction complete with sealant works etc.
2. Obtain Approval before commencement of installation;
3. Maintain the Approved construction mock-up as a workmanship benchmark. Obtain CM's agreement before dismantling the construction mock-up.

WAT6.W015.8  STORAGE
Store the Approved waterproofing material on Site or in the Contractor's workshops etc in a cool, well ventilated, and covered storage accommodation, or in a manner in accordance with the manufacturer's recommendations.

WAT6.W020.8  PREPARATION
Ensure surfaces to receive the Approved waterproofing system are:
1. Finished with a power-floated or steel-trowelled finish for concrete floor, or an equivalent acceptable to the waterproofing manufacturer;
2. Free of dirt, dust, oil, excessive moisture and other contaminants prior to application;
3. Free of holes, gaps or cracks;
4. Formed with non-shrink cement-sand angle fillet at junctions of walls and floors before application of waterproofing materials.

WAT6.W025.8  COATS OF APPLICATION
Apply a minimum of two coats, or more in accordance with the manufacturer's recommendations, with the thickness of each coat strictly in accordance with the manufacturer's recommendations.

WAT6.W030.8  OVERCOAT
Allow a minimum of 24 hours, or longer period in accordance with the manufacturer's recommendations from the completion of the first coat for drying. Ensure the first film shows no crissing, crawling, sinking, lifting or wrinkling before second coat application.
LAYERING FINISHES

Inspect the cured waterproofing layers prior to laying finishes. Lay finishes or protective layer without delay after the inspection to prevent damage to the cured waterproofing system.

HEALTH AND SAFETY

Do not use materials or working practices which would result in any hazard or injury to operatives or to others in the vicinity of the Site.

COLOUR

Apply each coat of the waterproofing material in a different colour as directed by the CM where a range of colours is available from the waterproofing system.

MIXING AND APPLYING CEMENTITIOUS WATERPROOFING SYSTEM

GENERAL

Engage Applicator, corresponding to the proposed proprietary cementitious waterproofing system to prepare, mix and apply the system in accordance with the manufacturer's specifications and recommendations.

CURING AND PROTECTION

In accordance with manufacturer's instructions.

APPLYING SHEET OR LIQUID MEMBRANE WATERPROOFING SYSTEMS

GENERAL

1. Engage Applicator, corresponding to the proposed proprietary waterproofing systems, to install the proprietary waterproofing systems for roofing and external tanking comprising of the proprietary waterproofing materials, insulation and roofing finishes including priming, sealing, crack filling and other necessary materials, flashings etc, with details all in accordance with manufacturer's specifications and recommendations;

2. Obtain CM's consent prior to application;

3. Obtain CM's consent prior to laying finishes on waterproofing materials;

4. Take particular care to ensure that all junctions, expansion joints, penetration around pipes, rainwater outlets, gutters and the like are properly executed;

5. Comply with the proprietary roofing and external tanking systems' requirements according to the manufacturer's instruction.

CONSTRUCTION MOCK-UP

1. Prior to commencing installation of the sheet membrane waterproofing system to the basement or semi-basement, construct a Construction Mock-up in accordance with PRE.B9.440 showing:
   a. Background preparation strictly in accordance with the manufacturer's recommendations on all types of substrates;
b. All layers of the waterproofing system including the composite drainage layer and/or protection board;

c. Typical junction details such as internal and external corners, lappings, edge terminations, patch ups to utilities and ELSW penetrations, composite drainage layer at corners, etc..

2. Maintain the Construction Mock-up as a workmanship benchmark. Obtain CM's agreement before dismantling the Construction Mock-up.

**WAT6.W220.8 SURFACES PREPARATION**

1. Prior to laying of the roofing and external tanking system, inspect, repair and prime as required to provide proper substrate surfaces to receive waterproofing materials in accordance with the waterproofing manufacturer's recommendations;

2. Remove protrusions and contaminants such as grease, oil, etc. from the surfaces;

3. For roofing, ensure the base is to even falls to the rainwater outlets with no area which will pond;

4. Complete all cuts and preformed chases, external angles chamfered and internal angles fillet including all fixings that will penetrate the roofing or external tanking membrane are in place unless otherwise specified in details of shop drawings.

**WAT6.W230.8 FREE OF MOISTURE**

For roofing and external tanking systems:

1. Do not carry out any work when there is surface moisture;

2. Take all necessary precautions to ensure the integrity of the proposed system is maintained;

3. Comply with the proprietary roofing and external tanking systems' requirements as stated in the manufacturer's instruction.

**WAT6.W240.8 COMPATIBILITY**

Before commencing work, demonstrate on Site that all adhesives and materials, including sealants, insulation and subsequent laid on materials, are fully compatible and certified by the Agent / Applicator in writing to CM.

**WAT6.W250.8 PROTECTION OF EXISTING ROOF**

1. Protect all roofing outlets to prevent debris falling into rainwater pipes;

2. Open and clear the outlets at the end of the working day and sweep the roof clean to ensure effective drainage;

3. Protect all pipeworks, ducting and other services running on top of existing roof including pipe supports.

**WAT6.W255.8 APPLYING PROPRIETARY WATERPROOFING SYSTEMS**

Ensure the spreading rate of the proprietary materials is in accordance with the manufacturer's instruction.

**WAT6.W260.8 ADHESIVE**
