SLW1 GENERAL PLANTING REQUIREMENTS

MATERIALS

PLANTS GENERALLY

SLW1.M010.8 SPECIES
All plants, seeds etc. must be true to species.

SLW1.M020.8 HEALTH
Plants and seeds must be free from pests, disease, parasites, discolouration, and mechanical damage.

SLW1.M030.8 SOURCE
Obtain all plants from a recognised cultivated source and not from the wild.

SLW1.M040.8 HABIT
Ensure all plants exhibit the habit, growth and a well developed shape for the species specified and that all plants have a vigorous fibrous root system.

SLW1.M050.8 NAME
In the event of any discrepancy between the Scientific Name, English Common Name, and the Chinese Common Name for any plant specified, the Scientific Name shall prevail.

SLW1.M060.8 SUBSTITUTION
At no time, either make or allow any substitution, without prior Approval.

SLW1.M070.8 PARASITIC PLANTS
Do not allow any of the following species of parasitic plants to be present in any form on any plant or soil brought on to the Site:
1. Cuscuta australis (European Dodder);
2. Cuscuta chinensis (Chinese Dodder, Yellow Colour Thread);
3. Cuscuta reflexa (Yunnan Dodder);
4. Cassytha filiformis (Cassytha).

SLW1.M080.8 NOXIOUS WEEDS
Do not allow any of the following species of noxious weeds as defined by the Agriculture, Fisheries and Conservation Department (AFCD) to be present in any form on any plant or soil brought on to the Site:
1. Mikania micrantha (Mile-a-minute Weed)
Such noxious weeds shall be cleared manually from all affected areas within the Site and disposed off site, at the Contractor’s expense, all in accordance with the guideline and practice notes promulgated by AFCD.

FERTILIZERS AND ADDITIVES

**SLW1.M110.8 SLOW RELEASE FERTILIZER**

Slow release fertilizer to be granular NPK chemical fertilizer with a minimum 12-week release period conforming to the following formula:

- 14 - 18 Parts N (Nitrogen)
- 7 - 12 Parts P (Phosphorus)
- 12 - 16 Parts K (Potassium)
- 1 - 3 Parts MgO (Magnesium Oxide plus other trace elements)

Apply at the rates specified in the appropriate planting Section.

**SLW1.M130.8 QUICK RELEASE FERTILIZER**

Quick release fertilizer to be granular NPK chemical fertilizer with a minimum two-week release period conforming with the following formula:

- 14 - 16 parts N (Nitrogen)
- 14 - 16 parts P (Phosphorus)
- 14 - 16 parts K (Potassium)

Apply at the rates specified in the appropriate planting Section.

**SLW1.M135.8 SPENT MUSHROOM COMPOST (SMC):**

*Option for Fertilizer*

1. **General**

   Spent mushroom compost (SMC) is also commonly called spent mushroom substrate (SMS) and spent mushroom waste. This is the solid residue left after harvest of the mushrooms from the growing compost / substrate;

2. **Composition:**

   The following table lists out the specification of spent mushroom compost as fertilizer:

   a. Organic Matter: >85% (by dry weight);
   b. Chitin : 22 – 25%  
      by Official Methods of Analysis of AOAC International, 2012 (19th edition) or latest revision as appropriate;
   c. Minimum N (Nitrogen) : 1.2 – 2.5%, by ‘Kjeldahl’ Method;
   d. Minimum P (Phosphorus) : 0.11 – 0.40%  
      by Official Methods of Analysis of AOAC International, 2012 (19th edition) or latest revision as appropriate;
   e. K (Potassium), 2.7 - 3.7%  
      by Official Methods of Analysis of AOAC International, 2012 (19th edition) or latest revision as appropriate;
   f. Mg(Magnesium), 0.2 - 0.3%
by Official Methods of Analysis of AOAC International, 2012 (19th edition) or latest revision as appropriate.

3. Certification: prior to use and deliver on Site, take samples of SMC for analysis at an Approved laboratory and within 14 calendar days, produce the laboratory’s Certificate stating the composition as per Para. 2 above;

4. Apply with the dosage as specified in the appropriate Planting Section.

SLW1.M140.8 DISCOURAGEMENT OF VERMIN
Do not use peanut cake as a fertilizer, nor any other substance likely to encourage vermin.

SLW1.M150.8 LIMESTONE
1. Composition: ground limestone containing a minimum of 90% calcium and magnesium carbonates and capable of passing through a 10mm mesh sieve;

2. Certification: prior to use and for every 500kg delivered to Site, take samples of the limestone for analysis at an Approved laboratory and within 14 calendar days, produce the laboratory's Certificate stating:
   a. Calcium and magnesium carbonate content;
   b. The particle size.

CHEMICALS

SLW1.M220.8 PESTICIDES
Submit details of the pesticides for the approval of the CM. The pesticides must be registered under the Pesticide Ordinance (Cap. 133) with Agriculture, Fisheries and Conservation Department (AFCD) in Hong Kong, properly packed and clearly labelled bilingually both in English and Chinese and conform to regulations stipulated by the Government of the HKSAR.

MULCHES

SLW1.M310.8 MULCHES
Mulch as shown on Drawings, to be:

1. Fibrous mulch to be organic material such as decomposed leaf litter, decomposed sawdust, prepared compost or spent mushroom compost; and / or

2. Wood chip mulch, to comprise:
   a. Particle size: in the range 10mm to 30mm;
   b. Thickness: in the range 2mm to 5mm.

ANCILLARY MATERIALS

SLW1.M410.8 PLANT LABELS
Plant labels to be 120 mm x 80 mm x 2 mm thick, white acrylic or aluminium with:

1. 2 holes of 5 mm diameter, centred 50 mm apart, 10 mm from the top edge;
2. The Botanic name, English and Chinese Common names of the plant, heat -
indenting in black characters;
3. The size of the capital letter for Botanic and English Common names to be not less
than 10 mm and the lower case to be not less than 7 mm;
4. Chinese characters not less than 13 mm high.

**SLW1.M420.8 PROTECTIVE FENCING**
Protective fencing as shown on Drawings, to be:
1. Proprietary bamboo fencing, comprising:
   a. 10 to 20 mm diameter bamboo palings fastened together at each joint with
galvanized metal staples and washers, which when erected forms a framework
with palings at 150 mm centres;
   b. Vertical support stakes and inclined support struts, 600 mm longer than the
finished height of the fence, of either:
      i. 50 mm diameter bamboo; or
      ii. 30 x 30 x 3 mm mild steel angle, painted black with one priming coat and
          one finishing coat.
   c. Open ends of bamboo palings and stakes to be sealed with sealant approved by
CM. No stagnant water should be found inside or outside of the stakes.
2. Proprietary plastic lattices to be of UV stabilized HDPE plastic resin
   with 70 mm
   grid opening, and 4.4 mm thick, with appropriate supporting system, colour as
   specified;
3. Finished height: Height of fencing, either 600 mm or 900 mm height as shown on
   Drawings, ±25 mm.

**SLW1.M430.8 PEA GRAVEL**
Pea gravel to be clean rounded river washed gravel:
Size: in the range 5 mm to 12 mm.

**SLW1.M440.8 GRAVEL**
Gravel to be clean broken stone:
Size: in the range 10 mm to 30 mm.

**SLW1.M450.8 GRAVEL FOR SAND BASED LAWN**
Gravel to be clean broken stone:
Size: 10mm ± 5mm.
WORKMANSHIP

PROGRAMME

SLW1.W010.8 PLANTING SEASON
Unless specified otherwise for individual species or types of planting, do not plant between the period 1st December to the end of February, without prior or agreement Approval from CM.

SLW1.W020.8 PLANTING TREES
Where trees are planted in grass or shrub areas, plant trees before the seeding/grassing or shrub planting operations.

SLW1.W030.8 PLANTING SHRUBS
Where shrubs are planted in grass areas, plant the shrubs before the seeding/grassing operations.

LIFTING PLANTS

SLW1.W110.8 ROOT PRUNING
Carry out root pruning and undercutting of the root system of the rootballed stock twelve months prior to lifting from the nursery.

SLW1.W120.8 WATERING AND LIFTING
Water plants grown in open ground prior to lifting and carefully lift to ensure the specified root ball is obtained.

SLW1.W130.8 PROTECTIVE WRAPPING
Wrap rootballs in moist hessian sacking, or an Approved equivalent protective wrapping.

PROTECTION AND STORAGE PRIOR TO PLANTING

SLW1.W210.8 PROTECTION GENERALLY
1. Adequately wrap and protect all plants to prevent mechanical damage, excessive transpiration and wilting during lifting, transportation and storage;
2. Protect all plants against excessive sunlight, wind and drought;
3. Keep plants moist at all times.

SLW1.W220.8 STORAGE OF PLANTS ON SITE
Maintain plants in good condition and:
1. Store plants, other than trees, on level ground, standing upright;
2. Store trees on level ground at an angle greater than 45° to the horizontal;
3. Where trees and shrubs are delivered to the Site with shoots and branches bundled, remove all tying materials immediately to prevent heating up and subsequent defoliation.

**PREPARATORY WORK**

**SLW1.W310.A  CLEARING**
Clear all areas to be planted of rubbish, weeds, deleterious matter, and stones larger than 25 mm in any dimension, and remove all such material from Site.

**SLW1.W320.8  PREPARING PLANTS**
1. Cut loose and remove all wrapping materials around roots and containers;
2. Trim any broken roots with secateurs or a sharp knife.

**SLW1.W330.8  WATERING**
Thoroughly soak all plants before planting. If rootballs or containers are very dry, immerse the roots in water until air bubbles cease to rise.

**PLANTING**

**SLW1.W410.8  GENERAL**
1. Carry out all planting works in accordance with good horticultural practice;
2. Do not leave pits excavated for planting on or adjacent to slopes, open during wet weather.

**SLW1.W420.8  TIMING**
Plant all plants in their final position within two days of delivery to Site.

**SLW1.W430.8  FINISHED SOIL LEVELS**
1. Ensure that the finished soil level round the plant is the same as that in which the plant was growing in the nursery or container, with the root collar at ground level;
2. When planting in grassed areas finish soil level 50 mm below the surrounding soil level to allow for mulching.

**SLW1.W440.8  FINISHING**
Rake planted areas through on completion of planting to leave the soil surface clean and tidy.

**SLW1.W450.8  WATERING IN**
Immediately after planting and before mulching, thoroughly water all plants at a rate of 10 litres/m², unless required otherwise by the CM, to settle the soil around the roots.
POST PLANTING WORK

SLW1.W510.8 WEEDING AND MAINTENANCE
Keep all planted areas weed free and maintain all plants in grass areas as SLW9.W320 during the contract period.

SLW1.W520.8 WATERING PLANTS
Continue watering as necessary to maintain a moist soil at all times during the Planting Period, having regard to the following or as directed by the CM:

1. Normally, water all planted areas on every day that the rainfall is less than 5 mm per day except on the day following a day that rainfall exceeded 20 mm per day or when the soil is saturated during the Time for Completion of the Works of the Planting Period;

2. For planted areas under cover, water every day unless the soil remains moist from previous day's watering during the Time for Completion of the Works of the Planting Period.

SLW1.W530.8 ERECTING PROTECTIVE FENCING
Erect fencing in locations shown on the Drawings, securing palings to support stakes with galvanized wire. Drive support stakes into the ground at 2000 mm centres.

DEALING WITH PARASITIC PLANTS

SLW1.W610.8 GENERAL
Report to the CM any case of parasitic plants, as SLW1.M070, being inadvertently brought on to the Site. Take whatever action is specified in the following clauses, relating to the degree of infestation and as Instructed.

SLW1.W620.8 LIGHTLY AFFECTED PLANTS
Remove all parts of the parasitic plant and burn off site.

SLW1.W630.8 BADLY AFFECTED PLANTS
Remove the host plant and burn off site.

SLW1.W640.8 EXTENSIVE INFESTATION
Clear the whole area of all plants and burn off site.

SLW1.W650.8 CULTIVATION AFTER TREATMENT
Cultivate the area by turning the soil over to a depth of 100 mm to prevent germination of the parasitic plant seeds.

USE OF CHEMICALS

SLW1.W710.8 GENERAL
Do not use pesticides without prior Approval.
SLW1.W720.8  STORING, MIXING, APPLYING AND DISPOSING PESTICIDES

Store, mix, apply and dispose in accordance with the requirements and the latest “Code of Practice for the Safe and Proper Use of Pesticides in Public Areas” of Agriculture, Fisheries and Conservation Department (AFCD) in Hong Kong and the manufacturer's instructions. Do not store pesticide on site without prior Approval.

TREE REMOVAL

SLW1.W810.8  GENERAL

Fell and remove from Site diseased and dead trees as shown on the Drawings or as instructed.

1. These works shall apply to those trees and palms transplanted to the Site by the Employer's Direct Contractor, as refer to PRE.B2.010 for relevance;

2. Take all necessary safety precautions to protect the people engaged in the tree felling and removal work, as well as the people and property in the vicinity throughout the whole process of tree felling;

3. Where applicable, the safety requirements and procedures as stipulated in the Guidelines on Arboriculture Occupational Safety and Health published by the Greening, Landscape and Tree Management Section of Development Bureau, HKSAR and other relevant guidelines published by other Government departments shall be applied;

4. All voids formed as a result of the above works shall be backfilled with fabricated soil as appropriate.
SLW2 TREES

MATERIALS

GENERAL

SLW2.M010.8 GENERAL PLANTING REQUIREMENTS
Read this Worksection in conjunction with the appropriate clauses in Worksection SLW1.

SLW2.M020.8 HOME GROWN TREES
Complying in all respects with the requirements of this Specification at the time of planting.

SLW2.M030.8 IMPORTED TREES
Complying in all respects with the requirements of this Specification at the time of planting.

SLW2.M040.8 FEATHERED TREES
Trees described as feathered in the planting schedule or on the Drawings, must exhibit the characteristics required for the type, size and species of tree as specified, with the head/crown of the tree a defined, straight and upright leader, its stem well furnished with unpruned lateral shoots.

SLW2.M050.8 SPECIES
Tree species to be as shown or scheduled on the Drawings.

SLW2.M060.8 TREE Girth
Tree girth is the circumference of a tree trunk measured at 1300mm above ground level. Refer to AFCD Practice note No. 02/2003 for measurement of a tree.

SLW2.M100.8 TREE QUALITY GENERAL
Trees of light standard tree or above to exhibit all the following characteristics:

1. Healthy stock grown in nursery and free from any kinds of structural defects, dieback, cavities and decaying wounds;

2. The form and density of the crown shall be typical of the species or cultivar;

3. Unless otherwise specified as multi-stem trees or typically inhere of the species or cultivar, the tree shall have one central leader. No co-dominant stems shall be occurred within the lower half of the crown;

4. Have good taper to support the tree in vertical form;

5. Branches:
   a. Scaffold branches shall be distributed along the centre leader evenly to form a balanced crown typical of the species or cultivar;
b. Branch diameter shall not exceed two-third (i.e. aspect ratio less than 0.66) the diameter of the central leader measured 25 mm above the branch union;

c. The attachment of the scaffold branches shall be free of included bark;

d. Scaffold branches shall distribute evenly on all sides.

6. Roots:

a. The surface root shall be free of wounds, scrapes, broken or split wood;

b. Root distribution shall be uniform throughout the root ball and growth shall be appropriate for the species or cultivar;

c. Root collar shall be within the upper 50 mm of the soil;

d. Free of stem girdling roots over the root collar or kinked roots;

e. The centre of the stem shall be in the centre of the rootball;

f. Structural roots shall distribute evenly on all sides.

7. For container grown trees, the tree shall have well-established root system reaching the sides of the container to main a firm rootball, but shall not have excessive root growth encircling inside the container.

TREES CLASSIFIED BY SIZE

SLW2.M110.8  SEEDLING TREES

Seedling trees to exhibit all the following characteristics:

1. Age: between 1 and 2 years;

2. Conformation: a single slender stem;

3. With a well developed vigorous root system;

4. Height above soil level: between 150 mm and 600 mm;

5. Grown in a container not less than 75 mm in diameter and 100 mm deep or a tube not less than 60 mm in diameter and 150 mm long.

SLW2.M120.8  WHIPS

Whips to exhibit all the following characteristics:

1. Age: between 2 and 3 years;

2. Conformation: a single central stem and elementary branch system;

3. With a well developed vigorous root system;

4. Height above soil level: between 600 mm and 1500 mm;

5. Grown in a container not less than 125 mm in diameter and 150 mm deep.

SLW2.M130.A  LIGHT STANDARD TREES

Light standard trees to exhibit all the following characteristics:

1. Height from the root collar to the lowest branch:
   a. between 1600 mm and 2100 mm for trees with main tree trunk, and
   b. between ...... mm and ...... mm for ........ form of tree;

2. Total height above soil level: between 2400 mm and 3000 mm;
3. Stem diameter measured at a point one metre above the root collar: between 25 mm and 50 mm;

4. Conformation: a sturdy straight stem with a well balanced branching head, or a well defined straight and upright leader with branches growing out from the stem with good symmetry, and a minimum length of 500 mm;

5. Rootball size:
   a. Diameter: not less than 300 mm;
   b. Depth: not less than 300 mm.

6. When container grown trees are required, grow the tree in a container not less than 350 mm diameter and 400 mm deep.

**SLW2.M140.A STANDARD TREES**

Standard trees to exhibit all the following characteristics:

1. Stem height from the root collar to the lowest branch:
   a. between 1700 mm and 2200 mm for trees with main tree trunk, and
   b. between …… mm and …… mm for ……… form of tree;

2. Total height above soil level: between 2750 mm and 3500 mm;

3. Stem diameter measured at a point one metre above the root collar: between 50 mm and 75 mm;

4. Conformation: a sturdy straight stem with a well balanced branching head, or a well defined straight and upright leader with branches growing out from the stem with good symmetry, and a minimum length of 600 mm;

5. Rootball dimensions:
   a. Diameter: not less than 450 mm;
   b. Depth: 300 mm.

6. When container grown trees are required, grow the tree in a container not less than 500 mm in diameter and 500 mm deep.

**SLW2.M150.A HEAVY STANDARD TREES**

Heavy standard trees to exhibit all the following characteristics:

1. Stem height from the root collar to the lowest branch:
   a. between 1800 mm and 2400 mm for trees with main tree trunk, and
   b. between …… mm and …… mm for ……… form of tree;

2. Total height above soil level: between 3500 mm and 5000 mm;

3. Stem diameter measured at a point one metre above the root collar: between 75 mm and 150 mm;

4. Conformation: a sturdy straight stem, with a well balanced branching head, or a well defined straight and upright leader with branches growing out from the stem with good symmetry, and a minimum length of 800 mm;

5. Root ball dimensions:
   a. Diameter: not less than 750 mm;
   b. Depth: 400 mm.
6. When container grown trees are required, grow the tree in a container not less than 750 mm in diameter and 600 mm deep.

**SLW2.M160.A SEMI-MATURE TREES**

Semi-mature trees to exhibit all the following characteristics:

1. Stem height from soil level to the lowest branch:
   a. not less than 2000 mm for trees with main tree trunk, and
   b. between …… mm and …… mm for ……… form of tree;
2. Total height above soil level: greater than 6000 mm;
3. Stem diameter measured at a point one metre above the root collar: greater than 150 mm;
4. Conformation: a sturdy, straight stem with a well balanced branching head, or a well defined straight and upright leader with branches growing out from the stem with good symmetry, and a minimum length of 1500 mm;
5. Root ball dimensions:
   a. Diameter: not less than 1200 mm;
   b. Depth: 600 mm.
6. A root system previously undercut a minimum of one year prior to lifting, to encourage compact fibrous growth.

**CONIFERS AND PALMS**

**SLW2.M210.8 CONIFERS**

Conifers to exhibit all the following characteristics:

1. A well developed upright stem and vigorous shoots with good symmetry;
2. A well-developed vigorous root system;
3. Minimum dimensions not less than those shown on the Drawings or plant schedule +300 mm, -0 mm;
4. A rootball appropriate and in proportion to the size of the plant.

**SLW2.M220.8 PALMS**

Palms to exhibit all the following characteristics:

1. A well developed, upright habit and vigorous fronds with good symmetry;
2. A well developed, vigorous root system;
3. Minimum dimensions not less than those shown on the Drawings or plant schedule +300 mm, -0 mm. Palms with multi-stems to be measured with overall height. Palms with single trunk to be measured with "Stem Height". "Stem Height" shall be measured from the root collar to the base of the growing tip;
4. A root ball appropriate and in proportion to the size of the plant.
TREE SUPPORTS ETC.

SLW2.M310.8 METAL STAKES
1. Material: mild steel angle, size: 30 mm x 30 mm x 3.5 mm thick;
2. Length: as specified in the table to SLW2.W420 ±50 mm;
3. With 5 mm to 10 mm diameter hole drilled 40-45 mm from the top;
4. Finish: Approved paint, applied prior to installation, with one coat primer and one black top coat;
5. Protective caps: black plastic or neoprene cap, min. 25 mm deep to fit tightly on top of metal stake.

SLW2.M320.8 BAMBOO STAKES
Open ends of bamboo stakes to be sealed with Approved sealant. No stagnant water should be found inside or outside of the stakes:
1. Bamboo stakes for whips to be 35 mm diameter poles, length as specified in the table to SLW2.W420;
2. Bamboo stakes for light standard, standard trees, palms and conifers (up to 2.5 m overall height) to be 50 mm diameter poles, length as specified in the table to SLW2.W420.

SLW2.M330.8 TIES
Tie as shown on Drawings, to be:
1. Rot-proof rope: 5 mm diameter in dark colour; and/or
2. Plastic coated wire: 3 mm overall diameter in dark colour; and/or
3. Stainless steel braided wire: 3 mm diameter with 20 mm adjustable galvanized steel screw clamp.

SLW2.M340.8 GUYS
Guys as shown on Drawings, to be:
1. Rot-proof rope: 8 mm diameter in dark colour; and/or
2. Plastic coated wire: 4 mm overall diameter in dark colour; and/or
3. Stainless steel braided wire: 4 mm diameter with 20 mm adjustable galvanized steel screw clamp.

SLW2.M350.8 GUYING TURNBUCKLES
Turnbuckles and associated fittings to be stainless steel. Turnbuckles to be not less than 100 mm long. The specified length excludes any attached fittings, or adjusting screws.

SLW2.M360.8 GUYING STAKES
1. Material: galvanized mild steel angle, size: 30 mm x 30 mm x 3.5 mm thick;
2. With 5 mm to 10 mm diameter hole drilled 40-45 mm from the top prior to galvanizing.

SLW2.M365.8 UNDERGROUND GUYING SYSTEM
Underground Guying System (Option 1), to be:
1. Flexible nylon straps with ratchet tensioner: not less than 50mm width in dark colour, with 3 – 5mm dia. stainless steel anchor ring and galvanized steel ratchet tensioner;
2. Stainless steel cables: not less than 5mm diameter and 20mm adjustable galvanized steel screw clamp or stainless steel anchor ring;
3. Timber deadman: not less than 1000mm x 150mm x 50mm.

Underground Guying System (Option 2), to be:
1. Flexible nylon straps: not less than 50mm width in dark colour, with 3 – 5mm dia. stainless steel anchor ring attached to straps at both ends;
2. Stainless steel cables: not less than 5mm diameter and 20mm adjustable galvanized steel screw clamp or stainless steel anchor ring;
4. Timber deadman: not less than 1000mm x 150mm x 50mm.

**SLW2.M370.8 TRUNK PROTECTION**

Trunk protection as shown on Drawings, to be:
1. Hosing: clear unplasticised polyvinyl chloride (uPVC) plastic hosing, 10 mm diameter; and/or
2. Rubber: 2 mm thick 150 mm wide rubber pad, long enough to wrap twice round the trunk.

**SLW2.M380.8 EYE BOLTS**

Eye bolts to be stainless steel with:
1. 70 mm overall length;
2. Threaded shank;
3. 15 mm diameter eye.

**SLW2.M390.8 ROOT BARRIERS AROUND TREE PITS**

Root barriers to be 5 mm thick copper lined root resistant bitumen membrane, or Approved proprietary type:
1. Depth: depth of tree pit below paving level less 100 mm;
2. Diameter: as for tree pit.

**LABELS**

**SLW2.M410.8 LABELS FOR USE**

Labels to be as SLW1.M410 for each type of tree.

**SLW2.M420.8 LABELS FOR STOCK**

Supply additional labels to the housing manager, totalling 30% of those provided above and name on a pro-rata basis.

**SLW2.M430.8 SECURING TREES IN PLANTERS WITH CONCRETE BASES**

1. Guy each tree with 4 No. guys, as SLW2.M340, fixed to tree trunk immediately above the lowest branch;
2. Tie each guy through an eye bolt, as SLW2.M380, drilled and plugged into the inner face of the planter walls 100mm below coping and tighten each end with a galvanized fastener;

3. Tension guys with turnbuckles, as SLW.2.M350, inserted 200mm from the eye bolt;

4. Ensure all guys are of an equal angle to the horizontal, sufficient to hold the tree firm.
WORKMANSHIP

GENERAL

SLW2.W010.8 GENERAL PLANTING REQUIREMENTS
Read this Worksection in conjunction with the appropriate clauses in Worksection SLW1.

NOTCH PLANTING

SLW2.W110.8 SEEDLING TREES
1. Form notch, using a hand held pick or spade, deep enough to accommodate the root of the plant;
2. Place the plant upright in the notch and take care to keep the soil and root intact;
3. Firm the plant in the ground with the shoot upright.

SLW2.W120.8 WHIPS
Unless specified otherwise on the Drawings or plant schedule:
1. Form notch, using a hand held pick or spade, deep enough to accommodate the root of the plant;
2. Place the plant upright in the notch and take care to keep the soil and root intact;
3. Firm the plant in the ground with the shoot upright.

PIT PLANTING

SLW2.W210.8 LIGHT STANDARD, STANDARD AND HEAVY STANDARD TREES, CONIFERS AND PALMS
Plant light standard, standard and heavy standard trees, conifers and palms in accordance with the following procedure and sequence:
1. Dig tree pit to size specified in SLW2.W250;
2. Soak rootball;
3. Fork over base of tree pit to a depth of 150 mm;
4. Prepare backfill material, adding and mixing in fertilizer as SLW2.W310, backfill base in layers and firm in to adjust planting depth;
5. Remove rootball covering, place tree, adjust orientation of the crown and check planting depth, adjusting as necessary;
6. Fix vertical stakes as SLW2.W420;
7. Tie tree to stakes;
8. Backfill in layers, firming in each layer with heel and water thoroughly;
9. Adjust tree ties;
10. Water again and continue to water as required.
SLW2.W220.8 SEMI-MATURE TREES

Plant semi-mature trees in accordance with the following procedure and sequence:

1. Dig tree pit to size specified in SLW2.W250;
2. Soak rootball;
3. Fork over base of tree pit to a depth of 150 mm;
4. Prepare backfill material, adding and mixing in fertilizer as SLW2.W310, backfill base in layers and firm in to adjust planting depth;
5. Remove rootball covering, place tree, adjust orientation of the crown and check planting depth, adjusting as necessary;
6. Fix guying stakes as SLW2.W420;
7. Secure trees with guys as SLW2.W420;
8. Backfill in layers, firming in each layer with heel and water thoroughly;
9. Water again and continue to water as required.

SLW2.W230.8 PLANTING IN PAVED AREAS

Where trees are planted in paved areas, carefully lift any tree grilles, lay them aside and:

1. Excavate tree pit, 900 mm deep, to the full area of the tree grille and expose the surface of aggregate layer over existing land drain at the base;
2. Carry out a water percolation test to check the functioning of the subsoil drain by filling the pit fully with water. If water does not drain away immediately or within 1 working day inform the CM;
3. Complete planting operations specified in this Worksection appropriate to the tree being planted and compact backfill to finish 75 mm below adjacent paving level;
4. Place a filter layer, as EXT13.M110, over the entire pit area tucking all edges into the soil;
5. Lay 50 mm of gravel, as SLW1.M440;
6. Transport from store on the estate, if necessary, and carefully replace tree grilles previously set aside, flush with the surrounding kerb or paving;
7. Fill the interstices and around the base of the trunk as shown on Drawings, with pea gravel, as SLW1.M430, or gravel as SLW1.M440.

SLW2.W240.8 BACKFILLING WITH DG

Where excavated soil is DG as Worksection EXT12, mix it with soil conditioner to form fabricated soil as EXT12.M310.

SLW2.W250.8 TREE PIT DIMENSIONS

Plant trees in pits 300 mm larger than the rootball or in accordance with the following table whichever is the greater except where planted in tree grilles (see SLW2.W230).

<table>
<thead>
<tr>
<th>Type of tree</th>
<th>Size of Pit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Light Standard, Standard, Conifers and</td>
<td>750 mm diameter x 600 mm deep</td>
</tr>
<tr>
<td>Palms</td>
<td></td>
</tr>
<tr>
<td>Heavy Standard</td>
<td>900 mm diameter x 750 mm deep</td>
</tr>
<tr>
<td>Semi-mature</td>
<td>1500 mm diameter x 900 mm deep</td>
</tr>
</tbody>
</table>
**FIXING ROOT BARRIERS**

Where indicated on Drawings fix root barrier, as SLW2.M390, in tree pits so that top edge finishes at underside of paving or tree grille level and bottom edge finishes 100 mm above bottom drainage layer of tree pit. Before fixing fully bond 100 mm minimum side laps by torching in accordance with manufacturer's instructions.

**FERTILIZING**

**APPLICATION OF FERTILIZER**

1. Apply slow release fertilizer, as SLW1.M110, in accordance with the following table:

<table>
<thead>
<tr>
<th>Type of tree</th>
<th>Amount per tree</th>
<th>Application</th>
</tr>
</thead>
<tbody>
<tr>
<td>Seedling trees</td>
<td>25 gm</td>
<td>Spread around each notch.</td>
</tr>
<tr>
<td>Small Conifers and Palms</td>
<td>50 gm</td>
<td>Mix with the backfilling soil.</td>
</tr>
<tr>
<td>Whips</td>
<td>50 gm</td>
<td>Mix with the backfilling soil or around the notch.</td>
</tr>
<tr>
<td>Light Standard trees</td>
<td>Note 1</td>
<td>Mix with the backfilling soil.</td>
</tr>
<tr>
<td>Standard trees, Medium Conifers and Palms</td>
<td>Note 1</td>
<td>Mix with the backfilling soil.</td>
</tr>
<tr>
<td>Heavy Standard trees, Large Conifers and Palms</td>
<td>Note 1</td>
<td>Mix with the backfilling soil.</td>
</tr>
<tr>
<td>Semi-mature trees</td>
<td>Note 1</td>
<td>Mix with the backfilling soil.</td>
</tr>
</tbody>
</table>

Note 1: Mix 0.5 kg of fertilizer with every m³ of backfilling soil.

2. Application of spent mushroom compost (SMC) as fertilizer
   a. Apply SMC as fertilizer, as SLW1.M135, in accordance with the following dosage:
      i. Add and mix SMC at a dose of 2% by volume to the top 30mm soil depth.

**SUPPORTING TREES**

**STAKES**

Drive vertical stakes firmly into the base of the pit prior to planting the tree; after planting fit protective caps as SLW2.M310 (5) on top of metal stakes.

**SECURING TREES - GENERAL**

Secure trees in accordance with the following table, passing ties and guys through trunk protection as SLW2.M370 to prevent trunk and branches being chafed or cut:

<table>
<thead>
<tr>
<th>Type of tree</th>
<th>No. of stakes</th>
<th>Type of support</th>
<th>Method of fixing</th>
</tr>
</thead>
<tbody>
<tr>
<td>Whips</td>
<td>1</td>
<td>Bamboo stake as SLW2.M320</td>
<td>Two-thirds the height of the plant. When driven into the ground one-third of its height</td>
</tr>
</tbody>
</table>
Light Standard and Standard Trees; Palms and Conifers (up to 2.5 m high)  |  2  |  Metal stake as SLW2.M310 |  1800 mm long, 300 mm from either side of the trunk. Drive into the ground to a depth of 900 mm with the point of the 'V' toward the tree. Stakes angled out at the top by approx. 15°. Ties as SLW2.M330.

Bamboo stake as SLW2.M320 |  3  |  1500 mm long, securely tied with 'scaffold tie' to form a tripod not exceeding 60% of the overall height of the plant.

Heavy Standard Trees; Palms and Conifers (over 2.5 m high)  |  3  |  Metal stake as SLW2.M310 |  As for Standard etc. but 2000 mm long, 600 mm from either side of the trunk. Drive into the ground to a depth of 1100 mm

Semi-mature Trees  |  3  |  Guys as SLW2.M340; Guying turn buckles as SLW2.M350; Guying stakes as SLW2.M360 |  Drive 900 mm long guying stakes 750 mm into the ground fix guys with turnbuckles to tree trunk immediately above the lowest branch and tie to each guying stake

SLW2.W430.8 SECURING TREES IN PLANTERS WITH CONCRETE BASES

1. Guy each tree with 4 No. guys, as SLW2.M340, fixed to tree trunk immediately above the lowest branch;
2. Tie each guy through an eye bolt, as SLW2.M380, drilled and plugged into the inner face of the planter walls 100 mm below coping and tighten each end with a galvanized fastener;
3. Tension guys with turnbuckles, as SLW2.M350, inserted 200 mm from the eye bolt;
4. Ensure all guys are of an equal angle to the horizontal, sufficient to hold the tree firm.

SLW2.W440.8 SECURING HEAVY STANDARD AND SEMI-MATURE TREES IN PAVED AREAS AND PODIUM PLANTERS

Submit detailed proposals and shop drawings for underground guying (Option 1 or 2) for Approval.

LABELLING

SLW2.W510.8 FIXING LABELS

1. Attach one label to each tree of Light Standard size and above at a height of 1500 mm above ground level;
2. Attach one label to each separate species in each plant bed for seedlings and whips;
3. Attach labels with dark coloured plastic coated wire and stainless steel coil spring protected with plastic covering;
4. Do not injure the tree.
SLW3  GROUND COVER, SHRUBS, CLIMBERS AND BAMBOOS

MATERIALS

GENERAL

SLW3.M010.8  GENERAL PLANTING REQUIREMENTS
Read this Worksection in conjunction with the appropriate clauses in Worksection SLW1.

PLANTS

SLW3.M110.8  SPECIES
Plant species are as shown or scheduled on the Drawings.

SLW3.M120.8  GROUND COVER PLANTS
Ground cover plants to exhibit all the following characteristics:
1. Well developed vigorous shoots, no fewer in number than specified on the Drawings or plant schedules;
2. A well-developed vigorous root system;
3. Minimum dimensions not less than those specified on the Drawings or plant schedule +50 mm, -0 mm;
4. Grown in a container not less than 125 mm in diameter and 150 mm deep.

SLW3.M130.8  SMALL SHRUBS
Small shrubs to be seedlings or rooted cuttings exhibiting all the following characteristics:
1. A minimum of three, one year old vigorous shoots with a well balanced shape;
2. A well-developed, vigorous root system;
3. Minimum dimensions not less than those specified on the Drawings or plant schedule +100 mm, -0 mm;
4. Grown in a container not less than 125 mm in diameter and 150 mm deep.

SLW3.M140.8  LARGE SHRUBS
Large shrubs to be transplanted seedlings or rooted cuttings exhibiting all the following characteristics:
1. Pruned to encourage bushiness with a minimum of three vigorous, one year old shoots, well furnished to produce a diameter two thirds that of the height;
2. A well-developed, vigorous root system;
3. Minimum dimensions not less than those specified on the Drawings or plant schedule +200 mm, -0 mm;
4. Grown in a container not less than 200 mm in diameter and 250 mm deep.

**SLW3.M150.8 CLIMBERS**

Climbers to exhibit all the following characteristics:
1. A minimum of four vigorous shoots not less than 600 mm long, except when specified otherwise on the Drawings or plant schedule;
2. A well developed vigorous root system;
3. Grown in a container not less than 200 mm in diameter and 250 mm deep.

**SLW3.M160.8 BAMBOOS**

Bamboos to exhibit all the following characteristics:
1. A minimum of four vigorous shoots not less than 600 mm long, except when specified otherwise on the Drawings or plant schedule;
2. A well developed vigorous root system;
3. Grown in a container not less than 125 mm in diameter and 150 mm deep.

**SUPPORTS**

**SLW3.M210.8 STAKES**

Stakes to be bamboo poles:
1. For general use:
   a. Diameter: 15 mm;
   b. Length: height of plant to be supported +50% in the ground.
2. As intermediate fixings where non self-clinging climbers are placed between columns of pergolas:
   a. Diameter: 25 mm;
   b. Length: height of pergola above ground +300 mm.

**SLW3.M220.8 TIES**

1. Ties to be either:
   a. 3 mm diameter, bitumen impregnated, rot-proof string; or
   b. 2 mm diameter, dark coloured plastic coated wire.
2. Do not use nylon string or plastic strapping.

**SLW3.M230.8 CLIMBER WIRES**

Climber wires to be 3 mm diameter, braided, stainless steel wire, with a clear plastic coating and galvanized clamps.

**SLW3.M240.8 TURNBUCKLES**

Turnbuckles and associated fittings to be stainless steel. Turnbuckles to be not less than 80 mm long. The specified length excludes any attached fittings, or adjusting screws.
SLW3.M250.8  TRUNK PROTECTION
Trunk protection to comprise 10 mm diameter clear unplasticized polyvinyl chloride (uPVC) hosing.

SLW3.M260.8  GUYING STAKES
1. Material: galvanized mild steel angle;
2. Size: 25 mm x 25 mm x 5 mm thick and 900 mm long;
3. With 5 mm to 10 mm diameter hole drilled 30 mm from top prior to galvanizing.

SLW3.M270.8  HORSESHOE NAILS
Horseshoe nails to be 25 mm long, galvanized, mild steel nails, horseshoe shaped and pointed at both ends, suitable for hammering into timber.

SLW3.M280.8  EYE BOLTS
Eye bolts to be stainless steel with:
1. 70 mm overall length;
2. Threaded shank;
3. 15 mm diameter eye.

LABELS

SLW3.M310.8  LABELS FOR USE
Provide plant labels as SLW1.M410, one label per species per plant or one label per 50 m² of planting as Instructed.

SLW3.M320.8  LABELS FOR STOCK
Supply additional labels to the housing manager, totalling 30% of those provided above and name on a pro-rata basis.
WORKMANSHIP

PLANTING GENERALLY

SLW3.W010.8  SEQUENCE AND GENERAL PROCEDURE
1. Prepare plants in the nursery and plant beds just prior to planting in accordance with Worksection SLW1;
2. Soak rootball;
3. Set out the plant spacing in accordance with the plant schedule or drawing;
4. Excavate the planting hole to the dimensions given at SLW3.W020;
5. With the exception of climbing plants and other plants tied to climber wires or columns, as SLW3.W110 to SLW3.W130, drive in a single support stake so as to leave two thirds of its height above finished ground level;
6. Remove the plant from its container and place it in the hole, spreading the roots as necessary and checking and adjusting the planting depth if required;
7. Tie the plant to its support stake, if one has been provided;
8. Backfill the hole and firm in the plant;
9. Thoroughly water in the plant and mulch to the depths specified at SLW3.W310;
10. Continue watering as SLW1.W520.

SLW3.W020.8  PLANTING HOLE SIZES
Excavate hole to the same depth as the rootball and:
1. For ground cover, small shrubs and climbers, to a diameter 100 mm greater than that of the rootball;
2. For large shrubs and bamboos, to a diameter 150 mm greater than that of the rootball.

SLW3.W030.8  CLIMBERS
Plant as SLW3.W010, at a distance of 150 mm from the structure which is to lend support.

SLW3.W040.8  BARE ROOTED PLANTS
Plant generally as SLW3.W010 but spread out the roots evenly and, as backfilling proceeds, lightly shake the plant to ensure that the soil penetrates between the roots.

SLW3.W050.8  PLANTING IN GRASS AREAS (EXISTING OR NEW)
Plant as SLW3.W010 to SLW3.W040 except:
1. Fork over base of hole in existing grass areas; and
2. Finish top of mulch level with soil level of surrounding grass.

SLW3.W060.8  PLANTING SHRUBS AND GROUND COVERS
Plant generally as SLW3.W010 but in staggered pattern, or as specified in Plant Schedule.
Option 1

SUPPORTING PLANTS OTHER THAN CLIMBERS

SLW3.W105.8 NON-CLIMBER SUPPORTS

Support plants whose natural habit is to be upright and cannot initially stand upright or which may be blown down by strong winds with a single bamboo stake as SLW3.M210 (1). Drive support into the ground so as to leave two thirds of its height above finished ground level and loosely attach the plant to the stake with ties as SLW3.M220.

SUPPORTING NON-SELF-CLINGING CLIMBERS

SLW3.W110.8 FIXING TO WALLS

For each support:

1. Fix the top of each of 3 no. of the climbing wires, 150 mm apart with a galvanized screw clamp to an eye bolt, plugged and screwed securely into the wall at a height of 3000 mm above the soil level, unless otherwise instructed;

2. Secure the bottom of each wire via a turnbuckle:
   a. To either an eyebolt plugged and screwed securely into the wall at a height of 200 mm above soil level;
   b. To the hole at the top of a guying stake driven firmly 450 mm into the ground at a distance of 300 mm from the wall.

3. Use 20 mm screw clamps for all fixings;

4. Tension wires by adjusting the turnbuckle;

5. After planting the climber, remove all nursery restraining ties and carefully turn the plant around the wire supports with the leading shoots trained upwards;

6. Loosely attach the climber to the supports with ties, as SLW3.M220.

SLW3.W120.8 FIXING TO PERGOLA COLUMNS

Where columns are in or immediately adjacent the plant bed, loosely attach the climber to the column with ties as SLW3.M220.

SLW3.W130.8 FIXING TO WIRE SUPPORTS ON PERGOLAS

For each support:

1. Securely fix the top of each of 3 no. of the climbing wires to the top of the timber slats, using horseshoe nails;

2. Secure the bottom of each wire via a turnbuckle:
   a. To either an eyebolt screwed into the support column of the pergola 200 mm above soil level; or
   b. To the hole at the top of a guying stake driven firmly 450 mm into the ground, in an adjoining planter, as close to the pergola as possible;

3. After planting the climber, remove all nursery restraining ties and carefully turn the plant around the wire supports with the leading shoots trained upwards;

4. Loosely attach the climber to the supports with ties, as SLW3.M220.
GROUND COVER, SHRUBS, CLIMBERS AND......

SLW3.W140.8 FIXING TO BAMBOO STAKES
1. Drive bamboo stakes, as SLW3.M210 (2), 300 mm into the ground and tie against the top of the pergola;
2. After planting the climber, remove any nursery retaining ties and carefully turn the plant around the bamboo stake with the leading shoots trained upwards;
3. Loosely attach the climber to the wire supports with ties as SLW3.M220.

FERTILIZING

SLW3.W210.8 RATES OF APPLICATION
Thoroughly mix fertilizer, as SLW1.M110, into the backfilling soil, at the following rates:
1. 50 g per plant for shrubs, climbers, and bamboos;
2. 20g per ground cover plant

Option 1
1. Rates of Application of spent mushroom compost (smc)
   a. Apply SMC as fertilizer, as SLW1.M135, in accordance with the following dosage:
      i. Add and mix SMC at a dose of 2% by volume to the top 30mm soil depth.

MULCHING

SLW3.W310.8 MULCHING DEPTHS
Apply mulch immediately after watering in, to the following depths:
1. 25 mm on all planting areas, except grassed area.

LABELLING

SLW3.W410.8 FIXING LABELS
1. Use one label, as SLW1.M410, per species per plant bed, or one label per 50 m² of species planting as Instructed;
2. Attach each label with 1 mm diameter, dark coloured, plastic coated wire 50 mm from the top of a 25 mm diameter bamboo pole, of the following lengths applicable to plant type:

<table>
<thead>
<tr>
<th>Plant Type</th>
<th>Length of Pole</th>
<th>Height above Soil Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ground cover</td>
<td>300 mm</td>
<td>150 mm</td>

<td>500 mm</td>
</tr>
</tbody>
</table>

3. Attach labels direct to climbers.
SLW4 HERBACEOUS PLANTS

MATERIALS

PLANTS AND SEEDS

SLW4.M010.8 SPECIES
Species are as shown or scheduled on the Drawings.

SLW4.M020.8 DEFINITIONS
1. Bulbs: modified shoot consisting of a small fleshy disk-like stem bearing a spherical mass of fleshy leaves above the developing adventitious root system;
2. Corms: solid swollen part of the stem at or near ground level that produces a bud at its apex;
3. Tubers: swollen underground branch, roundish in shape with buds or 'eyes' from which new plants are produced.

SLW4.M030.8 BULBS
Bulbs to be firm with good vigorous root system and free from rot.

SLW4.M040.8 CORMS
Corms to be firm with strong healthy bud, vigorous root system and free from rot.

SLW4.M050.8 TUBERS
Tubers to be firm with six 'eyes' minimum, strong root system and free from rot.

SLW4.M060.8 HERBACEOUS PLANTS
Herbaceous plants to exhibit all the following characteristics:
1. Number of shoots as specified on the Drawings or plant schedule;
2. Strong vigorous growth;
3. Strong vigorous root system;
4. Not pot bound;
5. Grown in pots, minimum size 150 mm diameter x 100 mm deep;
6. Size(s): as shown on Drawings or plant schedule +150 mm -0 mm.

STAKE TIES

SLW4.M110.8 TIES
Ties to be bitumen impregnated jute string:
1. Type: as Approved;
2. Colour: dark colour.
WORKMANSHIP

GENERAL

SLW4.W010.8 GENERAL PLANTING REQUIREMENTS
Read this Worksection in conjunction with the appropriate clauses in Worksection SLW1.

SLW4.W020.8 PLANTING PROGRAMME
Sow or plant herbaceous plants during the appropriate season for the species specified whether during the Planting or Establishment Periods as applicable.

SLW4.W030.8 PLANTING IN SHRUB BEDS
Plant herbaceous plants after shrubs ensuring shrubs are not disturbed or damaged during herbaceous planting operations.

SLW4.W040.8 PLANTING IN GRASSED AREAS
Plant herbaceous plants either:
1. Before grassed area is sown; or
2. After a suitable sward has been established.

SOWING SEEDS

SLW4.W110.8 BROADCAST SOWING
Broadcast seeds evenly at the rate of 30 gm/m² over the areas shown on the Drawings.

PLANTING

SLW4.W210.8 BULBS, CORMS AND TUBERS
1. Randomly scatter bulbs, corms or tubers by hand over previously prepared soil in locations shown on the Drawings;
2. Dig holes where bulbs, corms or tubers have landed between 50 mm and 100 mm deep, depending on species being planted, and 100 mm in diameter;
3. Place bulb, corm or tuber the right way up on the bottom of the hole and backfill with previously excavated soil.

SLW4.W220.8 HERBACEOUS PLANTS
1. Plant herbaceous plants in holes in previously prepared soil;
2. Dig holes to depth of rootball, or root system if bare-rooted and to a diameter 100 mm greater than rootball diameter or root spread;
3. Secure to stakes, as SLW3.M210, where necessary with tie;
4. Place plants on the bottom of the hole and spread roots where bare without damage and backfill with previously excavated soil.
SLW5  AQUATIC PLANTS

MATERIALS

AQUATIC PLANTS

SLW5.M010.8  PLANTS
Plant species as shown or scheduled on the Drawings and exhibiting all the following characteristics:
1. Grown in pots but not pot bound;
2. Strong vigorous growth;
3. Be capable of maintaining strong vigorous growth for twelve months before requiring repotting or potting on;
4. Tolerance on size(s) shown on Drawings: +150 mm, -0 mm.

PLANTING MATERIALS

SLW5.M110.8  PLANTING MEDIUM
Planting medium comprises DG, as EXT12.M120, with a high plastic clay content thoroughly mixed with:
1. 20% by volume of animal manure compost as, EXT12.M240; and
2. 50% bone-meal to 50% dried blood mix fertilizer added at a rate of 250 g/m³ of planting medium.

SLW5.M120.8  GRASS SODS
Grass sods to be 20 mm thick x 200 mm square with a well developed fibrous root system.

SLW5.M130.8  HESSIAN
Natural woven jute, brown in colour and of a type used in the manufacture of sacks.

CONTAINERS AND SUPPORTS

SLW5.M210.8  UNGLAZED FIRECLAY CONTAINERS
1. Sound and free from cracks, chips etc.;
2. Of matching colour, preferably natural;
3. With adequate drainage holes in base;
4. With a depth to diameter ratio appropriate for plant species to be contained and as follows, in all situations pot depth to be greater than diameter.

<table>

</tr>
<tr>
<td><strong>Other species as shown on drawing</strong></td>
<td>As shown on drawing</td>
</tr>
</tbody>
</table>

**SLW5.M220.8 PLASTICS MESH CONTAINERS**
1. Open mesh, bread and laundry basket pattern;
2. Colour: dark colour;
3. Shape: rectangular, circular or oval;
4. Minimum size: suitable for the species and plant size being contained but not less than:
   a. 450 mm diameter x 300 mm deep for circular containers;
   b. 500 mm x 400 mm x 300 mm deep for rectangular and oval containers.

**SLW5.M230.8 WIRE MESH CAGES**
Wire mesh cages to be made from galvanized mild steel expanded metal, not more than 2 mm thick with 10 mm x 10 mm or 5 mm x 20 mm slot pattern.

**SLW5.M240.8 CONTAINER SUPPORTS**
Container supports to be either:
1. Upturned fireclay pots of same diameter as containers being supported; or
2. Precast concrete blocks of same size as containers being supported.

**ANCILLARY MATERIALS**

**SLW5.M310.8 BALLAST**
Ballast to be clean rounded stone, evenly graded in the size range 30 - 75 mm diameter.

**SLW5.M320.8 TIES**
Ties to be bitumen impregnated jute string:
1. Type: as Approved;
2. Colour: dark colour.
WORKMANSHIP

GENERAL

SLW5.W010.8  GENERAL PLANTING REQUIREMENTS
Read this Worksection in conjunction with the appropriate clauses in Worksection SLW1.

SLW5.W020.8  PLANTING PROGRAMME
Plant no more than two days prior to pool being filled with water.

SLW5.W030.8  SOAKING PLANTS
Keep plants thoroughly soaked at all time prior to being submerged or placed in the pool.

PLANTING, SUPPORT AND PROTECTION

SLW5.W110.8  PLANT BOX FILLING
Fill in-situ plant boxes with planting medium as SLW5.M110, to a depth of 50 mm below lip of box.

SLW5.W120.8  PLANTING IN PLANT BOXES
Plant into in-situ plant boxes while the pool is empty. Remove plants from their pots and plant as follows:
1. In holes previously prepared in planting medium to a depth of the rootball. Diameter to be 100 mm greater than rootball diameter;
2. Place plants the right way up on the bottom of the hole and spread roots, where bare, without damaging and backfill with previously excavated soil;
3. Secure to stake, as SLW3.M210, where necessary with tie.

SLW5.W130.8  PLANTING IN FIRECLAY CONTAINERS
1. Place a broken rock or flat stone over drainage hole in base of container;
2. Place a layer of planting medium, as SLW5.M110, over base;
3. Position plant centrally in container and backfill with planting medium, as SLW5.M110 firmed down around plant;
4. Fill to a depth 50 mm below container lip;
5. Secure to a stake, as SLW3.M210, where necessary with a tie, as SLW5.M320.

SLW5.W140.8  PLANTING IN PLASTICS MESH CONTAINERS
1. Line container with a double layer of hessian, as SLW5.M130, folding the top level with basket lip and overlapping by 75 mm;
2. Place grass sods, as SLW5.M120, tightly around the base and sides of baskets with grass facing inwards;
3. Place a layer of planting medium over base of container;
4. Position plant centrally in container and backfill with planting medium firmed down around plant;
5. Fill to a depth 50 mm below basket lip after settlement;
6. Secure to a stake, as SLW3.M210, where necessary with a tie, as SLW5.M320.

**SLW5.W150.8 PLACING CONTAINERS**

Place containers on supports, as SLW5.M240, at a level to ensure tops of containers are at the depths below water level as follows:

<table>
<thead>
<tr>
<th>Species</th>
<th>Depth below water level (mm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cyperus alternifolius</td>
<td>at water level</td>
</tr>
<tr>
<td>Nelumbo nucifera</td>
<td>50 - 100 mm</td>
</tr>
<tr>
<td>Nymphaea Spp.</td>
<td>300 - 500 mm</td>
</tr>
<tr>
<td>Other species as shown on drawing</td>
<td>As shown on drawing</td>
</tr>
</tbody>
</table>

**SLW5.W160.8 BALLAST COVER**

After planting and before filling the pool with water, cover all planting medium with a 50 mm deep layer of ballast as SLW5.M310. Take care not to damage plants.

**SLW5.W170.8 WIRE MESH CAGES**

After placing containers in final positions and filling the pool with water surround each group of containers or large individual containers with a wire mesh cage, as SLW5.M230, that:

1. Is constructed to form a circle or oval shape as appropriate with ends lapped by 50 mm and securely fastened together with galvanized wire;
2. Protrudes a minimum of 50 mm above water level and is bent through 90° at the base to form a 100 mm plinth;
3. Is a distance from the plant to permit development and floating leaves to fully expand as follows:

<table>
<thead>
<tr>
<th>Species</th>
<th>Distance from Container Edge to Edge of Cage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cyperus alternifolius</td>
<td>300 mm</td>
</tr>
<tr>
<td>Nelumbo nucifera</td>
<td>300 mm</td>
</tr>
<tr>
<td>Nymphaea Spp.</td>
<td>1000 mm - 1500 mm</td>
</tr>
<tr>
<td>Other species as shown on drawing</td>
<td>As shown on drawing</td>
</tr>
</tbody>
</table>
SLW6 INDOOR PLANTS

MATERIALS

GENERAL

SLW6.M010.8 GENERAL PLANTING REQUIREMENTS
Read this Worksection in conjunction with the appropriate clauses in Worksection SLW1.

PLANTS

SLW6.M110.8 GENERAL
Plants must exhibit the following characteristics:
1. Not pot bound;
2. Capable of at least 12 months healthy, vigorous growth before requiring repotting or potting on.

SLW6.M120.8 ARTIFICIAL PLANTS
Obtain artificial plants from an Approved supplier subject to individual Approval and exhibiting the following characteristics:
1. Man-made, densely leafed with flowers and foliage of colour-fast silk or polyester appearing in colour, texture, form and habit like a real version of the species stated on the Drawings or plant schedule;
2. With real, preserved trunks and stems, free from insects and fungus;
3. Multi-stemmed when appropriate to the species stated on the Drawings or plant schedule;
4. With all leaves, flowers, stems, trunks and branches securely fixed;
5. Set in appropriately sized pots, entirely filled with dark brown coloured concrete, or an Approved equivalent without leaving a protruding lip.

POTS

SLW6.M210.8 PLAIN EARTHENWARE
Plain earthenware pots to be unglazed fireclay:
1. Sound and free from cracks, chips etc.;
2. Of matching colour;
3. With adequate drainage holes in the base;
4. With a depth to diameter ratio, appropriate to the plant it is intended to contain, but in any case greater than 1.
**INDOOR PLANTS**

**SLW6 > MATERIALS**

---

**SLW6.M220.8  DRAGON POTS**
Dragon pots used for individual feature plants to be:
1. True to type and of matching design;
2. Sound and free from cracks, chips etc.;
3. Colour: brown;
4. With adequate drainage holes in the base;
5. Size: 500 mm high x 510 mm diameter.

**PLANTING MATERIALS**

**SLW6.M310.8  POTTING COMPOST**
An Approved proprietary potting compost suitable for the species concerned.

**SLW6.M320.8  POT DRAINAGE LAYER**
Any of the following:
1. Clean pea gravel, as SLW1.M430;
2. Broken fireclay;
3. An Approved equivalent.

**SLW6.M330.8  PLANT BOX DRAINAGE LAYER**
Aggregate, as EXT13.M010.

**SLW6.M340.8  FILTER LAYER**
As EXT13.M110.

**ANCILLARY MATERIALS**

**SLW6.M420.8  WIRE NETTING**
Galvanized steel with a mesh size of 25 mm.

**SLW6.M430.8  WOOD CHIP MULCH**
As SLW1.M310.

**SLW6.M440.8  SURFACE COVER**
To artificial plant beds:
1. Type: wood chip mulch as SLW1.M310;
2. Thickness: 100 mm ±5 mm.
WORKMANSHIP

POTTING

SLW6.W010.8 GENERAL
Cultivate indoor plants in potting compost appropriate to the species concerned.

SLW6.W020.8 DRAINAGE LAYER
Lay a drainage layer, as SLW6.M320, in each pot to the following depths.

<table>
<thead>
<tr>
<th>Diameter of Pot (mm)</th>
<th>Depth of Drainage Layer (mm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>75 - 150</td>
<td>15</td>
</tr>
<tr>
<td>175 - 300</td>
<td>25</td>
</tr>
<tr>
<td>Over 300</td>
<td>35</td>
</tr>
</tbody>
</table>

SLW6.W030.8 PLANTING
Fill pot to level of the base of the rootball with compost, place the plant and fill the remainder of the pot with compost to within 15 mm of the rim, firming as necessary.

PLANTING IN PLANT BOXES

SLW6.W110.8 DRAINAGE LAYER
Lay aggregate, as SLW6.M330 to a depth of 100 mm in each plant box and cover with filter layer.

SLW6.W120.8 SOILING
Fill planting boxes with fabricated soil, as EXT12.M310, to a level 75 mm below the top of the box.

SLW6.W130.8 PLANTING
As shown on Drawing, place all plants in the planters in their pots, keeping the rim of each pot level with the soil surface in the plant box, and/or remove plants from pots and place in holes of appropriate size excavated in the plant box filling, ensuring that the soil level adjacent to the plant remains unchanged.

SLW6.W140.8 FERTILIZING
Apply fertilizer, as SLW1.M110, at the following rates (±5%):

<table>
<thead>
<tr>
<th>Type of Plant</th>
<th>Rate of Application</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ground Cover and Herbaceous Plants</td>
<td>15 g per plant</td>
</tr>
<tr>
<td>Shrubs, Climbers and Bamboos</td>
<td>20 g per plant</td>
</tr>
<tr>
<td>Conifers and Whips</td>
<td>20 g per tree</td>
</tr>
<tr>
<td>Light Standard Trees</td>
<td>80 g per tree</td>
</tr>
<tr>
<td>Standard Trees and Palms</td>
<td>100 g per tree</td>
</tr>
</tbody>
</table>
Option

1. Fertilizing with spent mushroom compost (SMC)
   a. Apply SMC as fertilizer, as SLW1.M135, in accordance with the following dosage:
      i. Add and mix SMC at a dose of 2% by volume to the top 30mm soil depth.

SLW6.W160.8 MULCHING
Apply wood chip mulch, as SLW1.M310, to a depth of 50 mm ±5 mm.

ARTIFICIAL PLANTS

SLW6.W210.8 PLANT BEDS
1. Place plant pots securely in beds and fill to a level 125 mm below the top with aggregate, as EXT13.M010;
2. Where the depth of the plant bed is greater than that of the plant pot, adjust the height by placing the pot on appropriately sized, upturned empty pots before placing the aggregate.

SLW6.W220.8 SECURING PLANTS
1. Cover the surface of the aggregate with wire mesh and tuck down the sides of the planter to secure the mesh in place;
2. Place artificial plants through cross-cuts in the mesh and retie the mesh securely around the stem to prevent theft.

SLW6.W230.8 SURFACE COVER
Cover the surface of plant beds with cover, as SLW6.M440.
SLW7  GRASSING

MATERIALS

SPRIGS

SLW7.M010.8  SPRIGS
Stoloniferous grass with sward / stolen / rhizome at least 150 mm long and some fibrous roots attached.

SLW7.M020.8  SPRIG SPECIES
One or a mixture of the following species unless otherwise specified:

<table>
<thead>
<tr>
<th>Scientific Name</th>
<th>Chinese Name</th>
<th>English Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cynodon dactylon</td>
<td>百慕達草</td>
<td>Bermuda grass</td>
</tr>
<tr>
<td>Cynodon dactylon x C. transvaalensis cv. Tifway</td>
<td>杂交百慕達草 (Tifway)</td>
<td>Hybrid Bermuda grass (Tifway)</td>
</tr>
<tr>
<td>Eremochloa ophiuroides</td>
<td>假儉草</td>
<td>Centipede grass</td>
</tr>
<tr>
<td>Paspalum conjugatum</td>
<td>雙耳草</td>
<td>Hilo grass</td>
</tr>
<tr>
<td>Paspalum vaginatum</td>
<td>海濱雀稗</td>
<td>Seashore Paspalum</td>
</tr>
<tr>
<td>Zoysia japonica</td>
<td>朝鮮草</td>
<td>Korean grass</td>
</tr>
<tr>
<td>Zoysia matrella</td>
<td>馬尼拉草</td>
<td>Manila grass</td>
</tr>
<tr>
<td>Chrysopogon aciculatus</td>
<td>竹節草</td>
<td>Wild Oat Grass</td>
</tr>
<tr>
<td>Other species as shown on Drawings</td>
<td>-</td>
<td>-</td>
</tr>
</tbody>
</table>

TURVES AND FIXINGS

SLW7.M110.8  TURVES
1. Grass of even density, capable of healthy growth and free from weeds, impurities, pests, fungi and disease;
2. With a sufficiently stolen / rhizome / root system to hold together when handled;
3. Minimum 300 x 800 x 25mm thick;
4. For area specified as “Sand Based Lawn”, the turves used shall be free of soil, either by:
   a. washed; or
   b. produced from sand based turf farm.
5. Certificate of sand composition used in sand base turf farm shall be provided;
6. Hybrid Bermuda grass cultivar such as Tifway; Improved Seashore Paspalum cultivars such as Salam, SeaIsles 1, 2000, Supreme and Sea Star shall be procured from certified turf farm with appropriate certificate issued by authorized representative from International Turfgrass Genetic Assurance Program (ITGAP) or equivalent.

**SLW7.M120.8 TURFES SPECIES**

Any of the following grass species:

<table>
<thead>
<tr>
<th>Scientific Name</th>
<th>Chinese Name</th>
<th>English Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>Axonopus compressus</td>
<td>地毯草 (大葉草)</td>
<td>Carpet grass</td>
</tr>
<tr>
<td>Cynodon dactylon</td>
<td>百慕達草</td>
<td>Bermuda grass</td>
</tr>
<tr>
<td>Cynodon dactylon x C. transvaalensis cv. Tifway</td>
<td>杂交百慕達草 (Tifway)</td>
<td>Hybrid Bermuda grass (Tifway)</td>
</tr>
<tr>
<td>Paspalum conjugatum</td>
<td>雙耳草</td>
<td>Hilo grass</td>
</tr>
<tr>
<td>Paspalum vaginatum</td>
<td>海濱雀稗</td>
<td>Seashore Paspalum</td>
</tr>
<tr>
<td>Paspalum vaginatum (Cultivars)</td>
<td>雜交海濱雀稗</td>
<td>Seashore Paspalum cultivars, e.g. Salam, Seaisle series and SeaStar, etc.</td>
</tr>
<tr>
<td>Eremochloa ophiuroides</td>
<td>假儉草</td>
<td>Centipede grass</td>
</tr>
<tr>
<td>Zoysia japonica</td>
<td>朝鮮草</td>
<td>Korean grass</td>
</tr>

<td>Zoysia matrella</td>
<td>馬尼拉草</td>
<td>Manila grass</td>
</tr>
<tr>
<td>Chrysopogon aciculatus</td>
<td>竹節草</td>
<td>Wild Oat Grass</td>
</tr>
</tbody>
</table>

**SLW7.M130.8 TURF PINS**

8 Standard Wire Gauge (SWG) galvanized wire bent to hairpin shape not less than 200 mm long.

**SLW7.M140.8 SECURING PEGS**

5 mm diameter, stainless steel rod, 450 mm long, with top bent over to form a 50 mm diameter loop.

**GRASS SEED**

**SLW7.M210.8 GRASS SEED MIX**

Consisting of the following species and proportions:

<table>
<thead>
<tr>
<th>Scientific Name</th>
<th>English Name</th>
<th>% by weight</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cynodon dactylon</td>
<td>Bermuda grass</td>
<td>30</td>
</tr>
<tr>
<td>Paspalum notatum</td>
<td>Bahia grass</td>
<td>60</td>
</tr>
<tr>
<td>Zoysia japonica</td>
<td>Korean lawnggrass</td>
<td>10</td>
</tr>
</tbody>
</table>
**SLW7.M220.8**  
**GERMINATION**  
Germination capacity of each constituent of the grass seed mix to be at least 80%.

**SLW7.M230.8**  
**PURITY**  
Purity of each constituent of the grass seed mix to be greater than 90%. Total pernicious weed seed content to be less than 0.5% and total content of other crop seeds to be less than 1.0%.

**SLW7.M240.8**  
**CERTIFICATION**  
Submit a certificate of testing for each species of grass seed, not less than 14 days before sowing, stating:  
1. Grass species, both Botanic and Chinese names;  
2. Date of tests (not more than 6 months prior to sowing);  
3. Percentage germination;  
4. Percentage purity.

**SLW7.M270.8**  
**GRASS SEED MIX FOR USE IN GRASS PAVING SYSTEM**  
In the locations as shown on Drawings, the grass seed mix for use in grass paving system shall comprise of the following species and proportions at a rate of 1 kg/m³, incorporated with soil mix and other constituents as per EXT12.M330:

<table>
<thead>
<tr>
<th>Mix 1</th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>

</tr>
</tbody>
</table>

**ANCILLARY MATERIALS**

**SLW7.M310.8**  
**PRE-SEEDING FERTILIZER**  
Pre-seeding fertilizer to be quick release fertilizer, as SLW1.M130.

**SLW7.M330.8**  
**SAND FOR TOP-DRESSING OR INFILLING**  
Sand for top-dressing and infilling to be graded sand, as EXT12.M235.

**SLW7.M340.8**  
**WEED-KILLER**  
Weed-killer, as SLW1.M220.
MACHINERY AND TOOLS

For areas specified as “Sand Based Lawn”, provide the following machinery and tools for both planting and establishment operation as specified in this Specification:

1. Mowing Machine
   Reel / cylinder or rotary type of mowing machine with height of cut adjustable between 25mm to 75mm in maximum 12.5mm increments; width of cut between 400mm to 600mm.

2. Aerator
   Aerator with coring / spiking width tines 75mm to 100mm apart; coring / spiking depth between 75mm to 150mm; coring / spiking with adjustable solid / hollow tines between 10mm to 20mm in diameter or otherwise specified.

3. Turf Roller
   Pull-behind or ride-on turf rolling machine designed specific for turf with minimum 750mm rolling width; minimum 450kg in full weight. Heavier roller with vibration shall be needed when instructed by the CM.

4. Verticutting Machine
   Walk behind verticutting machine or verticutting unit attached on reel type mowing machine with minimum 25mm working width; adjustable cutting depth between 10 to 50mm.

5. Spiker
   Walk behind or hand Spiker designed specific for turf with minimum 350-400mm working width and tines 75-100mm apart.

6. Spreader
   Rotary broadcast spreader designed specific for turf with minimum 350mm working width.
WORKMANSHIP

GENERAL

SLW7.W010.8 PROGRAMME
Where trees or shrubs are planted in grass areas, carry out all tree or shrub planting prior to any grassing operations.

PREPARATION

SLW7.W110.8 CULTIVATION
1. Prior to cultivation, remove all pernicious and perennial weeds, including complete root system;
2. When instructed by the CM, apply weed-killer in accordance with the manufacturer’s recommendation;
3. Cultivate areas less steep than 1:2 to a depth of 150mm and bring to a 25mm deep fine tilth by hand ranking or Approved mechanical means;
4. If necessary, carry out regrading of the surface to conform to the prescribed finished levels and create free flowing contours free from humps and water collecting hollows;
5. Final level: 25 mm above any adjacent hard surfaces.

SLW7.W120.8 CULTIVATION ON EMBANKMENTS
On embankments with slopes of 1:2 or steeper, do not cultivate the existing soil, so that the slope remains stable and erosion is prevented.

SLW7.W130.8 STONE PICKING
Remove all stones larger than 30 mm in any dimension, except on embankments of a gradient of 1:2 or greater.

SLW7.W140.8 FINISHED LEVELS
Finish levels to those indicated on the Drawings, creating free flowing contours, free from water collecting hollows and level with (+25 mm, -0 mm) adjoining hard surfaces.

SPRIGGING

SLW7.W210.8 PROGRAMME
Plant sprigs in their final positions within 48 hours of lifting.

SLW7.W220.8 CULTIVATION
Cultivate all areas, as SLW7.W110 and SLW7.W120, as appropriate. Scarify embankments, with a gradient of 1:2 or greater, to a depth of 5 mm with a hand rake to break up the surface.
APPLYING PRE-SPRIGGING FERTILIZER

Four to seven days prior to sprigging apply quick release fertilizer, as SLW1.M130, evenly at a rate of 40 g/m² and lightly rake into the soil.

WATERING

Thoroughly moisten the previously prepared soil immediately prior to sprigging using a fine spray hose attachment to avoid soil erosion and run off.

SPRIGGING

1. Lay the sprigs evenly at rates of not less than 15 bushels/100m² (approx. 27kg/100m²) on the surface until the entire area is covered;
2. Sprigs shall be laid flat on the surface and avoid protruding out;
3. Apply thin layer of top-dressing, as SLW7.M330 to cover the sprigged area; alternatively, use a disc-roller (cutting blade interval of 100mm) to roll over and press the sprigs down to the rootzone at 50-75mm deep;
4. Roll the top-dressed or roll-planted area with a flat rollers, as SLW7.M350;
5. Apply a compound fertilizer, as SLW1.M110 evenly at a rate of 20g/m²;
6. Water the sprigged area thoroughly and then cover with protective fabric as, EXT14.M240; the protective cover should be made of bio-degradable materials;
7. All sprigs delivered on Site shall be kept moist before sprigging.

POST-SPRIGGING OPERATION

1. Water the sprigged area three times per day or more depending on weather condition;
2. Remove protective fabric when new leaf blades were found emerging from the surface;
3. Fence off the sprigged area until further instruction by the CM.

RE-SPRIGGING

Where grassed areas do not show a 90% coverage 28 days after sprigging, immediately recultivate and re-sprig the areas, whether this date occurs in the Planting Period or Establishment Period.

TURFING

PROGRAMME

Lay turves in their final positions within 48 hours of lifting.

CULTIVATION

Cultivate all areas for turfing as SLW7.W110 and SLW7.W120 as appropriate. Scarify embankments, with a gradient of 1:2 or greater, to a depth of 5 mm with a hand rake to break up the surface.

APPLYING PRE-TURFING FERTILIZER

Four to seven days prior to turfing, apply quick-release fertilizer, as SLW1.M130 evenly at a rate of 40g/m² and lightly rake into the soil.
**WATERING**

Thoroughly moisten the previously prepared soil immediately prior to turfing using a fine spray hose attachment to avoid erosion and run off.

**DELIVERY AND STACKING**

Carefully unload turves and:

1. Store on cleared ground;
2. Stack not more than 1000 mm high unless palletted;
3. Do not allow turves to dry out.

**PLANKED SUPPORTS**

Transport turves from stacks to laying areas along planks laid closely side by side. Provide sufficient planks and always use to support workmen and barrows, and for access and laying.

**TURF LAYING**

Lay turves:

1. Working off planks;
2. In consecutive rows in stretcher bond to correct levels starting at near side of the area so that work proceeds over turf already laid;
3. Where necessary, lightly and evenly firm turves with approved wooden beaters, the bottom of the beaters being frequently scraped clean of accumulated soil or mud;
4. After laying, fill any gaps with top dressing, as **SLW7.M330** well brush in to fill all joints;
5. Use rollers, as **SLW7.M350** to roll the surface immediately after laying;
6. Water the grassed area thoroughly;
7. All turves delivered on Site shall be laid within 48 hours and keep moist before laying.

**SLOPES EXCEEDING 1:2**

1. Provide sufficient planks and ladders to ensure safe and efficient working;
2. Lay turves to the areas shown on the Drawings in consecutive rows either diagonally or horizontally, in stretcher bond with closely butted joints;
3. Firm as previously specified and secure each turf with one turf peg or turf pin, as appropriate, to provide a firm fixing, properly driven home, just below the surface.

**UNEVENNESS OF FINISHED LEVEL**

Adjust any unevenness in the finished level of turf as the work proceeds by lifting, raking out or infilling with graded sand as per **EXT12.M330** and replacing and refirming the turf.

**ROLLERS**

When instructed by the CM, use rollers as per **SLW7.M350** to roll the surface again until it reach an even surface to the satisfaction of the CM.
GRASSING

SLW7.W410.8  PERIMETERS
Use whole turves only and trim to clean, straight lines or regular curves as shown on Drawings.

SLW7.W420.8  TURF JOINTS
When instructed by the CM, refill the gaps with top dressing, as SLW7.M330 well brush in to level the surface to the satisfaction of the CM and water in carefully with a fine spray hose.

SLW7.W430.8  SHRINKAGE
Should shrinkage occur, fill the open joints with graded sand, as EXT12.M330 brush in and well water.

SLW7.W440.8  APPLYING POST-TURFING FERTILIZER
30 days after turfing apply slow release fertilizer, as SLW1.M110 evenly at a rate of 20 g/m².

SLW7.W450.8  TURFING TAKE
Where bare patches still occur 21 days after laying, remove the whole turf, recultivate the soil and returf the patch.

SLW7.W460.8  LAYING TURF IN GRASS PAVING SYSTEM
In the locations as shown on Drawings, lay turf to grass paving system as follows:

1. Apply soil filling mix, as EXT12.M330 to the openings of the grass paving system and water lightly prior to laying turf;
2. Prepare turf for use by cutting to an appropriate size and shape to fit the openings in the grass paving system in use;
3. Lay the cut turf in each of the openings of the grass paving system with closely butted joints and firm the turf by lightly and evenly beating with approved wooden beaters. The bottom of the beaters being frequently scraped clean of accumulated soil or mud;
4. After laying, fill any gaps with top dressing, as SLW7.M330 and brush in well to fill all joints and water carefully using a fine spray hose attachment;
5. Should shrinkage occur, refer to SLW7.W430;
6. Apply post-turfing fertilizers, as SLW7.W440;
7. Where bare patches within the turfed portions of the grass paving system still occur 21 days after laying, carry out turfing take, as SLW7.W450.

SEEDING

SLW7.W510.8  STORING SEED
Store seed on boards off the ground, in a clean dry place, free from vermin.

SLW7.W520.8  APPLYING PRE-SEEDING FERTILIZER
Four to seven days prior to broadcast sowing apply quick release fertilizer, as SLW1.M130, evenly at a rate of 40 g/m² (±5%) and lightly rake into the soil.
SLW7.W530.8  **BROADCAST SOWING**

1. Evenly broadcast grass seed mix, SLW7.M210, over areas shown on the Drawings by sowing at half the rate specified below in two equal sowings at right angles to each other, either by hand or by an Approved mechanical drill;

2. Rate of sowing: 30 g/m².

SLW7.W540.8  **RAKING, HARROWING AND ROLLING**

1. Lightly rake or harrow in the seed;

2. Roll and cross-roll with a lightweight roller.

SLW7.W550.8  **APPLYING WEED-KILLER**

Apply weed-killer evenly to newly seeded areas, as SLW1.W720.

SLW7.W560.8  **TURF EDGING TO SEED ED AREAS**

Edge seeded areas with turf 300 mm wide where shown on the Drawings. Adjust soil level to receive turf and marry-in surface of seed bed to surface of turf.

SLW7.W570.8  **EDGE TRIMMING TO SEED ED AREAS**

Trim edges of seeded areas which have not been edged with turf when sufficiently established to clean, straight lines or regular curves as shown on Drawings.

SLW7.W580.8  **APPLYING POST-SEEDING FERTILIZER**

Ten days after broadcast sowing, apply slow release fertilizer, as SLW1.M110 evenly at a rate of 20g/m².

SLW7.W590.8  **GERMINATION OF BROADCAST SOWN SEED**

Where grass areas do not show 90% cover over any 10 m² area, 28 days after sowing immediately re-cultivate and re-sow the area, whether this date occurs in the Planting Period or the Establishment Period.

SLW7.W592.8  **APPLICATION OF GRASS SEED AND SOIL FILLING MIXTURE IN GRASS PAVING SYSTEM**

In the locations as shown on Drawings, apply grass seed and soil filling mixture to grass paving system as follows:

1. Thoroughly mix grass seed, as SLW7.M270 and soil filling, as EXT12.M330 to form grass seed and soil filling mixture;

2. Apply grass seed and soil filling mixture to the openings of the grass paving system;

3. Lightly compact, and finish flush with the adjoining surfaces;

4. Water immediately and continue to water, as SLW1.W520 using a fine spray hose attachment to avoid erosion and run off;

5. Apply weed-killer evenly to newly seeded areas in accordance with the manufacturer's recommendation;

6. Apply post-seeding fertilizer, as SLW7.W580;

7. Re-sow, as SLW7.W590;

8. Carry out post-planting cutting, as SLW7.W630;
9. After germination and throughout the Planting Period and Establishment Period, ensure that the soil surface within the seeded areas of the grass paving system remain flush with the surrounding surfaces by supplementing top dressing, as SLW7.M330 and seed mixture, as SLW7.M270. Water in carefully using a fine spray hose attachment.

POST PLANTING OPERATIONS

SLW7.W610.8 WATERING

Water immediately after laying and continue to water, as SLW1.W520 using a fine spray hose attachment to avoid erosion and run off.

SLW7.W620.8 ROLLING OF GRASSED AREAS

When instructed by the CM, roll the grassed area with rollers, as SLW7.M350 to increase contact between the turves or sprigs and the rootzone medium.

SLW7.W630.8 CUTTING

1. Make the first cut when the grass sward is 75 mm high and reduce the sward to 25 mm high;
2. Make subsequent cuts as soon as the grass sward is 50 mm high and reduce the sward to 25 mm high;
3. Trim edges after cutting.

SLW7.W640.8 MOWING

1. Use mowing machine, as SLW7.M350;
2. Make the first mowing when the turf is at 50mm high and reduce the turf to 35mm high;
3. Make subsequent mowing as soon as the turf is at 40mm high and reduce the turf to 32 - 37mm high, depends on the season, as SLW9.W640;
4. Trim edges after cutting;
5. Rake up and remove all cuttings from Site within 24 hours after mowing;
6. Do not remove more than one-third of the height of the turf at each time.
SLW8     TREE SURGERY WORKS

MATERIALS

GENERAL

SLW8.M010.8     SCOPE OF WORK

The scope of the Works comprises the removal of dead, dying and diseased branches and stumps, cleaning out cavities, raising and thinning the crown, for transplanting purposes as Worksection EXT11 and generally improving the shape of existing trees, as scheduled and shown on the Drawings or as Instructed.

1. These works shall include those trees and palms transplanted to the Site by the Employer's Direct Contractor, as refer to PRE.B2.010 for relevance.
WORKMANSHIP

TREE SURGERY

SLW8.W010.8  STANDARD
Carry out works in accordance with BS 3998:2010 "Recommendations for Tree Work" and “General Guidelines on Tree Pruning” posted as website:

SLW8.W020.8  PRUNING TECHNIQUES
1. Cut back dead branches to living tissue/growing point;
2. Where removal of a whole lateral branch is required, do not cut flush to the main trunk or leaving a stub. Apply under cut technique to prevent tearing the bark and cut limbs in two operations. Cut initially from the underside close to the trunk or parent limb, without cutting into the branch bark ridge or collar. Make the second cut from above at a point 25 mm further away from the trunk;
3. Cut all limbs sloping away from the main trunk at an angle of approximately 60° from the horizontal on a line above the branch bark ridge and the branch collar without leaving a stub, in accordance with BS 3998:1989; figure 1;
4. Long and heavy branches should be cut in sequence of section by section. Carefully lower all cut branches to the ground to prevent any damage to limbs being retained;
5. Keep the crown in a well-balanced form and natural shape after pruning. Do not remove more than one quarter of the original crown coverage in each pruning operation.

SLW8.W030.8  CUTTING BACK BARK
Cleanly cut back loose, dead or damaged bark to firm healthy bark, and trim to leave rounded edges.

SLW8.W040.8  TIMING OF PRUNING
Carry out pruning of evergreen trees just before spring. For deciduous trees, pruning after shedding leaves in winter when trees are dormant is preferred. Avoid pruning prior to flowering seasons of the trees.

SLW8.W050.8  CAVITY TREATMENT
Cut out rotten wood from cavities, without exposing clean healthy wood.

SLW8.W060.8  ADDITIONAL DAMAGE
Repair any additional damage to existing trees, caused by tree surgery operations or any other cause during the Contract Period, as Instructed.

SLW8.W070.8  TOOLS AND EQUIPMENT
Use the tools and equipment recommended by and in accordance with BS 3998: 2010.
SLW9 ESTABLISHMENT WORKS

WORKMANSHIP

DEFINITIONS

SLW9.W010.8 ESTABLISHMENT WORKS

Establishment Works (EW) is the works as defined in the Preliminaries Worksection to be carried out during the Establishment Period (EP) to establish the soft landscaping.

1. These works shall include those trees and palms transplanted to the Site by the Employer's Direct Contractor, as refer to PRE.B2.010 for relevance.

SLW9.W020.8 ESTABLISHMENT PERIOD

Establishment Period (EP) is the 24 month period, commencing the day after the certified date for Completion of Section A - Planting Works, during which the EW are to be carried out.

GENERAL

SLW9.W100.8 TREE INVENTORY REPORT

1. No later than three(3) months from the certified date of completion of Section A, provide written Tree Inventory Report with information of all existing and newly planted trees, palms and conifers as indicated on Drawings and Plant Schedules for preparation of record plan of soft landscape works. In particular, attention is drawn to the following requirements:
   a. To provide tree information including location with Geographic Information System (GIS) technology, dimensions including trunk girth at 1.3m above ground level, crown spread, overall height, current conditions of tree such as form and health, and tree identification number to trees of size of light-standard and above, palms and conifers;
   b. To install tag to individual tree, palm or conifer with the tree identification (ID) number based on the tree layout plan. Format of the tree tag and the numbering system to be approved by the CM;
   c. To take and complete the tree inventory record for each tree, palm or conifer with a photo showing the whole tree, palm or conifer.

2. No later than two (2) months before the date for completion of Section B, replace missing tree tag(s), update and submit the Tree Inventory Report to the CM.

SLW9.W110.8 VANDALISM DAMAGE TO PLANTING

The Authority will accept responsibility for replacing dead or damaged stock resulting from vandalism only when the Contractor

1. Proves that such death or damage was caused by circumstances outside his control; and

2. Submits written claims to the CM within three working days of the event happening.
**SLW9.W120.8**  
**TYPHOON DAMAGE**

1. Within 48 hours of Typhoon Signal No. 8 or above being lowered:
   a. Make a photographic record and detailed report of all plant damage;
   b. Replant all plants blown over and firm up all other plants.

2. Within five days of Typhoon Signal No. 8 or above being lowered:
   a. Remove dead plants and clear the Site of all debris;
   b. Provide the above photographic record and report to the CM.

3. The Authority will accept responsibility for plants recorded as dead or dying after, and as a result of, the typhoon only when:
   a. The CM is notified within one month of the end of the typhoon; and
   b. Replanting works are carried out satisfactorily as specified and thorough watering is carried out each day.

---

**SLW9.W130.8**  
**REPLACEMENT PLANTING**

Replace any plant during the EP which is, in the opinion of the CM, dead, dying, ailing or no longer conforming to this Specification within two weeks of identification. Carry out replacement planting in accordance with this Specification. Bear all costs of replacement unless due to extreme weather conditions, vandalism, or typhoons as SLW9.W110 and SLW9.W120.

1. Those trees and palms transplanted to the Site by the Employer's Direct contractor are excepted, as refer to PRE.B2.010 for relevance.

---

**SLW9.W140.8**  
**PLANT DIVISION**

Where the CM considers ground cover and herbaceous planting to be overcrowded, divide and transplant as Instructed and in accordance with the following:

1. Dig up at an appropriate season;

2. Divide by teasing the roots apart by hand or using two forks back to back taking care to maintain an adequate root system with each divided part;

3. Replant one part in the original location and carry the other parts to another part of the estate as Instructed;

4. Replant in agreed positions, fertilize and water, all in accordance with this Specification.

---

**SLW9.W150.8**  
**THINNING**

Where Instructed reduce the number of plants due to overcrowding as

1. Dig up plants, transport and replant in locations as directed; or

2. Dig up plants, transport and replant in locations within a 20 km round trip of the original location as directed; or

3. Remove from site;

4. Fertilize and water all in accordance with this Specification.

---

**SLW9.W160.8**  
**PARASITIC PLANTS**

Parasitic plants, as defined as SLW1.M070, which become evident during the first four months of the EP are deemed to have been brought in on plants or soil delivered to the Site. Treat these parasitic plants as SLW1.W610 to SLW1.W650.
**SLW9.W170.8 RECORDS**

1. Ensure that the Approved Foreman reports to the Estate's Housing Manager's office before and after carrying out each day's establishment work and makes a signed record each day:
   a. Stating the work carried out;
   b. Indicating the percentage completed for each day's operation on the standard form (DLAP-F005) provided for the purpose.

2. Obtain countersignatures from the CM's site staff and keep the records available for inspection in the Estate Housing Manager's office.

**SLW9.W180.8 WATER SUPPLY**

See clauses PRE.B10.1210 and PRE.B10.1220.

**SCHEDULES OF ESTABLISHMENT WORKS OPERATIONS**

**SLW9.W208.8 GENERAL**

In the event of the scheduled operations requiring amendment due to the site and weather conditions prevailing during the EP, seek Approval, at least four weeks before the operation on site, with full justification to exceed the numbers specified.

**SLW9.W220.8 FIRST TWELVE MONTHS OF ESTABLISHMENT PERIOD**

During the first twelve months of EP, carry out the operations as scheduled below as applicable to the Soft Landscaping Works in accordance with this Specification and shown or scheduled on the Drawings:

<table>
<thead>
<tr>
<th>Operation</th>
<th>Anticipated No.</th>
<th>Timing</th>
</tr>
</thead>
<tbody>
<tr>
<td>Watering (in open air) (under cover)</td>
<td>300</td>
<td>As specified.</td>
</tr>
<tr>
<td></td>
<td>350</td>
<td>As specified.</td>
</tr>
<tr>
<td>Weeding</td>
<td>12</td>
<td>As specified.</td>
</tr>
<tr>
<td>Fertilizing</td>
<td>1</td>
<td>Early Summer, or otherwise Instructed.</td>
</tr>
<tr>
<td>Soil aeration</td>
<td>1</td>
<td>Immediately after fertilizer application.</td>
</tr>
<tr>
<td>Mulch application</td>
<td>1</td>
<td>Immediately after aeration operation.</td>
</tr>
<tr>
<td>Firming up</td>
<td>Min. 3</td>
<td>Immediately after strong wind and/or every four months.</td>
</tr>
<tr>
<td>Checking and adjusting tree ties</td>
<td>6</td>
<td>Check every two months; adjust/replace as necessary.</td>
</tr>
<tr>
<td>Tying climbers to supports and climber wires</td>
<td>As required</td>
<td>Check monthly, tie as necessary.</td>
</tr>
<tr>
<td>Climber wires</td>
<td>6</td>
<td>Check every two months; adjust/replace as necessary.</td>
</tr>
<tr>
<td>Pruning</td>
<td>Varies according to species</td>
<td>As scheduled in clause SLW9.W240.</td>
</tr>
<tr>
<td>Grass cutting</td>
<td>12</td>
<td>As specified.</td>
</tr>
</tbody>
</table>
## SECOND TWELVE MONTHS OF ESTABLISHMENT PERIOD

During the second twelve months of EP, carry out the operations as scheduled below as applicable to the Soft Landscaping Works in accordance with this Specification and shown or scheduled on the Drawings:

<table>
<thead>
<tr>
<th>Operation</th>
<th>Anticipated No.</th>
<th>Timing</th>
</tr>
</thead>
<tbody>
<tr>
<td>Watering (in open air) (under cover)</td>
<td>280 350</td>
<td>As specified.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>As specified.</td>
</tr>
<tr>
<td>Weeding</td>
<td>9</td>
<td>As specified.</td>
</tr>
<tr>

</tbody>
</table>
### Schefflera arboricola
- Shorten leggy branched by $\frac{1}{2}$ to $\frac{1}{3}$. Light pruning to encourage dense, balanced, bushy, natural growth form.

### Thevetia spp.
- Prune to 900 mm.

### Small Shrubs:
- Prune to 450 mm to encourage dense, basal branching.

### Nandina spp.
- Remove dead leaves

### Ground Cover:
- Prune hard back to prevent Wedelia from climbing over other plants. At edge of planter, cut back to 100 mm overhang.

### All:
- Remove dead leaves and stems

### Timing | Plant Species | Pruning Requirement
--- | --- | ---
**May** | Palms: | Remove dead fronds.
 | All | Remove dead fronds.
 | Large Shrubs: | Prune hard back to 300 mm, after flowering.
 | Brunfelsia calycina | Light pruning.
 | Melastoma spp. | Light pruning to remove rough foliage.
 | Murraya spp. | Prune to 900 mm.
 | Nerium spp. | Remove dead leaves.
 | Small Shrubs: | Light pruning to maintain tight balanced form.
 | Nandina spp. | Prune hard back to prevent Wedelia from climbing over other plants. At edge of planter, cut back to 100 mm overhang.
 | Ground Cover: | Aquatic: | All | Remove dead leaves and stems.

### Timing | Plant Species | Pruning Requirement
--- | --- | ---
**June** | Palms: | Remove dead fronds.
 | All | Small Shrubs: | Remove dead leaves.
<p>| Nandina spp. | Ground Cover: | Wedelia trilobata | Aquatic: | Prune hard back to prevent Wedelia from climbing over other plants. At edge of planter, cut back to 100 mm overhang. |</p>

### ESTABLISHMENT WORKS

#### SLW9 > WORKMANSHIP

### ESTABLISHMENT OPERATIONS

**SLW9.W300.8  MAKING GOOD ERODED SEEDED AREAS**

Make good any erosion of seeded, or hydroseeded, areas by broadcast sowing as *SLW7.W530* or hydroseeding as *EXT14.W310* as appropriate and carry out post application operations as specified.

**SLW9.W310.8  WATERING**

Water all planted areas so as to maintain a moist soil through the depth of the fabricated soil profile adequate to ensure satisfactory establishment and as a minimum:

1. For plants exposed to natural rainfall:
   a. Water during the first 12 months of EP, on every day that the rainfall is less than 5 mm per day except on the day following a day that rainfall exceeded 20 mm per day or when the fabricated soil profile is saturated;
   b. Water during the second 12 months of EP on every day that the rainfall is less than 2 mm per day except on the day following a day that rainfall exceeded 15 mm per day or when the fabricated soil profile is moist.

2. For plants NOT exposed to natural rainfall:
   Water every two to three days irrespective of the weather conditions during the whole EP.

Carry out watering either early mornings or late afternoon or both.

**SLW9.W320.8  WEEDING**

Keep all planted areas weed-free and:

### Table: Pruning Requirement

<th>Pruning Requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>As and when required</strong></td>
<td>Herbaceous:</td>
<td></td>
</tr>
<tr>
<td></td>
<td>All</td>
<td>Cut back to ground level immediately after plant dies back for dormant period.</td>
</tr>
</tbody>
</table>
1. During the first twelve months of EP, undertake a weeding operation at least once every three weeks during the wet season, and at least once every two months during the dry season;

2. During the second twelve months of EP, undertake a weeding operation at least once every month during the wet season, and at least once every two months during the dry season;

3. Replace any mulch or soil disturbed or removed during this process;

4. Maintain a circle of bare soil, 200 mm diameter greater than that of the tree trunk or plant stem, around all plant bases in grassed areas;

5. Collect all arisings resulting from these operations and remove from the Site to a properly designated tip.

**SLW9.W330.8 FERTILIZING**

1. During the first twelve months of the EP, carry out one applications of fertilizer during early summer, as SLW1.M110, at the following rates (±5%):  
   a. 200 gm per semi-mature tree;  
   b. 150 gm per heavy standard tree, large palm and large conifer;  
   c. 100 gm per standard tree, light standard tree, medium size palm and medium size conifer;  
   d. 50 gm per seedling tree, whip, small palm (up to 2000 mm high), small conifer;  
   e. 30 gm for shrub, climbing plant and bamboo;  
   f. 5 gm per ground cover and herbaceous plant;  
   g. 25 gm/m² for grass area.

2. During the second twelve months of the EP, carry out two applications of fertilizer, one during early spring as SLW1.M110, and one during later summer as SLW1.M120, at the following rates (±5%):  
   a. 200 gm per semi-mature tree;  
   b. 150 gm per heavy standard tree, large palm and large conifer;  
   c. 100 gm per standard and light standard tree, medium size palm and medium size conifer;  
   d. 50 gm per seedling tree, whip, small palm, small conifer;  
   e. 10 gm for shrub, climbing plant and bamboo;  
   f. 5 gm per ground cover and herbaceous plant;  
   g. 25 gm/m² for grass areas.

3. For the purpose of this clause the following definitions apply:
   
<table>
<thead>
<tr>
<th>Conifer height (mm)</th>
<th>Palm height (mm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Large: Above 3000</td>
<td>Above 4000</td>
</tr>
<tr>
<td>Medium: Above 1200 but not above 3000</td>
<td>Above 2000 but not above 4000</td>
</tr>
<tr>
<td>Small: Not above 1200</td>
<td>Not above 2000</td>
</tr>
</tbody>
</table>

4. These works shall include those trees and palms transplanted to the Site by the Employer's Direct Contractor, as refer to PRE.B2.010 where relevant.

**Option**

1. Fertilizing with spent mushroom compost (SMC)
SLW9.W340.8  **TOP DRESSING TO GRASSED AREAS**
Immediately after fertilizing, top dress all grass areas with top dressing, as specified at SLW7.M330, to smooth out minor depressions.

SLW9.W350.8  **AERATION**
1. Shrub areas, including bamboos, climbers and herbaceous plants: immediately after fertilizing, cultivate the soil by hand using a fork to a depth of 100 mm;
2. Ground cover areas: immediately after fertilizing lightly break up the soil by hand using a fork to a depth of 75 mm;
3. Grass areas: immediately before fertilizing aerate the soil by inserting a tine or fork to a depth of 100 mm at 200 mm centres.

SLW9.W360.8  **MULCHING**
Immediately after aeration, top up all shrub and ground cover areas, by adding mulch to match existing to the following minimum depths:
1. Shrubs, bamboo, climber and herbaceous plants: 25 mm;
2. Ground cover plants: restore to the original depth;
3. Plants in grassed areas: 25 mm in mulched circle.

SLW9.W370.8  **AERATION AND MULCHING**
Do not undertake aeration or mulching to ground cover areas once ground cover plants have successfully established and there are no visible bare areas of soil.

SLW9.W380.8  **TOPPING UP GRAVEL MULCH TO TREE GRILLES**
At three monthly intervals top-up gravel to match existing to fill the interstices of the tree grilles.

SLW9.W390.8  **FIRMING UP**
Firm up plants and tree stakes from time to time during the EP and particularly after heavy rain or wind.

SLW9.W400.8  **TREE SUPPORTS**
1. Tighten, slacken or replace tree ties, as SLW2.M330, as necessary for the healthy growth of the tree, and adjust or replace the trunk protection, as SLW2.M370 as necessary to prevent chafing of the bark;
2. Adjust guying turnbuckles as necessary to ensure guys are taut.

SLW9.W410.8  **GRASS CUTTING**
Cut grass by hand or machine, as SLW7.W630 and EXT14.W350 or otherwise instructed. These works shall include those existing grassed / hydroseeded area on Site:

a. During the EP, carry out one application of SMC fertilizer every 6 months, as SLW1.M135, at the following dosage: Add SMC at a dose of 2% by volume by layering on the top soil;

b. These works shall include those trees and palms transplanted to the Site by the Employer’s Direct Contractor, as refer to PRE.B2.010 where relevant.
1. During the main growing period (April to October): at least once per month at 100mm height;
2. During the dry season (November to March): at least twice at equal intervals at 100mm height;
3. Rake up and remove all cuttings from site to a properly designated tip within 24 hours after cut.

**SLW9.W420.8 PRUNING PROGRAMME**

Carry out pruning:
1. At the appropriate time of year for each species as scheduled in SLW9.W240;
2. Once each year of the EP, except when otherwise specified.

**SLW9.W430.8 PRUNING PROCEDURES**

Carry out pruning using sharp tools to give a clean cut, free from ragged edges and:
1. Ensure cuts are immediately above buds or branches and slope away from an outward facing bud;
2. Prune back branches, to the main stem to encourage bushy growth and improve flowering;
3. Remove dead, damaged or crossing branches and dead flower heads;
4. Retain the individual habit and shape of the plant, unless otherwise directed or the intention of the design is to form a clipped hedge;
5. Prune flowering shrubs by removing the shoots bearing the dead flower heads and/or the new growth dependant on species.

**SLW9.W440.8 TREATMENT OF PESTS AND FUNGAL GROWTH**

1. Regularly check all plant and grass areas for signs of insect attack or fungal infestation, whether or not the insects or fungi are injurious to the plants or only cause a nuisance. Pay particular attention during known periods of activity;
2. Report immediately to the CM any signs of insect attack or fungal infestation, and carry on to identify, monitor, and assess the insect attack or fungal infestation and propose remedial measures according to prevailing guidelines on pest control laid down by AFCD and Guidelines on Occupational Safety and Health for Pest Control Operators laid down by Food and Environmental Hygiene Department (FEHD);
3. Post warning notices (e.g. poison, no-entry, name of pesticide, date and time of application, re-entry time etc.) at conspicuous locations to avoid the public from entering the area under treatment before and after spraying of pesticide. Inform Estate Management to notify residents on the application and on spray drift risks;
4. Effect remedial measures by applying pesticides approved by the CM in strict accordance with the manufacturer's recommendations and labelling instructions, and carry out associated arboriculture works to the infected and/or infested areas in the manner as stated in PRE.B8.1260 sub-clauses (5)(a) and (5)(c) to (g);
5. Take due care and have regard to the safety and convenience of the general public and carefully control the spraying of the chemical pesticide to avoid unnecessary dispersion;
6. Plant parts pruned from diseased plants shall not be stockpiled anywhere on the Site and shall be disposed of from the Site.
CLEARANCE OF EXISTING VEGETATED AREAS
Keep existing vegetated areas clear as EXT11.W110.

CARE OF INDOOR PLANTS
Clean the leaves of all indoor plants at least once a month, and fertilize as SLW9.W330.

CARE OF ARTIFICIAL PLANTS
Maintain artificial plants as follows:
1. Clean each leaf and keep tidy once per month;
2. Replace leaves when they are loose or missing.

MAINTENANCE OF PROTECTIVE FENCING
Regularly check protective fencing and immediately carry out all necessary repairs to ensure that fencing is maintained in good condition at all times.

REMOVAL OF PROTECTIVE FENCING
Remove temporary protective fencing during or at the end of the EP as Instructed.

REMOVAL OF STAKES
Remove stakes when the plant root system is sufficiently developed to support the plant at the end of the EP unless otherwise instructed.

REMOVAL OF HESSIAN BINDING TO TRANSPLANTED TREES
Remove hessian binding from trunk and large branches of transplanted trees as soon as satisfactory growth has occurred as Instructed.

FINAL INSPECTION
1. In the presence of the CM carry out an inspection and formal check of the Works at the end of the EP;
2. Carry out the last of the operations scheduled immediately prior to the final handover inspection;
3. On satisfactory completion of any outstanding defective and replacement work, a completion Certificate will be issued in accordance with Clause 53 of the “said Conditions”

MAINTENANCE FOR SAND BASED LAWN

GENERAL
Maintenance operations listed in SLW9.W620 to SLW9.W680 only apply to areas specified as “Sand Based Lawn”.

CONTROL USAGE
Control the usage with fence for turf establishment or recovery when instructed by the CM.
OVERSEED DURING DRY SEASON
Overseed with dry season grass seeds by hand / overseeding machine during onset of cooler months when instructed by the CM.

TURF MOWING
Mow the turf by machine, as SLW7.M350:
1. During the main growing period: mow at 32 mm once per week;
2. During the dry season: mow at 37 mm once per week;
3. Rake up and remove all cuttings from site within 24 hours after cut.

TOPDRESSING
Apply 6mm thick topdressing by spreader as per SLW7.M350 2 times per year and any additional operation when instructed by the CM with graded sand as per EXT12.M235.

DETHATCHING
Remove the thatch layer by following operation:
1. Verti-cutting: 1-2 times per year and any additional operation when instructed by the CM by machine as per SLW7.M350. The depth of the cutting should be set at about 25mm below the thatch layer;
2. Hollow-tine coring: once per year with aerator installed with 12mm diameter hallow tine;
3. Solid-tine coring: once every 2 months with aerator installed with 6mm diameter solid tine.

SPIKING
Spike the grassed area with hand spiker, as SLW7.M350 once every 2 months and any additional operation when instructed by the CM.

FERTILIZATION
Apply compound fertilizer as per SLW1.M110 monthly.

ELE1.1 APPLICATION OF SPECIFICATION

ELE1.1.010.8 PRELIMINARIES

This Specification and this Worksection ELE1 in particular should be read in conjunction with Preliminaries for Building Services Sub-contracts.

ELE1.1.020.8 APPLICATION TO SYSTEMS

1. This Worksection ELE1 of this Specification is applicable to the whole of the Sub-contract Works while the other Worksections are applicable to the Systems described in the respective Worksection;

2. Worksection ELE2, which specifies general system requirements should be read in conjunction with subsequent Worksections of this Specification which are reference Worksections and define details of installations.
THE WORKS

ELE1.2

SITE OF THE WORKS
The site of the Works is given in the Project Specific Specification.

SCOPE OF THE WORKS
The scope of the works is given in the Project Specific Specification.
ELE1.3 CONTRACT DOCUMENTATION

ELE1.3.010.8 DRAWINGS AND DOCUMENTS
1. A Schedule of the Sub-contract Drawings is included in Appendix 'P';
2. The tenderer's attention is also drawn to the latest revision of the Standard Lighting Fitting Schedule issued by the Housing Department;
3. The Schedule is available for inspection at the Building Services Section, Housing Department during normal office hours upon application to the Contract Manager;
4. The Sub-contract Drawings and the Schedule shall hereinafter be referred to as the Drawings.

ELE1.3.020.8 TECHNICAL INFORMATION SUPPLIED WITH TENDER AND SUB-CONTRACTOR'S RESPONSIBILITY
1. All technical information supplied with the tender, including the tenderer's proposed design and the materials offered, is for tender assessment only;
2. Acceptance of the tender will not relieve the Sub-contractor of his responsibility for the proper working of the installation to meet the specified requirements in compliance with the Sub-contract documents to the entire satisfaction of the Contract Manager;
3. In the event of the installation being, in the opinion of the Contract Manager, not in compliance with the specified requirements, the Sub-contractor shall modify his design, replace any unsatisfactory materials and do everything necessary for compliance with the specified requirements at his own cost.

ELE1.3.030.8 DEFINITIONS AND ABBREVIATIONS
In this Specification the word "shall" is mandatory, the word "will" is informative, the word "should" is advisory and the word "provide" means supply and fix, or supply and install. In addition the following words shall have meanings herein assigned:
1. "Authority"
   means Hong Kong Housing Authority.
2. "Indicated"
   means indicated elsewhere in the Specification or on the Drawings.
3. "or Equal" or "or Similar"
   means having similar characteristics and Specification, as regards type of construction, performance, general appearance and standard of quality of manufacture.
4. "Drawing"
   means the drawings referred to in the Specification and any modification of such drawings Approved by the Contract Manager and such other drawings as may be, from time to time, furnished or Approved.
5. "Standard Drawings"
   means the drawings prepared by the Authority to show detailed arrangements of the common standard installations.
6. "EMSD"
   means the Electrical and Mechanical Services Department.
7. "WSD"  
means the Water Supplies Department.

8. "FSD"  
means the Fire Services Department.

9. "IET"  
means the Institution of Engineering and Technology UK.

10. "CSA"  
means the conductor cross-sectional area.

11. "BSI"  
means the British Standards Institution.

12. "BS"  
means British Standards, including British Standard Specifications and British Standard Codes of Practice published by the British Standards Institution.

13. "EN"  
means European Standard.

14. "ISO"  
means International Organization for Standardization Publications.

15. "IEC"  
means International Electrotechnical Commission Publications.

16. "BS EN"  
means European Standard adopted by the British Standards Institution to replace any relevant British Standard.

17. "ASTM"  

18. "ANSI"  
means American National Standards Institution.

19. "PASS"  
means Performance Assessment Scoring System.

20. "BSPASS"  
means Building Services Performance Assessment Scoring System.

**ELE1.3.040.8 SINGULAR AND PLURAL**

Words importing the singular only also include the plural vice versa where the context requires.
COMPLIANCE WITH REGULATIONS AND STANDARDS

ELE1.4.010.8  STATUTORY REGULATIONS

The Sub-contractor shall comply with the latest edition of all relevant Ordinances and Regulations together with any amendments made thereto, Laws of Hong Kong and shall be responsible for giving notifications to the appropriate authorities and paying all fees in accordance with the Sub-contract.

The following are particularly relevant:

1. Electricity Ordinance Chapter 406, and other subsidiary legislation made under the Ordinance;
2. Regulations of the Telecommunication Authority, Government of Hong Kong;
3. Buildings Energy Efficiency Ordinance (Cap. 610);
4. Energy Efficiency (Labelling of Products) Ordinance Chapter 598;
5. Fire Safety (Commercial Premises) Ordinance and Fire Safety (Buildings) Ordinance;
6. Dangerous Goods Ordinance and Dangerous Goods (General) Regulations;
7. Occupational Safety and Health Ordinance, Chapter 509, and other subsidiary legislation made under the Ordinance;
8. Factories and Industrial Undertakings Ordinance, Chapter 59, and other subsidiary legislation made under the Ordinance;
9. Construction Site (Safety) Regulations;
10. Construction Site Safety Manual issued by the Development Bureau, the Government of the HKSAR;
11. All regulations, code of practices and guidelines on safety issued by the Labour Department from time to time;
12. Other relevant Ordinances and Regulations, Laws of Hong Kong;
13. Code of Practice for the Electricity (Wiring) Regulations (hereinafter referred to as the Electrical CoP);
14. Guidance Notes for the Electrical Products (Safety) Regulation (hereinafter referred to as the Electrical Product Guidance Notes), which applies to all electrical products designed for household use and supplied in Hong Kong;
15. Codes of Practice for minimum Fire Service Installations and Equipment and Inspection, Testing and Maintenance of Installations and Equipment, and Circular Letters issued by the Fire Services Department (hereinafter referred to as Fire Services COP);

ELE1.4.020.8  STANDARDS

All materials and workmanship shall comply, where applicable, with all relevant sections, together with any revisions or amendments made thereto, of the following:
1. The Supply Rules issued by the respective Supply Company currently in operation in Hong Kong (hereinafter referred to as the Supply Rules);

2. 17th Edition of the Regulations for Electrical Installations, issued by the IET (hereinafter referred to as the 17th Edition IEE Wiring Regulations). The 17th Edition IEE Regulations was jointly published by the BSI and the IET as BS 7671 (hereinafter referred to as BS 7671) and is the general standard now referred to in this Specification. Reference is also made to Guidance Notes published by the IET for use in conjunction with BS 7671;

3. Appropriate British Standards / International or National Standards / Code of Practice subject to clause ELE1.4.040. When a British Standard quoted in this Specification has been wholly or partially superseded by another equivalent or similar British Standard, the Sub-contractor is allowed to offer material in compliance with the latter in lieu for the Contract Manager's Approval;

4. Relevant parts of the HKHA Specification Library for Building Works (hereinafter referred to as the HKHA Building Works Specification) which may be viewed during normal office hours in the Authority's offices upon application to the Contract Manager;

5. General Technical Specifications for Monochrome and Colour Closed Circuit Television Systems (Specification No. ESG 14 March 2017 Edition) issued by the Electronic & Data Communication Division, Electrical and Mechanical Services Department, Hong Kong;

6. General Specification for Public Address System (Specification No. ESG11 Issue No. 5 October 2016 and Amendment 4 October 2016) issued by the Projects Division, Electrical and Mechanical Service Department, Hong Kong (hereinafter referred to as the General PA Specification);

7. Other International or National Standard Specifications as detailed in ELE1.4.050 (hereinafter referred to as Equivalent Standards).

**ELE1.4.030.8 PRECEDENCE**

In case of conflict between the requirements among the publications referred to in ELE1.4.010 and ELE1.4.020, interpretation shall be in accordance with the following order of preference unless otherwise specified or directed by the Contract Manager:

1. Ordinances and subsidiary legislations, Regulations, Laws of Hong Kong;

2. The Project Specific Specification and / or the contract documents for a particular project;

3. The Specification and/or the Drawings;

4. The Electrical CoP;

5. Electrical Product Guidance Notes;

6. Supply Rules;

7. BS 7671 when specified;

8. British Standard Specifications and Codes of Practice;

9. Equivalent standard;

ELE1.4.040.8 APPLICATION OF BRITISH STANDARDS/INTERNATIONAL OR NATIONAL STANDARDS / CODE OF PRACTICE
1. The date/year of British Standards (BS)/International or National Standards / Codes of Practice (CP) shall be referred to Appendix 1 of the Specification. Where it is not specified in the Specification, it shall be deemed to refer to any valid or latest version, and any applicable amendments to that version;

2. Where the date/year is specified, due to intended purposes, the specified version and any amendments to that version shall be compiled with unless otherwise approved by Contract Manager;

3. "Head standards" (HS) are not dated because they do not contain any technical content. However reference to a head standard invokes all relevant extant "parts" of that standard which are themselves dated. Reference to head standards is a practicable method of using a general BS reference in situations where detailed reference to each part would be cumbersome.

ELE1.4.050.8 OTHER INTERNATIONAL OR NATIONAL STANDARD SPECIFICATIONS
Materials or equipment manufactured to other International or National Standard Specifications (Equivalent Standard) may be considered for acceptance provided that:

1. The Equivalent Standard shall be no less stringent than the corresponding BS; and

2. The materials or equipment shall be compatible, in all respects, with and comply with the corresponding BS; and

3. The following documents shall be produced when required:
   a. An English translation of the Equivalent Standard, certified true by the Equivalent Standard issuing organization or an acceptable authority;
   b. A comparison table highlighting the differences between the Equivalent Standard and the corresponding BS.

ELE1.4.060.8 TESTING AND CERTIFICATION
1. Unless otherwise specified, equipment shall be type-tested in accordance with the testing requirements as stipulated in the appropriate recognised standard as stipulated in the Electrical CoP;

2. Test certificates for each type test complete with reports and drawings, where applicable, shall be produced when required, to prove to the satisfaction of the Contract Manager of the compliance with the recognised standard. If the original documents are not produced in English, an English translation of the documents, certified true by the issuing organisation or an acceptable authority, shall be produced when required;

3. For the purpose of product testing and certification, the following interpretation shall apply:
   a. "Independent" shall mean not owned, managed or operated, either in whole or in part, by the manufacturer or its agents;
   b. "Accredited Laboratory" shall mean a laboratory accredited to carry out the specified tests by:
      i. IECCE (IEC System for Conformity Testing to Standards for Safety of Electrical Equipment) CB Scheme; or
      ii. Hong Kong Accreditation Service (HKAS) or Hong Kong Laboratory Accreditation Scheme (HOKLAS); or
iii. Other equivalent national laboratory accreditation schemes which have mutual recognition agreements with HKAS/HOKLAS as stipulated in the Electrical CoP.

c. "Short Circuit Testing Organisation" shall mean:
   i. The Association of Short Circuit Testing Authorities (ASTA); or
   ii. NV tot Keuring van Elektrotechnische Materialen (KEMA); or
   iii. Association des Stations d'Essais Francaises d'Appareillage (ASEFA); or
   iv. An Accredited Laboratory; or
   v. Other short-circuit testing authorities internationally recognized as having equal standing as ASTA.

d. "Equivalent Quality Surveillance Scheme" shall mean equivalent quality surveillance schemes internationally recognized as having equal standing as the specified scheme(s).

ELE1.4.085.8 CODE OF PRACTICE FOR ENERGY EFFICIENCY OF BUILDING SERVICES INSTALLATION

1. All materials and workmanship, where specified, shall comply with the BEC;

2. The Sub-contractor shall provide all necessary information and document to the CM for Registered Energy Assessor’s preparation of all relevant submission as required under the Buildings Energy Efficiency Ordinance (Cap. 610);

3. Attend and provide necessary equipment for random check and site check upon requested by the CM.
ELE1.5 CONDITIONS OF SUPPLY

ELE1.5.010.8 ELECTRICITY SUPPLY

Unless otherwise specified, the complete electrical installation shall be suitable for operation under the supply system with a nominal frequency of 50 Hz and nominal voltage of 380V, 3-phase and 220V, single phase within the variation limits as declared by the local Supply Companies.

ELE1.5.020.8 SERVICE CONDITIONS

The complete electrical installation shall be suitable for use under Hong Kong climatic conditions with relative humidity and ambient temperature as shown below:

1. Relative Humidity: up to 0.99 saturation;
2. Ambient Temperature: peak from minus 5°C to plus 40°C for 4 hours continuously with an average from 0°C to plus 35°C over only 24 hours period.
ELE1.6 MATERIALS AND EQUIPMENT

ELE1.6.010.8 METRIC UNITS
Materials shall be of metric unit.

ELE1.6.020.8 SUBMISSIONS FOR APPROVAL
1. The Sub-contractor shall submit catalogues, technical information, certificate of safety compliance and samples of the materials proposed for Approval as required by the Contract Manager. The Sub-contractor shall also read in conjunction with the associated requirements stipulated at Preliminaries for Building Services Sub-contracts;

2. The Sub-contractor shall ensure the availability of the certificate of safety compliance for all proposed household products, prior to the submission for approval;

3. Approval of equipment will not be considered until and unless proper rating/type of sample complete with detailed information/technical data such as equipment catalogue, manufacturer's specification and certificates, when required are submitted for examination.

ELE1.6.030.8 SELECTION OF EQUIPMENT
1. Selection of equipment shall be based on this Specification and technical data contained on the Drawings for a particular installation;

2. Where items of equipment are interconnected to form an integral part of the complete electrical installation, their characteristics of performance and capacities shall be so matched as to give efficient, economical, safe and reliable operation of the complete electrical installation.

ELE1.6.040.8 EQUIPMENT CATALOGUES AND MANUFACTURER'S SPECIFICATIONS
1. Equipment Catalogues and manufacturers' Specification related to the proposed equipment shall be in the English language, specific and shall include all information necessary for the Contract Manager to ascertain that the equipment complies with this Specification and Drawings. Data and sales catalogue of a general nature will not normally be accepted;

2. Equipment catalogues and manufacturers' specifications must be submitted for the examination by and Approval of the Contract Manager before any equipment is to be ordered.

ELE1.6.050.8 CONSISTENCY
All equipment of the same category shall be the product of the same manufacturer and shall preferably be of the same colour scheme throughout.

ELE1.6.060.8 RESTRICTED USE OF ASBESTOS PRODUCTS
Asbestos or products containing asbestos shall not be used without prior Approval.
ELE1.7 WORKMANSHIP

ELE1.7.010.8 TRADESMEN
All tradesmen must be experienced in the trade and the works carried out shall be consistent with good practice in Hong Kong and to the satisfaction of the Contract Manager.

ELE1.7.020.8 TOOLS AND INSTRUMENTS
1. Proper tools shall be used to carry out the electrical installations;
2. Adequate and accurate testing/measuring instruments shall also be used to demonstrate compliance of the electrical installations with the relevant specifications and regulations;
3. The Contract Manager has the right to stop any work on which the correct tools and/or instruments are not being used;
4. Instruments used for acceptance test shall be calibrated at appropriate intervals and/or as specified in Project Specific Specification.

ELE1.7.030.8 SAFETY ON SITE
All works shall be carried out in such a manner as to comply with all regulations together with any amendments made thereto on safety aspects. These include but are not limited to the following:
1. Construction Sites (Safety) Regulations;
2. Factories & Industries Undertakings Electricity Regulations;
3. Electricity Ordinance, Chapter 406;
4. IEC 60364-7-704: Construction and Demolition Site Installation.

ELE1.7.040.8 GUARD AND RAILING FOR MOVING OR ROTATING PARTS OF EQUIPMENT
1. All moving or rotating parts of equipment shall be provided with an Approved guard and railing complying with the Factories & Industrial Undertakings (Guarding and Operation of Machinery) Regulations, published by the Labour Department, together with any amendments made thereto;
2. Guards shall be rigid and of substantial construction and shall consist of heavy mild steel angle frames, hinged and latched with either heavy galvanized mild steel wire crimped mesh securely fastened to frames or galvanised sheet metal of 1.2 mm minimum thickness;
3. All apertures shall be such that finger access to dangerous parts is not possible.
4. All sections shall be bolted or riveted;
5. Railings shall be 32 mm galvanized mild steel pipe and rail fittings.

ELE1.7.050.8 IDENTIFICATION OF CABLES AND CONDUITS
1. Cables for control circuits, inter-communication circuits, signalling circuits, and bell wiring shall be identified as required for each particular circumstance. Cables for power and lighting circuits shall be identified in accordance with the Electrical CoP Code 13D;
2. Electrical conduits, where required to be distinguished from pipelines of other services, shall use orange as the basic identification colour in compliance with BS 1710.

**SAMPLE FLATS AND SAMPLE WING**

During the construction for domestic building blocks, a specified sample flats and wing located on a typical floor and construction mock-up will be required to be completed by the Main Contractor including the flats, the corridor, the flights of common staircase leading to the floors immediately above and below the sample wing and the lift lobby etc. If necessary, flats at the adjacent wing may also be selected. The Sub-contractor shall complete the electrical installations in the specified sample flats, sample wing and construction mock-up in coordination with the Main Contractor to cope with the construction programme. The proposed samples and details of electrical installations in the sample flats and the sample wing shall be submitted to the CM for approval prior to commencement of works. The Sub-contractor shall be responsible to replace any electrical installations which are found damaged or deformed and to carry out the necessary adjustments to restore to as-new condition before building completion.
ELE1.8 SITE MANAGEMENT

ELE1.8.010.8 APPOINTMENT OF SUPERVISING ENGINEERS, SITE SUPERVISORS AND BLOCK FOREMEN

1. Immediately upon the award of the Sub-contract, the Sub-contractor shall appoint Supervising Engineer(s) and Site Supervisor(s) specified in ELE1.8.020 and ELE1.8.030 who shall be both English and Cantonese speaking and in the Sub-contractor’s full-time employment for the supervision of the Sub-contract Works to the satisfaction of the Contract Manager;

2. The Sub-contractor shall also identify Block Foremen as in ELE1.8.035;

3. Immediately after the award of the Sub-contract, the name, qualifications and curriculum vitae of the Supervising Engineer(s) and Site Supervisor(s) shall be submitted for Approval to the satisfaction of the Contract Manager;

4. None of the Supervising Engineer(s) and Site Supervisor(s) shall be removed from their respective duties without prior Approval;

5. In the event of any of them being unsatisfactory, in the opinion of the Contract Manager, or misconducting themselves, they shall be removed forthwith and be replaced by suitable substitutes to the Contract Manager's satisfaction within seven days from the Contract Manager's instruction in writing.

ELE1.8.020.8 SUPERVISING ENGINEERS

1. Unless otherwise specified, the Sub-contractor is to employ for the supervision of all works on Site, at least one qualified Supervising Engineer. The Supervising Engineer shall generally represent the Sub-contractor in all respects of the Sub-contract and assume the following duties:
   a. Coordinate and supervise the work in the Sub-contractor's office and the Site;
   b. Develop, in conjunction with the Main Contractor, schedules of installation drawings, builder's work drawings, material submission and delivery, statutory submissions, the programme of works and testing and commissioning programme, for approval by the CM;
   c. Liaison with the CM and other parties;
   d. Attend at the office of the CM for the finalisation of drawings and equipment selection;
   e. Attend progress meetings and coordination meetings;
   f. Monitor and supervise installation drawings submission, builder's work drawings submission, material submission and delivery, statutory submissions in accordance with the respective submission schedules. Submit progress reports to the CM monthly or at shorter intervals when such requested by the CM;
   g. Check and confirm the installation drawings, builder's work drawings and material submissions are suitable for the installation works and in compliance with the requirements of the Sub-contract;
   h. Examine, verify and confirm in writing to the CM on a monthly basis that the material delivered to the Site under the Sub-contract has been approved by the CM;
   i. Certify all material delivery vouchers in accordance with PRE.B12.280 of the Main Contract;
j. Prepare, in conjunction with the Main contractor, the delivery method statements for delivery of plant and equipment;

k. Undertake all site test and commissioning of the Sub-contract Works and endorse the test and commissioning reports to confirm that he is satisfied with the completeness, workmanship and performance of the installations which comply fully with the Sub-contract requirements, prior to submission to the CM.

2. Qualification requirements:

   At least one year of proven post qualification at supervisory level on electrical installations in buildings with the following qualification:

   a. Registered Professional Engineer (Electrical or BS Discipline) under the Engineers Registration Ordinance; or

   b. Member of the Hong Kong Institution of Engineers (Electrical or BS Discipline) elected after 5 December 1975; or

   c. Member (Electrical or BS Discipline) of an overseas engineering institution which has signed agreements for the mutual recognition of qualifications with the Hong Kong Institution of Engineers.

3. The Supervising Engineer(s) shall be highly competent and experienced, and shall be given a high level of delegated authority such that they can take decisions, including those involving expenditure.

ELE1.8.030.8 SITE SUPERVISORS

1. Unless otherwise specified, the Sub-contractor is to employ at least one qualified Site Supervisor. The Site Supervisor(s) shall be stationed on site;

2. Qualifications requirements:

   Registered Electrical Worker Grade B(2) or above registered under the Electricity Ordinance.

ELE1.8.035.8 BLOCK FOREMEN

The Sub-contractor is to identify from time to time one Block Foreman per block who shall be answerable to the Contract Manager for the quality and progress of works for the block. The Block Foreman shall be stationed on Site. This Block Foreman and the Site Supervisor shall not be the same person.

ELE1.8.040.8 BUILDING SERVICES PERFORMANCE ASSESSMENT SCORING SYSTEM

1. The Housing Authority has adopted a Building Services Performance Assessment Scoring System (BSPASS) to assess the performance of building services Nominated Sub-contractors undertaking works for the Authority;

2. BSPASS will be operated in this Sub-contract and assessments by Building Services PASS Assessment Team (BSPAT) or other staff of the HA will be conducted at quarterly intervals or other intervals as required by the Contract Manager;

3. Upon the Contract Manager's notification, the Sub-contractor's authorised representative shall attend all such assessments;

4. The Sub-contractor shall provide all necessary attendance, and all necessary measuring instruments, in addition to those specified in PRE.BS1.630, etc. to facilitate the BSPASS assessment as stipulated in the relevant BSPASS manuals;

5. In addition, the Sub-contractor shall also provide labours for the opening up and re-fixing of the works, the operation of the equipment and the testing, etc. as required by the assessment.
ELE1.8.050.8 COORDINATION WITH MAIN CONTRACTOR ON INTENDED CONSTRUCTION METHOD FOR INTERNAL PARTITION WALLS (PANEL WALLS) IN DOMESTIC FLATS, PRECAST CONCRETE WALL & PRECAST FACADE PANEL

The internal partition walls (panel walls) in the domestic flats, precast concrete walls and the precast facade panel are of prefabricated panel wall construction. The Sub-contractor shall coordinate with the Main Contractor on their intended panel wall construction method and makes necessary allowance for the conduit installation work. The provision and installation of GI / PVC conduits and conduit fittings on internal partition walls (panel walls), precast concrete walls and precast facade panel should be carried out by Main Contractor and the proposed installation details are shown on Drawings. The Sub-contractor should ensure that all the conduit systems are in compliance with the Specification & Drawings.

ELE1.8.060.8 MODIFICATION WORKS IN NON-DOMESTIC PREMISES DURING MAINTENANCE PERIOD

1. During the Maintenance Period, the Employer may employ other workmen or contractors to carry out modification works pertaining to the installation to suit the fitting out works of the tenants;
2. The Sub-contractor shall provide the necessary attendance, including operation of the installation, as instructed by the Contract Manager to facilitate such modification works;
3. The costs of the attendance will be determined by a fair valuation made by the Contract Manager in conjunction with the Sub-contractor and paid for separately;
4. The employment of other workmen or contractors by the Employer for the modification of the installation shall not in any way relieve the Sub-contractor of his responsibilities for the maintenance and defects of the Works, other than those parts which have been modified by others, in accordance with the Contract.

ELE1.8.070.8 NOTICES AND FEES

The Sub-contractor shall comply with the regulations and requirements of all relevant Authorities such as Fire Services Department, the Building Authority, the Telecommunications Authority, the Electrical and Mechanical Services Department, Utility Companies, etc and shall be responsible for giving notifications to the appropriate Authorities and for paying all fees levied; such fees shall be included in the Tender Price, and also for collecting all necessary certificates and licenses for the installation.
ELE1.9 SITE SECURITY

ELE1.9.010.8 SUB-CONTRACTOR'S STORE ROOMS

1. In addition to the storage shed to be constructed by the Main Contractor as required under PRE.BS1.380 of the Preliminaries for Building Services Sub-contacts, the Main Contractor will also hand over to the Sub-contractor the switchroom of each building six months after the concreting of the structural frame and ceiling slab of the respective main switchroom, or four months before the completion of each building, whichever is the earlier;

2. The Sub-contractor may make use of the rooms for storage of materials, subject to the progress of the Works not being affected. The Sub-contractor shall make available to the Contractor the builder's work drawings and programme in good time to enable the Contractor to complete his works necessary for the handover of the rooms;

3. Immediately after the handover of the rooms, the Sub-contractor shall lock the doors with a good quality padlock. The padlock shall have proven reliability and in-service records for the Housing Authority projects. The Sub-contractor shall also provide and maintain in good operating conditions a burglar alarm system as specified in ELE1.9.020;

4. The Sub-contractor shall remove the padlocks and burglar alarm system upon completion of the respective building and upon Approval by the Contract Manager.

ELE1.9.020.8 BURGLAR ALARM SYSTEM FOR SUB-CONTRACTOR'S STORE ROOMS

The Sub-contractor shall provide the following whole burglar alarm system for each Electrical Sub-contractor's store room during the period as specified in ELE1.9.010:

1. System description

   The system shall consist of:

   a. Volumetric motion detector;
   b. Magnetic door contacts;
   c. Burglar alarm panel;
   d. Self activated bell;
   e. Dedicated-line remote alarm transmission circuit.

2. Volumetric motion detector

   a. Volumetric detectors used shall make use of dual technology, including passive infra red and microwave/ultrasonic wave, such that the possibility of false alarm will be reduced to the minimum;

   b. There shall be at least one detector installed facing each cable trench or any other weak points or openings.

3. Magnetic door contact

   Surface-mounted magnetic door contacts shall be installed on the inner door frame. It will be used to detect door open.

4. Control panel
The control panel shall be installed inside the protected room. It shall be powered by AC mains and backed up by stand-by battery sufficient for 8 hours. The control panel shall have real time clock display and alarm latching display. The panel shall be able to be armed or disarmed by mechanical key or by keying in secret code via the panel keypad. The panel shall also be built-in with entry and exit delay timer, such that the timer will be triggered by the entry, exit route sensors.

5. Alarm annunciator
   a. Self-activated alarm bell shall be installed on outstanding location on the outer wall of the protected room. The bell shall be housed in strong steel housing with anti-corrosion finishing and are tamper protect against removal of the lid, the bolt or attempted removal of the housing from the wall. The bell shall be self-powered by rechargeable battery. If input circuit is cut off, it shall give out annunciation. Upon activation it shall give out alarm sound level not less than 100 db at 1 metre distance. There shall also be a strobe light on the bell to provide visual warning;
   b. A cut off timer adjustable from 1 minute to 15 minutes shall be provided. Should the bell ring for the pre-set period, it shall be cut off by the timer. However, the strobe light shall remain flashing. Should the built-in battery voltage goes below the threshold limit, the bell shall give intermittent audio and visual warning to signify the need for battery replacement.

6. Dedicated line remote alarm transmission
   a. Alarm signal shall be transmitted to a remote central station. The signal shall be transmitted through dedicated lease-line. The alarm transmission line shall also be supervised, such that communication failure can be detected from the central station;
   b. The transmitter used shall have identity signals sent back to the central station such that compromising by direct swapping of transmitter shall not be possible. Communication data shall also be encrypted to deter compromising;
   c. The alarm signal shall be terminated in the central station which shall be manned by at least 2 persons any time. The central station shall enforce stringent security measures and meeting BS 5979 is preferred. The central station shall be operated by a well established and reputable security service company, the name of which shall be submitted to the Contract Manager for Approval;
   d. In the central station, there shall be records of telephone numbers of site guard post and keyholders. Should there by any alarm received by the central station, its operator shall call site guard and the keyholder. Upon notification, the keyholder shall return to the protected premises to investigate and reset the control panel. Should there be any suspected theft or burglary, the operator shall call the police. All telephone conversations with central station must be recorded and kept for at least 30 days for later reference.

7. Operating cost
   All operating costs for the burglar alarm system, including the rental charges for the lease-line, the charges for the remote central station etc. shall be borne by the Sub-contractor.
ELE1.9.030.8  MARKING OF RESIDUAL CURRENT CIRCUIT BREAKERS (RCCB)

The name of the estate and the phase number (e.g. LOK FU 5), or the suitable description of the contract, shall be indelibly marked on an external surface of the enclosure of the RCCB in capital letters of not less than 3 mm high. The marking shall not affect the appearance and performance of the RCCB. A sample of the marked RCCB shall be submitted to the Contract Manager for Approval prior to installation.
ELE1.10 RECORD DOCUMENTATION

ELE1.10.010.8 REQUIREMENTS FOR SUB-CONTRACTOR'S DRAWINGS

1. Size of drawings

Drawings submitted by the Sub-contractor shall be of a standard size from A0 to A4 in accordance with BS EN ISO 5457. "As-fitted" drawings shall be of A0 or A1 size only.

2. Installation drawings

The Installation Drawings shall detail and dimension the following, where relevant and also read in conjunction with Preliminaries for Building Services Sub-contracts:

a. Site distribution, cable and busduct routes;

b. General layout drawings giving accurate and dimensioned locations of all plant and equipment included in the Sub-contract;

c. Schematic diagrams for main and sub-main distribution;

d. Main switchboard details, including schematic diagram, component layout, busbar arrangement, compartmentation, conductor sizes, cabling arrangement, termination details, control diagram;

e. Details of distribution boards and consumer units, including types and rating of protective devices, sizes and types of incoming and outgoing cables, circuit description;

f. Busduct installation details showing connections, mounting details and setting out of all components including straight runs elbows, offsets, tap-off units, etc.;

g. Prefabricated Branch Cables installation details showing connections, mounting details and setting out of all components including straight runs elbows, offsets, tap-off units, etc.;

h. Lighting layouts for normal and emergency fittings, detailing positions, mounting methods, types of luminaires, switch positions and wiring connections;

i. Conduit routes with conduit sizes, showing adaptable boxes, details of cables and circuit references (see ELE1.10.020);

j. Trunking and cable tray routes with details of sizes, fixings, cables carried;

k. Generator installation details, showing plant layout and sections, exhaust pipe details, fuel system details, acoustic treatment, control equipment;

l. Earthing and equipotential bonding system with details of conductor sizes and routing, bonding arrangement;

m. Lightning protection system with details of air terminations, down conductors and bonding;

n. CABD, Security, CCTV, EAS, PA and carpark control systems, whichever included in the Sub-contract, with schematics, equipment details, cable routes, termination details, fixing details, etc.;

o. Label schedules, showing wording and formats for the labelling of equipment and distribution board circuits;

Operating and maintenance clearances for the equipment and their static and dynamic structural loading shall be shown on the installation drawings wherever necessary.
3. "As-fitted" drawings

The "as-fitted" drawings shall be based on the full set of Approved Installation Drawings updated to show the actual positions and arrangement of all items installed. Any additional drawings which are considered necessary by the Contract Manager for showing the complete installation shall be included. The Drawings shall be drawn in black-ink lines on transparent linen or other Approved materials, suitable for reproduction of prints.

**ELE1.10.020.8 CONDUIT RUN DRAWINGS**

The Sub-contractor shall submit detailed conduit layout drawings for Approval prior to commencement of the installation. The Sub-contractor shall supply to the Contract Manager eight (8) sets of conduit run drawings after Approval.

**ELE1.10.030.8 WORKING DRAWINGS AND AS-FITTED DRAWINGS**

1. The Sub-contractor's attention is drawn to Preliminaries for Building Services Sub-contracts for installation drawings and ELE1.10.020 above;

2. Schematic wiring diagrams for the electrical installation of each building shall be provided and fixed properly to the satisfaction of the Contract Manager, in the locations hereunder. The diagrams shall be of A1 size minimum and each diagram shall be treated with acrylic varnish to prevent deterioration and mounted in an anodised aluminium frame with transparent plastic front plate of 3 mm minimum thickness and wooden backing board of 5 mm minimum thickness;

<table>

</tr>
<tr>
<td>Public address system</td>
<td>Adjacent to the main system amplifier</td>
</tr>
</tbody>
</table>

3. The complete set of as-fitted drawings shall consist of each of the drawings, which shall include but not be limited to the following:

- Site plan and underground cable route of telecommunication lines, supply company cables, road lighting layout plan;
- Schematic wiring diagrams;
- Electrical floor layout plans;
- Typical domestic flat layout plans;
- Schematic wiring diagram of public lighting;
- Public lighting layout plans;
- External lighting layout plans;
- Transformer room, main switch room and meter room layout plans;
- Installation details - lateral main, trunking and mounting methods;
- Lighting protection system;
- Schematic diagram for doorphone system;
- Control block diagram for doorphone system;
m. Security system – schematic diagram for all sub-systems (showing the type of integrated circuits transistors, diodes and other semiconductor devices, voltage rating and values of all passive components etc), one to one scale printed board layout and the arrangement of components on the circuit boards;

n. CCTV installation layout plan;

o. Security alarm installation;

p. Public address system;

q. CABD system - site layout plan (showing antenna position and direction) and signal field strength.

**ELE1.10.040.8 DOCUMENTS AND TECHNICAL LITERATURE TO BE SUBMITTED AFTER COMPLETION**

The Sub-contractor shall submit the following documents and technical literature to the Contract Manager for the whole installation and equipment provided under this Sub-contract which shall include, but not be limited to the following:

1. User manual consisting of:
   a. Information (catalogue, manual, instruction etc.) on special precautions/procedures/methods required on the use, operation, cleaning, servicing, maintenance, repair and replacement of all proprietary material and equipment installed such as air circuit breaker(s)/moulded case circuit breaker(s) including protection and instrumentation devices, lighting fittings, amplifiers and cameras. Requirements on proper use and operation for durability, safety and statutory consideration shall be clearly stated;
   
   b. A list of recommended spare parts;
   
   c. Testing and commissioning reports on the system and equipment installed (electronic copy in PDF format stored on recordable compact disc shall be provided in addition to hard copies).

2. Original certificate of warranty for any material, equipment and installation with warranty period last beyond Maintenance Period; and

3. Other items as required by the Contract Manager.

For public address system, apart from the documents stipulated above, three sets of operation and maintenance manuals with detailed circuit diagrams and descriptions shall be submitted to the Contract Manager one month before the commissioning of the installation.

**ELE2.1 DOMESTIC BLOCKS**

**ELE2.1.1 APPLICATION**

**ELE2.1.010.8 BLOCKS**
ELE2.1 applies to the domestic blocks covered by this Sub-contract unless otherwise specified in Project Specific Specification or Drawings.

**ELE2.1.020.8 REFERENCE DOCUMENTS**
The Sub-contractor shall provide the whole of the electrical installation in each of the blocks/buildings as detailed on the Drawings and in this Specification including Project Specific Specification. This section of the Specification should be read in conjunction with other Worksections.

**ELE2.1.2 MAINS SUPPLY**

**ELE2.1.2.010.8 PROVISION BY SUPPLY COMPANY**
1. The Supply Company will provide an independent 380V, 3-phase, 4-wire, TT system supply to each block/building;
2. The Sub-contractor shall provide durable labels at the main incoming circuit breakers and along the risers at all floor levels to indicate the source transformers as per the power supply company's requirements and as otherwise specified in Project Specific Specification.

**ELE2.1.2.020.8 ATTENDANCE BY SUB-CONTRACTOR**
The Sub-contractor shall provide all necessary attendance, complete with all necessary work, and enforce all safety measures required for the connection of supply.

**ELE2.1.3 MAIN CUBICLE SWITCHBOARD**

**ELE2.1.3.010.8 PROVISION OF DETAILS**
The main cubicle switchboard shall be provided as shown on the Drawings. The Sub-contractor shall submit a set of detailed installation drawings showing the proposed layout, positioning and construction of the cubicle switchboard for Approval prior to assembly. The proposal shall take into account the actual site conditions and Supply Company's requirements with regard to incoming supply termination, clearance space for installation, operation and maintenance, incoming cable/bars and outgoing cable routing, supporting framework, etc.

**ELE2.1.3.020.8 INSTALLATION OF SUPPLY COMPANY'S ELECTRICITY METERS**
The Sub-contractor shall apply, collect and install the Supply Company's electricity meters, and liaise with the Supply Company to ensure that the provisions for termination of the incoming supply cables/busbars and installation of the electricity meters are suitable and meet the Supply Company's requirements.
ELE2.1.3.030.8 OFF-SITE INSPECTION
Inspection of the cubicle switchboard may be carried out by the Contract Manager or his representative at the manufacturer's works during the construction stage.

ELE2.1.3.040.8 TESTS
Tests shall be carried out by the Sub-contractor upon completion in the presence of the Contract Manager or his representative prior to acceptance and delivery to Site.

ELE2.1.3.050.8 SUPPLY FEEDING FROM HEC
1. Unless otherwise specified on Drawings, the Sub-contractor shall supply and install the LV transit blocks and single cores XLPE/PVCI/PVCS power supply cables connecting to the incoming air circuit breakers;
2. For design using busbar trunking system, the Sub-contractor shall supply and install the LV transit blocks and busbar trunking system connecting to the incoming air circuit breakers;
3. The busbar trunking system shall comply with IEC 60439-1 and shall be assembled by the same manufacturer of the main cubicle switchboard;
4. The copper busbars shall be of 2500A TP and full neutral and housed in an enclosure of IP 31. The system and its installation details shall be submitted for Approval prior to installation.

ELE2.1.3.060.8 POWER FACTOR CORRECTION EQUIPMENT
1. When power factor correction equipment is required, a separate floor-standing cubicle housing the power factor correction capacitor bank and the associated equipment shall be provided within the main switch room as shown on the Drawings;
2. The power factor correction cubicle shall be manufactured/assembled by the same manufacturer of the main cubicle switchboard;
3. The Sub-contractor shall submit a set of detailed installation drawings showing the proposed layout, positioning and construction of the power factor correction cubicle for Approval prior to assembly.

ELE2.1.3.070.8 PAINTING SWITCHGEAR
All the switchgears fed from essential supply circuitry shall be painted in red.

ELE2.1.4 RISING MAINS AND SUB-MAINS DISTRIBUTION SYSTEMS

ELE2.1.4.010.8 SCOPE OF WORK
The Sub-contractor shall supply, install and connect rising mains and sub-mains distribution systems comprising cables, busbar/pre-fabricated branch cable risers, conduit and accessories, MCB distribution boards, busbar chambers, etc as shown on the Drawings and otherwise as specified in Project Specific Specification.

ELE2.1.4.020.8 BUSBAR/PRE-FABRICATED BRANCH CABLE RISING MAINS
The busbar/pre-fabricated branch cable rising mains shall be manufactured and designed for the particular job with all purpose-made fittings and accessories.
ELE2.1.4.030.8  BUSBAR/PRE-FABRICATED BRANCH CABLE RISERS

1. The Sub-contractor shall submit the manufacturer's drawings showing the details of the busbar/pre-fabricated branch cable risers to the Contract Manager or his representative for Approval prior to manufacture;

2. The busbar risers shall be securely fixed on the surface of the wall and shall be straight from the bottom to the top;

3. When the gap between a riser and wall is considerable due to uneven plastering or concrete at fixing point, the Sub-contractor shall install suitable packing or Approved galvanized steel brackets to which the trunking shall be fixed;

4. The minimum distance between the trunking case and the wall shall be 25 mm.

ELE2.1.4.040.8  FIXING ARMOURED CABLES

All armoured cables run on walls shall be fixed by cable cleats of the following types:

<table>
<thead>
<tr>
<th>Cable Diameter (mm)</th>
<th>Type of Cable Cleat</th>
</tr>
</thead>
<tbody>
<tr>
<td>dia. ≤ 50</td>
<td>1-bolt Fixing Type</td>
</tr>
<tr>
<td>dia. &gt; 50</td>
<td>2-bolt Fixing Type</td>
</tr>
</tbody>
</table>

Also, the cables shall be fixed on wall by means of angle iron support or metal framework depending on actual site conditions.

ELE2.1.4.050.8  PAINTING SWITCHGEAR

All the switchgears fed from essential supply circuitry shall be painted in red.

ELE2.1.5  BRANCH-OFF CIRCUITS FROM RISING MAINS

ELE2.1.5.010.8  SCOPE OF WORK

The Sub-contractor shall supply, install and connect the TP & N branch-off circuits from the busbar/pre-fabricated branch cable rising mains comprising cables, TP & N fuse combination unit and MCB distribution board etc. in the meter rooms of each domestic floor and at other locations as shown on the Drawings and otherwise as specified in Project Specific Specification.

ELE2.1.6  RADIAL MAINS TO DOMESTIC UNITS

ELE2.1.6.010.8  THE INSTALLATION

1. The mains supply to each domestic unit on one floor shall be fed from the appropriate MCB distribution board in the meter room on the same floor or the other floor as shown on the Drawings;

2. Each circuit commencing from the respective double pole MCB shall be fed via the Supply Company's electricity meter to each individual domestic unit by PVC insulated cable in a cable containment system such as surface steel conduit/PVC conduit/trunking system as shown on the Drawings inside the meter room(s), and in concealed PVC conduit system from the meter room(s) to the consumer unit in each domestic unit;

3. The meter board for the installation of Supply Company's meter shall be provided and installed by the Sub-contractor;
4. The Supply Company's meters will be supplied and installed on the meter board in Meter Rooms at each floor by the Supply Company as shown on the Drawings. The Sub-contractor shall be responsible for providing connection and fixing facilities, at the position and ready for installing Supply Company's meter. The Sub-contractor shall check and ensure everything of the circuit is in an orderly manner before meter connection by the Supply Company.

ELE2.1.6.020.8  METER CONNECTION AND ENERGISATION FOR DOMESTIC FLATS

1. Before the installation and connection of the meters by Supply Company for the flats, the Sub-contractor shall switch off all the control switches i.e. the DP MCBs in the meter rooms and shall insulate properly any exposed conductors of the meter tails to the satisfaction of the Contract Manager;

2. The Sub-contractor shall also switch off all the main switches of consumer units in the flats and provide, next to each main switch, a temporary label/notice, in English and Chinese, as follows

"Danger: Do not switch on the main switch unless the meter is connected and the electricity supply to this flat is ready.
(Please check with the Management Office for the readiness of supply)."

危険: 在本單位電錶安裝和電源接駁妥當前
切勿閉合(開)電源總掣
(有關電錶/電源接駁時間，請與管理處聯絡)

The label/notice shall be legible and reasonably durable. Sample shall be submitted for Approval.

3. The Supply Company, before connecting the meters, will inspect and test the installation of the flats. The Sub-contractor shall provide all necessary attendance for such inspection and testing carried out within the Maintenance Period and shall pay all fees levied on retesting;

4. The Sub-contractor shall be responsible for switching on the supply circuits to individual flats subsequent to the installation of meters by the Supply Company. Immediately before switching on the supply to each flat, the Sub-contractor shall check to ensure that the switching will not cause any danger to other persons and the installation;

5. The Sub-contractor shall liaise with the Supply Co. and the Management Office for programming the meter connection and the switching operation before and within the Maintenance Period. The Sub-contractor shall complete the switching operation within 12 hours after collecting the daily return from the Management Office for those flats with the meter connected or upon notification by the Management Office. After the switching, the Sub-contractor shall return the record of flats energised to the Management Office immediately.

ELE2.1.7  INSTALLATION FOR DOMESTIC UNITS IN RENTAL BLOCKS

ELE2.1.7.010.8  SCOPE OF INSTALLATION

Each installation shall comprise a door bell and push, 13A 3-pin single and twin sockets, 20A DP switches, connection units, lampholders, lighting switches etc, to complete as shown on the Drawings and otherwise as specified in Project Specific Specification.
ELE2.1.7.020.8 WIRING SYSTEM

The Sub-contractor shall supply, install and connect a concealed PVC conduit wiring system for lighting and power points in each domestic unit, commencing from the surface mounted consumer unit as shown on the Drawings.

ELE2.1.7.050.8 ACCESSORIES

1. All electrical accessories shall be of flush type;
2. Inscription is not required on front plate of control switches feeding fixed electrical appliances in domestic blocks;
3. The door bell shall operate at extra-low voltage, comprising double wound transformer, bell and push etc. Sample of the door bell shall be submitted for Approval prior to ordering of material.

ELE2.1.7.060.8 CONSUMER UNIT

1. A plastic label to indicate the on and off of the main switch and the function of each MCB and spare way shall be provided in accordance with Worksection ELE28.1;
2. The range of instantaneous tripping current for MCB for the A/C unit shall be in accordance with IEC 60898-1 or BS EN 60898-1 - type C tripping characteristics;
3. The range of instantaneous tripping current for MCB for lighting and power shall be in accordance with IEC 60898-1 or BS EN 60898-1 – type B tripping characteristics;
4. The earthing terminal of the consumer unit shall be connected by protective conductor of adequate size PVC insulated cable as shown on the Drawings to the proper earthing terminal of the incoming supply system.

ELE2.1.7.070.8 CONDUIT FOR COMMUNICATIONS INSTALLATIONS

1. A concealed PVC conduit system complete with draw wire and accessories shall be provided by the Sub-contractor for the Fixed Telecommunication Network Services (FTNS), Communal Aerial Broadcasting Distribution (CABD) installation, Subscription Television Distribution Network (STDN) installation, Towngas Automatic Meter Reading (AMR) system and security system installation as shown on the Drawings;
2. The Sub-contractor shall take the roles of coordinating other neighbouring services and determine the exact concealed conduit routes for communications installations while those given on the Drawings are for indicative and tendering purposes.

ELE2.1.7.080.8 EQUIPOTENTIAL BONDING - GENERAL

1. The Sub-contractor shall provide a system of main equipotential bonding and local supplementary bonding for all exposed and extraneous conductive parts for each domestic unit in accordance with the Electrical CoP, BS 7671, Supply Rules and ELE17;
2. The Sub-contractor shall ensure the bonding for extraneous conductive parts is sound and the result complies with the Electrical CoP and BS 7671 by proper measurement with records at good time. For those parts of equipotential bonding system found not electrical conductive, the Main Contractor and the Sub-contractor shall be responsible for rectification of their own works as early as possible.
ELE2.1.7.085.8 **MAIN EQUIPOTENTIAL BONDING**

The water and gas main incoming pipes inside the domestic flat shall be bonded at their point of entry to the flat to the earth terminal of the consumer unit by cables in concealed PVC conduit system and surface wires as shown on the Drawings.

ELE2.1.7.090.8 **LOCAL SUPPLEMENTARY BONDING**

1. Local supplementary bonding shall also be provided for the exposed metal cold/hot water pipes and/or gas pipes in the flats, when they are not connected to the main pipes by reliable metal-to-metal joints of negligible impedance. Local supplementary bonding for these pipes inside pipe duct, under sink, cooking bench or below bath tub may be by surface wiring;

2. The Sub-contractor shall provide, local supplementary bonding for the following extraneous conductive parts, which are not exhaustive in the domestic flat as shown on the Drawings:
   a. Sink/combined unit/cooking bench;
   b. Windows;
   c. Louvers;
   d. Bathroom fittings.

3. Supplementary Bonding
   a. For sink/combined unit/cooking bench
      i. The Main Contractor will provide a 1.5 mm thick stainless steel earthing lug with a 5 mm diameter hole welded to each sink/combined unit/cooking bench;
      ii. The Sub-contractor shall provide the supplementary bonding for the sink/combined unit/cooking bench by surface wiring to the earthing terminal of the nearby extraneous/exposed conductive parts or BS 4662 or IEC 60670-1 box or the nearby fused connection unit via concealed PVC conduit to the BS 4662 or IEC 60670-1 box. For the former case, the bonding conductor shall be fixed by a 4 mm diameter stainless steel screw, washer and nut to the earthing lug.

   b. For windows and louvers
      i. The Main Contractor will provide at each of the extraneous conductive parts, a 20 mm wide, 1.5 mm thick hot-dip galvanized steel earthing lug one end of which will be fixed to the extraneous conductive part by 2 nos. M4 self-tapping stainless steel screws at 60 mm c/c and the other end with a 5 mm diameter hole provided, for the termination of the bonding conductor, will be extended to the nearby BS 4662 or IEC 60670-1 box via a recess slot;
      ii. The Sub-contractor shall provide the bonding conductor which shall be fixed to the earthing lug by a 4 mm diameter stainless steel screw, washer and nut and to the earthing terminal of the nearby [BS 4662 or IEC 60670-1 box]/[lighting point or connection unit];
      iii. The recess slot will be provided and backfilled after the fixing of the earthing lug by the Main Contractor;
      iv. The Sub-contractor shall advise the Main Contractor of the location of the recess slot in conjunction with the layout of the BS 4662 or IEC 60670-1 box for equipotential bonding.
c. For bathroom fittings
   i. The Main Contractor will provide a concealed 30 mm wide, 1.5 mm thick hot-dip galvanized steel metal strip for equipotential bonding of the extraneous conductive parts as shown on the Drawings;
   ii. The Main Contractor will fix one end of the hot-dip galvanized steel metal strip to the extraneous conductive part and the other end with a 5 mm diameter hole provided, for the termination of the bonding conductor in the nearby BS 4662 or IEC 60670-1 box as shown on the Drawings;
   iii. The Sub-contractor shall provide the bonding conductor which shall be fixed to the metal strip by a 4 mm diameter stainless steel screw, washer and nut and to the earthing terminal of the nearby [BS 4662 or IEC 60670-1 box]/[lighting point or connection unit];

The Sub-contractor shall advise the Main Contractor of the location of the BS 4662 or IEC 60670-1 box for equipotential bonding.

**ELE2.1.12 PUBLIC LIGHTING AND POWER**

**ELE2.1.12.010.8 SCOPE OF INSTALLATION**

The Sub-contractor shall supply, install and connect concealed PVC conduit wiring systems for the electrical installations at all public areas and plant rooms, comprising conduits and fittings, cables, lighting fittings, switches, MCB boards, sockets, etc to complete as shown on the Drawings.

**ELE2.1.12.020.8 ESSENTIAL LIGHTING**

Part of the public lighting is essential lighting fed from the essential supply board as shown on the Drawings.

**ELE2.1.12.030.8 LIGHTING CONTROLS**

1. The public lighting shall be controlled by 24 hours time switches/photocells complete with metal box as shown on the Drawings;
2. A by-pass switch shall be provided for each time switch to control the operation manually;
3. The time switch/photocell shall be submitted for Approval before installation;
4. The control of the lightings on roof is timer controlled and interconnected with the fire alarm installation and door contacts for operation as shown on the Drawings and as otherwise specified in Project Specific Specification;
5. The public lighting main switch and MCB distribution boards shall be installed in switch/meter rooms at various floors and blocks as shown on the Drawings.

**ELE2.1.12.050.8 EXIT SIGNS**

The Sub-contractor shall supply and install the exit signs as shown on the Drawings.

**ELE2.1.12.060.8 MCB UNIT**

Unless otherwise specified, the range of instantaneous tripping current for MCB unit for lighting and power circuitry shall be in accordance with IEC 60898 or BS EN 60898-1 type B tripping characteristics.
ELE2.1.13  LIFT SUPPLY

ELE2.1.13.010.8  SCOPE OF INSTALLATION

1. The Sub-contractor shall supply, install and connect lift power supply system consisting of multi-core fire resistant armoured cables, floor mounted L.V. cubicle switchboard, isolator, changeover contactor, fuse combination units, busbar chamber, MCB distribution boards, etc, as shown on the Drawings and otherwise as specified in Project Specific Specification;

2. The L.V. cubicle switchboard shall be provided as shown on the Drawings. The Sub-contractor shall submit a set of detailed installation drawings showing the proposed layout, position and construction of the cubicle switchboard for approval prior to assembly.

ELE2.1.13.020.8  INSTALLATION CABLES

The cables shall be installed with a minimum horizontal or vertical separation distance of 75 mm with other circuits.

ELE2.1.13.030.8  CONDUIT FOR LIFT ALARM BELL

Except for surface mounted conduit which shall be of G. I. type, a system of concealed PVC conduit completed with draw wire and accessories reserved for lift alarm bells at ground floor and central lift alarm indication system shall be carried out by the Sub-contractor as shown on the Drawings.

ELE2.1.13.040.N  TRIPPING OF POWER CIRCUITS FOR AFTER HOMING

The Lift Sub-contractor shall provide a homing signal to the Sub-Contractor, in form of a pair of normally open dry contacts, for each non-fireman’s lift after completion of homing. Upon receiving the homing signal, the power supply of the corresponding sub-distribution board serving the lighting and small power of that lift shall be tripped off automatically. The power supply shall resume normal after the homing signal is removed. The Sub-Contractor shall supply and install all necessary contactors and control circuits to perform the above function.

ELE2.1.14  PUMP SUPPLY

ELE2.1.14.010.8  SCOPE OF INSTALLATION

The Sub-contractor shall supply, install and connect the pump power supply system consisting of multi-core armoured cable, switchgears, busbar chambers, MCB distribution board, etc inside the fire services pump rooms, and water pump room, as shown on the Drawings and otherwise as specified in Project Specific Specification.

ELE2.1.14.020.8  FACILITIES PROVIDED BY OTHERS

All water pumps including fire pumps, starters, control panel, control wiring and accessories up to the roof tank will be provided by others.

ELE2.1.14.030.8  INSTALLATION OF CABLES

The circuit for fire pump supply shall be at a horizontal or vertical separation distance of 75 mm with other circuits.
ELE2.1.14.040.8 CONDUIT FOR PUMP SUPPLY
Except for surface mounted conduit which shall be of G. I. type, a system of concealed PVC conduits completed with draw wires and accessories, etc from the roof tanks down to the pump rooms for the pump control circuit, shall be carried out by the Sub-contractor as shown on the Drawings.

ELE2.1.15 PUMP, LIFT MACHINE, GENERATOR ROOMS, REFUSE STORAGE & MATERIAL RECOVERY CHAMBERS, REFUSE STORAGE & MATERIAL RECOVERY ROOMS AND REFUSE COLLECTION POINT/JUNK COLLECTION POINT

ELE2.1.15.010.8 SCOPE OF INSTALLATION
1. The Sub-contractor shall supply, install and connect in surface steel conduit wiring system for the electrical installation in all lift machine rooms, FS pump rooms, water pump rooms and generator rooms as shown on the Drawings and otherwise as specified in the Project Specific Specification, whereas for refuse storage & material recovery chambers, refuse storage & material recovery rooms and refuse collection point/junk collection point, concealed PVC conduit system shall be used;
2. The Sub-contractor shall supply and install mechanical ventilation systems for the refuse collection point/junk collection point, refuse storage & material recovery chambers, refuse storage & material recovery rooms, refuse chutes, pump rooms, lift machine rooms, generator rooms and other rooms all as shown on the Drawings and otherwise as specified in the Project Specific Specification and ELE31.

ELE2.1.15.025.8 SCOPE AND REQUIREMENTS OF MECHANICAL VENTILATION SYSTEM
1. The Sub-contractor shall supply, install, commission, test and maintain the mechanical ventilation systems all as shown on the Drawings and as specified in this Specification;
2. The sections in ELE31 stipulate the performance specification to be supplied and installed by the Sub-contractor and set out in general the design criteria, minimum requirements, types and standards of the relevant equipment and materials to be provided. The Sub-contractor shall be fully responsible for the comprehensive application design, manufacture, supply, installation, testing and commissioning to meet the project requirements, whether or not installation details are indicated in the Specification and / or on the Drawings;
3. The system installation shall comply with this Specification, latest edition of General Specification for Air conditioning, Refrigeration, Ventilation and Central Monitoring & Control System Installation in Government Buildings of the Hong Kong Special Administrative Region issued by Architectural Services Department, Hong Kong (hereinafter referred to as "General AC Specification") and latest edition of Code of Practice for Energy Efficiency of Building Services Installation issued by Electrical and Mechanical Services Department, Hong Kong.

ELE2.1.15.030.8 EXECUTION OF WORK FOR MECHANICAL VENTILATION SYSTEM
The Sub-contractor shall employ a registered ventilation contractor to supply, install, commission, test and maintain the complete systems and to issue ventilation certificates to the Contract Manager during the Maintenance Period where required by Building (Ventilating Systems) Regulations.
ELE2.1.15.040.8  EXTRATION SYSTEM FOR VEHICLE EXHAUST
Extraction system for vehicle exhaust shall be provided for the refuse collection point when specified in the Project Specific Specification and shown on the Drawings.

ELE2.1.15.050.8  FILTERS FOR MECHANICAL VENTILATION SYSTEM
Outdoor air shall be filtered by washable panel filter when shown on the Drawings to improve indoor air quality and protect equipment before it enters the mechanical ventilation system.

ELE2.1.16  TRANSFORMER ROOMS/H.V. SWITCH ROOMS

ELE2.1.16.010.8  SCOPE OF INSTALLATION FOR POWER SUPPLY FROM CLP
The Sub-contractor shall supply, install and connect the electrical installation comprising surface steel conduits and accessories, cables, MCB distribution board, switches, socket-outlets, lighting fittings, cable tray, etc to complete as shown on the Drawings and otherwise as specified in the Project Specific Specification.

ELE2.1.16.015.8  SCOPE OF INSTALLATION FOR POWER SUPPLY FROM HEC
The Sub-contractor shall supply, install and connect the electrical installation comprising surface steel conduits and accessories, cable, MCB distribution board, switches, socket-outlets, lighting fittings, etc to complete as shown on the Drawings and otherwise as specified in the Project Specific Specification.

ELE2.1.16.020.8  SUPPLY
The supply to the MCB distribution board will be provided by the Supply Company.

ELE2.1.16.030.8  FANS FOR CLP TRANSFORMER ROOM
1. The exhaust fan and the temperature control panel will be provided by the Supply Company but shall be collected and installed by the Sub-contractor;
2. The mounting diaphragm and flexible connection for exhaust fan shall be supplied and installed by the Sub-contractor.

ELE2.1.16.035.8  FANS FOR HEC TRANSFORMER ROOM
1. The axial flow fan and silencer will be supplied by the Supply Company and will be installed by the Main Contractor;
2. The fan control cubicle will be supplied by the Supply Company and shall be installed by the Sub-contractor.

ELE2.1.16.040.8  AIR TRUNKING
The air trunking inside the transformer rooms/switch rooms will be provided and installed by the Main Contractor.

ELE2.1.16.050.8  EQUIPOTENTIAL BONDING
The Sub-contractor shall also provide the equipotential bonding for the air trunking, steel door, etc to the earthing terminal of the MCB distribution board as shown on the Drawings.
ELE2.1.17 PROVISION FOR FIXED TELECOMMUNICATION NETWORK SYSTEM (FTNS) INSTALLATION

ELE2.1.17.010.8 CONDUIT AND TRUNKING
Except for the surface mounted conduit which shall be of G. I. type, a system of concealed PVC conduit and steel trunking together with accessories only for fixed telecommunication network system (FTNS) installation shall be provided by the Sub-contractor as shown on the Drawings.

ELE2.1.17.020.8 EARTHING
An earthing terminal for the FTNS equipment shall be provided by the Sub-contractor at the location as shown on the Drawings.

ELE2.1.17.030.8 LIGHTING IN TBE ROOMS
The Sub-contractor shall supply and install lighting fittings and switches in TBE rooms in concealed PVC conduit system as shown on the Drawings.

ELE2.1.17.040.8 TBE ROOM SUPPLY
The Sub-contractor shall supply, install and connect power supply system for FTNS installation consisting of switchgear, MCB board, trunking and cables in TBE room as shown on the Drawings.

ELE2.1.18 PROVISION FOR SECURITY SYSTEM (SE) INSTALLATION

ELE2.1.18.010.8 PROVISION OF SYSTEM / INSTALLATION
The Sub-contractor shall supply, install and connect the SE installation as shown on the Drawings and otherwise as specified in the Project Specific Specification and ELE24.

The detail of the building to be provided with a separate security system is specified in the Project Specific Specification.

The provision of Security System, unless otherwise stated in the Project Specific Specification or the Drawings, shall consist of the following:

1. A complete doorphone system with doorphone panel in main entrance or other entrances as indicated on the Drawings for every domestic block;
2. A complete local CCTV monitoring system for lifts and entrances at every domestic block;
3. A complete local alarm and door monitoring system at every domestic block;
4. A complete central alarm and door monitoring system;
5. A complete central CCTV system for entrances and guard counter;
6. Telephone at guard counter and in Estate Office.

ELE2.1.18.020.8 PROVISION OF POWER SUPPLY AND CONDUIT
1. The Sub-contractor shall provide the power supply and surface steel conduit/trunking system inside the meter/service room for SE installation;
2. A system of concealed PVC conduit together with accessories from the meter/service rooms to the domestic units and roof shall be provided as shown on the Drawings and otherwise as specified in the Project Specific Specification.

ELE2.1.19 PROVISION FOR SUBSCRIPTION TELEVISION DISTRIBUTION NETWORK (STDN) INSTALLATION

ELE2.1.19.010.8 CONDUIT AND TRUNKING

1. Except for surface mounted conduit which shall be of G.I. type, a system consisting of concealed PVC conduit and steel trunking together with accessories only for CABD & STDN installations shall be provided by the Sub-contractor as shown on the Drawings;

2. The Sub-contractor shall take the roles of coordinating other neighbouring services and determine the exact concealed conduit routes for communications installations while those given on the Drawings are for indicative and tendering purposes;

3. The Sub-contractor shall check and locate the exact location of the antenna in preparing the conduit run drawing from the meter/service room on the top floor to the roof and submit to the Contract Manager for Approval as this portion of conduit routing has not been shown on the Drawings;

4. The coordinated conduit layout for the entire CABD, STDN and any other television broadcasting distribution systems shall be submitted to the Contract Manager for approval prior to the commencement of works.

ELE2.1.19.020.8 COORDINATION

1. The Sub-contractor shall coordinate with the STDN operators and obtain a set of their exact technical requirements for installation. The Sub-contractor shall also install the CABD equipment in consideration of any space allocated for STDN installation;

2. The CABD equipment the Sub-contractor is installing shall not cause any interference that will impair the quality of to other neighbouring telecommunication services, including the STDN one.

ELE2.1.20 EARTHING AND FAULT PROTECTION

ELE2.1.20.010.8 GENERAL

This section should be read in conjunction with other Worksections relating to earthing and fault protection.

ELE2.1.20.020.8 EARTHING TERMINALS

1. An earthing terminal bonded to the reinforcement or steel piles of the building in each main switchroom will be provided by the Main Contractor as shown on the Drawings;

2. The Sub-contractor shall supervise the work and label the terminal and connect it up with copper tapes to the main earthing terminal in accordance with the Drawings;
3. The Sub-contractor shall follow Power Company Code of Practice 101 / Guide to Connection of Supply to provide bonding terminal and connection to the main earthing terminal as shown on the Drawings for bonding to the earthed point of transformer.

ELE2.1.20.030.8 EARTH ELECTRODE

The earth electrode shall be of rod electrode.

ELE2.1.20.040.8 EARTHING SYSTEM FOR TBE ROOM

In addition to earthing provided for exposed conductive parts of electrical installations in TBE room, a separate earthing system consisting of earth electrode(s), earthing conductor and earthing terminal shall be provided for telecommunication equipment as shown on the Drawings.

ELE2.1.20.050.8 CIRCUIT PROTECTIVE CONDUCTOR

1. For distribution boards supplying circuits for both sockets and fixed equipment, the Sub-contractor shall also check, in accordance with the offered equipment, and ensure that the impedance of the protective conductor between the exposed conductive parts and the point at which the protective conductor is connected to the main equipotential bonding of an installation does not exceed $50Z_s/U_o$ ohms, where $Z_s$ is the earth fault loop impedance corresponding to a disconnection time of 5 sec. and $U_o$ is the nominal voltage equivalent to 220V, failing which the Sub-contractor shall provide CPC with larger cross-sectional area wherever necessary;

2. For circuits supplying only fixed equipment within the equipotential zone, the earth fault loop impedance at every point of utilisation is such that disconnection occurs within 0.4 second or 5 seconds in accordance with Code 11B(b) (ii) of the Electrical CoP;

3. For circuits supplying fixed equipment outside the equipotential zone, the earth fault loop impedance at every point of utilisation is such that disconnection occurs within 0.2 second or 0.4 second in accordance with Code 11B(b) (iii) of the Electrical CoP.

ELE2.1.20.060.8 EQUIPOTENTIAL BONDING FOR EXTRANEOUS CONDUCTIVE PARTS IN COMMUNAL AREA OF BUILDING

1. Notwithstanding the provisions of the following specification on workmanship and materials for installation of cast iron piping system by Main Contractor, the Sub-contractor has the responsibility to verify that the resistance of installed cast iron pipes to main earth is not less than 45,000 Ohm even under the worst conditions (e.g. high moisture) in accordance with the Electrical CoP and if otherwise and necessary to provide the equipotential bonding in accordance with the requirements of the Electrical CoP:

   a. Use cold caulking compound for jointing of cast iron pipes and fittings in accordance with manufacturer's instruction;

   b. The pipe brackets for mounting cast iron pipe shall be lined with resilient plastic at pipe clamp;

   c. Paint cast iron pipes/fittings with at least 2 finish coats of bitumen to BS 3416 after installation.
**ELE2.1.21  LIGHTNING PROTECTION SYSTEM**

**ELE2.1.21.010.8  STANDARD**
The Sub-contractor shall supply, install and connect a lightning protection system at the
roof top of Domestic Blocks as shown on the Drawings.

**ELE2.1.21.020.8  CONSTRUCTION**
The lightning protection system comprising aluminium tapes shall be complete with
fixing saddles bonded to the structure as shown on the Drawings.

**ELE2.1.21.030.8  EQUIPOTENTIAL BONDING**
The Sub-contractor shall also provide equipotential bonding of the lightning protection
system to the electrical system in accordance with the Electrical CoP.

**ELE2.1.21.040.8  RESISTANCE**
After the completion of the lightning protection system installation, the Sub-contractor
shall measure the resistance of the down conductors between the air termination on roof
and the structural earth terminal in the main switch room and report the measured results
to the Contract Manager for checking purpose.

**ELE2.1.22  STANDBY DIESEL GENERATING SET(S)**

**ELE2.1.22.010.8  APPLICATION**
A standby diesel generating set shall be provided as an emergency supply to comply
with the Fire Services Department requirements as shown on the Drawings.

**ELE2.1.23  PROVISION FOR TOWNGAS AUTOMATIC METER READING (AMR) SYSTEM INSTALLATION**

**ELE2.1.23.010.8  CONDUIT AND TRUNKING**
Except for surface mounted conduit which shall be of G.I. type, a system of consisting
of concealed PVC conduit and steel trunking together with accessories for AMR system
installation shall be provided as shown on the Drawings.

**ELE2.1.24  COMMUNAL AERIAL BROADCAST DISTRIBUTION SYSTEM**

**ELE2.1.24.010.8  PROVISION OF SYSTEM / INSTALLATION**
A complete communal aerial broadcast distribution system shall be provided as shown
on the Drawings and otherwise as specified in the Project Specific Specification and
ELE23.

**ELE2.1.24.020.8  SPECIAL REQUIREMENTS**
The special requirements are specified in the Project Specific Specification.
ELE2.1.25  PUBLIC ADDRESS SYSTEM

PROVISION OF SYSTEM / INSTALLATION

Complete public address systems shall be provided as shown on the Drawings and otherwise as specified in the Project Specific Specification and ELE25.

ELE2.1.26  SMART METER MONITORING AND ENERGY INFORMATION DISPLAY SYSTEM

SCOPE OF INSTALLATION

The Sub-contractor shall design, supply and install a smart meter monitoring and energy information display system as shown on the Drawings and as specified in ELE35. The Sub-contractor shall supply and install a central monitoring and management workstation in the security control room at the Estate Management Office for central data processing, and which shall be connected to the local energy information display system in each domestic block as specified and shown on the Drawings. The central monitoring and management workstation shall oversee the local systems in all domestic blocks.

The Sub-contractor shall supply and install local energy information display system at the ground floor main entrance lobby of each domestic block and the associated data gathering units and equipment for displaying the information as described in ELE35. The complete display system shall include a LED TV display panel, integrated stereo speakers, display interfacing units and all peripheral devices and connections as specified and shown on Drawings.

The Sub-contract shall supply and install the complete communication network and cabling system including all connection cables and all associated interfaces and accessories between the central monitoring and management station at the EMO and all associated domestic blocks.

ELE2.1.27  AUTOMATIC METER READING (AMR) OUTSTATION FOR WATER SUPPLIES

PROVISION OF SYSTEM / INSTALLATION

The Sub-contractor shall design, supply and install AMR outstation for water supplies as shown on the Drawings and as Specification in ELE36.

CONDUIT AND TRUNKING

Except for surface mounted conduit which shall be of G.I. type, a system consisting of concealed PVC conduit and steel trunking together with accessories for AMR outstation for water supplies shall be provided as shown on the Drawings.
ELE2.2 EXTERNAL PUBLIC LIGHTING

ELE2.2.010.8 SCOPE
The Sub-contractor shall supply, install and connect the complete external public lighting system as shown on the Drawings and otherwise as specified in the Project Specific Specification.

ELE2.2.020.8 INSTALLATION
1. Where the lighting fittings are mounted on the periphery of the block, they shall be wired in concealed conduits;
2. Power supply to each circuit of lighting fitting(s) shall be fed from MCB unit via individual residual current devices;
3. The Sub-contractor shall provide all necessary fixing facilities and accessories as recommended by manufacturers for installation of external lighting fittings as shown on the Drawings;
4. Provision of ducts, excavation, concrete foundation necessary for installation of external lighting fittings and the cement/soil filling will be carried out by the Main Contractor;
5. The Sub-contractor shall coordinate with the Main Contractor and submit drawings showing details of all builder's works requirements necessary to complete installation of external public lighting to the Main Contractor for subsequent transmission to and Approval by Contract Manager.

ELE2.2.030.8 SWITCH CONTROL
The public lighting shall be controlled by 24 hours time switches/photocell as shown on the Drawings.

ELE2.2.040.8 FLOODLIGHTING FITTINGS
The Sub-contractor shall also be responsible for adjusting the mounting heights and aiming angles of the flood lighting fittings (if any) for the ball courts, playgrounds, etc. This may be carried out at night when required.

ELE3.1 GENERAL

ELE3.1.010.8 SCOPE

1. This section specifies the general requirements of low voltage switchgear and associated equipments which are intended for assembly on site from individual items of components. Additional and specific requirements for factory built assemblies of switchgear and controlgear are given in ELE4, the Drawings, other documents issued by the Contract Manager or Project Specific Specification;

2. The component equipments covered in this Section shall include the following:
   a. Fuse combination units and switch disconnectors;
   b. Circuit-breakers comprising moulded case circuit-breakers (MCCBs), miniature circuit breakers (MCBs) and residual current-operated circuit-breakers (RCCBs);
   c. Double-pole switch disconnectors;
   d. Fuses;
   e. Distribution boards including consumer units;
   f. Starters and contactors;
   g. Time switches;
   h. Measuring instrument;
   i. Site built assemblies.

3. The general requirements specified in ELE3.1.020 to ELE3.1.080 both inclusive shall apply to all items of switchgear and associated equipment where applicable unless explicitly mentioned otherwise.

ELE3.1.020.8 SERVICE CONDITIONS

The following conditions shall apply:

1. Ambient temperature: peak from minus 5°C to plus 40°C for 4 hours continuously with an average from 0°C to plus 35°C over only 24 hour period;

2. Relative humidity: up to 0.99 saturation.

ELE3.1.030.8 SHORT-CIRCUIT RATING AND CONTINUOUS CURRENT RATING

1. Low voltage switchgear shall be suitably rated for the specified prospective short-circuit current which can occur at the point of its installation. It shall also be rated for uninterrupted duty when carrying continuously the specified full load current. For non-automatic switching devices the rated short-time withstanding current shall be at least 12 times the continuous current rating for 1 second;

2. Where equipment components are installed in enclosures, they shall be suitable for operation at the actual maximum temperatures which will be reached within the enclosures under normal loaded conditions when the ambient temperature is 40°C.

ELE3.1.040.8 VOLTAGE RATING

Low voltage switchgear and associated equipment shall be suitable for use on 220V (single phase) or 380V (3 phase) 50Hz supply.
DEGREE OF PROTECTION FOR ENCLOSURE

Enclosures for low voltage switchgear and associated equipment shall have an index of protection, in accordance with IEC 60529 of at least IP 30 for indoor applications and of at least IP 54 for outdoor applications.

MATERIALS

1. Unless otherwise specified, low voltage switchgear and associated equipment except MCCBs and MCBs shall be metalclad. All ferrous metal parts shall be galvanised or chrome plated unless the final finish has been painted or enamelled in the manufacturer's factory;

2. All extraneous conductive parts shall be electrically continuous.

ON AND OFF INDICATION

1. The design of a switching device shall incorporate some positive means to indicate clearly and reliably the ON (or CLOSE) and the OFF (or OPEN) positions of the contacts. Indication of either position shall only occur when the ON or OFF position on every pole has been attained. Such indication shall be provided on the outside of the device and shall be prominently visible to an operator when the device is installed in the normal manner;

2. When the switching device is also used for isolation purpose, then an indication of the OFF position shall occur only when all contacts are also in the OFF position and the isolating distance between contacts in every pole has attained a clearance not less than those specified in the respective equipment standards.

IDENTIFICATION OF CIRCUIT

1. Labels or other means of identification shall be provided for every item of switchgear and associated equipment to indicate the purpose of the item. The labels shall either be fixed at the front cover or at the inside surface of the hinged front cover;

2. For a split-busbar consumer unit, the labels shall identify all outgoing MCBs which are protected by an RCCB from those which are not.
ELE3.2 SURFACE MOUNTED FUSE COMBINATION UNITS AND SWITCH-DISCONNECTORS

ELE3.2.1 GENERAL

ELE3.2.1.010 TYPE AND STANDARD
Surface mounted switch-disconnector fuses, fuse-switch disconnectors and switch-disconnectors (hereinafter referred to as "switching device" or "switching devices") shall be air-break, metalclad type and shall comply with IEC 60947-3.

ELE3.2.1.020 ARRANGEMENT
The switch-disconnector fuses or fuse-switch disconnectors shall be a combination of a switch-disconnector and one or more fuses in a composite unit.

</table>

ELE3.2.1.040 IN-SERVICE RECORDS
Prior to the time of material submission for Approval, the equipment shall have proven record of reliability in local application for a minimum continuous period of 12 months to the satisfaction of the Contract Manager.
ELE3.2.2 TYPE-TEST

ELE3.2.2.010.8 TEST STANDARDS
Switch-disconnector fuses, fuse-switch disconnectors and switch-disconnectors shall be type-tested in accordance with Clause 8.2 and Clause 8.3 of IEC 60947-3. For switch-disconnectors to be used in circuits protected by fuses, test sequence III of Clause 8.3.5 is not required, but test sequence IV of Clause 8.3.6 shall be performed to such switch-disconnectors connected in series with bolt-type fuse links as specified in ELE3.13.010 of the corresponding rated maximum current.

ELE3.2.2.020.8 TYPE-TESTING
The following test sequences of IEC 60947-3 shall be carried out by a Short Circuit Testing Organisation.
1. For fuse combination units – test sequences I & IV;
2. For switch-disconnectors – test sequences I & III.
Switch disconnectors converted from type-tested switch-disconnector fuses/fuse-switch disconnectors by replacing the fuse links with copper short links for a rated operational current not greater than the maximum rated operational current for the original switch-disconnector fuses/fuse-switch disconnectors and are installed in circuits protected by bolt-type fuses as specified in ELE3.13.010 are also acceptable.

ELE3.2.3 CONSTRUCTION AND DESIGN

ELE3.2.3.010.8 TYPE
Switch-disconnector fuses, fuse-switch disconnectors and switch-disconnectors shall be triple or single pole as shown on the Drawings, with detachable fully rated front accessible neutral link, or 4-pole as shown on the Drawings.

ELE3.2.3.020.8 CURRENT RATINGS ABOVE 100A
For fuse combination units with current ratings above 100A, the switching devices shall make and break on both the incoming supply side and the outgoing load side.

ELE3.2.3.030.8 CURRENT RATINGS OF 100A AND BELOW
For fuse combination units with current ratings of 100A and below, fuse bases and carriers shall be provided for housing the fuse links if the switching device are not making and breaking on both the incoming supply side and the outgoing load side.

ELE3.2.3.040.8 CURRENT CARRYING MATERIAL
The current carrying parts shall be made of hard drawn, high conductivity copper to BS EN 13601.

ELE3.2.3.050.8 ENCLOSURE
The enclosure shall be made of sheet steel of thickness not less than 1.6 mm for current ratings above 32A and not less than 1.2 mm for 32A and below, complete with stoved epoxy powder paint, or equal and Approved finish of a gloss light colour.
ELE3.2.3.060.8 FRONT COVER
The front cover of switching devices shall be hinged or of an equal and Approved 
construction, to enable easy access to the interior for replacement of fuse links. Gland 
plates shall be provided for top and bottom cable entry for switching devices of current 
ratings above 32A.

ELE3.2.3.070.8 DEGREE OF PROTECTION
1. Under normal service conditions, the enclosure shall be of totally enclosed type with 
a degree of protection against ingress of foreign solid bodies and liquids of at least 
IP41 as per IEC 60529 for the top surface and IP31 for the other surfaces of the 
enclosures. With the front-hinged door open and in replacing fuse links, the degree 
of protection to the live parts shall be at least IP2X. If the degree of protection to 
the neutral conductor of the live part cannot comply with this requirement, a 
warning label shall be provided next to the neutral conductor;

2. The switching devices shall be suitable for installation under environmental 
condition of pollution degree 3 unless otherwise specified.

ELE3.2.3.080.8 SPACE IN TERMINAL ENCLOSURE
1. Terminal connections shall be by means of screws so to ensure that the necessary 
contact pressure is maintained;

2. The terminal enclosure shall have sufficient space for accommodating cable lugs for 
the largest cables which the switching device is designed to receive, and also for 
proper cable termination with cable bending radius in accordance with the Electrical 
CoP otherwise proper extension cable terminals and/or cable boxes shall be 
provided. The palm width of the cable lugs shall comply with BS 91.

ELE3.2.3.090.8 FUSE COMBINATION UNITS
For switch-disconnector fuses or fuse-switch disconnectors, the fuse holders shall be 
capable of accepting any fuse links of physical dimension complying with the minimum 
and maximum limits of the respective fuse reference tabulated in the Specification for 
fuses (i.e. ELE3.13).

ELE3.2.3.100.8 EARTHING TERMINAL
An external accessible earthing terminal shall be provided at the side panel of the 
enclosure.

ELE3.2.4 OPERATION
ELE3.2.4.010.8 DESCRIPTION
The switching devices shall be independent manual operated and shall have mechanical 
interlock to prevent access to the interior except when the switching devices are in the 
OFF position, and to prevent the contacts from being switched to close when the door is 
open.

ELE3.2.4.020.8 PERFORMANCE
The latter interlock shall be able to be defeated by trained personnel for maintenance 
when necessary.
ELE3.2.4.030.8 SECURITY

A facility shall be provided for padlocking the switching devices in the OFF position.
ELE3.3 CIRCUIT BREAKER - GENERAL

ELE3.3.010.8 SCOPE OF CIRCUIT BREAKER
This Sub-section covers the general requirements of ACBs, MCCBs, MCBs, and RCCBs. Additional requirements relevant to particular types of circuit-breakers shall be given in ELE3.4 to ELE3.6 both inclusive.

ELE3.3.020.8 NUMBER OF POLES
Circuit-breakers shall be of four-pole, three-pole, double-pole or single-pole, as specified and shall have air-break contacts.

ELE3.3.030.8 OPERATING MECHANISM
1. The operating mechanism of a circuit-breaker shall be trip-free;
2. When an MCCB or MCB or RCCB trips and opens its contacts, the operating toggle shall automatically resume the OFF or TRIPPED position.

ELE3.3.040.8 CASING
The casing of an MCCB, an MCB, an RCCB shall be formed from an insulating material. The construction shall be capable of withstanding the appropriate rated short circuit current and reasonably rough use without fracture or distortion.

ELE3.3.050.8 CURRENT RATING
The rated current of a circuit-breaker shall be taken as that rated continuous current when the circuit-breaker is installed in the enclosure together with other equipment, if any, under normal operating conditions as shown on the Drawings.
ELE3.4 MOULDED CASE CIRCUIT BREAKERS (MCCB)

ELE3.4.1 GENERAL

ELE3.4.1.010.8 STANDARD

Moulded Case Circuit Breakers (MCCB) shall comply with IEC 60947-2.

ELE3.4.1.030.8 IN-SERVICE RECORDS

Prior to the time of material submission for Approval, the equipment shall have proven record of reliability in local application for a minimum continuous period of 12 months to the satisfaction of the Contract Manager.

ELE3.4.2 CONSTRUCTION AND DESIGN

ELE3.4.2.010.8 MCCB

1. MCCB shall be triple, double or single pole complete with overcurrent and/or earth leakage tripping device as shown on the Drawings, and suitable for direct mounting inside a metal enclosure or a cubicle switchboard. Both triple and single pole MCCB shall be provided with detachable, fully rated, front accessible neutral copper link mounted inside the enclosure;

2. a. For surface mounted MCCB cable terminals shall be at the top and bottom with access from the front;
   b. For MCCB housed in switchboard cubicles, the cable terminals shall be suitable for busbar connection;
   c. Interphase barriers shall be provided when necessary to maintain safe electrical clearance.

3. MCCB shall be type-tested and comply with the additional requirements for circuit breakers suitable for isolation in accordance with Clause 7.1.2 of IEC 60947-2.

ELE3.4.2.020.8 ENCLOSURES FOR SURFACE-MOUNTED MCCB

1.
a. The enclosure shall be of totally enclosed type with a degree of protection against ingress of foreign solid bodies and liquids of at least IP41 as per IEC 60529, for the top surface, and IP31 for the other surfaces of the enclosures;

b. The enclosure shall conform to the type-tested standard or as recommended by the manufacturer. The front cover of the enclosure shall be hinged or equal and approved. With the front-hinged cover opened, all live parts shall be protected to IP20. If the degree of protection to the neutral conductor of the live part cannot comply with this requirement, a warning label shall be provided next to the neutral conductor;

c. The enclosure shall have sufficient space for accommodating cable lugs for the largest cables which the MCCB is designed to receive;

d. The palm width of the cable lugs shall comply with BS 91;

e. There shall also be sufficient space for proper cable termination with cable bending radius in accordance with the Electrical CoP, otherwise proper extension cable terminals and/or cable box shall be provided.

2. An external accessible earthing terminal shall be provided at the side panel of the enclosure. The enclosure shall be formed from sheet steel 1.6 mm thick;

3. All inside and outside surfaces of the enclosures shall be treated with either anti-rust protective coating followed by two stoved coats of gloss paint of contrasting colours, or an alternative acceptable finish such as phosphate treatment followed by epoxy powder paint. The finishing colour shall be approved by the Contract Manager.

**ELE3.4.3  OPERATION**

**ELE3.4.3.010.8 OPERATING CHARACTERISTICS**

1. MCCB shall have inverse time delay and instantaneous tripping time-current characteristic which cannot be inadvertently adjusted. The operating characteristic shall be such that:
   a. The time delay on overload tripping shall be inversely proportional to the overcurrent up to a threshold value of approximately 7 times the rated current or as otherwise specified;
   b. There shall be no intentional time-delay on overcurrent tripping due to short-circuit or heavy overcurrent exceeding the threshold value.

2. The operating characteristic shall be calibrated at 40°C. For earth leakage protection, the tripping current shall be as shown on the Drawings. The earth leakage relay and the zero-sequence current transformer, if any, shall comply with the relevant British Standard.

**ELE3.4.3.020.A OPERATING MECHANISM AND INDICATIONS**

1. The operating mechanism shall be independent manual and trip-free. Indication of OFF position shall occur only when the specified isolation distance on each pole has been attained. Reliable visual indication of ON and OFF position and trip indication shall be provided;
2. MCCBs shall be equipped with lockable function such that they can be locked off and only be able to be unlocked by the use of keys or tools used to lock off these devices. Additional proprietary assistive devices shall be provided where necessary to facilitate the lockable function using padlocks. In case of no supply of proprietary assistive devices from the MCCB manufacturer or in case of provision of assistive devices for existing MCCBs in existing buildings, alternative made may be proposed and shall be demonstrated by the Sub-contractor that the proposed devices are suitable for the MCCBs to facilitate the lockable function using padlocks.

**ELE3.4.3.030.8 TYPE-TEST**

MCCB shall be type-tested to IEC 60947-2. Verification of short-circuit making and breaking capacity shall be carried out by a Short-Circuit Testing Organization.
ELE3.5 MINIATURE CIRCUIT BREAKERS (MCB)

ELE3.5.010.8 GENERAL
Miniature Circuit Breakers (MCBs) shall comply with IEC 60898-1 or BS EN 60898-1, suitable for 220/380V supply operation with rated current and number of poles as shown on the Drawings.

ELE3.5.020.8 CATEGORY OF DUTY
MCBs shall have a standard value of rated short-circuit capacity of not less than 4500A.

ELE3.5.030.8 TYPE
Unless otherwise specified or shown on the Drawings, MCBs shall have an instantaneous tripping operation of type B or type C in accordance with IEC 60898-1 or BS EN 60898-1.

ELE3.5.040.8 CABLE TERMINALS
Terminals suitable for terminating appropriate size of solid or stranded conductors shall be provided for the outgoing cables. The terminals shall be accessible from the front for easy cable termination.

ELE3.5.050.8 CONTACTS
Contacts shall be non-weld type.

ELE3.5.060.A TRIPPING MECHANISM, ISOLATION AND SWITCHING
1. Tripping elements shall be thermal magnetic type with instantaneous tripping characteristic under short-circuit conditions and inverse time delay tripping characteristic under overload conditions;

2. For domestic buildings, the double pole MCBs providing supply to domestic units before the power company's meters shall be capable of both isolating and switching the full load current of the respective circuits;

3. MCBs shall be equipped with lockable function such that they can be locked off and only be able to be unlocked by the use of keys or tools used to lock off these devices. Additional proprietary assistive devices shall be provided where necessary to facilitate the lockable function using padlocks. In case of no supply of proprietary assistive devices from the MCB manufacturer or in case of provision of assistive devices for existing MCBs in existing buildings, alternative made may be proposed and shall be demonstrated by the Sub-contractor that the proposed devices are suitable for the MCBs to facilitate the lockable function using padlocks.

ELE3.5.070.8 OPERATING MECHANISM
Operating mechanism shall be quick break, trip free type. Where the handle is used to indicate the position of the contacts, the handle, when released, shall automatically take up the position corresponding to that of the moving contacts; in this case, the handle shall have two distinct rest positions corresponding to the position of the contacts but, for automatic opening, a third distinct position of the handle may be provided.
ELE3.5.080.8 TYPE-TEST

Full type-test certificates to Section 9 of BS EN 60898-1 or Section 9 of IEC 60898-1 shall be produced to the satisfaction of the Contract Manager. In addition, type-test to test sequences C, D and E of IEC 60898-1 or BS EN 60898-1 shall be carried out by a Short Circuit Testing Organization.
ELE3.6 RESIDUAL CURRENT OPERATED CIRCUIT BREAKERS (RCCB)

ELE3.6.010.8 PERFORMANCE

1. Residual current operated circuit breakers (RCCBs) shall comply with IEC 61008-1, and shall be suitable for 220/380V supply operation with rated current and number of poles as indicated on the Drawings. The rated residual operating current of RCCBs shall be 30 mA unless otherwise specified. RCCBs shall not require any auxiliary source for operation. However, 2-pole RCCB requiring an integral auxiliary source for operation will still be acceptable provided that in the event of failure of integral auxiliary source through the loss of neutral, it shall either still function as a RCCB or open automatically without delay;

2. The RCCBs shall be:
   a. Type A for circuits serving electric vehicles charging facilities;
   b. General type (Type AC) for other circuits.

ELE3.6.020.8 TYPE-TEST CERTIFICATES

Full type-test certificates to Section 9 of IEC 61008-1 shall be produced to the satisfaction of the Contract Manager.

ELE3.6.030.8 CIRCUIT FAULT CURRENT TEST

1. The short circuit tests as specified in Clause 9.11 of IEC 61008-1 shall be carried out by a Short-circuit Testing Organisation;

2. For RCCBs which form part of consumer units or miniature circuit breaker distribution boards which have been satisfactorily tested in accordance with ELE3.12.4 or ELE3.11.5 respectively, the short circuit tests as specified in Clause 9.11 of IEC 61008-1 will not be required.

ELE3.6.040.8 EVIDENCE OF COUNTRY / PLACE OF MANUFACTURE AND AUTHENTICITY

The Sub-contractor shall produce documentary evidences as PRE.BS1.205 to verify the country / place of manufacture and authenticity of RCCBs delivered to Site or installed.
ELE3.8 DOUBLE POLE SWITCH-DISCONNECTORS

ELE3.8.010.8 PERFORMANCE
1. Double Pole Switch-disconnectors shall comply with IEC 60947-3, suitable for 220V supply operation with rated current as indicated on the Drawings;
2. They shall have Utilization Category AC22A and shall be provided with facility for padlocking the switch disconnectors in the isolated position;
3. Incoming terminal shall be protected against direct contact to IP2X.

ELE3.8.020.8 TYPE-TEST REPORTS
Full type-test report to Clause 8.1.2 of IEC 60947-3 shall be produced to the satisfaction of the Contract Manager.
ELE3.9 DISTRIBUTION BOARDS - GENERAL

ELE3.9.010.8 SCOPE OF DISTRIBUTION BOARDS
This sub-section covers the general requirements of MCCB distribution boards. Additional requirements relevant to a particular type of MCCB distribution board shall be given in ELE3.10.

ELE3.9.020.8 CONSTRUCTION OF ENCLOSURE
1. The enclosure of a distribution board shall be constructed from sheet steel, rust proofed and baked enamelled or stove epoxy powder painted;
2. The construction shall be of robust design, capable of withstanding the mechanical, electrical and thermal stresses under all working conditions, including fault conditions.

ELE3.9.030.8 ARRANGEMENT OF COMPONENT PARTS
1. Distribution boards shall include all necessary components and accessories to form a complete assembly;
2. Components and accessories shall be firmly fixed in position in the distribution board, and shall be assembled in such a way that it shall be possible to remove or replace any component parts and to carry out cable connections from the front;
3. Ample space shall be allowed for cabling;
4. MCCBs shall be arranged neatly in a row or rows;
5. All components shall be totally concealed: only the toggles of the MCCBs shall protrude through the cover plate of the distribution board.

ELE3.9.040.8 BUSBARS
All busbars shall be of hard drawn copper having ratings as specified and shall be electro-tinned. Neutral busbars shall be of the same CSA as the phase busbars, and shall have adequate number of terminals for all outgoing circuits including spare ways.

ELE3.9.050.8 EARTHING TERMINALS
1. Every distribution board shall be provided with an external earthing terminal for connection to the main earthing terminal. In addition, a multi-terminal connector shall be provided within the distribution board for connection of protective conductors of all outgoing circuits including spare ways;
2. Both the external earthing terminal and the multi-terminal connector for protective conductor shall be of hard drawn electro-tinned copper and shall be labelled in accordance with the requirements of IEC 60439-1.

ELE3.9.060.8 PROVISION OF SPARE WAYS
Each distribution board shall be provided with spare ways for future expansion. For new installations, the number of spare ways shall not be less than 20% of the total number of outgoing ways in the distribution board. Each spare way shall be blanked off with a suitable blanking plate having a finish comparable to that of the distribution board.
SHROUDING OF LIVE PARTS

1. All conductive parts shall be properly shrouded against accidental contact by means of rigid barriers, partitions of insulating materials such that accidental contact can be prevented during operation of component replacement or cable connection;

2. All conductive structural parts of the distribution boards shall comply with the protective circuit requirements of IEC 60439-1.
ELE3.10 MOULDED CASE CIRCUIT BREAKER (MCCB) DISTRIBUTION BOARDS

ELE3.10.010.8 GENERAL
1. The enclosure of an MCCB distribution board shall be constructed from sheet steel having a thickness of not less than 1.5 mm, and shall be designed for general commercial and light industrial applications;

2. The design, construction and testing specifications of the distribution boards shall comply with IEC 61439-1 and IEC 61439-2, or IEC 60439-1.

ELE3.10.020.8 TYPE OF MCCB DISTRIBUTION BOARD
1. MCCB distribution boards shall be of two types, viz. Type A and Type B. Type A MCCB distribution board shall be suitable for accommodating, in any combination, the double-pole and triple-pole MCCBs of 100A frame size. Type B MCCB distribution boards shall be suitable for accommodating triple-pole MCCBs of 225A frame size;

2. All MCCB distribution boards shall each be provided with a moulded-case isolating switch having a current rating not less than that of the supply side protective device. The moulded-case isolating switch shall meet the relevant requirements of ELE3.1 and ELE3.2.

ELE3.10.030.8 BUSBARS
1. MCCB distribution boards shall be provided with vertical triple-pole and neutral copper busbars of rating not less than that of the supply side protective device subject to a minimum of 250A;

2. The configuration of the busbars, busbar supports and busbar mounting arrangement shall be type-tested to a short-time withstanding current of not less than 14 kA in the case of type A boards or 22 kA in the case of type B boards for 0.2 seconds at a voltage of not less than 380V;

3. Outgoing MCCBs shall be mounted horizontally on both sides of the vertical busbars. The connection between the MCCBs and the phase busbars shall be by means of copper tapes and bolted joints. Plug-in type of current carrying contacts shall not be accepted.

ELE3.10.040.N ASSISTIVE DEVICE FOR LOCKING OF MCCB UNIT USING PADLOCK
1. For the MCCB distribution board fitted with MCCBs that cannot be locked by directly application of padlocks, two (2) assistive devices shall be provided for each MCCB distribution board irrespective of the number of outgoing ways to facilitate the locking of MCCBs using padlocks for isolation purpose during maintenance;

2. The assistive devices for all MCCB distribution boards installed within the electrical meter room shall be collectively housed inside a cabinet suitably wall mounted at a location within the electrical meter room;

3. The cabinet shall be made of sheet steel with finishing in baked enamelled or stove epoxy powder painted. The cabinet shall be suitably sized, fitted with front-hinged door and equipped inside with suitable hooks of sufficient numbers for hanging of all assistive devices.
ELE3.11 MINIATURE CIRCUIT BREAKER (MCB) DISTRIBUTION BOARDS

ELE3.11.1 GENERAL

ELE3.11.1.010.8 TYPE
Miniature Circuit Breaker Distribution Boards (MCB boards) shall be of surface mounted and enclosed type, and shall comply with IEC 60439-3 or BS EN 60439-3.

ELE3.11.1.020.8 GUARANTEE OF TYPE TEST EQUIVALENCE
In cases where miniature circuit breaker distribution boards are manufactured under licence from a Principal Company, letters of guarantee for products manufactured by the licensee from the Principal Company shall be produced to prove that such products are equivalent, in every respect, to the type-tested products.

ELE3.11.1.030.8 IN-SERVICE RECORDS
Prior to the time of material submission for Approval, the equipment including its major components shall have proven record of reliability in local application for a minimum continuous period of 12 months to the satisfaction of the Contract Manager.

</tbody>
</table>

ELE3.11.3 ENCLOSURE

ELE3.11.3.010.8 CONSTRUCTION
MCB boards shall be fabricated from sheet steel with a thickness of not less than 1.2 mm. They shall be robustly constructed and rustproof.
ELE3.11.3.020.8 **FINISH**

All inside and outside surfaces of the enclosure shall be treated with either anti-rust protective coating followed by two stoved coats of gloss paint of contrasting colours or an alternative acceptable finish such as phosphate treatment followed by stove epoxy powder paint. The finishing coat shall be approved by the Contract Manager.

ELE3.11.3.030.8 **KNOCKOUTS**

Knockouts of appropriate size shall be provided on the top and bottom of the enclosure.

ELE3.11.3.040.8 **FASTENING DEVICE**

The fastening device (e.g. screws) for fixing the cover to the enclosure shall be captive and shall not cause damage to the enclosure during fastening and loosening.

ELE3.11.3.050.A **DEGREE OF PROTECTION**

1. The degree of protection for the enclosure with all functional units and blanking plates fitted shall be at least IP41 and IP 31 for the top surface and other surfaces respectively;
2. If any cover or blanking plate can be removed without a tool, the degree of protection against direct contact with live parts shall be at least IP 2X with the cover or blanking plate removed;
3. Insulated tooth covers should be provided and inserted to cover the exposed live parts protruding from the main busbar reserved for future connection of MCB units;
4. With the front cover removed or in replacing the MCB unit, any live parts which cannot be isolated by the MCB board's integral incoming switch-disconnector shall be provided with barrier or other means affording a degree of protection at least IP 2X. If the degree of protection to the neutral conductor of the live part cannot comply with this requirement, a warning label bearing “DANGER - 危險” in red legible letters and characters each not less than 10 mm high shall be provided next to the neutral conductor. And, if the MCB board is not provided with an integral incoming switch disconnecter, a warning notice shall be placed in such a position that any person gaining access to live parts will be warned of the need to use the appropriate isolating device.

ELE3.11.3.060.8 **DANGER LABEL**

A label bearing "DANGER - 危險" in red legible letters and characters each not less than 10 mm high shall also be provided on the cover.

ELE3.11.4 **COMPONENTS AND ARRANGEMENT**

ELE3.11.4.010.8 **SPECIFICATION**

The functional units such as MCBs, RCCBs, switch-disconnectors etc. shall comply with the relevant BS EN/BS/IEC and the relevant sections in this Specification.
ELE3.11.4.020.8 MOUNTING ARRANGEMENT
All the MCBs, RCCB (if provided) and switch-disconnectors (if provided) shall be mounted in a straight line manner and fixed firmly in position. The toggles of all devices shall be projected through the front panel of the MCB board. The on and off identifications for all these devices shall be clearly visible such that the close or open state of the devices shall be easily distinguished when they are mounted in the normal service position.

ELE3.11.4.030.8 MAIN BUSBARS
The main busbars shall be copper to BS EN 13601 and be completely tinned. Fixing of busbars shall not rely on any functional unit.

ELE3.11.4.040.8 NEUTRAL TERMINAL BLOCK
The neutral terminal block, where specified, shall allow the connection of copper conductors having current carrying capacity of the phase conductor. The number of outgoing terminals in the neutral blocks shall not be less than the maximum number of outgoing circuits.

ELE3.11.4.050.8 EARTHING TERMINAL BLOCK
The earthing terminal block shall be provided with sufficient terminals for the incoming and maximum number of outgoing circuits.

ELE3.11.4.060.8 SPACING
Sufficient space shall be provided for wiring and termination after all the functional units are fixed in position.

ELE3.11.4.070.8 MOUNTING
The functional units, terminal blocks, busbars, incoming switch-disconnector, etc. shall be mounted as skeleton units or on a backplate. The skeleton units shall not be disintegrated for the removal or replacement of any functional unit.

ELE3.11.4.080.8 REMOVAL
Removal of any skeleton unit or the backplate, replacement of MCB, or termination of cable shall not disturb or loosen the other components or wiring.

ELE3.11.4.090.8 STEEL SCREWS
All steel screws shall be zinc plated or chromate coated. Self tapping screws are not acceptable.

ELE3.11.4.100.8 IDENTIFICATION
1. For MCB board designed to incorporate both multi-pole and single pole MCBs, phase and neutral colour identification shall be provided adjacent to each MCB outgoing way and neutral connection;
2. Ferrules shall be provided for wires, including earthing, phase and neutral conductor, throughout the distribution board internally for circuit identification.

ELE3.11.4.110.8 CIRCUITRY
The circuitry of the MCB board shall be as shown on the Drawings.
ASSISTIVE DEVICE FOR LOCKING OF MCB UNIT USING PADLOCK

1. Two (2) assistive devices shall be provided for each MCB board irrespective of the number of outgoing ways to facilitate the locking of MCBs using padlocks for isolation purpose during maintenance;

2. The assistive devices for all MCB boards installed within the electrical meter room shall be collectively housed inside a cabinet suitably wall mounted at a location within the electrical meter room;

3. The cabinet shall be made of sheet steel with finishing in baked enamelled or stove epoxy powder painted. The cabinet shall be suitably sized, fitted with front-hinged door and equipped inside with suitable hooks of sufficient numbers for hanging of all assistive devices.

ELE3.11.5  TYPE-TEST

STANDARD

MB boards shall be type-tested to Clause 8 of BS EN 60439-3 or IEC 60439-3. Partially type-tested assemblies (PTTA) will only be accepted provided that the non-type-tested arrangements are derived from and have been verified to comply with the standard of the type-tested ones and/or been tested to the satisfaction of the Contract Manager. PTTA shall be verified and substantiated by test certificates/reports and/or graphs, calculations, etc. together with the details of the type-tested arrangement from which the PTTA is derived.

VERIFICATION

The short-circuit strength of the MCB board shall be type-tested and verified by a Short Circuit Testing Organization with the conditional short-circuit current specified in ELE3.11.2.

SHORT-CIRCUIT

The short-circuit shall be made as follows:

1. For MCB boards designed to incorporate single pole MCBs only: across the phase and neutral;

2. For MCB boards designed to incorporate DP MCBs: across each phase and neutral. If the busbars in all phases are equally constructed and subject to the Approval of the Contract Manager, partially type tested assembly (PTTA) will be acceptable;

3. For MCB boards designed to incorporate TP and/or SP MCBs: across the three phases. Where a neutral bar exists, it shall be subjected to one test to prove its short-circuit withstand strength in relation to the nearest phase bar for the conditional short-circuit current specified in ELE3.11.2;

4. The bolted short-circuit connection shall be provided immediately at the terminals of the outgoing functional unit. The prospective short-circuit current shall pass through the integral incoming switch-disconnector (if provided), the main busbars, the neutral busbar (if provided), RCCB (if provided) and SP, DP or TP MCBs, as appropriate, located at the farthest position from the incoming supply point.
ELE3.12 CONSUMER UNITS

ELE3.12.1 GENERAL

ELE3.12.1.010.8 STANDARD
Consumer units shall comply with IEC 60439-3 or BS EN 60439-3 and shall be tropicalised for use in Hong Kong.

ELE3.12.1.020.8 GUARANTEE OF TYPE-TEST EQUIVALENCE
In case where consumer units are manufactured under licence from a Principal Company, a letter of guarantee for products manufactured by the licencee from the Principal Company shall be produced to prove that such products are equivalent, in every respect, to the type-tested standard products.

ELE3.12.1.030.8 IN-SERVICE RECORDS
Prior to the time of material submission for Approval, the equipment including its major components shall have proven record of reliability in local application for a minimum continuous period of 12 months to the satisfaction of the Contract Manager.

ELE3.12.2 ENCLOSURE

ELE3.12.2.010.8 CONSTRUCTION
Consumer units shall be fabricated from sheet steel with a thickness of not less than 1.2 mm for the enclosures, cover plates and hinged covers. They shall be robustly constructed and rustproof. The hinged covers shall be capable of covering up all functional units including labels fitted on the consumer units. The hinged covers together with hinges shall be so designed and fixed to the enclosures to enable their easy removal when and where required without causing any damage to the finish or impairing the integrity and the specified IP of the cover plates and enclosures.

ELE3.12.2.020.8 FINISH
1. All inside and outside surfaces of the enclosure, cover plate and hinged cover shall be treated with, either anti-rust protective coating followed by two stoved coats of gloss paint of contrasting colours, or an alternative acceptable finish such as phosphate treatment, followed by two stoved coats of gloss paint of contrasting colours, or an alternative acceptable finish such as phosphate treatment followed by stoved epoxy powder paint;

2. The finishing colour shall be the manufacturer's standard colour or a standard alternative light gray colour RAL 9002 according to the Classic RAL System, subject to the approval of the Contract Manager.

ELE3.12.2.030.8 KNOCKOUTS
Knockouts of appropriate size on the top and rear of the enclosure shall be provided.
**ELE3.12.2.040.8 FASTENING DEVICE**

The fastening device (e.g. screws) for fixing the cover plate/cover to the enclosure shall not cause damage to the enclosure during fastening and loosening. Hinges and screwed connections shall be properly designed and fixed to ensure permanent good conductivity between the enclosure, cover plates and hinged covers.

**ELE3.12.2.050.A DEGREE OF PROTECTION**

1. The degree of protection for the enclosure shall be at least IP 41 with all the functional units and blanking plates fitted;
2. If any cover or blanking plate can be removed without a tool, the degree of protection against direct contact with live parts shall be at least IP 2X with the cover or blanking plate removed;
3. Insulated tooth covers should be provided and inserted to cover the exposed live parts protruding from the main busbar reserved for future connection of MCB units.

**ELE3.12.3 COMPONENTS AND ARRANGEMENT**

**ELE3.12.3.010.8 COMPONENTS**

Each consumer unit shall comprise, but not be limited to, the following items:

1. Tinned main copper busbars to BS EN 13601;
2. A double pole switch-disconnector;
3. A residual current operated circuit breaker (RCCB);
4. An assembly of miniature circuit breakers (MCBs);
5. Multi-terminal bar(s) for neutral conductors with one hole and screw of suitable size for each way; the bar(s) shall be properly supported to and insulated from the backplate or enclosure;
6. A multi-terminal bar for circuit protective conductors with one hole and screw of suitable size for each way, earthing lead and two bonding conductors;
7. Rigidly fixed but removable metal backplate or mounting rail assembly;
8. Plastic labels for incoming and outgoing circuits and RCCB on the cover;
9. Rigid blanking plates; and
10. Interconnecting tinned copper bars of appropriate rating to BS EN 13601 or copper cables of appropriate rating to BS EN 50525-2-31.

**ELE3.12.3.020.8 CIRCUITRY**

The circuitry of the consumer unit shall be as shown on the Drawings.

**ELE3.12.3.030.8 SPECIFICATION**

The functional units such as MCBs, RCCB, switch-disconnector, etc. shall comply with the relevant BS/BS EN/IEC and the relevant sections in this Specification.
ELE3.12.3.040.8 MOUNTING ARRANGEMENTS
All the MCBs, RCCB and switch-disconnector shall be mounted in a straight line manner and fixed firmly in position so as not to allow any lateral movement. Except for rotary type, the toggles of all devices shall be operated in the same direction and projected through the front panel of the unit. The on and off identifications for all these devices shall be clearly visible such that the close or open state of the devices shall be easily distinguished when they are mounted in the normal service position.

ELE3.12.3.050.8 SPACING
Sufficient space shall be provided for wiring and termination after all the circuit breakers are mounted in position.

ELE3.12.3.060.8 MOUNTING
All the MCBs, RCCB, switch-disconnector, main busbars and the interconnecting copper bars or cables shall form an integral assembly on the metal backplate or mounting rail in such a way that it can be easily removed from the enclosure without disintegration.

ELE3.12.3.070.8 MULTI-TERMINAL BARS
The multi-terminal bars for neutral and circuit protective conductors shall be fixed securely and held captive so that they cannot be rotated. These bars shall be of copper to BS EN 13601.

ELE3.12.3.080.8 STEEL SCREWS
All steel screws within the unit shall be zinc plated or chromate coated.

ELE3.12.3.090.N ASSISTIVE DEVICE FOR LOCKING OF MCB UNIT USING PADLOCK
1. For Public Rental Housing (PRH) development:
   a. A total of fifty (50) assistive devices shall be provided for each domestic block of any size to facilitate the locking of MCBs using padlocks for isolation purpose during maintenance;
   b. Twenty (20) assistive devices shall be collectively housed inside a cabinet suitably wall mounted at a location near guard counter of each domestic block. The cabinet shall be made of sheet steel with finishing in baked enamelled or stove epoxy powder painted or fabricated in other material as specified by the CM. The cabinet shall be suitably sized, fitted with front-hinged door with lock using key for access and equipped inside with suitable hooks of sufficient numbers for hanging of all assistive devices;
   c. The rest thirty (30) assistive devices shall be collectively housed inside a cabinet suitably wall mounted at a location within the main switch room. The cabinet shall be made of sheet steel with finishing in baked enamelled or stove epoxy powder painted. The cabinet shall be suitably sized, fitted with front-hinged door and equipped inside with suitable hooks of sufficient numbers for hanging of all assistive devices; and
   d. A label of durable material shall be provided with prominent red wordings on white ground with a size of not less than 100 x 50 mm inscribed in English and Chinese characters as follows:
REW MAY BORROW ASSISTIVE DEVICE(S) FOR LOCKING OFF MCB UNITS FROM GUARD COUNTER

電業工程人員可於大堂櫃位借取微型斷路器的上鎖輔助器

Lettering shall be at least 5 mm high. The notice shall be securely affixed by adhesive means inside the cover of consumer unit.

2. For Subsidised Sale Flats (SSF) development:
   a. Two (2) assistive devices shall be provided for each consumer unit irrespective of the number of outgoing ways to facilitate the locking of MCBs using padlocks for isolation purpose during maintenance; and
   b. The assistive devices for all consumer units shall be handed over to the CM at contract completion.

**ELE3.12.4 TYPE-TEST**

**ELE3.12.4.010.8 STANDARD**

Consumer units shall be type-tested to Clause 8 of BS EN 60439-3 or IEC 60439-3. Partially type-tested assemblies (PTTA) will only be accepted provided that the non-type-tested arrangements are derived from and have been verified to comply with the standard of the type-tested ones and/or been tested to the satisfaction of the Contract Manager. PTTA shall be verified and substantiated by test certificates/reports and/or graphs, calculations, etc. together with the details of the type-tested arrangement from which the PTTA is derived.

**ELE3.12.4.020.8 VERIFICATION**

The short-circuit strength of the consumer unit shall be type-tested and verified by a Short Circuit Testing Organization in accordance with Annex ZA to BS EN 60439-3 or IEC 60439-3 at 16 kA minimum.
ELE3.13 FUSES

ELE3.13.010.8 GENERAL

1. Fuses shall comply with IEC 60269-1, IEC 60269-2 and BS 88:Section 2.2 or BS 88-2;

2. Fuses of compact dimensions to BS 88:Part 6 or BS 88-2 are only acceptable for metering circuits and/or control circuits provided that the rated breaking capacity of the fuse shall exceed the prospective short-circuit current at the point where the fuse is installed;

3. All fuses shall be of a.c. rating and their current ratings shall be as shown on the Drawings;

4. Fuse links shall be certified to use and shall bear the marking of "ASTA 20 CERT" or a similar and Approved Equivalent Quality Surveillance Scheme;

5. Unless otherwise specified, fuse links shall be of current limiting type with full-range breaking capacity for general application (i.e. Utilization Category "gG"). Fuse links shall have conventional fusing current not more than 1.45 times the rated current under the intended service conditions;

6. Fuse links other than those to be used in fuse combination units shall be provided with fuse holders. The maximum power dissipation of the fuse link shall not exceed the maximum rated power acceptance of the fuse holder under the intended service conditions;

7. When fuse holders are specified, the degree of protection against electric shock for the complete fuse shall be IP3X under normal service conditions. When replacing the fuse link or removing the fuse carrier, the degree of protection against electric shock shall be at least IP2X;

8. Type-test certificates and reports, time/current characteristics, cut-off characteristics, pre-arcing and operating $I^2t$ characteristics and Letter of Authorisation to use "ASTA 20 CERT" endorsement or similar documents shall be submitted for reference and examination if required.

ELE3.13.020.8 FUSES TO BS 88:SECTION 2.2

1. Fuses shall comply with IEC 60269-1, IEC 60269-2 and BS 88:Section 2.2 or BS 88-2;

2. When the fuse link is to be used in a fuse combination unit, its rated power dissipating shall not exceed that of the fuse link used in carrying out the temperature-rise type test of the unit;

3. The physical dimensions of the fuse links shall be as shown in the following table:

<table>
<thead>
<tr>
<th>Current rating of fuse link (I)</th>
<th>Dimension as fuse reference of BS 88:Section 2.2 or BS 88-2</th>
</tr>
</thead>
<tbody>
<tr>
<td>$32 &gt; or = I$</td>
<td>A2</td>
</tr>
<tr>
<td>$32 &lt; I &lt; or = 63$</td>
<td>A3</td>
</tr>
<tr>
<td>$63 &lt; I &lt; or = 100$</td>
<td>A4 or B1</td>
</tr>
<tr>
<td>$100 &lt; I &lt; or = 200$</td>
<td>B2</td>
</tr>
<tr>
<td>$200 &lt; I &lt; or = 315$</td>
<td>B3</td>
</tr>
<tr>
<td>$315 &lt; I &lt; or = 400$</td>
<td>B4 or C1</td>
</tr>
</tbody>
</table>
For fuse links rated at or below 100A mounted in cubicle switchboard, the physical dimensions of the fuse links as shown in Fig. 1 of BS 88:Section 2.2 or Figure 501 of BS 88-2 are also acceptable;

4. Fuses shall be type-tested to IEC, 60269-1, IEC 60269-2 and BS 88:Section 2.2 or BS 88-2. Type-test of 'Verification of Breaking Capacity' shall be carried out by a Short-Circuit Testing Organisation.

ELE3.13.030.8 **FUSES TO BS 88:PART 6**

1. Fuses of compact dimensions shall comply with IEC 60269-1 and BS 88:Part 6 or BS 88-2;

2. Fuses shall be type-tested to IEC 60269-1 and BS 88:Part 6 or BS 88-2. Type test of 'Verification of Breaking Capacity' shall be carried out by a Short-Circuit Testing Organisation.
ELE3.15 CONTACTORS

ELE3.15.1 GENERAL APPLICATION

ELE3.15.1.010.8 STANDARD
Contactors shall comply with IEC 60947-4-1.

ELE3.15.1.020.8 RATINGS

<p>| | |</p>
<table>

<tr>
<td>6.</td>
<td>Rated operational current/power and duty:</td>
</tr>
</tbody>
</table>

ELE3.15.1.030.8 CONSTRUCTION AND DESIGN

1. Contactors shall be four-pole, triple-pole, double-pole or single-pole as shown on the Drawings;
2. The mechanical endurance of the contactors shall not be less than 3 million no-load operating cycles;
3. Unless otherwise specified, the number of on-load operating cycles for category AC-3 shall not be less than 1/20 of the number of no-load operating cycles corresponding to the mechanical endurance of the contactor;
4. Contactors shall be silver or silver-faced;
5. Insulation shall be of class B of IEC 60085.

ELE3.15.1.040.8 OPERATION
Contactors shall be electro-magnetically controlled, double air-break type. The rated control circuit voltage shall be the same as that of the main circuit; otherwise it shall be 24V, 30V or 110V d.c. as specified.

ELE3.15.1.050.8 UTILISATION CATEGORY

1. Unless otherwise specified, contactors shall be of utilisation category AC-2 for general application;
2. For special applications described in clause ELE3.15.2, the utilisation categories of the contactors used shall comply with the correspondent requirements accordingly. Contactors with utilisation category other than the stipulated categories are acceptable provided that the test currents, voltages, power factors or time constants, number of operating cycles, the on and off times given in the Tables 7 and 8 of IEC 60947-4-1 and the test circuit for the assigned utilisation categories are not more severe than those of the contactor has been tested and the temperature rise has been verified at a current not less than the highest assigned rated operational current in continuous duty.
CONTACTORS

ELE3.15

ELE3.15.060.8  TYPE TESTS
Contactors shall be type-tested to IEC 60947-1 and IEC 60947-4-1. Full type-test certificates shall be produced to the satisfaction of the Contract Manager.

ELE3.15.2  SPECIAL APPLICATIONS

ELE3.15.2.010.8  CHANGEOVER CONTACTORS FOR CUBICLE TYPE SWITCHBOARD
1. Two identical contactors, mechanically and electrically interlocked such that only one of them can be closed at any one time, shall be used;
2. Each changeover contactor shall be enclosed in a separate and segregated compartment with a hinged front door as specified in ELE4.2.050. The contactor shall be provided with phase barriers and arcing chutes where applicable. At least one "a" contact and one "b" contact shall be provided for each contactor;
3. Contactors shall be rated for AC-3 utilisation category and intermittent duty of Class 30. When the main contacts of a contactor remain closed at either the main supply side or the essential supply side, the contactor shall be suitably rated for the specified current for uninterrupted duty;
4. Prior to the time of material submission for approval, the equipment shall have proven record of reliability in local application for a minimum continuous period of 12 months to the satisfaction of the Contract Manager.

ELE3.15.2.020.8  CONTROL CONTACTORS FOR POWER FACTOR CORRECTION EQUIPMENT
1. The contacts shall be of quick break and have a high arc resistance during switching operation;
2. Contactors shall be of utilisation category AC-6b and specifically designed for switching direct connected capacitor banks with intermittent duty of Class 30.

ELE3.15.2.030.8  CONTACTORS FOR MOTOR STARTER
1. Contactors for star/delta starting or reversing contactors shall be fitted with the necessary mechanical and electrical interlocks;
2. Contactors shall be of utilisation category AC-3 for general motor circuits and AC-4 for motor circuits with plugging or inching facilities. Contactors for motor starters of AC-3 utilisation category shall be of uninterrupted duty and intermittent duty Class 12, 60% on-load factor; and contactors for AC-4 category shall be of intermittent duty Class 30, 60% on-load factor.

ELE3.15.2.040.8  CONTROL CONTACTORS FOR DISCHARGE LAMPS
Contactors shall be of utilisation category AC-5a for electric discharge lamps. Also it shall be specifically designed for switching operations of the lamps with intermittent duty of Class 30.

ELE3.15.2.050.8  CONTROL CONTACTORS FOR HERMETIC REFRIGERANT COMPRESSOR MOTORS
Contactors shall be of utilisation category AC-8a for hermetic refrigerant compressor motors with manual reset of overload releases and AC-8b for the one with automatic reset of overload releases. Also it shall be specifically designed for switching operations of these items with intermittent duty of Class 30.
ELE3.16  STARTERS

ELE3.16.010.8  GENERAL
Starters shall be air-break triple pole electromagnetic contractor type and shall comply
with and be tested to IEC 60947-4-1 or EN 60947-4-1. Unless otherwise specified, each
starter shall comprise an isolating device, a thermal overload protective device, main
and auxiliary contacts, on/off controls and indications.

ELE3.16.020.8  UTILISATION CATEGORY
Starters shall be of utilisation categories AC-3 for general motor circuits and AC-4 for
motor circuits with plugging or inching facilities. Motor starters for AC-3 utilisation
category shall be of both uninterrupted duty and intermittent duty Class 0.1 60% on-load
factor. Starters of category AC-4 shall be of intermittent duty Class 0.3 60% on-load
factor.

ELE3.16.030.8  MECHANICAL AND ELECTRICAL ENDURANCE
1. The mechanical and electrical endurance of the starters shall be tested in accordance
with IEC 60947-4-1 or EN 60947-4-1;
2. The mechanical endurance of the starters shall not be less than 0.1 million no-load
operating cycles for category AC-3 starters and 0.3 million no-load operating cycles
for AC-4 starters;
3. The number of on-load operating cycles for category AC-3 starters shall not be less
than 1/20 of the number of no-load operating cycles corresponding to the
mechanical endurance of the starters.

ELE3.16.040.8  THERMAL OVERLOAD RELAY
Thermal overload relay shall be Type B compensated for ambient temperature of 40°C
and have a setting range of 50% - 150% rated operational current.

ELE3.16.050.8  AUXILIARIES
For assisted start starters, timers shall be solid state plug-in type with 0 - 15 seconds
setting. For star/delta and reversing starters, mechanical and electrical interlocks shall
be fitted with the contactors.
ELE3.17 TIME SWITCHES

ELE3.17.010.8 OPERATION
Time switches shall be self-starting and driven by synchronous motor or an electronic operated clock.

ELE3.17.020.8 MOUNTING/HOUSING
Time switches shall be suitable for either flush, surface or panel mounting as specified in ELE2 and shall be housed in metal or robust moulded plastic enclosure with a removable clear plastic front cover.

ELE3.17.030.8 RATING
The time switches shall be rated at 15A (Resistive load) unless otherwise specified. The time accuracy shall be within ±1 second per day.

ELE3.17.040.8 FEATURES
1. An automatic rewind spring reserve or lithium/NiMH battery backup, of not less than 72 hours, to drive the mechanism during power interruption;
2. A 24-hour dial with at least 2 "ON-OFF" operation cycles everyday;
3. An on/off or test switch to enable the circuit to be controlled at will without affecting the normal dial operation;
4. A minimum time setting period of 15 minutes shall be achievable.
ELE3.18 MEASURING INSTRUMENTS

ELE3.18.010.A KILOWATT-HOUR METERS

1. Kilowatt-hour meters shall be of a digital display type suitable for small rating circuits and have rated current not less than the rating of the circuit protection MCBs at the upstream of the corresponding circuits, single-phase or three-phase, as shown on the Drawings;

2. The meters shall comply with IEC 62053-21 or BS EN 62053-21, with IP51 in protective enclosure for indoor meters;

3. The meters shall be of direct connection type or connection with external measuring current transformers (MCTs) as appropriate to suit the rating of measured circuits;

4. The meters shall be mounted on a DIN rail and housed inside a metal enclosure with the display exposed to view on the front cover;

5. The display of the meter shall show the accumulative reading in kilowatt-hour and have minimum 4 digits. The reading shall be maintained even under power interruption and be continued upon power resumption;

6. The accuracy of the meters shall not be less than Class 1 according to IEC 62053-21 or BS EN 62053-21. The manufacturer shall issue a calibration certificate for every batch of meters at time of production and the calibration certificate shall be submitted to the Contract Manager. Such calibration shall be conducted by the manufacturer within one year prior to delivery of the meter on site. The manufacturer shall also declare in writing that the meter shall require no re-calibration for a minimum of 10 years from the time of issue of calibration certificate. A label marking the manufacturer’s calibration date shall be fixed adjacent to the meter;

7. The meters shall comply with the Electromagnetic Compatibility (EMC) requirements in accordance with IEC 61000-4-2, IEC 61000-4-3, IEC 61000-4-4 and IEC 61000-4-5 standards.

ELE3.18.020.8 AMMETERS AND VOLT METERS

1.

a. Ammeters and voltmeters shall be of moving iron type or moving magnet type or moving coil with transducer type, complying with IEC 60051-1 and IEC 60051-2;

b. The accuracy class shall be “2.5” or better in accordance with IEC 60051-1 and IEC 60051-2;

c. The dial shall have a nominal diameter of approximate 75 mm and shall have a minimum scale deflection of 90°.

2.

a. An ammeter for any circuit of rating up to 60A may be connected directly in series with the circuit, so that the full circuit current passes through the instrument;

b. For a circuit of rating exceeding 60A, the ammeter shall be fed through the secondary winding of a current transformer, and shall give a scale deflection with a secondary current of 5A.
CURRENT TRANSFORMERS

Current transformers for use with measuring instruments shall comply with IEC 61869-2 or BS EN 61869-2 having rated secondary current of 5A and rated output suitably matched with the burden of the measuring instrument.

SELECTOR SWITCH FOR AMMETER

1. Where a single ammeter is used to measure the current in each phase, or the neutral of a three phase circuit, the ammeter shall be connected to a selector switch which shall enable the ammeter to be inserted in series with each phase and the neutral in turn;
2. When the ammeter is connected to the secondary windings of the measuring current transformers, the selector switch shall have facilities to prevent the current transformers from being open circuited during change-over and at OFF position.

SELECTOR SWITCH FOR VOLTMETERS

1. In three phase circuits, in which a single voltmeter is used to measure the voltage, the voltmeter shall be provided with a selector switch to enable the following voltages to be measured:
   a. Voltage between each phase to neutral;
   b. Voltage between any two phases.
2. The selector switch shall also have an OFF position.

MOUNTING POSITION OF SELECTOR SWITCHES

Selector switches for ammeters or voltimeters shall be mounted immediately below the meters with which they are associated.

METER CHAMBERS

1. Construction:
   a. Meter chambers for housing kilowatt-hour meters shall be made of galvanised steel not less than 1.6 mm thick and shall be of ample size to accommodate the required number of kilowatt-hour meters and meter cables;
   b. Provision shall be made to enable the kilowatt-hour meters to be fixed inside the chamber without removing the chamber from the wall or other supports;
   c. Meter fixing screws shall not project through the back of the chamber.
2. Front covers:
   a. When a meter chamber is installed indoors, it shall be fitted with a hinged metal front cover;
   b. Meter chambers installed outdoors shall be weatherproof, with screw-on type front covers;
   c. The degree of protection in the latter case shall be of at least IP54 in accordance with IEC 60529.
3. Windows:
   a. Glass windows shall be provided in the front covers of meter chambers to enable the registers of the kilowatt-hour meters to be read easily;
   b. A window shall be provided for each meter, and the size of the window shall be large enough to enable the serial number of the meter and the register to be clearly visible.
ELE3.18.080.8  MOUNTING OF CURRENT TRANSFORMERS ASSOCIATED WITH A WATT-HOUR METER

1. Current transformers, if required in association with a watt-hour meter, may be mounted inside the meter chamber, or in a separate current transformer chamber, as dictated by the circumstances of each particular job;

2. When current transformers are mounted in the meter chamber, the front cover shall be arranged so that the opening or removal of the front cover to gain access to the meters will not expose the current transformers;

3. A separate cover giving access to the current transformers compartment shall be provided;

4. Suitable engraved labels shall be fixed on the covers to identify the installed equipment therein.

ELE3.18.090.8  IDENTIFICATION OF INSTRUMENTS

Each measuring instrument shall be identified by means of a label fitted under the associated instrument. This label shall denote the function of the circuit connected to the meter.
Site built assemblies of switchgear and controlgear shall be constructed, assembled and installed in accordance with ELE2 or the Drawings. They shall also comply with and be tested to the relevant BS EN/BS/IEC Specifications.

ELE4.1 GENERAL

ELE4.1.005.8 STANDARDS

1. Switchboards shall be constructed to fully comply with either IEC 60439-1 standard, or alternatively the new IEC 61439-1 and IEC 61439-2 standards.

2. All switchboards provided for the Contract shall comply with the same standard(s).

ELE4.1.010.8 SWITCHBOARDS (FOR IEC 60439 COMPLIANCE)

1. Switchboards shall be low-voltage switchgear and controlgear assemblies (hereinafter referred to as "ASSEMBLY" or "ASSEMBLIES") in full compliance with IEC 60439-1. They shall be of the enclosed, stationary, floor-standing, multi-cubicle type ASSEMBLIES for indoor use;

2. The manufacturer shall operate quality management system including design, manufacture, installation and maintenance of the ASSEMBLIES conforming to ISO 9001 and be certified by a certification body which is accredited by one of the following accredited bodies:
   a. Hong Kong Accreditation Services (HKAS);
   b. An accredited body considered as having equivalent standard by the Development Bureau.

3. In the case where the ASSEMBLIES are manufactured under licence from a Principal Company, a letter of guarantee from the Principal Company shall be produced to prove that the products manufactured by the licences are equivalent, in every respect, to those type-tested standard products;

4. Prior to delivery to Site, the ASSEMBLIES shall have satisfactory proven record of reliability in local application for a minimum period of 12 months which shall be established after the satisfactory completion of the type tests stipulated in ELE4.1.030;

5. All materials and components used in the ASSEMBLIES shall be of the same make and brand of the type tested ones. Alternative materials or components will not be accepted without prior Approval;

6. The switchboards shall adopt the full compliance of IEC 60439-1 as a whole.

ELE4.1.015.8 SWITCHBOARDS (ALTERNATIVE TO CLAUSE ELE4.1.010 FOR IEC 61439 COMPLIANCE)

1. Switchboards shall be low-voltage switchgear and controlgear assemblies (hereinafter referred to as "ASSEMBLY" or "ASSEMBLIES") in full compliance with IEC 61439-1 and IEC 61439-2. They shall be of the enclosed, stationary, floor-standing, multi-cubicle type ASSEMBLIES for indoor use;

2. The manufacturer shall operate quality management system including design, manufacture, installation and maintenance of the ASSEMBLIES conforming to ISO 9001 and be certified by a certification body which is accredited by one of the following accredited bodies:
   a. Hong Kong Accreditation Services (HKAS);
   b. An accredited body considered as having equivalent standard by the Development Bureau.
3. In the case where the ASSEMBLIES are manufactured under licence from a Principal Company, a letter of guarantee from the Principal Company shall be produced to prove that the products manufactured by the licences are equivalent, in every respect, to those verified standard products;

4. Prior to delivery to Site, the ASSEMBLIES shall have satisfactory proven record of reliability in local application for a minimum period of 12 months which shall be established after the satisfactory completion of the verification in compliance with IEC 61439-1 and IEC 61439-2 stipulated in ELE4.1.035;

5. All materials and components used in the ASSEMBLIES shall be of the same make and brand of the verified ones. Alternative materials or components will not be accepted without prior Approval;

6. The switchboards shall adopt the full compliance of IEC 61439-1 and IEC 61439-2 as a whole.

ELE4.1.020.8 TYPE-TEST (FOR IEC 60439 COMPLIANCE)

1. Switchboards shall be of type-tested assemblies (TTA). Partially type-tested assemblies (PTTA) will only be accepted provided that the non-type-tested arrangements are derived from and have been verified to comply with the standard of the type-tested ones and/or been tested to the satisfaction of the Contract Manager;

2. ASSEMBLIES, circuit breakers and fuse combination units shall be type tested to comply with IEC 60439-1, IEC 60947-2 and IEC 60947-3 respectively. They shall be suitable for installation under environment condition of pollution degree 3 unless otherwise specified;

3. Test certificates for each type-test complete with reports and drawings showing enclosures and partitions of the TTA to demonstrate the segregation of circuits, the type and thickness of insulation barriers, details of insulating supports and the clearances of equipment that passed the type-tests shall be submitted if required by the Contract Manager;

4. Verification of PTTA shall be substantiated by test certificates/reports and/or graphs, calculations, etc. together with the details of the type-tested arrangement from which the PTTA is derived.

ELE4.1.025.8 VERIFICATION (ALTERNATIVE TO CLAUSE ELE4.1.020 FOR IEC 61439 COMPLIANCE)

1. Three different but equivalent types of verification of requirements as stipulated in IEC 61439-1 shall be made for the ASSEMBLIES:
   a. Verification by testing;
   b. Verification by calculation / measurement;
   c. Verification by satisfying design rules.

2. ASSEMBLIES, circuit breakers and fuse combination units shall be verified to comply with IEC 61439-1 and IEC 61439-2, IEC 60947-2 and IEC 60947-3 respectively. They shall be suitable for installation under environment condition of pollution degree 3 unless otherwise specified;

3. Certificates for verification complete with reports and drawings showing enclosures and partitions of the ASSEMBLIES to demonstrate the segregation of circuits, the type and thickness of insulation barriers, details of insulating supports and the clearances of equipment that passed the verification shall be submitted if required by the Contract Manager;
4. Verification shall be substantiated by test certificates/reports and/or graphs, calculations, etc. together with the details of the verified arrangement from which is derived.

ELE4.1.030.8 SHORT-CIRCUIT TEST (FOR IEC 60439 COMPLIANCE)

1. ASSEMBLIES:

The following short-circuit type-tests on the main circuits of ASSEMBLIES shall be carried out by a Short Circuit Testing Organization in compliance with IEC 60439-1 at the value of short circuit currents specified in either Option 1 or Option 2 below:

<table>
<thead>
<tr>
<th>Circuit</th>
<th>Option 1</th>
<th>Option 2</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Busbars connected to the outgoing terminals of the outgoing functional unit in accordance with paragraph (a) of Clause 8.2.3.2.3 of IEC 60439-1</td>
<td>40kA for 1 second when outgoing functional unit is an air circuit breaker; Prospective short-circuit current of 40kA to flow until it is broken when the outgoing functional unit is a fuse combination unit or MCCB unit.</td>
<td>50kA for 1 second when outgoing functional unit is an air circuit breaker; Prospective short-circuit current of 50kA to flow until it is broken when the outgoing functional unit is a fuse combination unit or MCCB unit.</td>
</tr>
<tr>
<td>b. Main busbars including riser/droppers in accordance with paragraph (b) of Clause 8.2.3.2.3 of IEC 60439-1</td>
<td>40kA for 1 second when circuit is below 1600A; 40kA for 3 seconds when the circuit is 1600A or above.</td>
<td>50kA for 1 second</td>
</tr>
<tr>
<td>c. Neutral busbars of the above circuits in accordance with paragraph (d) of Clause 8.2.3.2.3 of IEC 60439-1</td>
<td>24kA for 1 second when circuit is below 1600A; 24kA for 3 seconds when the circuit is 1600A or above.</td>
<td>30kA for 1 second</td>
</tr>
<tr>
<td>d. Separate protective conductors and the terminals for the outgoing protective conductor in accordance with Clause 8.2.4.2 of IEC 60439-1</td>
<td>24kA for 1 second at main earth bar; Prospective short-circuit current of 24kA to flow until it is broken at outgoing protective conductor in each modular section.</td>
<td>30kA for 1 second at main earth bar; Prospective short-circuit current of 30kA to flow until it is broken at outgoing protective conductor in each modular section.</td>
</tr>
</tbody>
</table>

2. Circuit breakers and fuse combination units:

The following short-circuit type-test on the circuit breakers and fuse combination units shall also be carried out by a Short Circuit Testing Organization in accordance with IEC 60947-2 and IEC 60947-3 respectively. The Option 1 or Option 2 of the test current shall correspond with that of ASSEMBLIES:
### Test Current Table

### ELE4.1.035.8  SHORT-CIRCUIT WITHSTAND STRENGTH VERIFICATION

(ALTERNATIVE TO CLAUSE ELE4.1.030 FOR IEC 61439 COMPLIANCE)

1. ASSEMBLIES:

The following short-circuit withstand strength verification on the main circuits of ASSEMBLIES shall be carried out by a Short Circuit Testing Organization in compliance with IEC 61439-1 and IEC 61439-2 at the value of short circuit currents specified in either Option 1 or Option 2 below:

<table>
<thead>
<tr>
<th>Circuit</th>
<th>Test Current</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Busbars connected to the outgoing terminals</td>

ELE4.2  ASSEMBLIES - DESIGN AND CONSTRUCTION

ELE4.2.010.8  GENERAL ARRANGEMENT (FOR IEC 60439 COMPLIANCE)

1. ASSEMBLIES shall be formed from one or more modular sections (vertical-panel), each with a maximum width not exceeding 1000 mm and shall not accommodate more than two fuse combination units in the same row. They shall be fitted together to form a flush front continuous board of uniform height and depth front-to-back and be suitable for floor mounting without any mounting structure. ASSEMBLIES shall be pleasing in appearance and shall be extensible at both ends;

2. ASSEMBLIES shall be of the totally enclosed type with openings only for ventilating purposes. Ventilating grills or louvres located on top of the board shall be protected against ingress of condensate water (see also ELE4.2.030). In no case shall ventilating louvres be located at the front of ASSEMBLIES;

3. No forced ventilation to any components of ASSEMBLIES is allowed.

ELE4.2.015.8  GENERAL ARRANGEMENT (ALTERNATIVE TO CLAUSE ELE4.2.010 FOR IEC 61439 COMPLIANCE)

1. ASSEMBLIES shall be formed from one or more modular sections (vertical-panel), each with a maximum width not exceeding 1000 mm and shall not accommodate more than two fuse combination units in the same row. They shall be fitted together to form a flush front continuous board of uniform height and depth front-to-back and be suitable for floor mounting without any mounting structure. ASSEMBLIES shall be pleasing in appearance and shall be extensible at both ends;

2. ASSEMBLIES shall be of the totally enclosed type with openings only for ventilating purposes. Ventilating grills or louvres located on top of the board shall be protected against ingress of condensate water (see also ELE4.2.035). In no case shall ventilating louvres be located at the front of ASSEMBLIES;

3. No forced ventilation to any components of ASSEMBLIES is allowed.

ELE4.2.020.8  MECHANICAL DESIGN

1. ASSEMBLIES shall be of steel construction, self supporting, with the enclosures, covers, removable covers and cover plates made of sheet steel of not less than 2 mm thick. All removable covers and doors shall be notched and all joints shall be machined to give a rigid and smooth appearance to the satisfaction of the Contract Manager;

2. Marks of welding shall not be visible from the external surface of panels;

3. Detachable hinges shall be provided for the doors. Exposed hinges shall be bright cadmium or nickel chromium plated;

4. Gaskets shall be fitted on doors and removable covers and shall be continuous, without joints around corners, and suitably arranged to minimize the transmission of vibration, and to prevent the entry of dust.

ELE4.2.030.8  PROTECTION AGAINST ELECTRIC SHOCK AND EXTERNAL INFLUENCES (FOR IEC 60439 COMPLIANCE)

1. Protection against direct contact shall be by means of barriers of enclosures in accordance with IEC 60439-1;
2. All external surfaces of an ASSEMBLY shall have a degree of protection against ingress of solid foreign bodies and liquid of at least IP31 in the normal service condition in accordance with IEC 60439-1;

3. With the front-hinged door of the functional units open and in replacing the fuse links, the degree of protection to the live part shall be at least IP2X. If the degree of protection to the neutral conductor of the live part cannot comply with this requirement, a warning label shall be provided next to the neutral conductor;

4. The bottom of the ASSEMBLY shall be closed and made vermin-proof by means of barriers cut away, where required, to fit the cables passing through. The barriers in the cable compartment shall be made of phenolic resin bonded paper laminate sheet of a minimum thickness of 6 mm;

5. For PTTA, the construction of the enclosure shall be the same as the TTA, and be checked by visual inspection and standard test finger, if necessary, as IEC 60529;

6. Protection against indirect contact shall be by means of protective circuits in accordance with IEC 60439-1. The size and installation of the protective conductors in an ASSEMBLY shall be in accordance with ELE4.3.1.070.

**ELE4.2.035.8 PROTECTION AGAINST ELECTRIC SHOCK AND EXTERNAL INFLUENCES (ALTERNATIVE TO CLAUSE ELE4.2.030 FOR IEC 61439 COMPLIANCE)**

1. Protection against direct contact shall be by means of barriers of enclosures in accordance with IEC 61439-1 and IEC 61439-2;

2. All external surfaces of an ASSEMBLY shall have a degree of protection against ingress of solid foreign bodies and liquid of at least IP31 in the normal service condition in accordance with IEC 61439-1 and IEC 61439-2;

3. With the front-hinged door of the functional units open and in replacing the fuse links, the degree of protection to the live part shall be at least IP2X. If the degree of protection to the neutral conductor of the live part cannot comply with this requirement, a warning label shall be provided next to the neutral conductor;

4. The bottom of the ASSEMBLY shall be closed and made vermin-proof by means of barriers cut away, where required, to fit the cables passing through. The barriers in the cable compartment shall be made of phenolic resin bonded paper laminate sheet of a minimum thickness of 6 mm;

5. The construction of the enclosure shall be the same for ASSEMBLIES under all types of verification, and be checked by visual inspection and standard test finger, if necessary, as IEC 60529;

6. Fault protection shall be by means of protective circuits in accordance with IEC 61439-1 and IEC 61439-2. The size and installation of the protective conductors in an ASSEMBLY shall be in accordance with ELE4.3.1.075.

**ELE4.2.040.8 FINISH**

1. Before untreated steel work is painted, it shall be thoroughly cleaned by an Approved method, such as grit-blasting or chemical pickling and an Approved rust inhibitive priming coat applied. Treated steelwork e.g. zintec, shall be suitably cleaned and degreased;

2. Surfaces shall then have not less than two coats of stoved finish paint of contrasting colours; the finishing colour, both interior and exterior shall be equivalent to colour code 00A01 of BS 4800 (light grey) or lighter;

3. Care shall be taken to ensure that edges of metalwork have an adequate dry film thickness of paint and that paint build-up does not occur at edges;
4. Alternative finishing processes such as phosphate treatment followed by stoved epoxy powder paint conforming to BS EN 12476 will also be accepted.

**ELE4.2.050.8**  
**COMPARTMENTATION (FOR IEC 60439 COMPLIANCE)**

1. Internal separation of an ASSEMBLY shall be provided by means of barriers or partitions made of sheet steel or non-hygroscopic and flame retardant insulating materials rigidly fixed;
2. The size and construction of the compartments shall be the same as the type-tested ones;
3. Openings necessary for interconnection, control or ventilation shall be at least IP2X for protection against contact with live parts in the adjacent compartments, and be such that exhaust outlets of functional units shall not discharge directly to the live parts in adjacent compartments;
4. The ASSEMBLY shall be capable of withstanding any external fault. In the event of any internal arcing fault on a functional unit, the damage shall be confined to that unit so that the busbar and all other functional units remain fit for further service;
5. The internal separation shall be of Form 3a in accordance with IEC 60439-1. Further compartmentation shall also be provided for each of the following equipment:
   a. Incoming power supply cables, conductors and connections to the incoming supply side terminals of each incoming circuit breakers;
   b. Protective relays and terminal blocks;
   c. Batteries and Battery Charger;
   d. Supply Company's meter;
   e. Supply Company's CT;
   f. Capacitor bank;
   g. Fuse combination unit for capacitor bank;
   h. Control gears and relays for capacitor bank;
   i. Each section (vertical-panel) except the horizontal busbar compartments;
   j. Cable terminals for outgoing functional units.
6. Front doors shall be provided for items given in sub-clauses (5)(b), (5)(c), (5)(d), (5)(e), (5)(g) and (5)(h) above and each outgoing functional units;
7. Removal back covers shall be completed with pair of handles for easy fixing and removal and provided for items given in sub-clauses (5)(a), (5)(f) and (5)(i) above;
8. Voltmeters, ammeters together with associated switches and indication lamps are allowed to be mounted on the front cover/door of the respective functional unit monitored by the meters, provided that they do not obstruct the operation of the unit, are suitably protected against direct contact of live parts of at least IP2X, even when the door is open and, are properly earthed.

**ELE4.2.055.8**  
**COMPARTMENTATION (ALTERNATIVE TO CLAUSE ELE4.2.050 FOR IEC 61439 COMPLIANCE)**

1. Internal separation of an ASSEMBLY shall be provided by means of barriers or partitions made of sheet steel or non-hygroscopic and flame retardant insulating materials rigidly fixed;
2. The size and construction of the compartments shall be the same as the type-tested ones;
3. Openings necessary for interconnection, control or ventilation shall be at least IP2X for protection against contact with live parts in the adjacent compartments, and be such that exhaust outlets of functional units shall not discharge directly to the live parts in adjacent compartments;

4. The ASSEMBLY shall be capable of withstanding any external fault. In the event of any internal arcing fault on a functional unit, the damage shall be confined to that unit so that the busbar and all other functional units remain fit for further service;

5. The internal separation shall be of Form 3a in accordance with IEC 61439-1 and IEC 61439-2. Further compartmentation shall also be provided for each of the following equipment:
   a. Incoming power supply cables, conductors and connections to the incoming supply side terminals of each incoming circuit breakers;
   b. Protective relays and terminal blocks;
   c. Batteries and Battery Charger;
   d. Supply Company's meter;
   e. Supply Company's CT;
   f. Capacitor bank;
   g. Fuse combination unit for capacitor bank;
   h. Control gears and relays for capacitor bank;
   i. Each section (vertical-panel) except the horizontal busbar compartments;
   j. Cable terminals for outgoing functional units.

6. Front doors shall be provided for items given in sub-clauses (5)(b), (5)(c), (5)(d), (5)(e), (5)(g) and (5)(h) above and each outgoing functional units;

7. Removal back covers shall be completed with pair of handles for easy fixing and removal and provided for items given in sub-clauses (5)(a), (5)(f) and (5)(i) above;

8. Voltmeters, ammeters together with associated switches and indication lamps are allowed to be mounted on the front cover/door of the respective functional unit monitored by the meters, provided that they do not obstruct the operation of the unit, are suitably protected against direct contact of live parts of at least IP2X, even when the door is open and, are properly earthed.
ELE4.3  ASSEMBLIES - COMPONENTS AND AUXILIARIES

ELE4.3.1  BUSBARS AND BUSBAR CONNECTIONS

ELE4.3.1.010.8  STANDARD (FOR IEC 60439 COMPLIANCE)
Assembly: IEC 60439-1.

ELE4.3.1.015.8  STANDARD (ALTERNATIVE TO CLAUSE ELE4.3.1.010 FOR IEC 61439 COMPLIANCE)
Assembly: IEC 61439-1 and IEC 61439-2.

ELE4.3.1.020.8  RATING (FOR IEC 60439 COMPLIANCE)
1. Rated insulation voltage: 415V minimum
2. Rated operational voltage: 380/220V
3. Rated current: 100A, 200A, 400A, 800A, 1200A, 1600A, 2500A as shown on the drawings
4. Rated frequency: 50Hz
5. Rated short-time withstand current: as specified in ELE4.1.030

ELE4.3.1.025.8  RATING (ALTERNATIVE TO CLAUSE ELE4.3.1.020 FOR IEC 61439 COMPLIANCE)
1. Rated insulation voltage: 415V minimum
2. Rated operational voltage: 380/220V
3. Rated current: 100A, 200A, 400A, 800A, 1200A, 1600A, 2500A as shown on the drawings
4. Rated frequency: 50Hz
5. Rated short-time withstand current: as specified in ELE4.1.035

ELE4.3.1.030.8  BUSBARS (FOR IEC 60439 COMPLIANCE)
1. Busbars shall be three phase and full rating neutral busbar made of hard drawn, high conductivity, bare solid copper bars to BS EN 13601 with electrotinned finish. The temperature-rise type test with rated current on each busbar section shall be witnessed by an acceptable third-party;
2. Main busbars shall run horizontally and conform to the type-tested arrangement;
3. A vertical busbar riser/dropper shall be required for each section of the ASSEMBLY where switchgears are arranged in multi-tier, with a cross-section capable of carrying either the total rated current of all outgoing units connected to it or the current rating of the protective device protecting it, whichever is the less, without undue temperature-rise in accordance with Clause 8.2.1 of IEC 60439-1;
4. Busbars connecting the riser/dropper to the supply side of outgoing functional unit shall be with adequate insulation or shrouding;
5. Busbars shall be provided to connect between functional units and to extend each outgoing terminal of the functional units to the cabling compartment.

**ELE4.3.1.035.8 BUSBARS (ALTERNATIVE TO CLAUSE ELE4.3.1.030 FOR IEC 61439 COMPLIANCE)**

1. Busbars shall be three phase and full rating neutral busbar made of hard drawn, high conductivity, bare solid copper bars to BS EN 13601 with electrotinned finish. The temperature-rise verification with rated current on each busbar section shall be witnessed by an acceptable third-party;

2. Main busbars shall run horizontally and conform to the verification arrangement;

3. A vertical busbar riser/dropper shall be required for each section of the ASSEMBLY where switchgears are arranged in multi-tier, with a cross-section capable of carrying either the total rated current of all outgoing units connected to it or the current rating of the protective device protecting it, whichever is the less, without undue temperature-rise in accordance with Clause 10.10 of IEC 61439-1 and IEC 61439-2;

4. Busbars connecting the riser/dropper to the supply side of outgoing functional unit shall be with adequate insulation or shrouding;

5. Busbars shall be provided to connect between functional units and to extend each outgoing terminal of the functional units to the cabling compartment.

**ELE4.3.1.040.8 ARRANGEMENT OF BUSBARS AND CONNECTIONS**

1. In the incoming terminal compartment, the busbars shall be arranged in a manner that the provision and arrangement for the cable/busbar terminations shall comply with the Supply Company's requirement;

2. Unless otherwise specified, busbars and main connections which are generally in one plane shall be arranged in the order of L1-L2-L3 phases as follows:
   a. If the run of the conductors is horizontal, the L1 phase shall be the top, or the left or farthest away as viewed from the front of the ASSEMBLY;
   b. If the run of the conductor is vertical, the L1 phase shall be the left or farthest away as viewed from the front of the ASSEMBLY.

3. The busbars from the incoming supply connections through the incomer circuit breaker to the nearest main horizontal busbars, which follow the phase notation of the Supply Company's incoming terminals, shall also be acceptable;

4. The neutral shall occupy the outer position and shall be clearly marked.

**ELE4.3.1.050.8 BUSBAR IDENTIFICATION (FOR IEC 60439 COMPLIANCE)**

Each busbar and protective conductor shall be identified by colours in accordance with the Electrical CoP. The terminals for external protective conductors shall be marked in accordance with IEC 60439-1.

**ELE4.3.1.055.8 BUSBAR IDENTIFICATION (ALTERNATIVE TO CLAUSE ELE4.3.1.050 FOR IEC 61439 COMPLIANCE)**

Each busbar and protective conductor shall be identified by colours in accordance with the Electrical CoP. The terminals for external protective conductors shall be marked in accordance with IEC 61439-1 and IEC 61439-2.
ELE4.3.1.060.8 BUSBAR JOINTING AND SUPPORT (FOR IEC 60439 COMPLIANCE)

1. Jointing of sections of busbars shall be made by bolts and nuts or clamps. Soldered, welded or riveted joints shall not be used;

2. Bolts for jointing busbars shall be of steel, either hot-dip galvanized or heavily electroplated with zinc or cadmium, to guard against corrosion;

3. Conductors shall be supported on insulators of non-hygrosopic and non-deteriorating materials as type-test;

4. The method and materials used in jointing and support shall conform to the type-tested arrangement.

ELE4.3.1.065.8 BUSBAR JOINTING AND SUPPORT (ALTERNATIVE TO CLAUSE ELE4.3.1.060 FOR IEC 61439 COMPLIANCE)

1. Jointing of sections of busbars shall be made by bolts and nuts or clamps. Soldered, welded or riveted joints shall not be used;

2. Bolts for jointing busbars shall be of steel, either hot-dip galvanized or heavily electroplated with zinc or cadmium, to guard against corrosion;

3. Conductors shall be supported on insulators of non-hygrosopic and non-deteriorating materials as verification;

4. The method and materials used in jointing and support shall conform to the verification arrangement.

ELE4.3.1.070.8 PROTECTIVE CONDUCTORS (FOR IEC 60439 COMPLIANCE)

1. Protective conductors shall be of size in accordance with IEC 60439-1;

2. The cross sectional area and the installation of the protective conductor shall be so selected and designed to eliminate the possibility of the fault current in the protective conductor causing a temperature rise that may damage the conductor or impair its electrical continuity before the operation of the protective device, for a duration that may last up to 5 seconds;

3. A continuous tinned copper bar of size satisfying the above requirement and in any case not less than 150 mm² shall be fixed at the rear interior bottom portion throughout the length of the ASSEMBLY, bonding the frame-work of all modular sections, terminals for the outgoing protective conductor(s) of each circuit, the circuit breaker's earthing terminal and finally connected to the earthing terminals on the external surface at the extreme ends of the ASSEMBLY.

ELE4.3.1.075.8 PROTECTIVE CONDUCTORS (ALTERNATIVE TO CLAUSE ELE4.3.1.070 FOR IEC 61439 COMPLIANCE)

1. Protective conductors shall be of size in accordance with IEC 61439-1 and IEC 61439-2;

2. The cross sectional area and the installation of the protective conductor shall be so selected and designed to eliminate the possibility of the fault current in the protective conductor causing a temperature rise that may damage the conductor or impair its electrical continuity before the operation of the protective device, for a duration that may last up to 5 seconds;
3. A continuous tinned copper bar of size satisfying the above requirement and in any case not less than 150 mm² shall be fixed at the rear interior bottom portion throughout the length of the ASSEMBLY, bonding the frame-work of all modular sections, terminals for the outgoing protective conductor(s) of each circuit, the circuit breaker's earthing terminal and finally connected to the earthing terminals on the external surface at the extreme ends of the ASSEMBLY.

ELE4.3.080.8 EVIDENCE OF COUNTRY / PLACE OF MANUFACTURE AND AUTHENTICITY

The Sub-contractor shall produce documentary evidences in accordance with PRE.BS1.205 to verify the country / place of manufacture and authenticity of busbars delivered to Site or installed.

ELE4.3.2 AUXILIARY CIRCUITS

ELE4.3.2.010.8 WIRING

1. All auxiliary circuits shall be wired in PVC insulated copper cables to type CK of BS 6231 of not less than 2.5 mm² conductor;
2. All wiring shall be clipped in a neat and tidy manner by nylon type cable ties or installed in plastic wiring channels;
3. Wiring from the fixed part of the ASSEMBLY to equipment mounted on the hinged door shall be enclosed by a flexible PVC tubing.

ELE4.3.2.020.8 MARKING

1. Sleeve type cable markers shall be fitted to both ends of each length of cable to denote its function; the function letter shall be followed by a number identifying the individual wire;
2. Each branch of any connection shall bear the same identification mark. Where it is necessary to identify branches which are common, different identification marks for the branches shall be employed only if they are common through links or are connected to separate terminals which are then common by removable connections;
3. Numbering shall read from the terminals outwards on all wires;
4. Circuit function letters and wire numbers shall be in accordance with the following table:

<table>
<thead>
<tr>
<th>Circuit</th>
<th>Test Current</th>
</tr>
</thead>
<tbody>
<tr>
<td>C</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Current transformers for over-current protection (including combined earth-fault protection) and instruments</td>

</tbody>
</table>

ELE4.3.2.030.8 TERMINATION

1. Wiring from one section to another section of an ASSEMBLY shall feed through terminal blocks;

2. Except for the Supply Company's metering, test/disconnect terminal blocks shall be provided for each measurement and protection current transformer. The terminal blocks shall be housed in the same relay compartment with hinged front door;

3. All terminal blocks shall be feed-through terminal blocks with screw clamp connections and conforming to the following requirements:
   a. Electrical and mechanical characteristics to be type tested to IEC 60947-7-1;
   b. Voltage rating 750V;
   c. Moulding material to be melamine with low flammability as certified to UL94-V0(5V);
   d. Designed to be mounted directly on assembly rail to BS 5825;
   e. All current carrying parts to be copper coated with tin lead alloy. Clamping yokes and screw to be zinc plated steel with additional protection by a chromate layer.

   In addition, test/disconnect terminal blocks complete with plugs and test sockets for tapping off/disconnection shall be provided for test and measurement circuits.

4. The terminal blocks shall be provided with manufacturer's standard assembly rails, end section, partition, bracket, cross connection plug, jumper bar, warning sign, plastic screw, marking tags, disconnect plugs, test plug bolt, test plug, etc.;

5. Only one cable shall be terminated in each terminal, where necessary, jumper bars or cross connecting plugs shall be used;

6. Terminal blocks for the live conductor shall be indicated with a warning sign and separated from other terminal blocks by partitions.

ELE4.3.3 AIR CIRCUIT BREAKERS

ELE4.3.3.010.8 STANDARDS (FOR IEC 60439 COMPLIANCE)

1. Circuit Breaker: IEC 60947-2;

ELE4.3.3.015.8 STANDARDS (ALTERNATIVE TO CLAUSE ELE4.3.3.010 FOR IEC 61439 COMPLIANCE)

1. Circuit Breaker: IEC 60947-2;

ELE4.3.3.020.8 RATING (FOR IEC 60439 COMPLIANCE)

| 1. Rated operational voltage: | 380V |
| 2. Rated insulation voltage: | 415V minimum |
3. Rated frequency: 50Hz

4. Rated service short-circuit breaking capacity: as specified in ELE4.1.030

5. Rated short-time withstand current: as specified in ELE4.1.030

6. Rated-uninterrupted current: 800A, 1200A, 1600A and 2500A as shown on the drawings

**ELE4.3.025.8 RATING (ALTERNATIVE TO CLAUSE ELE4.3.020 FOR IEC 61439 COMPLIANCE)**

1. Rated operational voltage: 380V
2. Rated insulation voltage: 415V minimum
3. Rated frequency: 50Hz
4. Rated service short-circuit breaking capacity: as specified in ELE4.1.035
5. Rated short-time withstand current: as specified in ELE4.1.035
6. Rated-uninterrupted current: 800A, 1200A, 1600A and 2500A as shown on the drawings

**ELE4.3.030.8 CIRCUIT BREAKER (FOR IEC 60439 COMPLIANCE)**

1. The circuit breaker shall be triple pole or four pole as specified on the Drawings, air break and of metalclad, horizontal withdrawable type, fitted with a shunt trip coil and/or overcurrent release, depending on the type of protection scheme used, as specified in ELE4.4.1 and shown on the Drawings;

2. The circuit breaker shall be housed in a separate and segregated circuit breaker compartment as specified in ELE4.2.050. Each circuit breaker of triple pole type shall be complete with an accessible bolted type neutral link in accordance with the type-tested designs;

3. The circuit breaker shall have independent manual closing with stored energy or spring assisted mechanism, unless otherwise specified. Neutral link/pole shall be easily accessible for inspection and maintenance even after cabling;

4. Unless otherwise specified, opening and closing of incoming and bus-section ACB shall be capable of being remote controlled repeatedly by the integrally mounted shunt trip coil and shunt close coil respectively and shall be provided with on and off or "1" and "0" mechanical indicators on the front panel of the circuit breaker. The closing operation of the ACB shall be operable either by a solenoid coil or by a motorized mechanism;

5. For circuit breaker with mechanism controlled by a solenoid coil, the closing mechanism shall be controlled by the solenoid coil which replaces the standard closing spring. The a.c. supply to the rectifier for the solenoid coil shall be taken from the "Live" side of the circuit breaker. The closing contactor, rectifier and anti-hunting relay shall all be integrally mounted on the circuit breaker;

6. For circuit breaker with motorized mechanism, the closing spring shall be capable of being released electrically or manually and shall automatically be recharged upon each release operation with indication showing the mechanism is fully charged;

7. A push button shall be mounted on the front door of the circuit breaker to enable local closing for normal operation;
8. The remote closing and tripping function shall be designed to be operated through a pair of voltage free contacts on a remote operating device. A female 3-pin receptacle without the remote operating device shall be provided inside the IDMT Relay/Fuse chamber of the cubicle. The receptacle shall be of rating 250V 10A, a.c. to IEC 60320 or equivalent and approved standard. One number remote operating device shall be provided with each switchboard. The connection of the receptacle shall be as follows:
   a. Earth: common;
   b. Live: for remote closing;
   c. Neutral: for remote tripping.

9. The circuit breaker shall be of horizontal withdrawable type with 'connected', 'test' and 'isolated' positions, fitted with mechanical position indicators and pad-locking facilities in each of the positions;

10. The circuit breaker shall be type-tested and comply with the additional requirements for circuit breakers suitable for isolation in accordance with Clause 7.1.2 of IEC 60947-2.

ELE4.3.3.035.8 CIRCUIT BREAKER (ALTERNATIVE TO CLAUSE ELE4.3.3.030 FOR IEC 61439 COMPLIANCE)

1. The circuit breaker shall be triple pole or four pole as specified on the Drawings, air break and of metalclad, horizontal withdrawable type, fitted with a shunt trip coil and/or overcurrent release, depending on the type of protection scheme used, as specified in ELE4.4.1 and shown on the Drawings;

2. The circuit breaker shall be housed in a separate and segregated circuit breaker compartment as specified in ELE4.2.055. Each circuit breaker of triple pole type shall be complete with an accessible bolted type neutral link in accordance with the type-tested designs;

3. The circuit breaker shall have independent manual closing with stored energy or spring assisted mechanism, unless otherwise specified. Neutral link/pole shall be easily accessible for inspection and maintenance even after cabling;

4. Unless otherwise specified, opening and closing of incoming and bus-section ACB shall be capable of being remote controlled repeatedly by the integrally mounted shunt trip coil and shunt close coil respectively and shall be provided with on and off or "1" and "0" mechanical indicators on the front panel of the circuit breaker. The closing operation of the ACB shall be operable either by a solenoid coil or by a motorized mechanism;

5. For circuit breaker with mechanism controlled by a solenoid coil, the closing mechanism shall be controlled by the solenoid coil which replaces the standard closing spring. The a.c. supply to the rectifier for the solenoid coil shall be taken from the "Live" side of the circuit breaker. The closing contactor, rectifier and anti-hunting relay shall all be integrally mounted on the circuit breaker;

6. For circuit breaker with motorized mechanism, the closing spring shall be capable of being released electrically or manually and shall automatically be recharged upon each release operation with indication showing the mechanism is fully charged;

7. A push button shall be mounted on the front door of the circuit breaker to enable local closing for normal operation;
8. The remote closing and tripping function shall be designed to be operated through a pair of voltage free contacts on a remote operating device. A female 3-pin receptacle without the remote operating device shall be provided inside the IDMT Relay/Fuse chamber of the cubicle. The receptacle shall be of rating 250V 10A, a.c. to IEC 60320 or equivalent and approved standard. One number remote operating device shall be provided with each switchboard. The connection of the receptacle shall be as follows:
   a. Earth: common;
   b. Live: for remote closing;
   c. Neutral: for remote tripping.

9. The circuit breaker shall be of horizontal withdrawable type with 'connected', 'test' and 'isolated' positions, fitted with mechanical position indicators and pad-locking facilities in each of the positions;

10. The circuit breaker shall be type-tested and comply with the additional requirements for circuit breakers suitable for isolation in accordance with Clause 7.1.2 of IEC 60947-2.

**ELE4.3.040.8 MECHANICAL INTERLOCKS**

The circuit breaker shall be provided with the following mechanical interlocks:

1. Circuit breaker cannot be racked in or withdrawn when in closed position;
2. Circuit breaker cannot be closed unless it is either the main circuit connection is fully connected, at test position or completely isolated;
3. In case that there is provision for maintenance and adjustment of contacts, circuit breaker shall be possible to 'slow close' in the fully isolated position;
4. With hand charged spring mechanism, initiation of the closing of the circuit breaker is not possible until the closing mechanism is fully charged;
5. Other mechanical interlocks if specified on the Drawings to facilitate sequential operation of circuit breakers/section switches of the ASSEMBLY incorporating more than one circuit breaker.

**ELE4.3.050.8 CIRCUIT BREAKER COMPARTMENT/INTERLOCK**

The circuit breaker compartment shall maintain a degree of protection against direct contact with live parts of at least IP 2X during normal operation without overriding the interlock. To ensure safety, the circuit breaker compartment shall be provided with the necessary mechanical interlock as follows, or other equal and Approved means of mechanical interlock, so that:

1. If a door is used to enclose the breaker, it can only be opened when the main circuit of the circuit breaker has opened and it shall not be possible to close the circuit breaker while the door is opened, except by overriding the interlock. The interlock shall be restored on reclosing the door; or
2. If a front panel is used to enclose the breaker, the panel shall be fitted to the withdrawable part of the breaker and carried in unity with it in the drawout/rack-in operation. It shall be possible to remove the panel with tools when the circuit breaker is in the 'isolated' position.

**ELE4.3.060.8 SAFETY SHUTTERS**

1. A set of safety shutters shall be provided to cover each three phase or three phase and neutral group of stationary isolating contacts for three pole or four pole circuit breaker respectively;
2. Shutters shall be opened automatically by a positive drive from the circuit breaker moving portion and, when closed, shall prevent access to stationary isolating contacts. When the circuit breaker is withdrawn, shutters shall be capable of being operated and padlocked in the closed position;

3. Each safety shutter shall bear a colour label with 15 mm minimum white lettering as follows:
   a. Incoming supply : red/incomer;
   b. Busbar : yellow/busbar;
   c. Bus section : red/bus section;
   d. Outgoing feeder : yellow/outgoing.

**ELE4.3.070.8  AUXILIARY CONTACTS, CONTROL CONTACTS AND AUXILIARY SWITCHES**

1. All the control and instrumentation wiring between the fixing part of the ASSEMBLY and the withdrawable part of the breaker shall through the auxiliary and control contacts. Automatic safety shutters or screens with warning signs shall be provided if they are still live when the circuit breaker is withdrawn;

2. The auxiliary contacts shall engage when the breaker is in the "connected" and "test" positions and disengage when in the "isolated" position;

3. At least one spare a - contact and one spare b - contact shall be provided.

**ELE4.3.4  FUSE COMBINATION UNITS AND SWITCH-DISCONNECTORS**

**ELE4.3.010.8  COMPLIANCE WITH SPECIFICATION**

Unless otherwise specified, cubicle mounted fuse combination units and switch-disconnectors shall comply with the relevant parts of Specification for surface mounted fuse combination units and switch-disconnector (i.e. ELE3.2).

**ELE4.3.020.8  ASSEMBLY (FOR IEC 60439 COMPLIANCE)**

The assembly of the switching devices in the ASSEMBLY shall also comply with IEC 60439-1.

**ELE4.3.025.8  ASSEMBLY (ALTERNATIVE TO CLAUSE ELE4.3.4.020 FOR IEC 61439 COMPLIANCE)**

The assembly of the switching devices in the ASSEMBLY shall also comply with IEC 61439-1 and IEC 61439-2.

**ELE4.3.030.8  SWITCHING DEVICE (FOR IEC 60439 COMPLIANCE)**

Each switching device shall be enclosed in a separate and segregated compartment with hinged front door as specified in **ELE4.2.050** and flush mounted on the front of the ASSEMBLY.

**ELE4.3.035.8  SWITCHING DEVICE (ALTERNATIVE TO CLAUSE ELE4.3.4.030 FOR IEC 61439 COMPLIANCE)**

Each switching device shall be enclosed in a separate and segregated compartment with hinged front door as specified in **ELE4.2.055** and flush mounted on the front of the ASSEMBLY.
ELE4.3.4.040.8 EVIDENCE OF COUNTRY / PLACE OF MANUFACTURE AND AUTHENTICITY

The Sub-contractor shall produce documentary evidences in accordance with PRE.BS1.205 to verify the country / place of manufacture and authenticity of fuse combination units and switch-disconnectors delivered to Site or installed.

ELE4.3.5 CHANGEOVER CONTACTORS

ELE4.3.5.010.8 COMPLIANCE WITH SPECIFICATION

Unless otherwise specified, changeover contactors shall comply with the relevant parts of Specification for contactors. (i.e. ELE3.15).

ELE4.3.5.020.8 INSTALLATION (FOR IEC 60439 COMPLIANCE)

The installation of the changeover contactors in the ASSEMBLY shall also comply with IEC 60439-1. The installation such as the ways of mounting, the connection of incoming and outgoing conductors, the clearance and creepage distance, the enclosure, etc. shall be identical to the type-tested one or as recommended by the contactor manufacturers.

ELE4.3.5.025.8 INSTALLATION (ALTERNATIVE TO CLAUSE ELE4.3.5.020 FOR IEC 61439 COMPLIANCE)

The installation of the changeover contactors in the ASSEMBLY shall also comply with IEC 61439-1 and IEC 61439-2. The installation such as the ways of mounting, the connection of incoming and outgoing conductors, the clearance and creepage distance, the enclosure, etc. shall be identical to the type-tested one or as recommended by the contactor manufacturers.

ELE4.3.5.030.8 SHORT-CIRCUIT WITHSTAND CAPACITY

For contactors protected by fuse, the short-circuit withstand capacity of the contactors shall be not less than the maximum let-through energy of the respective fuse and be verified by test.

ELE4.3.5.040.8 EVIDENCE OF COUNTRY / PLACE OF MANUFACTURE AND AUTHENTICITY

The Sub-contractor shall produce documentary evidences in accordance with PRE.BS1.205 to verify the country / place of manufacture and authenticity of changeover contactors delivered to Site or installed.

ELE4.3.6 CABLE TERMINATION

ELE4.3.6.010.8 INCOMING/OUTGOING CABLES (FOR IEC 60439 COMPLIANCE)

All incoming/outgoing cables, unless otherwise specified, shall be of bottom-entry and incoming/outgoing busbar trunking of top entry and terminated in separate compartments as stated in ELE4.2.050. The cables shall be located at the rear of the ASSEMBLY complete with removable back covers.
ELE4.3.6.015.8 INCOMING/OUTGOING CABLES (ALTERNATIVE TO CLAUSE ELE4.3.6.010 FOR IEC 61439 COMPLIANCE)

All incoming/outgoing cables, unless otherwise specified, shall be of bottom-entry and incoming/outgoing busbar trunking of top entry and terminated in separate compartments as stated in ELE4.2.055. The cables shall be located at the rear of the ASSEMBLY complete with removable back covers.

ELE4.3.6.020.8 CABLE GLAND PLATES

Cable gland plates made of brass or steel of not less than 2 mm thick shall be provided below the lug termination at a distance not exceeding 600 mm. Adequate space shall be reserved for future cabling for the spare functional units.

ELE4.3.6.030.8 CABLE SUPPORTS

Cable and cable supports shall be suitably installed to prevent terminals or cables being subjected to stresses, which may reduce their normal life or performance.

ELE4.3.7 SUPPLY COMPANY'S METERING EQUIPMENT

ELE4.3.7.010.8 METERING COMPARTMENTS

1. Separate compartments shall be provided for accommodating the Supply Company's meter(s) on the front of the ASSEMBLY and for the corresponding current transformers;

2. The metering compartment shall be complete with a hinged glazed door for meter viewing and suitable support for mounting the meter.

ELE4.3.7.020.8 METERING EQUIPMENT

1. The metering equipment will be supplied and fixed by the Supply Company on site, but the ASSEMBLY shall be complete with fuses for the voltage coil, removable links for mounting the current transformers and the associated wiring to the meter;

2. The fuses shall be of rating according to the requirements of the Supply Company, with provision for sealing to prevent unauthorized removal and the incoming side of the fuseholders bolted to the incoming supply busbar.

ELE4.3.8 MOULDED CASE CIRCUIT BREAKERS (MCCB)

ELE4.3.8.010.8 COMPLIANCE WITH SPECIFICATION

Unless otherwise specified, MCCBs mounted in the ASSEMBLY shall comply with the relevant parts of Specification for MCCB (i.e. ELE3.4). MCCB shall be type-tested and comply with the additional requirements for circuit breakers suitable for isolation in accordance with Clause 7.1.2 of IEC 60947-2.
ELE4.3.8.020.8 INSTALLATION (FOR IEC 60439 COMPLIANCE)  
The installation of MCCBs mounted in the ASSEMBLY shall also comply with IEC 60439-1. The installation details such as the ways of mounting, mounting plates, termination of incoming and outgoing conductors, clearance and creepage distances, dimensions of enclosure, etc. shall be submitted to verify them in full compliance with the type-tested arrangements and/or the MCCB manufacturers' recommendations.

ELE4.3.8.025.8 INSTALLATION (ALTERNATIVE TO CLAUSE ELE4.3.8.020 FOR IEC 61439 COMPLIANCE)  
The installation of MCCBs mounted in the ASSEMBLY shall also comply with IEC 61439-1 and IEC 61439-2. The installation details such as the ways of mounting, mounting plates, termination of incoming and outgoing conductors, clearance and creepage distances, dimensions of enclosure, etc. shall be submitted to verify them in full compliance with the type-tested arrangements and/or the MCCB manufacturers’ recommendations.

ELE4.3.8.030.8 EVIDENCE OF COUNTRY / PLACE OF MANUFACTURE AND AUTHENTICITY  
The Sub-contractor shall produce documentary evidences in accordance with PRE.BS1.205 to verify the country / place of manufacture and authenticity of MCCBs delivered to Site or installed.

ELE4.3.9 POWER FACTOR CORRECTION EQUIPMENT

ELE4.3.9.010.8 COMPLIANCE WITH SPECIFICATION  
Unless otherwise specified, power factor correction equipment mounted on/housed in the ASSEMBLY shall comply with the Specification for Power Factor Correction Equipment (i.e. ELE5).
ELE4.4  PROTECTION AND INSTRUMENTATION

ELE4.4.1  CIRCUIT BREAKER PROTECTION

ELE4.4.1.010.8  COMPLIANCE WITH SPECIFICATION (FOR IEC 60439 COMPLIANCE)
The protection scheme for circuit breakers shall be in accordance with ELE4.4.1.020 and ELE4.4.1.030 as indicated on the Drawings.

ELE4.4.1.015.8  COMPLIANCE WITH SPECIFICATION (ALTERNATIVE TO CLAUSE ELE4.4.1.010 FOR IEC 61439 COMPLIANCE)
The protection scheme for circuit breakers shall be in accordance with ELE4.4.1.020 and ELE4.4.1.035 as indicated on the Drawings.

ELE4.4.1.020.8  PROTECTION SCHEME WITH EXTERNAL D.C. SOURCE FOR TRIPPING
For overcurrent or earth fault protection the circuit breaker shall trip by means of shunt trip release operated from the battery set and charger and controlled by protection relays. Three overcurrent relays, one for each phase, and one earth fault relay shall be provided.

ELE4.4.1.030.8  BATTERY SET AND CHARGER (FOR IEC 60439 COMPLIANCE)

1. General:
   A set of battery and charger system shall be provided for the tripping circuit. The battery set and charger shall be manufactured by a specialised battery and charger manufacturer and be suitable for use under the intended service conditions;

2. Battery/Charger equipment:
   The battery/charger equipment shall be housed in a segregated front accessible compartment as defined in ELE4.2.050. The input voltage of the battery charger shall be 220V a.c., 50Hz and the output voltage of the battery shall be 30V d.c;

3. Batteries:
   a. The batteries shall be sealed nickel cadmium to IEC 61951-1 or nickel-metal hydride to IEC 61951-2, maintenance free type, rated at 5 hours discharge rate. Type test report shall be submitted if required by the Contract Manager. Cells shall be of the sealed nickel cadmium sintered plate type or nickel-metal hydride type;
   b. The rated capacity of the battery for switchgear tripping auxiliary supplies shall be sufficient for at least 20 operations without charging and for at least two air circuit breakers tripping simultaneously, and shall be of at least 4 Ampere-hour rating.

4. Battery charger:
   The battery charger shall be automatic trickle-charge type with two rates charging to suit the battery characteristics. The first rate of charging shall be capable of restoring full capacity and second rate shall maintain the batteries in a fully charged condition. The standard charge rate and the float charge rate of the battery charger shall be adjustable to meet requirements of battery rating up to 10 Ampere-hour;

5. Battery re-charging time:
The time required for re-charging batteries from fully discharged to fully charged condition shall be not more than eight hours. Battery over-current protection shall be provided to safeguard the battery under short circuit conditions and facilities shall also be provided to prevent the batteries from being overcharged;

6. Battery charger indication/facilities:

The battery charger shall be provided with the following indications/facilities which shall be extended and mounted on the front door of the compartment:

a. Mains On;
b. Charger Fail;
c. Voltmeter;
d. Ammeter;
e. Test Facilities.

ELE4.4.1.035.8  BATTERY SET AND CHARGER (ALTERNATIVE TO CLAUSE ELE4.4.1.030 FOR IEC 61439 COMPLIANCE)

1. General:

A set of battery and charger system shall be provided for the tripping circuit. The battery set and charger shall be manufactured by a specialised battery and charger manufacturer and be suitable for use under the intended service conditions;

2. Battery/Charger equipment:

The battery/charger equipment shall be housed in a segregated front accessible compartment as defined in ELE4.2.055. The input voltage of the battery charger shall be 220V a.c., 50Hz and the output voltage of the battery shall be 30V d.c;

3. Batteries:

a. The batteries shall be sealed nickel cadmium to IEC 61951-1 or nickel-metal hydride to IEC 61951-2, maintenance free type, rated at 5 hours discharge rate. Type test report shall be submitted if required by the Contract Manager. Cells shall be of the sealed nickel cadmium sintered plate type or nickel-metal hydride type;
b. The rated capacity of the battery for switchgear tripping auxiliary supplies shall be sufficient for at least 20 operations without charging and for at least two air circuit breakers tripping simultaneously, and shall be of at least 4 Ampere-hour rating.

4. Battery charger:

The battery charger shall be automatic trickle-charge type with two rates charging to suit the battery characteristics. The first rate of charging shall be capable of restoring full capacity and second rate shall maintain the batteries in a fully charged condition. The standard charge rate and the float charge rate of the battery charger shall be adjustable to meet requirements of battery rating up to 10 Ampere-hour;

5. Battery re-charging time:

The time required for re-charging batteries from fully discharged to fully charged condition shall be not more than eight hours. Battery over-current protection shall be provided to safeguard the battery under short circuit conditions and facilities shall also be provided to prevent the batteries from being overcharged;

6. Battery charger indication/facilities:

The battery charger shall be provided with the following indications/facilities which shall be extended and mounted on the front door of the compartment:
a. Mains On;
b. Charger Fail;
c. Voltmeter;
d. Ammeter;
e. Test Facilities.

**ELE4.4.1.040.8 ELECTROMECHANICAL TYPE PROTECTION RELAY**

1. Overcurrent and earth/fault protection relays shall be of induction type to BS EN 60255 or IEC 60255 with IDMT characteristics in accordance with the time setting specified below;

2. The relays shall be accommodated in draw-out cases and contacts shall be fitted which shall short-circuit the associated current transformers on withdrawal of the relay. For the overcurrent relays, the three single phase elements shall be arrayed in one horizontal plane and accommodated in a common draw-out case, which shall be flush mounted on the front hinged door of the ASSEMBLY;

3. Operation indicators shall be provided for each protective element and installed within the same relay. They shall have a common hand-reset device openable without opening the relay case. The overcurrent relay shall comprise the following features:

<table>
<thead>
<tr>
<th>Feature</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Current setting</td>
<td>50% to 200% of 5A (CT rating), adjustable in 7 equal steps;</td>
</tr>
<tr>
<td>b. Time setting</td>
<td>0.63 second at 10 times current setting (for HEC supply);</td>
</tr>
<tr>
<td></td>
<td>1.3 seconds at 10 times current setting (for CLP supply);</td>
</tr>
<tr>
<td>c. Burden</td>
<td>3.5VA maximum at current setting.</td>
</tr>
</tbody>
</table>

4. The earth fault relay shall comprise the following features:

<table>
<thead>
<tr>
<th>Feature</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Current setting</td>
<td>10% to 40% of 5A (CT Rating), adjustable in 7 equal steps;</td>
</tr>
<tr>
<td>b. Time setting</td>
<td>1.3 seconds at 10 times current setting;</td>
</tr>
<tr>
<td>c. Burden</td>
<td>3.5VA maximum at current setting.</td>
</tr>
</tbody>
</table>

**ELE4.4.1.050.8 ELECTRONIC TYPE PROTECTION RELAYS**

1. Electronic type protection relays shall comply with BS EN 60255 or IEC 60255 with choice of the following characteristic curves:

   a. Normal inverse IDMT curve;
   b. Very inverse IDMT curve;
   c. Extremely inverse IDMT curve.

2. The relay shall provide trip contact for overcurrent and earth fault protections, and separate signal contacts for time delayed phase fault, instantaneous high-set phase fault and time delayed earth fault operations;

3. Trip indicators shall be provided which will enable the type of fault condition to be identified. Each indicator shall be capable of being reset by hand without opening the relay case;

4. The relay shall comprise the following features:
a. Current setting: 0.5 to 2 x In in step of 0.05 x In with instantaneous high-set of 5 to 10 x In for overcurrent protection; 0.1 to 0.4 x In in step of 0.05 x In for earth fault protection;

b. Time multiplier setting: 0.1 to 1.0 in 0.05 step;

c. AC burden: less than 0.5VA for 5A relay in any setting.

5. The relay shall be accommodated in a dust-proof case to IP51 and can be easily drawn out on front side in the event that the relay requires replacement. Facility shall be provided for short-circuiting the associated current transformers on withdrawal of the relay. The draw-out case shall be flush mounted on the front-hinged door of the ASSEMBLY. The relay shall be rated for an operating temperature up to 55°C;

6. The relay shall be type-tested for compliance with the following international standards by an Accredited Laboratory:

<table>
<thead>
<tr>
<th>Standards</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BS EN 61000-6-4 or IEC 61000-6-4</td>
<td>Electromagnetic Emission</td>
</tr>
<tr>
<td>BS EN 61000-6-2 or IEC 61000-6-2</td>
<td>Electromagnetic Immunity</td>
</tr>
<tr>
<td>BS EN 60255-3 or BS EN 60255-151 or IEC 60255-151</td>
<td>Accuracy</td>
</tr>
<tr>
<td>BS EN 60255-21-1 or IEC 60255-21-1</td>
<td>Vibration Tests - Class 1</td>
</tr>
<tr>
<td>BS EN 60255-21-2 or IEC 60255-21-2</td>
<td>Shock &amp; Bump Tests - Class 1</td>
</tr>
<tr>
<td>BS EN 60255-22-2 or IEC 60255-22-2</td>
<td>Electrostatic Discharge Tests - Class 2</td>
</tr>
</tbody>
</table>

7. The relay shall be suitable for operation at 30V d.c. auxiliary power supply and accepts current inputs from standard protection current transformers with rated secondary current of 5A. An exclusive battery set and charger shall be provided for relay operation.

**ELE4.4.1.060.8 EVIDENCE OF COUNTRY / PLACE OF MANUFACTURE AND AUTHENTICITY FOR ELECTROMECHANICAL AND ELECTRONIC TYPE PROTECTION RELAY**

The Sub-contractor shall produce documentary evidences in accordance with PRE.BS1.205 to verify the country / place of manufacture and authenticity of electromechanical and electronic type protection relays delivered to Site or installed.

**ELE4.4.3 FUSE PROTECTION**

**ELE4.4.3.010.8 METHOD OF PROTECTION**

All potential auxiliary and control circuits shall be protected by fuses.

**ELE4.4.3.020.8 COMPLIANCE WITH SPECIFICATION**

All fuses used, including those used in fuse combination units, shall be in compliance with the Specification for Fuses (i.e. ELE3.13).
ELE4.4.4 CURRENT TRANSFORMERS

ELE4.4.4.010.8 STANDARD AND TYPE
Current transformers shall comply with IEC 60044-1 and shall be of ring and encapsulated type.

ELE4.4.4.020.8 MEASURING CURRENT TRANSFORMERS
Measuring current transformers shall have a minimum accuracy class of 1. The C.T. ratio for measuring current transformer shall match the corresponding indicating/measuring device.

ELE4.4.4.030.8 PROTECTION CURRENT TRANSFORMERS
Protection current transformers shall have a minimum accuracy class of 10P. The rating of the current transformer shall match the total burden of the trip circuit including the relays, connection leads and overcurrent release where applicable, to which the current transformer is connected, such that, under the most severe fault conditions, the current transformer does not saturate and is still capable of maintaining its accuracy. For 2500A incoming ACB obtaining power supply from CLP, the protection current transformer shall have a C.T. ratio of 2250/5 unless otherwise specified.

ELE4.4.4.040.8 FITTING
Unless otherwise specified, the protective current transformers shall be fitted on the outgoing side of the respective circuit breaker, whereas for the measuring current transformer, on the outgoing side of the functional unit, removable short links for mounting the current transformer shall be provided to facilitate subsequent easy replacement/maintenance.

ELE4.4.5 INDICATING METERS

ELE4.4.5.010.A STANDARD
Indicating meters of analogue type shall comply with class 2.5 of BS EN 60051 or IEC 60051. Multi-function electronic meters shall comply with BS EN 61557-12 or IEC 61557-12.

ELE4.4.5.020.A MOUNTING
Meters of analogue type with approximate 75 mm dial and with an external zero adjustment, and multi-function electronic meters shall be flush mounted on the front cover of the ASSEMBLY.

ELE4.4.5.030.A MONITORING
Multi-function electronic meters, analogue type ammeters and voltmeters etc. shall be provided as shown on the Drawings. The analogue type ammeters used for monitoring the total current carried by the incoming circuit breaker shall be of the combination type with the thermal demand and the instantaneous values shown. The thermal demand shall indicate the mean r.m.s. current over the past 15 minutes with a slave pointer showing the maximum value reached.

ELE4.4.5.040.A MULTI-FUNCTION ELECTRONIC METERS
1. Multi-function electronic meter shall be of a digital display type to measure the following electrical parameters by means of microprocessor technology:
### Function of Measurement

<table>
<thead>
<tr>
<th>Function of Measurement</th>
<th>Minimum Accuracy</th>
</tr>
</thead>
<tbody>
<tr>
<td>True Root Mean Square (RMS) Current: per phase &amp; neutral</td>
<td>±0.5%</td>
</tr>
<tr>
<td>True RMS Volts: all phase-to-phase &amp; phase-to-neutral</td>
<td>±0.5%</td>
</tr>
<tr>
<td>Real Power (kW): per phase &amp; three phase total</td>
<td>±1%</td>
</tr>
<tr>
<td>Apparent Power (kVA): per phase &amp; three phase total</td>
<td>±1%</td>
</tr>
<tr>
<td>Reactive Power (kVar): per phase &amp; three phase total</td>
<td>±1%</td>
</tr>
<tr>
<td>Total Power Factor: per phase &amp; three phase total</td>
<td>±1%</td>
</tr>
<tr>
<td>Frequency (Hz)</td>
<td>±1%</td>
</tr>
<tr>
<td>Maximum Demand Current (Id): per phase, present &amp; peak</td>
<td>±1%</td>
</tr>
<tr>
<td>Real Power Demand (kWd): three phase total, present &amp; peak</td>
<td>±1%</td>
</tr>
<tr>
<td>Apparent Power Demand (kVAd): three phase total, present &amp; peak</td>
<td>±1%</td>
</tr>
<tr>
<td>Reactive Power Demand (kVArd): three phase total</td>
<td>±1%</td>
</tr>
<tr>
<td>Real Energy (kWh): three phase total</td>
<td>±1%</td>
</tr>
<tr>
<td>Total Harmonic Distortion (THD): per phase, voltage &amp; current (at least up to 31st harmonic order)</td>
<td>±2%</td>
</tr>
</tbody>
</table>

2. The meter shall be suitable for operation at 380V/220V, 50Hz and accepts current inputs from standard measuring current transformers with rated secondary current of 5A. The meter shall be rated for an operating temperature up to 50°C and have a minimum overcurrent withstand rating of 100A for 1 second;

3. The meter shall be capable to trend the required parameters as stipulated in the BEC Code at every 15 minutes and include hourly, daily, monthly and annual data. The meter shall be equipped with sufficient built-in memory capable of maintaining all data collected for a minimum of 36 months. The Sub-contractor shall retrieve the data files from all meters and submit to the CM on annual basis or as required by the CM during the Maintenance Period;

4. The meter shall be equipped with a communication port at front panel, using either RS232, RS485, RJ45 or similar socket and plug as Approved, for communication with portable personal computer for energy control and audit purpose. The connection cable with the appropriate plug and a copy of proprietary-made software for data retrieval shall be provided;

5. The meter shall be flush mounted with protection to not less than IP2X at front face. All wiring shall be connected via terminal blocks to allow easy removal of the cable connectors in the event that the meter requires replacement;

6. The meter shall comply with the general electrical safety requirements as specified in IEC 61010-1 and should be suitably suppressed to fall within the limits allowed by BS EN 61000-6-4 or IEC 61000-6-4 and BS EN 61000-6-2 or IEC 61000-6-2 for electromagnetic emission and immunity;
7. The manufacturer shall operate a quality management system conforming to ISO 9001 or other equivalent national/international quality system. The manufacturer shall issue a calibration certificate for every meter at time of production and the calibration certificate shall be submitted to the CM. Such calibration shall be conducted by the manufacturer within one year prior to delivery of the meter on site or prior to the date of factory acceptance test if the meter is installed in a switchboard that factory acceptance test is required. The manufacturer shall also declare in writing that the meter shall require no re-calibration for a minimum of 10 years from the time of issue of calibration certificate. A label marking the manufacturer’s calibration date shall be fixed adjacent to the meter;

8. For domestic building with Smart Meter Monitoring System provision:

a. The meters shall be fully compatible with Smart Meter Monitoring System as stipulated in ELE35 to allow connection for data retrieval by the System. Necessary data cables connections shall be included and wired to the interfacing terminals of the System.

### ELE4.4.6 VOLTAGE SENSING RELAYS

#### ELE4.4.6.010.8 GENERAL

1. Two numbers of voltage sensing relays of different brands for monitoring the mains supply conditions shall be provided to control the operation of the automatic changeover contactors and to activate the starting of the standby generating set and alarm indication as shown on the drawings.

#### ELE4.4.6.020.8 FEATURES (FOR IEC 60439 COMPLIANCE)

1. The relay shall be suitable for monitoring voltage of 380/220V 3-phase 4-wire system;

2. The relay shall be provided with indication to show its operation status;

3. The voltage sensing elements shall operate from measured phase-to-neutral voltages. When the voltage at either one phase drops below the voltage setting and sustains for a period exceeding the time setting, the relay shall activate the dry contacts to open position. The dry contacts shall be reset to close position automatically when all the measured voltages resume normal;

4. The relay shall operate at 24V d.c. auxiliary power supply. The battery set and charger for the auxiliary power supply shall comply with the requirement as stipulated in ELE4.4.1.030;

5. The relay shall comply with the following requirement:

<table>
<thead>
<tr>
<th>Description</th>
<th>Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adjustable voltage monitoring element setting</td>
<td>Undervoltage: 75 – 100%</td>
</tr>

</tr>
<tr>
<td>Expected mechanical life</td>
<td>0.2 million operations</td>
</tr>
<tr>
<td>Standard</td>
<td>IEC 60255 or other reputable national/international standards.</td>
</tr>
<tr>
<td>Operating temperature</td>
<td>0°C to +55°C</td>
</tr>
</tbody>
</table>
**ELE4.4.025.8 FEATURES (ALTERNATIVE TO CLAUSE ELE4.4.020 FOR IEC 61439 COMPLIANCE)**

1. The relay shall be suitable for monitoring voltage of 380/220V 3-phase 4-wire system;
2. The relay shall be provided with indication to show its operation status;
3. The voltage sensing elements shall operate from measured phase-to-neutral voltages. When the voltage at either one phase drops below the voltage setting and sustains for a period exceeding the time setting, the relay shall activate the dry contacts to open position. The dry contacts shall be reset to close position automatically when all the measured voltages resume normal;
4. The relay shall operate at 24V d.c. auxiliary power supply. The battery set and charger for the auxiliary power supply shall comply with the requirement as stipulated in ELE4.4.1.035;
5. The relay shall comply with the following requirement:

<table>
<thead>
<tr>
<th>Description</th>
<th>Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adjustable voltage monitoring element setting</td>
<td>Undervoltage: 75 – 100%</td>
</tr>
<tr>
<td>Adjustable time delay setting</td>
<td>0 – 1 sec.</td>
</tr>
<tr>
<td>Expected mechanical life</td>
<td>0.2 million operations</td>
</tr>
<tr>
<td>Standard</td>
<td>IEC 60255 or other reputable national/international standards.</td>
</tr>
<tr>
<td>Operating temperature</td>
<td>0°C to +55°C</td>
</tr>
</tbody>
</table>

**ELE4.4.030.8 FACTORY TESTING**

1. The relay shall be tested on load with a dummy circuit at the switchboard manufacturer workshop for operation for at least 50 times with each operating voltage and time properly recorded before installed in the switchboard cubicle. Result shall be incorporated into the test report. The setting shall be properly sealed after the factory test.

**ELE4.4.7 BATTERY SET AND CHARGER FOR CONTROL CIRCUIT**

**ELE4.4.7.010.8 BATTERY SET AND CHARGER (FOR IEC 60439 COMPLIANCE)**

1. General:
   
   A separate battery and charger system shall be provided for the control circuit. The battery set and charger shall be manufactured by a specialised battery and charger manufacturer and be suitable for use under the intended service conditions;

2. Battery/Charger equipment:
   
   The battery/charger equipment shall be housed in a segregated front accessible compartment as defined in ELE4.2.050. The input voltage of the battery charger shall be 220V a.c., 50Hz and the output voltage of the battery shall be 24V d.c. for control circuit;

3. Batteries:
a. The batteries shall be sealed nickel cadmium to IEC 61951-1 or nickel-metal hydride to IEC 61951-2, maintenance free type, rated at 5 hours discharge rate. Cells shall be of the sealed nickel cadmium sintered plate type or nickel-metal hydride type;

b. The rated capacity of the battery for control circuits shall be sufficient for at least 24 hours operations without charging including at least 10 times change of state of the control relays.

4. Battery charger:

The battery charger shall be automatic trickle-charge type with two rates charging to suit the batteries characteristics. The first rate of charging shall be capable of restoring full capacity and second rate shall maintain the batteries in a fully charged condition. The standard charge rate and the float charge rate of the battery charger shall be adjustable to meet requirements of battery rating up to 10 Ampere-hour;

5. Battery re-charging time:

The time required for re-charging batteries from fully discharged to fully charged condition shall be not more than eight hours. Battery over-current protection shall be provided to safeguard the battery under short circuit conditions and facilities shall also be provided to prevent the batteries from being overcharged;

6. Battery charger indication/facilities:

The battery charger shall be provided with the following indications/facilities which shall be extended and mounted on the front door of the compartment:

a. Mains On;
b. Charger Fail;
c. Voltmeter;
d. Ammeter;
e. Test Facilities.

---

**BATTERY SET AND CHARGER (ALTERNATIVE TO CLAUSE ELE4.4.7.010 FOR IEC 61439 COMPLIANCE)**

1. General:

A separate battery and charger system shall be provided for the control circuit. The battery set and charger shall be manufactured by a specialised battery and charger manufacturer and be suitable for use under the intended service conditions.

2. Battery/Charger equipment:

The battery/charger equipment shall be housed in a segregated front accessible compartment as defined in ELE4.2.055. The input voltage of the battery charger shall be 220V a.c., 50Hz and the output voltage of the battery shall be 24V d.c. for control circuit.

3. Batteries:

a. The batteries shall be sealed nickel cadmium to IEC 61951-1 or nickel-metal hydride to IEC 61951-2, maintenance free type, rated at 5 hours discharge rate. Cells shall be of the sealed nickel cadmium sintered plate type or nickel-metal hydride type;

b. The rated capacity of the battery for control circuits shall be sufficient for at least 24 hours operations without charging including at least 10 times change of state of the control relays.

4. Battery charger:
The battery charger shall be automatic trickle-charge type with two rates charging to suit the batteries characteristics. The first rate of charging shall be capable of restoring full capacity and second rate shall maintain the batteries in a fully charged condition. The standard charge rate and the float charge rate of the battery charger shall be adjustable to meet requirements of battery rating up to 10 Ampere-hour.

5. Battery re-charging time:

The time required for re-charging batteries from fully discharged to fully charged condition shall be not more than eight hours. Battery over-current protection shall be provided to safeguard the battery under short circuit conditions and facilities shall also be provided to prevent the batteries from being overcharged.

6. Battery charger indication/facilities:

The battery charger shall be provided with the following indications/facilities which shall be extended and mounted on the front door of the compartment:

a. Mains On;
b. Charger Fail;
c. Voltmeter;
d. Ammeter;
e. Test Facilities.
ELE4.5 MISCELLANEOUS

ELE4.5.1 INFORMATION, MARKING AND LABELLING

ELE4.5.1.010 INFORMATION TO BE GIVEN (FOR IEC 60439 COMPLIANCE)

1. The ASSEMBLIES shall be provided with one or more plates, marked in a durable manner and located in a place such that they are visible and legible when the ASSEMBLIES is installed;

2. The following shall be given on the nameplates:
   a. The manufacturer's name or trade mark;
   b. Type designation or identification number or other means of identification making it possible to obtain relevant information from the manufacturer;
   c. Standard of the ASSEMBLIES (e.g. IEC 60439-1);
   d. Type of current;
   e. Rated operation voltage and frequency;
   f. Rated insulation voltage;
   g. Short-circuit withstand strength;
   h. Degree of protection; and
   i. Rating of main busbars.

ELE4.5.1.015 INFORMATION TO BE GIVEN (ALTERNATIVE TO CLAUSE ELE4.5.1.010 FOR IEC 61439 COMPLIANCE)

1. The ASSEMBLIES shall be provided with one or more plates, marked in a durable manner and located in a place such that they are visible and legible when the ASSEMBLIES is installed;

2. The following shall be given on the nameplates:
   a. The manufacturer's name or trade mark;
   b. Type designation or identification number or other means of identification making it possible to obtain relevant information from the manufacturer;
   c. Standard of the ASSEMBLIES (e.g. IEC 61439-1 and IEC 61439-2);
   d. Type of current;
   e. Rated operation voltage and frequency;
   f. Rated insulation voltage;
   g. Short-circuit withstand strength;
   h. Degree of protection; and
   i. Rating of main busbars.
ELE4.5.1.020.8 LABELS AND MARKINGS

1. Each equipment, functional unit and settings of overcurrent and earth fault protection of air circuit breakers and moulded case circuit breakers of the ASSEMBLY shall be marked or labelled in a durable and indelible manner in both English and Chinese for identification;

2. Unless otherwise specified, all warning labels referred to in the previous clauses shall be coloured in red with white lettering in both English and Chinese denoting,

"DANGER 380/220V
危險 380/220 伏特"

3. The removable cover of the incoming conductor and connection compartment shall bear a warning label coloured in red with white lettering in both English and Chinese denoting,

"INCOMING CONNECTION - DANGER - 380/220 V - SWITCH OFF FROM SUPPLY COMPANY'S SIDE BEFORE REMOVING COVER
電源接點 - 危險 - 380/220V
開蓋前必須切斷電力公司來電"

4. For other circuits of the ASSEMBLY which may be still live when the incoming circuit breaker(s) are switched off, such as the essential busbars, the circuit for discharging the capacitive electrical energy, etc., the covers shall bear appropriate warning labels (e.g. LIVE BUSBAR 危險 - 帶電電巴) for personnel gaining access to those parts.

ELE4.5.2 VERIFICATION AND TESTING

ELE4.5.2.010.8 VERIFICATION (FOR IEC 60439 COMPLIANCE)

1. Two sets of shop drawings showing the details of the proposed ASSEMBLY including the front and end elevations, single line busbar diagrams, control wiring diagrams, list of equipment schedule and any other details as required by the Contract Manager, shall be submitted for approval prior to assembly;

2. The drawings shall indicate which portions of the ASSEMBLY are TTA and PTTA if required by the Contract Manager. For PTTA, documents such as test reports, calculations, etc., to verify the conformity with the TTA shall be submitted for examination.

ELE4.5.2.015.8 VERIFICATION (ALTERNATIVE TO CLAUSE ELE4.5.2.010 FOR IEC 61439 COMPLIANCE)

1. Two sets of shop drawings showing the details of the proposed ASSEMBLY including the front and end elevations, single line busbar diagrams, control wiring diagrams, list of equipment schedule and any other details as required by the Contract Manager, shall be submitted for approval prior to assembly;

2. The drawings shall indicate which portions of the ASSEMBLY are verified by testing, by calculation, measurement or by satisfying design rules if required by the Contract Manager. Documents such as test reports, calculations, etc., to verify the above conformity shall be submitted for examination.

ELE4.5.2.020.8 WORKSHOP TESTS (FOR IEC 60439 COMPLIANCE)

1. The following tests shall be performed at the manufacturer's workshop during the course of assembly and on completion immediately prior to transportation to site:
a. Inspection of the ASSEMBLY including wiring, electrical and mechanical connections, external and internal finish, degree of protection, creepage distance and clearance, etc.;

b. Mechanical test;

c. Primary and secondary injection tests to check that all measuring, protection and control circuits and associated components are operative;

d. Continuity test;

e. Dielectric properties test;

f. Functional check, including the shunt trip operation of breakers at 70% and 110% of the rated control supply voltage, if applicable.

2. All the above inspections and tests shall be carried out in accordance with IEC 60439-1, IEC 60947-2 and IEC 60947-3 and the standard test report format prepared by the Contract Manager.

**ELE4.5.2.025.8 WORKSHOP TESTS (ALTERNATIVE TO CLAUSE ELE4.5.2.020 FOR IEC 61439 COMPLIANCE)**

1. The following tests shall be performed at the manufacturer's workshop during the course of assembly and on completion immediately prior to transportation to site:

   a. Inspection of the ASSEMBLY including wiring, electrical and mechanical connections, external and internal finish, degree of protection, creepage distance and clearance, etc.;

   b. Mechanical test;

   c. Primary and secondary injection tests to check that all measuring, protection and control circuits and associated components are operative;

   d. Continuity test;

   e. Dielectric properties test;

   f. Functional check, including the shunt trip operation of breakers at 70% and 110% of the rated control supply voltage, if applicable.

2. All the above inspections and tests shall be carried out in accordance with IEC 61439-1 and IEC 61439-2 and IEC 60947-2 and IEC 60947-3 and the standard test report format prepared by the Contract Manager.

**ELE4.5.2.030.8 SITE TESTS**

After the erection of the ASSEMBLY on site, the following test/inspections shall also be carried out:

1. General inspection of the ASSEMBLY;

2. Mechanical tests;

3. Continuity and insulation resistance tests;

4. Function checks;

5. Contact resistance test (testing of a series of joints at one time for horizontal main busbars and vertical busbar riser/droppers; the test shall be recorded in the format approved by CM);

6. Secondary injection test to re-calibrate all measuring, protection and control circuits and associated components.
### ELE4.5.2.040.8 COMMISSIONING TESTS
The following inspections and tests shall be carried out immediately before the ASSEMBLY is put into normal service:

1. Voltage tests between any two combinations of each phase, neutral and earth;
2. Phase sequence tests on each outgoing unit;
3. Functional checks, especially on the controlling devices.

### ELE4.5.2.050.X DELETED

### ELE4.5.3 AUXILIARY EQUIPMENT

### ELE4.5.3.010.8 COMPLETENESS
Each ASSEMBLY shall be supplied complete with all operating handles, jigs, etc. required for the normal operation and inspection of all circuit breakers and switchgears of the ASSEMBLY.

ELE5.1 GENERAL ARRANGEMENT

ELE5.1.010.8 HOUSING

The capacitor units shall be housed in a separated compartment to prevent the control equipment from being damaged by the capacitors in case of a fault.

ELE5.1.020.8 CONTROLS

For capacitor installation of ratings equal to 30 kVAr or less, no step-switching mechanism and control relay or regulator will be required. For ratings greater than 30 kVAr, the capacitor installation shall be switchable type complete with switching devices and automatic control relays.
ELE5.2 CUBICLE CABINET DESIGN

ELE5.2.010.8 CONSTRUCTION

The construction of the cabinet and the fixture of the capacitor installation shall be sufficiently rigid to stand the thermal, electrical and mechanical stresses due to short circuit, step-switching and discharging of the capacitor.

ELE5.2.020.8 MOUNTING OF SWITCHES

For switchable type capacitor cabinet, flush mounted indicating devices and selector control switches shall be fitted on the front panel which shall be in the form of a hinged door.

ELE5.2.030.8 DEGREE OF PROTECTION

The cubicle cabinet shall have a degree of protection not less than IP 31 and IP 2X when the cubicle door is in the "close" and "open" position respectively.

ELE5.2.040.8 POSITION OF MAIN FUSESWITCH

The main fuseswitch for the power factor correction equipment shall not be housed within the control cabinet.

ELE5.2.050.8 SPACING

1. Sufficient space shall be allowed between cables connecting distribution fuses to contactors and contactors to capacitor banks for insertion of clamp-on meters for current measurement.

2. The capacitor units shall be spaced to enable access to individual capacitor terminals for on-load electrical tests.
ELE5.3 CAPACITORS

ELE5.3.010.8 STANDARD
1. IEC 60831-1;
2. IEC 60831-2.

ELE5.3.020.8 RATED OUTPUT OF CAPACITOR BANK
The output kVAR rating of capacitor bank shall be provided according to the standard ratings listed below:
20, 25, 30, 40, 50, 60, 90, 120, 150, 180, 200, 240, 280 (subsequent increases in 40 kVAR steps).

ELE5.3.030.8 RATED OUTPUT OF CAPACITOR UNIT
The output kVAR rating of each capacitor unit shall be provided according to the standard ratings listed below (all in kVAR):
20, 25, 30, 40.

ELE5.3.040.8 SAFETY FEATURES
1. All capacitor elements shall be of self-healing type, capable of self-restoration after breakdown of insulation due to momentary over voltage. The self-healing process shall be complete within half-a-cycle and with no significant changes in capacitance and the loss angle;
2. The capacitor elements shall be completely encapsulated in metal or epoxy case and fitted with tear-off fuse or other effective means to minimize overpressure due to internal fault;
3. Capacitors shall be dry type only;
4. PCBs (polychlorinated biphenyls) shall not be used and dielectric shall be environment compatible, i.e. no pollution to environment in case of leakage;
5. All materials used in capacitors except the dielectric shall be non-flammable and self-extinguishing;
6. Fuses having a current rating 1.5 times the capacitor current shall be provided to protect each capacitor unit and shall comply with ELE3.13;
7. A label shall be fixed on the front surface of the cubicle to indicate, in English and Chinese, the operating procedures before accessing the live parts inside the cubicle compartment. The label shall be submitted to Contract Manager for Approval;
8. The metallic container of the capacitor units and also the cubicle cabinet shall be properly earthed by permanent connection.

ELE5.3.050.8 DISCHARGE DEVICE
1. A resistor discharge device of appropriate resistance value shall be provided to reduce the residual voltage to less than 50V within one minute after actuation of the device. The discharge device shall function automatically on loss of supply and the discharge circuit shall be rated to discharge the capacitor bank from the peak of 30% overvoltage;
2. The residual voltage shall be measured across the terminals of the whole capacitor bank, i.e. not across individual capacitor element or unit;
3. The discharge path shall have no disconnecting link, switch, fuse or series capacitor interposed.

ELE5.3.060.8 LOSSES

1. The losses measured under nominal voltage and frequency shall be less than 0.5 W per kVAR. Type test report to the satisfaction of the Contract Manager shall be submitted to verify that this requirement has been met;

2. Puncture of insulation due to momentary overvoltage across electrodes shall not lead to significant increase in losses.

ELE5.3.070.8 CAPACITANCE TOLERANCES

1. The capacitance shall not differ from the rated capacitance by more than:
   a. -5% to 15% for units and banks up to 100 kVAR;
   b. 0% to 10% for units and banks above 100 kVAR.

2. In three-phase units, the ratio of maximum and minimum value of the capacitance measured between any two-line terminals shall not exceed 1.08;

3. Rating plate bearing the information markings as stipulated in Sections 26 & 27 of IEC 60831-1, shall be provided for each capacitor unit and the capacitor bank.
ELE5.4 AUTOMATIC CONTROL EQUIPMENT

ELE5.4.010.8 APPLICATION
For capacitors of 40 kVA and above, automatic control relay shall be provided to maintain the power factor at the specified value.

ELE5.4.020.8 OPERATION OF CONTROL SYSTEM
The control system shall continuously detect and measure the power factor and switch-in or switch-out bank(s) of capacitors in steps to maintain the designed power factor. The value of each step is determined as follows:

<table>
<thead>
<tr>
<th>Total capacitor rating in kVAR</th>
<th>Minimum no. of steps</th>

<td>7</td>
<td>40 kVAR</td>
</tr>
</tbody>
</table>

ELE5.4.030.8 STEPS
The number of steps shall be programmable within the range of 2 steps to 12 steps using a code switch.

ELE5.4.040.8 POWER FACTOR SELECTOR SWITCH
The power factor selector switch shall be continuously adjustable between 0.85 inductive to 0.95 capacitive.

ELE5.4.050.8 CONTROL RELAY
The control relay shall be designed in such a way that there shall be no relay hunting when the load power fluctuates. A starting reactive current (c/k ratio) setting device shall be provided to allow stepless adjustment between 0.075 to 1.0.

ELE5.4.060.8 SWITCHING TIME
The switching time between each switching stage shall be adjustable from 30 seconds to 60 seconds or above to give a time delay longer than the charging and discharging times of the previous stage so that there shall be no simultaneous charging or discharging of two stages.
ELE5.070.8  PROVISIONS FOR POWER FAILURE

In the event of power failure, all the capacitors shall be automatically disconnected and discharged. On restoration of supply, the relay shall, after a waiting time to ensure sufficient discharge of stored energy, commence operation in accordance with the selected switching programme and power factor setting.

ELE5.080.8  ACCESS TO CONTROL SWITCHES

Unless otherwise stated, all the control switches shall be front accessible without opening the cabinet door stated in ELE5.2.020.
ELE5.5  MANUAL CONTROL

ELE5.5.010.8  SELECTOR SWITCH
A selector switch for manual or automatic control of the equipment shall be provided inside the cubicle cabinet.

ELE5.5.020.8  PUSH-BUTTONS
Push-buttons shall be provided for steps "switching-in" and "switching-out" in the manual mode with the switching time delay as provided at ELE5.4.060.

ELE5.5.030.8  CAPACITOR CONTROL
The number of capacitors "switching-in" or "switching-out" shall be entirely manually controlled irrespective of the mode of controller output.
ELE5.6 ADDITIONAL MANUAL CONTROL

ELE5.6.010.8 OVERRIDE SWITCH

An additional selector switch to override the automatic control relay in case of its failure shall be provided inside the control cabinet.

ELE5.6.020.8 CAPACITOR CONTROL LOCATION

Under this manual control, the number of capacitors "switching-in" or "switching-out" shall be entirely manually controlled by additional push-buttons inside the control cabinet.
ELE5.7 CONTACTORS

ELE5.7.010.8 NUMBER
The number of contactors shall be determined by the number of switching stages stipulated in ELE5.4.020.

ELE5.7.020.8 SPECIFICATION
Contactors shall be in compliance with ELE3.15.
ELE5.8  INDICATING INSTRUMENTS

ELE5.8.010.8  LOCATION OF INDICATORS
Indicators shall be fitted on the front panel of the cubicle cabinet.

ELE5.8.020.8  INDICATORS FOR RATINGS GREATER THAN 30 KVAR
1. Supply ON/OFF indicator;
2. Power factor meter for inductive/capacitive indication;
3. Indicator showing the number of stages of capacitors being connected;
4. Indicator showing mode of operation, automatic or manual control;
5. Warning plate which reads "WARNING : WAIT 5 MINUTES AFTER ISOLATING SUPPLY BEFORE HANDLING" in both English and Chinese.

ELE5.8.030.8  INDICATORS FOR RATINGS EQUAL TO 30 KVAR OR LESS
1. Warning plate which reads "WARNING : WAIT 5 MINUTES AFTER ISOLATING SUPPLY BEFORE HANDLING" in both English and Chinese;
2. The warning plate specified in sub-clause (1) above shall constitute the minimum requirements and extra indicators relevant to the operation of the control equipment shall be provided to suit the design features of the equipment offered. In particular, the warning plate shall be provided on all access panels or doors;
3. Labels in the cubicle cabinet for indicators and control switches shall be in English or internationally accepted abbreviation.
ELE5.9  TYPE-TESTS AND ROUTINE TESTS

ELE5.9.010.8  TYPE-TESTS
Type-test reports to verify compliance with the specified requirements and details in IEC 60831-1 and IEC 60831-2 shall be submitted to the Contract Manager.

ELE5.9.020.8  ROUTINE TESTS
Routine tests for every capacitor supplied shall be carried out at manufacturer's works and test certificates shall be submitted to the Contract Manager.
ELE5.10 COMMISSIONING AND ACCEPTANCE TESTS

ELE5.10.010.8 FACTORY TESTS
Before putting the equipment into operation, acceptance tests shall be carried out in the manufacturing factory.

ELE5.10.020.8 MINIMUM ACCEPTANCE TESTS
The acceptance tests shall comprise at least the following:
1. Capacitance measurement and output calculation;
2. Measurement of the tangent of the loss angle (\(\tan \delta\)) of the capacitor;
3. Voltage test between terminal and container;
4. Test of the internal discharge device;
5. Control simulation test.

ELE5.10.030.8 VOLTAGE TEST
During voltage test between terminals, self-healing breakdowns will be allowed. However, the capacitance and tangent of the loss angle shall be measured subsequently and no significant changes in value shall be allowed.

ELE5.10.040.8 CONTROL SIMULATION TEST
During control simulation test, adequate temporary facilities, including field testers to simulate the actual load variations for checking the operation of the control relay and the correct functions of the power factor correction equipment, shall be provided.

ELE5.10.050.8 REPORT FORMATS
The report formats for the tests listed in ELE5.10.020 will be provided by the Contract Manager.

ELE5.10.060.8 ACCEPTANCE TEST REPORT
The acceptance test report for each capacitor installation should be submitted to the Contract Manager prior to delivery to Site.

ELE5.10.070.8 ACCEPTANCE TESTS DURING MAINTENANCE PERIOD
At the end of the Maintenance Period, or at any time instructed by the Contract Manager during the Maintenance Period, the Sub-contractor shall carry out the following and shall replace, at his own cost, any capacitor that fails the inspection and test:
1. Visual inspection;
2. Control simulation test;
3. 24-hour continuous measurements on power factor variations.

ELE6.1 BUSBAR CHAMBERS

ELE6.1.010.8 STANDARD
Busbar chambers shall comply with and be type-tested to IEC 60439-1 and IEC 60439-2.

ELE6.1.020.8 ENCLOSURE
1. The busbar chamber enclosure shall be made of sheet steel not less than 1.5 mm thick for ratings not exceeding 500A, and not less than 2 mm thick for rating above 500A;
2. The enclosure shall be formed in such a way as to give a rigid structure of sufficient strength;
3. The cover shall be provided with rubber gasket and fixed on to the main enclosure at the front by means of heavily electroplated hexagonal headed screws and nuts;
4. Either the screw or the nut shall be permanently fixed on to the main enclosure;
5. The enclosure shall be suitable for surface mounting with a degree of protection against ingress of foreign solid particles and liquids of at least IP31 of IEC 60529 with the cover closed.

ELE6.1.030.8 FINISH
All steel work shall be treated to prohibit corrosion by hot-dip galvanising or electrolytically coated with zinc. The inside and outside surfaces of the enclosure shall then be coated with not less than two layers of stove enamel finish paint of contrasting colours, or one layer of stoved enamel epoxy powder paint, of an Approved colour.

ELE6.1.040.8 BUSBARS
1. Busbars shall be hard drawn, high conductivity, air insulated, electro-tinned, solid copper bars to BS EN 13601;
2. The neutral busbar shall be of the same rating as the phase busbars;
3. Each busbar shall be marked with the appropriate phase colour at intervals of not more than 600 mm;
4. Busbars shall be mounted on insulators that shall follow the type-tested designs.

ELE6.1.050.8 TAP-OFF DEVICES
Unless otherwise Approved, proper tap-off devices in the form of tap-off clamps and cable lugs, where necessary, shall be provided for the tap-off cables and such devices shall not reduce the effective size or rating of the busbars. Slots through enclosures for tap-off cables shall be sealed with phenolic resin bonded paper laminated sheet not less than 6 mm thick.

ELE6.1.060.8 TYPE-TESTING
Busbar chambers shall be type-tested in accordance with Clause 8.1.1 of IEC 60439-1 and IEC 60439-2. The verification of short-circuit strength shall be carried out by a Short-Circuit Testing Organisation at the value of short circuit current specified below:

<table>
<thead>
<tr>
<th>Busbar rating</th>
<th>Test circuit</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Not exceeding 500A</td>
<td>*Fused short circuit of 40kA</td>
</tr>
</tbody>
</table>
| 2. | Over 500A | a. Short time withstand current of 40kA for one second;  
|    |          | b. Peak withstand current of 84kA. |

* IEC 60269-1: and IEC 60269-2: and BS 88: Section 2.2 or BS 88-2.
ELE6.3  ALL INSULATED BUSBAR TRUNKING SYSTEM (BUSDUCT)

ELE6.3.010.8  GENERAL

1. This specification covers the all-insulated busbar trunking system including fittings & accessories (hereinafter referred to as "busduct" or "busducts") up to and including 2500A;

2. Busducts shall comply with IEC 60439-2, and meeting all clauses as described in this Specification. Other standards, e.g. National Electrical Manufacturers Association (NEMA) or Underwriters Laboratories Inc. (UL) may be considered as acceptable provided that the standard is not inferior to the relevant IEC standards;

3. All the materials and components use for the busducts shall be of the same make and same country/place of manufacture of the typed-tested ones;

4. The busduct shall be manufactured at the base country/place of the original manufacturer. Licensed to make at other country/place will not be accepted;

5. Busduct current rating indicated on the Schedule of Rates, drawings or the particular specifications is the anticipated full load current (concentrated load) that the busduct must be capable of carrying continuously;

6. If the busduct is installed in flatwise mounting, appropriate de-rating factor as recommended by the manufacturer shall be applied to the busduct;

7. Busducts shall be totally enclosed type with ingress of protection not less than IP55 for indoor installation, including tap-off units, and IP66 for outdoor installation without tap-off units;

8. Unique model numbers shall be used to differentiate busducts with or without tap-off units;

9. Permanent nameplates shall be fixed on each busduct section and fitting. The use of stickers is not considered permanent in these circumstances.

ELE6.3.020.8  DESIGN AND CONSTRUCTION

1. The busducts shall be factory fabricated, fully insulated, totally enclosed, non-ventilated (sandwich) type. The busduct shall be designed to operate under the service conditions as specified in ELE1.5;

2. The busduct shall be of three phases and full size neutral busbar type;

3. Same length of busduct sections shall be interchangeable and polarized for phase relation. Each length of fitting shall bear the manufacturer's name, catalogue no. and rating. Each length or fitting shall bear the manufacturer's name, catalogue no. and rating;

4. All busducts can be mounted either flatwise or edgewise without loss in their mechanical strength and the current carrying capacity;

5. All plug-in sections provided shall be standardised to 1200 mm (4 feet) nominal length.
ELE6.3.030.8 BUSDUCT ENCLOSURE

1. The enclosure of the busducts shall be rigidly constructed from galvanized sheet steel of not less than 1.5 mm thickness or aluminium of minimum 2.5 mm thickness. Where a combination of sheets of these two materials is used as the assembly, no apparent visible stress shall be observed during operation when the busducts are properly supported. However, the thickness of the metal sheets employed shall, in no case, be less than 1.5 mm each;

2. The enclosure shall have one of the following finishes and the colour shall be grey or the manufacturer's colour of standard production:
   a. Stoved enamel paint;
   b. Stoved epoxy powder paint;
   c. Anodic oxidation coatings to Class 25 of EN 12373-1 for aluminum alloy;
   d. Other equivalent finishes approved by the Contract Manager.

3. For plug-in type busduct, the plug-in access opening shall be equipped with a hinged cover which covers the opening when not in use. All openings shall be usable simultaneously, if required.

ELE6.3.040.8 BUSBARS

1. Busbars shall be of hard drawn, high conductivity, solid copper bar to BS EN 13601 or alternatively hard drawn, high conductivity solid copper bars of 97% International Annealed Copper Standard Conductivity;

2. The busbar including all electrical contact surfaces shall be electroplated with silver or tin. The busbars shall be of adequate size to carry the rated current of the busducts continuously without exceeding the temperature rise limits specified in IEC 60439-2 when tested in accordance with sub-clause 8.2.1 of IEC 60439-2 at ambient temperature of 40°C;

3. Each busbar shall be insulated over its entire length except at joints and contact surfaces. The insulation material shall be of at least class B (130°C);

4. The insulation material shall be of heat-resistant, self-extinguishing, non-hygrosopic and high insulation resistance and mechanical strength to withstand the stresses under all services and fault conditions and it shall be tested in accordance with Clauses 8.2.14 of IEC 60439-2 or to the satisfaction of the CM;

5. The maximum voltage drop value of a three phases and neutral busduct shall be 10 volts per 100 metres run when the busduct is operating at a full rated sinusoidal a.c. current of 50 Hz (concentrated load), at a power factor of 0.85 and at an ambient temperature of 35°C. Use of higher current rating busducts to achieve the above maximum voltage drop value is acceptable subject to the maximum allowable structural opening size shown on the drawings not being exceeded;

6. Drilling of busbars for power take off shall not be permitted, unless otherwise approved by the CM.

ELE6.3.050.8 BUSBAR JOINTING

1. Two sections of busducts shall be joined by connecting the joint-ends of the busbars in an interleaved manner;

2. The joints shall be of bolt-on type. The contact pressure shall be maintained by insulated bolts through the joint with the bolt at earth potential. Soldered, welded or riveted joints shall not be permitted;

3. The bolt shall be torque indicating and be tightened up by means of a torque wrench as recommended by the manufacturer;
4. The joint shall be protected by metal cover plates of same type of material and finish as the busduct casing so that the degree of protection shall not be less than that of an unjoined busduct;

5. The design of jointing shall permit safe, practical checking of joints for tightness without de-energising the busbars, or exposing maintenance personnel to any electrical hazard;

6. It shall be possible to tighten up a joint from one side only of the busducts. The joint shall be so designed and located that removal of any length should not result in the removal of the adjacent lengths.

**ELE6.3.060.8 BUSBAR SUPPORT**

1. Busducts shall be securely fixed on the building structure by means of hangers and brackets specifically designed and supplied by the same manufacturers;

2. Unless otherwise specified, horizontal run busducts shall be supported by hangers spaced at intervals of not more than 2 meters. Extra number of hanger shall be required for joints. At least one hanger shall be provided for every section of the busducts. Additional supports as recommended by the busduct manufacturer shall be provided;

3. Vertical busducts shall be supported by spring hangers on every floor. The spring hangers shall be properly adjusted such that the loading of vertical busducts is evenly distributed among the supports. Additional guide brackets in intermediate position between two supports shall be provided, if necessary, to balance the offset loading of the tap-off units.

**ELE6.3.070.8 EXPANSION UNIT**

1. Expansion unit shall be provided where busduct is installed across any structural expansion joint. The expansion unit shall be so constructed that any lateral or axial displacement on both the conductors and the casing caused by any movement of the building joint (in all directions) can be absorbed easily and cause no distortion to the busduct in whatever form;

2. Thermal expansion units, if required, shall be so constructed that any change in length on both the conductors and the casing so caused by thermal expansion and contraction in all direction can be absorbed easily and cause no distortion of the busduct in whatever form;

3. All expansion units shall be protected from water dripping by means of properly fabricated enclosure, details of which shall be submitted for Approval.

**ELE6.3.080.8 TAP-OFF UNIT**

1. Power tapping-off from the busduct shall be taken by means of specially designed tap-off units. These devices shall be plug-in type units, which shall be held in position by means of wing nuts or other quick fastening and quick release device. Quick fastening device shall mean that no tools are required for the removal of tap-off units. The design and construction of tap-off units shall be such that the electricity supply to other floors will not be interrupted no matter the tap-off units were plugged in or removed;

2. All plug-in access openings shall be equipped with a hinged door which covers the openings when not in use. The plug-in access opening doors can only be opened by tools otherwise the plug-in access opening door should be padlockable. The Subcontractor shall provide pad-locks to all spare padlockable doors. A master key shall open all pad-locks of the same busduct. Details of the plug-in access opening doors shall be submitted for Approval;
3. The plug-in or the bolt-on type tap-off unit boxes together with the jaws and internal connection terminals shall be of the same manufacturer and country / place of manufacture of the busducts. The Sub-contractor shall propose, with the support of the busduct manufacturer, a type of FCU complying with ELE3.2 for Approval. If any modification to the manufacturer's standard tap-off unit boxes is required to suit the particular type of FCU, such modification shall be designed and carried out by the busduct manufacturer. The manufacturer shall undertake that such modifications are safe and suitable for the intended purpose. No modification by the Sub-contractor on site is allowed. The plug-in box complete with built-in FCU and fuses shall be type tested to IEC 60439-1 & IEC 60439-2. Full fault level, protection coordination and earth fault calculations should be submitted by the Sub-contractor for CM's Approval;

4. The tap-off units shall be equipped with internal barriers so that when the covers of the boxes are removed / opened, a degree of protection of the least IP2X is still maintained. Internal phase barriers shall be provided where necessary;

5. The tap-off unit shall be mechanically inter-locked with the busduct to prevent installation or removal of the unit while the unit is in the ON position. In addition, the cover of the tap-off unit shall have interlocks to prevent the covers from being opened while the tap-off unit is in the ON position. Means shall also be provided to padlock the FCU in its OFF position;

6. Tap-off unit boxes shall make positive earth connection with the earthing conductors before the jaws make contact with the phase busbars. The earthing method shall be such that it cannot be defeated by future painting of the busduct housing;

7. Tap-off unit shall be equipped with means for direct positioning or hanging so that the weight of the unit is borne by the busduct before the plug-in jaws make contact.

ELE6.3.090.8 BUSDUCT FITTINGS AND ACCESSORIES

1. All the busduct fittings, as listed below but not limited to, shall be specifically designed to suit the requirements of the busduct concerned and made by the same manufacturer:
   a. Flanged end;
   b. Flatwise and edgewise elbow;
   c. Combination elbow;
   d. Flatwise and edgewise offset;
   e. End closer;
   f. Tee-joints.

ELE6.3.100.8 LABELS AND WARNING NOTICES

1. All labels and warning notices shall be in both English and Chinese characters. Details shall be submitted to the Contract Manager for Approval;

2. Warning notices shall be provided along the entire busduct with the following wording in both English and Chinese characters:
   "DANGER - LIVE PART"
   "危險 - 帶電部份"

3. The warning notice shall be in the form of durable self-adhesive type label with red lettering on yellow background. The label shall have a minimum size of 150 mm x 75 mm with the lettering not less than 20 mm high;
4. The warning notices shall be located on all visible sides of the busduct, including all fittings, with a maximum spacing of 2 m along each side.

**ELE6.3.110.8 TESTING AND CERTIFICATION**

1. Short circuit test shall be carried out and certified by a Short Circuit Testing Organisation;

2. Short-circuit test for the busduct shall be carried out in accordance with Clause 8.2.3 of IEC 60439-1 or to the satisfaction of the Contract Manager at the value of short-circuit current specified below:

<table>
<thead>
<tr>
<th>Busbar Rating</th>
<th>Test Current</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Not exceeding 500A:</td>
<td>*Fused short-time withstand current of 40 kA</td>
</tr>
<tr>
<td>b. Over 500A &amp; below 1600A:</td>
<td>Short-time withstand current of 40 kA minimum for one (1) second.</td>
</tr>
<tr>
<td>c. 1600A &amp; above:</td>
<td>Short-time withstanding current of 50 kA for one (1) second.</td>
</tr>
</tbody>
</table>

*IEC 60269-1 and IEC 60269-2 and BS 88 : Section 2.2 or BS 88-2.

3. Before energization, the Sub-contractor shall carry out insulation resistance test for whole length of the busway, including feeders, expansion joints, and tap off/plug-in to verify the insulation resistance of the busway between phases and phases to earth to be not less than 10MΩ. For length of the busway exceeding 50 m, it is acceptable to carry out the insulation resistance test in two sections.

**ELE6.3.120.8 IN-SERVICE RECORDS**

Prior to the time of material submission for Approval, the equipment including its major components shall have proven record of reliability in local application for a minimum continuous period of 12 months to the satisfaction of the Contract Manager.

ELE7.1 GENERAL REQUIREMENTS

ELE7.1.010.8 QUALITY SURVEILLANCE SCHEME

1. Where a national/international product standard exists, cables of the particular type shall be manufactured under BASEC licence or an Equivalent Quality Surveillance Scheme (EQSS) (e.g. HAR scheme recognized by the European Committee for Electrotechnical Standardization, CENELEC, etc.) and bear BASEC marking or the appropriate marking of the EQSS (e.g. 'X' [HAR], where 'X' is one of the Approval Organizations' designation under CENELEC);

2. The EQSS shall be a System 5 product certification system in accordance with ISO/IEC 17067 for determining the conformity of a product with specified requirements through initial testing of samples of the product, assessment and surveillance of the involved quality system, and surveillance by testing of product samples taken from the manufacturer, the open market or the supply from the Purchasers;

3. The certification body providing the EQSS shall be accredited by Hong Kong Accreditation Services (HKAS) or its Mutual Recognition Agreement (MRA) partners in accordance with this Scheme, ISO/IEC 17065 and its corresponding International Accreditation Forum (IAF) Guidance;

4. The cable manufacturer shall have its own machineries and facilities to make the cables and laboratories to perform routine tests on cables. Cross licence and sub-contracting of cable manufacture can be acceptable subject to the advance approval is obtained from the approved certification body. Cables manufactured under Original Equipment Manufacture (OEM) or private labelling shall not be accepted;

5. The certification body providing the EQSS shall submit complete set of the EQSS document and substantiate with separate information to the satisfaction of the CM that their product certification work and quality surveillance scheme are equivalent to that of BASEC’s by making reference and comparison to each of the following:
   a. Each factory location where cable production occurs, and its product, is separately audited / tested and certified;
   b. Audited quality management system requirements include all requirements of ISO 9001;
   c. Audit includes production equipment and processes, and factory in-process and off-line testing equipment, calibration, etc. Factories must maintain specified minimum suite of laboratory testing equipment;
   d. Three year certification cycle in line with ISO requirements;
   e. Audit / sample pickup frequency at each factory shall be four times per annum with at least one being unannounced. Sample numbers selected shall be up to 150 per annum for building wires / flexes, 50 per annum for armoured and fire performance cables, and 50 per annum for IEC or special types, which the number shall be geared by volume of production. Reduced level of surveillance can be acceptable only if a risk assessment system is established in the scheme and the licensee maintains persistent satisfactory quality results that meet the criteria for reduced surveillance as defined in the risk assessment. In any case, the risk assessment system and acceptable criteria shall not be less stringent than that adopted by BASEC;
f. Alternative to item e above, EQSS having yearly routine surveillance test at each factory plus inspection acceptance tests to be carried out on each batch cables to be supplied for individual project will also be acceptable. The inspection acceptance tests shall be conducted on each size and type of cable and at least include the following:

i. verify all the results of routine tests conducted by the factory as defined in the corresponding cable standard and carry out supplementary auditing tests if necessary;

ii. conduct all the Sample Tests (S) as stipulated in the corresponding cable standards on minimum 10% of each size and type of cables reels;

iii. conduct the following verification tests on all cables:
   - resistance of conductors;
   - absence of faults in insulation (the spark test);
   - voltage test.

   All the tests shall be carried out in an accredited laboratory. Identification of the tested batch of cables such as purchase order number(s) and date(s) shall be submitted for the CM’s checking prior to delivery. The purchase order number(s) shall be printed on the cables as one of the markings on the cable.

g. Initial type testing covering all requirements of cable standards and any subsidiary materials, performance and test standards referenced;

h. Surveillance testing covers all type, sample and routine tests on each cable type over the certification cycle;

i. Full traceability maintained from incoming material, through production to factory final test, and for samples onwards from auditor selection of samples through to final test;

j. Minor irregularities of deviations on test results are handled as non-conformities and require root cause analysis, correction and corrective action;

k. In case of serious test failures product recall notices are issued to the manufacturer;

l. Complaints and appeals system in cases of concern, test failure or failure in-use, with range of sanctions applied;

m. Specific assessment criteria of test results for each type of cable;

n. The certified products, together with their links to news of suspensions, recalls, etc, shall be shown on the certification bodies’ websites;

o. The surveillance test report shall be submitted to the CM for checking upon requested.

---

**ELE7.1.020.8 CABLE COLOURS**

1. The compliance of electric cables with a national / international product standard shall require their design, construction and manufacture to adhere to that particular standard in all aspects except the cable colours that unless otherwise stated, should be in line with the Electrical CoP;

2. For any electrical installation based on the new cable core colour code, the registered electrical workers employed shall have satisfied the Electrical & Mechanical Services Department training requirements for new cable core colour code.
ELE7.2 WIRING SYSTEM IN CONDUIT

ELE7.2.010.8 TYPE OF CABLE

The cable installed in conduits shall be one of the following types with copper conductors unless otherwise stated:

1. Single-core, PVC-insulated cables to BS EN 50525-2-31 or IEC 60227-3;
2. PVC-insulated cables to BS 6231 Table 2;
3. Single-core, non-sheathed, non-armoured, low smoke zero halogen cables to BS EN 50525-3-41;
4. Single-core, non-sheathed, non-armoured, fire-resistant cables;
5. Single-core, sheathed, non-armoured, fire-resistant cables;
6. Multi-core, sheathed, non-armoured, fire-resistant cables.

ELE7.2.020.8 GRADE OF CABLE

The cable installed in conduits shall have the minimum voltage rating given in the table below:

<table>
<thead>
<tr>
<th>Type of Cables</th>
<th>Minimum Voltage Rating (V)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Single-core, PVC-insulated cables to BS EN 50525-2-31 or IEC 60227-3</td>
<td>450/750</td>
</tr>
<tr>
<td>2. PVC-insulated cables to BS 6231 Table 2</td>
<td>600/1000</td>
</tr>
<tr>

</tr>
<tr>
<td>6. Multi-core, sheathed, non-armoured, fire-resistant cables</td>
<td>300/500</td>
</tr>
</tbody>
</table>
ELE7.3  WIRING SYSTEM IN TRUNKING

ELE7.3.010.8  TYPE OF CABLE

The cable installed in trunkings shall be one of the following types with copper conductors unless otherwise stated:

1. Single-core, PVC-insulated cables to BS EN 50525-2-31 or IEC 60227-3;
2. PVC-insulated cables to BS 6231 Table 2;
3. Single-core, non-sheathed, non-armoured, low smoke zero halogen cables to BS EN 50525-3-41;
4. Single-core, non-sheathed, non-armoured, fire-resistant cables;
5. Single-core, sheathed, non-armoured, fire-resistant cables;
6. Multi-core, sheathed, non-armoured, fire-resistant cables.

ELE7.3.020.8  GRADE OF CABLE

The cable installed in trunkings shall have the minimum voltage rating tabulated below:

<table>
<thead>
<tr>
<th>Type of Cables</th>
<th>Minimum Voltage Rating (V)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Single-core, PVC-insulated cables to BS EN 50525-2-31 or IEC 60227-3</td>

<td>300/500</td>
</tr>
<tr>
<td>15. Multi-core, sheathed, armoured, fire-resistant cables</td>
<td>600/1000</td>
</tr>
</tbody>
</table>

ELE7.4.020.8 PVC-INSULATED, NON-SHEATHED, GENERAL PURPOSE, SINGLE-CORE CABLES

Cables shall comply with BS EN 50525-2-31 or IEC 60227-3.

ELE7.4.030.8 XLPE/PVC-INSULATED, PVC-SHEATHED, SINGLE-CORE CABLES

1. Cables with copper conductor sizes up to and including 35 mm² shall comply with BS 6004 Table 3;
2. Single-core cables with copper conductor sizes from 50 mm² to 1000 mm² inclusive shall comply with BS 7889 or IEC 60502-1.

ELE7.4.040.8 PVC-INSULATED, PVC-SHEATHED, FLAT TWIN CABLES
1. Cables with or without integral circuit protective conductor shall comply with BS 6004 Tables 3 & 4;
2. The colour of the PVC sheath shall be white.

ELE7.4.060.8 XLPE-INSULATED, PVC-SHEATHED, ARMOURED CABLES
1. XLPE-insulated, PVC-sheathed, armoured cables shall comply with BS 5467 or IEC 60502-1;
2. The XLPE insulated cable cores shall be sheathed with PVC which serves as bedding for the galvanized steel single-wire armouring of multi-core cables and for the aluminium single-wire armouring of single-core cables;
3. The XLPE insulation shall be able to operate continuously at a conductor operating temperature of 90°C.

ELE7.4.070.8 PVC-INSULATED CABLES FOR SWITCHGEAR AND CONTROLGEAR WIRING
Flexible cables shall comply with BS 6231 Table 2.

ELE7.4.090.8 MINIMUM SIZE OF LIVE CONDUCTOR
1. Cables for circuits of rating not exceeding 10A shall have CSA of not less than 1.5 mm²;
2. Cables for circuits rated at 15A and above shall have CSA of not less than 2.5 mm²;
3. Flexible cables and flexible cords shall have CSA of not less than 0.75 mm².

ELE7.4.100.8 CIRCUIT PROTECTIVE CONDUCTOR (CPC)
1. In installations where cables are clipped direct having CSA up to 16 mm² and below used for single phase circuit shall be twin-core with integral CPC except where:
   a. They are used in earth free situations; or
   b. They are used for extra low voltage circuits; or
   c. The CSA of the integral CPC cannot meet the requirement of the adiabatic equation laid down in BS 7671 or IEC 60364.
2. Separate CPC shall be single-core cables, to BS EN 50525-2-31 or IEC 60227-3;
3. Tee connection in the CPC shall not be allowed;
4. The minimum CSA of a CPC shall be 1.0 mm² if the CPC is incorporated in the same cables as the associated live conductors, otherwise the minimum CSA shall be 4 mm²;
5. CPC shall be sized in accordance with ELE17.

ELE7.4.120.8 IDENTIFICATION OF CABLE CORE
The identification of cable cores shall follow the requirements of the Electrical CoP.
ELE7.5 WIRING SYSTEM USING MINERAL INSULATED CABLE

ELE7.5.010.8 TYPES OF CABLE
All mineral-insulated cables shall be copper sheathed with copper conductors complying with IEC 60702-1 or BS EN 60702-1.

ELE7.5.020.8 GRADE OF CABLE
Unless otherwise specified, all mineral-insulated cables shall be 750V (heavy duty) of IEC 60702-1 or BS EN 60702-1.

ELE7.5.030.8 LOW SMOKE ZERO HALOGEN (LSOH) OUTER COVERING
1. Mineral-insulated cables shall have LSOH thermoplastic outer covering when:
   a. They are exposed to weather;
   b. They are installed in situations where the atmosphere is likely to cause corrosion;
   c. They are laid upon or fixed direct to a concrete or stone surface subject to dampness;
   d. They are laid upon or fixed directly to a zinc coated surface, e.g. a galvanised cable tray or corrugated sheeting, subject to dampness;
   e. They are buried direct in the ground;
   f. They are as specified in ELE2 or the Drawings.
2. LSOH thermoplastic outer covering shall not be used in refrigerated spaces or other situations where the temperature is consistently below 0°C;
3. The LSOH thermoplastic outer covering shall have an orange colour.
ELE7.6 POWER DISTRIBUTION CABLES

ELE7.6.020.8 XLPE- INSULATED POWER CABLES WITH COPPER CONDUCTORS
XLPE insulated PVC-sheathed, armoured cable shall comply with the requirement specified in ELE7.4.060.

ELE7.6.040.8 GRADING OF POWER CABLES
All power cables for electricity supply shall have a grading of 600/1000V.
ELE7.7 CABLE GLANDS

ELE7.7.010.8 CONSTRUCTION
Cable glands shall be mechanical cable glands in compliance with BS 6121:Part 1 or BS EN 50262 and use brass as basic material.

ELE7.7.020.8 TERMINATION
For the termination of steel wire armoured cables of any of the following types, type D1W glands shall be employed for indoor applications while type E1W shall be employed for outdoor applications:
1. Cables to BS 5467 or IEC 60502-1;
2. Cables to BS 6724 or IEC 60502-1;
3. Fire-resistant cables.

ELE7.7.030.8 ATTACHMENTS
1. Each gland shall be provided with locknut and earth bond attachment of appropriate size and same material as the gland body for making electrical connection to the armour of the cable to be terminated;
2. Each gland shall be complete with a shroud made of the following materials according to the types of cables served:

<table>
<thead>
<tr>
<th>Type of Cable</th>
<th>Material of Shroud</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Cables to BS 5467 or IEC 60502-1</td>
<td>PVC</td>
</tr>
<tr>
<td>b. Cables to BS 6724, or IEC 60502-1 and IEC 60332-1-2 and IEC 61034-2 and IEC 60754-1</td>
<td>Low smoke zero halogen thermosetting or thermoplastic compound</td>
</tr>
<tr>
<td>c. Fire-resistant cables to BS 6387</td>
<td>Low smoke zero halogen thermosetting or thermoplastic compound</td>
</tr>
</tbody>
</table>

ELE7.7.040.8 CERTIFICATION
Test certificates giving the results of type-tests shall be produced to verify compliance with the test requirements stipulated in BS 6121: Part 1 or BS EN 50262.
ELE7.8  FIRE-RESISTANT CABLES

ELE7.8.010.8  GENERAL REQUIREMENTS

1. Fire-resistant cables shall be manufactured under licence of LPCB, BASEC or an Equivalent Quality Surveillance Scheme and shall comply, where applicable, the clauses specified in ELE8;

2. Valid approval documents issued by FSD and / or product certification bodies recognized by FSD for the fire-resistant cables shall be submitted to the Contract Manager for approval;

3. Fire-resistant cables and their application shall comply with the requirements stipulated in Fire Services COP, FSD’s Circular Letters, and relevant BS or other international standards acceptable to the Director of Fire Services;

4. Fire-resistant cables shall have cross-sectional area of not less than 1.5 mm²;

5. Non fire-resistant cables wholly installed in embedded concealed conduits complying with FSD’s Circular Letters are allowed to apply for EXIT / directional signs and emergency lightings except those of which exposed conduits will be involved. In such cases, fire resistant cables shall be provided. For avoidance of doubt, only fire-resistant cables in concealed or exposed conduits shall be provided for all EXIT / directional signs in the entire domestic block, emergency lightings on ground floor of domestic blocks and all EXIT / directional signs / emergency lightings of which exposed conduits are involved;

6. Save as modified in the above clauses, the minimum fire-resistant cable requirements in respect of various fire service installations are listed below:

</table>
For enhanced cables or cable systems as defined in BS 5839-1, they shall comply with:

(h) BS EN 50200 (PH120) and BS 8434-2 (a duration of survival time of 120 minutes); or

(i) BS EN 60702; or

(j) BS 7629-1 (Cat. Enhanced 120); or

(k) BS 7846 (Cat. F2 for cables of overall diameter not exceeding 20mm or Cat. F120 for cables of overall diameter exceeding 20mm); or

(l) BS 6387 Cat. CWZ; or

(m) Other international standards acceptable to the Director of Fire Services.

| 20. | Fire detection system | The same requirements as those for item 19. |
| 21. | Fireman’s lift | Cables from the main essential switchboard for fire service installations to the main switch for lift power circuit, car lighting, etc., in the lift machine room shall comply with the same requirements as those for items 2 to 15. |
| 22. | Sprinkler system | The same requirements as those for items 2 to 15. |

**ELE7.8.030.8 EVIDENCE OF COUNTRY / PLACE OF MANUFACTURE AND AUTHENTICITY**

The Sub-contractor shall produce documentary evidences in accordance with PRE.BS1.205 to verify the country / place of manufacture and authenticity of fire-resistant cables delivered to Site or installed.
ELE7.9 PREFABRICATED BRANCH CABLES

ELE7.9.010.8 GENERAL
1. Being XLPE-insulated, PVC-sheathed type, main and branch cables shall comply with one of the standards below:
   a. BS 7889;
   b. IEC 60502-1.
2. The sizes of main and branch cables shall be in line with those shown on the Drawings.

ELE7.9.020.8 TYPE OF CONDUCTORS
Main and branch cables shall be of copper conductors.

ELE7.9.030.8 TYPE OF BRANCH JOINTS
1. Each branch joint shall take the form of main and branch cables bound together to a compression connector that complies with one of the product standards below:
   a. BS EN 61238-1;
   b. JIS C 2810;
   c. HD 623 S1 or BS EN 50393;
   d. IEC 61238-1.
2. Each branch joint shall be assembled and encapsulated in a thermoplastic moulding, which is compatible with the cable sheath. The entire production process shall be under a quality management system to ISO 9001.

ELE7.9.040.8 VOLTAGE RATING
Prefabricated branch cables shall have a voltage rating of 600/1000V.

ELE7.9.050.8 INSTALLATION OF BRANCH CABLES
Prior to ordering, drawings to show the actual installation details of prefabricated branch cables shall be submitted to the Contract Manager for approval.

ELE7.9.060.8 PROTECTION
Cable ends for main and branch cables shall be sealed at factory before delivery to site.

ELE7.9.070.8 TYPE & ROUTINE TESTS
Prefabricated branch cables shall be assembled under a product specification that establishes at least the following test requirements:
1. Type tests:
   a. Heat cycle test according to the method given in one of the following:
      i. JIS C 2810 Class A;
      ii. HD 623 S1 or BS EN 50393;
      iii. BS EN 61238-1;
iv. Total 125 test cycles undergone - after the 25th cycle, the surface temperature of the thermoplastic moulding shall not exceed 75°C. This temperature shall also not reach more than 8°C plus that at the 25th cycle when measurements are taken at the end of the 50th, 75th, 100th and 125th cycles.

b. Resistance to flame propagation according to one of the standards below:
   i. JIS C 3005;
   ii. BS 4066-1, or IEC 60332-1-1, or BS EN 60332-1-1 and BS EN 60332-1-2 and BS EN 60332-2-1;
   iii. IEC 60332-1-2;
   iv. IEC 60332-3 Category C.

c. Insulation resistance test: the cables in water shall have a minimum insulation resistance of 50MΩ;

d. Tensile strength test: the cables shall withstand without breakage twice the specified weight of main and branch cables for the duration of not less than 24 hours.

2. Routine tests:
   a. Voltage withstand test: The cables in water shall withstand a minimum voltage of 3.5kV for 1 minute without breakdown;

b. Connector resistance or conductivity test according to the method given in one of the following:
   i. JIS C 3005;
   ii. The resistance measured between the connector before and after the tensile test mentioned above shall agree to each other within 12%;
   iii. \( \frac{R_1}{R_2} \leq 1.2 \) where
      - \( R_1 \) is the cable resistance measured across the connector between the main and one of the branch cables; and
      - \( R_2 \) is the summation of the resistance of individual cables having the same length of cable up to the connector and conductor sizes as the main and branch cables respectively.

**ELE7.9.080.8 FACTORY TEST REPORT**

Prefabricated branch cables shall prove to have satisfactorily passed all tests stipulated in the product specification in ELE7.9.070. Prior to delivery to site, a factory test report on routine tests shall be submitted to the Contract Manager for approval.

**ELE7.9.090.8 SITE TESTS/INSPECTION**

Each prefabricated branch cable shall satisfactorily pass the site inspections/tests below along its entire route once its installation is completed:

1. Visual inspection;
2. Insulation resistance test: the cables in air shall have a minimum insulation resistance of 2MΩ.
ELE7.9.100.8  MANUFACTURERS' RECOMMENDATIONS & SPECIAL TOOLS

Manufacturers' recommendations shall be followed and special tools/accessories shall be used in the installation of prefabricated branch cables on site.

</tbody>
</table>
ELE8.1  GENERAL INSTALLATION REQUIREMENTS

ELE8.1.010.8  IDENTIFICATION OF CORE
Each core of a power cable shall be identified continuously throughout its entire length. The identification shall take the form of appropriate colour or number codes in accordance with ELE8.6.010 or the relevant British Standard specifications.

ELE8.1.020.8  IDENTIFICATION AT JOINT OR TERMINATION
At each joint or termination, a non-ferrous metallic label shall be fixed to the cable giving the size and identification of the cable, e.g. 50 mm² 4-core XLPE/SWA/PVCS copper cable to "Services Block".

ELE8.1.030.8  USE OF SINGLE-CORE POWER CABLES WITH STEEL WIRE ARMOURS
Single-core power cables with steel wire armours shall not be used for a.c. circuits.

ELE8.1.040.8  SIZE OF NEUTRAL CONDUCTOR
The CSA of the neutral conductor shall have the same size as that of the phase conductors, unless otherwise specified.

ELE8.1.050.8  BENDING RADIUS OF CABLE
The internal bending radius of every power cable shall not be less than the appropriate values given in ELE8.6.020.

ELE8.1.060.8  MINIMUM SIZE OF CABLE CONDUCTOR
1. Cables for lighting, bell and control circuits shall have CSA of not less than 1.5 mm², and cables for power circuits shall have CSA of not less than 2.5 mm²;
2. The CSA of any cable shall not be reduced at its point of termination, junction, joints etc.

ELE8.1.070.8  USE OF PVC-INSULATED CABLES AT LOW TEMPERATURE
PVC-insulated cables shall not be installed in refrigerated spaces or other situations where the temperature is consistently below 0ºC.

ELE8.1.080.8  TERMINATION OF WIRING CONNECTIONS
All wiring connections are to be properly terminated.
ELE8.2 PARTICULAR INSTALLATION REQUIREMENTS

ELE8.2.010.8 CABLES MOUNTED ON SURFACE
1. Power cables mounted on the surface of walls or ceilings or other building structures shall either be cleated in position by Approved type cable cleats or cable saddles;
2. Cables cleats or cable saddles shall be provided along the entire cable route at regular intervals and at spacing in accordance with the requirements stipulated in the Electrical CoP unless otherwise specified on the Drawings;
3. Alternatively, the cables shall be supported on cable trays in accordance with the requirements of ELE9;
4. For vertical cable runs exceeding 100 m, tension releasing sections shall be provided in accordance with the recommendation of the cable manufacturer, failing which, a tension releasing section shall be provided for every 100 m vertical run.

ELE8.2.020.8 CABLES LAID IN ENCLOSED TRENCH
When more than one power cable is laid in an enclosed trench, the cables shall be spaced in accordance with BS 7671 or IEC 60364. Correction factors shall be applied to the current ratings as indicated in Table 4B and 4C of the above Standard. For cable sizes not shown in the above-mentioned tables, reference shall be made to the appropriate tables in the ERA Report 69-30 Part III.

ELE8.2.030.8 CABLES ENCLOSED IN DUCTS
1. General:
   a. Power cables installed in ducts shall conform to the provisions of ELE9;
   b. Prior to the drawing-in of the cables, the cylindrical ducts shall be cleaned with a cylindrical brush of appropriate size.
2. Pulling cables through ducts - general:
   a. Attachment to facilitate the pulling of cables through a duct shall be made to the cores, insulation, inner and outer sheath and not to the armour in order to avoid twisting;
   b. Attachment to the armour will only be permitted for small cables with the Approval of the Contract Manager;
   c. When pulling power cables into small ducts, an emulsion of graphite powder and soft soap in water may be used for brushing onto the cable surfaces where they enter the duct to reduce friction during pulling;
   d. The use of "French Chalk" or other methods will not be precluded provided that such materials or methods shall not damage the cables and that the prior Approval of the Contract Manager has been given.
3. Pulling cables through ducts - lead-sheathed insulated:
   a. When pulling-in lead-sheathed insulated power cables, the following stresses shall not be exceeded:
      i. Maximum stress in sheath - 10,000kPa (with stocking pulling grip);
ii. Maximum stress in conductors - 70,000kPa (with pulling eye attached to conductors).

b. When the cables are being drawn into ducts, the maximum pull shall be limited to 220,000 Newtons.

**ELE8.2.040.8 CABLES BURIED DIRECT IN GROUND**

1. Power cables buried direct in ground shall be armoured;
2. They shall be buried at a depth of not less than 450 mm and shall be protected by means of Approved cable cover tiles;
3. The bottom of the trench shall be covered, to a depth of 100 mm with a bedding layer of sand or fine soil;
4. On top of the cables, a layer of sand or fine soil, also to a depth of 100 mm, shall again be provided;
5. The sand or fine soil shall not be larger than 13 mm sieve;
6. Particular care shall be taken to ensure that there shall be no pebbles or small stones in the bedding layer or after the layer of fine sand or soil;
7. The cables shall then be covered, throughout the entire route, by cable cover tiles which shall be laid on top of the after layer.

**ELE8.2.050.8 CABLE MARKERS**

1. The route of all power cables buried direct in ground shall be clearly indicated by cable markers laid in the ground;
2. Cable markers shall be placed at regular intervals not exceeding 60 m apart and also at positions where the cable route changes direction;
3. At the position of each underground junction box, a cable marker shall also be installed. Such markers shall be engraved with, in addition to the wordings mentioned above, the appropriate information, such as "3 way Joint Box".

**ELE8.2.060.8 CABLES CONNECTED TO OR IN CONTACT WITH BARE CONDUCTORS OR BUSBARS**

1. PVC cables for interconnection between busbar risers and their outgoing switchgears, or between busbar chambers and their incoming/outgoing switchgears shall be to type CK of BS 6231 or equal and Approved;
2. Where cables to BS EN 50525-2-31 or BS 5467 or IEC 60502-1 are terminated to bare conductors or busbars of ACBs, MCCBs, fuse combination units or switch-disconnectors in the applications other than those given in sub-clause (1) above, the insulation and sheath of the cables shall be suitable for the maximum temperature of the terminals of the switchgear or equipment.
3. If the Sub-contractor fails to verify the above requirement as given in sub-clause (2) above to the satisfaction of the Contract Manager, the insulation and/or sheath of the cables shall be removed for a distance of 150 mm from the termination and replaced by at least 0.21 mm thick heat-resisting insulating tapes complying with IEC 60454-3-1 and suitable for operating temperatures up to 105°C.
ELE8.3  WIRING SYSTEM USING PVC INSULATED AND PVC SHEATHED CABLES

ELE8.3.1  WIRING SYSTEM

ELE8.3.1.010.8  GENERAL
1. XLPE/PVC insulated and PVC sheathed non-flexible cables shall be used for surface wiring in fixed installations. The cables shall not be buried in concrete or plaster;
2. PVC insulated and PVC sheathed flexible cables or flexible cords shall be used for connection to apparatus, appliances or equipment via an appropriate wiring accessory;
3. Flexible cables or flexible cords shall not be used in a fixed installation, except for final connection to a fixed equipment.

ELE8.3.1.020.8  JOINTS IN CABLES OR CORDS
Joints in cables or cords shall not be allowed unless Approved. In such cases, the joints shall be electrically and mechanically sound and shall be accessible for inspection.

ELE8.3.2  MATERIALS FOR ACCESSORIES

ELE8.3.2.010.8  WIRING ACCESSORIES
Wiring accessories, e.g. switches and socket outlets, shall be of the all-insulated pattern suitable for flush mounting on to a moulded box or pattress. In all other respects, they shall comply with ELE20.

ELE8.3.2.020.8  BOXES OR PATTRESSES
Moulded boxes or pattresses or the enclosure of surface mounted wiring accessories shall be of insulating material and shall comply with BS EN/IEC 60670-1 with dimensions to BS 4662. Each box or pattress shall have a copper earth terminal for the connection of the circuit protective conductors.

ELE8.3.2.030.8  CABLE FIXING CLIPS AND PINS
Buckle clips shall be of heavy gauge, heavily tinned brass with countersunk fixing holes. Fixing pins shall be of copper or brass with a minimum length of 15 mm.

ELE8.3.2.040.8  CABLE FIXING SADDLES AND SCREWS
Saddles shall be of heavy gauge galvanised steel. The fixing screws shall be of non-ferrous metal.
ELE8.3.3 INSTALLATION OF NON-FLEXIBLE CABLES

ELE8.3.3.010.8 CABLE ROUTES
1. All cables shall be run in a vertical or horizontal direction, and shall be secured flat on the surface of walls, columns, partitions or ceilings, etc. throughout the entire route, including at bends. Fixing on to the ceiling shall be avoided unless the cable is required to feed a point on the ceiling;
2. Where required, the cables may be run under floors, between partitions or inside ceiling voids provided that they are enclosed in ducts, conduits or trunking which comply fully with the relevant clauses in ELE9, ELE11, ELE12 and ELE13;
3. When cables are routed along or across steel joints, beams, stanchions, etc. they shall be enclosed in steel trunking/conduit or rigid PVC conduit;
4. Cables shall not be run as a span between beams, trusses, etc. without rigid support throughout their length.

ELE8.3.3.020.8 PROTECTION TO CABLES SUSCEPTIBLE TO DAMAGE
Cables susceptible to damage shall be protected by means of metal channels. Where protection is required for cables running up a wall from the floor, the metal channel shall be fixed to a minimum height of 2 m above finished floor level.

ELE8.3.3.030.8 CABLES PASSING THROUGH A BUILDING STRUCTURE
Where cables pass through a building structure such as a wall or column, the cables shall be drawn through PVC sleeves inserted into the building structure. The size of the PVC sleeves shall be such that the space factor shall not exceed 45%.

ELE8.3.3.040.8 CABLES CROSSING EXPANSION JOINT
Cables passing an expansion joint shall be formed into a loop such that any movement in the joint shall not stress the cables.

ELE8.3.3.050.8 CABLES PASSING THROUGH METAL WORK
Rubber grommets or insulated bushes shall be used to protect the cables passing through metal parts of a distribution board, a luminaires, a metal box or any other metal work.

ELE8.3.3.060.8 SEGREGATION FROM OTHER SERVICES
Cables shall be run at least 150 mm clear of all other non-electrical services.

ELE8.3.3.070.8 "LOOPING-IN" WIRING SYSTEM
The cables shall be wired on the "looping-in" system. Cable joints of any type in cable runs shall not be allowed.

ELE8.3.3.080.8 NEUTRAL CONDUCTOR AT SWITCH POSITION
The neutral conductor of a cable for a lighting final circuit shall be looped through an insulated connector enclosed in the moulded box or pattress housing the switch.
TERMINATION OF CABLES

1. Cables terminated at a moulded box or pattress, a luminaire or other fittings shall have the overall protective sheaths carried into the moulded box or pattress, luminaire or other fittings for a minimum of 13 mm;

2. The circuit protective conductor shall be terminated at the earth terminal provided in the moulded box or pattress housing the wiring accessories;

3. Where it is not required to terminate the circuit protective conductor in an accessory, the circuit protective conductor shall not be cut back or removed. Instead it shall be coiled away from the live terminals or any bare conductors and shall be insulated and sleeved with a green-and-yellow PVC sleeve.

BENDING RADIi OF CABLES

The internal radii of cables shall not be less than the values given below:

<table>
<thead>
<tr>
<th>Cable type</th>
<th>Overall diameter of cable, D (mm)</th>
<th>Minimum internal radius of cable</th>
</tr>
</thead>
<tbody>
<tr>
<td>BS EN 50525-2-31 Clause 4.1 and BS 7889 or IEC 60502-1</td>
<td></td>
<td></td>
</tr>
<tr>
<td>D ≤ 10</td>
<td></td>
<td>3 D</td>
</tr>
<tr>
<td>10 &lt; D ≤ 25</td>
<td></td>
<td>4 D</td>
</tr>
<tr>
<td>D &gt; 25</td>
<td></td>
<td>6 D</td>
</tr>
</tbody>
</table>

FIXING OF CABLES

1. Cables having an overall diameter not exceeding 10 mm shall be fixed by means of buckle clips. Cables of other diameters shall be fixed by means of cable saddles.

2. a. Where a number of cables running together on the surface of walls, columns, partitions or ceiling such that their aggregated width exceeds 50 mm, a 13 mm thick hardwood batten of adequate width shall be fixed along the cable route for mounting the cables;

b. The hardwood batten shall be finished with one coat of Approved priming on front and edges, and treated at the back with waterproof compound;

c. Lengths of the batten shall be properly fitted together and fixed in position by counter-sunk brass screws in rawplugs.

FIXING OF CLIPS

1. a. Buckle clips shall be fixed to the surface of wall, column, partition or ceiling by pins secured to one plug inserted to a minimum depth of 20 mm;

b. Where the buckle clips are fixed to plaster, concrete, etc. the plugs shall be made from teak dowelling of parallel length;

c. The head of every pin shall be level with the surface of the clip so that no damage to the sheath of the fixed cables can occur.

2. Every hole in the buckle clip shall require a fixing pin;

3. A separate buckle clip shall be required for every cable of size above 2.5 mm² twin with CPC, or of equivalent size. Not more than two cables shall be allowed in one clip under all circumstances;

4. Buckle clips shall be provided along the entire cable route at regular intervals not exceeding 250 mm on horizontal runs and 400 mm on vertical runs;
5. A clip shall also be provided at a distance not exceeding 75 mm from a termination and from both sides of a bend.

**ELE8.3.130.8** FIXING OF CABLE SADDLES
Cable saddles shall be securely fixed by fixing screws. Saddles shall be provided along the entire cable route at regular intervals. The spacing between adjacent saddles shall be in accordance with the requirements stipulated in the Electrical CoP unless otherwise specified on the Drawings.

**ELE8.3.140.8** RATING FACTORS TO CURRENT RATING OF CABLES
There more than two twin cables are fixed together, or when the cables are installed at or in thermally insulated materials, etc., suitable rating factors, as recommended by the electrical CoP or BS 7671 or IEC 60364 shall be applied in determining the size of the cables to be installed.

**ELE8.3.4 INSTALLATION OF FLEXIBLE CABLES AND FLEXIBLE CORDS**

**ELE8.3.4.010.8** CONNECTIONS TO PORTABLE EQUIPMENT
Flexible cables or flexible cords for connections to portable appliances or equipment shall be of suitable length (preferably 1.5 m to 2 m) to avoid undue risk of mechanical damage.

**ELE8.3.4.020.8** CONNECTIONS TO FIXED EQUIPMENT
Exposed lengths of flexible cable or flexible cord used for final connections to fixed equipment or appliance shall be as short as possible.

**ELE8.3.4.030.8** CONNECTIONS TO LUMINAIRES
Where a flexible cord supports or partly supports a pendant luminaires, the maximum mass acting on the cord shall not exceed 3 kg for flexible cord of 0.75 mm², and shall not exceed 5 kg for flexible cord of larger conductor cross sectional area.
**ELE8.4 WIRING SYSTEM USING MINERAL-INSULATED CABLES**

**ELE8.4.1 MATERIALS FOR ACCESSORIES**

**ELE8.4.1.010.8 CABLE SADDLES AND CLIPS**
Saddles and clips for fixing mineral-insulated cables shall be of the type specially made by the cable manufacturer for this purpose. Where the cables are fitted with low smoke zero halogen (LSOH) thermoplastic outer covering, the saddles or clips used shall also have LSOH thermoplastic or thermosetting covering.

**ELE8.4.1.020.8 CONDUIT/ADAPTABLE BOXES**
Conduit/adaptable boxes shall meet the requirements of ELE11.3.

**ELE8.4.2 INSTALLATION OF CABLES**

**ELE8.4.2.010.8 CABLE ROUTES**
Mineral-insulated cables shall be run neatly on the surface of the walls, columns, beams or ceilings in a vertical or horizontal direction, and at least 150 mm clear of all plumbing and mechanical services. The use of conduit and/or cable trunking to enclose such cables shall be kept to the minimum.

**ELE8.4.2.020.8 CABLE SUPPORTS**
1. Mineral-insulated cables shall be adequately supported by saddles which shall be obtained from the same manufacturer as the cables;
2. Saddles shall be provided through the entire cable route at regular intervals;
3. The spacing between adjacent saddles shall not exceed the values given in ELE8.4.3.010;
4. Saddles shall also be provided at a distance not exceeding 150 mm away from termination and from both sides of a bend.

**ELE8.4.2.030.8 BENDING RADIUS**
The minimum internal bending radius for mineral-insulated cables shall be 6 times the overall diameter of the cable.

**ELE8.4.2.040.8 CABLE LOOP FOR PREVENTION OF VIBRATION**
A loop shall be introduced in a cable immediately before its entry into the connected equipment which is subject to vibration or occasional movement. A clear space of at least 10 mm shall be maintained at the point in the loop where the cable passes over itself.

**ELE8.4.2.050.8 CABLE TERMINATIONS**
1. Cable termination shall generally comply with IEC 60702-2 or BS EN 60702-2;
2. The cable to be terminated shall be cut, screwed, sealed with cold compound and fitted with brass terminating glands, nuts, compression ring, gland body, sealing pot, disc and sleeves. The conductors shall be carried unbroken through the sealing pot to the terminal sockets or clamping screws;

3. The sealing shall be properly carried out to protect the cable ends from moisture and the insulation shall be thoroughly dry before the sealing is applied. The sealing material and any material used to insulate the conductors when they emerge from the insulation shall have adequate insulating and moisture proofing properties and shall retain these properties throughout the range of temperature they may be subjected to in service;

4. Where a mineral insulated cable is terminated at an insulating casing or enameled/painted metal casing, the sealing pot shall be provided with a copper circuit protective conductor, complying with the requirements of BS EN 60228 and of an appropriate size in accordance with IEC 60702-2 or BS EN 60702-2;

5. Where more than one cable terminates at a galvanised or zinc coated enclosure the gland plate shall be of brass or insulating materials;

6. LSOH thermoplastic or thermosetting shrouded terminating glands shall be used when the cables are fitted with LSOH thermoplastic outer covering;

7. Only tools recommended by the manufacturer of the cables shall be used and the manufacturer's recommended methods of cable termination shall be adopted in all cases.

**ELE8.4.2.060.8 INSULATION RESISTANCE**

1. The insulation resistance between the cores and between each core and the sheath shall be measured before the cable end is sealed;

2. The measured insulation resistance, RI dependent on its length, l, on a 500V insulation resistance tester shall be given as follows:

<table>
<thead>
<tr>
<th>Length, l (km)</th>
<th>Requirements on insulation resistance, R_I</th>
</tr>
</thead>
<tbody>
<tr>
<td>l &lt; 0.1</td>
<td>( R_I \geq 10,000M\Omega )</td>
</tr>
<tr>
<td>l = 0.1</td>
<td>( R_I \geq 10,000M\Omega )</td>
</tr>
<tr>
<td>l &gt; 0.1</td>
<td>( l R_I \geq 1,000M\Omega \text{ km} )</td>
</tr>
</tbody>
</table>

3. If the reading is less than the values given above, the cable shall be heated by means of a blow lamp or similar device so that moisture is driven out to the open end of the cable and evaporated there;

4. Heating shall be continued until the measured insulation resistance reaches the values given above and the sealing shall be applied without delay;

5. The insulation resistance shall be measured when the cable end has been sealed, and shall meet the values given above;

6. For mineral-insulated cable with LSOH thermoplastic outer covering, adequate length of the LSOH thermoplastic outer covering shall be cut out in the event of low insulation resistance to achieve the required insulation resistance.

**ELE8.4.2.070.8 IDENTIFICATION OF CORE**

1. The cores of the mineral-insulated cables shall be identifiable at their termination by the application of sleeves or discs of appropriate colours as prescribed below:

<table>
<thead>
<tr>
<th>Type</th>
<th>Colour</th>
</tr>
</thead>
<tbody>
<tr>
<td>Single-phase circuit</td>
<td>Brown</td>
</tr>
</tbody>
</table>
### Identification sleeves
Identification sleeves shall comply with BS 3858 Type 3 where appropriate and shall have temperature rating similar to that of the seals.

### Bonding of Cable Sheath to Metalwork
Where a mineral-insulated cable passes through or makes contact with any metal, the metal and cable sheath shall be effectively bonded together.

### Use of Single-Core Cables
Single-core mineral-insulated cables running together shall be laid with the cable sheaths in contact. Mineral-insulated cables for 3-phase circuits shall be laid in trefoil formation. Where the cables used are rated at 100A or above, gland plates of apparatus shall be of brass.

### Protection from Mechanical Damage
The mineral-insulated cables shall be protected by steel conduits or steel sheathings where the cables are exposed in vulnerable positions. Where cables pass through floors, ceilings and walls, the holes shall be made good with cement or other non-combustible material and where cables pass through steelwork, the holes must be bushed.

### Restriction of Use
Mineral-insulated cables shall not be used:
1. In discharged lighting circuits unless suitable Approved precautions have been taken to avoid excessive voltage; or
2. For earthed concentric wiring system.

### Reference Table

#### Maximum Spacing of Saddles for Mineral-Insulated Cables
1. The spacing between adjacent saddles shall not exceed the values given in the table below:

<table>
<thead>
<tr>
<th>Overall Diameter of Cable, D (mm)</th>
<th>Maximum Spacing (mm)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Horizontal Run †</td>
</tr>
<tr>
<td>D ≤ 9</td>
<td>600</td>
</tr>
<tr>
<td>9 &lt; D ≤ 15</td>
<td>900</td>
</tr>
<tr>
<td>15 &lt; D</td>
<td>1500</td>
</tr>
</tbody>
</table>

† The spacing stated for horizontal runs may be applied also to runs at an angle of more than 30° from the vertical. For runs at an angle of 30° or less from the vertical, the vertical spacing is applicable.
2. Saddles shall be provided at a distance not exceeding 150 mm away from a termination and away from both sides of a bend.
ELE8.5  CABLE JOINTS AND TERMINATIONS

ELE8.5.010.8  GENERAL

1. Joints and terminations of all power cables shall be made by skilled cable jointers who shall be approved by the Contract Manager before work commences;

2. No reduction in the number of strands of a cable core shall be allowed at a cable joint or termination;

3. Ferrules, compression connectors and bare portions of cable core resulting from a jointing or terminating process shall be insulated with an Approved type insulating tape or heat shrinkable tubing after completion of the process. Such insulating tape or heat shrinkable tubing shall have equal or better electrical and mechanical properties than those of the original insulation removed, and shall be adhered to the cores etc. securely and permanently. The final thickness shall be in a smooth contour throughout the whole length;

4. Every compression joint shall be of a type which has been the subject of a test certificate as described in BS 4579 or IEC 61238-1. When a compression joint is made, the appropriate tools specified by the manufacturer of the joint connectors shall be used.

ELE8.5.020.8  JOINT BOXES AND TERMINATING BOXES

1. Boxes for joints in all power cables shall be of cast-iron, compound filled and of adequate size;

2. The boxes shall be fitted with suitable armouring clamps and glands;

3. The armouring of the cables shall be terminated at the armouring clamps and the inner sheath shall pass through the gland;

4. The box shall be warmed thoroughly before the compound is poured to allow total adhesion between the compound and the box. The compound shall then be allowed to cool and tapped up before the box is closed. No air locks shall be formed within the box.

ELE8.5.030.8  USE OF COLD COMPOUND AND PLASTIC SHELLS

With the consent of the Contract Manager, plastic shells fitted with suitably sized armour bond and filled with Approved type cold pouring encapsulating compound may be used as an alternative to the compound filled cast iron joint boxes for jointing XLPE/PVC-insulated power cables. In such cases, the complete jointing kit, including plastic shell, compound, insulating tape etc., shall be from the same proprietary manufacturer who is specialised in manufacturing products for this purpose. The jointing method and procedure shall be in strict accordance with the manufacturer's recommendations.

ELE8.5.040.8  EARTH CONTINUITY ACROSS JOINTS

A circuit protective conductor having adequate CSA and of same material as the phase conductors shall be installed and connected to maintain the effectiveness of the earth continuity across every cable joint.
ELE8.505.8  STRAIGHT-THROUGH JOINTS FOR COPPER CONDUCTORS

1. In a straight-through joint for copper conductors, the two conductors shall be butted together after the strands have been soldered solid and shall be jointed by means of a weak back ferrule, soldered to the cores. Soldering shall be carried out by pouring tinman's solder over the cores and weak back ferrule. In no circumstances shall direct flame from a blowlamp be used for soldering;

2. As an alternative, conductors may be jointed by Approved type compression connectors using appropriate tools and connectors.

ELE8.506.8  TEE-JOINTS FOR COPPER CONDUCTORS

When two cables with copper conductors are tee-jointed, the branch conductor shall be connected to the main conductor by means of claw type or weak back ferrules. The strands in both branch and main conductors are to be sweated solid before sweating to the ferrule. Soldering shall be carried out as detailed in ELE8.5.050.

ELE8.510.8  TERMINATION OF XLPE/PVC-INSULATED POWER CABLES WITH COPPER CONDUCTORS

1. XLPE/PVC-insulated power cables shall be terminated in a gland fitted with an armour clamp;

2. Provision shall be arranged to enable a watertight seal to be made between the gland and the inner PVC or low smoke zero halogen sheath;

3. The gland body shall be provided with an internal conical seating to receive the armour clamping cone and a clamping nut which shall secure the armour clamping cone firmly to the armour wires ensuring that the armour wires are tightly clamped between the armour cone and conical armour seating;

4. The spigot on the gland body shall be threaded to suit standard conduit accessories;

5. A shroud shall be fitted to cover the body of the gland and the exposed armour wires.

ELE8.512.8  USE OF HEAT SHRINKABLE TUBING

1. With the consent of the Contract Manager, heat shrinkable tubing and accessories may be used for cable joints or terminations. All tubing and accessories shall be specially designed for this purpose and shall be suitable for use with the type and construction of cable to be jointed or terminated;

2. The heat shrinkable materials shall have electrical and mechanical properties equal to or better than those of the cable insulation and sheath, where applicable. After the application of the heat, the heat shrinkable materials shall seal the interfaces between the heat shrinkable materials or between the heat shrinkable materials and the cable surfaces;

3. Whenever heat shrinkable tubing and accessories are used, the complete kit shall be from the same proprietary manufacturer who is specialised in manufacturing products for this purpose. The method and procedures adopted shall be strictly as those laid down by the manufacturer.

ELE8.513.8  OTHER METHODS OF JOINTING AND TERMINATION

Methods for jointing or terminating a power cable, other than those specified in the Section, will not be precluded provided that:

1. The method used shall be proven to be capable of affording the degree of safety and efficiency not less than that achieved by those specified in this Section;
2. The method used shall satisfy the requirements of the BS 7671 or IEC 60364;
3. The prior Approval of the Contract Manager has been obtained.
ELE8.6  REFERENCE TABLES

- ELE9.2.120.8 FIXING OF CABLES ON TRAYS ............................................. 6
ELE9.1 CABLE DUCTS

ELE9.1.010.8 MATERIALS FOR DUCTS
Cable ducts shall be formed from concrete, PVC, metal or such other materials as may be specified by the Contract Manager in ELE2 or on the Drawings.

ELE9.1.020.8 METALLIC DUCTING
Metallic ducting shall comply with the same requirements as metal trunking.

ELE9.1.030.8 CONCRETE DUCTS CAST IN-SITU
Ducts cast in in-situ concrete shall be formed so that the radial thickness of the concrete or screed surrounding the cross-section of the complete ducting shall not be less than 15 mm at every point.

ELE9.1.040.8 CABLES IN CONCRETE DUCTS
Cables in ducts formed from concrete shall be PVC insulated and PVC sheathed with wire armour, or paper insulated with lead sheath and armoured or mineral insulated with PVC outer covering.

ELE9.1.050.8 CABLES IN WOOD DUCTS
Cables in ducts formed from wood shall be PVC insulated, or PVC insulated and PVC sheathed, and shall be held in position by clips, saddles, or equal and Approved fixings.

ELE9.1.060.8 CABLES IN UNDERGROUND DUCTS
Cables in underground ducts shall be of armoured type as specified in ELE7.

ELE9.1.070.8 INTERNAL BARRIERS
1. In every vertical duct, which is designed as totally enclosed without ventilation, internal barriers shall be provided to prevent the air at the top of the duct from attaining an excessively high temperature;
2. The distance between adjacent barriers shall be the distance between floors;
3. Where the floor to floor distance exceeds 5 m, additional barriers shall be provided at intervals not exceeding 5 m.

ELE9.1.080.8 FIRE BARRIERS
Where a cable duct passes through fire resistant structural elements, such as floors or walls designated as fire barriers, the opening thus formed shall be sealed with fire resistant materials having the same degree of fire resistance as the structural element. In addition, suitable internal fire barriers shall also be provided. An internal barrier may also serve as an internal barrier described previously in ELE9.1.070 above.

ELE9.1.090.8 ACCESSORIES FASTENED TO DUCT COVER
Where a duct cover is used as a support for fixing socket outlet or other accessories, provision shall be made to enable the cover to be removed, so that the enclosed cables can be accessed without taking down the socket outlet or other accessories from the cover.
ELE9.1.100.8 STEEL CONDUITS TERMINATED AT A DUCT
Steel conduits terminating at a duct shall each be securely fixed by means of conduit coupler and brass male brush.

ELE9.1.110.8 RADIUS OF CURVATURE
Where a change in direction in a duct occurs, provision shall be made to enable the cables in the duct to have adequate radii of curvature in accordance with ELE7 and ELE8.

ELE9.1.120.8 DRAW-IN PITS
1. Where cables in a duct are inaccessible for the greater part of their lengths, adequate number of draw-in pits shall be provided at regular intervals of not greater than 45 m;
2. Sufficient room shall be available in the draw-in pits to enable cables to be manoeuvred without damage;
3. In the case of armoured cables, the draw-in pits shall be concrete or brick lined and shall be fitted with a waterproof heavy cast iron lid;
4. Draw-in pits shall not be filled with sand or other materials.

ELE9.1.130.8 SPACE FACTOR
The space factor in a cable duct shall not exceed 35%.

ELE9.1.140.8 SEGREGATION OF CABLES OF DIFFERENT CIRCUIT CATEGORIES
Separate ducts shall be provided for cables of different circuit categories. However, cables of different categories may be allowed to pass through the same draw-in pit provided that they are properly and appropriately segregated.

ELE9.1.150.8 SEALING OF DUCT ENTRIES TO BUILDING
1. After the cables have been installed, both the cables and the exposed duct end shall be sealed to form a gas, water and fire barrier;
2. Open ends of spare ducts shall be closed with duct plugs as shown on drawings to prevent gas and water ingress. If the open ends of spare ducts are located in two separate fire compartments, either one end shall be further sealed with fire resistant material of fire rating not less than the fire resistant requirement of the compartments.

ELE9.1.160.8 SEALING OF DUCT ENTRIES TO MANHOLES/DRAWPITS
After the cables have been installed, all cables duct ends at the manholes/drawpits, including the spare ducts shall be sealed up to form a gas and water barrier according to the installation details as shown on the Drawings.
ELE9.2   METAL CABLE TRAYS

ELE9.2.010.8 MATERIALS FOR TRAYS
Metal cable trays shall be perforated, formed from plain steel sheet complying with BS 1449:Part 1 and shall be hot-dipped galvanised to ISO 1460, ISO 1461 after perforation. Cable trays shall have corrosion protection not lower than medium protection to BS EN 50085-1 and BS EN 50085-2-1 or Class 5 to IEC 61537.

ELE9.2.020.8 DIMENSION OF TRAYS
Cable trays have the following dimensions:

<table>
<thead>
<tr>
<th>Nominal width</th>
<th>Minimum height of upstand</th>
<th>Nominal thickness of steel sheet</th>
</tr>
</thead>
<tbody>
<tr>
<td>100 mm</td>
<td>12 mm</td>

</table>

ELE9.2.030.8 BEND PIECES
Bend pieces shall be of the same material, thickness and finish as the main body of the cable tray and shall have an inner radius of 50 mm and a straight length of 100 mm at each end.

ELE9.2.040.8 PERFORATIONS IN BEND PIECES
1. No perforation shall be made in the circular portion of all bend pieces having a nominal width of 150 mm or 100 mm;
2. Perforation may be allowed in bend pieces having a nominal width of 225 mm or above provided that the perforation is made along a line passing through the centre of curvature of the bend pieces and set at an angle $\theta$ to the normal of the axis of the cable tray;
3. The values of $\theta$ are tabulated below:

<table>
<thead>
<tr>
<th>Nominal width of cable tray</th>
<th>Value of $\theta$</th>
</tr>
</thead>
<tbody>
<tr>
<td>225 mm and 300 mm</td>
<td>45°</td>
</tr>
<tr>
<td>450 mm and 600 mm</td>
<td>30° and 60°</td>
</tr>
</tbody>
</table>

ELE9.2.050.8 TEE PIECES
Tee pieces shall be of the same material, thickness and finish as the main body of the cable tray. The distance measured between the point of the intersection and the end of the tee piece shall not be less than 100 mm.
ELE9.2.060.8 CONNECTIONS BETWEEN ADJACENT LENGTHS OF TRAY
1. Connections between adjacent lengths of tray, tee or bend pieces, shall be made by butt joints and fixed by mushroom-head steel roofing bolts and nuts complying with BS 1494:Part1;
2. The connection shall be mechanically strong so that no relative movement between the two lengths can occur.

ELE9.2.070.8 CUTTING OF TRAYS
Cable trays shall be cut along a line of plain metal only, i.e. they shall not be cut through the perforation. All cut edges of the galvanised cable tray shall be prepared and treated with a cold galvanised paint.

ELE9.2.080.8 CABLE TRAY ACCESSORIES
1. Manufacturer's standard items of accessories shall be used;
2. Site fabrication of accessories shall only be allowed after Approval and shall be kept to a minimum;
3. Where special sections are required, the material, thickness and finish shall be as specified for the standard items.

ELE9.2.090.8 HOLES IN TRAYS
Holes cut in a cable tray for the passage of cables shall be provided with grommets. Alternatively they shall be bushed or lined.

ELE9.2.100.8 SPACE BEHIND TRAYS
A minimum clear space of 20 mm shall be left behind all cable trays.

ELE9.2.110.8 FIXING OF TRAYS
1. Cable trays shall be fixed securely to the walls, ceiling or other structure by means of mild steel hangers or brackets of adequate mechanical strength;
2. The hangers or brackets shall be painted in accordance with ELE28.7;
3. Fixings for cable trays shall be disposed at regular intervals not exceeding 1200 mm and on both sides of, and at a distance not exceeding 225 mm from, a bend or intersection.

ELE9.2.120.8 FIXING OF CABLES ON TRAYS
1. For horizontal run of multi-core cables to BS 5467, cable ties for securing these cables to cable trays shall be made from nylon or polypropylene material. In the cases of low smoke zero halogen or fire-resistant multi-core cables, stainless steel cable ties shall be used;
2. For vertical run of multi-core armoured cables, cable cleats of cast iron with hot dipped galvanised finish or die cast aluminium shall be used for the fixture of multi-core armoured cables. In the case of multi-core non-armoured cables mounted vertically, metallic cable clamps or clips shall be used;
3. Single-core cables shall be secured to the cable tray by non-magnetic metallic cable cleats, clamps or clips specially designed to suit the dimensions of the cables. In the case of low smoke zero halogen or fire-resistant single-core cables, the cable cleats, clamps or clips shall be resistant to a flame at 950°C;
4. The cleats, clamps or clips of these single-core cables shall be secured to the cable tray by means of bolts, washers and nuts.

ELE11.1  CONDUIT SYSTEM

ELE11.1.010.8  CONCEALED CONDUIT SYSTEM

Unless otherwise specified in ELE2 or shown on the Drawings, conduits shall be concealed within walls, floor slabs, false ceilings, or other suitable space.

ELE11.1.020.8  SURFACE CONDUIT SYSTEM

Where surface conduits are specified, they shall be fixed by distance saddles, and shall run only in a vertical or horizontal direction.

ELE11.1.030.8  MINIMUM SIZE OF CONDUIT

The minimum outside diameter of any conduit to be used shall be 20 mm. Where special situations demands, 16 mm conduit may be used subject to prior Approval being obtained from the Contract Manager.

ELE11.1.040.8  STANDARD

Steel conduits, except flexible conduits, shall be of heavy gauge, screwed, longitudinally welded. All conduits shall comply with BS 4568: Part 1 or IEC 61386-21 or BS EN 61386-21.
ELE11.2 CONDUITS AND FITTINGS

ELE11.2.010.8 TYPE-TESTING
Steel conduits and conduit fittings shall be type-tested for complete compliance with the following Standards by an Accredited Laboratory:

1. Steel conduits: BS 4568:Part 1 or IEC 61386-21 or BS EN 61386-21;
2. Conduit fittings: BS EN 61386-1 or IEC 61386-1;
3. Steel boxes for Electrical Accessories: IEC 60670-1 with dimensions to BS 4662.

ELE11.2.020.8 FLEXIBLE STEEL CONDUITS
1. Flexible steel conduits and solid type brass adaptors shall comply with BS EN 61386-1, or IEC 61386-1 and IEC 61386-23. In addition, the conduits shall be of the metallic watertight pattern, PVC oversheathed and with a separate circuit protective conductor drawn into the conduit for each continuity. PVC oversheath will not be required for installations within ventilated ceiling voids;
2. Length of each flexible conduit shall not be more than 1 m for general applications or 2 m inside false ceiling and raised floor.

ELE11.2.030.8 CONDUIT FITTINGS
1. All conduit fittings shall comply with BS EN 61386-1 or IEC 61386-1;
2. Adaptable boxes complete with covers shall be of cast iron, galvanised, or sheet steel having a protection against corrosion in accordance with IEC 60670-1. Unless otherwise specified, boxes of the preferred sizes only, as given in IEC 60670-1, shall be used. Screws for securing the cover shall be of stainless steel;
3. Circular boxes, dome covers and hook covers shall be of galvanised malleable cast iron. Ceiling mounted boxes shall be of deep pattern type having an internal depth of not less than 60 mm;
4. Bushes and plugs shall be of brass;
5. Distance saddles shall be of galvanised cast iron. The screws for fixing the saddles shall be of brass;
6. Solid or inspection tee-pieces, couplers or elbows shall not be used on any conduit installation.

ELE11.2.040.8 METAL BOXES FOR ACCESSORIES
1. Metal boxes for the enclosure of electrical accessories in conduit installation shall comply with IEC 60670-1 with dimensions to BS 4662;
2. 35 mm and 47 mm deep boxes shall be used to house accessories such as domestic switches, socket outlets, etc.;
3. 16 mm and 25 mm deep boxes may be used to house specially designed electrical accessories of shallow pattern subject to prior Approval.

ELE11.2.050.8 CLASS OF PROTECTION AGAINST CORROSION
1. Steel conduits shall have Class 4 protection against corrosion in accordance with BS 4568: Part 1 or IEC 61386-1 or BS EN 61386-1 i.e. heavy protection both inside and outside (e.g. hot-dip zinc coating or sherardizing);
2. Steel conduit fittings shall have Class 4 protection in accordance with BS EN 61386-1 or IEC 61386-1 i.e. heavy protection both inside and outside (e.g. hot-dip zinc coating or sherardizing);

3. Metal boxes for the enclosure of electrical accessories shall have protection both inside and outside in accordance with IEC 60670-1.

**ELE11.2.060.8 CORROSION RESISTANCE TEST**

Upon request from the Contract Manager, documentary evidence that the batch/consignment of steel conduits and conduit fittings delivered to site having satisfied the corrosion protection requirement as stipulated in the relevant Standards mentioned in ELE11.2.010 shall be provided.
ELE11.3 CONDUIT AND WIRING INSTALLATION

ELE11.3.010.8 CONDUIT CONTINUITY
1. The steel conduit installation shall be mechanically and electrically continuous throughout, and efficiently earthed;
2. Earth continuity of the conduit installation shall be tested before concreting of floors and walls and also on completion of the entire installation;
3. Where the circuit protective conductor is formed by the conduits, the terminal of the socket outlet shall be connected by a separate protective conductor, having the same cross sectional area and type as the live conductors, to an earth terminal incorporated in the associated metal box or enclosure;
4. Flexible conduit shall not be used as a protective conductor.

ELE11.3.020.8 JOINTS IN STEEL CONDUITS
1. Joints in steel conduits shall be made by means of a solid coupler into which the adjacent ends of the two conduits shall be inserted and screwed up tightly in order to make the conduit run mechanically and electrically continuous;
2. Running couplings shall be avoided. Where such a coupling cannot be avoided, the coupler shall be screwed up tightly onto the short threaded portion of one conduit, the threaded portion of which shall project approximately half way into the length of the coupler. The threaded portion of the mating conduit should also project approximately half way into the coupler;
3. Electrical continuity should be ensured by tightening up a hexagon locknut against the coupler;
4. Any exposed threads on either conduit shall be painted with at least two coats of anti-rust paint.

ELE11.3.030.8 PROVISION OF ADAPTABLE BOXES
1. An adequate number of suitably sized adaptable boxes shall be provided in all conduit runs to enable cables to be drawn in easily and without damage;
2. Adaptable boxes shall be provided immediately after every two bends, after a bend plus a total maximum straight run of 10 m or after a maximum straight run of 15 m;
3. Where an adaptable box is required for conduits installed in the floor screed, it shall be fitted in such a manner that the lid is covered by the same material as the remainder of the floor, and shall remain accessible at all times.

ELE11.3.040.8 SPACING BETWEEN CONDUITS
Adjacent or parallel conduits cast in concrete (except the first 200 mm straight runs from the same box) shall be separated by a spacing of not less than 25 mm so as to allow concrete aggregate to pass and set between them.

ELE11.3.050.8 TERMINATION OF STEEL CONDUITS AT METAL CASING
1. 
   a. Where a steel conduit terminates at a metal casing, a coupler or a brass adaptor for flexible conduit together with a brass male bush shall be used;
b. The brass male bush shall be screwed into the coupler or adaptor from the inside of the metal casing through a clearance hole drilled in the metal casing to suit the bush;

c. Both the conduit and the bush shall be screwed tightly into the coupler or adaptor so as to grip the metal casing securely for mechanical and electrical continuity;

d. Threads on the steel conduit shall be at least half the coupler length, and no threads on the metal casing shall be allowed;

e. The connection between the flexible conduit and the adaptor shall be securely fixed and effectively watertight.

2. Where the metal casing is painted or enamelled, the electrical continuity between the conduit and the casing shall be achieved by means of a separate protective conductor of adequate size connecting the conduit and an earth terminal inside the metal casing through a copper earthing placed between the bush and the metal casing. Neither the paint nor the enamel shall be damaged or removed to achieve electrical continuity.

**ELE11.3.060.8 CONDUIT BENDS**

Conduits shall not be bent with an acute angle. The internal radius of the bend shall not be less than 2.5 times the outside diameter of the conduit.

**ELE11.3.070.8 CHASES FOR CONDUITS**

Chases for conduits to be concealed in walls, columns or beams shall be vertical or horizontal.

**ELE11.3.080.8 CONDUITS CROSSING EXPANSION JOINTS**

1. Where a conduit crosses an expansion joint, special arrangements shall be made to allow relative movement to occur on either side of the expansion joint;

2. A separate circuit protective conductor shall be installed to maintain an effective electrical continuity across the expansion joint;

3. The circuit protective conductor shall have a cross-sectional area rated to suit the largest live conductors drawn into the conduits in accordance with for the Electrical CoP.

**ELE11.3.090.8 USE OF EXTENSION PIECE**

1. An extension piece shall be fitted to a conduit box where the plaster wall finish (including plaster) is more than 25 mm from the conduit box;

2. Only extension pieces of the correct depth shall be used;

3. Under no circumstances shall multiple extension pieces be permitted.

**ELE11.3.100.8 PREVENTION OF INGRESS OF FOREIGN MATTER**

1. During the building construction, all open ends of the conduit termination, which are liable to be filled with water, moisture or other foreign matter, shall be plugged with Approved conduit stopping plugs; paper or rag materials will NOT be allowed for this purpose;

2. Conduit boxes in similar circumstances shall also be similarly plugged to prevent concrete or plaster from entering the boxes during the building construction.
**ELE11.3.110.8**  
**PREVENTION OF ACCUMULATION OF WATER OR MOISTURE**  
1. The conduits shall be so laid to prevent accumulation of condensed moisture in any part of the installation. Due care shall also be taken to prevent the ingress of water into the conduits from leakage in walls and ceilings of the building structure;  
2. Approved type of sealant for the prevention of condensed moisture shall be applied to ceiling conduit outlets installed in a cool space subject to the influx of warm air.

**ELE11.3.120.8**  
**CONDUITS LAID DIRECT IN THE GROUND**  
Steel conduits laid direct in ground or buried in soil shall be painted with two coats of bituminous paint before installation.

**ELE11.3.130.8**  
**FIXING OF SURFACE MOUNTED BOXES**  
In surface conduit installations, conduit boxes, adaptable boxes and metal boxes for accessories shall be securely fixed to walls, ceilings or other substantial parts of a structure by means of suitable brass screws correctly spaced. The fixing of these boxes shall be independent of the fixing of the associated conduits.

**ELE11.3.140.8**  
**FIXING OF SADDLES**  
1. Galvanised distance saddles, for the support of surface conduits, shall be provided throughout the entire route at regular intervals;  
2. The spacing between the adjacent saddles shall not be more than those given in the Electrical CoP;  
3. Each bend of a surface conduit shall be supported by a saddle on either side of the bend, and the saddles shall be fixed as near to the bend as practicable;  
4. Distance saddles shall be fixed with brass screws in Rawplugs or other Approved method.

**ELE11.3.150.8**  
**CONDUITS INSTALLED OUTDOORS OR IN DAMP SITUATIONS**  
Where conduits are installed outdoors or in damp situations all conduit fittings and conduit accessories, shall not be placed in contact with other metals with which they are liable to set up electrolytic action. In addition, where the conduit installation is subjected to weather, the conduit fittings and conduit accessories shall be provided with weatherproof sealant or other materials to ensure that the installation is completely weatherproof.

**ELE11.3.160.8**  
**SWABBING OUT OF CONDUITS**  
Conduits shall be swabbed out and free from moisture before wiring work is commenced. The swabbing operation shall be carried out under the supervision of the authorised representative of the Contract Manager. Only Approved draw-in tape or wire of appropriate size and absorbent cloth shall be used.

**ELE11.3.170.8**  
**CONDUITS PASSING THROUGH FIRE RESISTANT BARRIERS**  
Where conduits pass through fire resistant structural elements, such as walls and floors designated as fire barriers, the opening made shall be sealed according to the appropriate degree of fire resistance of the wall and floor. In addition, where conduits are installed in channels, ducts, ducting, trunking or shafts which pass through such elements, suitable internal fire resistant barriers shall also be provided to prevent the spread of fire.
ELE11.3.180.8 IDENTIFICATION
Conduits, where required to be distinguished from pipelines of other services, shall use orange as the basic identification colour in compliance with BS 1710.

ELE11.3.190.8 CABLE CAPACITY OF CONDUITS
1. The number of cables drawn into a conduit shall be such that no damage will be caused to the cables or to the conduits during their installation;
2. In determining the size of the conduit, the "unit system" method as recommended by the Electrical CoP shall be adopted;
3. For cables and conduits NOT included in the Electrical CoP, the number of cables drawn into a conduit shall be such that the resulting space factor shall not exceed 40%.

ELE11.3.200.8 METHOD OF DRAWING CABLES INTO CONDUITS
Cables shall be drawn into conduits by using Approved draw-in tape or wire of the appropriate size. Only lubricating materials which are confirmed in writing from a cable manufacturer or recognised certification body that there will be no adverse effect on the cable insulation for the lifetime of the cable may be allowed to be used for drawing cables into conduits.

ELE11.3.210.8 SEGREGATION OF CABLES OF DIFFERENT CIRCUIT CATEGORIES
Separate conduits shall be provided for cables of different circuit categories.

ELE11.3.220.8 "LOOPING-IN" WIRING SYSTEM
Each conductor in a run shall be of one continuous length and wired on the "loop-in" system. No joint in cable run will be allowed.

ELE11.3.230.8 NUMBER OF FINAL CIRCUITS IN CONDUIT
A conduit serving final circuits direct from a distribution board or from an adaptable box used as the final distribution point shall contain one final circuit except in the case of lighting final circuit where two circuits with 1.5 mm² cables will be permitted in a 20 mm conduit. For 3 phase final circuits, a separate conduit shall be used for each circuit.

ELE11.3.240.8 GROUPING OF CABLES IN CONDUIT
1. Where an adaptable box is used as the final distributing point, a number of final circuits may be grouped together between the distribution board and the adaptable box by means of conduits of appropriate diameter. All live conductors of the same a.c. circuits shall be drawn into the same conduit;
2. Correction factors for grouping, as recommended by the Electrical CoP, shall be applied in determining the size of cables to be installed.

ELE11.3.250.8 NEUTRAL CABLE OF LIGHTING POINT
The neutral cable of a lighting final circuit shall be routed in the conduit direct to the lighting point and shall not pass through the switch box.
ELE11.4  TOOLS AND WORKMANSHIP

ELE11.4.010.8  TOOLS
Conduit bends shall be formed on a bending machine, and the conduits shall not be flattened at bends.

ELE11.4.020.8  CUTTING OF HOLES
Holes in metal work for the termination of conduits shall be drilled with a twist drill of the correct size or by means of other hole cutting device.

ELE11.4.030.8  REMOVAL OF BURRS AND SHARP EDGES
Burrs and sharp edges are to be removed from the ends of conduits before they are installed.

ELE11.4.040.8  MAKING GOOD OF DAMAGED COATING
Where the protective coating on a steel conduit has been damaged after installation, such surface shall be painted with at least two coats of an Approved anti-rust paint to prevent corrosion.

ELE12.1 TRUNKING SYSTEM

ELE12.1.010.8 ARRANGEMENT OF CABLES
Cables in each final circuit and/or in each sub-main shall be bunched and tied or clipped together.

ELE12.1.020.8 PROVISION OF CABLE RETAINING BARS AND CABLE SUPPORTS
1. Trunking, which is installed in such a position that the cables would fall out when the cover is removed, shall be fitted with cable retaining bars or other suitable devices to prevent cables from falling out;
2. Trunking installed in a vertical plane shall contain sufficient supporting devices within the trunking to prevent strain on the cables due to the weight of the cables, and to prevent vertical movement of the cables.

ELE12.1.030.8 CABLE CAPACITY OF TRUNKING
1. The number of cables put into a trunking shall be such that no damage is caused to the cable or the trunking;
2. In determining the size of the trunking required for a particular installation, the "unit system" method as recommended by the Electrical CoP shall be adopted;
3. For cables and trunking not included in the Electrical CoP, the number of cables to be enclosed in the trunking shall be such that the resulting space factor shall not exceed 45%.

ELE12.1.040.8 CORRECTION FACTORS FOR GROUPING
Where more than three loaded conductors or more than one multi-core cable are enclosed in a common trunking, suitable correction factors for grouping, as recommended by BS 7671 or IEC 60364, shall be applied in determining the size of the cables to be installed.

ELE12.1.050.8 SEGREGATION OF CABLES OF DIFFERENT CIRCUIT CATEGORIES
1. Where a common trunking is used to accommodate cables for different circuit categories, they shall be effectually segregated by means of partitions or dividers;
2. The partitions or dividers shall be adequately secured to the body of the trunking.
ELE12.2 MATERIALS FOR TRUNKING SYSTEM

ELE12.2.010.8 GENERAL
1. Trunkings and fittings shall comply with BS EN 50085-2-1, IEC 61084-2-1 or equivalent unless otherwise specified;
2. Manufacturer’s standard fittings such as tee or angle pieces, connectors etc. shall be used throughout unless prior Approval has been obtained from the Contract Manager;
3. Factory prefabricated trunking assemblies of repetitive pattern can be used for congested areas like meter rooms on various floors. Mock-up installation shall be set up for the Contract Manager’s approval prior to mass production of the prefabricated trunking assemblies.

ELE12.2.020.8 CLASS OF PROTECTION AGAINST CORROSION
Trunking and fittings shall have continuous hot-dip zinc coating on both sides with a minimum coating mass of 275 g/m².

ELE12.2.030.8 CONSTRUCTION
1. Trunking shall be of square or rectangular cross-section of which one side of the trunking shall be removable or hinged;
2. If screws are used to secure the cover or the connector, they shall not project internally over 2mm to avoid causing damage to the cables inside;
3. Where partitions or dividers are provided for the segregation of circuits, they shall be rigidly fixed to the main body of the trunking.

ELE12.2.040.8 MARKING ON TRUNKING
Every standard length of trunking shall bear an easily legible and durable marking by means of moulding, pressing or engraving showing the name or the trademark of the manufacturer, British Standard and / or International Electrotechnical Commission Standard, as appropriate. For short pieces without durable marking, the marking shall be provided at the internal wall of every piece of trunking in the form of painting or printed adhesive label.

ELE12.2.050.8 DIMENSIONS
1. The sizes, body and cover thicknesses and preferred lengths of surface trunking shall comply with Code 14C of the Electrical CoP;
2. Trunking to special order, having dimensions differing from those given in Code 14C of the Electrical CoP, may be used provided they meet all the other requirements as stated in this specification and with tolerance in external dimensions not exceeding +5%.
**ELE12.2.060.8 CONNECTIONS BETWEEN LENGTHS OF TRUNKING**

1. Connections between adjacent lengths of trunking, tee or angle pieces, accessories, etc. shall be made by means of U-shaped butt joints. The two adjacent ends of the trunking shall be fixed so that there shall be no relative movement between them. At least two screws shall be used to attach each connector to each section of the trunking;

2. Electrical continuity shall be achieved by means of a copper tape of minimum size 2mm x 12mm connecting the two adjacent ends of the trunking;

3. Prefabricated trunking assemblies shall have sections connected by welding or screws. Welding points shall be touched up with anti-rust paint.

**ELE12.2.070.8 TRUNKING COVERS**

1. Trunkings and fittings shall have removable or hinged covers extending over the entire length. The covers shall be of the same material and finish as those of the trunking body;

2. Removable covers shall be held in position on the trunking by the natural elasticity of the material of the cover (e.g. spring capped trunking); a means formed as an integral part of the cover (e.g. captive screws); or stainless steel spring clips fixed rigidly on trunking body by welding or by adhesive suitable for fixing metallic parts;

3. Bends, tee junctions, etc. shall be fitted with removable or hinged covers;

4. When trunking is mounted up-side-down or installed inside lift shaft, the trunking covers shall be fixed by screws.

**ELE12.2.080.8 SCREWS**

1. Screws used for securing the cover or connector and for the fixing of the trunking shall have isometric threads;

2. They shall be of brass or steel and if of steel they shall be protected against corrosion by a finish at least equal to the zinc coating specified in BS 7371-12;

3. Electro-brass plated screws or self-tapping screws will not be acceptable.
ELE12.3 INSTALLATION OF TRUNKING SYSTEM

ELE12.3.010.8 LAYOUT
Trunking shall be installed neatly on the surface of the walls, columns or beams and shall be truly vertical and horizontal.

ELE12.3.020.8 TRUNKING CONTINUITY
The trunking body and cover shall be mechanically and electrically continuous throughout, and efficiently earthed.

ELE12.3.030.8 CONNECTION TO APPARATUS
Connection between trunking and apparatus shall be by a screwed coupler and brass male bush, or a standard flange coupling or an adaptor neck, fabricated or casted. Direct attachment of trunking to apparatus will only be permitted if cable entries are provided with smooth bore bushes or grommets and the return edge of the lid of the trunking is left intact.

ELE12.3.040.8 CONNECTION TO DISTRIBUTION BOARD
Where connection is made between trunking and a distribution board, the cable entry or entries shall be sized to accept all cables from all used and "spare" ways.

ELE12.3.050.8 FIXING OF TRUNKING
1. Individual pieces of trunking shall be independently supported by means of at least two fixed points per piece;
2. On straight runs supports for trunking shall be fixed at regular intervals with maximum spacings as given in Code 25B of the Electrical CoP;
3. For runs with bends, supports shall be fixed as near to the bend as practicable;
4. Overhead trunking shall be suitably supported by means of mild steel hangers, brackets or other Approved devices, so that no visible sag is observed when loaded with cables. These supports shall be painted with at least two coats of an Approved anti-rust paint to prevent corrosion.

ELE12.3.060.8 CABLES THROUGH TRUNKING
Cables penetrating through trunking shall be protected by conduits except for PVC insulated and sheathed cables if such cables form part of a surface wiring system. In such cases, the holes in the trunking, through which such cables penetrate shall be fitted with suitable rubber grommets or insulated bushes.

ELE12.3.070.8 TRUNKING PASSING THROUGH FIRE RESISTANT BARRIERS
1. Whenever trunking passes through a fire resistant structural element, such as a floor or wall, designated as fire barrier, the opening thus formed shall be sealed with Approved type of fire resisting material according to the appropriate degree of fire protection required. In addition, suitable internal fire barriers shall also be provided to prevent the spread of fire or smoke through the trunking;
2. In vertical trunking installations, internal fire barriers shall be provided between floors or at intervals of 5 m apart whichever is less.
ELE12.3.080.8  PREVENTION OF ELECTROLYTIC ACTION
Whenever the trunking is installed in damp situations, or where the trunking is likely to be exposed to weather, the trunking shall be kept away from other metalwork with which electrolytic action is liable to be established.

ELE12.3.090.8  PREVENTION OF INGRESS WATER
Every entry to the trunking shall be so placed as to prevent and/or to be protected against the ingress of water.
ELE12.4  TOOLS AND WORKMANSHIP

ELE12.4.020.8  CUTTING IN TRUNKING

Holes in trunking shall be drilled, punched or cut by ring saw. After cutting, burrs and sharp edges on the trunking shall be removed to prevent abrasion of cables.

ELE12.4.030.8  MAKING GOOD OF DAMAGED COATING

Where the protective coating on the trunking has been damaged after installation or after welding, such surface shall be painted with at least two coats of an Approved anti-rust paint to prevent corrosion.

<td>IEC 60670-1 and dimensions to BS</td>
</tr>
<tr>
<td></td>
<td>4662</td>
</tr>
</tbody>
</table>

2. All PVC conduits, fittings and boxes shall be of the same make.

ELE13.1.030.8 COLOUR

All PVC conduits, fittings and boxes shall be white in colour.

ELE13.1.040.8 FLAME RESISTANCE

All PVC conduits, fittings and boxes shall be non-flame-propagating and self-extinguishing.

ELE13.1.050.8 TEMPERATURE CLASSIFICATION

All PVC conduits, fittings and boxes shall comply with the temperature classification for transport, installation and permanent application not less than -5°C. For PVC conduits, where the ambient temperature at the place of manufacture is likely to be below -5°C, the temperature classification of conduits shall be capable for transport, installation and permanent application not less than -25°C.
RIGID PLAIN PVC CONDUITS

ELE13.2 RIGID PLAIN PVC CONDUITS

ELE13.2.010.8 CONSTRUCTION AND SIZE
1. PVC conduits shall be rigid, plain and of a non-threadable type;
2. The nominal diameter of rigid plain PVC conduits shall be within the range of 20 mm to 32 mm unless otherwise specified.

ELE13.2.020.8 MECHANICAL PROPERTIES
Rigid plain PVC conduits shall have heavy mechanical strength, capable of withstanding the heavy compression and impact tests specified in IEC 61386-21 or BS EN 61386-21.

ELE13.2.030.8 TYPE-TEST CERTIFICATES
1. Rigid plain PVC conduits shall be type-tested for complete compliance with IEC 61386-21 or BS EN 61386-21 by an Accredited Laboratory;
2. Test certificates or test reports are acceptable for the purpose of product testing and certification.

ELE13.2.040.8 MARKING
1. Rigid plain PVC conduits shall be marked on the surface with the first four digit classification code for declared properties in accordance with IEC 61386-21 or BS EN 61386-21;
2. The PVC conduits shall have a minimum classification code of 4421. If the ambient temperature at the place of manufacture of the PVC conduits is likely to be below -5°C, the classification code of the PVC conduits shall be upgraded to 4441.
ELE13.4 PVC CONDUIT FITTINGS

ELE13.4.010.8 CONSTRUCTION
1. Plain, moulded slip-type couplers and expansion type couplers to IEC 61386-1 or BS EN 61386-1 shall be used in the jointing of conduits;
2. Saddles and spacers in compliance with IEC 61386-1 or BS EN 61386-1 shall be used for fixing of conduits unless otherwise specified.

ELE13.4.020.8 TYPE-TEST CERTIFICATES
1. PVC conduit fittings shall be type-tested for complete compliance with the following standards by an Accredited Laboratory:
   a. Plain moulded slip type coupler: IEC 61386-1 or BS EN 61386-1 or BS 4607-5;
   b. Male bush and female adaptor: IEC 61386-1 or BS EN 61386-1 or BS 4607-1.
2. Test certificates or test reports are acceptable for the purpose of product testing and certification.
ELE13.5 PVC CIRCULAR CONDUIT BOXES, PVC BOXES FOR ELECTRICAL ACCESSORIES AND PVC ADAPTABLE BOXES

ELE13.5.010.8 CONSTRUCTION AND DIMENSIONS

1. All PVC boxes and their covers shall comply with the relevant International Standard and British Standard Specifications listed above in ELE13.1.020;

2. All screw holes shall be fitted with metal inserts. Other than PVC adaptable boxes, each box shall be provided with a brass earthing terminal complete with screw for the connection of circuit protective conductor (CPC);

3. Ceiling-mounted circular conduit boxes shall be of deep pattern type having an internal depth of not less than 60 mm. Extension rings shall comply with IEC 60670-1;

4. Each PVC box shall be moulded in one piece;

5. The minimum wall thickness of IEC 60670-1 boxes and adaptable boxes shall be 2 mm;

6. For flush installation, the overall sizes of the covers of the PVC adaptable boxes shall be larger than the adaptable boxes on each edge by at least 5 mm. Screws for securing the cover shall be of stainless steel;

7. BS 4662/IEC 60670 boxes equipped with spouts for mounting wiring accessories can be used as an alternative for easy connection to conduits.

ELE13.5.020.8 MECHANICAL PROPERTIES

1. All PVC boxes shall comply with the requirements for mechanical properties stated in the relevant International Standard and British Standard Specifications listed in ELE13.1.020 above;

2. PVC adaptable boxes shall be moulded of sufficient mechanical strength to withstand forces encountered in concealed conduit wiring system application and complete with provision for prevention of deformation of the boxes where necessary;

3. Boxes for the suspension of luminaires or other equipment, where considerable heat will be produced, shall be fitted with steel insert clips;

4. Plastic boxes shall not be used in situations where the temperature of the box is likely to exceed 60°C or where the mass suspended from the box exceeds 3 kg.

ELE13.5.030.8 TYPE-TEST CERTIFICATES

1. PVC circular conduit boxes, PVC boxes for electrical accessories and PVC adaptable boxes shall be type-tested for complete compliance with IEC 60670-1 by an Accredited Laboratory;

2. Test certificates or test reports are acceptable for the purpose of product testing and certification.
TOLERANCE IN SETTING-OUT OF CONCEALED JUNCTION/ADAPTABLE BOXES ON WALLS AND SLABS INSIDE DOMESTIC FLATS AND AT PUBLIC AREAS IN STANDARD BLOCKS

The deviation of the installed position of concealed junction/adaptable boxes from the specified position as shown in the Drawings shall be within a tolerance of ±150 mm with the following considerations:

1. Inside domestic flats:
   In general, the sockets outlets and lighting switches etc. shall be at the same level in the same room. Vertical levels of boxes designed at the same level on the same structural wall shall be within ±8 mm, and that on the same panel wall shall be within ±3 mm.

2. At public areas:
   In general, junction boxes shall be aligned and properly confined in a small area. The regular pattern of the boxes and their alignment along the corridors' ceiling slabs shall be maintained within ±10 mm.

3. The installed position of boxes after taking the above tolerance into consideration shall not contravene the requirements of the position of switches/sockets as stipulated in the Design Manual - Barrier Free Access 2008; nor have conflict with other installations such as skirting, door frame, etc.;

4. Deviations exceeding the tolerance under special site condition shall be subject to the approval of the Contract Manager.

CONCEALED CONDUITS INSTALLATION ON PANEL WALLS WITH PRE-INSTALLED CONDUITS

1. Coordinate with Main Contractor for the alignment of the concealed conduit in the slab and the pre-installed in panel walls;

2. Interconnect conduits from ceiling slab to pre-installed conduits in panel wall partitions including the provision of conduits, couplers, sockets and all electrical accessories;

3. Wherever necessary, adjust alignment of conduits in ceiling slab and conduit ends at the open slots of panel walls for smooth interconnection;

4. Interconnect the draw wires in the conduits in ceiling slab and the draw wires in the pre-installed conduits for subsequent wiring work;

5. Attend and coordinate with the Main Contractor for the making good of the open slots on panel wall;

6. Installation of concealed conduits in panel walls shall follow the Electrical CoP. Unless otherwise specified, mechanical protection cover for pre-installed conduits shall comply with the Electrical CoP.
ELE13.6 CONDUIT AND WIRING INSTALLATION

ELE13.6.010.8 CONDUIT BENDS
Conduit bends shall have an internal radius of at least 4 times the outside diameter of the conduit.

ELE13.6.020.8 BENDING, JOINTING AND TERMINATING OF CONDUITS
The method of carrying out the conduit bends, conduit joints, fixing conduits to boxes without spouts, and the tools and materials to be used shall be as recommended by the manufacturer of the conduits.

ELE13.6.030.8 EARTHING
Unless otherwise specified, a PVC insulated cable shall be drawn into the conduit system to serve as the circuit protective conductor (CPC), the cross-sectional area of which shall comply with Electrical CoP for the size of the largest live conductors enclosed.

ELE13.6.040.8 EARTHING FOR PRE-INSTALLED STEEL CONDUIT
In case pre-installed steel conduit is adopted in panel wall, provide earthing of the metal boxes to the corresponding wiring accessories with cost agreed with and borne by the Main Contractor.
ELE13.7  TRUNKING AND FIXING

ELE13.7.010.8  GENERAL

Trunking of sizes up to 100 mm x 100 mm shall have covers of the clip-on type. Larger sizes shall have covers secured by special plastic rivets.

ELE13.7.020.8  FIXING OF TRUNKING

1. The trunking shall be fixed and supported in the normal way by screws, but the holes in the trunking shall be made oversize to allow for the movement of expansion;
2. Washers shall be used under the head of the screw which should not be tightened to its full extent;
3. The spacing between adjacent supports for trunking shall not be larger than those given in the Electrical CoP.

ELE13.7.030.8  EARTHING

Unless otherwise specified, a PVC insulated cable shall be drawn into the trunking system to serve as the circuit protective conductor (CPC), the cross-sectional area of which shall comply with the Electrical CoP for the size of the largest live conductors enclosed.

ELE13.7.040.8  ALLOWANCE FOR THERMAL EXPANSION

Due allowance shall be made for the expansion of the PVC tubing at high temperatures. Expansion coupling or other fittings shall be included in a straight run of 8 m or more. Saddles or clips shall be of sliding fit.

ELE14.1 PROTECTION OF STRUCTURES AGAINST LIGHTNING

ELE14.1.010.8 INSTALLATION OF LIGHTNING PROTECTION SYSTEMS
1. The lightning protection system shall comprise an air termination network connected by down conductors to earthing electrodes;
2. The lightning protection systems shall be installed in accordance with Project Specific Specification and Drawings, and as directed by the Contract Manager.

ELE14.1.020.8 SCOPE
1. This section covers lightning protection systems applicable to buildings and similar structures;
2. It does not cover the protection of overhead lines and other specialised applications;
3. The installation shall conform to the requirement and recommendations set out in IEC 62305-1 and IEC 62305-2 and IEC 62305-3 and IEC 62305-4, or BS EN 62305-1 and BS EN 62305-2 and BS EN 62305-3 and BS EN 62305-4, or AS/NZS 1768.

ELE14.1.050.8 AIR TERMINATION ON ROOF AND UPPER ROOF
1. An air termination consisting of a network of aluminium roof conductors shall be provided on roof and upper roof as shown on the Drawings;
2. All salient points of the roof structure shall be incorporated in the air termination network;
3. All metallic projections, chimneys, ducts, vent pipes, railings, gutters, etc., on or above the main surface of the roof of the roof structure, shall be fixed to, and form part of, the air termination network by appropriate clamps;
4. Aluminium roof conductors shall be of 25 mm x 3 mm and fixed to the roof structure at regular intervals of not more than 0.5 m by means of spacer saddles;
5. The spacer saddles shall be of pressing or casting aluminium alloys.

ELE14.1.055.8 AIR TERMINATION ON SIDE WALLS
1. Air termination on external wall of the building, if required, shall be in form of tinned copper plate of thickness not less than 4 mm mounted on the cast in bonding point as shown on the Drawings;
2. The cast in bonding point shall be of copper and pre-welded to a 70 mm² PVC insulated cable. The cable shall be bonded to two reinforcement bars by means of rod-to-cable clamps;
3. The tinned copper plate shall have good contact with the cast in bonding point and shall be properly protected to avoid covering up by the external wall paint. The fixing screws shall be welded to the tinned copper plate after testing to be having negligible resistance to the down conductor. The Sub-contractor shall coordinate with the Main Contractor on the sequence of installation during construction.

ELE14.1.060.8 DOWN CONDUCTORS
1. Down conductors shall be of 25 mm x 3 mm aluminium strips, or steel reinforcement bars as shown on the Drawings;
2. The reinforcement bars extended from the foundation shall be tested to be having low earthing resistance before selected as down conductors. At each down conductor position, two reinforcement bars shall be used;

3. Continuity shall be maintained between different sections of the selected reinforcement bars by using clamps as shown on the Drawings. Each connection shall be tested to be at negligible resistance before concreting. The Sub-contractor shall ensure the reinforcement bars at the same position, from foundation up to the roof, to be used as the down conductors;

4. The reinforcement bars selected as down conductors shall be connected to the aluminium roof conductors and the cast in bonding point on external wall according to the details and locations as shown on the Drawings;

5. The total resistance measured from the earth inspection pit to each down conductor on roof and to each cast in bonding point on external wall shall be recorded.

ELE14.1.080.8 EARTH TERMINATION
The building foundation shall be used as the earth electrode of the lightning protection system. The steel reinforcement bars of the foundation shall be connected to earth inspection pits via cast in bonding point and copper tape as shown on the Drawings. The complete lightning protection system shall have a combined resistance to earth not exceeding 10 ohms. Where it is difficult, due to local conditions, to obtain a value of less than 10 ohms by the sole use of the foundation, additional rod electrodes complying with ELE17.3 shall be provided and connected to the copper link inside the earth inspection pits until the combined resistance to earth not exceeding 10 ohms. The proposed installation details shall be submitted for the Contract Manager's approval prior to commencement of works.

ELE14.1.110.8 BONDING TO OTHER SERVICES
1. Lightning protection systems shall normally be kept segregated from the metalwork of other services;

2. The earthing of electrical system shall be bonded to the lightning protection system through the main earthing terminal provided inside the main switch room and services rooms as shown on the Drawings;

3. Cables, earthing systems and pipes belonging to the Supply Company, the Telephone Companies, the Hong Kong & China Gas Co. Ltd. and other utility companies shall not be bonded except with the written permission of such companies.

ELE14.1.120.8 BONDING TO METALWORK
Unless otherwise stated, metalwork on roof shall be bonded to the roof conductor by means of 25 mm x 3 mm aluminium strip. The bonding of movable items to the lightning protection system shall use flexible copper braid with termination nut suitable for connection to aluminium conductor. The connections shall be of negligible resistance, metal to metal and mechanically sound with non-ferrous nuts, bolts and washers using clamps where necessary.

ELE14.1.130.8 JOINTS IN CONDUCTORS
Joints in aluminium roof conductors shall be made by suitable tape clamps. The tape clamps shall each be provided with at least 4 screws or bolts. All such joints shall have negligible resistance and good mechanical strength.
ELE14.1.140.8 TESTING

1. On completion of the installation, the lightning protection system shall be tested and recorded in accordance with the checklists given in Appendix 13 of the Electrical CoP;

2. The earthing resistance of the foundation metalwork shall also be tested in accordance with Code 21 of the Electrical CoP with test instruments approved by the Contract Manager;

3. The results of all tests shall be submitted to the Contract Manager for record.

ELE16.1 TELECOMMUNICATION SYSTEMS

ELE16.1.010.8 SCOPE

1. This sub-section covers the conduit installations for the following systems:
   a. Telephone;
   b. Inter-communication and Public Address (PA) Systems;
   c. Communal Aerial Broadcast Distribution (CABD) System;
   d. Subscription Television Distribution Network (STDN).
2. Separate conduits shall be provided for each of these systems;
3. Nylon draw-wires of adequate strength shall be provided in all empty conduits.

ELE16.1.020.8 CONDUITS FOR TELEPHONE AND PA SYSTEMS

Conduits shall be of PVC not smaller than 20 mm in diameter, and shall be installed in accordance with ELE11.

ELE16.1.030.8 OUTLET BOXES FOR TELEPHONE POINTS

1. At each telephone outlet position, the conduit shall be terminated at a 47 mm deep BS 4662 box for electrical accessories with blank cover plate. If the outlet is installed with a telephone outlet plate by the FTNS operator, the provision of blank cover plate is not required;
2. Outlet boxes shall be located at skirting level or otherwise as stated on the Drawing;
3. The cover plate shall be of moulded material unless otherwise specified.

ELE16.1.040.8 OUTLET BOXES FOR PA SYSTEMS

1. At each PA outlet position, the conduit shall be terminated at a 47 mm deep BS 4662 box for electrical accessories with blank cover plate. If the outlet is installed with equipment on top, the provision of blank cover plate is not required;
2. Outlet boxes shall be fixed at skirting level or otherwise as stated on the Drawing.

ELE16.1.060.8 CONDUITS FOR CABD/STDN SYSTEMS

1. Conduits for CABD/STDN systems shall be of PVC, not smaller than 25 mm in diameter, and shall be installed generally in accordance with ELE11;
2. They shall be kept clear of power and telephone conduits and shall be arranged to cross them at right angles whenever possible;
3. Draw-in boxes shall be provided at intervals of not exceeding 10 metres and at all 90° changes of direction, unless otherwise shown on the Drawings.

ELE16.1.070.8 OUTLET BOXES FOR CABD/STDN SYSTEMS

1. At each CABD/STDN outlet position, the conduit shall be terminated in a 47 mm deep BS 4662 box for electrical accessories with blank cover plate. If the outlet is installed with CABD/STDN socket, the provision of blank cover plate is not required;
2. Outlet boxes shall be fixed at skirting outlet plate level or otherwise as shown on the Drawing.
**ELE16.2 BELL AND AUDIBLE WARNING SYSTEM**

**ELE16.2.040.8 CALL BELL AND DOOR BELL SYSTEMS**

1. Bells shall operate at a voltage not exceeding 24V a.c. obtained from a double wound transformer which shall be connected to the mains supply through a 2A fused connection unit, unless otherwise specified;

2. Unless otherwise specified cables shall be 1.5 mm² PVC insulated cables enclosed in conduit for concealed conduit installation.

**ELE16.2.050.8 BELLS FOR EXTRA LOW VOLTAGE**

1. Call bells shall be of the underdome type having a gong of approximately 75 mm diameter and shall be fixed to a substantial frame;

2. Door bell shall be 2 tones sound and of a wall mounted design with white or ivory colour cover and is to be free of any projection on the rear surface;

3. Door bell shall be classified, as a minimum requirement, to Class II as described in IEC 60335-1;

4. The insulating enclosure of the door bell shall be opened only with the use of a tool and this insulating enclosure shall provide a degree of protection of at least IP20 as described in IEC 60529. Where the enclosure can be opened without the use of a tool, every conductive part which is accessible if the enclosure is open shall be behind an insulating barrier which prevents a person from coming into contact with those parts; this insulating barrier shall provide a degree of protection of at least IP20 as described in IEC 60529 and be removable only by use of a tool.

**ELE16.2.060.8 BELL TRANSFORMERS**

1. Bell transformers shall be a single phase, double wound, safety isolating transformer specifically intended to supply domestic sound signalling equipment and comply with IEC 61558-2-8. Factory test certificates shall be submitted as evidence of compliance with the required standard;

2. The transformer shall be inherently short circuit proof. The reactance of the transformer winding shall be of such value that a continuous short circuit across the terminals of the secondary winding shall not damage the transformer, or cause dangerous overheating;

3. The windings, core and terminals of the transformer shall be contained within an insulating plastic case.

**ELE16.2.070.8 CONNECTION OF BELL TRANSFORMERS**

Bell transformers shall be connected to the lighting final circuit as shown on the Drawing, unless otherwise specified.

**ELE16.2.080.8 CALL BELL PUSHES**

1. Call bell pushes for indoor use shall be of flush pattern with white or ivory colour front plate;

2. Call bell pushes for outdoor use, or for areas where they may be subjected to rain or water, shall be weatherproof.
ELE16.2.090.8 MOUNTING OF CALL BELL PUSHES
1. In conduit installations, bell pushes shall be fixed in 35 mm deep, BS 4662 boxes for electrical accessories;
2. In surface cable installations, bell pushes shall be fixed in a plastic pattress;
3. Bell pushes shall not be mounted on doors without Approval.

ELE16.2.140.8 SEGREGATION OF CIRCUITS
Cables for operation at extra low voltage shall not be routed in the same conduit with cables for operation at higher voltages.

ELE17.1 GENERAL

ELE17.1.010.8 SCOPE

Unless otherwise specified the protective measures for fault protection is by earthed equipotential bonding and automatic disconnection of supply.

ELE17.1.020.8 COMPLIANCE WITH RULES AND REGULATIONS

The Sub-contractor shall provide the earthing system for the electrical installation, and also bond the electrical installation and extraneous conductive parts to fully comply with the Electrical CoP, BS 7671, Supply Rules and BS 7430 Code of practice for earthing.

ELE17.1.030.8 BONDING FOR EXTRANEOUS CONDUCTIVE PARTS

1. Building exposed metallic parts such as metallic doors, windows, louvres, burglar bars, railings, water supply pipeworks, drainage pipe, catladder etc. are extraneous conductive parts requiring equipotential bonding;

2. Main equipotential bonding

   Main equipotential bonding conductors should be provided in accordance with ELE17.5,

3. Supplementary Bonding

   Supplementary bonding conductors should be provided in accordance with ELE17.6,

4. The Sub-contractor shall ensure the bonding for extraneous conductive parts is sound and the result complies with the Electrical CoP and BS 7671 by proper measurement with records at good time. For those parts of equipotential bonding system found not electrical conductive, the Main Contractor and the Sub-contractor shall be responsible for rectification of their own works as early as possible.
ELE17.2 MAIN EARTHING TERMINALS

ELE17.2.010.8 LOCATION
A solid copper main earthing terminal of ample size shall be provided for every electrical installation at a position near the main incoming switch or switchboard for the connection of the circuit protective conductors, the main equipotential bonding conductors, the structural earthing terminal and the earthing conductors to create the equipotential zone.

ELE17.2.020.8 SEPARATE BUILDINGS OR UNITS
Where an installation distributes to a number of buildings or units, a separate main earthing terminal shall be provided for each individual building or unit at the point of intake thereby creating a separate equipotential zone in each building or unit.

ELE17.2.030.8 CONNECTION TO EARTH
The mains earthing terminal shall be connected to Earth via an earthing conductor to an earth electrode or a group of electrodes.
ELE17.3 EARTH ELECTRODES

ELE17.3.010.8 TYPES OF EARTH ELECTRODES

Unless otherwise specified in Project Specific Specification or on the Drawings, rod electrodes shall be installed.

ELE17.3.020.8 ROD ELECTRODES

1.
   a. Rod electrodes shall be of mild steel inner core with a bonded hard drawn copper sleeve of an Approved type.
   b. The overall diameter of the rod shall not be less than 14 mm and the thickness of the copper sleeve shall not be less than 0.25 mm;
   c. The minimum length shall be 2.4 m. The length shall comprise a single piece of rod or two 1.2 m pieces coupled together;
   d. Additional lengths, whenever required, shall each be of 1.2 m, connected together by a coupling;
   e. The penetrating end of the rod electrode shall be a hardened steel point.

2. Rod electrodes shall be driven into the ground within an earth pit. Only Approved tools e.g. electric hammer or pneumatic hammer shall be used for their installation;

3. The number of rod electrodes and the location of the earth pits shall be determined on site such that the resultant earth loop impedance will effect the disconnection of supply within 5 sec. by the protective device in case of any earth faults occurred at any part of the installation other than the final circuits;

4.
   a. In cases where the earthing resistance achieved by one rod is not sufficiently low for the purpose required, additional lengths or additional rods shall be installed;
   b. For the latter application, the additional rods shall be driven into the ground outside the resistance area of the previously installed rods;
   c. Under normal circumstances, a mutual separation of 3.5 m is considered adequate;
   d. All rods thus installed shall be connected together by means of 25 mm x 3 mm copper tapes enclosed in PVC ducts and laid at a minimum depth of 600 mm below ground surface;
   e. The connecting copper tapes shall be run in direct lines between the rods.
ELE17.4 EARTHING CONDUCTORS

ELE17.4.010.8 CONDUCTOR MATERIALS
Earthing conductors shall be copper tapes 25 mm x 3 mm in cross section and for outdoor application, the copper tapes shall be tinned.

ELE17.4.020.8 CONNECTION TO ELECTRODES
1. The earthing conductor shall be connected to the earth electrode(s) by means of Approved copper connector-clamps such that the connection can only be disconnected by means of a tool;
2. The connection shall be contained within a concrete lined earth pit with a substantial removable cover to ensure accessibility and maintainability.
ELE17.5  MAIN EQUIPOTENTIAL BONDING CONDUCTORS

ELE17.5.010.8  CONDUCTOR MATERIALS
Unless otherwise specified, main equipotential bonding conductors shall be of copper.

ELE17.5.020.8  BONDING POSITIONS
1. Main equipotential bonding conductors shall connect the extraneous conductive parts of other services within the premises to the main earthing terminal of the installation;
2. Such extraneous conductive parts shall include main water and gas pipes, other service pipes and risers and exposed metallic parts of the building structure liable to transmit a potential;
3. Connections shall be made as near as practicable to the point of entry of the non-electrical services into the premises concerned, and shall be on the installation side of the possible breaks in the system, such as gas meter or water meter.

ELE17.5.030.8  BONDING METHOD
Unless otherwise specified or shown on Drawings, the main equipotential bonding conductors shall be securely and reliably connected to extraneous conductive parts of the non-electrical services by means of a connector-clamp of an Approved type suitable for the particular applications or other effective bonding methods approved by the Contract Manager. All contact surfaces shall be clean and free from non-conducting materials, such as grease or paint, before making the connection.
ELE17.6 SUPPLEMENTARY BONDING CONDUCTORS

ELE17.6.010.8 CONDUCTOR MATERIALS

Unless otherwise specified, supplementary bonding conductors shall be of copper.

ELE17.6.030.8 APPLICATION

Supplementary bonding of extraneous conductive parts will be required whenever such conductive parts are likely to be accessible simultaneously with other extraneous conductive parts, or exposed conductive parts, and are not electrically connected to the main equipotential bonding by means of permanent and reliable metal-to-metal joints of negligible impedance.

ELE17.6.040.8 BONDING METHODS

1. Unless otherwise specified or shown on Drawings, the supplementary bonding conductors shall be solidly and effectively connected to the extraneous or exposed conductive parts by means of a connector-clamp of an Approved type suitable for the application or other effective bonding methods approved by the Contract Manager. All contact surfaces shall be clean and free from non-conducting materials, such as grease or paint, before making the connection;

2. For surface conduit installations, the supplementary bonding conductors shall be terminated at the nearest conduit or conduit box forming an integral part of the conduit installation;

3. Unless otherwise specified or shown on Drawings, for concealed conduit installations, the subject extraneous or exposed conductive part shall be terminated via a cord outlet plate with 1 no. supplementary bonding conductor. The BS 4662 conduit box of the cord outlet plate, forming an integral part of the conduit installation shall be located as near as possible to the bonding position and the exposed part of the supplementary bonding conductor shall be made as short as possible;

4. When necessary and required, insulated connector enclosed in base box of cord outlet plate (for bonding conductor) or base box of electrical equipment in vicinity of extraneous or exposed conductive part can be used for interconnection of all associated supplementary bonding conductors from related extraneous or exposed conductive part or from earthing terminal of the nearby electrical equipment in order to achieve the requirements of the Electrical CoP on electrical bonding.
ELE17.7 CIRCUIT PROTECTIVE CONDUCTORS (CPC)

ELE17.7.010.8 GENERAL
Circuit protective conductors (CPC) may be formed by a separate conductor/cable, the metallic sheath or armour of a cable, part of the same cable as the associated live conductor, rigid steel conduits, trunking or ducting, or the metal enclosure of the wiring system. Flexible conduits and the exposed conductive parts of equipment shall not form part of the circuit protective conductors.

ELE17.7.030.8 CPC FOR FLEXIBLE CONDUIT
For every length of flexible conduit, a separate circuit protective conductor shall be provided inside the conduit to ensure the earth continuity of the installation between the two ends of the flexible conduit.

ELE17.7.040.8 CPC FOR BUSBAR TRUNKING AND BUSWAY
1. A copper tape, 25 mm x 3 mm in cross section shall be provided for the entire length of a busbar trunking or busway. The copper tape shall be bonded to the busbar trunking or busway at intervals not exceeding 3 m and at the position of each tape-off point;
2. Subject to prior Approval the provision of copper tapes for a busbar trunking or busway may be exempted provided that the enclosure of the busbar trunking or busway can be proved to satisfy the full requirements of the circuit protective conductor.

ELE17.7.050.8 CPC FOR FINAL RING CIRCUIT
For wiring systems using PVC insulated, PVC sheathed cables, the circuit protective conductor of every ring final circuit shall also be run in the form of a ring having both ends connected to the earth terminal at the origin of the circuit.
ELE17.8  JOINTS IN PROTECTIVE CONDUCTORS

ELE17.8.010.8  Provision for Disconnection
Provision shall be made in an accessible position for disconnecting a protective conductor from the main earthing terminal or the earth electrode to permit testing and measurements of earthing resistance.

ELE17.8.020.8  Means of Disconnection
Such joints shall only be disconnected by means of a tool, be mechanically strong and shall be tinned to maintain the electrical continuity reliably.

ELE17.8.030.8  Use of Switching Devices
No switching devices shall be inserted in a protective conductor.
ELE17.9  IDENTIFICATION AND LABELLING

ELE17.9.010.8  COLOUR IDENTIFICATION

1. All cables used as protective conductors, including earthing conductors, main equipotential bonding conductors, supplementary bonding conductors and circuit protective conductors shall be identified by the colour combination "green and yellow";

2. Bare copper tapes used as protective conductors shall also be made similarly identifiable, by the application of tapes with the above colour combination at maximum 2 m intervals and at each tee-off points.

ELE17.9.020.8  LABELS FOR EARTHING AND BONDING CONNECTIONS

Every point of connection for earthing conductor to an earth electrode and the main equipotential bonding shall be provided with a warning notice in accordance with ELE28.1.
ELE17.10 SIZING OF PROTECTIVE CONDUCTORS

ELE17.10.010.8 PROTECTIVE CONDUCTORS

1. The cross sectional area of a protective conductor, excluding equipotential bonding conductors, shall comply with Code 11 C of the Electrical CoP. Alternatively, it can be calculated using the formula given in Regulation 543.1.3 of BS 7671;

2. When a separate PVC insulated copper cable is used as the protective conductor and not contained in conduit, trunking, ducting or other enclosure of a wiring system, it shall have a minimum cross sectional area of 4 mm² and shall be insulated to BS EN 50525-2-31 or better unless its CSA is greater than 6 mm²;

3. When metal enclosures for cables are used as protective conductors, they shall have CSA equivalent to that of copper, not less than that resulting from the above-mentioned adiabatic equation.

ELE17.10.020.8 PROTECTIVE CONDUCTORS BURIED IN SOIL

Where protective conductors are buried in the soil, they shall comply with Code 11H(a) of the Electrical CoP.

ELE17.10.030.8 EQUIPOTENTIAL BONDING CONDUCTORS

1. The cross sectional area of a main equipotential bonding conductor shall comply with Code 11E(d) of the Electrical CoP;

2. The cross-sectional area of a supplementary bonding conductor shall comply with Code 11F(d) of the Electrical CoP.
ELE17.11 EARTH FAULT LOOPS

ELE17.11.010.8 AUTOMATIC DISCONNECTION TIME

The characteristics of the protective devices for automatic disconnection shall be coordinated with the earthing impedances of the circuits and comply with Code 11B(b) of the Electrical CoP.

ELE17.11.030.8 MAXIMUM EARTH FAULT LOOP IMPEDANCE

1. The maximum permissible earth fault loop impedance shall comply with Code 11 I of the Electrical CoP;

2. Where the armouring of an armoured cable forms part of the circuit protective conductor, and if the maximum earth fault impedance exceeds the specified limits, a separate protective conductor of appropriate size shall be provided.
ELE17.12 USE OF RESIDUAL CURRENT-OPE
RATED CIRCUIT BREAKER
(RCCB)

ELE17.12.010.8 GENERAL

1. RCCBs shall be installed for final circuits where the earth fault loop impedance is too high to allow sufficient earth fault current to operate the overcurrent protective device within the specified automatic disconnection time of 0.4 seconds or 5 seconds. In such cases, the product of the rated residual operating current in amperes of the residual current-operated circuit breaker and the earth fault loop impedance, in ohms, of the circuit shall not exceed 50;

2. Residual current-operated circuit breaker shall meet the requirements specified in ELE3.6.

ELE17.12.020.8 APPLICATION IN HOUSEHOLD INSTALLATIONS

RCCBs used to protect socket outlet circuits in a household or similar installation shall have a rated operating residual current not exceeding 30 mA.

ELE17.12.030.8 EQUIPMENT OUTSIDE SAME EQUIPOTENTIAL ZONE

For circuits supplying fixed equipment outside the equipotential zone shall refer to Code 11B(b)(iii) of the Electrical CoP.

ELE18.1  GENERAL

ELE18.1.010.8  COMPLIANCE WITH REGULATION

Domestic appliances together with their electric components and cabling shall comply with the currently-in-force edition of Electrical Products (Safety) Regulation, CAP 406G, Laws of Hong Kong.
ELE18.2 400MM SWEEP ROTARY CEILING FAN

ELE18.2.010.8 CAPACITY
The unit shall be capable of an air delivery of not less than 1.1 m³/s.

ELE18.2.020.8 DIMENSION
The sweep diameter of the unit shall be 400 mm.

ELE18.2.030.8 DUTY
1. The unit shall be suitable in all respects for operation in ambient air condition of 40°C and 95% R.H;
2. The unit shall be suitable for operation on 220V, 50Hz, single phase a.c. supply;
3. The fan shall not require periodic lubrication;
4. The fan shall operate quietly at all speeds.

ELE18.2.040.8 CONSTRUCTION
1. General:
   a. The unit shall be of deluxe pattern with smooth, safe edges and "easy-to-disassemble" design for cleaning;
   b. The fan shall have high quality aluminium or plastic blades;
   c. The fan shall be fully balanced after assembly;
   d. The blades shall be enclosed by chromed, closely meshed metal guard. The gap of the guard slots shall preferably be not greater than 13 mm at the widest;
   e. The fan shall be provided with rotary mechanism for a swing of 360° when mounted on the ceiling;
   f. The whole unit shall be finished to manufacturer's standard light colour Approved by the Contract Manager.
2. Electrics:
   a. All electrical components, cables etc. shall conform to the appropriate British Standards Specification, or shall be of fully equivalent quality and capacity;
   b. All exposed metal parts of the unit shall be suitably earthed via the 3 core flexible cable;
   c. The fan shall be provided with two (2) metres of 0.75 mm², 3 core, PVC insulated and sheathed flexible cable.
ELE18.3  400MM SWEEP ELECTRIC WALL FAN

ELE18.3.010.8  CAPACITY
The unit shall be capable of an air delivery of not less than 1.1 m³/s.

ELE18.3.020.8  DIMENSION
The sweep diameter of the unit shall be 400 mm.

ELE18.3.030.8  DUTY
1. The unit shall be suitable in all respects for operation in ambient air condition of 40°C and 95% R.H;
2. The unit shall be suitable for operation on 220V, 50Hz, single phase a.c. supply;
3. The fan shall not require periodic lubrication;
4. The fan shall operate quietly at all speeds.

ELE18.3.040.8  CONSTRUCTION
1. General:
   a. The unit shall be of deluxe pattern with smooth, safe edges and "easy-to-disassemble" design for cleaning;
   b. The fan shall have high quality aluminium or plastic blades;
   c. The fan shall be fully balanced after assembly;
   d. The blades shall be enclosed by chromed, closely meshed metal guard. The gap of the guard slots shall preferably be not greater than 13 mm at the widest;
   e. The unit shall be suitable for direct fixing on to a wall. Conversion from Desk Fan will NOT be accepted;
   f. The unit shall be fitted with "3-speed and off" push bottom or pull switch.
   g. The fan shall be provided with oscillating and tilting mechanism for horizontal swing and vertical adjustment respectively;
   h. The oscillator shall have a clutch that slips or disengages if the fan meets an obstruction as it swings. The mechanism shall also be easily disengaged when not required;
   i. The whole unit shall be finished to manufacturer’s standard light colour Approved by the Contract Manager.
2. Electrics:
   a. All electrical components, cables etc. shall conform to the appropriate British Standards Specification, or shall be of fully equivalent quality and capacity;
   b. All exposed metal parts of the unit shall be suitably earthed via the 3 core flexible cable;
   c. The fan shall be provided with two (2) metres of 0.75 mm², 3 core, PVC insulated and sheathed flexible cable.
ELE18.4 DOMESTIC EXHAUST FAN

ELE18.4.010.8 CAPACITY
The unit shall be capable of the following air extraction rate:
1. 0.06 m³/s for 150 mm diameter fan;
2. 0.23 m³/s for 230 mm diameter fan;
3. 0.47 m³/s for 300 mm diameter fan.

ELE18.4.020.8 DUTY
1. The unit shall be suitable in all respects for operation in ambient air condition of 40°C and 95% R.H;
2. The unit shall be suitable for operation on 220V, 50Hz, single phase a.c. supply;
3. The fan shall operate quietly at all speeds;
4. The unit casing, outlet grille, fan blade and shutters shall be moulded in rigid flame-retardant plastic. This shall also apply to the motor casing if not manufactured in metal.

ELE18.4.030.8 CONSTRUCTION
1. General:
   a. The unit shall be suitable for mounting on window glass and partitions;
   b. The unit shall have in-built draught excluding shutters suitable for remote control through an "on/off" switch;
   c. The unit shall have "easy-to-disassemble" design for cleaning and maintenance;
   d. The fan shall be fitted with silent running, self-aligning, self-oil bearings;
   e. The fan shall be fully balanced after assembly;
   f. The whole unit shall be finished in white or ivory colour or alternatively to manufacturer's standard light colour Approved by the Contract Manager.
2. Electrics:
   a. The fan shall be driven by a totally enclosed, single phase, induction motor;
   b. All exposed metal parts of the fan shall be suitably earthed via the 3-pin plug;
   c. The fan shall be of single speed and be capable of being switched on and off by a remote 5A switch;
   d. The fan shall be provided with two (2) metres of 0.75 mm², 3 core, PVC insulated and sheathed flexible cable.
**ELE18.5 ELECTRIC HAND AND FACE DRYER**

**ELE18.5.010.8 GENERAL**

1. The electrically operated hand and face dryer shall be of good design and pleasant appearance, suitable for heavy duty operation. It shall be of robust construction, intrinsically safe, tamperproof and the drying cycle shall not exceed 35 seconds;

2. The dryer shall be suitable for operation on 220V, 50Hz, single phase, a.c. supply with full bonding to earth through an amply sized 3 core supply cable;

3. The dryer shall be suitable for mounting on the surface of walls, including ceramic tiles.

**ELE18.5.020.8 STANDARD CONSTRUCTION**

1. The front shall be manufactured from a fully enveloping one piece metal, or Approved high strength plastic cover, fitted with a capacitive touch switch, or insulated metal push button marked "Touch or Push" (as applicable) to start, bi-directional air flow nozzle spring loaded to automatically return to the hand drying position and permanently engraved operating instructions recessed if applicable;

2. Metallic covers shall be finished with acid resistant porcelain enamel;

3. The cover shall be secured to the dryer base by recessed Allen head, or similar type bolts. The base shall be secured to the wall by at least three mounting bolts;

4. The air inlet shall be at the bottom and shall be protected by a suitably sized protective vaned grill. The air outlet shall similarly be protected by metal vanes inside the bi-directional nozzle;

5. All metal parts shall be of stainless, cadmium, or chromium plated steel;

6. The dryer shall be suitable for back and side cable entry with an insulated bushing;

7. The dryer shall be complete with internal electrical overload protection for the fan motor and preferably also for the heater unit.

**ELE18.5.030.8 ALTERNATIVE CONSTRUCTION**

As an alternative, tenderers may offer units having an infra-red proximity detector, in lieu of the touch switch, or push button control. In this case the operation instructions shall, by internationally recognisable symbols, clearly indicate the method of operation. It would also be preferable for these instructions to state in both English and Chinese:

"Place hands below the air outlet to start."

**ELE18.5.040.8 MAINTAINABILITY**

The equipment offered shall be designed for easy maintenance.
ELE18.6 QUARTZ MOVEMENT WALL CLOCK

ELE18.6.010.8 GENERAL
1. The clock shall be of deluxe wall hanging pattern having a nominal clock-face diameter of not less than 300 mm;
2. It shall be of Quartz-crystal oscillator controlled movement type and battery operated.

ELE18.6.020.8 CONSTRUCTION
1. The clock shall be of a design which can be flush mounted on the wall and is to be free of any projections on the rear surface;
2. The clock dial shall be white with large Arabic Numerals in black and graduated in minutes;
3. The hour, minutes and second full sweep hands shall preferably be of distinct colour complete with a glass or clear plastic covered front;
4. The rim of the clock shall either be metal or plastic finished in white or ivory colour and the clock movement shall be enclosed to protect it from dust;
5. The type and voltage of the battery powering the clock shall be specified in the supplier's quotation. It shall have a minimum normal use life of at least one year and shall be easily replaceable by non-skilled labour.

ELE18.6.030.8 ACCURACY
The accuracy of timekeeping shall not exceed ±0.5 sec./day at room temperature (25°C) and the clock unit shall be tropicalised and dust-proof.
ELE18.7 CEILING FANS

ELE18.7.010.8 SCOPE

Each ceiling fan shall be complete with speed regulator. The sweep diameter of the unit shall be 900 mm, 1200 mm or 1400 mm as shown on the Drawings or specified in Project Specific Specification.

ELE18.7.020.8 CAPACITY

The unit shall be capable of an air delivery as below:

<table>
<thead>
<tr>
<th>Sweep diameter of the unit (mm)</th>
<th>Air delivery (m³/s)</th>
</tr>
</thead>
<tbody>
<tr>
<td>900</td>
<td>2.2</td>
</tr>
<tr>
<td>1200</td>
<td>3.9</td>
</tr>
<tr>
<td>1400</td>
<td>4.5</td>
</tr>
</tbody>
</table>

ELE18.7.030.8 DUTY

1. The unit shall be suitable in all respects for operation in ambient air condition of 40°C and 95% R.H.;
2. The unit shall be suitable for operation on 220V, 50Hz, single phase A.C. supply;
3. The unit shall be designed for heavy duty commercial and domestic usage;
4. The fan shall operate quietly at all speeds.

ELE18.7.040.8 CONSTRUCTION

1. Motor:
   a. The motor shall be a totally enclosed, capacitor run induction motor, with internal stator and external squirrel-cage rotor;
   b. The rotor shall be mounted in grease lubricated ball bearings;
   c. The power factor shall not be less than 0.8 at any speed. The motor shall be rated for continuous operation under ambient air conditions of 40°C and 95% R.H. and the temperature of the windings shall not exceed 50°C after two (2) hours of continuous operation;
   d. All electrical components, cables etc. shall conform to the appropriate British Standards Specification or shall be of fully equivalent quality and capacity.
2. Blades:
   a. 900 mm Sweep diameter units:
      i. The fan shall be fitted with three (3) blades. "Twisted" blades are preferred;
      ii. The blade assemblies shall consist of one piece all aluminium blades of not less than 1.5 mm thickness;
      iii. Where the one piece blades are twisted to give the required angle of incidence to the blades there shall be large radius bends to prevent stress concentrations in the blade roots;
      iv. Anti-vibration bushes shall be installed between the one piece blades and the motor frame;
v. The blades, shall be securely fastened to the frame of the motor by machine screws and spring washers, the whole designed to ensure that there is no possibility of a blade becoming detached during operation.

b. 1200 mm & 1400 mm Sweep diameter units:
   i. The fan shall be fitted with three (3) blades. "Twisted" blades are preferred;
   ii. The blade assemblies shall consist of blades manufactured from heavy gauge aluminium riveted to steel blade carriers. The rivets shall conform to appropriate British Standards Specification;
   iii. The blade carriers will be manufactured from mild steel plate of not less than 3 mm in thickness and of not less than 40 mm width at the narrowest point, pressed to shape. The blades shall be of not less than 1.5 mm thickness;
   iv. Where the blade carriers are twisted to give the required angle of incidence to the blades there shall be large radius bends to prevent stress concentrations in the blade roots;
   v. Anti-vibration bushes shall be installed between the blades and blade carriers;
   vi. The blade carriers shall be securely fastened to the frame of the motor by machine screws and spring washers, the whole designed to ensure that there is no possibility of a blade becoming detached during operation.

3. Terminals and capacitor:
   a. The plastic terminal block and capacitor shall be mounted in a ferrous metal connecting piece, located between the fan and the down-rod;
   i. The leads from the stator windings shall be connected to the terminal block;
   ii. An earthing terminal, consisting of a round head brass screw and washer shall be provided on the connecting piece;
   iii. All exposed metal parts of the fan unit shall be connected to this earthing terminal.

   b. The bottom portion of the connecting piece shall be screwed on to the shaft of the motor;
   i. The connecting piece shall be tightened on to a shoulder formed on the motor shaft;
   ii. A 4 mm minimum thickness steel hexagonal lock-nut shall then be fitted and tightened in position. The connecting piece shall additionally be secured in the fully tightened position by two hardened steel grub screws;
   iii. These screws shall engage in shallow depressions drilled in the shaft after the connecting piece has been tightened in place to ensure positive locking.

4. Down-rod assembly:
   a. The down-rod assembly shall consist of a down-rod and a steel shackle with a hard rubber roller for suspension of the fan;
i. The down-rod shall be supplied, as required, in lengths of 200 mm, 300 mm, 450 mm, 600 mm, 750 mm, 900 mm and 1200 mm measured from the top of the connecting piece to the centre of the pin in the shackle at the top;

ii. Cables of a length to suit the down-rod shall be provided;

iii. The down-rod shall be manufactured from 12 mm bore standard mild steel/iron pipe of not less than 3 mm, wall thickness, having an external diameter of approximately 20 mm;

iv. It shall be accurately threaded at one end and shall be screwed into the top portion of the fan connecting piece (capacitor housing) from which it shall protrude by a minimum of 2 mm;

v. It shall be locked in position by two (2) hexagonal steel lock nuts, having a minimum thickness of 6 mm, tightened on to the upper machined surface of the fan connecting piece;

vi. The down-rod shall also be locked to the fan connecting piece by means of a steel split-pin, of not less than 5 mm diameter, passing through both the fan connecting piece and the down-rod.

c.

i. The split-pin holes in the fan connecting piece shall be of such a diameter that the split-pin is a light push fit therein;

ii. The matching split-pin holes in the down-rod shall be just sufficiently large so that the split-pin shall be a light push fit, when the hole is in its worst position relative to the threading;

iii. All burrs and sharp edges shall be removed from the split-pin holes in both the fan connecting piece and the down-rod.

d.

i. The steel suspension shackle shall be welded to the down-rod;

ii. Welding shall be of good quality and to the satisfaction of the Contract Manager;

iii. The rubber roller shall be mounted on an 8 mm diameter steel clevis pin secured by a split-pin.

e.

i. The ends of the down-rod shall be rounded off and free from burrs;

ii. There shall be no sharp edges which could cause damage to the insulation of the wiring.

5. Suspension joints and threaded parts:

a. Joints along the suspension rod must be of double-locking design. i.e. at least two independent positive locking devices must be employed to prevent a joint from loosening itself;

b. All factory-assembled threaded components which form part of a suspension joint must be bonded with glue as approved by the Contract Manager;

c. The maximum clearance between threaded mating parts must not exceed 1% of their mean diameter;

d. The down-rod threaded end shall be interchangeable with the existing government ceiling fans;
e. The direction of rotation of the fan shall be such that all screwed joints tend to be tightened when the fan is in operation.

6. Canopies:
   Two (2) canopies shall be provided manufactured from plastic or pressed steel sheet and fitted over the upper and lower ends of the down-rod. They shall be fixed to the down-rod by grub screws.

7. Balance:
   a. All fans shall be fully balanced after assembly, with any necessary adjustment being made to ensure that they shall not oscillate due to out-of-balance forces;
   b. All blades shall be given a single identification number, or letter, permanently stamped thereon, with a corresponding mark stamped on the motor body so that the fan blades may be reassembled in the correct position.

8. Finish:
   The whole fan shall be finished in high quality stove enamel, white or ivory colour.

9. Speed Regulator:
   a. The speed regulator shall be of robust construction with at least three (3) speed controls and an "OFF" position, built on a flame retardant moulded plastic, or insulated steel base and enclosed by a flame-retardant moulded plastic cover or metal cover. Plastic cover shall be in white or ivory colour to match the fan. Metal cover shall be of stainless steel or metalclad finish;
   b. For choke type regulator, an earth terminal shall be provided on the base with an earth wire permanently connected to the steel core of the choke unit;
   c. The rotary switch of the speed regulator shall be designed for smooth and easy movement by hand between different speed positions.

  ELE19.11.010.8 METHOD OF SUPPLY ....................................................................... 12
ELE19.1 GENERAL

ELE19.1.010.8 CONNECTIONS TO APPLIANCES

1. Domestic appliances shall each be connected to the electrical supply through a suitable wiring accessory and a suitable length (preferably 1.5 m to 2 m) of flexible cable or PVC insulated cables enclosed in a flexible conduit;

2. For portable appliances, plugs and sockets shall be used. For fixed appliances, the wiring accessories shall be opened or removed only by means of a tool;

3. Wiring accessories shall meet the requirements of ELE20. They shall be installed as near as practicably possible to the appliances they are supplying. Fuse-links shall comply with BS 1362 and shall have current ratings suitable for the appliances to be controlled;

4. Flexible cables for final connection to domestic appliances shall be white in colour unless otherwise specified, and shall be circular sheathed, twin with CPC to BS EN 50525-2-11 (PVC-insulated) or to BS EN 50525-2-21 (rubber-insulated), all with copper conductors. The cores of the flexible cables shall have identification colours in accordance with Code 13 D of the Electrical CoP.

ELE19.1.020.8 USE IN BATHROOMS

No portable appliance shall be installed in a room containing a fixed bath or shower. Fixed appliances installed in such a room shall be located out of reach by a person using the bath or shower, and the controlling switches shall be located outside the room.

ELE19.1.030.8 ENGRAVING FOR IDENTIFICATION

The front plate of every switched socket outlet, connector box, spur box or control switch feeding a fixed domestic appliance shall be engraved in accordance with ELE28 to indicate its correct function.

ELE19.1.040.8 EARTHING OF APPLIANCES

All domestic appliances except Class II equipment to BS 2754 shall be effectively earthed to the main earth via a circuit protective conductor. Where the cables for final connection to a fixed appliance are enclosed in a flexible conduit, effective earthing shall be achieved by means of a separate circuit protective conductor drawn into the flexible conduit.

ELE19.1.050.8 APPLIANCES REQUIRING AN EXCLUSIVE CIRCUIT

The following types of domestic appliances shall be supplied from an exclusive final circuit:

1. Household electric cookers;
2. Water heaters other than oversink water heaters;
3. Water boilers;
4. Room coolers;
5. Appliances having a nominal power rating of 3 kW or above.
ELE19.2 CEILING FANS & CEILING-MOUNTED ROTARY FANS

ELE19.2.010.8 METHOD OF SUPPLY
1. Supply to a ceiling fan or a ceiling mounted rotary fan shall be by means of a 2A fused connector box with earthing facilities;
2. The fused connector box shall be square, suitable for mounting on a moulded box or plastic pattress to BS 4662 or IEC 60670-1.

ELE19.2.020.8 FIXING
1. Every ceiling fan shall be suspended from a substantial hook fixed securely to the ceiling structure;
2. Rotary fans shall be fixed direct to the ceiling structure.

ELE19.2.030.8 FAN REGULATORS
1. Fan regulators shall be fixed on the surface of walls;
2. In a concealed conduit installation, the fan regulator shall be mounted on a back-plate over a recessed 35 mm deep BS 4662 or IEC 60670-1 box where the conduit shall be terminated. The back-plate shall be made of 3 mm thick galvanised steel with suitable grommeted hole for cable entry;
3. In a surface conduit installation, the fan regulator shall be mounted on a special fabricated box made of 1.5 mm thick galvanised sheet steel and having the same size as the regulator. The conduit shall be terminated at this specially made surface mounted box through which the cables shall enter the fan regulator;
4. In a surface wiring installation, the fan regulator shall be mounted on a wooden block. Grooves shall be formed at the back surface of the wooden block to suit the cables, and holes shall be drilled to enable the cables to enter the fan regulator from the rear.
ELE19.3 WALL-MOUNTED FANS

ELE19.3.010.8 METHOD OF SUPPLY

Supply to a wall mounted fan shall be by means of a 2A fused connector box in a similar manner as for a ceiling fan, except that the fused connector box shall be fixed on the wall adjacent the fan.

ELE19.3.020.8 FIXING

Wall mounted fans shall be fixed by means of a wall mounting bracket supplied with the fans or sit on a mounting bracket or batten made of teak wood or other material approved by the Contract Manager.
ELE19.4 EXHAUST FANS

ELE19.4.010.8 METHOD OF SUPPLY
1. Unless otherwise specified, supply to a domestic type exhaust fan shall be by means of a connection unit, and shall be controlled by a fused connection unit with double-pole switch as shown on the Drawing;
2. Supply to an industrial type exhaust fan shall be by means of a fused spur box and shall be controlled by a 20A switch D.P. with pilot light.

ELE19.4.020.8 FIXING
1. Exhaust fans shall be installed on the structural opening by means of a steel mounting plate;
2. Where an exhaust fan is intended to draw exhausted air through a fume cupboard, the fan shall be ducted to the fume cupboard by means of PVC pipes of suitable size and length.

ELE19.4.030.8 BUILDERS WORK IN CONNECTION WITH FIXING VENTILATION FANS
The openings in slabs or walls or window glass for mounting roof extractors and/or other ventilation fans shall be provided by the Main Contractor. However, the Sub-contractor shall submit detailed drawings to the Contract Manager to indicate the dimensions of the openings and the details of the diaphragm plates and the proposed method of mounting for Approval prior to installation.
ELE19.6  ELECTRIC FIRES AND HEATERS

ELE19.6.010.8  WALL-MOUNTED RADIATORS
Supply to wall-mounted radiators shall be fed through a fused spur box and shall be controlled by a 15/20A, D.P. switch with pilot light.

ELE19.6.020.8  PANEL FIRES
1. Method of supply:
   Panel fires rated at 3 kW or less shall be supplied and controlled by a connection unit and a double-pole switch with pilot light.
2. Fixing:
   The connection unit shall be installed on the same side of the panel fires as where the flexible cable enters the panel fires unless otherwise specified.

ELE19.6.030.8  TUBULAR HEATERS
Tubular heaters shall be supplied and controlled by a 13A 3-pin switched socket outlet.
ELE19.7 WATER HEATERS & WATER BOILERS

ELE19.7.010.8 OVERSINK WATER HEATERS

1. Method of supply:
   a. Supply to an oversink water heater shall be by means of a fused spur box and shall be controlled by a 15/20A, D.P. switch with pilot light at a distance of not less than 2 m from any water taps;
   b. The front plate of the fused spur box shall have an outlet hole and the necessary cordgrip for the flexible cable.

2. Fixing:
   In a surface wiring installation, the fused spur box and the 15/20A, D.P. switch shall each be mounted on a moulded box or plastic pattress to BS 4662 or IEC 60670-1.

ELE19.7.020.8 OTHER TYPES OF WATER HEATER

1. Method of supply:
   Supply to domestic water heaters, other than oversink type, shall be controlled by a 20A D.P. switch with pilot light.

2. In a concealed or surface conduit installation:
   a. The PVC insulated cables shall be enclosed in a conduit from the control switch to a standard circular conduit box fitted with a dome cover and then through a flexible conduit from the dome cover to the water heater;
   b. The dome cover and the conduit box shall be fixed as near to the water heater as practicable.

3. In a surface wiring installation:
   a. The control switch shall be mounted on a moulded box or plastic pattress;
   b. Final connection to the water heater shall be taken direct from the control switch via a flexible cable, twin with CPC;
   c. The control switch shall be fixed as near to the water heater as practicable.

ELE19.7.030.8 WATER BOILERS

The installation of a water boiler shall be similar to that for a water heater except that the control switch shall have a rating of 30A.

ELE19.7.040.8 WASH BOILERS & TEA URNS

1. Method of supply:
   Wash boilers and tea urns having a rating of 3 kW or less, shall be supplied and controlled by a connection unit and a double-pole switch with pilot light.

2. Fixing:
   The connection unit shall be installed on the same side of the wash boiler and tea urn as where the flexible cable enters the wash boiler and tea urn unless otherwise specified.
ELE19.8 ELECTRIC COOKERS

ELE19.8.010.8 BABY BELLING COOKERS

The installation of a Baby Belling type cooker shall be similar to that for a wash boiler.

ELE19.8.020.8 HOUSEHOLD COOKERS

1. Method of supply:

   Supply to a household cooker shall be controlled by a cooker control unit of rating not less than 45A unless otherwise specified. The control unit shall be installed at a height of 1350 mm above finished floor level;

2. In a concealed or surface conduit installation:

   a. The PVC insulated cables from the control unit shall be enclosed in a conduit and terminated at an insulated terminal block inside a 47 mm deep BS 4662 or IEC 60670-1 conduit box;

   b. The PVC insulated cables shall then be changed into PVC insulated and sheathed cable twin with CPC before connecting to the cooker;

   c. The insulated terminal block shall be mounted on the wall at 300 mm above finished floor level;

   d. The PVC insulated and sheathed cable twin with CPC shall be 1.5 m to 2 m long to allow the cooker to be moved for cleaning purposes.

3. In a surface wiring installation:

   PVC insulated and sheathed cable twin with CPC shall be used throughout.
The supply to an electric hand dryer shall be by means of a fused spur box complete with an integral D.P. switch and pilot light. The front plate of the fused spur box shall have an outlet hole and the necessary cordgrip for the flexible cable.
ELE19.10 ROOM COOLERS

ELE19.10.010.8 METHOD OF SUPPLY
Supply to a room cooler shall be by means of a connection unit or an insulated terminal block and a control switch, both of which shall have a current capacity of not less than the rated value of the room cooler. The control switch shall be D.P. with pilot light.

ELE19.10.020.8 POSITION OF CONNECTION UNIT AND TERMINAL BLOCK
The connection unit or insulated terminal block shall be installed adjacent to the room cooler and shall be on the same side of the room cooler as where the flexible cable enters the room cooler. Where it is not possible to ascertain where the flexible cable enters the room cooler, the connection unit or insulated terminal block shall be installed on the left side of the room cooler, as viewed from the front.
ELE19.11 REFRIGERATORS

ELE19.11.010.8  METHOD OF SUPPLY

Supply to a refrigerator shall be by means of a fused spur box fitted with a 20A D.P. switch or a 13A socket outlet as shown on the Drawing.

ELE20.1 WIRING ACCESSORIES - GENERAL

ELE20.1.010.8 STANDARD
Wiring accessories shall meet the general requirements of BS EN 60670-22 and BS 5733, unless otherwise specified.

ELE20.1.020.8 COLOUR AND CONSISTENCY
Unless otherwise specified, wiring accessories of the same cover plate material shall be of the same colour scheme and for those used for domestic purpose, they shall be in white. All wiring accessories in domestic units, with the exception of batten lampholders, shall be from the same range of product of a single manufacturer.

ELE20.1.030.8 MOUNTING
1. In surface cable installations, they shall be fixed onto moulded boxes or pattresses;  
2. In conduit installations, they shall be mounted on either plastic moulded boxes or cast iron galvanised boxes;  
3. Where a waterproof or flameproof pattern is required, they shall be mounted as the particular circumstances demand.

ELE20.1.040.8 ENCLOSURES
Moulded boxes or pattresses and steel or cast iron boxes for the enclosure of wiring accessories shall comply with IEC 60670-1 and dimensions to BS 4662 and shall meet the requirements specified in ELE11, ELE12 and ELE13 where appropriate.

ELE20.1.050.8 ENGRAVING
The front plate of each socket or control switch feeding an essential circuit or a fixed electrical appliance, such as wash boiler, water heater, cooker, wall-mounted fan, wall mounted radiator, incinerator, exhaust fan, room cooler, etc., shall be engraved according to the appliance being controlled. Details of the inscription shall be submitted to the Contract Manager for approval. See Project Specific Specification for particular project requirements, if any.
ELE20.2 DOMESTIC SWITCHES

ELE20.2.010.8 GENERAL

1. Standard:
   Switches for domestic and similar purposes shall comply with BS EN 60669-1.

2. Mounting:
   a. They shall be mounted at a height of 1350 mm above finished floor level unless otherwise specified;
   b. Unless otherwise specified, lighting switches shall be designed for flush mounting on to pattresses or boxes to IEC 60670-1 and dimensions to BS4662.

3. Type-testing:
   Lighting switches shall be type-tested for complete compliance with BS EN 60669-1 by an Accredited Laboratory.

ELE20.2.020.8 LIGHTING SWITCHES

1. Type:
   Lighting switches shall be suitable for use on a.c. circuits, and shall be of the quick make-and-break type when used in d.c. circuits. Suspension pear type switches will not be permitted.

2. Front plate:
   a. The front plate shall be made of an insulating material such as urea-formaldehyde or polycarbonate and white in colour;
   b. The B.S. number shall be indelibly marked on the lighting switch assembly;
   c. The whole assembly shall have a pleasant appearance and shall be fixed onto the enclosure by means of bright electroplated oval head screws;
   d. The screws shall be flush with the surface of the front plate.

3. Cable terminals:
   a. Cable terminals shall be suitably positioned for easy cable termination and suitably shrouded to prevent accidental contact with other metal or current-carrying parts;
   b. The ends of the terminal screws shall be so shaped as to prevent damage to the conductor;
   c. Current carrying parts of cable terminals shall be made of copper, brass, phosphor-bronze or other metal at least equivalent with regard to its conductivity and resistance to corrosion.

4. Plastic pattresses:
   a. Lighting switches for surface cable installations shall be fixed onto proprietary-made plastic pattresses;
   b. The pattress shall be complete with copper earthing terminal and shall be at least 25 mm internal depth to accommodate the cables to be installed and to prevent acute bends of the cables;
   c. The colour, shape and material of the pattress shall match that of the front plate of the switch.
5. Rating:
   Lighting switches shall be single pole rated at 5AX or 10AX as specified in Project
   Specific Specification or on the Drawings;

6. Multi-gang mounting:
   When lighting switches are mounted adjacent to one another, they shall be grouped
   in a single enclosure (multigang box) and shall share a common switch plate,
   subject to a maximum of three lighting switches per single-gang plate;

7. Location:
   Lighting switches, installed adjacent to a door shall be located on the handle side of
   the door and shall be as near to the door as practicable.

**ELE20.2.030.8 D.P. SWITCHES FOR APPLIANCES**

1. Switches controlling appliances with heating elements or appliances permanently
   connected to the supply shall be of double pole type, and shall have a rating not
   smaller than the current capacity of the appliances being controlled;

2. The front plate of each such switch shall be properly engraved in accordance with
   ELE20.1.050;

3. The pilot light, where specified, shall be formed by a neon lamp with resistor and a
   red coloured lens.

**ELE20.2.040.8 SPARKLESS SWITCHES**

1. Sparkless switches shall be of the tilting mercury type;

2. The contacts of a sparkless switch shall be contained in a sealed glass capsule;

3. The rating shall be as specified in Project Specific Specification or on the Drawings.

**ELE20.2.050.8 TIME SWITCHES**

As ELE3.17.

**ELE20.2.060.8 SWITCHES EXPOSED TO WEATHER**

Switches mounted outdoors, or in positions where they may be exposed to rain or water,
shall be weatherproof with ingress protection of at least IP55 to BS EN 60529 or IEC
60529. Switches with covers on top to achieve the IP requirement are not acceptable.

**ELE20.2.070.8 APPLICATION IN BATHROOMS ETC.**

No switch shall be installed inside a room containing a fixed bath or shower or inside a
bathroom.

**ELE20.2.080.8 DOOR BELL PUSH BUTTON**

Door bell pushes button shall be of large press button type and flush pattern with white
or ivory colour front plate to BS EN 60669-1.
ELE20.3 SOCKET OUTLETS

ELE20.3.010.8 GENERAL

1. Socket outlets and plugs rated at 5A and 15A for general application shall comply with BS 546 and the Electrical CoP;
2. Socket outlets and plugs rated at 13A shall comply with BS 1363: Parts 1 & 2;
3. All socket outlets shall be of 3 pin, and shall be of the shuttered type;
4. 5A socket outlets may be unshuttered provided they are installed on the ceiling or at high level and are not normally accessible;
5. Socket outlets intended for supplying fixed or stationary appliances shall be located as near as possible to the appliances.

ELE20.3.020.8 13A SOCKET OUTLETS

1. Design:
   Unless otherwise specified, socket outlets shall be designed for flush mounting onto pattresses or boxes to IEC 60670-1 and dimensions to BS 4662;
2. Type-testing:
   Socket outlets shall be of 3-pin shuttered type and shall be type-tested for complete compliance with BS 1363: Part 2 by an Accredited Laboratory;
3. Front plate:
   a. The front plate shall be made of an insulating material such as urea-formaldehyde or polycarbonate and white in colour;
   b. The B.S. number shall be indelibly marked on the socket outlet assembly;
   c. The whole assembly shall have a pleasant appearance and shall be fixed onto the enclosure by means of bright electroplated oval head screws;
   d. The screws shall be flush with the surface of the front plate.
4. Cable terminals:
   a. Cable terminals shall be suitably positioned for easy cable termination and suitably shrouded to prevent accidental contact with other metal or current-carrying parts;
   b. The ends of the terminal screws shall be so shaped as to prevent damage to the conductor;
   c. Current carrying parts of cable terminals shall be made of copper, brass, phosphor-bronze or other metal at least equivalent with regard to its conductivity, and resistance to corrosion.
5. Plastic pattresses:
   a. Socket outlets for surface cable installations shall be fixed onto proprietary-made plastic pattresses;
   b. The pattress shall be at least 25 mm internal depth to accommodate the cables to be installed and to prevent acute bends of the cables;
   c. The colour, shape and material of the pattress shall match that of the front plate of the socket outlet.
ELE20.3.030.8 INTEGRAL SWITCH FOR SOCKET OUTLETS
For socket outlet with integral switch, the integral switch shall be of single pole, forming part of the same front plate as the socket outlet.

ELE20.3.040.8 WEATHERPROOF SOCKET OUTLETS
Weatherproof socket outlets of appropriate types and ratings shall be provided as shown on drawings. The socket outlets shall comply correspondingly with the following requirements:
1. Industrial type surface mounting socket outlet to BS EN 60309-2 or IEC 60309-2 with a push-on cap and cap retaining ring having ingress protection of at least IP44 to BS EN 60529 or IEC 60529. The socket outlet shall be suitable for wall mounting and the outlet shall face downward, to facilitate plug insertion and to minimize ingress of water;
2. General purpose type socket outlet to BS 1363 with the plug fully enclosed by protective cover and with the cord entry properly sealed when in use condition and having ingress protection of at least IP44 to BS EN 60529 or IEC 60529. The hinge mechanism for the protective cover shall be of sturdy construction with opening angle greater than 120 degrees.

ELE20.3.060.8 SHAVER SUPPLY UNITS
1. Electric shaver supply units shall comply with BS EN 61558-1 and BS EN 61558-2-23, or IEC 61558-1 and IEC 61558-2-23 and shall be insulated, suitable for flush mounting;
2. Each unit shall comprise two outlets one for 110V and the other for 220V obtained from a double wound transformer;
3. The complete unit shall be enclosed in a galvanised metal box for flush mounting, or a cast iron or plastic surface box for surface mounting.

ELE20.3.070.8 SOCKET OUTLETS TO SURFACE CONDUIT INSTALLATIONS
In pump rooms, plant rooms, boiler houses, switch rooms and other places where surface conduit and accessories are installed, socket outlets shall be metalclad, with bronze front plate, unless otherwise specified.

ELE20.3.080.8 PLUGS
1. Plugs for 13A socket outlets shall be fitted with a fuse, complying with BS 1362 or IEC 60269-1, suitably rated to suit the appliance connected to it;
2. Where the current rating of the appliance cannot be ascertained, a 13A fuse shall be fitted;
3. Every plug shall be fitted with a cord grip which is so designed that no stress will be taken by the terminals or the conductors of the flexible cable connected to it;
4. The extent of provision of plugs, if required, is given in Project Specific Specification or Drawings.

ELE20.3.090.8 SOCKET OUTLETS IN HAZARDOUS AREAS
1. The installation of socket outlets in hazardous areas should be avoided as far as possible;
2. Where it is absolutely essential to install a socket outlet in such an area, the socket outlet shall comply with BS EN 60309-2 or IEC 60309-2 and shall be controlled by a sparkless switch;
3. The socket outlet shall be interlocked with the plug so that removal or insertion shall not be possible unless the controlling switch is in the OFF position;

4. The plug shall have shrouded pins and the design of the pin contacts shall be such as to guard against development of hot spots or sparking.

**ELE20.3.100.8 SOCKET MOUNTING HEIGHT**

Unless otherwise specified socket outlets shall be mounted at a height of 1350 mm above finished floor level in kitchens, sculleries, ironing rooms and the like, and at a height of 300 mm above finished floor level in other locations.

**ELE20.3.110.8 SOCKET OUTLETS FOR DIFFERENT VOLTAGE SYSTEMS**

Socket outlets and plugs for one voltage system shall not be interchangeable with those for use at other voltage and/or frequency systems in the same installation.

**ELE20.3.120.8 APPLICATION IN BATHROOMS ETC.**

No socket outlets, other than shaver supply units complying with BS, shall be installed inside a room containing a fixed bath or shower or inside a toilet.
ELE20.4 CONNECTION UNITS

ELE20.4.010.8 CONNECTION UNITS - GENERAL

1. Design:
   Unless otherwise specified, connection units shall be suitable for flush mounting onto pattresses or boxes to IEC 60670-1 and dimensions to BS 4662;

2. Type-testing:
   Connection units shall be type-tested to BS 5733 by an Accredited Laboratory;

3. Current rating:
   The current rating of connection units shall be at least 20A unless otherwise specified on the Drawings;

4. Front plate:
   a. The front plate shall be made of an insulating material such as urea-formaldehyde or polycarbonate and white in colour;
   b. Where pilot light and integral switch are specified, the light shall comprise a neon lamp and a red coloured lens, and the switch shall be of double pole, unless otherwise specified, and forming part of the same front plate;
   c. The front plate shall also incorporate a flex outlet with a clamp for anchoring the flexible cord;
   d. The whole assembly shall have a pleasant appearance and shall be fixed onto the enclosure by means of bright electroplated oval head screws;
   e. The screws shall be flush with the surface of the front plate.

5. Cable terminals:
   a. Cable terminals shall be suitably positioned for easy cable termination and suitably shrouded to prevent accidental contact with other metal or current-carrying parts;
   b. The ends of the terminal screws shall be so shaped as to prevent damage to the conductor;
   c. Current carrying parts of cable terminals shall be made of copper, brass, phosphor-bronze or other metal at least equivalent with regard to its conductivity and resistance to corrosion.

6. Plastic pattresses:
   a. Connection units for surface cable installations shall be fixed onto proprietary-made plastic pattresses;
   b. The pattress shall be complete with copper earth terminal and shall be at least 25 mm internal depth to accommodate the cables to be installed and to prevent acute bends of the cables;
   c. The colour, shape and material of the pattress shall match that of the front plate of the unit.

ELE20.4.020.8 FUSED CONNECTION UNITS

1. Fused connection units shall comply with BS 1363: Part 4 and contain plugs incorporating cartridge fuse-links to BS 1362 or IEC 60269-1 of a.c. rating either 2A or 13A as shown on the drawings;
2. The plug shall only be removable by the use of a tool;
3. The unit shall be clearly marked with the word "FUSE" or "FUSED" in a conspicuous position on the front plate;
4. Fused connection unit shall be type-tested by an Accredited Laboratory.
**ELE20.5 INSULATED TERMINAL BLOCKS**

**ELE20.5.010.8 VOLTAGE RATING**

The rated voltage of terminal blocks shall not be less than 435V between terminals and 250V to earth.

**ELE20.5.020.8 CONSTRUCTION**

Terminal blocks shall comprise brass connectors with screw connections, all contained within a moulded block suitable for working temperature up to 100°C.

**ELE20.5.030.8 DESIGN**

Terminals shall be designed to clamp the conductor between metal surface with sufficient contact pressure but without causing damage to the conductors. With the largest recommended conductor in position, and tightly clamped, there shall be at least two full threads of the screw engaging in the connector.

ELE21.1 LAMPS

ELE21.1.010.N LED MODULE AND LED LAMP

1. The LED module and self-ballasted LED module shall be manufactured and tested to comply with BSEN 62031 or IEC 62031:

2. The performance of the LED module and self-ballasted LED lamp shall comply with the following requirements:
   a. Luminous Efficacy (lumen/watt)
      The luminous efficacy of different types of luminaires under different colour temperatures to be used in the Sub-contract shall be provided to indicate its performance;
   b. Lumen Maintenance (L70)
      The lumen output shall deliver at least 70% of its initial value after operating 35,000 hours and 25,000 hours for LED module and self-ballasted LED lamp respectively. For compliance with the L70 threshold lumen maintenance requirements, the lumen maintenance data of each colour temperature LED light source using 6,000 hours is acceptable for projecting the L70. The required lumen maintenance at 6,000 hours shall not be less than 94.1% and 91.8% for L70 = 35,000 hours and L70 = 25,000 hours respectively;
   c. Colour Rendering Index (CRI)
      CRI shall be minimum 80 and 60 for indoor luminaires and outdoor luminaires respectively;
   d. Correlated Colour Temperature (CCT)
      The colour temperature of a group of LED light sources in the same room or space shall not be visually noticeable. The nominal CCT of the LED light source shall preferably be one of the following values:

<table>
<thead>
<tr>
<th>CCT (K)</th>
<th>CCT Range (±)</th>
</tr>
</thead>
<tbody>
<tr>
<td>2,700K</td>
<td>2,725 ± 145K</td>
</tr>
<tr>
<td>3,000K</td>
<td>3,045 ± 175K</td>
</tr>
<tr>
<td>3,500K</td>
<td>3,465 ± 245K</td>
</tr>
<tr>
<td>4,000K</td>
<td>3,985 ± 275K</td>
</tr>
<tr>
<td>5,700K</td>
<td>5,665 ± 355K</td>
</tr>
<tr>
<td>6,500K</td>
<td>6,530 ± 510K</td>
</tr>
</tbody>
</table>

3. Self-ballasted LED lamps for general lighting services shall comply with BS EN 62560 or IEC 62560 and BS EN 62612 or IEC 62612, and the following requirements:
   a. The operating frequency of the built-in driver shall be not less than 20kHz or at a sufficiently high frequency to ensure no flickering causing health risk to viewers;
   b. The lamp shall have been in continuous and satisfactory operation locally in similar application and supply scale for at least one year up to the time of material submission. The corresponding in-service records with supply scale and proven satisfactory operation shall be provided upon request by the Contract Manager;
c. The lamp manufacturing plant and facilities shall conform to ISO 9001 with proper quality control scheme in place to ensure delivering consistent and high-quality products. Relevant documentation shall be provided upon request by the Contract Manager to substantiate the quality assurance system covering the purchasing and quality control of lamp components, design and manufacturing process, qualification and experience of plant operating personnel as well as testing and delivery of end products.

ELE21.1.015.N DOUBLE-CAPPED LED TUBULAR LAMP

1. Double-capped LED tubular lamp shall be suitable for direct connection to supply mains of 220V±6% and 50Hz±2%, and CCT 4000K, unless otherwise specified, with built-in driving and control circuits, and safety design to avoid voltage being present at the opposite pin when inserted at one end. The operating frequency of the built-in driver shall be not less than 20kHz or at a sufficiently high frequency to ensure no flickering causing health risk to viewers. The LED tubular lamp shall be compatible with market norms and capable to operate irrespective of the tube orientation when inserted in luminaires or lamp holders with simple wiring connection;

2. The lamp shall comply with BS EN 62776 or IEC 62776 in addition to the corresponding International Standards listed in ELE21.1.010 and meet the following minimum requirements:
   a. Luminous efficacy: 100 lm/W;
   b. Lamp life: 35 000 hours (L70);
   c. Colour Rendering Index: 80;
   d. Total power factor: 0.85;
   e. The initial luminous output of double-capped LED tubular lamp shall not be less than that shown on the table below:

<table>
<thead>
<tr>
<th>Length of double-capped LED tubular lamp</th>
<th>Initial luminous output (lm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>600 mm</td>
<td>920</td>
</tr>
<tr>
<td>1200 mm</td>
<td>1700</td>
</tr>
<tr>
<td>1500 mm</td>
<td>2400</td>
</tr>
</tbody>
</table>

3. The lamp shall be suitable to operate and fully compatible with emergency lighting modification unit without flickering, if supplied under this Sub-contract, as stipulated in ELE21.12;

4. The lamp shall have been in continuous and satisfactory operation locally in similar application and supply scale for at least one year up to the time of material submission. The corresponding in-service records with supply scale and proven satisfactory operation shall be provided upon request by the Contract Manager;

5. The lamp manufacturing plant and facilities shall conform to ISO 9001 with proper quality control scheme in place to ensure delivering consistent and high-quality products. Relevant documentation shall be provided upon request by the Contract Manager to substantiate the quality assurance system covering the purchasing and quality control of lamp components, design and manufacturing process, qualification and experience of plant operating personnel as well as testing and delivery of end products.
ELE21.1.020.8 TUBULAR FLUORESCENT LAMPS

1. Tubular fluorescent lamps with preheated cathode, for general lighting service, shall be manufactured and tested to BS EN 60081 or IEC 60081 or BS1853: Part 2. Lamps shall start satisfactorily with switch-start control gears operated on 220V 50Hz single-phase supply;

2. Lamps shall have the colour appearance of 'white' the colour temperature of 4000 K and the colour rendering index of 85. Initial luminous output and the minimum luminous output at 2000 burning hours shall not be less than that shown in the table below:

<table>
<thead>
<tr>
<th>26 mm diameter fluorescent tubular lamp</th>
<th>Initial luminous output at 100 hours (lm)</th>
<th>Minimum luminous output at 2000 hours (lm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>600 mm</td>
<td>1350</td>
<td>1250</td>
</tr>
<tr>
<td>1200 mm</td>
<td>3300</td>
<td>3100</td>
</tr>
<tr>
<td>1500 mm</td>
<td>5150</td>
<td>4900</td>
</tr>
</tbody>
</table>

3. Lamp life expectancy shall not be less than 8000 hours. By the end of lamp life, the luminous output shall not be less than 80% of initial luminous output specified above;

4. Lamps shall be fitted with bi-pin G13 lamp caps, 26 mm diameter, they shall be completely interchangeable with, and shall operate on, the corresponding circuits for 38 mm diameter fluorescent lamp.

ELE21.1.025.8 COMPACT FLUORESCENT LAMPS

Compact fluorescent lamps with preheated cathode, either with built-in control gear or separate control gear, shall be manufactured and tested to BS EN 60901 or IEC 60901 and BS EN 61199 or IEC 61199.

ELE21.1.030.8 COMPACT FLUORESCENT LAMPS

1. Construction:
   a. The lamp shall be as follows;
      i. 10W or 13W (consist of four narrow fluorescent tubes, bonded together with a 2-pin, single end type G24d-1 lamp base or 4-pin, single end type G24q-1 lamp base);
      ii 11W (consist of two narrow fluorescent tubes, bonded together with a 2-pin, single end type G23 lamp base or 4-pin, single end type 2G7 lamp base);
      iii 18W (consist of four narrow fluorescent tubes, bonded together with a 2-pin, single end type G24d-2 lamp base or 4-pin, single end type G24q-2 lamp base);
      iv 24W (consist of two narrow fluorescent tubes, bonded together with a 4-pin, single end type 2G11 lamp base or four narrow fluorescent tubes, bonded together with a 4-pin, single end type 2G10 lamp base);
      v. 26W (consist of four narrow fluorescent tubes, bonded together with a 2-pin, single end type G24d-3 lamp base or 4-pin, single end type G24q-3 lamp base).
   b. The lamp base shall form an integral housing for the integrated starter and radio interference suppressor;
c. Ignition of the lamp should be almost instantaneous with minimum flickering;

d. The lamp wattage shall be rated with a.c. supply voltage of 220V 50Hz single-phase for the operating gear.

2. Luminous characteristic:

a. The initial luminous output shall be not less than 600 lumen for 10W, 900 lumen for 11W, 900 lumen for 13W, 1200 lumen for 18W, 1800 lumen for 24W, 1800 lumen for 26W. They shall have a colour temperature of 4000K unless otherwise specified;

b. The life expectancy of the lamp shall not be less than 8000 hours for switch start circuit and 12000 hours for high frequency start circuit;

c. The initial luminous output shall be measured at the end of 100-hour ageing period;

d. The lumen maintenance shall not be less than 80% of the initial value. This value shall be measured after 2000 hours operation including the ageing period.

3. Marking:

Each lamp shall be indelibly marked with the following information:

a. The manufacturer's identification;

b. The country/place of manufacture;

c. The rated wattage.

4. Performance and endurance tests:

The lamp shall be type-tested by an Independent Testing Laboratory/Institution in accordance with BS EN 60901 or IEC 60901 for lamp ageing test; BS EN 13032-1 for lamp luminous output test, BS EN 61199 or IEC 61199 for safety requirement.

**DISCHARGE LAMPS**

1. All discharge lamps shall comply with BS EN 62035 or IEC 62035. High pressure sodium lamp shall also comply with BS EN 60662 or IEC 60662; Low pressure sodium lamp shall comply with BS EN 60192 or IEC 60192; High pressure mercury lamp shall comply with BS EN 60188 or IEC 60188; Metal halide lamp shall comply with BS EN 61167 or IEC 61167;

2. Mercury vapour and metal halide lamps shall have fused silica discharge tubes whereas low pressure sodium lamps shall employ glass having an internal layer of a different glass resistant to sodium vapour;

3. The discharge tube of high pressure sodium lamps shall be made translucent alumina;

4. Discharge lamps shall be started without heating the electrodes.

**ANCILLARY EQUIPMENT AND CIRCUITRY OF DISCHARGE LAMPS**

The ancillaries complying with BS EN 61347-1 and BS EN 61347-2-8 and BS EN 60921 and BS EN 61347-2-9 and BS EN 60923 and BS EN 61048 and BS EN 61049, or IEC 61347-1 and IEC 61347-2-8 and IEC 61347-2-11 and IEC 60921 and IEC 61347-2-9 and IEC 60923 and IEC 61048 and IEC 61049 shall be adopted to suit the respective lamp parameters to achieve maximum light output consistent with lamp life. The function of the ancillary gear and circuitry shall be:

1. To operate the lamp, and its rated output in lumens, and to attain the rated life of lamp under normal running conditions;
2. To ensure reliable starting under all conditions for which the installation has been designed;
3. To suppress the generation of radio television interference;
4. To restrict, within specified limits, the level of noise generated by the inductor windings and to minimise the generation of additive harmonics;
5. To limit the temperature rise of cables, lampholders, and all ancillary gear with particular reference to inductors and capacitors.

ELE21.1.060.A PROVISION OF LIGHT SOURCES

The Sub-contractor shall supply and fix light source(s) in all luminaires except those in the luminaires at acoustic balcony and the lampholders in domestic units.
ELE21.2 LAMPHOLDERS

ELE21.2.010.8 BATTEN LAMPHOLDERS

1. Unless otherwise specified, batten lampholders shall be suitable for flush mounting on plastic pattresses or BESA boxes;

2. Batten lampholders shall be type-tested for complete compliance with BS EN 60238 or IEC 60238 by an Accredited Laboratory;

3. The lampholder shall be of all-insulated Edison screw socket pattern manufactured from moulded hard white or ivory colour plastic material which shall be unaffected by the heat from the lamp, and shall be fitted with a shaded carrier ring and a ventilated shield unless otherwise specified;

4. The whole assembly shall have a pleasant appearance and shall be fixed onto the enclosure by means of bright electroplated oval head screws;

5. An earthing terminal shall be provided to each lampholder for connection to the circuit protective conductor of the final circuit;

6. Cables terminals shall be made of brass, suitably positioned for easy cable termination and suitably shrouded to prevent accidental contact with other metal or current-carrying parts. The ends of the terminal screws shall be so shaped as to prevent damage to the conductor;

7. Batten lampholders for surface cable installation shall be fixed onto proprietary-made plastic pattresses. The pattress shall have sufficient space for accommodating the cables to be installed and to prevent acute bends of the cables. The colour, shape and material of the pattress shall match that of the lampholder;

8. Batten lampholders shall be of type “E27” unless otherwise specified.

ELE21.2.020.8 CORD GRIP LAMPHOLDERS

1. Cord grip lampholders to BS EN 61184 or IEC 61184 shall be white or ivory in colour and fitted with cord grips so designed that no stress can be taken by the conductors of terminals;

2. Lampholders shall be of the all-insulated bayonet socket pattern fitted with shade carrier ring, a ventilated shield, or a moulded white plastic cone as required;

3. They shall be suitable for PVC insulated and sheathed, circular flexible cable of not less than 0.75 mm² size;

4. White moulded plastic break joint rings shall be used;

5. Where a flexible cord supports, or partly supports, a luminaire, the maximum mass supported by the cord shall not exceed the values as given in ELE8.3.4.030;

6. Lampholders shall be of type "22d" with temperature rating of "T2" unless otherwise specified.

ELE21.2.030.8 LAMPHOLDERS FOR WEATHERPROOF LUMINAIRES

Weatherproof luminaires shall be fitted with porcelain lampholders, complying with BS EN 61184 or IEC 61184.
LAMPHOLDER FOR LED TUBULAR LAMPS

Lampholders for use with LED tubular lamps shall be bi-pin type, complying with IEC 60061-1 and BS EN 60061-2 or IEC 60061-2. They shall be made in moulded white plastic material and designed to hold the tube in position without the need for an additional clip.
ELE21.3 LUMINAires

ELE21.3.010.8 GENERAL

1. Luminaires shall be well constructed and shall comply with the requirements of BS 4533 or BS EN 60598 or IEC 60598 and be chosen to suit the conditions under which they will operate;

2. Luminaires to be supplied shall contain components of the same brands and models as those shown on type test certificates. However, luminaires equipped with alternative controlgear will be acceptable if the Sub-contractor can meet the following conditions to the satisfaction of the Contract Manager:

   a. The Sub-contractor shall seek the luminaire manufacturer's confirmation that the use of these alternatives will neither jeopardize safety nor have any adverse effect on performance;

   b. The Sub-contractor shall submit the luminaire manufacturer's test certificates that can prove the concerned luminaire, together with alternative controlgear, to have satisfactorily undergone endurance tests and thermal tests specified in BS EN 60598-1 or IEC 60598-1 or BS 4533 Section 102.1 or IEC 60598-2-1 respectively. Tests conducted on the luminaire manufacturer's premises are acceptable;

   c. Luminaires with alternative controlgear shall be of the same construction as the original one that comes with a full set of type test certificates;

   d. Alternative controlgear shall meet their respective product standards stipulated in the Specification.

3. For other special luminaires, particularly specified in the project the Sub-contractor shall confirm to provide adequate substantiations to justify these special luminaires on safety and performance aspects to the satisfaction of the Contract Manager. For special luminaires other than those specified in this specification and without comprehensive test reports, the Sub-contractor shall submit adequate substantiations to justify these special luminaires be suitable for the installation without jeopardising their safety and performance to the satisfactory of the Contract Manager, particularly on operation voltage / frequency / power factor (220V, 50Hz at 0.85 lagging or above), heat resistant of wiring (at least 90°C), IP rating (minimum IP54 for outdoor luminaires), insulation resistance (not less than 1MΩ between phases and phase to earth), excessive temperature rise (not to cause the luminaires be operated in overheat condition) and safety device provision to prevent dropping (required for luminaires mounted on high position). In addition, under no circumstances shall the wiring be visible in the lamp compartment.

ELE21.3.020.A INDOOR LUMINAires (EXCEPT SF84 & SF85)

1. The luminaires shall comply with the following standards in conjunction with BS EN 60598-1 or IEC 60598-1, where the luminaires fall into the respective categories:

<table>
<thead>
<tr>
<th>Standard</th>
<th>Description</th>
</tr>
</thead>
<tbody>

</tr>
<tr>
<td>IEC 60598-2-2</td>
<td>Section 2: Recessed luminaries</td>
</tr>
</tbody>
</table>
2. Unless otherwise specified, the following components of the luminaire, where fitted, shall be manufactured in accordance with the relevant BS EN or IEC Specifications and shall carry the BSI Kitemark or the mark of an equivalent Quality Surveillance Scheme:

a. Ballast:
   i. Electromagnetic ballast: BS EN 61347-1 and BS EN 61347-2-8, or IEC 61347-1 and IEC 61347-2-8 and IEC 61347-2-11 or;

b. Capacitor: BS EN 61048 and BS EN 61049 or IEC 61048 and IEC 61049.

3. Compact fluorescent luminaires shall be radio interference suppressed to limits specified in BS EN 55015 or EN 55015. Test certificates and reports shall be submitted as evidence of compliance as and when required by the Contract Manager;

4. The controlgear loss of compact fluorescent lamp shall not be greater than the corresponding maximum allowable values as specified in the Hong Kong Voluntary Energy Efficiency Labelling Scheme for electronic ballast issued by EMSD;

5. LED luminaires shall comply with the following requirements:

   a. Optics such as diffuser, reflector etc. for luminaires adopting LED tubes or lamps shall be specifically designed for use with LED tubes or lamps to achieve desirable polar curve/ luminous distribution and to avoid glare;

   b. The driver control unit for LED luminaire shall include the components of power factor correction and radio interference suppression. The operating frequency of the built-in driver shall be not less than 20kHz or at a sufficiently high frequency to ensure no flickering causing health risk to viewers. The driver shall conform to the following international standards if applicable:

<table>

</table>
Certificate of compliance shall be provided for each of the different ratings of drivers to be used;

c. Technical information of the LED drivers shall be provided to indicate the performance of the drivers. The data shall include, but not limited to, minimum and maximum input voltage, frequency, maximum operating temperature, rated output voltage, rated output current, rated output power and power factor;

d. The rated life of LED driver shall not be less than 35,000 hours operating at maximum allowable ambient temperature of not lower than 40°C;

e. The irradiance and radiance emission limits of the LED luminaires, that are exposed to view directly, shall be tested to comply with the hazard ‘Risk Group 1’ (low risk) or ‘Exempt Group’ as stated in the requirements of the BS EN/IEC 62471 – Photobiological safety of lamps and lamp systems;

f. The LED luminaires shall be certified to ‘Restriction of Hazardous Substances (RoHS) Compliance’;

g. Full set of photometric data for each type of LED luminaires prepared to CIBSE TM5 or IES format shall be submitted for general lighting design purpose;

h. The LED luminaires shall be rated for continuous service at the intended application conditions with maximum ambient temperature exceeding 40°C without affecting the performance requirements as for luminaire efficacy, lumen maintenance (L70), colour rendering index, total power factor, and correlated colour temperature as stated in this specification;

i. Each model of LED luminaire or self-ballasted LED lamp shall be tested to comply with the performance requirements stated in this specification. The Sub-contractor shall submit the test report and certify each model of LED luminaire or self-ballasted LED lamp to be complying with the BS EN or IEC standards or other recognised international/national standards.

6. The luminaire shall have been in continuous and satisfactory operation locally in similar application and supply scale for at least one year up to the time of material submission. The corresponding in-service records with supply scale and proven satisfactory operation shall be provided upon request by the Contract Manager;

7. The luminaire manufacturing plant and facilities shall conform to ISO 9001 with proper quality control scheme in place to assure delivering consistent and high-quality products. Relevant documentation shall be provided upon request by the Contract Manager to substantiate the quality assurance system covering the purchasing and quality control of luminaire components, design and manufacturing process, qualification and experience of plant operating personnel as well as testing and delivery of end products;

8. The overall power factor of the luminaire shall not be less than 0.85 lagging;

9. Internal wiring shall be appropriately colour coded, neatly wired and properly terminated;

10. A sample of the luminaires shall be submitted to the Contract Manager for inspection and Approval as and when required.

ELE21.3.030.A OUTDOOR LUMINAIRES

1. The luminaires shall comply with the following standards in conjunction with BS EN 60598-1 or IEC 60598-1, where the luminaires fall into the respective categories:

<table>
<thead>
<tr>
<th>Standard</th>
<th>Description</th>
</tr>

Certificate of compliance shall be provided for each of the different ratings of drivers to be used;

c. Technical information of the LED drivers shall be provided to indicate the performance of the drivers. The data shall include, but not limited to, minimum and maximum input voltage, frequency, maximum operating temperature, rated output voltage, rated output current, rated output power and power factor;

d. The rated life of LED driver shall not be less than 35,000 hours operating at maximum allowable ambient temperature of not lower than 40°C;

e. The irradiance and radiance emission limits of the LED luminaires, that are exposed to view directly, shall be tested to comply with the hazard ‘Risk Group 1’ (low risk) or ‘Exempt Group’ as stated in the requirements of the BS EN/IEC 62471 – Photobiological safety of lamps and lamp systems;

f. The LED luminaires shall be certified to ‘Restriction of Hazardous Substances (RoHS) Compliance’;

g. Full set of photometric data for each type of LED luminaires prepared to CIBSE TM5 or IES format shall be submitted for general lighting design purpose;

h. The LED luminaires shall be rated for continuous service at the intended application conditions with maximum ambient temperature exceeding 40°C without affecting the performance requirements as for luminaire efficacy, lumen maintenance (L70), colour rendering index, total power factor, and correlated colour temperature as stated in this specification;

i. Each model of LED luminaire or self-ballasted LED lamp shall be tested to comply with the performance requirements stated in this specification. The Sub-contractor shall submit the test report and certify each model of LED luminaire or self-ballasted LED lamp to be complying with the BS EN or IEC standards or other recognised international/national standards.

6. The luminaire shall have been in continuous and satisfactory operation locally in similar application and supply scale for at least one year up to the time of material submission. The corresponding in-service records with supply scale and proven satisfactory operation shall be provided upon request by the Contract Manager;

7. The luminaire manufacturing plant and facilities shall conform to ISO 9001 with proper quality control scheme in place to assure delivering consistent and high-quality products. Relevant documentation shall be provided upon request by the Contract Manager to substantiate the quality assurance system covering the purchasing and quality control of luminaire components, design and manufacturing process, qualification and experience of plant operating personnel as well as testing and delivery of end products.

8. Internal wiring shall be appropriately colour coded, neatly wired and properly terminated;

9. The overall power factor of the luminaire shall not be less than 0.85 lagging;

10. The type of protection against electric shock shall be Class I or II; and the degree of protection against ingress of dust and moisture shall be at least IP54 unless otherwise specified;
11. Outdoor luminaires shall be able to withstand the weather. Metalwork shall be protected against corrosion, and luminaire parts which have to be removed for access to the interior shall be properly gasketed to restrict the entrance of moisture and dirt. Stirrup mounting and similar parts shall be heavily galvanised, and bolts shall either be made of stainless steel or be galvanised;

12. The adjustment nuts and bolts of the luminaires that will be mounted high on buildings or columns shall be captive to prevent loss or accident during servicing. Safety devices shall be provided to prevent luminaires mounted on high positions from dropping;

13. The luminaires installed in such locations that are within hand reach shall be strongly constructed, fitted with an impact-resistant transparent or diffusing cover, and shall have secret key fixings for the cover to the body of the luminaires. Where necessary, wire guards shall be fitted over the cover to give extra protection;

14. A sample of each of the luminaires shall be submitted to the Contract Manager for inspection and Approval as and when required.

ELE21.3.040.A INDOOR BATTEN TYPE LED LUMINAIRES (SF11L TO SF24L, SF33L & SF39L)

1. A type-test certificate together with the associated report(s) issued by an Accredited Laboratory shall be submitted as evidence of compliance with the required standard;

2. The luminaires shall be classified, as a minimum requirement, to Class I and IP20 as described in BS EN 60598-1 or IEC 60598-1;

3. Each luminaire shall be supplied as a complete set comprising, where applicable, the main part, end plates, cover plate/reflector/diffuser, double-capped LED tubular lamps, bi-pin lampholder, fused terminal block, integral earthing terminal and internal wiring, etc.;

4. A fused terminal block, fitted with a suitably-rated fuse to BS 1362 or IEC 60269-1, shall be properly fixed to the body in such a way as to be easily accessible for fuse replacement;

5. The main part of the luminaire shall be made of substantive sheet steel of minimum thickness 0.5 mm, pretreated to prohibit corrosion on both sides and finish coated in gloss white stoved enamel or epoxy powder on the outside surface. It shall be formed and suitably shaped into one continuous U-channel piece to give a fairly rigid structure on its own, but can be further strengthened by ribs where necessary;

6. The luminaire shall be provided with cover plate (for SF11L to SF14L, SF33L), reflector (for SF15L to SF19L, SF39L), or diffuser (for SF20L to SF24L) as appropriate. The cover plate and reflector shall be of the same material and finish as the main part, but the reflector shall be finish coated on both inside and the outside surfaces. The cover plate and reflector shall be of one continuous piece formed and suitably shaped to give adequate mechanical strength. The fixing screw for the cover plate and reflector shall be captive with the main part. The diffuser shall be made of clear prismatic plastic material unless otherwise specified;

7. The end plate for the main part shall be of white finish and can be made of plastic or sheet steel. If made of sheet steel, the end plate shall be of the same material and finish as the main part. A knockout shall be formed on the end plate for conduit entry. The bi-pin lampholder can either be integral with the end plate or alternatively be mounted on the main part or end plate;
8. The main part shall be formed with knockouts on the mounting face for fixing to conduit and BESA box. The fused terminal block shall be conveniently positioned and securely fixed to the main part. The mounting face of the main part shall be purposely formed with small protrusions to adequately cover the heads of any fixing screws projecting beyond its outside surface;

9. A label shall be affixed near the lampholders to indicate only double-capped LED tubular lamp is suitable for the luminaire and fluorescent tube shall not be used.

**ELE21.3.050.A**

**CORROSION RESISTANT TYPE LED LUMINAIRES (SF25L, SF26L & SF34L - SF36L)**

1. A type-test certificate together with the associated test report(s) issued an Accredited Laboratory shall be submitted as evidence of compliance with the required standard;

2. The luminaire shall be classified, as a minimum requirement to Class I and IP54 as described in BS EN 60598-1 or IEC 60598-1;

3. The luminaire shall be supplied as a complete set comprising, where applicable, the main part, reflector/diffuser, bi-pin lampholder, fused terminal block, integral earthing terminal and internal wiring, etc.;

4. A fused terminal block fitted with a suitably-rated fuse to BS 1362 or IEC 60269-1 shall be properly fixed to the body in such a way as to be easily accessible for fuse replacement;

5. The main part of the luminaire shall be a one piece moulded polycarbonate or glass fibre reinforced plastic finished in light grey colour. The mounting face of the main part shall be formed with a knockout for back entry and holes for mounting screws. The two ends of the main part shall each be provided with a hole for conduit entry which shall be sealed with a suitable plastic plug;

6. The reflector shall be made of substantive sheet steel pretreated and finish coated in gloss white stoved enamel or epoxy powder. It shall be of one continuous piece formed and suitably shaped to give adequate mechanical strength. The bi-pin lampholder shall be conveniently positioned and securely fixed onto the tray;

7. The reflector shall be securely mounted to the main part by screws, or other suitable means, which shall remain captive with the main part;

8. The diffuser shall be a one piece moulded clear prismatic polycarbonate with smooth outer surface. It shall be fixed to the main part by means of an adequate number of stainless steel clips. The clips shall remain captive with the main part when the diffuser is removed;

9. A neoprene or silicone gasket shall be provided between the main part and the diffuser and shall be retained firmly in the purposely formed groove in the main part;

10. A label shall be affixed near the lampholders to indicate only double-capped LED tubular lamp is suitable for the luminaire and fluorescent tube shall not be used.

**ELE21.3.060.8**

**BULKHEAD TYPE FLUORESCENT LUMINAIRES (SF 8 & SF 50)**

1. Luminaires shall be licensed with the BSI Kitemark Scheme or with an equivalent Quality Surveillance Scheme. The licence and associated type-test report(s) issued by BSI or the licensing organisation shall be submitted as evidence of compliance with the required standard;

2. The luminaire shall be classified, as a minimum requirement, to Class I and IP 54 as described in BS EN 60598-1 or IEC 60598-1;
3. The luminaire shall be supplied as a complete set comprising the main part, reflector/gear tray, diffuser, ballast, 4-pin single ended type 2G7 lamp base compact fluorescent tube lampholder, metal lamp supporter, fused terminal block, integral earthing terminal and internal wiring. Earthing terminal shall be fitted to the main part and not the reflector/gear tray;

4. The electronic ballast used in the luminaire shall comply with ELE21.20;

5. A fused terminal block, fitted with a suitably-rated fuse to BS 1362 or IEC 60269-1, shall be properly fixed to the body in such a way as to be easily accessible for fuse replacement;

6. The main part of the luminaire shall be a one piece aluminium alloy diecasting, pretreated and finished stoved enamel in cream colour on the outside surface. The main part shall be formed with knockouts on the mounting face for fixing to conduit and BESA Box. The two ends of the main part shall each be provided with a threaded hole for 20 mm conduit entry and shall be fitted with a suitable threaded plastic plug;

7. The reflector/gear tray shall be made of substantive sheet steel or diecast aluminium alloy, pretreated and finish coated in gloss white stoved enamel. The ballast, lampholder and metal lamp supporter shall be conveniently positioned and securely fixed onto the tray;

8. The reflector/gear tray shall be securely hinged to the main part and maintained in normal position by captive screw(s);

9. An isolating device with tinned contacts shall be provided between the main part and the reflector/gear tray such that the mains supply will be isolated automatically on opening the reflector/gear tray;

10. The luminaire shall be neatly wired up with heat resistant PVC cable to BS 6231 or IEC 60227-3 with a maximum conductor temperature of 90°C. Under no circumstances shall the wiring be visible in the lamp compartment;

11. The diffuser shall be a one piece moulded clear prismatic polycarbonate. It shall be fixed to the main part with secret head captive screws openable by a special tool, and shall be securely strapped or hinged to the main part when opened. The quality of diffuser shall be certified by an independent accredited laboratory on the following tests:
   a. Impact test complying with BS EN 60598-1 or IEC 60598-1 with impact energy of 6.5Nm at 25°C without visible damage; and
   b. Exposure test complying with BS EN ISO 4892-2 for a period of not less than 48 hours exposure without visible change.

12. A neoprene or silicone gasket shall be provided between the main part and the diffuser and shall be retained firmly in the purposely formed groove in the main part;

13. Prior to the time of material submission for approval, the luminaire including its major components shall have proven record of reliability in local application for a minimum continuous period of 12 months to the satisfaction of the Contract Manager.

ELE21.3.080.8 GAS DISCHARGE LUMINAIRES

Luminaires for gas-discharge lamps, such as fluorescent, mercury vapour, sodium vapour etc., which utilise chokes as part of the circuit, shall be complete with capacitors of sufficient capacitance to ensure that the overall power factor of the lighting circuit does not fall below 0.85 lagging. The control gear shall be placed as near as possible to the discharge lamp it serves.
ELE21.3.090.8  FLAMEPROOF LUMINAIRES
Not used.

ELE21.3.100.8  SPOT LIGHTS (SF42)
1. The luminaire shall be licensed with the BSI Kitemark Scheme or with an equivalent Quality Surveillance Scheme. The licence and associated type-test report(s) issued by BSI or the licensing organisation shall be submitted as evidence of compliance with the required standard;

2. The luminaire shall be classified, as Class I or Class II, IP20 (minimum) and suitable for direct mounting on normally flammable surfaces as described in BS EN 60598-1 or IEC 60598-1;

3. The luminaire shall be fitted with a PAR 38 Reflector Lamp of wattage and type of diffusion (flood or spot) as specified on the Drawings;

4. The main part of the luminaire shall be rotatable in all directions within 90 degree perpendicular to the exposed side of the mounting surface;

5. The luminaire shall be of surface mounting type unless otherwise specified;

6. The colour of the exposed part of the luminaire shall be as specified on the Drawings.

ELE21.3.110.8  TILTED SPHERICAL SEMI-RECESSED LIGHTS (EYE-BALL LIGHT) (SF43)
1. The luminaire shall be designed and constructed in accordance with BS EN 60598-2-2 or IEC 60598-2-2. The luminaire shall be licensed with the BSI Kitemark Scheme or with an equivalent Quality Surveillance Scheme. The licence and associated type-test report(s) issued by BSI or the licensing organisation shall be submitted as evidence of compliance with the required standard;

2. The luminaire shall be classified, as Class I or Class II, IP20 (minimum) and suitable for direct mounting on normally flammable surfaces as described in BS EN 60598-1 or IEC 60598-1;

3. The luminaire shall be fitted with a PAR 38 Reflector Lamp of wattage and type of diffusion (flood or spot) as specified on the Drawings;

4. The main part of the luminaire shall be rotatable in all directions within 30 degree perpendicular to the exposed side of the mounting surface;

5. The main part of the luminaire shall be able to be dismantled from the exposed side of the mounting surface without having to dismantle any part of the mounting surface;

6. The colour of the exposed part of the luminaire shall be as specified on the Drawings.

ELE21.3.120.8  CYLINDRICAL FULLY RECESSED LIGHTS (DOWN LIGHTS) (SF44)
1. The luminaire shall be designed and constructed in accordance with BS EN 60598-2-2 or IEC 60598-2-2. The luminaire shall be licensed with the BSI Kitemark Scheme or with an equivalent Quality Surveillance Scheme. The licence and associated type-test report(s) issued by BSI or the licensing organisation shall be submitted as evidence of compliance with the required standard;

2. The luminaire shall be classified, as Class I or Class II, IP20 (minimum) and suitable for direct mounting on normally flammable surfaces as described in BS EN 60598-1 or IEC 60598-1;
3. The luminaire shall be fitted with a PAR 38 Reflector Lamp of wattage and type of diffusion (flood or spot) as specified on the Drawings;

4. The main part of the luminaire shall be able to be dismantled from the exposed side of the mounting surface without having to dismantle any part of the mounting surface;

5. The colour of the exposed part of the luminaire shall be as specified on the Drawings.

ELE21.3.130.8 CIRCULAR FULLY RECESSED LIGHTS (DOWN LIGHTS) WITH PLC LAMP (SF45)

1. The luminaire shall be designed and constructed in accordance with BS EN 60598-2-2 or IEC 60598-2-2;

2. The luminaire shall be classified, as Class I or Class II, IP20 (minimum) and suitable for direct mounting on normally flammable surfaces as described in BS EN 60598-1 or IEC 60598-1;

3. The luminaire shall be fitted with bi-pin PLC Lamp(s) of 10, 13, 18 or 26 watts as specified on the Drawings;

4. The main part of the luminaire shall be able to be dismantled from the exposed side of the mounting surface without having to dismantle any part of the mounting surface;

5. The luminaire shall be supplied as a complete set comprising the gear box, ballast, power factor correction capacitor, lampholder, terminal block, integral earthing terminal, internal wiring, trim, gear box supporting structure, false ceiling clamping fixture, reflector and lamp;

6. The reflector shall be made of aluminium;

7. The gear box shall be made of sheet steel of minimum thickness 0.5 mm and be integral with the main part of the luminaire by a rigid metallic structure both of which shall be pretreated to prohibit corrosion;

8. The gear box shall house the ballast, capacitor, lampholder and terminal and be provided with a knockout for flexible conduit entry;

9. The colour of the exposed part of the luminaire shall be as specified on the Drawings.

ELE21.3.140.8 OVAL BULKHEAD FLUORESCENT FITTING (SF83)

1. The luminaire shall be classified, as a minimum requirement to Class I and IP55 as described in BS EN 60598-1 or IEC 60598-1 and suitable for wall mounted;

2. The luminaire shall be supplied as a complete set comprising the main part, reflector/gear tray, diffuser, ballast, starter and starter-holder, power factor correction capacitor, lampholder, fused terminal block, integral earthing terminal and internal wiring;

3. The luminaire shall be fitted with 26W compact fluorescent lamp unless otherwise specified on the Drawings;

4. The luminaire shall have die-cast aluminium housing, UV-stabilized vandalproof polycarbonate diffuser. The diffuser shall be held in place by the retaining ring which is fixed onto the housing by stainless screws;

5. A neoprene or silicone rubber gasket shall be provided between the main part and the diffuser and shall be retained firmly in the main part.
ELE21.4 POLE TOP LANTERNS (SF 29)

ELE21.4.010.8 GENERAL
Lanterns shall comply with BS EN 60598-2-3 or IEC 60598-2-3 and shall be suitable for vertical pole top mounting for 76 mm x 76 mm spigot.

ELE21.4.020.8 LAMP TYPE
1. Lanterns shall be compatible with the following types of lamps:
   a. SON : one 50W or 70W;
   b. MBF/U : one 80W or 125W.
2. The exact type of lamp used shall be as specified in ELE2 or on the Drawings.

ELE21.4.030.8 CONSTRUCTION
1. The lantern body shall consist of a truncated mould-cone held between a cast aluminium base incorporating a spigot cap and a die-cast light alloy upper rim. The vertical rods which join the base to the upper rim shall also support the lamp holder assembly;
2. The lantern shall be covered with an aluminium or UV stabilised glass reinforced polyester top canopy secured by a nylon or aluminium alloy screw cap. Alternatively, the canopy can be hinged to the upper rim and secured with a stainless steel toggle switch catch;
3. A clear anti-vandal UV stabilised polycarbonate prismatic cone designed to give a symmetrical all round light distribution in the lower hemisphere, shall be securely fixed to the lantern;
4. The fitting shall be supplied with an integral set of the required control gear comprising ballast, capacitor, ignitor as appropriate to the type of lamp fitted.
ELE21.5  GLOBE LANTERNS (SF 27, SF 28)

ELE21.5.010.8  GENERAL

1. Lanterns shall comply with BS EN 60598-2-3 or IEC 60598-2-3 and shall be suitable for vertical pole-top mounting or on wall-mounted bracket;

2. Type-test report(s) issued by BSI or an Accredited Laboratory shall be submitted as evidence of compliance with the above BS.

ELE21.5.020.8  LAMP TYPE

1. Lanterns shall be compatible with the following types of lamps:
   a. MBF/U: one 80W or 125W;
   b. SON: one 50W or 70W.

2. The exact type of lamp used shall be as specified in ELE2 or on the Drawings.

ELE21.5.030.8  CONSTRUCTION

1. The diffuser support of the lantern shall be made of corrosion-resistant die-cast aluminium alloy with black enamelled finish. Diffuser support made of matt black or grey high strength plastic may be accepted;

2. The globe shall be made of clear polycarbonate with a smooth surface and UV stabilised. The globe shall be secured to the support by means of captive socket headed screws shrouded on the bottom of the diffuser support. The globe shall be easily removed and reassembled for maintenance;

3. A heat shield shall be provided and fixed positively on to its correct position without adjustment;

4. Suitable prismatic glass refractor or aluminium lamp shield enclosing the lamp shall be provided to control the glare;

5. The bracket to which the lantern is fixed shall be of the same manufacturer as the lantern and fixed as recommended by the manufacturer;

6. All control gear such as ballast, capacitor and ignitor shall be provided and housed inside the globe.
ELE21.6 SIDE-ENTRY STREET LANTERNS (SF 30, SF 31)

ELE21.6.010.8 GENERAL
Lanterns shall comply with BS EN 60598-2-4 or BS EN 60598-2-3 or IEC 60598-2-3 and shall be suitable for side entry to suit 25 mm BSP mounting bracket.

ELE21.6.020.8 LAMP TYPE
1. Lanterns shall be compatible with the following types of lamps:
   a. MBF/U: one 80W or 125W;
   b. SON: one 70W;
   c. SOX: one 35W;
2. The exact type of lamp used shall be as specified in ELE2 or on the Drawings.

ELE21.6.030.8 CONSTRUCTION
1. The main body of the lantern shall be cast from pressure die-cast aluminium alloy or high impact, corrosive resistant material with a separate compartment for housing the control gear, such as ballast, capacitor, ignitor, etc.;
2. Lanterns shall be so constructed that their live parts are not accessible when the lanterns have been installed and wired as in normal use, and when opened as necessary for replacing lamps even if the replacement cannot be achieved by hand;
3. The lantern shall incorporate an injection moulded UV stabilised polycarbonate diffuser which shall be securely fixed to the main body of the lanterns. Another device shall be provided to prevent the diffuser from falling should the fixing device fail under normal conditions;
4. Optical control shall be achieved by means of the diffuser and silver anodized aluminium reflector to give the required light distribution;
5. The bracket to which the lantern is fixed shall be obtained from the same manufacturer as the lantern and fixed as recommended by the manufacturer.
ELE21.7 OUTDOOR AREA FLOODLIGHTS (SF 46)

ELE21.7.010.8 GENERAL
1. Floodlights shall comply with BS EN 60598-2-5 or IEC 60598-2-5 and shall be suitable for outdoor use;
2. The degree of protection against ingress of dust and moisture shall be at least IP65.

ELE21.7.020.8 LAMP TYPE
The exact type of lamp used shall be as specified in ELE2 or on the Drawings.

ELE21.7.030.8 LIGHT DISTRIBUTION
The light distribution shall be as specified in ELE2 or on the Drawings.

ELE21.7.040.8 MAIN BODY CONSTRUCTION
The main body shall be manufactured in aluminium alloy. Luminaire of one-piece glass reinforced plastic moulded body may be acceptable.

ELE21.7.050.8 FRONT FRAME AND GLASS
The front glass shall be toughened type and framed by a non-ferrous metal or glass reinforced plastic frame with silicon rubber gasket. The frame shall be hinged and secured to the main body by screw catches or swivel bolts which shall not possibly fall off even in loose position.

ELE21.7.060.8 REFLECTOR
The reflector shall be made of durable and highly reflective material.

ELE21.7.070.8 WIND SPEED PERFORMANCE
The floodlight, including its fixing/mounting accessories, will be able to withstand wind speeds of 150 km/h on the projected surface of the floodlight assembly without undue deformation, deflection or vibration.

ELE21.7.080.8 STABILITY
1. Fixings which carry the weight of the floodlight and internal accessories shall be provided with appropriate means to prevent dislodgement of any part of the floodlight either in service or during maintenance. Parts of the floodlight which are fixed other than with at least two devices, for example, screws or equivalent means of sufficient strength, shall have such extra protection necessary to prevent those parts from falling if a fixing device fails under normal conditions;
2. A safety chain shall also be provided between the floodlight and the lamp pole to ensure that the floodlight will not drop down should the floodlight support fail. The chain shall be of galvanised steel and of adequate strength to support at least three times the weight of the floodlight.
<table>
<thead>
<tr>
<th>Specification Reference</th>
<th>Description</th>
</tr>
</thead>
</table>
| ELE21.7.090.8            | **ANGULAR ADJUSTMENT**  
Floodlights shall be provided with means for angular adjustment in the azimuth and zenith planes and there shall be provision for positive locking after any such adjustment has been effected. |
| ELE21.7.100.8            | **FIXING ACCESSORIES**  
All exposed external hinges, screws, bolts, washers of the luminaires shall be of stainless steel. All the associated means for attaching the floodlight to its support, such as mounting/fixing bracket, universal pole clamp etc., shall be made of galvanised steel or appropriate corrosion resistant materials. |
| ELE21.7.110.8            | **WINDAGE AREA AND WEIGHT**  
The maximum projected area in any horizontal direction of the pole-mounted floodlight, including the fixtures and gear box etc., shall be 0.2 m². The total weight of each floodlight assembly shall be not more than 18 kg in aggregate. |
| ELE21.7.120.8            | **INTEGRATED CONTROL-GEAR**  
Unless otherwise specified, all control gear such as ballast, capacitor, ignitor shall be provided and integrated inside the lantern. |
| ELE21.7.130.8            | **CABLE ENTRY**  
Compression type cable gland suitable for 9-11 mm O/D cable for cable entry shall be provided. |
ELE21.8  BOLLARDS (SF 37)

ELE21.8.010.8  GENERAL

1. Bollards shall comply with BS EN 60598-2-4 or BS EN 60598-2-3 or IEC 60598-2-3 and shall be of outdoor type with a cylindrical external shape;

2. The dimensions of the bollard shall be as indicated on the Drawings or otherwise specified.

ELE21.8.020.8  LAMP TYPES

1. Bollards shall be compatible with the following types of lamps:
   a. MBF/U: up to 50W;
   b. SON: up to 50W;
   c. CFL: up to 26W.

2. The exact type of lamp used shall be as specified in ELE2 or on the Drawings.

ELE21.8.030.8  CONSTRUCTION

1. The external body of the bollard shall be of extruded aluminium with a durable and scratch-proof outer coating to a colour specified by the Contract Manager. The bollard shall be of base-plate mounted type;

2. The optical assembly of the bollard shall be made of a clear UV stabilised polycarbonate lens with or without an external corrosion resistant metal louvre as specified;

3. A wiring compartment shall be provided within the bollard. It shall be of adequate size to accommodate all the control and switch gear, wiring, etc., and space for one MCB with room for working with hands and tools easily. A gland plate, for armoured cable or conduit termination, shall be provided inside the wiring compartment;

4. Removal of any part of the luminaire should only be possible by using tools other than a slotted head or Philips head screw driver.
ELE21.9 STEEL LAMP COLUMNS (3, 4, 5, 10, 12 M NOMINAL HEIGHT)

ELE21.9.010.8 GENERAL
The columns shall comply with BS 5649 Part 5 and BS EN 40-1 and BS EN 40-2 and BS EN 40-3-1 and BS EN 40-3-2 and BS EN 40-3-3, or BS 5649 Part 5 and EN 40-1 and EN 40-2 and EN 40-3-1 and EN 40-3-2 and BS EN 40-3-3. In general 3, 4 and 5 m columns shall be suitable for post top lanterns and 10 and 12 m columns shall be suitable for mounting four floodlights and complete with mounting arm(s), step bars, and a working platform.

ELE21.9.020.8 CONSTRUCTION
1. Construction shall be similar or equivalent to that shown in the Master Details of the Housing Department;
2. Unless otherwise approved, columns shall be provided with ground root but, if mounted on podium slab, shall be provided with flange plate;
3. The base compartment shall have adequate room to accommodate a corrosion resistant service box to house MCBs and cable connection unit;
4. The compartment door shall be fixed flush with the column by corrosion resistant bolts or tamper proof door lock;
5. The whole column, after installation, shall have ingress protection not less than IP33 and shall be effectively earthed.

ELE21.9.030.8 DIMENSIONS
The following dimensions shall be complied with:

<table>
<thead>
<tr>
<th>Nominal Height</th>
<th>Minimum Root Length</th>
<th>Minimum Door Size</th>
<th>Min Clear Compartment Space (depth x width)</th>
</tr>
</thead>
<tbody>
<tr>
<td>3, 4, 5 m</td>

<td>400 x 80 mm</td>
<td>80 x 60 mm</td>
</tr>
<tr>
<td>10 m</td>
<td>1500 mm</td>
<td>500 x 140 mm</td>
<td>140 x 140 mm</td>
</tr>
<tr>
<td>12 m</td>
<td>1700 mm</td>
<td>500 x 140 mm</td>
<td>140 x 140 mm</td>
</tr>
</tbody>
</table>

ELE21.9.040.8 CORROSION PROTECTION
The whole column including all ferrous accessories shall be hot-dip galvanised to BS EN ISO 1461 after fabrication. The external surface above ground shall be painted with etched primer suitable for galvanised surfaces before any finish coating according to ELE21.14. The external surface of the ground section shall be protected with bitumen coating to a height 50 mm above the cement skirt.

ELE21.9.050.8 STRENGTH
The column shall be of adequate strength to withstand the imposed static and wind load. It shall be fabricated in accordance with the Master Details of the Housing Department, or otherwise, the structural design shall be verified by calculation in accordance with BS EN 40-3-1 or EN 40-3-1 and BS EN 40-3-3 or EN 40-3-3 with partial load factors Class B and maximum horizontal deflection Class 1. The calculation shall be counter-checked by an independent Registered Professional Engineer (RPE) recognised by Hong Kong Engineers Registration Board.
LOW BAY FLOODLIGHTS (WIDE LIGHT DISTRIBUTION) ELE21.10

ELE21.10.010.8 GENERAL

1. Unless otherwise specified below, the luminaire shall be in compliance with sub-clauses ELE21.4.030 (1) to (4);
2. The luminaire shall comply with BS 4533 : Section 102.1 or EN 60598-2-1 or IEC 60598-2-1 and shall be suitable for ceiling mounting. The ballast and capacitor shall be manufactured in accordance with the following standard and shall carry the B.S.I. Kitemark or the mark of an Equivalent Quality Surveillance Scheme:
   a. Ballast - BS EN 61347-1 and BS EN 61347-2-9 and BS EN 60923, or IEC 61347-1 and IEC 61347-2-9 and IEC 60923
   b. Capacitor - BS EN 61048 and BS EN 61049, or IEC 61048 and IEC 61049
3. The degree of protection against ingress of dust and moisture shall be at least IP54 as described in BS EN 60598-1 or IEC 60598-1.

ELE21.10.020.8 LAMP TYPE

Unless otherwise specified on the Drawings, the type of lamp used shall be 150W SON.

ELE21.10.030.8 CONSTRUCTION

1. The luminaire shall be of robust construction with excellent resistance against vandalism. The main body shall be made of die-cast aluminium or steel coated in corrosion resistant textured finish;
2. The diffuser shall be a one piece moulded prismatic polycarbonate which shall be securely fixed to the main body by means of an adequate number of stainless steel screws. Gasket of appropriate type shall be provided between the main body and the diffuser and shall be retained firmly in the purposely formed groove in the main body;
3. The reflector shall be made of durable and highly reflective material, painted white or as approved;
4. All control gears such as ballast, capacitor, ignitor shall be provided and integrated inside the luminaire.

ELE21.10.040.8 LIGHT DISTRIBUTION

The luminaire shall be capable of giving a uniform light distribution for a mounting height as low as three metres with limited glare. As requested by the Contract Manager, photometric data shall be submitted for assessment to ascertain that the luminaire is suitable for the intended application. Unless otherwise specified, the luminaire, in each of transverse plane and axial plane, shall have the light distribution characteristic as follows:

<table>
<thead>
<tr>
<th>Angle from Vertical Plane (Degrees) (5 degrees step)</th>
<th>Luminous Intensity (Cd / 1000 lumen)</th>
</tr>
</thead>
<tbody>
<tr>
<td>0 - 25</td>
<td>Not less than 90 in both planes</td>
</tr>
<tr>
<td>Range</td>
<td>Requirement</td>
</tr>
<tr>
<td>--------</td>
<td>------------------------------------</td>
</tr>
<tr>
<td>30 - 55</td>
<td>Not less than 80 in either transverse or axial plane</td>
</tr>
<tr>
<td>60 - 70</td>
<td>Not less than 50 in either transverse or axial plane</td>
</tr>
</tbody>
</table>
ELE21.11 SELF-CONTAINED EXIT SIGNS AND DIRECTIONAL SIGNS

ELE21.11.010.A TYPE OF FITTING
Unless otherwise specified, all EXIT or directional signs shall be internally illuminated by LED, acceptable to the Fire Services Department and suitable for operation at 220V±6%, 50Hz ± 2%, single phase a.c. supply.

ELE21.11.030.A STANDARDS
The complete EXIT or directional signs shall, where applicable, meet the requirements of Fire Services COP, BS 5499: Part 10 and BS EN/IEC 60598-2-22. The driver control unit regulating the operation of LED shall comply with BS EN/IEC 62384.

ELE21.11.040.A CONSTRUCTION AND COMPONENTS
1. The dimensions, lettering, construction and the general layout of EXIT or directional signs shall conform to the appropriate type of standard EXIT or directional signs as shown on the Master Details of the Housing Department unless otherwise specified. If the dimensions and construction of EXIT or directional signs based on the Manufacturer’s proposal are deviated from the above, Contract Manager’s prior approval shall be obtained;
2. The LED and associated control gear shall be securely fixed and contained inside the sign box. The live parts shall be properly shielded when the sign box is opened for maintenance. The assembly shall comply with the following:
   a. The LED shall be of white colour and with colour temperature within 5000 – 9000K;
   b. Adequate LED shall be provided to produce a luminance of at least 100 cd/m² in white area of the sign in both normal and emergency operation mode during the entire life of the LED;
   c. The total power consumption including the charger and control gear for the EXIT or directional sign shall not be greater than 5W during full charge of the battery unless otherwise approved;
   d. The minimum lumen output of the LED shall be maintained at or above 70% of the initial value after operating for 5.7 years (i.e. 50 000 hours) and this lifetime (L70) shall be supported with calculation using TM-21-11;
   e. The following document shall be submitted for Contract Manager’s checking:
      i. Test report showing the offered sign complies with the standards specified in ELE21.11.030;
      ii. Job reference.
3. All components such as fused terminal block, driver control unit, etc. shall be securely fixed and contained inside the sign box. Internal wiring shall be heat-resistant PVC cable suitable for operation at or above 90°C and comply with BS 6231 Table 2 (Type CK) or IEC 60227-3 and be appropriately colour coded, neatly wired and properly terminated;
4. If emergency lighting modification unit is specified inside the EXIT or directional sign box, the emergency lighting modification unit (conversion kit) shall comply with ELE21.12; the EXIT sign and directional signs shall comply with BS 5266-1 and BS EN/IEC 60598-2-22 and the operation shall comply with ELE21.11.050 and ELE21.11.060 respectively.

ELE21.11.050.A FITTINGS TO EXIT SIGN AND DIRECTIONAL SIGN

The Sub-contractor shall supply and install the following fittings and features on the external surface of the EXIT or directional sign if emergency lighting modification unit (conversion kit) is specified.

1. LED indication lamp to show that the mains supply is "on";
2. LED indication lamp to show that the battery is being charged;
3. A self-returning switch to simulate failure of normal supply to test the emergency operation of the EXIT or directional sign.

ELE21.11.060.A OPERATION

The EXIT sign and directional sign shall be of maintained type if emergency lighting modification unit (conversion kit) is specified:

1. Under normal conditions, the 220V a.c. mains shall power the LED and charge a sealed nickel cadmium battery or nickel-metal hydride battery through a battery charger. On failure of mains supply, the emergency lighting modification unit shall instantaneously switch to battery power operation. Upon restoration of mains supply, the unit shall switch back to normal power and the batteries shall be recharged again. The changeover operations shall be automatic;
2. The duration of emergency operation shall be at least 3 hours after the mains supply fails with a light output up to the end of the duration of not less than the requirements specified in ELE21.12.070;
3. The charging system shall be capable of recharging the battery to full capacity in 24 hours after a total discharge of the battery.

ELE21.11.070.8 SAMPLE

A sample of the EXIT or directional signs box shall be submitted for Approval prior to installation.

ELE21.11.080.8 EVIDENCE OF COUNTRY / PLACE OF MANUFACTURE AND AUTHENTICITY

The Sub-contractor shall produce documentary evidences in accordance with PRE.BS1.205 to verify the country / place of manufacture and authenticity of self-contained exit signs and directional signs delivered to Site or installed.
ELE21.12 EMERGENCY LIGHTING MODIFICATION UNITS (CONVERSION KITS)

ELE21.12.010.8 QUALITY SURVEILLANCE SCHEME
The emergency lighting modification units (conversion kits) shall be licensed with BSI Kitemark Scheme or with an Equivalent Quality Surveillance Scheme. The license issued by BSI or other licensing organisation shall be submitted as evidence of compliance with the required standard.

1. The modification unit comprising an emergency lighting module, a battery pack and related connecting devices (e.g. cables, screw, etc.) can be fully or partially contained inside the connected luminaire;
2. The emergency lighting module shall comply with BS EN/IEC 61347-1 and BS EN/IEC 61347-2-7 and BS EN 60929 for luminaire with fluorescent lamp and shall comply with BS EN/IEC 61347-2-13 for luminaire with LED. The type-test report(s) issued by BSI or the licensing organisation shall be submitted as evidence of compliance with the required standard;
3. The cables used for the modification unit shall be heat-resistant PVC cable suitable for operation at or above 90°C and comply with BS 6231 Table 2 (Type CK) or IEC 60227;
4. The batteries used for the modification unit shall be high temperature (70º C) sealed rechargeable nickel cadmium batteries complying with BS EN/IEC 61951-1, or nickel-metal hydride batteries complying with BS EN/IEC 61951-2;
5. The complete modification unit or remaining components of the modification unit, if mounted separately from the connected luminaire, shall be housed inside a metallic box with inner or outer finishes protected against corrosion.

ELE21.12.030.8 OPERATION MODE
The unit shall be capable of being connected in maintained or non-maintained operation modes as specified on the Drawing.

ELE21.12.040.8 CHARGING SYSTEM
The charging system shall be capable of recharging the battery to full capacity in 24 hours after a total discharge of the battery.

ELE21.12.050.A BATTERIES
Batteries with adequate initial capacity shall be chosen to compensate for the loss of effective capacity during service life cycle such that the interval between batteries replacement shall not be less than four years.

ELE21.12.060.8 BATTERY PROTECTION
The battery shall be protected against over-discharge by a low voltage "cut-out" device which shall disconnect the battery from the load once the discharging voltage of the battery drops below 1V per cell.
EMERGENCY LIGHTING MODIFICATION......

ELE21.12

ELE21.12.070.B  LIGHT OUTPUT DURING EMERGENCY OPERATION MODE
The batteries shall be of adequate capacity such that, from 5 seconds to 3 hours after failure of normal supply, the light output of the emergency luminaire shall not be less than the following ballast lumen factor of the lamp/LED at normal supply voltage:

<table>
<thead>
<tr>
<th>LED Tubular Lamp / Fluorescent Lamp Type and Wattage</th>
<th>Minimum Ballast Lumen Factor</th>
</tr>
</thead>
<tbody>

<td>0.5</td>
</tr>
</tbody>
</table>

ELE21.12.080.A  INDICATION AND TESTING FACILITIES
The emergency modification unit shall have the following fixtures:
1. LED indication lamp to show that the mains supply is "on";
2. LED indication lamp to show that the battery is being charged;
3. A self-returning switch to simulate failure of normal supply for testing the emergency operation of the complete emergency lighting assembly.

ELE21.12.090.8  EVIDENCE OF COUNTRY / PLACE OF MANUFACTURE AND AUTHENTICITY
The Sub-contractor shall produce documentary evidences in accordance with PRE.BS1.205 to verify the country / place of manufacture and authenticity of emergency lighting modification units (conversion kits) delivered to Site or installed.
ELE21.13 INSTALLATION OF LAMPS AND LUMINAIRES

ELE21.13.010.8 "GRID" SYSTEMS

1. Unless otherwise stipulated, fluorescent luminaires installed on the "grid" system, shall be suspended from the ceiling by means of two chromium plated steel chains, with 20 mm oval links. The chains shall be fixed to chromium-plated carrier rings which shall be screwed into 2A 3-pin socket front plates by removing one of the fixing screws. Where no socket exists at a point at which it is necessary to suspend a chain, a carrier ring stud shall be embedded into the ceiling slab as circumstances dictate;

2. Electricity supply to the luminaires shall be obtained from the nearest 2A 3-pin socket enclosed in a circular conduit box in the ceiling via a 3-core circular flexible cable having CSA of not less than 0.75 mm²;

3. Sockets shall be positioned as shown on the Drawings, but if no drawing exists, they shall be positioned on a square grid at approximately 1.5 m centres, depending upon the size and geometry of the area concerned.

ELE21.13.020.8 TUBE PENDANTS

Tube pendants shall comprise a dome cover and a piece of screwed steel conduit of suitable length to give the required mounting height of the luminaire. A lock nut shall be provided to bear against the conduit entry of the luminaires.

ELE21.13.030.8 PLAIN PENDANTS

Plain pendants shall comprise a ceiling rose and a cord-grip lampholder connected by a flexible cord having a suitable length to give the required mounting height of the lamp shade.

ELE21.13.040.8 LUMINAIRES MOUNTED ON WOODEN BATTENS

When a luminaire is not provided with facility for a surface cable entry the luminaire shall be mounted on a suitably shaped wooden batten or pattress. The cable shall then enter the luminaire from the rear through a slot and a hole formed in the batten.

ELE21.13.050.8 CABLES IN ENCLOSED LUMINAIRES

1. Cables entering or within the gear compartment of an enclosed type luminaire shall be properly protected against damage due to the excessive heat generated by the lamp within the luminaire;

2. Protection shall be by means of sleeving the insulation of the cables with fibre glass or other equivalent heat resistant insulating materials. The sleeves shall be provided for all cables within the luminaire;

3. Alternatively protection shall be by means of using heat resisting cables selected in accordance with Requirement 522.2.2 of BS 7671.
ELE21.13.060.8 STROBOSCOPIC EFFECT
Luminaires, other than those using tungsten filament lamps, installed over rotating machinery, shall be arranged so that at least two luminaires connected to different phases are used to illuminate the machinery's moving parts. Alternatively where different phases are not available, or the use of which is impractical, separate tungsten filament lamps shall be used in addition to the gas discharge lamps to eliminate the stroboscopic effect.

ELE21.13.070.8 PAINTING OF PLASTIC ITEMS
Painting of the factory fabricated lighting equipment and luminaire to meet the colour requirements stipulated in this Specification or to meet the directions of the Contract Manager is not acceptable.

ELE21.13.080.8 PAINTING OF EXPOSED METAL PARTS
Metal parts such as cover plates for adaptable boxes, blanking plate for any boxes and conduit pendants, etc. shall be painted white or a suitable colour to match the interior finish of a particular location as specified in ELE28.7.

ELE21.13.090.8 LUMINAIRE TRACK SYSTEMS
1. The electrical supply track system for luminaires (hereinafter referred as the track system) shall be designed and constructed in accordance with the requirements as described in BS EN 60570 or IEC 60570;
2. A type-test certificate together with the associated test report(s) issued by BSI or an Accredited Laboratory shall be submitted as evidence of compliance with the required standard;
3. The track system shall be classified as Class I, IP20 (minimum) and suitable for ordinary interior use for mounting on, or flush with, or suspended from walls and ceilings;
4. The track system shall have a rated current of not exceeding 16A per conductor for distribution of supply to luminaires. It shall consist of three conductors for a single circuit system or five conductors for a system of three separately switchable circuits;
5. Components of the track system shall be so designed that there is no risk of accidental contact between the earthing contacts of the components and the current-carrying parts of the track during insertion and removal by the user;
6. Suitable adaptors shall be used to provide sound electrical and mechanical connections of luminaires to the track so that the weight of the adaptors and/or luminaires are not supported by the electrical connections of the adaptors and the track. The live parts of the adaptor shall not be touchable when the adaptor is in partial or complete engagement and is wired as in normal use. Each adaptor when used in a 3-circuit track system shall be provided with a pre-switched circuit selection function so that the luminaire can be switched to the designed circuit before installation;
7. The track shall be protected from corrosion by using anodized aluminium or stove enamelled paint or equivalent material.
PHOTOCELL DEVICES

1. Photocell devices shall be of adjustable type suitable for on/off control under illumination level ranging at least from 50 to 1500 lux, with ingress protection of at least IP55. The device shall comply with IEC 60669-2-1 with a built-in additional circuitry to achieve an on/off time delay of at least 30 seconds and switch-off threshold greater than the illumination level after switching on of the controlled luminaires so as to eliminate hunting due to short period changes in illumination or light from controlled luminaires. The photocell devices shall have indication to show activation/deactivation status upon reaching the preset on/off level or the time delay setting be adjustable to zero to facilitate commissioning on Site. The required functions shall be demonstrated on Site upon completion of installation;

2. A label in red numbers and characters of legible size shall be provided by the side of each photocell device to indicate the corresponding control zone.
ELE21.14 EXTERNAL LIGHTING SYSTEM

ELE21.14.010.8 SCOPE
This section covers pole mounted tungsten or discharge lighting installations for street lighting, security lighting, floodlighting and general area lighting.

ELE21.14.020.8 SPECIFICATION AND DRAWINGS
External lighting installations shall be installed in accordance with ELE2.

ELE21.14.030.8 LUMINAIRES
1. The type of lamps and luminaires including reflectors to be used shall be as specified in this Specification or as directed by the Contract Manager;
2. The luminaires shall be securely mounted on the poles;
3. A safety chain shall also be provided between the luminaires and the lamp pole to ensure that the luminaires will not be dropped down in case the luminaires support fails;
4. The chain shall be of galvanised steel and of adequate strength to support at least three times the weight of the luminaire.

ELE21.14.040.8 CONSTRUCTION OF LAMP POLES
1. Lamp poles shall be constructed of mild steel pipe of one, two or three sections of diameter and modulus all as specified on Drawings;
2. Pole caps, cat ladders and platforms shall be fitted where shown;
3. Material samples and working drawings shall be submitted when requested by the Contract Manager;
4. The poles shall be finished overall with at least two coats of primer and two coats of finishing paint after erection;
5. The colour of the finishing paint shall be as directed by the Contract Manager.

ELE21.14.050.8 FOUNDATIONS FOR LAMP POLES
Lamp poles shall be securely bolted down in an upright position to the foundations constructed in accordance with the Drawings.

ELE21.14.060.8 SERVICE BOXES
1. A mild steel service box shall be provided on each pole at an appropriate height above ground level to accommodate the MCB control box. The construction of the service box and the MCB control box shall be as shown on the Drawings;
2. Each lamp circuit shall be protected by an MCB. Where the CSA of the incoming/outgoing cable cores are larger than that which can be accommodated by the terminal of the MCB, a fixed insulator connector block of adequate rating shall be installed with a tail to the MCB. Alternatively, a copper busbar may be used;
3. Where the service box serves more than one circuit, the supply to the MCBs shall be by means of a copper busbar of adequate rating. The phase conductors of the incoming/outgoing cables shall then be terminated to the busbar by means of cable sockets;
4. Each control box shall be fitted with a neutral block of adequate rating and having sufficient number of ways for the incoming/outgoing cable cores. It shall be securely fixed to the base of the control box by means of a 6 mm thick paxolin block;

5. The service box shall be fitted with a 3 mm thick galvanised mild steel cover made waterproof with a 3 mm thick soft rubber or neoprene gasket. The cover shall be fixed by means of four M6 brass fixing bolts and washers and shall be hinged if specified;

6. Provision shall be made in the batten plate of the box for supporting and terminating up to three numbers of incoming/outgoing PVC/SWA & PVCS cables by means of suitable cable glands. The cable sizes shall be as specified in ELE2 or on the Drawings.

**ELE21.14.070.8 UNDERGROUND CABLES TO POLES**

1. Underground cables for external lighting systems shall be copper cored, PVC insulated, steel wire armoured and PVC sheathed cables (PVC/SWA & PVCS) unless otherwise specified;

2. Cables shall enter and leave the pole below ground level and each cable shall terminate in a gland fixed to the MCB control box;

3. The cable cores between the glands and the terminals shall not be in tension.

**ELE21.14.080.8 CABLES BETWEEN SERVICE BOX AND LUMINAIRES**

1. a. Cables from the neutral terminal block and the MCBs to the luminaires shall be PVC insulated and PVC sheathed having CSA as specified;

   b. Arrangements shall be made to prevent the cores from being under tension where they are attached to terminals;

   c. All cables shall be contained within the poles;

   d. Rubber grommets shall be installed where cable pass through any metal works.

2. Where the sustained arc voltage of a discharged lamp exceeds 250V, the cables used for connecting the lamp and the control-gear shall be of heat resistant type to BS 6231 or equivalent as recommended by the lamp manufacturer according to lamp requirements;

3. Where the design of the cable termination of the luminaires is only suitable for flexible cables, PVC insulated and PVC sheathed flexible cables shall be used. Such cables shall enter the luminaires by means of suitable waterproof compression glands;

4. Where four or more floodlights are mounted on a pole, the flexible cables shall be connected to the luminaires by means of a mild steel connector box with waterproof hinged cover. The connector box shall be fitted near to the top of the pole, all as shown on the Drawings.

**ELE21.14.090.8 SWITCHES FITTED TO POLES**

1. Where specified switches may be mounted on the pole for local control;

2. Switches mounted on the pole shall be fixed on to it by tapped holes and brass fixing screws;

3. The switches shall be waterproof or be contained within a waterproof type galvanised metal case, with an external galvanised metal operating knob or handle;
4. Switches shall be fitted at least 2 m above finished ground level.

**ELE21.14.100.8 CONTROL GEAR FOR DISCHARGE LIGHTING**

1. Control gear for discharge lamps shall be contained within a galvanised steel box mounted on or inside the pole as directed by the Contract Manager;

2. When mounted on the pole, the steel box shall be watertight and positioned at a height higher than normal working level in such a way that a ladder is needed for access;

3. The box shall be of adequate size to accommodate all control gear, cable and connections;

4. The method of construction shall be similar to the service box.

**ELE21.14.110.8 TESTING OF ILLUMINATION LEVEL**

1. Illumination and luminance measurements shall be carried out after dark using Lux meter and luminance meter with valid calibration certificates issued by accredited calibration laboratory;

2. The proposed measurement procedures, measurement locations and aiming adjustment of luminaires shall be submitted for Contract Manager's agreement before carrying out the test; particularly to avoid obtrusive light affecting occupants of nearby properties and to direct the light into the area required to avoid waste light. When situations necessitate the technical support from the local lighting specialist / supplier(s), the Sub-contractor shall arrange and bear the necessary cost for the local lighting specialist / supplier(s)'s presence and advice during commissioning of the external lighting installation at project completion stage;

3. The Sub-contractor shall carry out re-adjustment of the aiming angle of the luminaires or if necessary, to incorporate additional louvres, baffles or shields to the respective luminaires to control the affect of spill light;

4. The date, time and climatic conditions when the measurement was conducted, measurement locations, type and geometric details of the lighting installation, location and aiming of luminaires, installation drawings, record photos, technical details of measuring instruments etc., shall all be prepared and detailed in a submission report with format to be agreed by the Contract Manager.
ELE21.16 NEW TUBULAR BULKHEAD FLUORESCENT LUMINAIRE WITH ELECTROMAGNETIC BALLAST (SF 71 & SF 73)

ELE21.16.010.8 GENERAL
1. The luminaire shall comply with BS 4533: Section 102.1 or EN 60598-2-1 or IEC 60598-2-1;
2. The luminaire shall be licensed with the BSI Kitemark/ENEC Mark Scheme or with an equivalent Quality Surveillance Scheme. The license and associated type-test report(s) issued by BSI or the licensing organisation shall be submitted as evidence of compliance with the required standard;
3. Unless otherwise specified, the following components of the luminaire shall be manufactured in accordance with the relevant British Standard Specifications and shall carry the BSI Kitemark/ENEC Mark or the mark of an equivalent Quality Surveillance Scheme:
   a. Ballast: BS EN 61347-1 and BS EN 61347-2-8 and BS EN 60921, or IEC 61347-1 and IEC 61347-2-8 and IEC 61347-2-11 and IEC 60921;
   b. Starter: BS EN 60155 or IEC 60155;
   c. Capacitor: BS EN 61048 and BS EN 61049 or IEC 61048 and IEC 61049.
4. The luminaire shall be classified, as a minimum requirement, to Class I and IP54 as described in BS EN 60598-1 or IEC 60598-1;
5. The overall power factor of the luminaire shall not be less than 0.85 lagging;
6. The luminaire shall be radio interference suppressed to limits specified in BS EN 55015 or EN 55015. Test reports shall be submitted as evidence of compliance as and when required by the Contract Manager;
7. The maximum controlgear loss of the lamp shall be equal or smaller than the maximum allowable value as specified in the table below:

<table>
<thead>
<tr>
<th>Lamp type</th>
<th>Nominal lamp wattage ($L_w$)</th>
<th>Maximum allowable lamp controlgear loss (W)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Compact fluorescent</td>
<td>$L_w &lt; 18W$</td>
<td>6</td>
</tr>
<tr>
<td></td>
<td>$L_w \geq 18W$</td>
<td>9</td>
</tr>
</tbody>
</table>

ELE21.16.020.8 LAMP TYPE
1. The luminaire shall be compatible with either single or twin 24W 4-pin 2G11 compact fluorescent lamp;
2. The exact type of lamp used shall be as specified in ELE2 or on the Drawings.

ELE21.16.030.8 LIGHT DISTRIBUTION
1. The luminaire, in each of transverse plane and axial plane, shall have the light distribution characteristic certified by independent accredited laboratory as follows:
### Angle from Vertical Plane

<table>
<thead>
<tr>
<th>Angle from Vertical Plane (Degrees)</th>
<th>Luminous Intensity (Cd / 1000 lumen)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Transverse plane</td>

<tr>
<td>80 - 90</td>
<td>&gt; 110</td>
</tr>
</tbody>
</table>

2. Photometric data shall be submitted for assessment to ascertain that the luminaire is suitable for the intended application as requested by the Contract Manager.

### ELE21.040.8 CONSTRUCTION

1. The luminaire shall be supplied as a complete set comprising the main part, gear tray/reflecter, diffuser, 4-pin 2G11 compact fluorescent tube, lampholder, lamp supporter, ballast, power factor correction capacitor, starter, fused terminal block, integral earthing terminal and internal wiring. Earthing terminal shall be fitted to the main part and not the reflector/gear tray;

2. The main part of the luminaire shall be a one piece aluminium alloy diecasting, pretreated and finished stoved enamel in cream or white colour on the outside surface. The main part shall be formed with knockouts on the mounting face for fixing to conduit and BESA Box. The two ends of the main part shall each be provided with a threaded hole for 20 mm conduit entry and shall be fitted with a suitable threaded plastic plug;

3. The gear tray shall be made of substantive sheet steel or diecast aluminium alloy, pretreated and finish coated in gloss white stoved enamel. The gear tray shall be securely hinged to the main part and maintained in normal position by captive screw(s);

4. An isolating device with tinned contacts shall be provided between the main part and the gear tray such that the mains supply will be isolated automatically on opening the gear tray;

5. The ballast, capacitor, starter, 4-pin lampholder and lamp supporter shall be conveniently positioned and securely fixed onto the tray. The starter shall be positioned in such a way as to be accessible for detachment from the exterior of the gear tray without opening the gear tray;

6. A fused terminal block, fitted with a suitably-rated fuse to BS 1362 or IEC 60269-1, shall be properly fixed to the body in such a way as to be easily accessible for fuse replacement;

7. The luminaire shall be neatly wired up with heat resistant PVC cable to BS 6231 with a maximum conductor temperature of 90°C. Internal wiring shall be neatly wired and properly terminated. Under no circumstances shall the wiring be visible in the lamp compartment;
8. The diffuser shall be a one piece moulded clear prismatic polycarbonate. It shall be fixed to the main part with secret head captive screws openable by a special tool, and shall be securely strapped or hinged to the main part when opened. The quality of diffuser shall be certified by an independent accredited laboratory on the following tests:

   a. Impact test complying with BS EN 60598-1 or IEC 60598-1 with impact energy of 6.5Nm at 25°C without visible damage; and

   b. Exposure test complying with BS EN ISO 4892-2 for a period of not less than 48 hours exposure without visible change.

9. A neoprene or silicone gasket shall be provided between the main part and the diffuser and shall be retained firmly in the purposely formed groove in the main part.
ELE21.17 NEW CIRCULAR BULKHEAD FLUORESCENT LUMINAIRE WITH ELECTROMAGNETIC BALLAST (SF 75 & SF 77)

ELE21.17.010.8 GENERAL

1. The luminaire shall comply with BS 4533: Section 102.1 or EN 60598-2-1 or IEC 60598-2-1;

2. The luminaire shall be licensed with the BSI Kitemark/ENEC Mark Scheme or with an equivalent Quality Surveillance Scheme. The license and associated type-test report(s) issued by BSI or the licensing organisation shall be submitted as evidence of compliance with the required standard;

3. Unless otherwise specified, the following components of the luminaire shall be manufactured in accordance with the relevant British Standard Specifications and shall carry the BSI Kitemark/ENEC Mark or the mark of an equivalent Quality Surveillance Scheme:
   a. Ballast: BS EN 61347-1 and BS EN 61347-2-8 and BS EN 60921 or IEC 61347-1 and IEC 61347-2-8 and IEC 61347-2-11 and IEC 60921;
   b. Starter: BS EN 60155 or IEC 60155;
   c. Capacitor: BS EN 61048 and BS EN 61049 or IEC 61048 and IEC 61049.

4. The luminaire shall be classified, as a minimum requirement, to Class I and IP54 as described in BS EN 60598-1 or IEC 60598-1;

5. The overall power factor of the luminaire shall not be less than 0.85 lagging;

6. The luminaire shall be radio interference suppressed to limits specified in BS EN 55015 or EN 55015. Test reports shall be submitted as evidence of compliance as and when required by the Contract Manager;

7. The maximum controlgear loss of the lamp shall be equal or smaller than the maximum allowable value as specified in the table below:

</tr>
</tbody>
</table>

8. The input power of the ballast/lamp circuit shall meet Class B1 of proposed CELMA standard.

ELE21.17.020.8 LAMP TYPE

1. The luminaire shall be compatible with either single or twin 24W 4-pin 2G10 compact fluorescent lamp;

2. The exact type of lamp used shall be as specified in ELE2 or on the Drawings.

ELE21.17.030.8 LIGHT DISTRIBUTION

1. The luminaire, in each of transverse plane and axial plane, shall have the light distribution characteristic certified by independent accredited laboratory as follows:

---

### CONSTRUCTION

1. The luminaire shall be supplied as a complete set comprising the main body, gear tray/reflector, diffuser, 4-pin 2G10 compact fluorescent tube, lampholder, ballast, power factor correction capacitor, starter, fused terminal block, integral earthing terminal and internal wiring;

2. The main body of the luminaire shall be a one piece moulded polycarbonate or aluminium alloy diecasting, pretreated and finished stoved enamel in cream or white colour on the outside surface. The main body shall be formed with knockouts on the mounting face for fixing to conduit and BESA box;

3. The gear tray shall be made of substantive sheet steel or diecast aluminium alloy, pretreated and finish coated in gloss white stoved enamel. The reflector/gear tray shall be securely mounted to the main body by screws, or other suitable means, which shall remain captive with the main body, or the tray, when the tray is detached from the main body. In the detached position, the tray shall be securely strapped or hinged to the main body;

4. The ballast, capacitor, starter and 4-pin lampholder shall be conveniently positioned and securely fixed onto the tray. The starter shall be positioned in such a way as to be accessible for detachment from the exterior of the gear tray without opening the gear tray;

5. A fused terminal block, fitted with a suitably-rated fuse to BS 1362 or IEC 60269-1, shall be properly fixed in such a way as to be easily accessible for fuse replacement;

6. The luminaire shall be neatly wired up with heat resistant PVC cable to BS 6231 with a maximum conductor temperature of 90ºC. Internal wiring shall be neatly wired and properly terminated. Under no circumstances shall the wiring be visible in the lamp compartment;

7. The diffuser shall be a one piece moulded clear prismatic or reeded polycarbonate. A circular trim can be mounted if required. The diffuser or the trim shall be fixed to the main body with secret head captive screws or equivalent, openable by a special tool, and shall be securely strapped or hinged to the main body when opened. The quality of diffuser, trim and main body if polycarbonate is used, shall be certified by an independent accredited laboratory on the following tests:
a. Impact test complying with BS EN 60598-1 or IEC 60598-1 with impact energy of 6.5Nm at 25°C without visible damage; and

b. Exposure test complying with BS EN ISO 4892-2 for a period of not less than 48 hours exposure without visible change.

8. A neoprene or silicone gasket shall be provided between the main body and the diffuser and shall be retained firmly in the purposely formed groove in the main body.
ELE21.18 NEW TUBULAR BULKHEAD FLUORESCENT LUMINAIRE WITH ELECTRONIC BALLAST (SF 72 & SF 74)

ELE21.18.010.8 GENERAL

1. The luminaire shall comply with BS 4533: Section 102.1 or EN 60598-2-1 or IEC 60598-2-1;

2. The luminaire shall be licensed with the BSI Kitemark/ENEC Mark Scheme or with an equivalent Quality Surveillance Scheme. The license and associated type-test report(s) issued by BSI or the licensing organisation shall be submitted as evidence of compliance with the required standard;

3. The luminaire shall be classified, as a minimum requirement, to Class I and IP54 as described in BS EN 60598-1 or IEC 60598-1;

4. The electronic ballast used in the luminaire shall comply with ELE21.20;

5. The luminaire shall meet the electromagnetic compatibility requirements specified in BS EN 55015 and BS EN 61000-3-2 and BS EN 61547, or EN 55015 and IEC 61000-3-2 and IEC 61547. Test certificates or reports shall be submitted as evidence of compliance with the required standard;

6. The overall power factor of the luminaire shall not be less than 0.95 unless otherwise specified;

7. The maximum controlgear loss of the lamp shall comply with the requirements of the latest version of Hong Kong Voluntary Energy Efficiency Labelling Scheme for Electronic Ballasts, EMSD;

8. Photometric data shall be submitted for assessment to ascertain that the luminaire is suitable for the intended application as requested by the Contract Manager.

ELE21.18.020.8 LAMP TYPE

1. The luminaire shall be compatible with either single or twin 24W 4-pin 2G11 compact fluorescent lamp;

2. The exact type of lamp used shall be as specified in ELE2 or on the Drawings.

ELE21.18.030.8 LIGHT DISTRIBUTION

1. The luminaire, in each of transverse plane and axial plane, shall have the light distribution characteristic certified by independent accredited laboratory as follows:

<table>
<thead>
<tr>
<th>Angle from Vertical Plane (Degrees)</th>
<th>Luminous Intensity (Cd / 1000 lumen)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Transverse plane</td>
</tr>
<tr>

<tr>
<td>10 - 15</td>
<td>&gt; 170</td>
</tr>
<tr>
<td>20 - 25</td>
<td>&gt; 165</td>
</tr>
<tr>
<td>30 - 35</td>
<td>&gt; 150</td>
</tr>
</tbody>
</table>
Photometric data shall be submitted for assessment to ascertain that the luminaire is suitable for the intended application as requested by the Contract Manager.

### ELE21.18.040.8 CONSTRUCTION

1. The luminaire shall be supplied as a complete set comprising the main part, gear tray/reflecter, diffuser, 4-pin 2G11 compact fluorescent tube, lampholder, lamp supporter, ballast, fused terminal block, integral earthing terminal and internal wiring. Earthing terminal shall be fitted to the main part and not the reflector/gear tray;

2. The main part of the luminaire shall be a one piece aluminium alloy diecasting, pretreated and finished stoved enamel in cream or white colour on the outside surface. The main part shall be formed with knockouts on the mounting face for fixing to conduit and BESA Box. The two ends of the main part shall each be provided with a threaded hole for 20 mm conduit entry and shall be fitted with a suitable threaded plastic plug;

3. The gear tray shall be made of substantive sheet steel or diecast aluminium alloy, pretreated and finish coated in gloss white stoved enamel. The gear tray shall be securely hinged to the main part and maintained in normal position by captive screw(s);

4. An isolating device with tinned contacts shall be provided between the main part and the gear tray such that the mains supply will be isolated automatically on opening the gear tray;

5. The ballast, 4-pin lampholder and lamp supporter shall be conveniently positioned and securely fixed onto the tray;

6. A fused terminal block, fitted with a suitably-rated fuse to BS 1362 or IEC 60269-1, shall be properly fixed to the body in such a way as to be easily accessible for fuse replacement;

7. The electronic ballast shall be of preheat starting. One electronic ballast can be used for twin lamp circuit;

8. The luminaire shall be neatly wired up with heat resistant PVC cable to BS 6231 with a maximum conductor temperature of 90 °C. Internal wiring shall be neatly wired and properly terminated. Under no circumstances shall the wiring be visible in the lamp compartment;

9. The diffuser shall be a one piece moulded clear prismatic polycarbonate. It shall be fixed to the main part with secret head captive screws openable by a special tool, and shall be securely strapped or hinged to the main part when opened. The quality of diffuser shall be certified by an independent accredited laboratory on the following tests:
   a. Impact test complying with of BS EN 60598-1 or IEC 60598-1 with impact energy of 6.5Nm at 25°C without visible damage; and
   b. Exposure test complying with BS EN ISO 4892-2 for a period of not less than 48 hours exposure without visible change.
10. A neoprene or silicone gasket shall be provided between the main part and the diffuser and shall be retained firmly in the purposely formed groove in the main part.
ELE21.19 CIRCULAR BULKHEAD FLUORESCENT LUMINAIRE WITH ELECTRONIC BALLAST (SF 76 & SF 78)

ELE21.19.010.8 GENERAL

1. The luminaire shall comply with BS 4533: Section 102.1 or EN 60598-2-1 or IEC 60598-2-1;

2. The luminaire shall be licensed with the BSI Kitemark/ENEC Mark Scheme or with an equivalent Quality Surveillance Scheme. The license and associated type-test report(s) issued by BSI or the licensing organisation shall be submitted as evidence of compliance with the required standard;

3. The luminaire shall be classified, as a minimum requirement, to Class I and IP54 as described in BS EN 60598-1 or IEC 60598-1;

4. The electronic ballast used in the luminaire shall comply with ELE21.20;

5. The luminaire shall meet the electromagnetic compatibility requirements specified in BS EN 55015 and BS EN 61000-3-2 and BS EN 61547, or EN 55015 and IEC 61000-3-2 and IEC 61547. Test certificates or reports shall be submitted as evidence of compliance with the required standard;

6. The overall power factor of the luminaire shall not be less than 0.95 unless otherwise specified;

7. The maximum controlgear loss of the lamp shall comply with the requirements of the latest version of Hong Kong Voluntary Energy Efficiency Labelling Scheme for Electronic Ballasts, EMSD.

ELE21.19.020.8 LAMP TYPE

1. The luminaire shall be compatible with either single or twin 24W 4-pin 2G10 compact fluorescent lamp;

2. The exact type of lamp used shall be as specified in ELE2 or on the Drawings.

ELE21.19.030.8 LIGHT DISTRIBUTION

1. The luminaire, in each of transverse plane and axial plane, shall have the light distribution characteristic certified by independent accredited laboratory as follows:

2. Photometric data shall be submitted for assessment to ascertain that the luminaire is suitable for the intended application as requested by the Contract Manager.

ELE21.19.040.8 CONSTRUCTION

1. The luminaire shall be supplied as a complete set comprising the main body, gear tray/reflector, diffuser, 4-pin 2G10 compact fluorescent tube, lampholder, ballast, fused terminal block, integral earthing terminal and internal wiring;

2. The main body of the luminaire shall be a one piece moulded polycarbonate or aluminium alloy diecasting, pretreated and finished stoved enamel in cream or white colour on the outside surface. The main body shall be formed with knockouts on the mounting face for fixing to conduit and BESA box;

3. The gear tray shall be made of substantive sheet steel or diecast aluminium alloy, pretreated and finish coated in gloss white stoved enamel. The reflector/gear tray shall be securely mounted to the main body by screws, or other suitable means, which shall remain captive with the main body, or the tray, when the tray is detached from the main body. In the detached position, the tray shall be securely strapped or hinged to the main body;

4. The ballast and 4-pin lampholder shall be conveniently positioned and securely fixed onto the tray;

5. A fused terminal block, fitted with a suitably-rated fuse to BS 1362 or IEC 60269-1, shall be properly fixed to the body in such a way as to be easily accessible for fuse replacement;

6. The electronic ballast shall be of preheat starting. One electronic ballast can be used for twin lamp circuit;

7. The luminaire shall be neatly wired up with heat resistant PVC cable to BS 6231 with a maximum conductor temperature of 90° C. Internal wiring shall be neatly wired and properly terminated. Under no circumstances shall the wiring be visible in the lamp compartment;

8. The diffuser shall be a one piece moulded clear prismatic or reeded polycarbonate. A circular trim can be mounted if required. The diffuser or the trim shall be fixed to the main body with secret head captive screws or equivalent, openable by a special tool, and shall be securely strapped or hinged to the main body when opened. The quality of diffuser, trim and main body if polycarbonate is used, shall be certified by an independent accredited laboratory on the following tests:
   a. Impact test complying with BS EN 60598-1 or IEC 60598-1 with impact energy of 6.5Nm at 25°C without visible damage; and
   b. Exposure test complying with BS EN ISO 4892-2 for a period of not less than 48 hours exposure without visible change.

9. A neoprene or silicone gasket shall be provided between the main body and the diffuser and shall be retained firmly in the purposely formed groove in the main body.
ELE21.20 ELECTRONIC BALLAST

ELE21.20.010.8 GENERAL

1. The electronic ballast shall comply with BS EN 61347-1 or IEC 61347-1, BS EN 61347-2-3 or IEC 61347-2-3 and BS EN 60929 or IEC 60929;
2. The electronic ballast shall be suitable for 220V ±6% 50Hz supplies;
3. The electronic ballast shall be automatically re-start after a sudden voltage fluctuation outside its normal operating range and the luminaire shall resume to normal operation.

ELE21.20.020.8 QUALITY ASSURANCE

1. The electronic ballast shall be licensed with the BSI Kitemark/ENEC Mark Scheme or with an equivalent Quality Surveillance Scheme. The license and associated type-test report(s) issued by BSI or the licensing organisation shall be submitted as evidence of compliance with the required standard;
2. The electronic ballast shall be radio interference suppressed to limits specified in BS EN 55015 or EN 55015. Harmonics generated by electronic ballast shall be within the limit set by BS EN 61000-3-2 or IEC 61000-3-2. The total harmonic distortion (THD) of supply current shall be less than 15%. The electronic ballast shall comply with the EMC immunity requirements in BS EN 61547 or IEC 61547. Test certificates or reports shall be submitted as evidence of compliance with the required standard.

ELE21.20.030.8 ENERGY EFFICIENCY

The maximum controlgear loss of the lamp shall comply with the requirements of the latest version of Hong Kong Voluntary Energy Efficiency Labelling Scheme for Electronic Ballasts, EMSD.

ELE21.20.040.8 PERFORMANCE

1. The overall power factor of the luminaire shall not be less than 0.95;
2. The ambient temperature (ta) of the electronic ballast shall be ranged from -5°C to +50°C;
3. The electronic ballast shall withstand a casing temperature (tc) of 70°C minimum;
4. The mean service life at maximum case temperature shall be 50,000 hours minimum;
5. The lamp operating frequency shall be larger than 30kHz unless otherwise specified;
6. The leakage current of each ballast shall be less than 0.5mA;
7. The electronic ballast shall withstand overvoltage at 320V for one hour;
8. The electronic ballast shall allow high voltage insulation testing (Megger testing) of building wiring to be undertaken without disconnecting the power supply.

ELE21.20.050.8 PROVEN RECORD OF RELIABILITY

The electronic ballast shall have satisfactory proven record of reliability in local service for a minimum period of one (1) year after all the above mentioned type test certification.
SUITABILITY FOR APPLICATION

The maximum number of electronic ballast suitable for use with Type B or C miniature circuit breaker in accordance with BS EN 60898-1 or IEC 60898-1 at different lamp wattage shall be submitted for assessment to ascertain that the ballast is suitable for intended application when required by the Contract Manager.

ELE21.21.040.8 AVERAGE RATED LIFE FOR FLUORESCENT LAMP (T5)

The average rated life of fluorescent lamp (T5) shall be not less than 20,000 hours.
ELE21.22 MOTION DETECTOR UNIT

ELE21.22.010.8 GENERAL

Motion detector unit shall consist of a motion sensor mounted on a steel housing with terminal block inside for connection of cable. It shall be used to control the on/off of the light fitting by detection of motion and ambient light level. The unit shall be surface mounted and attached to the light fitting via the conduit entry on the body of the light fitting.

ELE21.22.020.8 CONSTRUCTION

1. The housing of the motion detector unit shall be made of galvanized sheet steel of not less than 1.6 mm thick. The inside and outside surfaces shall be painted with one coat of primer, followed by a coat of stoved enamel finish of colour same as that of the light fitting to be controlled;

2. Cable termination blocks, properly fixed to the housing, shall be provided for connection of cables in/out the unit. A fused terminal block, fitted with a suitably rated fuse to BS 1362 or IEC 60269-1, shall be provided for the phase conductor;

3. The connection between the motion detector unit and the light fitting shall be neatly wired up with heat resistant PVC cable to BS 6231 or IEC 60227-3 with a maximum conductor temperature of 90ºC.

ELE21.22.030.8 MOTION SENSOR

1. The motion sensor shall be flush-mounted on the housing and comply with the following specification:
   a. Type of sensor: passive infrared, ceiling mounted;
   b. Operation voltage: 220V, 50Hz, single phase a.c. supply;
   c. Detection range: 360 degree;
   d. Detection distance: 3 m at floor level for 2.5 m mounting height;
   e. Connected load: capable to supply upto 100W circuit of fluorescent light fittings;
   f. Time delay: automatically turns off 10 minutes (adjustable) after no motion object is detected;
   g. Built-in light level sensor (to be provided when specified on Drawings): turns the connected light fitting off when natural light level raised above a pre-set level which shall be adjustable to suit the site conditions;
   h. Quality standard: U.L. listed or equivalent certification.

2. The setting of the motion detector unit shall not be affected by switching on/off of the power supply to the circuit.

ELE21.22.040.8 MOCK-UP INSTALLATION

The motion detector units and the associated light fittings shall be installed at the sample floor for testing. Approval on the motion detector units shall be given only when the function has been tested to be satisfactory.
ELE21.22.050.8  WARRANT FOR MOTION SENSOR

1. The motion sensors to be installed in each project shall be supplied with a certificate of warranty issued by its manufacturer stating their warranty to provide free replacement of defective parts, components or the motion sensors as a whole against inferior materials, faulty design and/or workmanship for a period of five years from the date of completion of the Section of the Works. The Sub-contractor shall submit the content and format of the letter of warranty for approval together with the material submission;

2. The Sub-contractor shall submit an undertaking issued by the local supplier/manufacturer stating their promise to provide free labour and materials for replacing any parts, components or the motion sensors as a whole found to be defective and provide free on site technical support during the testing and commissioning and the five years warranty period.
ELE21.23 BULKHEAD TYPE LIGHT EMITTING DIODE (LED) LUMINAIRIES (SF84 & SF85)

ELE21.23.010.8 GENERAL

1. The luminaires shall be suitable for operation at:
   a. 220V + 10%, 50 Hz + 2%, single phase, mains supply;
   b. Ambient temperature: peak 40°C for 4 hours continuously with an average of 35°C over 24 hours period;
   c. Ambient relative humidity: up to 98%.

2. The luminaires shall be fully assembled and passed the burn-in test under the specified ambient conditions for 48 hours before shipment from factory;

3. The luminaires shall be integrated with thermal management system such that no force ventilation (e.g. electric fan) shall be employed for cooling;

4. Enclosure of the luminaires shall have a degree of protection meeting the minimum requirement of IP54 as described in IEC 60529;

5. The luminaires design shall duly consider elimination of discomfort glare with adoption of appropriate glare control diffuser and/or reflector, etc.. The rating of discomfort glare caused directly from the luminaires shall be calculated for each typical installation area in compliance with recommendations of authoritative guidance such as the CIE Unified Glare Rating Method. Full set calculation basing on eye level at 1.5m above finished floor together with photometric data shall be provided;

6. Technical information of the luminaires including identity and technical data of key components (e.g. LED, driver unit, light diffuser, etc.) together with relevant certificates of compliance and test report on measurements basing on the IES LM-79-08 Method shall be submitted. The IES LM-79-08 report shall be issued by testing laboratory accredited by the Hong Kong Accreditation Service (HKAS) or their equivalence under the Hong Kong Laboratory Accreditation Scheme (HOKLAS) or a scheme for which HOKLAS has concluded a mutual recognition agreement;

7. In case the luminaires manufacturer wishes to change any key component(s) (e.g. LED, driver unit, light diffuser, etc.) or to modify the circuit design, the new luminaires configuration shall produce at least the same quantity and quality of light (i.e. correlated colour temperature, colour rendering index, lumen output, etc.) and shall be submitted to the accredited laboratories specified in sub-clause (6) for testing. Full set of the relevant certified test reports in accordance with the IES LM-79-08 Method must be submitted for inspection;

8. The luminaires manufacturer shall have at least three years of proven experience and history in the design and manufacture of LED lighting systems; particularly lighting products for illumination purpose, relevant company information and job references shall be provided;

9. The luminaires including key components submitted for the IES LM-79-08 test shall have been in continuous and satisfactory operation either locally and / or overseas for at least one year up to the time of tender submission. The corresponding in-service records with supply scale and proven satisfactory operation shall be submitted for information.
ELE21.23.020.8 CONSTRUCTION

1. The luminaires shall be supplied as complete sets each comprising the housing enclosure, light diffuser, LED panel, segregation partition, fused terminal block, integral earth terminal, driver unit and internal wiring. Both the fused and earth terminal blocks shall be fitted at the inside surface of the housing instead of the segregation partition;

2. The housing of the luminaires shall be a one piece aluminium alloy diecasted, pretreated and finished in cream or white colour epoxy powder coating on the outside surface. The housing shall be formed with knockouts on the mounting face for fixing to conduit and BESA Box. The two ends of the housing shall each be provided with a threaded hole for 20mm diameter conduit entry and shall be fitted with a suitably threaded plastic plug;

3. The segregation partition shall be made of sheet steel or aluminium alloy. It shall be securely hinged to the housing and maintained in normal position by captive screw(s);

4. An isolating device with electrical contacting pins complying with IEC 60998-1 shall be provided inside the housing such that the mains supply will be isolated automatically on opening the hinged partition;

5. The LED panel shall be securely fixed onto the segregation partition interlaid with thermal grease, thermal pad or thermal epoxy. The driver unit shall be conveniently positioned either at the inside surface of the housing or on the other side of the segregation partition as appropriate to suit the housing enclosure and thermal management design. Both the LED panel and driver unit shall be easily replaceable without the use of special tools;

6. A fused terminal block fitted with a 2A fuse to BS 1362 or IEC 60269-3 shall be properly fixed onto the inside surface of the housing in such a way as to be easily accessible for fuse replacement;

7. Wiring inside the housing enclosure shall be of heat resistant copper cable to BS 6231 Table 2 or IEC 60227-3 or other international standards with rated conductor operating temperature of at least 90°C. Internal wiring of different voltage categories shall be neatly segregated, wired and properly terminated. Under no circumstance shall the internal wiring be visible after removing the light diffuser from the housing enclosure;

8. The cable connection between components after the fused terminal block shall be in the form of plug and socket or other connection means to facilitate easy replacement of individual components;

9. The light diffuser shall be moulded prismatic / translucent polycarbonate or other types of durable material. It shall be fixed to the housing with secret head captive screws openable by a special tool, and shall be securely strapped or hinged to the housing when opened. The diffuser shall be certified by an independent accredited laboratory on compliance to the following tests:
   a. Impact test complying with Section 4.13 of IEC 60598-1 with impact energy of 6.5Nm at 25°C without visible damage;
   b. Exposure test complying with BS EN ISO 4892-2 for a period of not less than 48 hours exposure without visible change;
   c. Glow wire test at 850 °C according to BS EN 60598-2-22.

10. A neoprene or silicone gasket shall be provided between the housing and the light diffuser and shall be retained firmly in the purposely formed groove in the housing;

11. Alternative luminaires construction may be accepted subject to meeting the performance specification and with the approval of the Contract Manager.
ELE21.23.030.8 LED PANEL

1. The LED panel comprising array of LEDs on a metal core printed circuit board or thermally enhanced substrate incorporated with thermal, mechanical, and electrical interfaces shall be fixed onto the segregation partition. The selected LEDs shall comply with the following minimum requirements:
   a. Colour rendering index (CRI) : not less than 75;
   b. Correlated colour temperature (CCT): 4,000K (nominal) [3,985K (target) + 275K tolerance];
   c. Chromaticity of LEDs; variation within 0.007 on the CIE 1976 (u’,v’) diagram over the Maintenance Period.

2. The Sub-contractor shall submit written confirmation from the luminaires manufacturer that the selected LED manufacturer has the patent right to produce the supplied LED chipsets including the relevant packaging technology together with the material submission;

3. Circuit design and configuration of the LEDs shall be such that in case a single LED fails open or short circuit, minimum 80% of the remaining LEDs shall maintain operation. Should a single LED fails open or short circuit, the other LEDs shall not be overstressed significantly thus increasing the likelihood that other LEDs will fail;

4. Detail specification of the LED array including the following information shall be submitted:
   a. Colour rendering index, correlated colour temperature including the binning and rated junction temperature of individual LED;
   b. Power rating, design driving current and forward voltage range of individual LED;
   c. IES LM-80-08 test report issued by the United States Environmental Protection Agency recognized accreditation bodies accredited laboratory basing on LED solder point temperature of 55°C, 85°C and a third temperature selected by the LED manufacturer;
   d. Basing on the luminaires design, internal components configuration, and the ambient conditions specified in ELE21.23.040.8, the associated calculations and thermal test report shall be submitted for substantiation of the anticipated maximum operating junction temperature of LED(s) within the array;
   e. Design operating voltage range of the LED array;
   f. Design total lumen output from the LED array;
   g. Design operating current and power consumption of the LED array at the respective driver unit dimming settings of 60%, 70%, 80%, 90% and full lumen output at 100%;
   h. Calculations on the projected service life at 90% and 70% of initial lumen output (i.e. L90 and L70).

ELE21.23.040.8 LED DRIVER

1. Constant current mode LED driver shall be offered for connection between the fused terminal block and the LED panel. The driver unit shall be compatible with the connected LED array and selected to fulfil the LED array power consumption requirement with safety margin;

2. The driver unit shall include components for power factor correction, radio interference suppression, harmonic suppression and also dimming facility;
3. Overload, short circuit, over voltage, over temperature and surge protection shall be incorporated with auto-recovery capability;

4. The dimming circuitry shall be designed for five steps lumen output control, namely, 60%, 70%, 80%, 90% and 100% with tolerance of ±5% at each step using either PWM or analogue DC voltage control signal. The dimming circuit design shall eliminate flickering effect and hence visual fatigue. A toggle / rotary switch with position indicator shall be provided on the segregation partition aside the LED panel to facilitate easy adjustment of the dimming setting;

5. Efficiency of the driver at dimming settings of 80% and above shall not be less than 80%;

6. The design service life of the driver units operating inside the luminaires at the ambient conditions specified in ELE21.23.010 shall be at least 50,000 hours basing on cumulative failure rate of 10%. In-house reliability validation report or test report issued by accredited laboratory for the driver unit shall be submitted;

7. Detail specification of the driver unit including the following information shall be provided:
   a. Make and technical data of electrolytic capacitors adopted inside the driver unit including the temperature rating, voltage rating and service life, etc.;
   b. Make and technical data of LED driver control IC including the MTBF rate / Failure-In-Time rate, life expectancy, circuit protections, etc., in case the component has been incorporated in the driver circuit;
   c. Electrical operating parameters and dimming methodology as adopted by the driver unit;
   d. Driver casing temperature at the manufacturer’s declared temperature measurement point for the hottest spot on the driver casing. In any case, the design casing withstanding temperature shall not be less than 70°C;
   e. Test report for the driver unit casing temperature taken at the temperature measurement point under the operating ambient conditions specified in ELE21.23.010 and dimming setting at 100% full lumen output;
   f. Test report recorded the respective driver losses at the rated output current and at the operating current under different dimming settings;
   g. Drawing showing the physical dimensions and screw fixing positions of the driver unit.

ELE21.23.050.8 PERFORMANCE REQUIREMENTS

1. The luminaires shall comply with the following performance requirements:
   a. Maximum LED junction temperature within the array: not exceeding the temperature at which 70% of the initial lumen output be maintained at 50,000 operating hours referencing to the IES LM-80-08. The lumen output at 50,000 operating hours can be inferred from the test with test duration not less than 9,000 hours and from IES TM-21-11 for the offered LEDs basing on ambient temperature of luminaire projected to 40°C;
   b. Luminaire efficacy: minimum 70 lm/W at 100% full lumen output
   c. Estimated lumen maintenance: lumen output of the installed luminaires shall be maintained at or above 90% and 70% of the initial value (i.e. minimum 700 lumen initially for SF84 and 1400 lumen for SF85) after operating for 2 years and 5.7 years respectively.
basing on 24 hours operation a day

d. Overall power consumption of the luminaires : Maximum 10W for SF84 and 20W for SF85 respectively
e. Overall operating power factor of the luminaires : 0.85 (minimum) at all dimming settings
f. Total harmonic distortion (THDI) : 15% (maximum) at 100% setting
g. Surge immunity level according to IEC61000-4-5

ELE21.060.8 STANDARD

1. The bulkhead type LED luminaires, their components and constituent parts shall comply with the following standards:

## LIGHT DISTRIBUTION

1. Full set of photometric data for the luminaires prepared to IES format including the polar curve on the light distribution shall be submitted. The photometric data shall be certified by an independent accredited laboratory;

2. The luminous flux of SF85 shall be at least double that of SF84;

3. Software simulation of the lighting effect shall be submitted for Contract Manager’s approval basing on photometric data of SF84 and the following design requirements:
   a. Typical corridor width of 1.5m;
   b. Fixing height of luminaires at 2.4m above finished floor;
   c. Spacing of 1.8m measured from centre to centre of adjacent luminaires;
   d. Reflectance of architectural finishes to be 0.8 for ceiling, 0.75 for the walls and 0.4 for the floor;
   e. Illumination level at the finished floor along the centre line of the corridor shall achieve a minimum of 85 lux (i.e. based on a maintenance factor of 70% with the driver units dimming setting at 100% full lumen output);
   f. Vertical illumination level measured on wall at 1.2m above finished floor shall achieve a minimum of 70 lux (i.e. based on a maintenance factor of 70% lumen maintenance with the driver units dimming setting at 100% full lumen output).

## VERIFICATION OF PERFORMANCE

1. The cumulative failure rate of each type of luminaires installed at each domestic block shall not exceed 5% and the lumen maintenance shall not be less than 90% of the initial illumination level at the end of Maintenance Period;

2. Typical installation areas installed with SF84 and SF85 with dimming setting designated by the Contract Manager at each domestic block shall be selected for verification of initial illumination level before completion of relevant Section of Works and illumination measurements shall be conducted in accordance with the illuminance grid spacing as recommended in BS EN 12464-1. The luminaires should have been initially run for a period recommended by the LED manufacturer before conducting the illumination measurement. Contract Manager or his representative, the Sub-contractor and the local supplier / agent together with the luminaires manufacturer shall be present to witness the illumination measurement while the associated report shall be submitted for record;

3. 5 nos. SF84 and 5 nos. SF85 shall be randomly selected from each domestic block, and packed at the presence of Contract Manager’s representative and the Sub-contractor with proper marking and identification. These luminaires shall be further sent to an accredited laboratory for measurement of photometric parameters covering luminous flux, CRI, CCT and luminaire efficacy, etc.. The relevant photometric measurement report shall then be submitted for record and the luminaires shall be re-installed at different locations within the building as assigned by the Contract Manager or his representative;
4. Illumination measurements shall be, unless otherwise instructed by the Contract Manager, continuously conducted quarterly in the first year and half-yearly in the second year at each selected area as identified in sub-clause (2) after the initial illumination measurement. The Sub-contractor shall submit measurement report within 2 weeks after each measurement. In case the illumination level falls below 90% of that measured at the end of the Maintenance Period, the Sub-contractor shall take down the luminaires at the concerned area(s) identified in sub-clause (3) above for further sending to an accredited laboratory for verification of photometric performance. The associated costs for testing and installation of replacement luminaires for continuation of lighting services shall be borne by the Sub-contractor;

5. In case the cumulative failure rate stated in sub-clause (1) exceeds 5% or test report from the accredited laboratory indicates any taken down luminaires in sub-clause (4) with measured photometric parameter(s) below the Specification requirement, particularly if average lumen maintenance falls below 90% as compared with initial test result identified in sub-clause (3), the Sub-contractor shall accompany the local supplier / agent together with the luminaires manufacturer on investigating the cause(s) leading to the high failure rate and / or excessive degradation on the photometric performance. The Sub-contractor shall then submit a report explaining the root cause(s) and an improvement action plan for approval. Notwithstanding the explanation of root causes and the improvement action plan, the Contract Manager can instruct all the luminaires installed in the whole block(s) be replaced with brand-new ones, and the associated cost shall be borne by the Sub-contractor;

6. The Sub-contractor shall coordinate with the local supplier / agent together with the luminaires manufacturer to provide free on-site technical support during commissioning of the installation works at the project completion stage and illumination measurements and assessment of lighting performance during the Maintenance Period.

ELE21.23.090.8 WARRANTY

1. The Sub-contractor shall provide a certificate of warranty from each of the luminaire manufacturers of the approved luminaires in favour of the Employer to warrant that their said products be functional and the spare parts be available for the periods as specified below within 4 weeks from the date of completion of the Works:

<table>
<thead>
<tr>
<th>Warranty Aspects</th>
<th>Period of Warranty</th>
</tr>
</thead>
<tbody>
<tr>
<td>One to one replacement of all malfunctioned luminaires</td>
<td>5 years</td>
</tr>
<tr>
<td>Available in stock for purchase of major spare parts including the LED panel, driver unit, light diffuser, etc. (Compatible spare parts without degrading the performance of the luminaires and with proven tests would be acceptable.)</td>
<td>8 years (available in stock for purchase if required)</td>
</tr>
</tbody>
</table>

2. The period of warranty stated above shall commence from the date of completion of the Works as certified by the Contract Manager in the certificate of completion but in the event of there being more than one certificate of completion, then from the date of completion of the Section of the Works, in which the respective luminaires are installed, as certified by the Contract Manager in the certificates of completion issued pursuant to Clause 8.7 of the General Conditions of Contract for Building Works;
3. The certificate of warranty shall also specify that, after the Maintenance Period but within the warranty period, the luminaires manufacturer shall provide replacement parts and components or the luminaires as a whole, free of charge, against any malfunctioned luminaires. Each luminaire, if more than 10% of LEDs malfunctioned, is also considered as defective and requires replacement. The separation partition mounted with LED panel and driver unit shall be taken down as a whole and returned to the manufacturer for rectification / replacement. The parts / luminaires for replacement are to be returned / collected in Hong Kong at location designated by the manufacturers, with replacement labour provided by the maintenance contractor designated by the Employer. The Sub-contractor shall submit the manufacturers’ certificate(s) of warranty for approval together with the material submission.

ELE21.23 QUALITY ASSURANCE

1. The luminaires manufacturing plant and facilities shall conform to ISO 9001 with proper quality control scheme in place to assure delivering consistent and high-quality products. Relevant documentation shall be provided upon request by the Contract Manager to substantiate the quality assurance system covering the purchasing and quality control of luminaires components, luminaires design and manufacturing process, qualification and experience of plant operating personnel as well as testing (including the burn-in test) and delivery of end products;

2. The luminaires including their components shall be “Restricted of Hazardous Substances (RoHS)” and complying with EC Directive. The luminaires manufacturer shall keep up to date the appropriate documentation for the components used and quality control processes in place ensuring RoHS compliance. Relevant documentation shall be provided upon request by the Contract Manager;

3. The luminaires shall be of certified products under the “Product Certification Scheme for LED Lighting Products” published by the Hong Kong Electronic Industries Association. The product conformity certificate shall be issued by a certification body accredited by the Hong Kong Accreditation Service (HKAS) or an accreditation body which has entered into a mutual recognition agreement with the HKAS.

ELE21.23.110.8 UNIT RATES OF SPARE PARTS

1. The Sub-contractor shall obtain written confirmation from the local supplier / agent of the luminaires on the associated unit rates for major spare parts including the LED panel, driver unit and light diffuser, etc. at the end of the Maintenance Period for reference.

ELE23.3 GENERAL & SPECIAL REQUIREMENTS

ELE23.3.1 - SCOPE

ELE23.3.1.010.8 INSTALLATION TO COMPLY WITH THIS SPECIFICATION

The communal aerial broadcasting distribution (CABD) installation shall comply in every respect with this Specification which details the intrinsic properties (including materials and workmanship) of the installation unless otherwise specified in the currently in force Hong Kong Laws, Project Specific Specification, Drawings and/or written instructions by the Contract Manager.

ELE23.3.1.020.8 SCOPE OF THE WORKS

This Specification, Project Specific Specification, Tender Equipment Schedule and Drawings detail the performance requirements of the Works. The Works to be carried out in accordance with this Specification shall include the whole of the design for a CABD installation only, installation and supply of all materials necessary to form a complete installation including any necessary tests, adjustments, commissioning and maintenance as prescribed and all other incidental sundry components together with the necessary labour for installing such components, for the proper operation of the installation.

ELE23.3.1.030.8 TERMS AND DEFINITIONS

In this Specification, the following words or expressions shall have the meanings assigned to them except when the context otherwise requires:

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Guided Drawings</td>
<td>The drawings for reference purpose to show detailed arrangements of the common standard installations.</td>
</tr>
<tr>
<td>Headend</td>
<td>Equipment connected between the receiving aerials and the remainder of the broadcast reception system to process the signals to be distributed. The headend may, for example, comprise channel amplifiers, channel converters, combining and separating networks.</td>
</tr>
<tr>
<td>Splitter</td>
<td>A device in which the signal energy at the input port is divided equally or unequally between two or more output ports.</td>
</tr>
<tr>
<td>Tee-unit</td>
<td>A device that a 'through' output to connect a series of other Tee-units in cascade and one, or more user's tap for connecting to user's outlets.</td>
</tr>
</tbody>
</table>

ELE23.3.1.040.8 EXECUTION OF THE WORKS

1. The Sub-contractor shall employ a contractor on the “List of Approved Suppliers of Materials and Specialist Contractors for Public Works” for “Broadcast Reception Installation” to carry out the works for the CABD system. The name of the contractor shall be included on the Schedule of Information to be supplied by Tenderer at the time of tender submission. Subsequent to the acceptance of tender, the afore-mentioned contractor shall not be changed unless otherwise approved by the Contract Manager;
2. The “List of Approved Suppliers of Materials and Specialist Contractors for Public Works” for “Broadcast Reception Installation” may be found on the website of the Development Bureau, the Government of the HKSAR.

ELE23.3.2 - STATUTORY OBLIGATIONS AND OTHER REGULATIONS

ELE23.3.2.010.8 STATUTORY OBLIGATIONS AND OTHER REQUIREMENTS

The CABD installation shall comply with the statutory obligations stipulated in the following Laws of the HKSAR and other documents currently in force:

1. Statutory Obligations:
   a. The Specification No. HKTA-1103 "Performance Requirements of Television Signals Input to the Head End of Subscription Television System";
   b. The Specification No. HKTA-1104 "Performance Requirements for In-building Coaxial Cable Distribution System (IBCCDS)” issued by the Office of Communications Authority (OFCA) (hereinafter referred to as the Performance Specification);
   c. The Specification No. HKTA-1105 "Technical Information for Frequency Planning of In-Building Coaxial Cable Distribution System (IBCCDS)” issued by OFCA;
   d. Fire Service (Installations and Equipment) Regulations, Fire Services Ordinance, Chapter 95, and other subsidiary legislation made under the Ordinance;
   e. Other Statutory Regulations as detailed in ELE1.4.010.

2. Other Requirements:
   a. Testing & Commissioning Procedure No. 7 for Broadcast Reception Installation in Government Buildings, Hong Kong issued by Building Services Branch, Architectural Services Department, the Government of the HKSAR;
   b. Other Standards as detailed in ELE1.4.020.

3. Safety Requirements:
   a. The Specification No. HKTA-1101 "Performance and Safety Requirements for Subscription Television System”;
   b. The Specification No. HKTA-1102 "Radiation Limits and Measurement Methods for In-Building Coaxial Cable Distribution System (IBCCDS)");
   c. The Specification No. HKTA-1104 "Performance Requirements for In-building Coaxial Cable Distribution System (IBCCDS)” issued by OFCA (hereinafter referred to as the Performance Specification.);
   d. The Specification No. HKTA-1105 "Technical Information for Frequency Planning of In-Building Coaxial Cable Distribution System (IBCCDS)” issued by OFCA;
   e. Other safety requirements as detailed in ELE1.4.010.
ELE23.4  INSTALLATION METHODOLOGY

ELE23.4.1 - CABD SYSTEM DESIGN

ELE23.4.1.010.8  GENERAL

1. A CABD system is designed with an aim to convey the best receivable signal at a particular site to individual users sharing the same system. The CABD system performance shall comply with BS EN 60728-1 and BS EN 60728-10, or EN 60728-1 and EN 60728-10;

2. At any particular site, the CABD system shall be designed to convey the best receivable digital and analogue terrestrial TV and FM signals to individual users sharing the same system;

3. The CABD system shall allow for digital terrestrial TV broadcasting (DTTB) distribution whose details OFCA has announced. Furthermore, the CABD system shall meet the requirements laid down in HKTA 1104, HKTA 1105 & BS EN 60728-1 and BS EN 60728-10, or EN 60728-1 and EN 60728-10.

ELE23.4.1.020.8  VOLTAGE COVERED BY THIS SPECIFICATION

All apparatus, equipment, materials and wiring shall be suitable for use on 220V ±6%, 50 Hz ±2%, a single phase a.c. system.

ELE23.4.1.030.8  ONE CABD SYSTEM PER BUILDING BLOCK

One CABD system shall be installed for each building block in a particular project.

ELE23.4.1.040.8  CHOICE OF EQUIPMENT AND SITING OF AERIALS

1. For the avoidance of doubt, no signal field strength will be provided. The Sub-contractor shall be responsible for their own signal field strength measurements and deemed to have inspected, measured and investigated the actual conditions on site as necessary, and finding out any source of interference that may affect the installation for choice of equipment and sitting of aerials. The Sub-contractor shall be responsible for the performance of the CABD system in accordance with the specification.

2. The location of aerials shall be the best position for reception with minimum interference from reflection and tidal effect. Should the system be subject to such interference after the commissioning of the system, the Sub-contractor shall be responsible for all necessary rectification work including the relocation of aerials and modification / adjustment to the system to the satisfaction of the CM at no extra cost to the Employer during the Maintenance Period.

ELE23.4.1.050.8  SELECTING THE GAIN OF TV AND FM AERIALS

To maximize signal to noise ratio and to achieve good directivity, the gain of TV and FM aerials shall be chosen to be as high as possible and in compliance with other requirements when specified in the Project Specific Specification for the installation.

ELE23.4.1.060.8  SEPARATE DOWN LEADS FOR THE TV AND FM SIGNALS

1. The TV and FM signals shall be conveyed through separate down leads to the respective amplifiers in the headend circuit for amplification;
2. The Sub-contractor shall allow one spare down leads for future digital terrestrial television.

ELE23.4.1.070.8 SELECTION OF AMPLIFIERS
For systems design, which involves the use of amplifiers in the headend to drive the TV channel amplifiers and/or FM channel amplifier, the first amplifiers to be used for the TV and/or FM signal path shall be a TV bandpass preamplifier and/or a FM band preamplifier respectively. Alternatively, a TV bandpass filter shall be used for the TV signal path and shall be connected to the input of the first wideband amplifier, notwithstanding that it is a preamplifier or a distribution amplifier. Such design practice shall ensure that the amplifiers of the system shall not be overloaded by strong out-of-band signals.

ELE23.4.1.080.8 LOSS ALLOWANCE
A 3 dB attenuation factor shall be included in the calculation of system level to account for practical installation losses such as cable joints.

ELE23.4.1.090.8 ENCLOSURE OF HEADEND CIRCUIT COMPONENTS
The headend circuit components shall be enclosed in a well-ventilated enclosure fitted with lock. The equipment shall be adequately screened from radio interference caused by lift equipment, starters, etc.. The case shall be properly secured against the wall and have sufficient space for cable routing and bending.

ELE23.4.2 - PERFORMANCE REQUIREMENTS

ELE23.4.2.010.8 SIGNAL LEVELS AT FM/TV OUTLETS
The r.m.s. voltage of each vision carrier at the peak of the modulation envelope when measured at the user's outlet across a non-inductive 75 ohm resistor (or referred to 75 ohm) shall be:

1. Minimum level:
   a. 60 dBμV for analogue terrestrial TV signals;
   b. 50 dBμV for digital terrestrial TV signals;
   c. 50 dBμV for FM signals.

2. Maximum level:
   a. 77 dBμV for analogue terrestrial TV signals;
   b. 74 dBμV for digital terrestrial TV signals;
   c. 70 dBμV for FM signals.

ELE23.4.2.020.8 PERMISSIBLE DIFFERENT SIGNAL LEVELS IN AN OUTLET
1. The difference in level between the weakest and the strongest TV signals at the same outlet ("tilt") shall not exceed the following:
   a. 12 dB for frequency range between 47 and 862 MHz;
   b. 6 dB in the range of 60 MHz;
   c. 3 dB between adjacent channels.

2. The difference in level between the weakest and the strongest FM signals at the same outlet shall not exceed 15 dB for frequency range 88 and 108 MHz.
ELE23.4.2.030.8  INTERMODULATION

1. At each outlet, the level of any unwanted signal generated in the system in any channel shall make the minimum carrier-to-noise be the following:
   a. 44 dB for analogue terrestrial TV signals;
   b. 34 dB for digital terrestrial TV signals;
   c. 48 dB for FM signals.

2. Bit error rate (BER) of digital signals after error correction shall be better than $3 \times 10^{-6}$; 

3. Modulation error ratio (MER) shall be not less than 30 dB.

ELE23.4.2.040.8  MUTUAL ISOLATION BETWEEN OUTLETS

To minimize the local oscillator energy from one receiver causing interference to other receivers on the same cable system, the mutual isolation between outlets connected separately to a spur feeder shall not be less than 36 dB for Terrestrial TV, and 42 dB for FM signal.

ELE23.4.3 - TERRESTRIAL TELEVISION SYSTEM

ELE23.4.3.010.8  TERRESTRIAL AERIALS

1. The mast or poles and the aerials shall be of heavy duty construction and be designed to be able to operate normally under a loading pressure associated with a sustained wind speed of up to 170 km/hr. and gusts up to 240 km/hr. The Sub-contractor shall be responsible for liaison with the Main Contractor to ensure the support structure provided by the Main Contractor is adequate for their aerials installation and also be responsible for checking the positions of the builder’s work on Site where reception is at its best before any concrete work is carried out;

2. If the FM aerial is required to be mounted on the same mast for the TV aerial, the TV aerial shall be mounted below the FM aerial and the two aerials shall be separated by at least 1.8 m apart so as to achieve the minimum interaction;

3. The aerial system shall be adequately earthed and protected against lightning in accordance with IEC 62305-1 by mean of bonding the aerial masts or supporting frames of antenna to the air termination for the lightning protection system under the sub-contract with at least 25x3 mm² aluminium tape or an acceptable equivalent;

4. Separate downleads shall be employed for the TV and FM aerials. The TV and FM signals shall not be combined in front of the channel amplifiers.

ELE23.4.3.020.8  PREAMPLIFIERS AND FILTERS

1. TV bandpass preamplifiers shall be used in weak TV field strength areas. Similarly, FM band preamplifiers shall be used in weak FM field areas;

2. Alternatively, TV/FM bandpass filters shall be incorporated if wideband preamplifier is used.

ELE23.4.3.030.8  AMPLIFIERS

1. Signal amplification within the system shall be provided with channel amplifiers at the headend for signal processing and wideband distribution amplifiers;

2. At sites where the aerial is not in direct line-of-sight with the transmitter, the channel amplifier shall be equipped with automatic gain control circuitry;
3. When channel amplifiers are required, this shall include one channel amplifier for FM reception, at least two (2) channel amplifiers for closed circuit TV reception, two (2) interconnection points to combiners / amplifiers transmitting four (4) UHF and twenty (20) VHF signals from Domestic Pay Television Programme Services (DPTPS), two (2) additional spare interconnection points for future uses and Nine (9) channel amplifiers for reception of any one TV channel group as required by the location of reception in accordance with the frequency plans allocated for TV and FM. DPTPS will provide the above combiners and amplifiers for their UHF and VHF signals. Only one TV channel group transmitted by any one transmitter shall be relayed;

4. The design levels used for the output of all amplifiers shall be 4 dB lower than their respective maximum allowable output with the exception of channel amplifiers equipped with AGC and all amplifiers following these AGC channel amplifiers. The maximum allowable output is the output level at which the specification limit for unwanted signal detailed in the wideband amplifiers, FM channel amplifiers and TV channel amplifiers & AGC channel amplifiers etc. can no longer be met with further increase in outputs;

5. The headend equipment of each system shall be installed at the topmost Telecom Room and / or as shown on the Drawings;

6. Cable routing shall be as short as possible and where possible screened from the sight of the TV Transmitter.

**ELE23.4.3.040.8 FREQUENCY CONVERTERS**

Television signals shall be conveyed at the received signal frequencies. If frequency conversion is required, the outlet frequencies shall be in the frequencies 470 to 862 MHz for television reception.

**ELE23.4.3.050.8 UHF MODULATORS**

The video signals from the closed circuit television system cameras shall be modulated to UHF range channels and combined at the headend of the system.

**ELE23.4.3.060.8 SPLITTERS/TEE-UNITS**

All splitters and tee units shall have a wide bandwidth to allow for cascaded mode of operation. The maximum number of tee units in cascade shall be limited to 6. Mock-up tests may be required to assess the design prior to installation, if in the opinion of the Contract Manager, the cascaded chain is too long as to create unacceptable signal tilting.

**ELE23.4.3.070.8 COAXIAL CABLES**

1. The wiring installation from the aerial and any interconnecting point of free TV signals at the topmost Telecom Room to the head-end equipment, amplifiers and tee units / splitters on other floors shall be carried out in surface / concealed conduit system and surface trunking system, and as shown on the Drawings;

2. Coaxial cables terminating at aerial arrays shall be neatly and securely fixed to the supporting structures by means of PVC strapping with nylon stubs or flexible moulded nylon self-locking cable ties at intervals not greater than 250 mm;

3. Co-axial cable shall not be bent to a radius smaller than 15 times the outer diameter of the cable. Joints in the cable runs and looping of cables at outlet terminals shall NOT be allowed;

4. All wiring shall be properly installed and segregated in accordance with the Electrical CoP;
5. The wiring installation in each domestic unit shall be in concealed conduits. The TV / FM socket outlets shall be mounted on concealed BS 4662 boxes located as shown on the Drawings. The number of the Sub-contractor's coaxial cables to be installed in a conduit of any size shall be limited to two (2);

6. A set of spare conduits running from the Meter / Telecom Room on respective floors to individual flats, along with the conduits for CABD system, is designated for future telecommunication and broadcasting services. Under no circumstances, will the Sub-contractor be allowed to use these spare conduit facilities. In addition, the Sub-contractor shall propose the conduits to be used for the CABD system and the number of cables running in each of them whereas no works can commence without the Contract Manager's prior approval for such proposal;

7. All coaxial cables shall have distinctive labels along its length. All coaxial cables except the underground cables shall be white or ivory in colour;

8. Domestic Pay Television Programme Services (DPTPS) Operators' coaxial cables will be run in common trunkings, conduits and boxes with the CABD coaxial cables. The Sub-contractor shall closely liaise and coordinate with the DPTPS Operators on the shared use of trunkings, conduits and boxes.

**ELE23.4.3.080.8 FM/Tv OUTLETS**

1. Looping of outlets to achieve the sufficient isolation shall not be acceptable. Only isolation using splitters and tee units with isolation shall be considered;

2. The FM/TV socket outlets shall be mounted at 100 mm above the skirting level unless otherwise specified and located as shown on the Drawings;

3. The outlets shall be fixed on electrical accessory boxes with made of insulating material in compliance with 47 mm deep. BS 4662 boxes whose colour and shape shall match those of the FM/TV outlets. Outlets shall be white or ivory in colour.

**ELE23.4.3.090.8 FIBRE OPTICAL CABLE SYSTEM**

1. Fibre optical cable system should be provided where the length of main trunk cable without splice exceeds 200 meters. The fibre optical cable in riser shall be enclosed in a galvanized iron cable trunking with space factor not exceeding 40%. In any case, the cable trunking should not be smaller than 50 mm X 50 mm. Where the main trunk is installed underground, the fibre optical cables shall be protected by minimum 100 diameter galvanized iron pipes and cable draws;

2. Fibre optical cable amplifier shall be provided where the total attenuation loss of the optical circuit exceeds the maximum output power of the transmitter;

3. Loose tube buffer fibre optical cables shall be specified for outdoor or locations subject to moisture or temperature variations;

4. The length of fibre optical cables without splice between the optical transmitter and the fibre optical splitter shall not exceed 5000 meters and between the fibre optical splitter and the fibre optical transceiver exceeds 2000 meters.
ELE23.5 MATERIAL & EQUIPMENT

ELE23.5.1 - TERRESTRIAL TELEVISION SYSTEM

ELE23.5.1.010.8 TERRESTRIAL AERIALS

The terrestrial aerials shall be suitable for both analogue and digital terrestrial television and shall comply with EN 60728-11 and EN 50083-2 and EN 60728-5 and the following:

1. TV aerial should have a gain of at least 13 dB and a front to back ratio not less than 20 dB. The aerial shall be of the type to minimize ghost image;
2. FM aerial should have a gain of 4 to 7 dB;
3. The impedance of the aerial should be 75 ohm unbalanced;
4. The aerial system should be provided with a durable protective coating;
5. The aerial mast should be made of stainless steel;
6. The aerial should be capable of receiving digital signal.

ELE23.5.1.020.8 PREAMPLIFIERS AND FILTERS

The performance of the preamplifiers, TV bandpass preamplifiers, FM bandpass preamplifiers, TV bandpass filters and FM bandpass filters shall be suitable for both analogue and digital terrestrial television and shall comply with EN 60728-11 and EN 50083-2 and EN 60728-5 and the following:

1. Preamplifiers

#### ELE23.5.1.030.8 AMPLIFIERS

The performances of the wideband amplifiers, FM channel amplifiers and TV channel amplifiers & AGC modules shall be suitable for both analogue and digital terrestrial television and shall comply with EN 60728-11 and EN 50083-2 and EN 60728-3 and the following:

1. **Wideband Amplifiers**

| Flatness of Response within passband | ± 1.5 dB |
| Selectivity (@ –20 dB point) | Not more than 60 MHz |
| Noise Figure | Less than 3.5 dB |
| Impedance (Input & Output) | 75 ohm |
| Screening Factor | Not less than 60 dB |
| Housing | Weatherproof type housing for outdoor mounting |

* Measured by two signal method with carrier frequencies set at reference zero

#### 4. TV Bandpass Filters

<table>
<thead>
<tr>
<th>Frequency Range</th>
<th>Within CH21 – CH62</th>
</tr>
</thead>
<tbody>
<tr>
<td>Passband</td>
<td>According to manufacturer's specification &amp; compatible with site conditions</td>

<td></td>
</tr>
<tr>
<td>Impedance (Input &amp; Output)</td>
<td>75 ohm</td>
</tr>
<tr>
<td>Screening Factor</td>
<td>Not less than 60 dB</td>
</tr>
</tbody>
</table>

#### 5. FM Bandpass Filters

| Frequency Range | 88 to 108 MHz |
| Loss within Passband | Not more than 1.5 dB |
| Selectivity (at –20 dB point) | Not more than 60 MHz |
| Impedance (Input & Output) | 75 ohm |
| Screening Factor | Not less than 60 dB |
**Television Standard** | CCIR – PAL I System  
---|---  
**Frequency Range** | 88 to 862 MHz  
---|---  
**Gain** | According to manufacturer's specification & compatible with site conditions  
---|---  
**Gain Control Range** | According to manufacturer's specification & compatible with site conditions  
---|---  
**Maximum Output Level** | According to manufacturer's specification  
---|---  
**Unwanted signal output (IM Distortion)** | Better than –60 dB* at maximum level  
---|---  
**Adjustable Slope** | ≥3 dB  
---|---  
**Hum Modulation** | Better than –50 dB  
---|---  
**Stray RF Radiation** | Less than 4 x10^{-9}W  
---|---  
**Noise Figure** | Less than 7 dB  
---|---  
**Nominal Impedance (Input & Output)** | 75 ohm  
---|---  
**Screen Factor** | Not less than 60 dB  
---|---  
**VSWR** | Input VHF better than 1.5:1  
---|---  
**Impedance (Input & Output)** | 75 ohm  
---|---  
**Coaxial Sockets** | F type  
---|---  
**Operating Temperature** | -10°C to +60°C  
---|---  
**Operating Humidity** | Up to 98%  
---|---  
**Deviation with Temperature** | Gain less than 1.0 dB/20°C change  
---|---  
**Output Level less than 0.5 dB/20°C** | Noise Figure less than 0.5 dB/20°C  
---|---  
**Power** | 220 ± 6%, 50Hz ± 2Hz  
---|---  
**Power Consumption** | Less than 20W  
---|---  
**Safety Isolation** | Tested at 2 kV r.m.s.  
---|---  
**Weather proofing** | Designed to confirm to IEC 60065  
---|---  
**Housing** | Either internally or externally fully screened metal box complete with suitable mounting legs for vertical mounting  
---|---  
**Earthing** | All metal parts to be properly earthed  
---|---  
**Identification** | Clearly mark 'IN' & 'OUT' signal sockets  
---|---  
**Accessories** | All necessary coaxial cable plug and accessories  
---|---  

* Intermodulation Ratio is measured by two signal method with carriers set at reference level of 0 dB.

2. FM Channel Amplifiers
### Frequency Band
FM

### Frequency Range
88 to 108 MHz

### Gain
According to manufacturer's specification & compatible with site conditions

### Gain Control Range
According to manufacturer's specification & compatible with site conditions

### Noise Figure
Less than 7 dB

### Output Level
According to manufacturer's specification

### Unwanted Signal Output (IM Distortion)
Better than -60 dB* at maximum level

### Selectivity (@-30 dB point)
Less than 60 MHz

### Operating Temperature
-10°C to +60°C

### Operating Humidity
Up to 98%

### Impedance (Input & Output)
75 ohm

### Deviation with Temperature
Gain less than 1.0 dB/20°C change  
Flatness less than 0.5 dB/20°C  
Output Level less than 0.5 dB/20°C  
Noise Figure less than 0.5 dB/20°C

### Power Supply
220V ± 6%, 50 Hz ± 2 Hz  
D.C. output regulated with good transient suppression. Line powering facility is available by means of individual switches via the input coaxial sockets.

### Safety Isolation
Tested at 2 kV r.m.s.  
Designed to conform to IEC 60065

### Electromagnetic compatibility limit
According to EN 50083-2 Class A

### Weather proofing
Indoor application

### Housing
Modular type construction of robust and attractively designed plug-in units with connecting links between TV channel amplifier outputs. Fully internally metal-screened. Earthing on metal chassis.

### Identification
Clearly marked 'IN' & 'OUT' signal sockets

* Measured by three signal method with carrier frequencies set at reference zero.

### Television Standard
CCIR – PAL I System & Digital Terrestrial Television Broadcasting (DTTB) System suitable

### Frequency Range
470 to 862 MHz, Channel Selectable with 0.25 MHz tuning steps

---

3. **TV Channel Amplifiers & Automatic Gain Control (AGC) Modules.**  
The TV channel amplifiers shall be suitable for working with a group of adjacent channels.
Gain | According to manufacturer's specification & compatible with site conditions
---|---
Gain Control Range | According to manufacturer's specification & compatible with site conditions
Minimum Output Level | >110 dBμV
Maximum Output Level | According to manufacturer's specification
Unwanted Signal Output (IM Distortion) | Better than –60 dB* at maximum level
Stray RF Radiation | Less than 4 x10⁶W
Noise Figure | Less than 7 dB
Flatness of Response | Better than ±1 dB within channel
AGC Facility | Better than ±1 dB output variation for a full range change of at least ±20 dB of the nominal input
Selectivity for non-adjacent channel application | At f₀ ± 8 MHz not less than 70 dB
Hum Modulation | Better than –50 dB
Impedance (Input & Output) | 75 ohm
Coaxial Sockets | F Type
Operating Temperature | -10°C to +60°C
Operating Humidity | Up to 98%
Deviation with Temperature | Gain better than –1.0 dB/20°C change
| Flatness better than 0.5 dB/20°C
| Output Level less than 0.5 dB/20°C
| Noise Figure less than 0.5 dB/20°C
Power Supply | 220V ± 6%, 50 Hz ± 2 Hz
| D.C. output regulated and protected against accidental or fault condition short circuits with an automatic reset facility. Mains indicator light shall be of neon type.
Safety Isolation | Tested at 2 kV r.m.s. D.C. Designed to conform to IEC 60065
Electromagnetic Compatibility Limit | According to EN 50083-2 Class A
Weather Proofing | Indoor application
Housing | Modular type construction of robust and attractively designed plug-in with connecting links between amplifiers outputs. Fully internally metal-screened. Earthing on metal chasis.
Identification | Clearly mark 'IN' & 'OUT' signal sockets
Accessories | All necessary coaxial cable plugs and accessories

* Inter-modulation Ratio is measured by three signal method with both vision and sound carriers set at 7 dB and colour sub carrier at 17 dB.
ELE23.5.1.040.8 FREQUENCY CONVERTERS

The frequency converters shall comply the following:

<table>
<thead>
<tr>
<th>Specification</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>Television Standard</td>
<td>CCIR – PAL I System &amp; DTTB System suitable</td>
</tr>
<tr>
<td>Converted Frequency Band</td>
<td>470 to 862 MHz, channel selectable (specific frequency to be determined by OFCA, Hong Kong)</td>

<tr>
<td></td>
<td>600 to 862 MHz – 1.5:1</td>
</tr>
<tr>
<td>Impedance</td>
<td>75 ohm</td>
</tr>
</tbody>
</table>

### COAXIAL CABLES

1. All coaxial cables used shall be of 75 ohm type copper cables designed for transmitting UHF (470 to 862 MHz) and VHF (88 to 108 MHz) signals. All coaxial cables used shall comply with the relevant sections of EN 50083-1, EN 50083-8 and EN 50117;

2. The feeder shall conform to IEC 60096-3 (cable designation 370 or above of BS 5425-1 and the trunk feeder shall be to cable designation 550 or above of BS 5425-1);

3. Underground cables shall be of low loss coaxial copper cable with polyethylene outer sheath, copper foil outer conductor. These shall conform to IEC 60096 (cable designation 550 MB or above of BS 5425-1).

### FM / TV OUTLETS

1. Outlets shall be dual socket type for FM / TV (88 to 862 MHz) signals complete with frequency dividing network and the respective socket shall be identified with labels embossed on the front plate;
2. The outlets shall comply with EN 60728-11 and EN 50083-2 and EN 60728-4 and shall be suitable for flush mounting on 47 mm deep BS 4662 boxes;

3. The FM / TV outlet shall comply the following:

<table>
<thead>
<tr>
<th>Specification</th>
<th>FM: 88-108 MHz</th>
<th>TV: 470-862 MHz</th>
</tr>
</thead>
<tbody>
<tr>
<td>Features</td>
<td>Double outlet configuration one for FM and one for TV, flush mounting type complete with cover, connected from tap output of tee unit. The TV socket outlet shall only accept a male plug.</td>

</tbody>
</table>

**ELE23.5.1.090.8 ALLOWANCES FOR DIGITAL TERRESTRIAL TV BROADCASTING (DTTB) SYSTEM**

1. The CABD system shall allow for the future additional channel installation of DTTB equipment whose details OFCA has already announced, such as digital headend amplifiers / converters to enable a satisfactory reception and distribution of DTTB broadcasting signals;

2. The DTTB equipment shall be compatible with the CABD system installed and in no circumstances cause interference to the original analogue terrestrial channels.
ELE23.6 INSPECTION, TESTING & COMMISSIONING DURING CONSTRUCTION PERIODS

ELE23.6.1 - GENERAL REQUIREMENTS

ELE23.6.1.010.8 GENERAL

1. The purpose of Inspection, Testing and Commissioning during construction is to ensure the quality of delivered material and equipment and the workmanship of the installation comply with the relevant Regulations, Standards, Code of Practice and requirements of the Sub-contract and the function and performance of the systems meet the requirements specified in the Sub-contract;

2. Inspection and testing shall be carried out on all new installations and alterations to an existing installation in accordance with the requirements of this Section;

3. At the start of the Sub-contract, the Sub-contractor shall propose and obtain agreements from the Contract Manager on the time frames for the process of verification of materials and equipment delivered on site, inspection and testing of installed works;

4. The Sub-contractor shall be responsible for the submission of relevant and sufficient documents to the Contract Manager to describe the materials, equipment and installations to be inspected, tested and commissioned before carrying out of the inspection, tests and commissioning;

5. The Sub-contractor shall provide all necessary specialists, labour, materials, tools, instruments and equipment for carrying out of inspections, testing including analyzing the data, and commissioning. The Sub-contractor's specialist approved by the Contract Manager shall undertake all testing and commissioning procedures;

6. The Sub-contractor shall dispatch competent and experienced commissioning engineers to carry out the test and commissioning of the installation. Such personnel shall collaborate closely with the Contract Manager on site, who will witness the tests carried out under the Sub-contract. The Sub-contractor shall provide the Contract Manager with access to inspect all equipment during any phase of the installation and shall provide all reasonable facilities for such access. The Sub-contractor shall notify the Contract Manager of impending tests in sufficient time to allow the Contract Manager to be present. Parts to be subjected to witnessed tests will not be accepted unless the relevant test result are provided and has been signed by the Contract Manager and Sub-contractor;

7. All tests at site shall be performed in the sequence required by the construction and commissioning programme. The Sub-contractor shall prepare itemised and detailed testing and commissioning schedule. These schedules shall be prepared and submitted to the Contract Manager at least three months before the commencement of the test and approved by the Contract Manager. The schedule shall be completed by the Sub-contractor and presented to the Contract Manager for approval;

8. All instrument used for testing should be calibrated as specified in the Specification for the inspection, measuring and testing of the installation. The Sub-contractor shall submit to the Contract Manager valid calibration certificates issued and signed by approved calibration organizations before the use of the instruments;
9. The entire installation shall be commissioned and tested in accordance with the latest edition of "Testing and Commissioning Procedure for Broadcast Reception Installation in Government Buildings, Hong Kong Special Administrative Region";

10. The Sub-contractor shall record all data and information gathered during all inspections, testing and commissioning and produce reports to the Contract Manager within 3 weeks after the inspection;

11. The Sub-contractor at their own expense shall rectify all defects in performance, material and workmanship before the installation is accepted.

**ELE23.6.1.020.8 COMPONENT ACCEPTANCE**

1. The following components offered for the CABD installation shall have at least three(3) years of proven local performance history. Relevant job reference(s) shall be submitted to the Contract Manager for approval:
   a. TV and FM bandpass filters or preamplifier;
   b. Channel amplifiers;
   c. Broadband amplifiers (with or without AGC) / Frequency converters;
   d. Splitters / tap-off units;
   e. FM / TV outlets;
   f. Coaxial cables.

2. The Sub-contractor shall test, at least one month before actual installation, all the channel amplifiers / AGC converters for acceptance tests witnessed by the Contract Manager. In the event of the components failing the acceptance tests, the Sub-contractor shall resubmit fresh components for further tests until the components are accepted;

3. The Sub-contractor shall bear the cost of all testing required by the Contract Manager on any CABD equipment;

4. In addition, the Contract Manager shall have the right to order any components to be tested, if, in his opinion, the components are suspected of not complying with this Specification. All components failing such tests shall be replaced by the Sub-contractor at their own cost to the satisfaction of the Contract Manager.

**ELE23.6.1.030.8 VERIFICATION OF MATERIALS AND EQUIPMENT DELIVERED**

1. All materials and equipment delivered to site shall be verified by the Contract Manager that they comply with the requirements and conform to the materials and equipment approved by the Contract Manager;

2. The Sub-contractor shall request in writing the Contract Manager to inspect materials and equipment delivered on site in accordance with the agreed time frame;

3. The request for inspection shall be made together with detail descriptions of the materials/equipment including, but not limited to, brand name, model number, country of origin, their tested standards and record of Contract Manager's approval for the using the materials and equipment.

**ELE23.6.1.040.8 INSPECTION AND TESTING OF INSTALLED WORKS**

1. The Sub-contractor shall request in writing in accordance with the agreed time frame to the Contract Manager for the inspection and witness testing of installed works in order to ensure that the installed works conform to the approved drawings and also meet the requirements of the Sub-contract;
2. Inspection and testing of installed works may be carried out for the whole or portion by portion of an installation, as appropriate. The Sub-contractor shall make proposal to the Contract Manager and obtain the Contract Manager’s agreement on the arrangement before commencement of the works;

3. The request shall be made together with descriptions or drawings showing details of the works including, but not limited to, area/location of the works and types of installations;

4. Request for inspection for works to be covered up subsequently shall be made according to the work progress and well before the installations are covered up by subsequent activity. The Sub-contractor is responsible for any delay and its associated financial or time loss arising from late or unsatisfactory planning and arrangement of inspection and testing of works incurred to himself and others, consequential or otherwise.

**ELE23.6.1.050.8 COMMISSIONING AND FUNCTIONAL AND PERFORMANCE TESTS**

1. All installations and equipment shall be properly commissioned and tested to ensure that they are operating to deliver the design capacities and at the most optimum favourable operation conditions of the installations and the equipment and they are functioning properly in accordance in accordance with the design requirements;

2. The Sub-contractor shall submit proposed testing and commissioning programmes, testing and commissioning methods, procedures and formats of test records to the Contract Manager for approval at least three (3) months before commencement of commissioning and testing or within four (4) months after commencement of the Sub-contract whichever is earlier. The submission shall be submitted together with a list of major equipment with their crucial information such as brand names, model numbers, types, capacities and locations;

3. The Sub-contractor shall check and ensure that all related building items such as false ceiling, partitions, windows, louvers, etc. that will affect proper operation of the system have been provided and ready for carrying out of the commissioning before starting commissioning works;

4. The Sub-contractor shall check and ensure that all related building services items including those provided by others are available and ready for carrying out of the commissioning before starting commissioning works;

5. The Sub-contractor shall carry out commissioning work portion by portion rather than waiting until completion of the whole system if the commissioning work is more effective and appropriate to be proceeded in such arrangement. Nevertheless, after completion of the whole installation, the Sub-contractor shall commission the whole system in one go in order to ensure that the whole system is operating smoothly to deliver the design capacities and at its optimum favourable operation condition;

6. The Sub-contractor shall test the system on their own and is satisfied that the performance of the system comply with the design requirements before making requests to the Contract Manager for witness of commissioning and tests;
7. Commissioning and testing shall be conducted strictly under the specified design condition as far as possible. For commissioning works or tests that would be affected by environment condition or other factors outside the Sub-contractor's control and it is unlikely that the commissioning works or tests can be arranged to be proceeded under the design condition, the Sub-contractor shall submit alternative proposal for the Contract Manager's approval for carrying out the commissioning works or tests under condition with slight deviation from the specified design condition. Nevertheless, the Sub-contractor shall demonstrate from the result of commissioning and testing, either by means of calculation or other methods that the system can operate to deliver the design capacities;

8. The Sub-contractor shall, at its own cost, provide temporary TV channels at the headend in addition to the receivable off air and CCTV channels at the time of testing and commissioning. This is to demonstrate that the system shall be able to operate and deliver the design output for a total of not less than 30 TV channels;

9. In addition to the commissioning and test reports submitted by the Sub-contractor within 3 weeks after the commissioning and tests, the Sub-contractor shall compile all inspection, test and commissioning records in one report and submit it to the Contract Manager within 4 weeks after contract completion.

**ELE23.6.2 - EQUIPMENT CALIBRATION**

**ELE23.6.2.010.8**  
**GENERAL**

The Sub-contractor shall make available the calibrated equipment and the associated calibration records etc. whenever the relevant test is performed. The equipment together with the relevant documentation shall conform to the requirements as set out in the following:

1. Accreditation:
   
   The equipment shall be calibrated at accredited laboratories. The calibration shall be made against certified equipment having a known valid relationship to internationally or nationally recognized standards. Where no-such standards exist, the basis used for calibration shall be documented. In such cases, the laboratories shall provide satisfactory evidence of correlation of results, for example by participation in a suitable programme of inter-laboratory comparisons or proficiency testing.

2. Acceptance of the calibration of the equipment:
   
   The calibration and acceptance of the calibration of the equipment shall comply with the requirements as set out in the schedule.

3. Document the calibration process:
   
   The Sub-contractor shall define and document the process employed for the calibration of the equipment including details of equipment type, unique identification, location, frequency of checks, check method, acceptance criteria and the action to be taken when results are unsatisfactory.

4. Calibration records of the equipment:
   
   The Sub-contractor shall maintain and submit calibration records of the equipment to the Contract Manager and the records shall include:
   
   a. The description and unique identification of equipment;
   
   b. The date of equipment calibration;
   
   c. The calibration results obtained after and, where relevant, before any adjustment and repair;
d. The assigned calibration interval;

e. The calibration procedure;

f. The designated limits of permissible error or accuracy of equipment;

g. The source of the calibration used to obtain traceability;

h. The relevant environmental conditions and a statement about any corrections thus necessary;

i. A statement of the uncertainties involved in calibrating the equipment and of their cumulative effect;

j. Details of any maintenance such as servicing, adjustment, repairs or modifications carried out;

k. Any limitations in use;

l. Identification of the person(s) performing the calibration;

m. Identification of person(s) responsible for ensuring the correctness of the recorded information;

n. Unique identification (such as serial numbers) of any calibration certificates and other relevant documents concerned.

5. Calibration under suitable environmental conditions:

Calibration shall be carried out under suitable environmental conditions considering the conditions under which the equipment is used for inspections, measurements and tests.

6. Label marked “calibrated”:

The Sub-contractor shall identify the equipment with a label marked "calibrated" and approved identification record to show the calibration status and the next due date.

7. Doubt on the accuracy of the equipment:

The Sub-contractor shall re-calibrate the equipment at intervals as shown in the schedule, or at shorter periods when the Contract Manager has doubt on the accuracy of the equipment.

8. Return of equipment:

The equipment shall be returned to the Sub-contractor at the completion of the Sub-contract when there is no outstanding or remedial works to be completed.

ELE23.6.3 - TESTING & COMMISSIONING

ELE23.6.3.010.8 VISUAL INSPECTION

A visual inspection shall be carried out before testing of the installation in order to verify the following:

1. Compliance with Regulations and / or CoP:

   The installation has been carried out in compliance with regulations and / or CoP.

2. Correctness:

   The correctness of the designation of the installation; and

3. Visual Damage:

   There is no visual damage to the installation.
ELE23.6.3.020.8  TESTING & COMMISSIONING

The Sub-contractor shall carry out complete performance tests for all equipment and systems installed by him, make all necessary adjustments, commission the installations and submit the test reports, all to the satisfaction of the Contract Manager who may require the Sub-contractor to repeat all or some of the tests in the presence of his or her representatives before the installation will be accepted. Where relevant, the following tests shall be carried out in the sequence indicated. In the event of any test indicating failure to comply, that test and those preceding tests, the results of which may have been influenced by the fault indicated, shall be repeated after the fault has been rectified.

1. Signal Level Measurement of TV Headend and Trunk Distribution Equipment:
   a. Measure the input and output signal levels of each headend and trunk distribution equipment item with the signal level meter, starting from the antenna side. All the TV channels to be distributed shall be measured. For FM signals, three of the principal programmes to be distributed, namely those with the lowest, middle and highest frequencies, shall be measured;
   b. The input and output signal levels shall agree with the calculation done by the Sub-contractor on the approved System Schematic Diagram(s).

2. The Automatic Gain Control (AGC) Performance of TV Channel Amplifiers:
   a. If the TV channel amplifiers are fitted with AGC facilities, the AGC functions shall be tested. The input signal of each AGC channel amplifier shall be varied by +10 dB and –10 dB from its nominal value. External amplifier and attenuator shall be temporarily inserted at the channel amplifier input for this test;
   b. For proper AGC function, the channel amplifier output shall not vary by more than ±1 dB.

3. Measurement of Signal Levels at FM/TV Outlets:
   a. The signal level at FM/TV outlets shall be measured by the signal level meter for each TV channel and three of the principal FM programmes to be distributed, namely those with the lowest, middle and highest frequencies;
   b. The signal levels shall fall within the following items:

<table>
<thead>
<tr>
<th>Channel</th>
<th>Minimum Signal Level (dBµV)</th>
<th>Maximum Signal Level (dBµV)</th>
<th>&quot;Tilt&quot;</th>
</tr>
</thead>
<tbody>
<tr>
<td>Analogue Terrestrial TV</td>
<td>60</td>
<td>77</td>
<td>i. 12 dB for 47 to 862 MHz</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>ii. 6 dB in the range of 60 MHz</td>
</tr>
<tr>
<td>Digital Terrestrial TV</td>
<td>50</td>
<td>74</td>
<td>iii. 3 dB between adjacent channels</td>
</tr>
<tr>
<td>FM</td>
<td>50</td>
<td>70</td>
<td>15 dB</td>
</tr>
</tbody>
</table>
   
   Note: "Tilt" is the difference in signal level between the strongest and the weakest TV signals.

4. Mutual Isolation between FM/TV Outlets:
   a. The mutual isolation between FM/TV outlets from the same tee unit shall be measured. About 3 pairs of outlets shall be tested for each type of tee unit;
   b. The mutual isolation shall not be less than 36 dB for terrestrial TV and 42 dB for FM signal.

5. Functional Testing:
The picture quality at TV outlets shall be measured by a Portable TV monitor c/w sound monitoring loudspeaker for each TV channel. The test results shall be recorded in the report.
ELE23.7 MAINTENANCE REQUIREMENTS

ELE23.7.010.8 GENERAL MAINTENANCE REQUIREMENTS

1. The Sub-contractor shall furnish maintenance, free of further charge, for the complete installation for a period of twenty-four (24) months from the date of acceptance. This maintenance shall include the following services:
   a. Routine inspection, testing and maintenance services;
   b. Emergency inspection, testing and repairs.

2. All inspection, testing, maintenance services and repairs shall be carried out generally in accordance with the manufacturers' recommendation/instructions and to the satisfaction of the Contract Manager;

3. The Sub-contractor shall despatch competent and experienced engineers and technicians equipped with the testing instruments, tools, equipment etc. to inspect, service, test, adjust and maintain the installation in a satisfactory operating condition. The Sub-contractor shall allow for carrying out such inspection, service, testing, adjustment and maintenance at a time outside normal office hours including general holidays;

4. All labour and materials including cleaning materials, lubricants, battery electrolyte, tools, instruments etc., and transportation required for carrying out routine and emergency inspection, testing, repair, replacement and maintenance services shall be included in this Sub-contract. Any renewals or repairs necessitated by reason of negligence of the end user or misuse of the equipment by the end user or by reason of any other causes not due to the fault of the Sub-contractor shall be carried out by the Sub-contractor and paid for in accordance with the Sub-contract with prior notice to the Contract Manager;

5. The Sub-contractor shall be responsible for all repairs necessary to maintain the installation in a safe, reliable and operative condition at all times. The Sub-contractor must ensure that their servicing staff carrying out necessary repairs immediately utilising manufacturer's original replacement parts. Any component taken down for services shall be reinstated within 2 hours or otherwise replaced by a spare unit at the Sub-contractor's expenses;

6. After each routine inspection, testing and maintenance service, the Sub-contractor shall furnish to the Contract Manager within 14 days a report complete with the following details:
   a. Date and time of inspection, testing and maintenance service;
   b. Persons carrying out the task;
   c. Details of inspection and maintenance service;
   d. Results of all tests performed;
   e. Any external factors significantly affecting the service and test results;
   f. Any follow-up actions as required.

ELE23.7.020.8 ON-CALL MAINTENANCE AND REPAIR SERVICE

1. The Sub-contractor shall dispatch technically competent and specially trained personnel for on-call maintenance and repair service and restore the malfunction CABD System to proper working order within the time period as specified below:
a. The Sub-contractor shall respond immediately to system fault or breakdown affecting the service to a whole building or effecting 'no picture' for large-scale residents and inspect the failure within one hour during office hours or two hours if outside office hours after receiving a call for service from the Contract Manager or his or her representatives or from the estate office. The system shall be restored to normal within 4 hours. In the event that it being impossible to perform the requirement within the time stipulated, the Sub-contractor shall explain immediately to the Contract Manager or his or her representatives the reason for such non-conformance;

b. For any other system minor fault, or complaints not involving loss of picture, the Sub-contractor shall restore the system to proper working order within 24 hours from receiving a fault report from the Contract Manager or his or her representatives.

2. The on-call maintenance and repair services shall include all works, whether they are of mechanical, electrical or electronic nature which are found necessary to maintain the CABD System in good and safe working order at all times and in conformity with:

a. The Specification No. HKTA-1103 "Performance Requirements of Television Signals Input to the Head End of Subscription Television System" issued by OFCA;

b. The Specification No. HKTA-1104 "Performance Requirements for In-building Coaxial Cable Distribution System (IBCCDS)" issued by OFCA (hereinafter referred to as the Performance Specification);

c. The Specification No. HKTA-1105 "Technical Information for Frequency Planning of In-Building Coaxial Cable Distribution System" issued by OFCA.

Should the Sub-contractor find it necessary to remove any system equipment to his Workshop for repair, he shall install, at the time of removal, a suitable replacement equipment for temporary use at no cost to the Housing Authority in order to maintain the system in proper working condition during the entire period of repair;

3. In case a system breakdown call occurs in Outlying Islands (e.g. Cheung Chau), the Sub-contractor shall, as far as practicable, restore the system to normal operating condition in 24 hours from receiving the call;

4. The Sub-contractor shall provide all transport, labours and materials including cleaning materials, tools and testing instruments required for the on-call maintenance and repair service. The Sub-contractor shall employ sufficient number of competent technicians and have adequate number of testing instruments for the service;

5. The Sub-contractor should note that the cost for the provision of the on-call repair service for the CABD system as well as the overtime work during on-call services is deemed to have been included in this Sub-contract;

6. The on-call repair service for CABD System shall be provided once the system is included in the Sub-contract and shall last until the end of the Sub-contract. Therefore, the Sub-contractor should make sufficient allowance in her tender;

7. The Sub-contractor shall within one week after the commencement of the Sub-contract, submit a name list with at least two names and telephone numbers of his English and Cantonese speaking representatives to whom repair calls should be directed;

8. For indicative purposes, the average number of on-call maintenance and repair service is around 23 per month. However, this figure is likely to vary due to:

a. Addition or deduction of CABD system in this Sub-contract;
b. Connection of the CABD drop-in cables to other Subscription TV networks or re-connection of CABD drop-in cables back to CABD system;

c. Addition of video signals from CCTV cameras on the CABD system;

d. Reception and distribution of DTTB signals in addition to analogue ones from 2007 onwards.

**ELE23.7.030.8 ROUTINE HALF-YEARLY INSPECTION, TESTING AND MAINTENANCE**

The Sub-contractor shall visit the installation at least once every six months to carry out tests, repairs and adjustment. All environmentally sensitive devices shall be inspected, cleaned, adjusted and calibrated. A test sequence shall be carried out in accordance with the manufacturer's instructions.

**ELE23.7.040.8 FINAL INSPECTION, TESTING AND MAINTENANCE**

1. At the final inspection, the Sub-contractor shall, in addition to the routine half-yearly inspection and testing, adjust all the electronic equipment to the optimum state of operational efficiency. All mechanical equipment and control panels shall be inspected for rusting or corrosion such that touching-up or re-painting shall be carried out as necessary;

2. A complete performance test of the whole installation shall be carried out and any defects in operation, materials and workmanship so developed shall be rectified.

**ELE23.7.050.8 TAKING RECORDS IN LOG-BOOK**

The Sub-contractor shall have their maintenance staff completing the site/installation record 'Log-Book' after each visit. The log books shall be provided by the Contract Manager and can be completed in either English or Chinese.

**ELE23.7.060.8 CONTRACT MANAGER TO BE INFORMED**

No replacements of installation or parts of installation shall be carried out at any time unless the Contract Manager has previously been notified and has signified their approval.

ELE24.1 GENERAL REQUIREMENTS

ELE24.1.010.8 INFORMATION FURNISHED WITH TENDER
1. The Tenderer shall furnish the following information, as applicable, with his Tender, which will be considered incomplete without such information:
   a. Name of manufacturer, country of manufacture, type and catalogue number, and full technical performance details, of all major items of equipment offered;
   b. Voltage of operation, and current consumption;
   c. Type and size of wiring;
   d. Illustrated brochures showing all major items of equipment and their installation requirements;
   e. A list of spares and tools included in the offer;
   f. Details of any special works required to be carried out by others.

ELE24.1.020.8 AS-FITTED DRAWINGS
The provisions shall follow the details in ELE1.10.030.

ELE24.1.030.8 ROBUST DESIGN
All equipment shall be of robust design, having a durable nature and of pleasant appearance all to the satisfaction of the Contract Manager.

ELE24.1.040.8 SCREENING
All equipment shall be properly screened and/or shielded against any possible external frequency interference where necessary.

ELE24.1.050.8 DOORPHONE SYSTEM VOLTAGE
1. The Doorphone System shall be operated at not more than 50 V d.c. Where battery is used, an automatic charger shall be provided to maintain the charge, and tapping off from the battery to obtain different voltage levels shall not be allowed;
2. All system components, other than electronic circuits, shall preferably be operated at a single voltage level.

ELE24.1.060.8 SUPPRESSION OF ELECTROMAGNETIC EMISSION
The whole system should be suitably suppressed to fall within the limits allowed by BS EN 55014-1 for electromagnetic emission.

ELE24.1.070.8 WORKS BY OTHERS
The following works interfacing with the security system will be provided by other contractors:
1. Lift Installation
   a. CCTV cameras in lift cars and the associated video cables in lift shaft will be installed by the Lift Sub-contractor. The video cables connected to lift car cameras will be terminated at a connection unit at high level of the entrance lift lobby or otherwise as shown on the Drawings;
b. Volt free contacts will be provided by the Lift Sub-contractor in an interface box in ground floor meter room or otherwise as shown on the Drawings for each lift. The contacts shall consist of the following:

i. Two N.O. contacts for lift alarm, to be closed when the lift emergency alarm push button is pressed;

ii. One N.O. contact to be assigned to each lift landing floor, to be closed only when the lift is at the floor which the contact is assigned to. At any one time, only one of these contacts will be closed;

iii. Two N.O. contacts for lift travel directions, one to be closed when the lift is going up and the other to be closed when the lift is going down. Simultaneous closing of the two contacts will not occur.

All terminals for the dry contacts shall be properly labelled to indicate their functions. Subject to the CM's approval, it is acceptable that digital signals are used in lieu of the above dry contact signals, should an agreement be reached between the Sub-contractor and the Lift Sub-contractor. In this case, the details of communication protocol, data format and the hardware interface shall be clearly defined by the two parties and submitted to the CM for approval.

2. Building Works

The door and guard counter will be provided by the Main Contractor. The Sub-contractor shall coordinate with the Main Contractor on their construction details and make necessary allowance for the installation work.

ELE24.1.080.8 DOCUMENTATION

1. For each equipment offered, tenderers shall supply with the tender full and complete technical information in English sufficiently detailed to enable a technical appraisal of the equipment to be made. Submissions without sufficient information may be discounted;

2. Apart from the documents stipulated in Section ELE1.10, the Sub-contractor shall, within one month prior to equipment delivery, supply the number of equipment handbook in English language as stated in sub-clause (4) giving full details on:

   a. Principle of operations;
   b. Details of installation and setting-up procedures;
   c. Maintenance and operation instructions;
   d. Schematic and block diagrams;
   e. Circuit diagrams with details down to component levels with their respective descriptions;
   f. Printed circuit board layout;
   g. Calibration procedures;
   h. Full parts list; and
   i. If microprocessors are used, all program storage devices (ROM's, EPROM's etc.) shall be supplied with comprehensive part and version numbers for ordering of replacement; additionally, the method of generation/duplication of the data in the storage device shall be given.

3. Should any Original Equipment Manufacturer (OEM) products be included, the documents as specified in sub-clause (2) above shall also be provided;
4. Three sets of the manufacturer's operations and maintenance manuals in English shall be provided with each equipment ordered, up to a maximum of six sets per model of equipment. The following table indicates the number of documents required:

<table>
<thead>
<tr>
<th>No. of equipment per model</th>
<th>Sets of manufacturer's operation and maintenance manuals required</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 - 2</td>
<td>3 (at least 1 original)</td>
</tr>
<tr>
<td>3 - 5</td>
<td>4 (at least 2 originals)</td>
</tr>
<tr>
<td>6 or more</td>
<td>6 (at least 3 originals)</td>
</tr>
</tbody>
</table>

5. The Sub-contractor shall supply "As-fitted" drawings showing the positions of all items of equipment installed and the routing of interconnecting cables;

6. The Sub-contractor shall not use confidentiality as a reason for withholding the supply of relevant documentation required by Contract Manager. The Contract Manager's representative will if required certify that all sensitive material in handbooks will not be released to any organisation outside Contract Manager. Any charges for such material supplied shall be included within the Contract. The Sub-contractor should make sure that all his overseas/local principals understand such obligation when submitting tender;

7. The Contract Manager shall be granted the right of duplicating the documents stated above for internal use;

8. The Contract Manager shall be kept informed of any recommended modifications during the operational life of the equipment.

**ELE24.1.090.8 EXECUTION OF THE WORK**

The Sub-contractor shall verify to the satisfaction of the Contract Manager that they are licensed for carrying out type III security work under the Security and Guarding Services Ordinance Cap. 460 and are competent to complete the works, otherwise they shall employ a competent contractor, who has the required licence, to carry out the works. For the latter case, the Sub-contractor shall submit the proposed contractor's relevant information related to the licence, technical capability, working experience on security system to the Contract Manager for approval. Whenever necessary, the Sub-contractor shall also submit document and drawings for the completed projects to the Contract Manager for consideration. Inspection of the completed projects and visit of the proposed contractor's office and workshop may be conducted, if deemed necessary.
ELE24.2 EQUIPMENT OF SECURITY SYSTEM

ELE24.2.1 CCTV VIDEO CAMERA

ELE24.2.1.010 GENERAL

1. The CCTV camera shall be of CCD video camera equipped with integral lens, CCD imager, electronic processing circuitry and synchronization pulse generation circuits;

2. All power, control and video cables connecting the camera with the housing shall be in plug-socket arrangement to facilitate easy removal of camera for maintenance;

3. The camera shall be operated by a CCD imager of not smaller than 1/3”. The active picture element shall at least be 752(H) x 582(V). The camera shall satisfy the following minimum performance characteristics:
   a. Sensitivity shall be such that under a scene illuminance of 0.5 lux (at 2856 K) with the F1.8 lens at the highest gain (i.e. AGC ON) and with a 75% highlight reflectance chart, full video output can be obtained;
   b. The horizontal resolution shall not be less than 450 TV lines and the depth of modulation of the test signal at 350 lines shall be greater than 30%.

4. The camera shall be provided with white clip control. If this is not field adjustable, the white “clipper” shall be factory adjusted to clip at 110% of video level;

5. The camera, in conjunction with the lens, shall be able to handle a scene contrast range of 30,000 :1;

6. The camera shall be designed to operate continuously without switching off at 7V-15V d.c. supply or 24V a.c. supply or other extra low voltage supply fed from coaxial cable. Having been set up and installed, the camera shall operate within Specification without adjustment for at least three months;

7. The camera shall be provided with electronic shutter for operating in wide range of lighting level;

8. The camera shall be provided with auto white balance function;

9. The outdoor camera shall be provided with auto iris lens (such as camera in doorphone panel);

10. In situation where line synchronization is employed, the power supply to all cameras shall be from the same phase of the a.c. supply to that of the supply to the related equipment in the system.

ELE24.2.1.020 SHADING REQUIREMENTS

With the lens capped, the automatic black level control and automatic gain control circuitries defeated and fixed at the respective nominal levels, the black level variation shall not exceed 4% of peak video level in both the horizontal direction (line rate) and the vertical direction (field rate).

ELE24.2.1.030 NOISE

The video signal to noise ratio shall be better than 40 dB unweighted.
ELE24.2.1.040.8 SYNCHRONIZATION
The video camera shall be provided with a built-in synchronization generator which is selectable for roll-free vertical interval switching. Cameras connected to sequential switcher shall provide line lock function.

ELE24.2.1.050.8 COLOUR SYSTEM AND SCANNING
The video camera shall be provided with the following colour and scanning systems:
1. CCIR 625-line, 50 fields/sec, PAL colour system;
2. Horizontal frequency: 15.625 kHz;
3. Vertical frequency: 50 Hz;

ELE24.2.1.060.8 TEST SIGNAL
The video camera shall be provided with internal correction circuitry against the peaking of test signal. The test signal below 250 lines shall not be peaked.

ELE24.2.1.070.8 CAMERA PROTECTIVE HOUSING
All outdoor cameras, including those which are mounted under outdoor canopy, shall be fitted with die-cast metallic protective housing. The housing shall accommodate the camera provided, complete with lens and other accessories. The housing shall be sturdy and tamper-proof. Notwithstanding, with the aid of easy-to-use tools, operation and maintenance staff shall make easy and safe access to the camera and other accessory of the camera or housing for maintenance and cleaning purpose.
The field of view of the camera shall not be obstructed by the housing. All power, control and video cables entering or leaving the housing externally shall be protected by a conduit.
The housing shall not cause degradation of any of the performance parameters of the video camera. Outdoor camera housings shall be water and dust-proof to at least IP54.
The weight of the housing, excluding the camera and its accessories, shall be less than 12 Kg.

ELE24.2.1.080.8 CAMERA MOUNTING
Each camera shall be provided with a camera mounting which mechanically couples the camera housing to a wall or ceiling or some other form of mechanical support (e.g. a pole, metal mounting rack) so that the camera assembly can be suitably and stably located.
The mounting offered must be of a design such that it allows free adjustment of the angle of the camera. The design of the mounting shall also take into account of the structural or architectural support where the camera mounting is fixed.
The mounting shall provide a field-adjustable mechanism and a suitable mechanical joint so that the camera assembly can be swung or tilted to the appropriate surveillance direction and locked into this particular position.
The tensile strength of the mounting and the method used to connect the mounting to the architectural or structural support must withstand the total weight of the camera, plus housing.
The colour of the camera mounting shall preferably be the same as that of the camera housing.
ELE24.2.2 LCD VIDEO MONITOR

ELE24.2.2.010.8 GENERAL
1. Size of the LCD monitor shall be of 19” or otherwise specified on the Drawings. The screen shall be provided with anti-glare surface/coating and some means of protection allowing greater firmness;
2. The LCD monitor shall be designed as a professional/industrial type with Mean Time Between Failure (MTBF) rate not less than 50,000 hours;
3. The LCD monitor shall be suitable for 24 hours continuous operation;
4. The monitor shall accept and display colour video signal from the digital video recorders as described in Worksection ELE24.2.4, via a VGA input terminal;
5. The resolution shall be at least 1,280 x 1,024 pixels;
6. Brightness shall not be less than 300 cd/m². The contrast ratio shall be at least 700 : 1;
7. The response time shall be not more than 8 ms. The pixel pitch shall be 0.3 mm or less. The display colours level shall not less than 16 million;
8. The horizontal and vertical viewing angle shall be at least 140/135 degrees;
9. The LCD monitor shall be equipped with controls to adjust the basic settings, including brightness, contrast, vertical and horizontal position, vertical and horizontal size;
10. The LCD monitor shall be completed with adjustable tilting angle wall mounted bracket and desk mounted support depending on the application on site.
11. The LCD monitor shall be compatible to VGA, SVGA, XGA and SXGA formats.

ELE24.2.3 VIDEO DISTRIBUTION AMPLIFIER

ELE24.2.3.010.8 GENERAL
The video distribution amplifier is used to buffer and distribute video signals in the system highway. In general, video distribution amplifier should be used whenever the required video path transverses more than one bridging input.

ELE24.2.3.020.8 INPUT AND OUTPUT
1. Each distribution amplifier shall contain at least one (1) high impedance bridging input. It shall provide at least four (4) isolated outputs;
2. The distribution amplifier performance shall be better than
   a. Frequency response 50 Hz to 5 MHz ± 0.5 dB with respect to 100 kHz;
   b. 2T pulse K factor 1%;
   c. Output isolation: 35 dB up to 5 MHz;
   d. Return loss ratio: 35 dB up to 5 MHz.

ELE24.2.3.030.8 ADJUSTMENT
The distribution amplifier shall contain gain adjustment to vary the video level to ±3 dB. Preferably it shall also be provided with some form of high frequency compensation adjustments.
ELE24.2.4 DIGITAL VIDEO RECORDER

ELE24.2.4.010.A TECHNICAL REQUIREMENTS

1. The digital video recorder (DVR) shall be designed for professional video, audio surveillance and alarm monitoring applications including recording, playback and signal transmission simultaneously;

2. The DVR shall support recording of not less than 16 non-synchronized PAL video inputs;

3. The DVR shall digitize, compress and store the images received in its internal removable hard disks with a total data storage capacity not less than 28 days and minimum 4TB for 16 camera inputs simultaneously and which can be expandable for longer time continuous recording. The minimum resolution of the recorded images shall be not less than 720 x 576 pixels with high picture quality at total frame rate of 100fps for PAL video images as accepted by the Contract Manager;

4. The DVR shall support displaying of live video images up to 400fps for PAL videos from connected cameras either in full screen, 2x2, 3x3 or 4x4 multiplexed screen modes and displaying recorded images up to 100fps;

5. The DVR shall operate in multiplex manners including simultaneous local live viewing, recording, playback and network transmission without causing any adverse effect to the performance of each other in any circumstances;

6. The network transmission of video signal from DVR to the networked PC at remote site shall comply with Transmission Control Protocol / Internet Protocol (TCP/IP);

7. The DVR shall be equipped with alarm inputs to perform pre-selected function (i.e. image captured from the camera with the alarm being triggered, shall be popped up and displayed in full at the main monitor and the recording frame rate for the corresponding camera shall be increased to the pre-set value up to 25fps simultaneously). The system operation shall automatically resume to normal after the pre-set time period;

8. The number of alarm inputs shall match with the number of video inputs;

9. The DVR shall allow the user to define the duration for event recording with a pre-event recording period not less than 3 seconds and for post-event within a range from minimum 1 to 99 seconds adjustable;

10. The DVR shall allow continuous recording and shall overwrite the oldest recorded images under a first in first out approach when all the hard disks are full. The DVR shall also allow an adjustable pre-set recording days of storage from 7 to 30 days;

11. The DVR shall be automatically resumed operation on resumption of power after interruption;

12. The status and control of the DVR shall be monitored and operable through the front panel controls for the following:
   a. Indicate time and system operation condition;
   b. Start and stop recording;
   c. Control pause, stop, playback, fast forward / reverse and playback speed;
   d. Access on-screen search functions by event, date and time;
   e. Access / select the menu function on-screen.
13. The DVR shall be equipped with at least 2 nos. of spot monitor outlet(s) independent of the main monitor (tower guard). The main monitor shall be able to display up to 16 cameras on a single screen simultaneously either under playback or real time display condition. The spot monitor(s) shall only be able to display one selected camera or to display up to 16 cameras sequentially with one at each time;

14. The DVR shall provide alarm signal for the events including triggering from external alarm, detectors, video motion detection, video signal loss from camera, power interruption, hardware failure and hard disk overheat warning signal;

15. The DVR shall provide indication on screen whether the input video signal from each camera is under recording or not;

16. The digital video recording system shall be able to search alarm for playback according to events. The alarms shall be logged and reported;

17. The DVR shall provide not less than 20 x 16 masking grids on each camera input for selection of area for video motion detection. The sensitivity level of the video motion detection shall also be configurable;

18. All images exported from the DVR can also be viewed on a networked PC at the remote sites through LAN or Internet via a proprietary software player provided by the DVR Manufacturer at no extra cost;

19. The proprietary software player shall be compatible for operation on a PC with Windows 10 or the latest version of Windows or other operating system to the satisfaction of the Contract Manager and also have a multi-site video reception software allowing for connection up to 16 nos. of networked DVRs at different sites under any pre-selected grouping of cameras for viewing on one screen of a designated networked PC simultaneously;

20. The DVR shall have multi-level login hierarchy for access by administrator, supervisor and operator at local or remote site to the system for setting of the operation configuration and normal operation of the DVR;

21. A standard USB style connector of latest version shall be provided at the face panel of the DVR for interfacing with the USB flash drive, DVD writer or external hard disk for video backup functionality;

22. The backup video data file copied from the DVR can be viewed on any other PC via the proprietary player as mentioned in item 18 and 19 above which shall be free licence to the Authority;

23. The DVR shall incorporate digital watermark recording function. Letter issued by the DVR Manufacturer certifying the reliability / authentication of watermarking feature shall be provided under the Sub-contract;

24. The DVR shall be integrated with a built-in real-time clock capable of configuring the system's time and date for display. On-screen display shall include the date, time, camera location, hard disk currently under recording mode and site description name up to 12 alpha-numeric characters;

25. Date shall be displayed by 8 digits composite with year (4 digits), followed by month (2 digits) and day (2 digits) under the format of YYYYMMDD;

26. Time shall be displayed in international time by 6 digits composite with hour, minute and second under 2 digits each under the format of hhmmss;

27. All alpha-numeric characters displayed on screen shall be white in colour and edging with thick black colour lines;

28. DVR shall provide with 75 ohms BNC type video connectors for cable connections to other video equipment;
29. 3-core 2 m long PVC insulated and PVC sheathed power cable shall be provided with the DVR. One end of the power cable shall be properly connected to the supply terminals inside the DVR while the other end of the cable shall be connected with a 13A 3-pin plug;

30. Operation manual both in English and Chinese shall be provided for each DVR. Each DVR shall be under individual packing with all accessories, hard copy of the operation manual and CD-ROM corresponding to the proprietary video software player as mentioned in items 18 and 19 for the system operation and backup;

31. The DVR shall have the mask function for every channel. When the area of a channel is masked, the image of the area then cannot be viewed by the monitor but can be recorded by the DVR;

32. Once the video images exported from DVR are being edited, these video images shall not be read at the proprietary remote client software to ensure the video integrity. The message “This is NOT the original images” or equal and equivalent with the agreement from the Contract Manager or his representatives shall also be shown on the screen;

33. Time-clock shall be avoided to display on individual channel screen but they must be stamped on the recorded films;

34. Fixed font size characters display on the screen shall be provided whenever in full screen, 2x2, 3x3 or 4x4 multiplexed screen modes.

**ELE24.2.6 QUAD MULTIPLEXER**

**ELE24.2.6.010.8 GENERAL**

1. The quad multiplexer shall be capable to display up to 4 colour CCTV cameras simultaneously on one screen. The acceptable video signal format shall be PAL 625 line, 50 field per second;

2. The display resolution shall not be less than 720 x 564 pixels, 8-bit grey levels, 16 million colours;

3. The quad multiplexer shall have 4 asynchronised video input capability. Gain adjustment shall be provided individually for each input channel. The video refresh rate shall be 50 fields per second for each quadrant;

4. All video input and output shall be 1.0V p-p 75 ohms;

5. The quad multiplexer shall provide on-screen, preset alphanumeric camera identification of at least eight characters per camera. The preset display shall be stored in non-volatile memory and shall not be lost upon power interruption. It shall be able to switch off the display of identification for individual screen;

6. Facility shall be provided to alert the operator when any input signal being monitored is lost.

**ELE24.2.7 TELEPHONE SET**

**ELE24.2.7.010.8 GENERAL**

1. The telephone set shall be a model certified by OFCA as in conformance with the relevant OFCA’s standard. The telephone set shall have the following feature:
   a. Hands-free speaker phone;
   b. 28 Telephone memory;
c. One touch redial;
d. Wall mounting;
e. Tone / pulse dialling.

2. The telephone set shall be submitted to the Contract Manager for approval.

**ELE24.2.8 CABLES**

**ELE24.2.8.010.8 GENERAL**

1. Singlecore cables shall conform to BS EN 50525-2-31 and the conductor size shall be not less than 1.0 mm². Multicore cables to be installed inside buildings shall be of copper conductor/PVC insulated/PVC sheathed non-armoured type with tinned copper drain wire and colour identification for cores. The conductor size shall be not less than 0.5 mm diameter Contract Manager's approval is required prior to the installation of cables;

2. Multicore cables to be installed underground shall be of copper conductors/PVC insulated/PVC inner sheathed/steel wire armoured/PVC sheathed type with colour identification for cores. The conductor size shall be not less than 0.5 mm diameter Contract Manager's approval is required prior to the installation of cables;

3. Non-armoured cables shall be installed in trunking/conduit systems and armoured cables shall be installed in underground galvanised steel/PVC ducts outside the building boundaries. A system of trunking/conduits and underground galvanised steel/PVC ducts shall be provided by the Sub-contractor for the Doorphone System installation as shown on the drawings, the Sub-contractor shall also be responsible for any additional provision to complete the installation;

4. Multicore cables shall be terminated at fixed terminals. Where cable termination blocks are used, they shall be of suitable size for the conductors;

5. Movable parts shall be connected to the system by means of flexible cables;

6. Labels shall be provided at visitor's panels, indicating panels, control panels, cable termination/junction boxes etc. to identify the function (e.g. door lock release) of the respective core of the outgoing cables;

7. The colour code of the wiring for the doorphone system shall comply with BT CW 1293 or IEC 60708-1.

**ELE24.2.8.020.8 VIDEO CABLES**

1. Video cables shall be of the coaxial type with a single central core of annealed copper. The dielectric shall be polythene with a shield of copper braid or tape. The cable shall be insulated with an overall sheath of PVC;

2. The attenuation characteristic of the cable shall be better than:
   a. 1.1 dB/100 m at 1 MHz;
   b. 3.8 dB/100 m at 10 MHz;
   c. 13.5 dB/100 m at 100 MHz.

3. Unless total conformance to a relevant recognised international standard, which is subject to Contract Manager's approval, is achieved, the cable shall have the following characteristics:
   a. Strand diameter not to be less than 0.58 mm;
   b. Dielectric diameter not to be less than 3.71 mm;
c. Outer conductor diameter not to be less than 4.39 mm;
d. Nominal overall diameter not to be greater than 6.2 mm;
e. Capacitance not to be more than 67 pF/m;
f. Bending radius not to be less than 60 mm;
g. Weight not to be less than 55 kg/km;
h. Characteristic impedance to be 75 ohm ± 3 ohm;
i. Return loss ratio to be better than 20 dB at 10 MHz;
j. Insulation resistance to be not less than 30 Mohm per km.

ELE24.2.8.030.8 CONTROL CABLES
1. Control cables shall be of the multicore type. Each core shall be made up of stranded annealed copper conductors with PVC insulation. The whole cable shall be screened with copper tape or copper braid and shall have an overall sheath of PVC;
2. The cable shall satisfy the following minimum characteristics:
   a. At least 7 strands per conductor.
   b. Strand diameter not to be less than 0.2 mm;
   c. Conductor resistance to be less than 90 ohm/km;
   d. Insulation resistance to be better than 20 Mohm/km measured between cores or between core and screen.

ELE24.2.8.040.8 RADIO FREQUENCY CABLES
The radio frequency cable shall comply with BS EN 50117-1 and BS EN 50117-2-1 and BS EN 50117-2-2 and BS EN 50117-2-3 and BS EN 50117-3 and BS EN 50117-4.

ELE24.2.8.050.8 OPTICAL FIBRE CABLES
The optical fibre cable shall be of multimode type with minimum 4 cores of 62.5μm diameter.

ELE24.2.9 SEMICONDUCTOR DEVICES

ELE24.2.9.010.8 GENERAL
Unless otherwise specified or a particular application requires the use of other types, semiconductor devices shall be of silicon type, and shall have instantaneous electrical characteristics capable of handling the transient power, voltage and current which the devices may encounter in the circuit. The continuous power, voltage and current ratings of the semiconductor devices shall be not less than 1.5 times the respective maximum value at which the devices are intended to operate. Power devices shall be mounted on adequately sized heat sinks.
ELE24.2.10 CAPACITORS

ELE24.2.10.010.8 GENERAL

Capacitors shall have a nominal working voltage of not less than 1.5 times the maximum voltage at which they are intended to operate. The values of the nominal working voltage and capacitance shall be marked on the body of the capacitor.

ELE24.2.11 RESISTORS

ELE24.2.11.010.8 GENERAL

Resistors shall have resistance values better than ± 5% tolerance and, continuous power rating of not less than 1.5 times the maximum power which the resistors shall dissipate. The values of resistance and tolerance shall be marked on the body of the resistors.

ELE24.2.12 PRINTED CIRCUIT BOARDS

ELE24.2.12.010.8 GENERAL

All electronic circuits shall be fabricated on printed circuit boards. Printed circuit boards shall be of fibre glass material and all conducting parts shall be tin plated. Connections between circuit boards and from circuit boards to outgoing circuits shall be of plug-in type to facilitate easy replacement. Direct soldering of outgoing cable onto printed circuit boards shall not be allowed.

ELE24.2.13 MAGNETIC DOOR CONTACT

ELE24.2.13.010.8 GENERAL

1. Magnetic door contact shall be equipped with completed concealed magnetic switch and shall be recessed mounted into the door;

2. The design shall offer years of positive fail-safe separating power when door is opened even after years of being held closed. When the door is closed, high contact force shall be developed to ensure proper contact;

3. The magnetic door contact shall be U.L. listed for the application.

ELE24.2.14 EQUIPMENT RACK

ELE24.2.14.010.8 GENERAL

1. Equipment rack made of 1.2 mm sheet steel shall be provided in meter room or equipment room or other areas as shown on the Drawings to house the security equipment. There shall be lockable panels at the front and back of the rack. The front panel shall be glass. The rack shall be modular in design such that the trays and sliding shelves can be added or deleted if required;

2. The rack shall consist at least the following types of basic modules:
   a. Ventilation fan module;
   b. Power distribution panel;
   c. Cable trays;
d. Illuminating lamp.

3. The size of rack shall be suitable for standard 483 mm rack mounted equipment with standard rack aperture;

4. The rack shall be painted with stove enamel paint of Approved colour;

5. Security equipment such as digital video recorder (DVR), patch panel, router, ethernet switch, amplifiers, cable accessories etc., situated in a common location shall be housed in a single equipment rack. A spare space for the installation of one additional DVR in the future shall be provided in the equipment rack housing DVR.

**ELE24.2.15 UNINTERRUPTED POWER SUPPLY**

**GENERAL**

1. The Sub-contractor shall provide the following Uninterrupted Power Supply (UPS) systems for continual and uninterrupted power supply of security systems and other equipment as shown on the Drawings:

a. Central UPS system for backup power supply duration of not less than two (2) hours in case of mains failure for the following systems and equipment of domestic block:
   i. CCTV and intercom system for temporary refuge space;
   ii. Local CCTV system;
   iii. Doorphone system;
   iv. Local alarm and door monitoring system;
   v. Lift car CCTV system including CCTV camera and LCD monitor, etc.;
   vi. Exit route & roof lighting indication panel;
   vii. Lift alarm indication panel.

b. Central UPS system for backup power supply duration of not less than two (2) hours in case of mains failure for the following systems and equipment of Estate Management Office (EMO):
   i. Central CCTV System;
   ii. Central Alarm and Door Monitoring System;
   iii. Local CCTV system;
   iv. Local security alarm system.

2. The UPS system shall consist of UPS equipment, external maintenance bypass switch, MCB distribution board and all necessary cable wirings and accessories to form a complete working system as shown on the Drawings;

3. The Sub-contractor shall submit the sizing calculation for the kVA rating of the UPS and the battery capacity required to CM for approval. In any case, the UPS equipment shall have a capacity of providing back-up power of duration not less than two (2) hours with 30% spare capacity.

**TECHNICAL REQUIREMENT OF UPS EQUIPMENT**

1. The UPS shall be of static online double-conversion type conforming to IEC 62040. It shall consist of rectifier/charger, batteries, inverter and internal static transfer switch;
2. The UPS shall operate in three different operating modes:-
   a. Normal mode
      Under normal operation, the rectifier/charger unit shall convert the incoming a.c. mains power supply to d.c. power. The rectifier/charger unit output shall feed the inverter and charge up the batteries simultaneously. The inverter shall convert the d.c. power into a.c. mains power which feeds the load;
   b. Discharging mode
      Upon failure of the incoming a.c. mains supply, the inverter and the batteries shall continue to supply power to the load without interruption or disturbance. The UPS shall continuously run in this discharging mode until the batteries fully discharge or the incoming a.c. mains supply returns to normal at which the UPS returns to normal mode;
   c. Bypass mode
      The UPS shall automatically transfer the load via the internal static transfer switch to the incoming a.c. mains supply by-passing the rectifier/charger unit, batteries and inverter without any interruption when the UPS is overloaded or faulty.

3. The UPS shall include the following control and monitoring facilities on display panel of UPS:-
   a. Mains on/off switch;
   b. ‘Bypass Mode’ manual on/off switch;
   c. Alarm reset/buzzer mute switch;
   d. Indicating lights for load %, battery charge %, “UPS On” and “Mains Available”;
   e. Audio and visual alarms for “Mains Failed”, “On Battery”, “On Internal Static Transfer Switch”, “Low Battery” and “UPS Fault”.

4. The overall efficiency of the UPS, output to input, shall not be less than 88% when the UPS is operating at 50 - 100% rated load;

5. The UPS shall comply with the energy efficiency requirements for power quality as stipulated in the BEC;

6. The UPS shall be constructed in heavy duty metal enclosures and designed for floor or rack mounted to suit the site condition;

7. The UPS shall be natural air cooled or forced air ventilated to ensure that all components operate within their environmental ratings;

8. The UPS equipment shall be equipped with a device to protect batteries from over-discharging;

9. The UPS equipment shall allow minimum 30% spare capacity for future expansion.

ELE24.2.15.030.N TECHNICAL REQUIREMENT OF UPS BATTERY

1. The batteries shall be valve regulated sealed lead acid batteries complying with IEC 60896-22, maintenance free with a design life of minimum 10 years rated at 20°C;

2. The batteries, after fully discharged, shall be fully charged in less than 10 hours.
ELE24.2.15.040.N  TECHNICAL REQUIREMENT OF EXTERNAL MAINTENANCE BYPASS SWITCH

1. External maintenance bypass switch shall be provided as shown on Drawings to allow maintenance personnel to manually isolate the UPS equipment from the load for maintenance purpose and connect the load directly to the incoming a.c. mains supply via external bypass connection using manual changeover switch;

2. The external maintenance bypass switch shall be of changeover switch manually controlled at mains voltage, either double-pole or four-pole type and tested to IEC 60947-3. The changeover switch shall be capable of making, breaking and carrying continuously the rated current and making on fault without overheating, damage or deterioration;

3. The external maintenance bypass switch shall be housed inside a lockable metal box which shall be operated by maintenance staff only.
ELE24.3 INSTALLATION REQUIREMENTS

ELE24.3.2 DOORPHONE SYSTEM

ELE24.3.2.010.8 GENERAL

1. The doorphone system shall be of digital selection and display type complete with secret code door lock release feature. The system shall provide high fidelity communication between the visitors at the main entrance and the occupants in a particular flat of whom the visitors intend to visit. The system shall enable the occupant to remotely release the entrance door lock to allow the visitors to enter the building by operating a switch on the handset located within the flat;

2. The doorphone system shall only permit communication and control between the selected flat and the doorphone panel/door lock at the main entrance of the building. All flats which are not selected shall be cut off from the system, voice transmission to and from these flats and operation of the door lock release through the handsets in these flats shall be inhibited intrinsically by the system;

3. For linked blocks, the visitor panel shall be provided in the main entrance of the joint entrance lobby as shown on the drawings. In addition to the requirements as detailed in ELE24.3.2.030, a set of block selection feature shall be provided in the visitor panel. Once the block is selected in the panel, the operation sequence of the system shall follow the details in ELE24.3.2.060;

4. The operation of the doorphone system shall not be affected by any fault or incorrect wiring in any handset or prolonged removal of the handpiece of a handset from its base unit. If a handpiece is removed from its base unit without being called by a visitor from the doorphone panel, this handset shall be disconnected from the system and the services to other handsets shall be maintained. Once the disconnected handset is put back to the base unit properly, the service to this handset shall resume. If there is any faulty or incorrect wiring connection for a handset due to installation mistake or unauthorised alteration, the system shall be able to detect this condition and disconnect this handset automatically and maintain services to other handsets.

ELE24.3.2.020.A ELECTRO-MAGNETIC LOCK

1. This clause shall be read in conjunction with the Drawings for electro-magnetic lock installation details;

2. The main entrance and side entrance shall be provided with electro-magnetic locks which shall have no mechanical moving parts. The lock shall be UL listed as a releasing device for exit door;

3. The lock shall provide instantaneous unlocking with no residual magnetism upon interruption of power supply;

4. The magnet core shall be permanently sealed by epoxy resin in a metal casing to form an integral magnet assembly. For recess-mounted application, the magnet assembly shall be secured to the door frame in such a way that loosening or undoing of any or all fixing screws on the magnet assembly shall not result in the assembly itself being pulled out from the recess aperture when the door is being opened by force;

5. The lock shall be fail-safe type. When power is cut off, the lock shall be automatically released to allow door opening. The lock shall also be automatically unlocked in case of mains power failure despite standby power supply is available;
6. The lock shall be equipped with a built-in lock status sensing device with dry contact output to positively indicate that the door is secured;

7. Installation of the electro-magnetic lock shall be in accordance with the standard details shown on the Drawings and all required mounting hardware / accessories shall be either supplied or approved by the manufacturer of electro-magnetic lock. The installation method shall be endorsed by the manufacturer of electro-magnetic lock as appropriate for their product in case the actual details differ from manufacturer's own standard methods;

8. The lock shall operate at low voltage of d.c. 12V and consume low current of not more than 400 mA. When locked, the traction force shall not be less than 226.8 kg. Even if the lock is forced open by excessive force, it shall not be damaged and shall be re-locked immediately afterwards;

9. Other provisions for the electro-magnetic lock shall include:
   a. Bypass key
      i. There shall be a keyswitch at the bottom of the doorphone panel and combination lock panel outside the entrances. Upon turning the keyswitch, power for the electro-magnetic lock shall be cut off and free access shall be allowed;
      ii. 5 sets of keys for the entrance door lock shall be provided by the Sub-contractor at the completion of the works to the Contract Manager.
   b. Door release
      i. A door release button shall be provided at the inside of the building and adjacent to each main and side entrance such that by pressing this button, the corresponding electro-magnetic lock shall be released for an adjustable period of 1 to 30 seconds. The lock shall be relocked after the expiry of the timer period. The button shall be fitted on a stainless steel plate and flushed mounted with the surface of stainless steel plate. The button borderlines shall be self-illuminated in green colour when the door is locked and change to red when the door is unlocked. The signals to change the illumination colour of button borderlines shall be derived from the output of the built-in lock status sensing device in the electro-magnetic lock;
      ii. Another door release button shall be provided at the guard counter for releasing the door lock of the main entrance by the tower guard. The lock shall be relocked after an adjustable period of 1 to 30 seconds;
      iii. The door release button shall be vandal resistant and suitable for operation under extreme humid condition. The button shall be submitted to the Contract Manager for approval.
   c. Emergency door release
      i. An emergency door release shall be provided adjacent to each main and side entrance on the inside of the building. Upon actuation of an emergency door release, power to the corresponding electro-magnetic lock shall be cut directly, not through a control circuit. The entrance shall then serve as an emergency exit. At the same time an alarm signal shall be indicated at the tower guard counter and sent to the security control room through the central alarm and door monitoring system, if available, for reporting of emergency;
ii. Emergency door release shall be of direct operation type equipped with resettable frangible element. The release shall comprise an electrical contact which will operate automatically upon displacing the resettable frangible element at the operating face of the release. Cover of the release shall be locked in position with a special tool and the frangible element shall be clipped firmly into place. The release shall be equipped with transparent hinged protective cover which shall be proprietary product for the emergency door release. The release and its mounting box shall be of pleasing appearance and styling, constructed by non-corrodible materials and finished in green colour. The release shall be engraved with the following labels in Chinese and English, "Emergency Door Release" and "緊急開門掣". All characters and letters on release shall be in white colour;

iii. A permanent operation instruction plate shall be provided above the emergency door release.

d. Safety measure

The circuit for controlling the supply to the electro-magnetic lock shall be designed such that the failure of any electronic components shall cause all the electro-magnetic door locks to be released.

e. Spare parts

A spare and complete set of mounting accessories such as washers, roll pins, centre bolts and lock nuts in labelled packing shall be handed over to the Contract Manager for each electro-magnetic lock at the completion of the works.

ELE24.3.2.030.8 DOORPHONE PANEL

1. At each main entrance of the domestic block positioned as shown on the Drawings, the Sub-contractor shall supply and install a vandal proof panel with stainless steel faceplate comprising, but not limited to:

a. A set of numerical floor number selection push buttons (from 0 - 9), and an alphabetical "G" button for ground floor where necessary;

b. A set of numerical, or alphabetical as specified, flat number selection push buttons;

c. A "Combination Lock" push button for the selection of secret code combination door lock;

d. A 5 x 7 dot matrix yellow L.E.D. display unit of sufficient digits to display the particular floor and flat number being selected. All L.E.D. in the display unit shall have equal and steady brightness. The display shall be right hand justified;

e. Self-illuminated operating instruction displayed in English and Chinese for the following:

<table>
<thead>
<tr>
<th>English</th>
<th>Chinese</th>
</tr>
</thead>
<tbody>
<tr>
<td>PLEASE WAIT</td>
<td>請等候</td>
</tr>
<tr>
<td>PLEASE TALK</td>
<td>請通話</td>
</tr>
<tr>
<td>PLEASE ENTER</td>
<td>請進入</td>
</tr>
<tr>
<td>NO ANSWER</td>
<td>無答覆</td>
</tr>
<tr>
<td>INCORRECT INPUT,</td>
<td>輸入錯誤，按「取消」，重新輸入</td>
</tr>
<tr>
<td>PRESS &quot;CLEAR&quot;,</td>
<td></td>
</tr>
<tr>
<td>INPUT AGAIN</td>
<td></td>
</tr>
</tbody>
</table>
f. Voice message generator for giving audible instructions in either Cantonese or both Cantonese and English as directed by the Contract Manager for the following status:

- PLEASE WAIT 請等候
- PLEASE ENTER 請進入
- NO ANSWER 無答覆
- WRONG NUMBER, PLEASE PRESS THE CLEAR BUTTON AND TRY AGAIN 輸入錯誤，請按取消掣重新輸入

The voice message generator shall provide high quality audible instruction using digital data compression technique. The voice message generator shall provide 5 individual pre-recorded messages for a total time period (for 5 messages) of not less than 90 seconds. The generator shall accept 5 digital control inputs to output the 5 individual pre-recorded messages. The length of individual message shall be variable from 0 to 90 seconds. All messages shall be approved by the Contract Manager prior to being programmed into the memory of the generator. The voice output level shall be adjustable and the maximum level shall not be less than 60 dB at a distance of 1 metre from the panel.

g. A set of high fidelity and sensitivity two way communication unit. The output shall be clearly audible of at least 60 dB at a distance of 0.5 metre from the panel;

h. A "Clear" push button switch for resetting of incorrect entry of floor / flat number;

i. A push button for communication with the guard counter if specified on the Drawings;

j. A CCTV camera;

k. All push buttons shall be vandal resistant and weatherproof. Keypads shall be vandal resistant and weatherproof. All push buttons with numerical or alphabetical figures shall be back-lit by LED through plastic insert forming the figures. The figures shall be flushed with the surface of push button without protruding edge. The colour of the insert shall be red unless otherwise specified on the Drawings. The LED, with a life span of 35,000 hours minimum, shall be on throughout the operation of the panel. Keypad and push buttons shall be submitted to the Contract Manager for approval;

l. A Block selection feature shall be provided for linked block design;

m. Braille instructions as specified on the Drawings.

2. The Sub-contractor shall submit drawings for the arrangement of the "Doorphone Panel" to the Contract Manager for approval prior to manufacture.

ELE24.3.2.040.8 DOORPHONE CONTROL UNIT

The doorphone control unit shall be totally enclosed containing all necessary components and accessories for satisfactory doorphone operation. The control unit shall be located in ground floor meter room where an a.c. supply in the form of a 13A connection unit.
ELE24.3.2.050.8 HANDSET

1. Each flat shall be provided with one handset positioned as shown on the Drawings. The handset shall be submitted to Contract Manager for approval prior to ordering;

2. Two separate and independent push buttons shall be provided integral with the handset, one for remotely releasing the main entrance door lock and the other for interfacing to the lighting control system for corridor lighting. The buttons shall be marked permanently with respective graphic symbols for easy identification of their functions. The graphic symbol for door lock release shall be in green colour and for corridor lighting in red colour. The buttons shall separate from each other by a minimum distance of 100 mm. The button for lighting control shall be at the lower portion of the handset and be operable without the need to lift the hand-piece for lighting control only;

3. All contacts and other equipment inside the handset shall be of durable type;

4. The handset shall be equipped with independent buzzer / speaker for the call tone and the buzzer / speaker shall be distinct from the loudspeaker at the handset. The call tone shall be of pleasant type and shall be clearly audible anywhere in the flat.

ELE24.3.2.055.8 LIGHTING CONTROL INTERFACE PANEL

1. The push button for lighting control on each handset shall be connected to a lighting control interface panel in the telecom/meter room on the respective floor;

2. Relays with single pole normally open (NO) contact and operated by DC control voltage derived from the doorphone system shall be provided in the lighting control interface panel. Pressing and releasing of a push button shall result in closing and opening of a corresponding NO contact in the interface panel. The output terminals of the NO contacts (one for each flat) shall be located in a segregated compartment in the interface panel for interfacing to the lighting control system. LED indicating lights shall be provided on the hinged cover of the interface panel to show the status of each push button. All relays, terminals and LED lights shall be properly labelled for easy identification;

3. The relays provided in the interface panel shall satisfy the following technical requirements:
   a. Contact: min. rated load 1A, max. switching voltage 250VAC;
   b. Coil operating voltage: 12 or 24 DC (to be drawn from the doorphone system);
   c. Insulation resistance: 100 MΩ (at 500V DC);
   d. Dielectric strength: 1000Vrms 1 minute between open contacts;
   e. 2000Vrms 1 minute between contact and coil;
   f. Mounting: by plug and socket;
   g. Conformance: UL or equivalent standard.

4. The interface panel shall be a metal enclosure properly earthed and finished in epoxy powder coating. A sample shall be submitted to Contract Manager for Approval and the approved sample can be utilized in the actual installation.

ELE24.3.2.060.8 OPERATION SEQUENCE

The operation sequence of the doorphone system shall be as follows:
1. The "Please Select" indicator shall be illuminated when the system is at "normal" condition. For linked blocks, a block selection feature shall be provided for selecting appropriate block at the first place. When a visitor presses the appropriate floor number key on the floor selection key board followed by the flat number key on the other flat selection key board, the selected floor and flat number shall display on the screen immediately after the depression of each key, when any floor from ground floor to ninth floor is to be selected, the sequence shall not necessitate the entry of a "O" preceding the floor number. Depression of any button on the doorphone panel shall be accompanied by a beep tone;

2. An intermittent call tone shall be initiated at the handset of the selected flat. Simultaneously, a "Please Wait" voice message shall be generated at the doorphone panel and the illuminated signal on the instruction display shall change to "Please Wait" until the handset in that selected flat is picked up by the occupant. At the moment, the illuminated signal shall change to "Please Talk", then intercommunication between the occupant and the visitor can take place;

3. If the hand-piece is not picked up within a predetermined period, which is adjustable from 1 to 30 seconds, the call tone shall stop. A "No Answer" voice message shall be generated at the doorphone panel and the illuminated signal shall change from "Please Wait" to "No Answer" and after 3 seconds the system and illuminated signal shall automatically revert back to "Please Select" as normal;

4. The two way intercommunication between the occupant and the visitor shall be limited to a predetermined period ranging from 20 to 120 seconds. When the predetermined period expires, the intercommunication between the two parties shall be automatically cut off and the system shall revert back to its normal conditions;

5. Before the hand-piece is being put back to its normal position, pushing the door release push button on the hand-piece shall remotely release the electrical door lock at the main entrance door. A "Please Enter" voice message shall be generated at the doorphone panel and the illuminated signal shall change from "Please Talk" to "Please Enter". The communication shall be terminated after an adjustable period of 1 to 30 seconds after the release of the door lock. The lock shall then be reverted to locked state after the door is closed again. If the door is not opened by the visitor after a predetermined period adjustable from 1 to 30 seconds, the lock shall then revert to the locked state;

6. After the termination of the communication link and the reverting of the door lock to its locked stated, the illuminated indication on the instruction display shall revert to "Please Select" as normal;

7. When the selection of floor or flat number is not completed within a preset time period which is adjustable from 1 to 15 seconds, the system shall revert to normal condition;

8. The display shall be blanked when the number of a non-existent floor/flat is entered, a "Wrong Number" voice message shall be generated at the doorphone panel and the illuminated signal on the instruction panel shall change to "Incorrect Entry". The system shall reset to its normal condition by pressing the "Clear" button or after a predetermined period adjustable from 1 to 30 seconds;

9. When the handset is not connected to the entrance panel, i.e. when the flat number is not pressed at the entrance panel by any visitor, operation of the door release button at any hand-piece shall not release the lock of the main entrance door;

10. The door lock shall be such that in case the electric push button inside the entrance door or the secret digital code door lock release is not operative the door can still be opened by operating a keyswitch at the bottom of the doorphone panel and combination lock panel outside the entrances. The door lock shall revert to its normal closing state when the door is closed;
11. When the "Clear" button is pressed at any stage during the operation of the doorphone panel, the system shall switch off the display, terminate any established communication link and revert to the "normal" condition.

ELE24.3.2.070.8 COMBINATION LOCK SYSTEM

1. 
   a. Combination lock system for the main entrance and side entrance doors shall be built in the control unit of the doorphone system;
   b. Correct entry of the code at any combination lock control panel shall only cause the electro-magnetic lock of the corresponding entrance to be released;
   c. The combination lock system shall allow connection of up to 5 combination lock control panels for 5 side entrances in addition to the combination lock control panel at the main entrance. All the combination lock control panels can be operated at the same time without affecting each other.

2. For the main entrance, the combination lock system shall be accessed and controlled through the doorphone panel. If the "Combination Lock" button is pressed, the floor selection buttons shall serve as a combination lock control panel;

3. For each side entrance, a combination lock control panel shall be provided;

4. 
   a. The four-digit secret code for releasing lock shall be kept in the non-volatile memory. The secret code shall be easily changeable by adjusting a set of selector switches or push buttons housed in the control unit in the meter room. Code changing by re-connecting jumpers is not acceptable;
   b. The code shall be adjustable to any combination of the four digits from 0 to 9. An instruction procedure for code changing shall be fixed inside the door of the enclosure. Security measures shall be provided against illegal changes of the secret code.

5. The combination lock control panel for the side entrance shall be constructed with 1.5 mm thick stainless steel faceplate and 1.2 mm thick stainless steel housing enclosure comprising:
   a. A keypad fitted with a set of numerical push buttons (from 0-9). The keypad and push buttons shall be vandal resistant and weatherproof. All push buttons shall be back-lit by LED through plastic insert forming the numerical figures. The figures shall be flushed with the surface of push button without protruding edge. The colour of the insert shall be red unless otherwise specified on the Drawings. The LED, with a life span of 35,000 hours minimum, shall be on throughout the operation of the panel. Keypad and push buttons shall be submitted to the Contract Manager for approval;
   b. A "clear" push button for resetting of incorrect entry;
   c. Operating status / instruction L.E.D. indicators with instructions in English and Chinese for the following:
      i. SYSTEM ON 系統正常
      ii. PLEASE ENTER 請進入
      iii. INCORRECT ENTRY 錯輸入
   d. Voice message generator to give audible instructions in either Cantonese or both Cantonese and English as directed by the Contractor Manager for the following status:
i. Please enter  請進入
ii. Wrong number, please press the clear button and try again  輸入錯誤，請按取消掣 重新輸入

The voice message generator shall be of the same specification as that used in the doophone panel;

e. Braille instructions as specified on the Drawings.

Each pressing of the button shall have a 'beep' sound.

6. The enclosure for the secret code setting devices shall be fabricated from sheet steel with a thickness not less than 1.2 mm. All inside and outside surfaces of the enclosure shall be treated with anti-rust protective coating followed by an Approved painting;

7. The door lock shall be released only when the entry of a pre-assigned 4-digit code in proper sequence within a 10 seconds period otherwise a timer will activate causing the code already entered to reset. When the door is unlocked, the corresponding visual and audio instructions shall be activated. The unlocked period shall be adjustable from 1 to 30 seconds. The L.E.D. matrix display at the main entrance doophone panel shall only display "*" during the code entry and before the door is released. When incorrect codes are entered, the visual and audio instructions for "Incorrect Entry" shall be activated and the system shall reset to its normal condition by pressing the "Clear" button or after a predetermined period adjustable from 1 to 30 seconds.

ELE24.3.2.080.8  WIRING INSTALLATION

The wiring from the equipment enclosure on each floor to the doophone handset in each domestic flat shall be carried out by the Sub-contractor in concealed conduit wiring system as shown on the Drawings. The wiring from the meter room to each domestic flat through the concealed conduits shall be multicore cables with number of cores not less than four.

ELE24.3.2.090.8  STANDBY POWER SUPPLY

The Doophone System shall be provided with standby power supply to enable the system to operate for a period of not less than four hours at average power consumption of 20 calls per hour subsequent to a mains failure. The stand-by power shall be of nickel cadmium or nickel-metal hydride type battery complete with trickle charger and with minimum nominal capacity of not less than 10AH. The battery shall be automatically recharged when the permanent supply restores.

ELE24.3.2.100.A  DOORPHONE SYSTEM FOR SSF COURT ENTRANCE GATES

1. When it is specified on the Drawings, the main and side entrance gates of SSF development shall be provided with doophone system. The system shall consist of electro-magnetic lock, doophone panel and two way communication unit at main entrance gate, two way communication units and door release buttons at guard counters of domestic blocks, and electro-magnetic lock and combination lock panel at side entrance gate as shown on the Drawings. The equipment shall be suitable for operation under outdoor condition;

2. The electro-magnetic lock shall be suitable for outdoor application and the technical specification of electro-magnetic lock shall comply with ELE24.3.2.020 except the following:
a. For ELE24.3.2.020 sub-clause 7, the installation of the electro-magnetic lock shall be coordinated with the design of entrance gate and the installation details shall be submitted to the Contract Manager for approval. All required mounting hardware / accessories shall be supplied or approved by the manufacturer of electro-magnetic lock. The installation method shall be endorsed by the manufacturer of electro-magnetic lock as appropriate for their product in case the actual details differ from manufacturer’s own standard methods. The electro-magnetic lock shall be of weatherproof construction;

b. For ELE24.3.2.020 sub-clause 9(b)(i), the door release button shall be vandal resistant and weatherproof with ingress protection of at least IP55 to BS EN 60529 or IEC 60529. The button shall be submitted to the Contract Manager for approval;

c. For ELE24.3.2.020 sub-clause 9(c), the provision of emergency door release is not required.

3. For each main entrance gate, a doorphone panel with built-in two way communication unit shall be provided. The doorphone panel shall be suitable for operation under outdoor condition and provided with stainless steel weather shield. The panel shall be constructed with 1.5mm thick stainless steel faceplate and 1.2mm thick stainless steel housing enclosure comprising:

a. A keypad fitted with a set of numerical push buttons (from 0-9);

b. A "clear" push button for resetting of incorrect entry;

c. Operating status / instruction L.E.D. indicators with instructions in English and Chinese for the following:

i. SYSTEM ON 系統正常

ii. PLEASE ENTER 請進入

iii. INCORRECT ENTRY 錯輸入

iv. PLEASE WAIT 請等候

v. PLEASE TALK 請通話

vi. NO ANSWER 無答覆

d. Voice message generator to give audible instructions in either Cantonese or both Cantonese and English as directed by the Contractor Manager for the following status:

i. Please enter 請進入

ii. Wrong number, please press 輸入錯誤，請按取

the clear button and try again 消掣重新輸入

iii. Please wait 請等候

iv. No answer 無答覆
The voice message generator shall provide high quality audible instruction using digital data compression technique. The voice message generator shall provide 5 individual pre-recorded messages for a total time period (for 5 messages) of not less than 90 seconds. The generator shall accept 5 digital control inputs to output the 5 individual pre-recorded messages. The length of individual message shall be variable from 0 to 90 seconds. All messages shall be approved by the the Contract Manager prior to being programmed into the memory of the generator. The voice output level shall be adjustable and the maximum level shall not be less than 60 dB at a distance of 1 metre from the panel;

e. A set of high fidelity and sensitivity two way communication unit between main entrance doorphone panel and guard counter of individual domestic block. The output shall be clearly audible of at least 60 dB at a distance of 0.5 metre from the panel;

f. Push buttons for selection of communication with the guard counters of individual domestic blocks;

g. All push buttons shall be vandal resistant and weatherproof. Keypads shall be vandal resistant and weatherproof. All push buttons shall be back-lit by LED through plastic insert forming the figures. The figures shall be flushed with the surface of push button without protruding edge. The colour of the insert shall be red unless otherwise specified on the Drawings. The LED, with a life span of 35,000 hours minimum, shall be on throughout the operation of the panel. Keypad and push buttons shall be submitted to the Contract Manager for approval;

h. Braille instructions as specified on the Drawings;

i. Each pressing of the button shall have a 'beep' sound.

4. The operation sequence of the doorphone panel shall be as follows:

a. The "System On" indicator shall always be illuminated when the system is at normal condition;

b. When a visitor presses a guard counter selection push button, an intermittent call tone shall be initiated and an “INCOMING CALL” indication light shall light up at the handset of the selected guard counter. Simultaneously, a "Please Wait" voice message shall be generated at the doorphone panel and the illuminated signal "Please Wait" shall be illuminated on the instruction display until the handset in that selected guard counter is picked up by the security guard. At the moment, the illuminated signal shall change from "Please Wait" to "Please Talk" and the “INCOMING CALL” indication light at the handset of the guard counter shall turn off, then intercommunication between the security guard and the visitor can take place;

c. If the handset is not picked up within a predetermined period, which is adjustable from 1 to 120 seconds, the call tone shall stop and the “INCOMING CALL” indication light shall turn off. A "No Answer" voice message shall be generated at the doorphone panel and the illuminated signal shall change from "Please Wait" to "No Answer" and after 3 seconds the system shall automatically revert back to normal and illuminated signal "No Answer" shall turn off. An alarm signal for the unattended call of respective block shall also be generated to the central alarm and door monitoring system via the local alarm and door monitoring system of the respective domestic block;
d. The two way intercommunication between the security guard and the visitor shall be limited to a predetermined period ranging from 20 to 120 seconds. When the pre-determined period expires, the inter communication between the two parties shall be automatically cut off and the system shall revert back to its normal conditions;

e. After the handset is picked up and before the handset is put back to its normal position within the pre-determined intercommunication period, pushing the door release push button on the handset shall remotely release the electrical door lock at the main entrance gate. A "Please Enter" voice message shall be generated at the doorphone panel and the illuminated signal shall change from "Please Talk" to "Please Enter". The communication shall be terminated after an adjustable period of 1 to 30 seconds after the release of the door lock. The lock shall then be reverted to locked state after the door is closed again. If the door is not opened by the visitor after a predetermined period adjustable from 1 to 30 seconds, the lock shall then revert to the locked state;

f. After the termination of the communication link and the reverting of the door lock to its locked state, the illuminated indication "Please Enter" on the instruction display shall turn off;

g. When the handset is not connected to the entrance panel, i.e. when the guard counter selection push button of domestic blocks is not pressed at the entrance panel by any visitor, operation of the door release button at any handset shall not release the lock of the main entrance gate;

h. The door lock shall be such that in case the door release button inside the entrance gate or the secret digital code door lock release is not operative the gate can still be opened by operating a keyswitch at the bottom of the doorphone panel and combination lock panel outside the entrances. The door lock shall revert to its normal closing state when the door is closed;

i. When the "Clear" button is pressed at any stage during the operation of the doorphone panel, the system shall switch off the display, terminate any established communication link and revert to the "normal" condition.

5. For each side entrance gate, a combination lock control panel shall be provided. The combination lock control panel shall be suitable for operation under outdoor condition and provided with stainless steel weather shield. The panel shall be constructed with 1.5mm thick stainless steel faceplate and 1.2mm thick stainless steel housing enclosure comprising:

a. All the facilities for side entrance combination lock control panel as specified in ELE24.3.2.070 sub-clause 5.

6. The specification of combination lock system at doorphone panel of main entrance gate and combination lock panel of side entrance gate of SSF development shall be the same as the main entrance and side entrance doors of domestic block specified in ELE24.3.2.070. Setting of the four-digit secret codes for releasing lock of entrance gates shall be same as that for domestic blocks, in which the individual secret code of any domestic blocks shall be able to release lock of entrance gates.
**ELE24.3 LOCAL CLOSED CIRCUIT TELEVISION MONITORING SYSTEM**

**ELE24.3.3.010.8 GENERAL**

1. Closed circuit television systems shall be installed at the various locations of each block as indicated on the Drawings; public signage related to CCTV surveillance shall be provided and installed in accordance with the details shown on the Drawings;

2. If the distance between the DVR and the LCD monitor is too large for a direct connection by VGA cable, a pair of VGA extenders shall be used as shown on the Drawing or as indicated in Project Specific Specification.

**ELE24.3.3.020.8 DOORPHONE PANEL**

1. CCTV camera shall be installed within the doorphone panel to capture the view of the visitors. The view shall be displayed at:
   a. Monitors at the guard counter;
   b. Tenants' television sets through the CABD installation.

2. The camera shall be built in the doorphone panel. Lighting other than those originally included in this sub-contract shall not be required for the camera to transmit clear and satisfactory pictures at night time. The capture angle of the CCTV camera shall be adjustable on site;

3. Super wide angle lens integral with the camera shall be used. The camera and the integral lens shall have the following characteristics:

<table>
<thead>
<tr>
<th>Characteristic</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Focal length</td>
<td>f2.3mm to f2.5mm</td>
</tr>
<tr>
<td>Aperture</td>
<td>F2.0</td>
</tr>
<tr>
<td>Angular field of view</td>
<td>Not less than 95° horizontal 130° diagonal</td>
</tr>
</tbody>
</table>

**ELE24.3.3.030.8 LIFT**

1. CCTV camera installed by others within each lift of the building shall be connected to the local CCTV monitoring system. The view shall be displayed at:
   a. Monitors at the guard counter;
   b. Tenants' television sets through the CABD installation.

2. Lift floor number generator:
   a. Lift floor number generator shall be provided for each lift. The lift floor number generator shall superimpose the following characters on the CCTV picture captured from the lift car:
      i. Lift floor numbers;
      ii. An up or down arrow showing lift travelling direction;
      iii. Lift alarm button activated.
   b. The image with superimposed characters shall be restricted for display at the monitor connected to the DVR at Security Counter only. The characters shall be positioned at one corner of the screen not interfering with other alphanumeric display, and clearly legible under all background conditions;
c. The characters to be generated shall be based on the status of the lift provided by Lift Sub-contractor in the form of either normally open volt free contacts or digital signals. Interface shall be through an interface box located at the ground floor meter room or otherwise at locations as shown on the Drawings. The following types and quantities of data will be provided:

i. Lift landing floor number, one for each landing floor;

ii. Lift travelling directions, one for up and one for down;

iii. Lift alarm activated status, one.

d. Closing of a particular contact or change of state of a digital signal shall cause the generation of the corresponding set of characters it represents on the CCTV picture and the characters shall be removed as soon as the signal resets. When multiple closures of the same type of contacts are detected simultaneously, a fault signal (such as a blinking asterisk) shall be generated in lieu of the floor number or the directional arrow to indicate the fault condition. In case of digital signals, detection of contradictory signals shall also activate the same fault condition;

e. The lift floor number generator shall conform to the following technical requirements:

<table>
<thead>
<tr>
<th>Item</th>
<th>Technical Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>i. Video input</td>
<td>Composite 1Vp-p/ 75 Ohms</td>
</tr>
<tr>
<td>ii. Video output</td>
<td>Composite 1Vp-p/ 75 Ohms</td>
</tr>
<tr>
<td>iii. Control input</td>
<td>Minimum 64 N.O. contacts</td>
</tr>
<tr>
<td>iv. Character</td>
<td>Height 23 scanning line min.;</td>
</tr>
<tr>
<td></td>
<td>Width 0.7 ms min.;</td>
</tr>
<tr>
<td></td>
<td>Position selectable at each of the four corners on the screen;</td>
</tr>
<tr>
<td></td>
<td>Brightness and greyscale adjustable.</td>
</tr>
</tbody>
</table>

ELE24.3.3.040.8 MAIN ENTRANCE/GUARD COUNTER

1. A CCTV camera shall be installed at the main entrance of each domestic block to capture the view of the guard counter/visitor;

2. The view shall be displayed at central CCTV system;

3. The camera lens shall be super wide angle type as follows:
   a. Focal length: F3.65 mm;
   b. Aperture: F1.8 to 3.5;
   c. Angular field of view: Not less than 72° horizontal, 97° diagonal.

ELE24.3.3.050.8 SIDE ENTRANCE

A CCTV camera shall be installed at each side entrance of the block. The view shall be displayed at:

1. Monitors at the guard counter;

2. Central CCTV system.

The camera shall be the same as that installed for main entrance/ guard counter CCTV system as specified in ELE24.3.3.040.
ELE24.3.3.055.8  ROOF EXIT
CCTV camera shall be installed at the roof exit staircase to monitor the staircase area leading from the top domestic floor to the roof exit gate. The view shall be displayed at

1. monitors at the tower guard counter.
2. Centralized CCTV system

The camera shall be similar to that used for lift CCTV system except that the camera shall be surface mounted under the ceiling. Super wide angle lens integral with the camera shall be used. The camera and the integral lens shall have the following characteristics:

<table>
<thead>
<tr>
<th>Characteristic</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Focal length</td>
<td>2.3mm to 2.5mm</td>
</tr>
<tr>
<td>Aperture</td>
<td>F2.0</td>
</tr>
<tr>
<td>Angular field of view</td>
<td>Not less than 95° horizontal 130° diagonal</td>
</tr>
</tbody>
</table>

ELE24.3.3.056.8  G/F STAIRCASE EXIT AND OTHER STAIRCASE EXITS
A CCTV camera shall be installed for each staircase exit to capture the view of G/F staircase exit and other staircase exits at specific floors as shown on the Drawings. The view shall be displayed at:

1. Monitors at the guard counter;
2. Central CCTV system.

The camera shall be the same as that installed for roof exit CCTV system as specified in ELE24.3.3.055. For outdoor cameras, including those which are mounted under outdoor canopy, camera protective housing as specified in ELE24.2.1.070 shall be provided.

ELE24.3.3.060.8  RECORDING
1. The scenes captured by the above closed circuit television system except the camera inside the doorphone panel shall be recorded by a DVR installed at each building;
2. Video signal from cameras viewing guard counter and side entrances, should be presented for interface with the future central CCTV monitoring system in case the project does not include an Estate Management Office;
3. These video signals shall be in a form of standard composite video having the following specification;
4. Scanning: CCIR 625 lines 50 field Interlace 2:1;
5. Signal: Composite video normally 1.0V p-p characteristic impedance of 75ohms.
ELE24.3.4  LOCAL ALARM AND DOOR MONITORING SYSTEM

ELE24.3.4.010.A  LOCAL SYSTEM

1. A mimic panel made of 1.5 mm thick stainless steel plate with alarm buzzer and indicating light emitting diode (L.E.D.) showing the locations of the entrance doors and staircase exit doors at ground floor and other specific floors as shown on the Drawings shall be installed at the guard counter. The layout of the building ground floor and other specific floors as shown on the Drawings shall be engraved on the panel. An additional mimic panel shall be provided with indicating L.E.D. showing the locations of the staircase exit doors at roof level. The operation of the alarm and door monitoring system shall be as follows:

a. Opening of any door shall cause the corresponding L.E.D. on the mimic panel to light up. Opening of the staircase exit door shall also cause the buzzer to sound intermittently. The L.E.D. and the buzzer if sounded shall go out if the door is closed afterward;

b. In case any main / side entrance door and staircase exit door has been opened for an adjustable period of 0 (immediate alarm) to 10 minutes without being re-closed and reset or any roof exit gate has been opened for an independently adjustable period of 0 (immediate alarm) to 10 minutes without being re-closed and reset, the corresponding L.E.D. shall flash and the buzzer shall sound continuously. A local indicating light shall be illuminated and a local buzzer shall also be sounded. An alarm signal shall be sent to the centralized alarm and door monitoring system for alarm reporting to the security control room;

c. The buzzer in the mimic panel shall be able to be muted by pressing the "Acknowledged" push button on the panel;

d. Pressing the "Reset" push button on the mimic panel after re-closing the door shall reset the local alarm;

e. In the event that any alarm has not been reset for an adjustable period of 1 to 10 minutes, an alarm signal shall be sent to the central alarm and door monitoring system for reporting the alarm to the security control room in the Estate Office;

f. Activation of the emergency door release for door opening shall cause a signal to be sent to the central alarm and door monitoring system;

g. Upon the activation of the guard counter panic alarm push button, L.E.D. on the mimic panel shall light up and an alarm signal shall be sent to the central alarm and door monitoring system;

h. Pressing of the "Test" push button on the mimic panel shall cause all the L.E.D. to light up and the buzzer shall sound;

i. When the doorphone system for SSF court entrance gate is specified, in the event that any call from doorphone panel at main entrance gate of SSF development is not picked up by the security guard of the respective block for an adjustable period of 1 to 120 seconds, an alarm signal for the respective block shall be sent to the central alarm and door monitoring system via the local system for reporting the alarm to the security control room in the Estate Office;

j. In the event that any call from intercom slave station at temporary refuge space is not picked up by the security guard for an adjustable period of 1 to 120 seconds, an alarm signal shall be sent to the central alarm and door monitoring system for reporting the alarm to the security control room in the Estate Office.
2. In case interconnection is required to an existing central security system, the Sub-contractor shall ensure that the equipment provided for this system is compatible with the existing Central Security System for the interface requirements as stipulated in this Specification. The Sub-contractor shall be responsible for the verification of compatibility.

ELE24.3.4.020.8 INTERFACING WITH THE CENTRAL SECURITY SYSTEM

The details of interfacing requirement with central security system are specified in the Project Specific Specification.

ELE24.3.4.030.8 TELEPHONE SET

The requirements of provision of telephone sets are specified in the Project Specific Specification.

ELE24.3.5 CENTRAL SECURITY SYSTEM

ELE24.3.5.010.8 GENERAL

1. Central Security System or Second Tier Security System shall be installed in the security control room located in the Estate Management Office (EMO). These systems shall oversee the security system in individual building within the whole estate;

2. The Central Security System shall consist of the following:
   a. Central alarm and door monitoring system in security control room;
   b. Central CCTV system in security control room;
   c. A Local Area Network (LAN) providing connectivity between:
      i. The local CCTV and alarm systems of all domestic blocks;
      ii. Central alarm and door monitoring system;
      iii. Central CCTV system;
      iv. Similar systems in other blocks as specified in Project Specific Specification and Drawings.
   d. As shown in Project Specific Specification and on the Drawings, for those blocks that cannot be connected to the above LAN due to the obstruction by a barrier, such as a public road inaccessible for cabling work, or other site constraint that disallow cabling work, the connection to those blocks shall be provided by broadband lines subscribed from a Broadband Internet Service Provider (BISP). Each Broadband line shall conform to the following, unless otherwise specified:
      i. Minimum 8 Mbps bandwidth for both uploading and downloading;
      ii. With or without Internet access;
      iii. Single fixed IP;
      iv. IP access right within estate between PC and DVR;
      v. All Transmission Control Protocol (TCP) and User Datagram Protocol (UDP) ports of broadband line shall be opened.
   e. Telephone set at EMO and guard counters of domestic block and other location as specified in Project Specific Specification and Drawings.
3. The LAN mentioned in sub-clause 2 above shall conform to the following network standards on a backbone of optical fiber or Cat. 6 UTP:

100 Mbps: Ethernet IEEE 802.3u, 100BASE-TX, 100BASE-FX.

4. The schematic of LAN, if shown on the Drawings, is for indicative purpose only. The Sub-contractor shall be responsible for the final design of the LAN and submit a detailed proposal, with a fully developed schematic, performance analysis and the technical specifications of all the hardware / software required, for the Contract Manager’s Approval. The system shall comprise all necessary components, such as switches, hubs, repeaters, bridges and routers, to form a fully functional network;

5. If broadband connection services are required, the Sub-contractor shall be responsible for the subscription and maintaining of the services at the EMO and the blocks, where the services are needed, for the entire period starting from testing and commissioning phase of the Works till the expiry of Maintenance Period. The details of the broadband connection services and the BISP shall be approved by the Contract Manager;

6. For all communication via Broadband Line, adequate data security shall be provided. All routers accessible from the Internet shall be configurable to run in Virtual Private Network (VPN) mode. The VPN routers shall be so selected that the data throughput shall be adequate for satisfactory transmission of CCTV images with no loss frame from the local systems to the central system with both firewall and VPN activated. The Sub-contractor shall verify the selection of the VPN routers in the performance analysis as stipulated in sub-clause 3 above;

7. The IP addresses and sub-netting arrangement of all the network devices on the LAN shall be submitted to the Contract Manager for approval. The Sub-contractor shall adopt the LAN IP format 192.168.xxx.xxx and subnetting Class C with subnet mask set at 240 unless otherwise specified. The third octet number shall be assigned by the Contract Manager;

8. At the end of testing and commissioning of the central security system, the Sub-contractor shall prepare the following network data records for future maintenance and management of the system:

a. Network address list for all networked devices (with TCP/IP address of each network device, subnet setting, WAN IP address if any, etc.);

b. Network map (includes hardware location, device IP addresses and cable number / reference, etc.);

c. Network Equipment List (Equipment name, manufacturer name, Model no., Serial no., includes DVR, Ethernet Switch, Router, Personal Computer, LCD monitor, VGA extender, Cat. 6 cable, fibre optic cable, patch panel etc.);

d. Network hardware configuration (configuration information includes configuration files and protocol information, user name, password, etc. for each network device);

e. User manual for all networking and networked devices.

9. The Sub-contractor shall provide hard copy and soft copy of the data record as specified in sub-clause (8) above. Hard copy for data described in sub-clauses (8)(a), (8)(b), (8)(c) & (8)(d) shall be attached to the T & C report and these hard copies together with data described in sub-clause (8)(e) shall be included the O & M manual. Soft copy of all the data records shall be burned onto CD-ROM or DVD-ROM and also stored in a protected sector of the hard drive in the PC of the central security system. A network map shall also be provided in each equipment rack housing the network devices, this map shall be fixed on the front glass panel in a secure manner and facing inward;
10. The Sub-contractor shall provide customized hands-on training on the operation and management of the central security system. The training shall include the system overview, the operation of hardware and the use of application software. The Sub-contractor shall allow two training courses each for up to 20 personnel nominated by the Contract Manager. One training course shall be arranged after the completion of the installation and the second upon the expiry of the Maintenance Period. The Sub-contractor shall provide all necessary training tools, materials and handouts. The Sub-contractor shall submit details of the training, such as the programme, the duration and the contents, for the Contract Manager's approval.

ELE24.3.5.020.A CENTRAL ALARM AND DOOR MONITORING SYSTEM

1. General
   a. The central alarm and door monitoring system shall be provided for monitoring alarm signals from individual buildings for the whole estate. The central alarm and door monitoring system shall consist of the following:
      i. Alarm transmitter and necessary network device at each domestic block;
      ii. A central station consisting personal computer, printer, network devices and accessories at the security control room in estate office;
      iii. Software for processing the alarms / events.
   b. The communication between the transmitters at each local blocks and personal computer in EMO shall be through the LAN or Broadband Line connection;
   c. The total numbers of alarm signals required for the whole estate are specified in Project Specific Specification.

2. Alarm Transmitter
   a. The alarm transmitter shall have a minimum of 30 alarm inputs;
   b. Upon receipt of an alarm, the transmitter shall send the alarm status to the central station at the security control room to report the emergency event;
   c. The alarm transmitter shall test the alarm reporting function by reporting to the central station regularly at an adjustable time interval of ½ to 24 hours;
   d. The alarm transmitter shall accept the following signals through the dry contacts:
      i. Unattended prolonged opening or emergency opening of main / side entrance door;
      ii. Unattended prolonged opening of staircase exit door;
      iii. Emergency opening of roof staircase exit door;
      iv. Panic alarm at guard counter;
      v. Power failure to the control units;
      vi. Signals from spare dry contacts;
      vii. Lift alarm signals;
      viii. For SSF development, prolonged unattended call from doorphone panel at main entrance gate(s) of respective block;
      ix. Prolonged unattended call from intercom slave station at temporary refuge space.

3. Central station
The personal computer shall be of Approved registered trade name. The personal computer shall operate on Windows 10 or the latest version of Windows or other operating system approved by the Contract Manager and with minimum 8GB RAM memory, 1TB hard drive, DVD writer and the following peripheral hardware and software:

a. Peripheral Hardware
   i. LCD monitor, 19 inch screen size;
   ii. Keyboard and optical mouse;
   iii. Laser jet colour printer;
   iv. All necessary network devices.

b. Software
   i. Alarm processing and display system for all alarm signals from the whole estate plus 100% other future alarm signals;
   ii. All the texts / words shown on the screen for the information of and use by the guard supervisor shall be in Chinese. All the inputs required to be made by the guard supervisor shall be simple and user friendly to the approval of the Contract Manager;
   iii. Only licensed original software shall be used in each system.

4. Software function

The software for processing and displaying the alarm in the central station shall have the following functions:

a. Alarm and event monitoring overview

   The system shall be able to show a summary of all alarms and events and list the alarms and events in chronological sequence. The listed details shall include at least the following:
   i. Time of alarm / event;
   ii. Date of alarm / event;
   iii. Name of building;

b. Password control

   The system shall be able to protect from use by unauthorized person by means of password control. The system shall provide different password for individual user. There shall be one master password for a user who has the authority to assign authority to individual user.

c. Mimic map display

   In order for the security guard to easily identify the exact location of an alarm, the system shall store sets of mimic map including:
   i. The floor plans of each building with security doors and staircase exit doors within an estate with details of location of individual alarm detection points. All alarm detection points shall be properly labelled;
   ii. Site layout plan in which a street map showing the location of all the buildings of an estate. The plan shall be properly labelled and easily updated in future.
These mimic map/plans shall be shown in at least 5 different colours.

d. History and reports

The system shall store the history of alarms and events received by the system for at least 31 days. The history shall be able to be retrieved by defining one or more of the parameters below:

i. Building name;

ii. Operator;

iii. Nature of event;

iv. Duration;

v. Type of action taken by the guard supervisor.

e. Remote terminal

The system shall have the ability to download information to another personal computer through LAN or Broadband Internet;

f. Database back-up

The system shall have facilities to back-up the data stored in the system on rewritable CD or DVD;

g. Capacity for future expansion

i. The system shall have capacity and facilities for expanding the alarm / event monitoring systems such that the no. of alarm / event signals can be doubled in future;

ii. Under normal condition, the alarm / event monitoring overview screen shall be presented. This screen shall show all the current and past alarm and event data. The outstanding alarms shall be in red colour. The reset of the alarm circuit shall cause the colour of the corresponding alarm text changed to white and at the same time, a text indicating the reset of the alarm circuit shall be shown. Events other than alarm shall be shown in white colour;

iii. Upon receipt of an alarm signal from the transmitter, the alarm shall be shown up on the monitor in the form of mimics. Initially, the site layout plan shall be shown with the block having alarm changed to red colour and flashed intermittently. The buzzer shall sound continuously. After the signal is accepted by the guard supervisor, the floor plan of the block shall be displayed with the location of alarm point changed to red colour and flashed intermittently. Simple instructions with nature of alarm and action required to be shown at the bottom of the screen;

iv. After the instructions are acknowledged by the guard supervisor, an action screen listing all the possible actions to be carried out by the guard supervisor shall be shown. The confirmation of the actions carried out by the guard supervisor shall be time tagged and stored in the system;

v. Should there be another alarm occur while the previous alarm is being processed, there shall be a window on the screen indicating the nature of the latest incoming alarm / event and the number of outstanding alarms on queue. This allows the guard supervisor to judge the urgency of the situation;
vi. By returning to the alarm / event monitoring overview screen the guard supervisor may select the most important alarm or event and process it accordingly;

vii. The history of the alarms and events can be produced by the printer at the command of the guard supervisor.

ELE24.3.5.030.A CENTRAL CCTV SYSTEM

1. General
   a. The CCTV images captured by each local CCTV system shall be transmitted to the EMO via LAN or Broadband Internet as specified in Project Specific Specification and Drawings;
   b. The Sub-contractor shall programme and set up the DVR in each domestic block to transmit the video images to the personal computer in EMO;
   c. The Central CCTV system shall consist of the following components, to be provided by the Sub-contractor unless otherwise specified:
      i. Cameras at the local CCTV systems;
      ii. DVR's at the local CCTV systems;
      iii. LAN and Broadband Internet connection;
      iv. Central station (a personal computer with accessories) at security control room in EMO.

2. Central Station
   The personal computer shall be of Approved registered trade name. The personal computer (PC) shall operate on Windows 10 or any latest version of Windows or other operating system subject to the Contact Manager's approval. The PC shall be equipped with minimum 8GB RAM memory, 1TB hard driver, DVD writer and the following peripheral hardware and software:
   a. Peripheral Hardware
      i. LCD monitor, 19 inch screen size;
      ii. Keyboard and optical mouse;
      iii. Laser jet colour printer (shared with the central alarm and door monitoring system);
      iv. All necessary network devices.
   b. Software
      i. Remote end CCTV monitoring software to be provided by the DVR suppliers and installed and set up by the Sub-contractor.

ELE24.3.6 CENTRAL SECURITY SYSTEM SIGNALS TERMINATION BOX

ELE24.3.6.010.8 TERMINATION

All the video and panic alarm signals which all required to be interfaced with the central CCTV system shall be terminated properly to sockets in a separate metal housing at G/F of the meter room. The Sub-contractor shall collect the video transmitters and modems from the Estate Office and complete the Central Security System.
ELE24.3.7 CABLELING AND CONNECTIONS

ELE24.3.7.010 CABLE

1. Video and radio frequency cables shall be run in concealed conduit separated from power and control cables unless otherwise shown on the Drawings. If surface wiring of video and radio frequency cables has to be performed, they shall maintain a distance of at least 100 mm from power conductors;

2. Internal wiring within console or equipment racks shall be neatly run and held fixed in cable ducts by non-rusting cleats or cable ties;

3. The installation and handling of the cables shall be undertaken at all times by adequate staff suitably trained and supplied with all the necessary equipment and tools. The arrangement of the cables and all method of laying shall be Approved by the Contract Manager and shall be an orderly manner, free from unnecessary bends and crossing and will permit the removal of any one cable without undue disturbance to adjacent cables.

ELE24.3.7.020 CONNECTION

1. Connection of cables between an equipment and a wall-mounted adaptor box; or between the equipment rack or console and the cable conduit or trunking shall be protected by flexi-conduit to BS EN 61386-1 or IEC 61386-1;

2. Cable connections to an equipment or control panel shall, as far as possible, be provided with plug-socket configuration. Where direct entry of a cable through a metallic cover or panel of an equipment rack is unavoidable, the hole through the metallic cover or panel shall be protected by rubber grommets to avoid cuts;

3. Jointing of cables shall be avoided. Where a joint is considered acceptable by the Contract Manager all cables shall be jointed by properly designed connectors or inside joint boxes;

4. The Sub-contractor shall provide 75 ohms BNC type video connectors for all cable connections to video equipment or connection panel of control consoles;

5. Handsets of the doorphone system in individual flats shall be connected to the main trunk cable through a termination box located in the meter room on each floor. A printed circuit board shall be provided in the termination box for the purpose of cable connection and termination. All terminal blocks and other system components such as diodes and resistors shall be mounted on this printed circuit board. Interconnections between incoming terminals, outgoing terminals and other system components shall be achieved by copper tracks etched on the printed circuit board and jumper wires shall not be used. Labels shall be printed on the printed circuit board to show the identity of each component, the function and associated flat number of each terminal. A sample of a fully completed printed circuit board together with a labelled circuit diagram shall be submitted for approval prior to manufacturing.

ELE24.3.8 EARTHING

ELE24.3.8.010 GENERAL

1. All consoles, operator panels, equipment chassis, camera housing, monitor housing that are constructed from metal shall be suitably earthed against electric shock;
2. If the system design or equipment configuration requires the signal circuit common (applicable to video, radio frequency or control circuitries) to be earthed to minimise interference and/or electromagnetic pick-up, these shall be earthed at a single point to avoid hum loops;

3. Earthing arrangements shall be in accordance with the Electrical CoP.

**ELE24.3.9 CCTV AND INTERCOM SYSTEM FOR TEMPORARY REFUGE SPACE**

**ELE24.3.9.010.A GENERAL**

1. The following CCTV and intercom system shall be provided for temporary refuge space (TRS) in accordance with the Code of Practice for Fire Safety in Buildings 2011 (the Code) issued by Buildings Department:

   a. A closed-circuit television and direct intercom system, both backed up by uninterruptible power supply (UPS) system, shall be provided to every temporary refuge space for communication with the local guard counter and / or management office of the building or other location as specified;

   b. The height of the intercom slave station shall not be less than 900mm and not more than 1200mm above the floor level;

   c. The closed-circuit television and direct intercom system shall be linked to a monitor and a panel respectively at the local guard counter and / or management office or other location as specified showing or indicating the temporary refuge spaces at which persons with a disability are waiting for rescue.

2. An operation instruction plate of CCTV and intercom system shall be provided at the local guard counter and / or management office or other location as specified. The Sub-contractor shall submit details of operation instruction plate to the Contract Manager for approval prior to manufacture.

**ELE24.3.9.020.8 INTERCOM SYSTEM**

1. The intercom system shall comprise a master station located at the local guard counter and / or management office or other location as specified and a slave station at each temporary refuge space respectively;

2. The master station shall conform to the following technical requirements:

   a. The master station shall be a vandal proof panel with minimum 1.5mm thick stainless steel faceplate and designed for desk-top mounting. The housing shall be made of minimum 1.2mm thick stainless steel;

   b. Each master station shall comprise:

      i. A floor selection panel;

      ii. A handset unit.

   c. A floor selection panel shall be provided to incorporate the following controls / indicators:

      i. Heavy duty Press-ON / Press-OFF floor selection buttons;

      ii. Floor selection indication light;

      iii. A heavy duty spring-loaded slave station "CALL” button;

      iv. A buzzer volume control button;

      v. A power supply status indicator;
vi. A lamp test button;

vii. A buzzer alarm.

d. The master station shall be capable of communicating with any one of the
c-connected slave stations. Direct communication between the slave stations is
not required.

3. The slave station shall conform to the following technical requirements:

a. Each slave station shall be a vandal proof panel with minimum 1.5mm thick
stainless steel faceplate and designed for recessed-mounting. The base box
shall be made of minimum 1.5mm thick galvanised steel;

b. Each slave station shall comprise:

i. A microphone and loudspeaker two way communication unit for hands free
operation in a noisy environment such as fire alarm bell being activated;

ii. A heavy duty spring-loaded "CALL" button for communication with local
guard counter and / or management office or other location as specified;

iii. A LED indication lamp “PLEASE WAIT” displayed in English and
Chinese;

vi. A LED indication lamp “PLEASE TALK” displayed in English and
Chinese;

v. All push buttons shall be vandal-proof type. The push buttons shall be
flush mounted with its edge at least 1mm protruded from the surface of
stainless steel plate. Push buttons shall be submitted to the Contract
Manager for approval;

vi. Braille instructions as specified on the Drawings.

4. The Sub-contractor shall submit drawings for the arrangement of the master station
and slave station to the Contract Manager for approval prior to manufacture;

5. The operation of intercom system shall be as follows:

a. To initiate a call at the master station, the operator shall press the floor selection
button on the master station once. The respective floor indication light shall
light up in RED colour automatically. When the "CALL" button at the master
station is pressed, a high note call alarm shall be heard at the selected slave
station and the “PLEASE TALK” indication lamp shall light up at the selected
slave station. Communication between the operator at the master station and
the persons with disability at the slave station can be made via the
corresponding microphone and loudspeaker unit. On completion of the call, the
system shall be reset by pressing the selected floor selection button again and
the respective floor indication light at master station shall change to YELLOW
colour in order to retain the indication of completed call. The YELLOW floor
indication light can be turned off by pressing the selected floor selection button
again;
b. To initiate a call at the slave station, the person with disability shall press the “CALL” button on the slave station once. The “PLEASE WAIT” indication lamp shall light up at the slave station. When the master station is being called by a slave station, the buzzer alarm at the master station shall sound and the corresponding floor indication light shall flash in RED colour and the operator can answer the call by pressing the floor selection button; the “PLEASE WAIT” indication lamp shall stop light up and the “PLEASE TALK” indication lamp shall light up at the selected slave station. The respective floor indication light at master station shall light up in RED colour automatically. Communication between the operator at the master station and the persons with disability at the slave station can be made via the corresponding microphone and loudspeaker unit. On completion of the call, the system shall be reset by pressing the selected floor selection button again and the respective floor indication light at master station shall change to YELLOW colour in order to retain the indication of completed call. If the master station is being called by the same slave station again at this stage, the buzzer alarm at the master station shall sound and the corresponding floor indication light shall flash in RED colour and the operator can answer the call by the same operation sequences as mentioned above. The YELLOW floor indication light can be turned off by pressing the selected floor selection button again;

c. If the call from slave station is not picked up within a predetermined period, which is adjustable from 1 to 120 seconds, an alarm signal for the unattended call shall also be generated to the central alarm and door monitoring system via the local alarm and door monitoring system;

d. The master station shall be so designed that it can communicate with only one slave station at a time. When the master station is engaged with one slave station, call from other slave station shall cause the corresponding floor indication light to flash only without activating the buzzer alarm. The operator shall follow the same procedure as described above in answering the waiting calls.

ELE24.3.9.030.8 CCTV SYSTEM

1. The CCTV system shall be a local CCTV monitoring system. It shall comprise of the following:
   a. A CCTV camera at each temporary refuge space;
   b. A monitor located at the local guard counter and / or management office or other location as specified;
   c. DVRs;
   d. Video multiplexing device for display of CCTV images of all TRS from all DVRs on single monitor via time interlace mode;
   e. Interfacing unit with intercom system for pop-up of CCTV images at TRS during communication.

2. The CCTV images captured by the CCTV camera at TRS shall be transmitted to the central CCTV system via LAN or Broadband Internet as specified in Project Specific Specification and Drawings;

3. The operation of CCTV system shall be as follows:
   a. Under normal condition, there shall be a view mode selector at the local guard counter and / or management office or other location as specified for the operator to select viewing of CCTV images in two different modes:
      i. display of CCTV images from selected single DVR in 4x4 screen mode;
ii. sequential display of 4x4 screen CCTV images of all TRS from all DVRs in view mode.

Under normal condition, all CCTV images are not recorded by the DVR.

b. When the operator initiates the communication with a particular slave intercom station or answers the call from a slave intercom station by pressing the floor selection button at master intercom station of intercom system, the CCTV image of the selected slave intercom station shall be automatically pop-up and displayed on the monitor. At the same time, when the operator initiates the communication at the master intercom station by pressing the floor selection button or when the persons with disability initiates the communication at the slave intercom station by pressing the “CALL button”, the DVR will be triggered to start recording of the CCTV image of the TRS at selected floor;

c. On completion of the call, the operator will reset the intercom system by pressing the selected floor selection button once again and the floor indication light at master intercom station shall change to YELLOW. The CCTV system shall then resume to the view mode under normal condition automatically but the recording of the CCTV images of the TRS at selected floor shall still continue. The operator shall press the selected floor selection button again to turn off the YELLOW indication light and stop recording of the CCTV images of the TRS at selected floor.

4. The Sub-contractor shall provide all necessary video multiplexing devices for display of all CCTV camera images on a single monitor and interfacing devices for the interface with intercom system as described in the above operation sequence. The Sub-contractor shall submit drawings for the arrangement of the CCTV system to the Contract Manager for approval prior to manufacture;

5. The equipment of the CCTV system shall comply with the specification in ELE24.2.

6. The CCTV camera shall be similar to that used for lift CCTV system except that the camera shall be surface mounted under the ceiling. Super wide angle lens integral with the camera shall be used. The camera and the integral lens shall have the following characteristics:-

<table>
<thead>
<tr>
<th>Characteristic</th>
<th>Details</th>

**ELE24.3.9.040.8 WIRING INSTALLATION**

Except for the installation in fireman’s lift lobby area with guard counter, the wiring installation of CCTV and intercom system shall meet the minimum fire resisting cable requirements for audio / visual advisory systems as listed in Appendix 8 of Code of Practice for Minimum Fire Service Installations and Equipment and Inspection, Testing and Maintenance of Installations and Equipment issued by Fire Services Department.

**ELE24.3.9.050.X DELETED**
ELE24.4 TESTING, COMMISSIONING, ACCEPTANCE AND MAINTENANCE

ELE24.4.1 PERFORMANCE TESTS, ADJUSTMENTS, COMMISSIONING AND ACCEPTANCE

ELE24.4.1.010.8 GENERAL
The Sub-contractor shall carry out complete performance tests for all equipment and system installed by him, make all necessary adjustments, commission the installations, and submit the test reports, all to the satisfaction of the Contract Manager who may request the Sub-contractor to repeat all or some of the tests in the presence of his representatives before the installation will be accepted.

ELE24.4.2 TEST

ELE24.4.2.010.8 TEST FOR DOORPHONE PANEL
Before delivery of the doorphone panel to site, the Sub-contractor shall perform the functional tests of the doorphone system at the manufacturer's workshop to the satisfaction of the Contract Manager's Representative:

1. Functional test of all push buttons in the visitor panel shall be conducted;
2. Functional test of the selection of flats and the two-way communication between the panel and the selected flats shall be conducted;
3. To facilitate the test, a test panel with sufficient indication lights and sockets for connection of handset unit to simulate the flats of the block shall be provided to demonstrate the floor / flat selection and two-way communication. After pressing the selected floor and flat, the correct pilot light shall be illuminated in the test panel and the communication between the visitor panel and addressed flat's handset shall be functioned;
4. During the system communication, the sound quality, sound output level, sensitivity of microphone, and door releasing button of the handset shall be checked;
5. The picture displayed in the video monitor receiving from the CCD video camera in the visitor panel shall have good quality.

ELE24.4.2.020.A ELECTRICAL TESTS
1. The electrical installation associated with the installation shall be tested to comply with the Electrical CoP and I.E.E. Wiring Regulations, latest edition;
2. Essential performance parameters of all active components of the system as detailed in this Particular Specification including CCTV, amplifier, quad unit, UPS etc. shall be tested to the satisfaction of the Contract Manager. The Sub-contractor shall, at his own cost, deliver the equipment together with test report as required by the Contract Manager or his representative for bench testing and subsequently to the site;
3. The testing procedures recommended by the manufacturer for CCD cameras shall be submitted for Approval;
4. After completion of the installation and before acceptance, the system shall be tested by the Sub-contractor in the presence of the Contract Manager or his representative. All operational functions and performance parameters as specified shall be clearly demonstrated and verified.

ELE24.4.2.030.8 TEST FOR CCTV AND INTERCOM SYSTEM FOR TEMPORARY REFUGE SPACE

1. Before delivery of the equipment for CCTV and intercom system to site, the Sub-contractor shall perform the functional tests of the CCTV and intercom system at the Sub-contractor's workshop in Hong Kong. All tests shall be witnessed by the CM and carried out to the satisfaction of the CM and all test results shall be submitted to the CM for record purpose. During works completion, the Sub-contractor shall again perform the functional tests of the CCTV and intercom system to the satisfaction of the CM. The scope of functional tests shall include:
   a. Functional test of all push buttons in the master and slave stations;
   b. Functional test of the selection of slave stations and the two-way communication between the master station and the selected slave stations;
   c. During the system communication, the sound quality, sound output level and sensitivity of microphone shall be checked under fire alarm bell being activated;
   d. The CCTV camera images displayed in the video monitor shall have good quality. Functional test of interfacing of CCTV and intercom system and the selection of different viewing modes ((1) display of CCTV images from selected single DVR in 4x4 screen mode and (2) sequential display of 4x4 screen CCTV images of all TRS from all DVRs in view mode) shall be conducted.

2. The Sub-contractor shall provide training on the operation and maintenance of the CCTV and intercom systems in accordance with a proposed training programme approved by the CM. The training shall be conducted during normal working hours for the estate management staff. The Sub-contractor shall record one training session in 720p or better resolution video and hand over 2 copies of the video record to the CM.

ELE24.4.3 SCOPE OF WORK DURING MAINTENANCE PERIOD

ELE24.4.3.010.8 GENERAL

The scope of work shall include:

1. To carry out all repairs necessary to maintain the Security System installation in good working order at all times;
2. To provide all transport, labour and materials, including cleaning materials, tools and all testing instruments required for the maintenance service;
3. To despatch competent and specially trained workmen to attend any requirement for an emergency inspection within 1 hour during office hours or 2 hours if outside office hours after receiving the report of a fault. The system shall be repaired and restored to normal within 24 hours. In the event that it being impossible to perform the requirement within the time stipulated, the Sub-contractor shall explain immediately to the Contract Manager or his or her representatives the reason for such non-conformance;
4. To despatch competent and specially trained workmen once monthly during normal working hours i.e. 0800 hours to 1700 hours, or as otherwise stated in the Schedule of Installations to inspect, clean and when necessary, align, adjust and maintain the whole installation, and to sign a "Maintenance Record Book" in the way described as follows:

a. On arrival at the estate, the workmen shall report to the Estate Office and sign a "Maintenance Record Book" which will be kept by the Officer-in-Charge of the estate. At the time of signing, they shall note any message written in the book concerning the performance of any parts of the Security System on the estate, and shall take such action as may be required. They shall inspect the installation on the estate at the time of this regular inspection and make any repairs, replacements or adjustments which may be required, irrespective of whether or not such repair or adjustment is noted in the book;

b. When leaving the estate, the workmen shall report to the Office-in-Charge and enter in the "Maintenance Record Book" a brief report on any repairs, replacements or adjustments, which have been carried out or on the fact that they have found the system operating satisfactorily.

5. Throughout the Maintenance Period, the Sub-contractor shall be responsible for the updating of the firmware of the DVR and the software of the DVR remote client as and when requested by the Contract Manager. After each firmware and software update, the Sub-contractor shall test the system and do all adjustment of system settings as necessary to make sure the system is back to full operational conditions and functionalities and record all the details in "Maintenance Record Book";

6. To provide quarterly reports on the condition of the system:

a. To provide repairs and replacement parts at no additional cost to the Authority such as mechanical, electrical and electronic parts of the installation which the Contract Manager or the Sub-contractor in his judgement may consider necessary for the correct operation of the installation. Provided always that any renewals or repairs necessitated by reason of negligence or misuse of the equipment or by reason of any other cause beyond the Sub-contractor's control, with the exception of ordinary wear and tear, shall be carried out by the Sub-contractor if so required by the Contract Manager at an additional cost to be negotiated by both parties. Replacements shall be obtained from the manufacturer's spare parts list. Alternative components shall not be used without prior Approval by the Contract Manager;

b. Should the Sub-contractor find it necessary to remove any system parts to his workshop for repair, the Sub-contractor shall install at the time of removal replacement parts of the equipment during the period of repair, free of cost to the Authority.

ELE24.4.3.020.B QUARTERLY SERVICING

The Sub-contractor shall carry out, at three months intervals, routine servicing and preventive maintenance to maintain the security systems in proper working condition within the Maintenance Period. The Sub-contractor shall conduct the inspection, servicing and maintenance works and submit a report to the Contract Manager after each inspection, as stated below:

1. Security door lock:

a. Check and clean the door contact;

b. Clean and check the proper operation of the electro-magnetic door lock and the conditions of all physical mounting and alignment;
c. Check that the entrance door with electro-magnetic door lock can be released when the emergency door release for door release is activated;
d. Check that the entrance door with electro-magnetic door lock is unlocked in case of mains power failure.

2. Doorphone system:
   a. Check for and repair / replace the push buttons;
   b. Check the condition of electronic components and printed circuit board;
   c. Check the operation of L.E.D. matrix display and other indicators for proper operation;
   d. Check that the functional operation of the systems meets with the specification requirements.

3. Local closed circuit television system:
   a. Clean the lens and housing of camera;
   b. Check the focus of camera;
   c. Adjust the angle of view of the camera;
   d. Check views of the camera on the monitor and in particular take note of the resolution of the picture;
   e. Check and adjust the contrast and brightness of the monitor;
   f. Clean the screen of the monitor;
   g. Check the operation of DVR.

4. Local alarm and door monitoring system:
   a. Check that the functional operation of the system in particular the time delay setting meets with the specification requirements;
   b. Test the indicators and buzzer;
   c. Check the condition of the battery and charger.

5. Central alarm and door monitoring system:
   a. Check that the functional operation of the system meets with the specification requirements by means of simulating alarms at the building;
   b. Clean the floppy disk drive, if provided;
   c. Check the data storage and back up if necessary;
   d. Clean and check the proper operation of the printer.

6. Central CCTV system:
   a. Check that the functional operation of the system and the alarm reporting operation meets with the specification requirements;
   b. Check the views of the cameras on the monitor and in particular take note of the resolution of the picture;
   c. Check and adjust the contrast and brightness of the monitor;
   d. Clean the screen of the monitor;
   e. Check the operation of all network devices (routers, network hubs / switches etc.) at the local systems and the central system (i.e. at domestic blocks and EMO);
   f. Check the operation of the Broadband Line connections.
7. CCTV and Intercom system for Temporary Refuge Space:
   a. Check and repair / replace the push buttons as necessary;
   b. Check the condition of electronic components and printed circuit boards;
   c. Check the operation of L.E.D. indicators for proper operation;
   d. Check the functional operation of the systems for compliance with the specification requirements;
   e. Clean the lens and housing of camera;
   f. Check the focus of camera;
   g. Adjust the angle of view of the camera;
   h. Check views of the camera on the monitor and in particular take note of the resolution of the picture;
   i. Check and adjust the contrast and brightness of the monitor;
   j. Clean the screen of the monitor;
   k. Check the operation of CCTV image distribution and control device;
   l. Check the sound quality, sound output level and sensitivity of microphone of the Intercom System.

8. Uninterrupted Power Supply (UPS):
   a. Operation checks of all alarms, indications, controls and protection facilities of UPS equipment;
   b. Check the condition of batteries;
   c. Functional check of external maintenance bypass switch.

ELE25.1 GENERAL REQUIREMENTS

ELE25.1.010.8 GENERAL

This Particular Specification is in addition to, and is to be read in conjunction with, the relevant sections of the latest issue/amendment of the General PA Specification. The installation shall comply with the above specifications where relevant.

ELE25.1.020.8 SCHEMATIC DIAGRAM

The proposed schematic diagrams for the systems given in the Drawings are intended to serve as guidelines only and may not be taken as the final design. If any deviations are proposed or expected, tenderer shall enclose details of the proposed alternatives with their tenders for consideration.

ELE25.1.030.8 INFORMATION TO BE SUPPLIED WITH TENDER

Tender shall be accompanied by specifications, catalogues, literatures etc. in English language for each item of equipment offered.

ELE25.1.040.8 SAMPLES OF EQUIPMENT

Tenderer may be required to submit sample of any equipment proposed to the Contract Manager for bench acceptance testing before installation.

ELE25.1.060.8 EXECUTION OF WORKS

1. The Sub-contractor shall employ a contractor on the “List of Approved Suppliers of Materials and Specialist Contractors for Public Works” for “Audio Electronics Installation” to carry out the works for the public address system. The name of the specialist contractor shall be included on the Schedule of Information to be supplied by Tenderer at the time of tender submission. Subsequent to the acceptance of tender, the afore-mentioned contractor shall not be changed unless otherwise approved by the Contract Manager;

2. The “List of Approved Suppliers of Materials and Specialist Contractors for Public Works” for “Audio Electronics Installation” may be found on the website of the Development Bureau, the Government of the HKSAR.
ELE25.2 THE PUBLIC ADDRESS SYSTEM

ELE25.2.020.8 FUNCTIONALITY OF THE PUBLIC ADDRESS SYSTEM

The System will be used for making announcement and playing background music to the selected areas of the commercial centre. The system shall allow:

1. Announcement to be made from the console by means of a hand-held microphone with on-off switch;
2. Background music to be played by means of a CD player with MP3 playback function and/or a radio tuner at the console; and
3. Speeches and music programmes fed from remote signal input points (RSIPs), as specified in Project Specific Specification and/or Drawings, to be broadcasted.

ELE25.2.030.8 COMPONENTS OF THE PUBLIC ADDRESS SYSTEM

The system shall comprise the following items, each to be complete with necessary accessories:

1. A hand-held type microphone with built-in "ON/OFF" talk switch completes with mike hanger and coiled cable of 1 m to 1.5 m long;
2. An AM/FM radio tuner;
3. A CD player with MP3 playback function;
4. An input selection panel - the input selection panel shall perform the input switching function as detailed in ELE25.3.050 below;
5. One mixer preamplifier - the mixer preamplifier shall accept all system inputs. Individual volume control shall be provided for each system input;
6. The quantities and power ratings of power amplifiers to be used for the system shall be clearly stated by the tenderer in his tender. The total load connected to each individual power amplifier shall not be more than 90% of its rated power;
7. A speaker selector shall allow speaker zones to be selected individually or collectively in any combinational manner, plus the all-call function. Details of speaker zones are given in Project Specific Specification and/or Drawings;
8. A volume control panel shall allow individual step volume control of each speaker zone. Details of speaker zones are given in Project Specific Specification and/or Drawings;
9. A monitor panel with two monitoring circuits;
10. A steel equipment cabinet rack for holding items (1) to (9) above;
11. 3W ceiling mount speakers, number to be given in Project Specific Specification and/or Drawings;
12. Wide range horn speakers, number and wattage to be given in Project Specific Specification and/or Drawings;
13. Column speakers, number and wattage to be given in Project Specific Specification and/or Drawings; and
14. Remote signal input circuits where each circuit consists of a number of remote signal input points connected in parallel. Details to be given in Project Specific Specification and/or Drawings.
ELE25.2.040.8 REMOTE SIGNAL INPUT POINT (RSIP)
All remote signal input point (RSIP)'s shall be connected to the equipment rack by microphone cables. A cannon socket shall be provided for each RSIP and installed in the manner as described in ELE25.4.030.

ELE25.2.050.8 PORTABLE PUBLIC ADDRESS SYSTEM
The portable system shall comprise the following equipment items, each to be complete with necessary accessories:

1. 2 hand-held type microphones each complete with a tiltable mount adaptor and a suitable floor stand of adjustable height. The length of cable required for each microphone shall be 10 m;

2. A portable mixer power amplifier (or a portable mixer-preamplifier plus a portable power amplifier) with at least 2 microphone inputs, 1 magnetic phono input, and 1 auxiliary input. A line level output is also required. Minimum output power of the amplifier is given in the Project Specific Specification and/or Drawings;

3. 2 Nos. speaker columns each complete with a suitable height floor stand support. Output power of the speakers is given in the Project Specific Specification and/or Drawings;

4. A 10 m long extension microphone cable shall be provided for connecting the line output of the amplifier to any one of the RSIPs of the Public Address System. The cable end for connecting to the RSIP shall be terminated with a cannon plug;

5. A 10 m long extension speaker cable shall be provided for each speaker column for connecting the speaker to the power amplifier;

6. The Sub-contractor shall supply a trolley with heavy duty casters. All the above equipment except the speakers and their accessories shall be mounted on it. The sub-contractor shall submit a shop drawing to the Contract Manager for Approval prior to fabrication.
ELE25.3 EQUIPMENT FUNCTIONAL REQUIREMENTS AND PERFORMANCE CHARACTERISTICS

ELE25.3.010.8 GENERAL
1. Unless otherwise specified herein, all equipment items to be supplied shall comply with the functional requirements and performance characteristics specified in Section 4 of the General PA Specification;
2. In case of any discrepancy between this specification and the General PA Specification the former shall take precedence;
3. The Monitor Panel, the Input Selection Panel and the Volume Control Panel for the Public Address System shall be made of 1.5 mm thick stainless steel plate or 3.2 mm thick anodized aluminium plate. All labels shall be engraved. Drawings of the panel layout shall be submitted for Approval prior to fabrication;
4. The requirements of sub-clause (3) shall apply also to the front panel of the Speaker Selector for the Public Address System if this item is custom made.

ELE25.3.020.8 AM-FM RADIO TUNER
1. A quartz synthesizer AM/FM tuner with auto-scan tuning shall be provided. It shall be equipped with at least 12 preset tunings with 6 for FM channels and 6 for AM channels. The tuning circuit of the tuner shall be stable enough to maintain unattended operation over long period;
2. The tuner shall be capable of receiving radio programmes in AM band of 530 to 1,605 kHz and FM band of 88 to 108 MHz;
3. The tuner shall be complete with band selector and volume control, and shall also satisfy the following minimum performance characteristics:
   a. Sensitivity shall be better than 100uV for AM (1,000 kHz) and 10uV for FM (26 dB quieting, 40 kHz deviation);
   b. Signal-to-noise ratio shall be greater than 40dB for AM and 65 dB for FM;
   c. Selectivity shall be not lower than 6 kHz for AM and 250 kHz for FM at −3 dB point;
   d. Total harmonic distortion shall not exceed 2% for AM (5 mV, 400 Hz) and 1% for FM (1 kHz);
   e. FM intermodulation distortion shall not exceed 0.3%;
   f. FM frequency response shall not vary by more than 3dB over the frequency range 30 - 15,000 Hz;
   g. Output level shall be not less than 450 mV.

ELE25.3.030.8 CD PLAYER
1. This shall be a multi-CD player with MP3 playback function. It shall be of rugged design suitable for long hours playback of background music;
2. It shall comprise of a front access USB socket for audio file play back;
3. The multi-CD player shall have the series playback function so that after one disc finishes, the other shall start playing automatically;

4. It shall satisfy the following minimum performance characteristics:
   a. Frequency response : 20 to 20,000Hz ± 2 dB;
   b. Harmonic distortion : Less than 0.02% at 1 kHz;
   c. Signal to noise ratio : Better than 98 dB.

ELE25.3.040.8 MICROPHONES

All microphones shall be of unidirectional (cardioid) dynamic type.

ELE25.3.050.8 INPUT SELECTION PANEL

1. The panel shall comprise of push-button switches, illuminated indicators and the associated control circuitry to facilitate the selection of the following inputs.
   a. Tuner;
   b. CD player with MP3 playback function;
   c. Console microphone (selected by the microphone "ON/OFF" switch);
   d. Remote signal input point;
   e. Spare.

2. The microphone input shall have priority over all other inputs and is selected by its "ON/OFF" switch. The control circuitry shall be able to select the microphone input automatically when the microphone is switched to "ON" position and back to the previous selected input source when it is switched off;

3. Only one input shall be selected at any one time;

4. The input selection panel and the volume control panel mentioned in ELE25.3.070 should preferably be installed in a single panel mounted on the console.

ELE25.3.060.8 MONITOR PANEL

1. The panel, required for the Public Address System, shall consist of two monitoring circuits - Circuit A for monitoring the outputs of all power amplifiers and Circuit B for monitoring the zone outputs of the volume control panel. The number of zones is given in Project Specific Specification and/or Drawings;

2. All the facilities specified in Clause 4.2.9(b) of the General PA Specification, except item (ii), shall be provided for the Monitor Circuits A & B;

3. A master power ON/OFF switch with lamp indication shall be provided on the panel for the whole Public Address System.

ELE25.3.070.8 VOLUME CONTROL PANEL

1. The panel, required for the Public Address System, shall have a number of sets of rotary switches and auto-transformer circuits for varying the output voltage of the speaker lines individually. The number of sets is given in Project Specific Specification and/or Drawings;

2. For each control circuit, a minimum of six control steps giving attenuation right from full speaker line output (0 dB) to a value of not less than 15 dB shall be provided.
ELE25.3.080.8  EQUIPMENT CABINET

1. Equipment cabinet for the Public Address System shall be a steel cabinet rack of standard 19 inch (483 mm) EIA type;

2. The cabinet rack shall be made of mild sheet steel of at least 1.2 mm thick, complete with two layers of stoved enamel or one layer of epoxy powder paint, and coloured grey;

3. Provision of a front locking door for the rack is optional. However, it shall have a detachable back panel (or cover) to facilitate easy servicing. The back panel (or cover) shall be either fixed by screws or fitted with hinge and lock. Blank panels shall be provided to fill up gaps and spaces on the rack front;

4. It shall be complete with a blower fan unit to assure good ventilation;

5. Drawing of the cabinet rack and proposed equipment mounting layout shall be submitted for Approval prior to fabrication.

ELE25.3.090.8  CEILING SPEAKER

1. Ceiling mount speakers for the Public Address System shall be suitable for flush-mounting on false ceiling;

2. Input power rating of the ceiling mount speaker shall be at least 3W and equipped with matching transformer. The transformer shall be complete with at least 1 W, 2 W and 3 W tappings with insertion loss of not exceeding 1 dB;

3. The ceiling mount speaker shall have aluminium or metallic alumited punching grille and complete with a metal enclosure. The area of punching shall be not less than 10% of the total area of the metal grille;

4. If there is no false ceiling, surface type ceiling speaker shall be provided.

ELE25.3.100.8  HORN SPEAKER

Wide range horn speakers of outdoor type shall be provided for the Public Address System. Input power rating of the horn speaker is given in the Project Specific Specification and/or Drawings.

ELE25.3.110.8  COLUMN SPEAKER

1. Column speaker shall be of weatherproof type suitable for outdoor application for both fix mounting and portable PA Systems. Enclosure shall be made of non-rusting metallic material;

2. Input power rating of the column speaker is given in the Project Specific Specification and/or Drawings...
ELE25.4 INSTALLATION REQUIREMENTS

ELE25.4.010.8 GENERAL

Unless otherwise specified in this specification or on the Drawings, all signal cables shall be provided in concealed conduit wiring system. Speaker and microphone cables shall be installed in separate conduits. Voltage of control cables sharing the same conduit with microphone cables shall be d.c. 24V or lower. Microphone cables shall mean all microphone cables carrying line or lower level audio signals.

ELE25.4.020.8 MOUNTING OF CEILING SPEAKER

1. The ceiling speakers shall be linked to the BESA boxes at conduit outlets by flexible conduits (with PVC oversheath and dome covers);
2. The Sub-contractor shall provide mounting brackets and necessary mounting materials for the ceiling speakers;
3. Mounting of the ceiling speakers, including mounting brackets, shall be carried out by the Sub-contractor;
4. Cutting of openings on the false ceiling for the speakers will be carried out by the Main Contractor, however information of which shall be provided by the Sub-contractor;
5. The tenderer shall enclose details of the installation method, together with complete information on exact dimensions of the ceiling speaker and mounting bracket, size of ceiling opening required, total mechanical loading of speaker including mounting bracket, etc. in his tender for consideration;
6. Proper connector, such as terminal block, shall be provided inside the speaker enclosure for the speaker cable to facilitate easy removal of the loudspeaker unit.

ELE25.4.030.8 MOUNTING OF REMOTE SIGNAL INPUT POINT (RSIP) CONNECTORS

If RSIP is required, the Cannon Socket for the RSIP of the Public Address System shall be flush mounted or a stainless steel plate. The plate shall be fixed inside a drip-proof stainless steel box complete with hinged cover and lock. The size of the box shall not be more than 180 x 180 x 100 (D) mm and it shall be fixed onto a BS 4662 box provided by others.

ELE25.4.040.8 AM-FM RADIO TUNER

The FM signal for the AM-FM Radio Tuner shall be obtained from the Communal Aerial Broadcast Distribution System socket outlet at the position as shown on the Drawings.
ELE25.5 TESTING, COMMISSIONING, ACCEPTANCE AND MAINTENANCE

ELE25.5.010.8 PERFORMANCE TEST, ADJUSTMENTS, COMMISSIONING AND ACCEPTANCE

The Sub-contractor shall carry out complete performance tests for all equipment and systems installed by him, make all necessary adjustments, commission the installations, and submit test reports, all to the satisfaction of the Contract Manager who may request the Sub-contractor to repeat all or some of the tests in the presence of his representatives before the installation is accepted. At the end of the maintenance period, the Sub-contractor shall repeat the tests to the satisfaction of the Contract Manager.

ELE25.5.020.8 ELECTRICAL TEST

The electrical installation associated with the installation shall be tested to comply with latest edition of the Electrical CoP and I.E.E. Wiring Regulations.

ELE25.5.030.8 SCOPE OF WORK DURING MAINTENANCE PERIOD

The scope of work shall include:

1. To carry out all repairs necessary to maintain the Public Address System installation in good working order at all times;
2. To provide all transport, labour and materials, including cleaning materials, tools and all testing instruments required for the maintenance service;
3. To despatch competent and specially trained workmen to attend any requirement for an emergency inspection and repair within 24 hours of receiving the report of a fault;
4. To despatch competent and specially trained workmen once monthly during normal working hours i.e. 0800 hours to 1700 hours, to inspect, clean and when necessary, align, adjust and maintain the whole installation, and to sign a "Maintenance Record Book" in the way described as follows:
   a. On arrival at the estate, the workmen shall report to the Estate Office and sign a "Maintenance Record Book" which will be kept by the Officer-in-Charge of the estate. At the time of signing, they shall note any message written in the book concerning the performance of any parts of the Public Address System on the estate, and shall take such action as may be required. They shall inspect the installation on the estate at the time of this regular inspection and make any repairs, replacements or adjustments which may be required, irrespective of whether or not such repair or adjustment is noted in the book;
   b. When leaving the estate, the workmen shall report to the Officer-in-Charge and enter in the "Maintenance Record Book" a brief report on any repairs, replacements or adjustments which have been carried out or on the fact that they have found the system operating satisfactorily.
5. To provide half-yearly reports on the condition of the system. The report should include, but not be limited to, the number of calls attended, the number and types of system parts replaced;
6. 
a. To provide repairs and replacement parts at no additional cost to the Authority such as mechanical, electrical and electronic parts of the installation which the Contract Manager or the Sub-contractor in his judgement may consider necessary for the correct operation of the installation. Provided always that any renewals or repairs necessitated by reason of negligence or misuse of the equipment or by reason of any other cause beyond the Sub-contractor's control, with the exception of ordinary wear and tear, shall be carried out by the Sub-contractor if so required by the Contract Manager at an additional cost to be negotiated by both parties;

b. Replacements shall be obtained from the manufacturer's spare parts list. Alternative components shall not be used without prior Approval by the Contract Manager;

c. Should the Sub-contractor find it necessary to remove any system parts to his workshop for repair, the Sub-contractor shall install at the time of removal replacement parts of the equipment during the period of repair, free of cost to the Contract Manager.

ELE26.1 SCOPE OF WORK

ELE26.1.010.A PROVISION OF CARPARK CONTROL AND MANAGEMENT FACILITIES

The Sub-contractor shall provide the following carpark control and management facilities as shown on the Drawings:

1. Automatic Carpark Control System (ACCS) and revenue collection provision;
2. ______ nos. of short range or long range proximity cards and ______ nos. of blank magnetic stripe paper tickets;
3. Vehicle Image and Licence Plate Recognition System (VLRS);
4. Intercom System;
5. Car counting system and "FULL" sign;
6. Carpark CCTV System at Entrance and Exit Control Points and at strategic locations in the car parking control area as shown on the Drawings;
7. Interfaces with the Octopus clearing system;
8. System Interfaces to exchange electronic data with a HA data hub server via broadband network with fixed IP (4G USB modem with fixed IP may be accepted subject to CM’s approval in case of unavailability of broadband network with fixed IP).

ELE26.1.020.8 ENTRANCE CONTROL POINTS

Unless otherwise specified, the Sub-contractor shall provide the following components at the entrance control point(s) at the car parking control areas as located on the Drawings:

1. Entrance Control Unit;
2. Floor-mounted drop gate barrier completed with automatic raising arm;
3. Underground presence and passage loop detectors;
4. Cameras and Floodlight for CCTV System and VLRS and accessories completed with weatherproof housings including mounting poles and brackets;
5. Vehicle's height detector with mounting pole and bracket;

ELE26.1.030.8 EXIT CONTROL POINTS

Unless otherwise specified, the Sub-contractor shall provide the following components at the exit control point(s) at the car parking control area(s) as located on the Drawings:

1. Exit Control Unit;
2. Floor-mounted drop gate barrier completed with automatic raising arm;
3. Underground presence and passage loop detectors;
4. Cameras and Floodlight for CCTV and VLRS and accessories completed with weatherproof housing including mounting pole and bracket.

ELE26.1.040.8 CARPARK CONTROL CENTRE

Unless otherwise specified, the Sub-contractor shall provide the following components at the carpark control centre as located on the Drawings:
1. ACCS Workstation;
2. Revenue collection provision;
3. VLRS Computer Unit;
4. Manual button for barrier control;
5. Master station of intercommunication system;
6. Equipment rack to keep CCTV system equipment and digital video recorders.

**ELE26.1.050.8 WIRING CONNECTION**

The Sub-contractor shall provide all necessary cable wiring for data, communication and power connection between the entrance control point, the exit control point and the carpark control centre, at both above-ground and under-ground.

**ELE26.1.060.8 EXECUTION OF THE WORK**

1. The Sub-contractor shall verify to the satisfaction of the Contract Manager that they are licensed for carrying out type III security work under the Security and Guarding Services Ordinance Cap. 460 and are competent to complete the works, otherwise they shall employ competent sub-sub-contractor(s), who have the required licence, to carry out the works relating to security. For the latter case, the Sub-contractor shall submit the proposed sub-sub-contractors' relevant information related to the licence, technical capability, working experience on security system to the Contract Manager for approval. Whenever necessary, the Sub-contractor shall also submit documents and drawings for the completed projects to the Contract Manager for consideration. Inspection of the completed projects and visit of the proposed contractor's office and workshop may be conducted, if deemed necessary;

2. The Sub-contractor shall be an Octopus authorized contractor, or otherwise employ an Octopus authorized contractor as its sub-sub-contractor to provide the ACCS. All system hardware and software related to the Octopus clearing system shall be approved by the Octopus Cards Limited. The Sub-contractor shall provide copies of approval certificates to the Contract Manager for vetting;

3. The Sub-contractor or its sub-sub-contractor for the ACCS shall have at least five carpark systems satisfactorily completed for more than 6 months, in the past three years;

4. For Sub-contract of the latter phase of a housing estate, the Sub-contractor shall ensure the ACCS and VLRS to match with the ACCS and VLRS of the earlier completion phases in the same estate.

ELE26.2  SYSTEM DESCRIPTION

ELE26.2.010.8  AUTOMATIC CARPARK CONTROL SYSTEM

1. The Automatic Carpark Control System (ACCS) shall include the following components:-
   a. Entrance Control Unit(s);
   b. Exit Control Unit(s);
   c. ACCS Workstation;
   d. Revenue collection facilities;
   e. Automatic drop gate barriers;
   f. Loop detectors;
   g. Height detectors;
   h. All necessary wiring and accessories.

2. The ACCS shall be able to handle the following types of parking modes:
   a. Hourly or Concessionary Parking - operated by Octopus cards, or during the suspension of Octopus Card System, by magnetic stripe paper tickets;
   b. Season/Monthly Parking - operated by proximity cards;
   c. Complimentary Parking - operated by either magnetic strip paper tickets or manual control.

3. The ACCS shall be of fully automatic type. Under normal operation, no operator is required. Only in the suspension of the Octopus Card System, an operator at the ACCS Workstation is required to handle the cashier work. The magnetic stripe paper ticket dispenser at the Entrance Control Unit shall be disabled if Octopus Card System works properly;

4. The ACCS shall possess an anti-passback function for all season/monthly proximity cards. When any proximity card has been accepted by an Entrance Control Unit, the card cannot be re-used again at any Entrance Control Unit of the ACCS until the card has been accepted by an Exit Control Unit of the ACCS. Same principle shall be applied to the Exit Control Unit.

ELE26.2.020.8  VEHICLE IMAGE AND LICENCE PLATE RECOGNITION SYSTEM

1. The Vehicle Image and Licence Plate Recognition System (VLRS) shall capture and store the image of incoming and outgoing vehicles and automatically detect, recognize and verify alphabetical and numerical characters on images of vehicle licence plates taken by infrared cameras at low level at entrance/exit control points. The system shall be able to recognise all kinds of vehicle licence plate formats issued by local authority;

2. The VLRS shall comprise all necessary equipment including infrared cameras with weatherproof housings, VLRS computer, LCD colour monitor (19" or above) and well developed software for the system to perform to the Contract Manager's satisfaction. The overall accuracy of the licence plate recognition shall be up to 95% at any time. Cameras shall be provided at all entrance and exit control points;
3. When vehicles of Octopus Card/Magnetic Stripe paper ticket users enter the carpark, the infrared cameras at entrance control point shall take images of the incoming vehicles and their licence plates. The VLRS computer shall store and link up the data with the respective Octopus Cards/Magnetic Stripe paper tickets. The infrared cameras at the exit control point shall also take images of the leaving vehicles and their license plates. The VLRS shall compare and verify whether a licence plate taken at exit has been recorded at entrance with respect to the respective Octopus Card prior to automatically raising up the exit barrier arm. If the verification process fails, an alarm shall be initiated at the carpark control centre to alert the operator;

4. When vehicles of proximity card users enter the carpark, the infrared cameras at entrance control point shall take images of the incoming vehicles and their license plates. The VLRS shall compare them with the stored data of a pre-defined list of authorized vehicles and verify their validity prior to automatically raising up the entrance barrier arm. When vehicles of proximity card users exit the carpark, the infrared camera at exit control point and the VLRS computer shall do the same. Once the verification process fails, an alarm shall be initiated at the carpark control centre to alert the operator;

5. The VLRS can be by-passed, disabled or isolated completely from the ACCS inside carpark control centre by simple means whenever required at any time.

ELE26.2.030.8 OPERATION AT ENTRANCE CONTROL POINT

1. Three types of incoming vehicles – vehicles with height below 2 m, vehicles with height 2 m or above and motorcycle shall be identified by presence detection loop and height sensors and then the ACCS Workstation automatically decide on which rate to be charged according to the pre-set fee structure;

2. For season and monthly parking, when a proximity card is detected, the card information shall be transferred to the ACCS Workstation for checking and the VLRS shall activate illumination and take image of the front car licence plate from the infrared camera and image read shall be compared with the pre-defined vehicle number. Another built-in CCTV camera inside Entrance Control Unit shall take image of the driver and image read shall be stored in the VLRS computer. If the car licence plate number is verified, the barrier arm will be raised. The barrier arm shall be lowered automatically after the vehicle has passed the passage detection loop;

3. For hourly parking, when an Octopus Card is detected or a magnetic stripe paper ticket is drawn, the type of vehicle and the Card information shall be transferred to the ACCS Workstation and the VLRS shall activate illumination and takes image of the front car licence plate from the infrared camera and image read shall be stored in the VLRS Workstation. Another built-in CCTV camera inside Entrance Control Unit shall take image of the driver and image read shall be stored in the VLRS computer. The LCD display panel in the Entrance Control Unit shall display the information such as time and date of entry and remaining money value of Octopus Card. An automatic cutting-off thermal printer shall issue ticket indicating the date and time of entry to the hourly parker if a request button is being pressed. The barrier arm shall be raised and then lowered automatically after the vehicle has passed the passage detection loop;

4. The function of the magnetic stripe paper ticket dispenser shall be disabled when the Octopus card system is in operation;

5. When any data or information found invalid, the reason of invalidity shall be shown on the LCD monitor at the ACCS Workstation. An alarm signal shall pass to the ACCS Workstation to arouse the operator's attention. The barrier shall not be activated. The reader shall be set to receive another card.
ELE26.2.040.8  OPERATION AT EXIT CONTROL POINT

1. The presence of a leaving vehicle is detected by the presence detection loop;

2. For season and monthly parking, when a season/monthly proximity card is detected, the card information shall be transferred to the ACCS Workstation for checking and the VLRS shall activate illumination and take image of the front car licence plate from the infrared camera and image read shall be compared with the pre-defined vehicle number. Another built-in CCTV camera inside Exit Control Unit shall also take image of the driver and image read can be compared with the pre-stored image in the VLRS computer. If the car licence plate number is verified, the barrier arm will be raised. The barrier arm shall be lowered automatically after the vehicle has passed the passage detection loop;

3. For hourly parking, when an Octopus Card/magnetic stripe paper ticket is detected, the card information shall be transferred to the ACCS Workstation and the corresponding vehicle licence plate number taken by the VLRS shall be retrieved and compared. Another built-in CCTV camera inside Exit Control Unit shall also take image of the driver and image read can be compared with the pre-stored image in the VLRS computer. If the car licence plate number is verified, appropriate amount shall be deducted from the Card as hourly parking fees. The LCD display panel in the Exit Control Unit shall display the information such as time and date of exit and the remaining money value of Octopus Card and parking fee paid and an automatic cutting-off thermal printer shall issue ticket indicating the date and time of exit and the parking fee paid to the hourly parker if a request button is pressed. The barrier shall be raised and then lowered automatically after the vehicle has passed the passage detection loop;

4. When any date or information found invalid, the reason of invalidity shall be shown on the LCD monitor at the ACCS Workstation. An alarm signal shall pass to the ACCS Workstation to arouse the operator's attention. The barrier shall not be activated. The reader shall be set to receive another card.

ELE26.2.050.A  ACCS WORKSTATION AND REVENUE COLLECTION PROVISION

1. The ACCS Workstation and revenue collection provision shall include the following:
   a. Central data station/cashier computer completed with a fully developed carpark management software and central database;
   b. LCD colour monitor (19” or above);
   c. Uninterrupted power supply unit (UPS) - for a back-up period of not less than 15 minutes for the computers for ACCS, VLRS and Octopus;
   d. Magnetic stripe paper ticket coding and printing device;
   e. Octopus Card reader/validator;
   f. Clearing institution (Octopus) communication interface;
   g. Data point for broadband connection with fixed IP (4G USB modem with fixed IP may be accepted subject to CM’s approval in case of unavailability of broadband network with fixed IP);
   h. Cash drawer;
   i. Fee indicator;
   j. Receipt printer;
   k. Report printer.

2. The ACCS Workstation shall be capable of handling the following activities:
a. Processing of hourly parking and concessionary parking for transient parkers using Octopus Card/Magnetic Stripe paper ticket;
b. Processing of Season/Monthly parking for long term parkers using Proximity Card;
c. Processing of complimentary parking for special parkers using Magnetic Stripe paper ticket;
d. Automatic fee calculation;
e. Record of malfunctions of equipment and every transaction;
f. Daily accounting record and statistics;
g. Information on parking spaces;
h. Instant cash audit function;
i. Instant proximity card/magnetic stripe ticket checking;
j. Anti-pass-back control;
k. Independent control of the barriers;
l. Activation of the "FULL" sign;
m. Automatic printout and alarm message in case of faulty operation.

3. The ACCS Workstation shall link up with the VLRS and all other components to monitor and proceed with the operations of the ACCS through an Ethernet network. It shall provide overall control of car parking activities, identification of possible reconciliation discrepancies from clearing institution and data collected, and comprehensive and efficient financial and statistical report generation;

4. The ACCS Workstation shall be able to allow reading, checking, debiting and archiving against usage of Octopus Cards, and process the access/exit requests at the Carpark and store the transaction information in the central database;

5. The ACCS Workstation shall be so designed as to permit season/monthly proximity cards to be issued with simple operation of command code on the terminal keyboard. The proximity card shall be coded from the machine terminal that the parkers are free to enter and exit the carpark for a defined period of time, and the system shall be able to examine the validity of the ticket at the entrance and exit reader;

6. The ACCS Workstation and the management software shall be able to handle several transactions in parallel and simultaneously;

7. The ACCS Workstation shall be able to monitor not less than six kinds of alterable fee rates with respect to different kinds of vehicles and settings of grace periods. Different fee structures shall be preset and altered at the control keyboard and be viewable at the LCD monitor;

8. Monthly carpark user can make payment in the carpark shroff office by cash (or future pay collection system e.g. paywave);

9. Hourly carpark user can make payment simply by Octopus (or future pay collection system e.g. paywave) at the egress or in the carpark shroff office by cash in case of magnetic stripe paper tickets;

10. To enable payment for hourly carpark user to leave the carpark when shroff office is closed after office hour (for carpark at grade with 150 parking spaces or less), revenue collection provision is provided at the estate control room;

11. During ACCS breakdown, device shall be provided for keying in the Octopus cards number to the ACCS system or allow the use of the card reader device to retrieve hourly carpark user the entering time to carpark in collection of revenue prior to the system resume normal.
**ELE26.2.060.8 CAR COUNTING SYSTEM**

Vehicles entering and leaving the carpark shall be counted in order to determine when it is full. The number of season/monthly proximity cards should be automatically deducted from the total number of available spaces in the carpark. Season/monthly proximity card holders entering or leaving the carpark will be counted under a separate category which will not affect the total car parking bays assigned to hourly parkers. When the spaces available for hourly parking are full, the carpark "FULL" Sign Box in English and Chinese characters at the carpark entrance lane and a "FULL" message at the LCD of Entrance Control Unit shall illuminate. The Entrance Control Unit shall not allow any entry of hourly parking vehicle. Management software shall be able to set tolerance to the total number of available spaces for hourly parking in the carpark in order to allow the entry of Taxi/Drop-off vehicles without charges within an adjustable period of time.

**ELE26.2.070.8 INTERCOM SYSTEM**

1. The intercom system shall comprise master station(s) located at the carpark control centre and a slave station at each of the Entrance Control Unit(s) and the Exit Control Unit(s) respectively;

2. The master station shall be designed for desk-top mounting and shall be capable of communicating with any one of the connected slave stations. Direct communication between the slave stations is not required;

3. To initiate a call at the master station, the operator shall press the slave selection button on the master station once. The respective slave station indicator shall light up automatically. When the "CALL" button at the master station is pressed a high note call alarm shall be heard at the selected slave station and communication between the operator at the master station and the visitor/parker at the slave station can be made via the corresponding microphone and loudspeaker unit. On completion of the call, the system shall be reset by pressing the selected slave station selection button again;

4. When the master station is being called by a slave station, the buzzer alarm at the master station shall sound and the corresponding slave station indication light shall flash and the operator can answer the call by pressing the slave selection button;

5. The master station shall be so designed that it can communicate with only one slave station at a time. When the master station is engaged with one slave station, call from other slave station shall cause the corresponding slave station indication light to flash only without activating the buzzer alarm. The operator shall follow the same procedure as described above in answering the waiting calls.

**ELE26.2.080.8 CARPARK CCTV SYSTEM**

1. The carpark CCTV system shall be provided at the entrance and exit control points for monitoring and recording the traffic condition and over the car-parking area for carpark surveillance. It comprises the following equipment:
   a. 1 no. camera (colour) each at every entrance control point and every exit control point at middle level;
   b. cameras (colour) at strategic locations over the car-parking area as shown on Drawings;
   c. 19" LCD colour monitors as mentioned in ELE24.2.2; and
   d. 16-channel colour Digital Video Recorders (DVR) as mentioned in ELE24.2.4.
2. The Sub-contractor shall install LCD monitors on the working bench and DVRs inside a lockable equipment rack at the carpark control centre for the completion of the System;

3. For open carpark, the Sub-contractor shall supply and install CCTV cameras of fixed type encased in weatherproof housings suitable for outdoor use, cables and wirings and all necessary auxiliary devices and equipment in order to complete the system. The Sub-contractor shall supply and install all necessary mounting poles and devices for mounting of CCTV cameras and accessories. Depending on the site condition, the CCTV cameras over the open carpark can be mounted on the lamp poles of the landscape lightings;

4. The traffic condition at the entrance and exit control points and the parking condition over the car parking area can be monitored through the LCD monitors and recorded by the DVRs;

   Easy reading from recorded CCTV system as a proof to indicate the entering time of the hourly carpark user in case the ACCS is in total failure for the purpose of revenue collection prior to the system resume normal.

5. A proper signage shall be affixed on a prominent location to notify the public about the installation of CCTV system at the entrance control point(s);

6. The CCTV system including CCTV cameras, LCD monitors and DVRs for ACCS shall be an independent set of system separated from the CCTV system for carparking area for carpark surveillance.

**ELE26.2.090.A**

**INTERFACING REQUIREMENTS WITH OCTOPUS CLEARING SYSTEM**

1. In case due connection to the HA data hub server as mentioned in ELE26.2.100 is not available at the time of handover, the Sub-contractor shall design and provide a system software for interfacing and exchanging electronic data with the Octopus Clearing System until the interfacing works mentioned in ELE26.2.100 is satisfactorily completed within the Maintenance Period. These electronic data include:

   a. Octopus Full/Interim Blacklist File (in Octopus proprietary format) from Octopus Clearing System for the ACCS to validate the Octopus card used;

   b. Octopus Data Exchange File(s) (in Octopus proprietary format) of the hourly income collected through Octopus devices.

2. The Sub-contractor shall be responsible for liaising with Octopus for the proper implementation of the interfaces, including the interface channel, frequency etc..

**ELE26.2.100.A**

**INTERFACING REQUIREMENTS WITH HA DATA HUB SERVER**

1. The ACCS shall be automated with system interfaces to exchange electronic data with a HA's data hub server via broadband network with fixed IP (4G USB modem with fixed IP may be accepted subject to CM’s approval in case of unavailability of broadband network with fixed IP). The Sub-contractor is responsible for implementing the processes to perform the following system interfaces between ACCS and the data hub server:

   a. Getting licensee information (in ASCII format) from the data hub server to control the entry and exit of season / monthly parking licensees at the carpark.

      The process is to get an interface file from the data hub server daily and import it into the ACCS for updating the monthly parking licensees authorized to facilitate proximity card validation. The licensee information from the data hub server includes:

      i. Carpark stock identifier;
ii. Vehicle number;
iii. Licence identifier;
iv. Valid period from;
v. Valid period to.

b. Getting carpark information (in ASCII format) from the data hub server to update the number of carpark spaces allowed for parking on each parking space type.

The process is to get an interface file from the data hub server daily and import it into the ACCS for updating parking space information. The output file will be provided by change trigger mechanism. The parking space information from the data hub server includes:

i. Carpark stock identifier;
ii. Type of parking space;
iii. Number of parking spaces for monthly letting;
iv. Number of parking spaces for hourly parking;
v. Number of parking spaces for HD's self use;
vi. Number of parking spaces for other use;
vii. Effective date.

c. Providing information (in ASCII format) of the total income collected through Octopus for reporting to HA, and sending it to the data hub server.

The process is to produce and send an interface file to the data hub server daily for reporting the total hourly income collected through Octopus. The total hourly income information to be sent to the data hub server includes:

i. Carpark stock identifier;
ii. Octopus card device identifier;
iii. Transaction date and time;
iv. Total hourly income amount collected through Octopus.

d. Providing information (in ASCII format) of the detailed transactions for reporting to HA, and sending it to the data hub server.

The process is to produce and send an interface file to the data hub server daily for reporting the detailed transactions. The information to be sent to the data hub server includes:

i. Carpark stock name;
ii. Transaction reference (ACCS reference);
iii. Transaction type;
iv. Vehicle number;
v. Type of vehicle;
vi. Carpark entry method;
vii. Transaction start date and time;
viii. Entry gate (device) ID;
ix. Transaction end date and time;
x. Exit gate (device) ID;

xi. Parking charge amount;

xii. Free parking start date and time;

xiii. Free parking end date and time;

xiv. Free parking amount;

xv. Amount collected;

xvi. Payment method;

xvii. Octopus card identification number;

xviii. Smartcard identification number (if applicable).

e. Providing statistical information (in ASCII format) for management reporting to HA, and sending it to the data hub server.

The process is to produce and send an interface file to the data hub server monthly for management reporting. The information to be sent to the data hub server includes:

i. Carpark stock name;

ii. Records of hourly parking:
   - Number of day passes sold;
   - Amount of revenue collected for the sale of day passes;
   - Number of other hourly parking tickets sold;
   - Amount of revenue collected for the sale of other hourly parking tickets;
   - Number of tickets issued for free parking;
   - Amount of revenue waived for the free parking tickets issued.

iii. Records of redemption of discount parking coupons:
   - Number of hourly parking coupons sold;
   - Number of hourly parking coupons redeemed;
   - Amount of discount for reimbursement.

iv. Records of monthly tickets sold:
   - Number of reserved monthly tickets sold;
   - Amount of revenue collected for the sale of reserved monthly tickets;
   - Number of floating monthly tickets sold;
   - Amount of revenue collected for the sale of floating monthly tickets.

v. Records of concessionary parking for disabled persons:
   - Number of concessionary hourly tickets sold;
   - Amount of revenue collected for the sale of concessionary hourly tickets;
   - Number of concessionary monthly tickets sold;
   - Amount of revenue received for the sale of concessionary monthly tickets.
vi. Records of letting of part-time parking:
   - Number of part-time parking monthly tickets sold;
   - Amount of revenue collected for the sale of part-time parking monthly tickets.

vii. Records of granting free parking for special vehicles (e.g. rehabilitation bus):
   - Number of tickets issued to special vehicles for free parking;
   - Number of hours waived due to free parking by special vehicles;
   - Amount of revenue waived due to free parking by special vehicles.

viii. Records of granting privileged parking:
   - Number of privileged parking tickets issued;
   - Number of hours waived for privileged parking tickets issued;
   - Amount of revenue waived for privileged parking tickets issued.

ix. Records of impounding, towing, storage charges, auction and others:
   - Number of charging cases for impounding, towing, storage charges, auction and others;
   - Amount of revenue collected for these charging cases.

x. Number of parking spaces reserved for disabled persons (as at month-end position);

xi. Obtaining waivers for letting to non-residents (for carparks in SSF courts only) [An indicator shows "Yes" or "No"]

xii. Records of monthly parking charging rates (if any):
   - Monthly rate for full-time reserved covered parking space for private car;
   - Monthly rate for full-time floating covered parking space for private car;
   - Monthly rate for full-time reserved open parking space for private car;
   - Monthly rate for full-time floating open parking space for private car.

xiii. Records of hourly parking charging rates (if any):
   - Hourly normal rate for private car;
   - Abolition of hourly reduced rate for private car [An indicator shows "Yes" or "No"];
   - Hourly reduced rate for private car;
   - Abolition of day-pass reduced rate for private car [An indicator shows "Yes" or "No"];
   - Day-pass rate for private car;
   - Adoption of hourly ascending scale for private car [An indicator shows "Yes" or "No"];
   - Hourly rate under ascending scale for private car;
   - Hourly rate for motor-cycle;
- Hourly rate for light goods vehicle;
- Abolition of hourly double charge rate for light goods vehicle [An indicator shows "Yes" or "No"];
- Hourly double charge rate for light goods vehicle;
- Abolition of hourly reduced rate for light goods vehicle [An indicator shows "Yes" or "No"];
- Hourly reduced rate for light goods vehicle.

f. Providing the Octopus Data Exchange File(s) (in Octopus proprietary format) of the hourly income collected through Octopus devices to the data hub server, for central submission to the Octopus Clearing System by the HA.

The process is to send all transaction file(s) collected daily on the Octopus Card device(s) to the data hub server;

g. Getting the Octopus Full Blacklist File / Interim Blacklist File (in Octopus proprietary format) from the data hub server for updating the Octopus Card devices.

The HA will get the Octopus Full Blacklist File / Interim Blacklist File from the Octopus Clearing System. The process is to get interface file(s) from the data hub server and update the Octopus Card devices.

2. The Sub-contractor shall develop all programs and / or scripts in ACCS to perform the system interface processes and automate these processes such that the interfaces can be performed with minimum human operation. The automation shall include:

a. To generate the file to the data hub server;

b. To connect to the data hub server by broadband network / 4G USB modem;

c. To provide Secure File Transfer Protocol (SFTP) username and password for authentication;

d. To make SFTP file transfer request to the data hub server to send / get the files as binary data;

e. To disconnect the SFTP session;

f. To import the file from the data hub server to update ACCS;

g. To log the progress of the automated processes during execution, and save the log in ACCS;

h. To display message in ACCS to show the result of the processes after execution.

3. The system interfaces shall be performed using web services through broadband network with fixed IP (4G USB modem with fixed IP may be accepted subject to CM’s approval in case of unavailability of broadband network with fixed IP);

4. The system interface processes shall be automated to run daily at regular timeslot. When required, ad-hoc execution of the automated processes shall be allowed;

5. The system interface files and the logs from the executed processes shall be kept in the ACCS for an adjustable period up to three months;

6. The Sub-contractor shall provide the user guide for operating and administering the system interfaces. The user guide shall include but not limited to:

a. How to set the daily schedule of the automated processes for regular execution;

b. How to launch the automated processes manually for ad-hoc execution;

c. How to inspect the result of the automated processes after execution;
d. The exception handling procedures when the execution of any automated process failed which include the reporting channel(s) for the failure, the steps to manually dispatch and receive the electronic data with alternative means (e.g. flash static memory, DVD-R, e-mail attachment, etc.) in case broadband network / 4G USB modem connection to the data hub server cannot be established, the steps to manually perform the failed system interface process, etc.;

e. How to change the system interface parameters, such as the login username and password, the carpark stock identifier, the destination broadband network / 4G USB modem connection to the data hub server, etc.

7. The Sub-contractor is responsible for liaising with and providing assistance to HA staff for implementation of the system interfaces. The implementation will consist of the following tasks:

a. To set up broadband network / 4G USB modem connection;

b. To develop SFTP requests from ACCS;

c. To develop programs and / or scripts in ACCS to automate the system interface processes;

d. To prepare user guide for operating and administering the system interfaces;

e. To participate in the acceptance testing of the system interfaces to prove that all automated system interface processes work properly, information to / from the data hub server is correct, and information from the data hub server is properly updated in ACCS;

f. To provide proper training for the operation and administration of the system interfaces to the operators.

**DATA REQUIREMENTS FOR ACCS**

The Sub-contractor shall maintain a set of database for the ACCS comprising the following:

1. Carpark geographical zone - It shall maintain the geographical zone and the charging rate that the Carpark locate;

2. Carpark time table - It shall maintain the operating hours of the Carpark which specifies the opening time and closing time of the Carpark. It shall support the complicated charging scheme such as "Day parking" and "Night parking";

3. Carpark quota table - It shall maintain the quota of parking spaces available in the Carpark for controlling the entry of hourly parking;

4. Carpark charging rate table - It shall maintain the various charging rates of the Carpark. It is applicable to monthly parking spaces, hourly parking spaces and other miscellaneous income, such as Towing fee, impounding charge, etc.;

5. Carpark payment method - It shall maintain the payment methods that supported by the Carpark, e.g. Octopus, cash, free parking coupon, etc. Methods currently in use shall be allowed to change easily and new methods can be added;

6. Carpark entry method - It shall maintain the entry methods supported by the Carpark. The proposed methods include proximity card (for season/monthly parking) and Octopus Card/ Magnetic Stripe Paper Ticket (for hourly parking). Methods currently in use should be allowed to change easily and new methods can be added;

7. Carpark facility - It shall maintain the facilities provided by the Carpark. The information shall include:
a. Type of parking space;
b. Number of parking spaces for monthly letting;
c. Number of parking spaces for hourly parking;
d. Number of parking spaces for HD's self use;
e. Number of parking spaces for other use.

8. Detailed parking transaction - It stores all the detailed information regarding the entry, exit and revenue collected from the vehicle. Relevant data should include:
   a. Carpark stock identifier;
   b. Vehicle number;
   c. Type of vehicle;
   d. Carpark entry method;
   e. Transaction reference (ACCS reference);
   f. Parking charge amount;
   g. Transaction start date and time;
   h. Entry gate (device) ID;
   i. Transaction end date and time;
   j. Exit gate (device) ID;
   k. Free parking amount;
   l. Free parking start time and end time;
   m. Payment method;
   n. Other relevant information (e.g. the octopus card identification, Smartcard/Licence identifier, etc. if any);
   o. Payment period start time and end time (for monthly parking).

9. Customer (licensee) - It shall store all personal information of a licensee who registers in ACCS for monthly parking; Personal information shall include but not limited to Carpark stock identifier, Vehicle number, Smartcard/Licence identifier, Valid period from, Valid period to, Driver name, contact number, Vehicle types, Parking charges, Image of vehicle, Image of driver and etc.;

10. Customer car information - It shall maintain the information of customer car.
ELE26.3 MATERIALS AND EQUIPMENT

ELE26.3.010.A GENERAL

1. The system installations shall be suitable for use under Hong Kong climatic condition with relative humidity and ambient temperature as shown below:
   a. Relative Humidity : up to 0.99 saturation;
   b. Ambient Temperature : peak from minus 5°C to plus 40°C for 4 hours continuously with an average from 0°C to plus 35°C over 24 hours period.

2. All equipment provided shall be compatible with the system installation;

3. All equipment shall be entirely suitable for use in the intended locations. The material finishes and construction of the equipment shall be such that it can withstand the possibility of vandalism, tampering and impact from vehicles;

4. Unless otherwise Approved, all cabinets exposed to weather shall be corrosion-resistant, constructed of not less than 1.5 mm thick grade 304 stainless steel or better, or heavy gauge aluminium alloy with epoxy coating, or equivalent;

5. Alternative design proposal for various items of equipment hereinafter specified will be considered but subject to the submission of detailed technical information enclosed in the tender;

6. All carpark control equipment shall have not less than one year proven reliability and in-service record established in local application, and evidence shall be produced to the satisfaction of the Contract Manager upon request;

7. Unless otherwise Approved, the specification for CCTV video camera, LCD video monitor, video distribution amplifier, digital video recorder, cables, equipment rack, etc. shall be referred to ELE24.2 and the specification for UPS equipment (except the manual bypass switch which is not required for ACCS) and battery shall be referred to ELE24.2.15.020 and ELE24.2.15.030.

ELE26.3.020.B CENTRAL DATA STATION/CASHIER COMPUTER

1. The central data/cashier computer shall comprise a main computing unit of sufficient processing speed to suit the intended purpose, a DVD-RW, a colour LCD monitor (19" or above) with built-in speakers, a mouse and a keyboard;

2. The central data/cashier computer shall contain duplex hard-disks of equal capacity of no less than 2 TB arranged in RAID 1 (mirroring) for data storage so that failure of any one hard-disk can be replaced by a new one without any permanent loss of data. History of financial transactions for two years shall be kept and easily be retrieved. Provision shall be incorporated in the system for short and long term data storage such that the archived data can be analyzed to produce results and reports on carpark occupancy, parking frequency, malfunctions etc.;

3. The central data/cashier computer shall be completed with a fully developed carpark management software and central database;

4. The central data/cashier computer shall operate under a platform of Windows 10 or the latest version of Windows or other operating system subject to the Contract Manager’s approval;

5. The central data/cashier computer shall be ready for broadband network / 4G USB modem connection;
6. The central data/cashier computer shall be backed up by UPS for a duration of not less than 15 minutes to prevent data loss in the event of power failure;

7. All softwares included shall be in free or full user licenses with no expiry date. Full set of system recovery diskettes, back up diskettes for the softwares shall be provided.

ELE26.3.030. A VLRS COMPUTER

1. The VLRS computer shall comprise a main computing unit of sufficient processing speed to suit the intended purpose, a hard-disk of no less than 2 TB, a DVD-RW, a colour LCD monitor (19” or above) with built-in speakers, a mouse and a keyboard;

2. The VLRS computer shall contain high speed photo image processing and capture card with frame grabber function and be completed with a fully developed vehicle licence plate recognition software;

3. The image recognition speed shall be within 0.5 second and the optical character recognition (OCR) accuracy shall be at least 95% at anytime;

4. The VLRS computer shall operate under a platform of Windows 10 or the latest version of Windows or other operating system subject to the Contact Manager's approval;

5. The VLRS computer shall be able to recognise licence plates from black and white images taken by the infrared cameras and to record high resolution colour images taken by the CCTV cameras for manual functions;

6. The VLRS computer shall be backed up by UPS for a duration of not less than 15 minutes to prevent data loss in the event of power failure;

7. All softwares included shall be in free or full user licenses with no expiry date. Full set of system recovery diskettes, back up diskettes for the softwares shall be provided.

ELE26.3.040.8 ENTRANCE CONTROL UNIT

Entrance Control Unit shall be completed with a factory manufactured floor-mounted weatherproof stainless steel enclosure and as indicated on Drawings, comprise the following components:

1. A short range or long range proximity card reader shall be provided as specified in the Project Specific Specification for season/monthly parking. The installation details of proximity card reader shall be as follows:-
   a. Short range proximity card reader – installed at not less than 900mm and not greater than 1,150mm above ground level;
   b. Long range proximity card reader – completed with mounting pole and bracket installed at 2 meters (subject to site condition) above ground level.

2. An Octopus card reader installed at not less than 900 mm or greater than 1,150 mm for hourly parking;

3. A magnetic stripe paper ticket dispenser with button labelled "Press Button for Hourly Ticket" in both English and Chinese characters installed at not less than 900 mm or greater than 1,150 mm for hourly parking covered with a proper blank-off plate in case the ticket dispenser is not in use;

4. A slave station of the intercom system;

5. A backlit LCD colour visual instruction display panel;
6. An automatic cutting-off thermal printer for issuing receipts showing date and time of entry at the Octopus card reader and a button labelled "Press Button for Receipt" in both English and Chinese characters near the printer;

7. A built-in CCTV camera installed at not less than 900 mm or greater than 1,150 mm above ground level for capturing image of driver;

8. Allow for future addition of fee collection system e.g. paywave.

ELE26.3

EXIT CONTROL UNIT

Exit Control Unit shall be completed with a factory manufactured floor-mounted weatherproof stainless steel enclosure and as indicated on Drawings, comprise the following components:

1. A short range or long range proximity Card Reader shall be provided as specified in the Project Specific Specification for season/monthly parking. The installation details of proximity card reader shall be as follows:-

   a. Short range proximity card reader – installed at not less than 900mm and not greater than 1,150mm above ground level;

   b. Long range proximity card reader – completed with mounting pole and bracket installed at 2 meters (subject to site condition) above ground level.

2. An Octopus Card Reader installed at not less than 900 mm or greater than 1,150 mm for hourly parking;

3. A magnetic stripe paper ticket validator installed at not less than 900 mm or greater than 1,150 mm for hourly parking;

4. A slave station of the intercom system;

5. A backlit LCD colour visual instruction display panel;

6. An automatic cutting-off thermal printer for issuing Octopus payment receipts showing parking fee paid and date and time of exit at the Octopus card reader and a button labelled "Press Button for Receipt" in both English and Chinese characters near the printer;

7. A built-in CCTV camera installed at not less than 900 mm or greater than 1,150 mm above ground level for capturing image of driver;

8. Allow for future addition of fee collection system e.g. paywave.

ELE26.3.060.8

AUTOMATIC DROP GATE BARRIER

1. Automatic drop gate barrier shall be of straight rising arm type. Articulated arm shall be accepted if the headroom of the covered entrance/exit is not enough to allow the arm from 90 degree movement;

2. The arm shall be made from an Approved weather resistant material suitably treated to prevent corrosion. It shall be sufficiently strong to withstand vandalism. It shall be so fabricated that it will shear off under impact by a vehicle in order to minimize damage to the arm and prevent damage caused to the mechanism and the cabinet;

3. The arm when at low position shall be of a length not less than 3.5 m or the corresponding width of the drive way whichever is the shorter. The clearance from the drive way finished level to the top of arm when the barrier is raised shall be adjusted to suit the site condition;

4. When the barrier is at low position, the clearance between the bottom of the barrier and the drive way finished level shall be not less than 800 mm or greater than 1200 mm;
5. On receipt of a open signal from a card reader or ticket dispenser the barrier arm shall be raised and shall then be lowered on receipt of a closing signal from the passage loop detector. The barrier shall be raised again upon receiving another signal from a reader or dispenser;

6. Provision shall be made to enable the barrier to be manually operated (i) by holding down a Manual Control Barrier Button at carpark control centre, and (ii) by turning off the key switches at the corresponding Entrance/Exit control units in case of emergency;

7. The barrier shall have a "store vend" function which allows its barrier arm to reverse its downward motion immediately when a following vehicle has been accepted by an entrance control unit or an exit control unit.

ELE26.3.070 LOOP DETECTOR

1. Loop detector shall be inductive detection type suitable for placing in a slot cut on the drive way. The cables shall be waterproof and the slots shall be sealed with epoxy or an Approved sealant;

2. Loop detectors shall be installed as either presence detection loop or passing detection loop;

3. A presence detection loop shall pass an electric signal to the system when a vehicle is detected passing over it or stopped on it. The detector(s) at the entrance shall be capable of detecting any back-out vehicle;

4. A passing detection loop shall pass an electric signal to the system when a vehicle has passed over it. No electric signal shall be induced when a vehicle stops on it;

5. The loop detector provided shall be capable of detecting the presence and passing of three type of vehicles – vehicles with height below 2 m, vehicles with height 2 m or above and motorcycle;

6. Preventive measures of Electromagnetic Interference for detection loop shall be provided where applicable;

7. When no vehicle is detected passing over the loop detector within 30 seconds subsequent to the raising of a barrier arm, a signal shall pass to the ACCS Workstation to arouse operator's attention.

ELE26.3.080 HEIGHT DETECTOR

Height detector shall be weatherproof and of infrared type and used to detect the height of a vehicle stopping on the loop detector so as to differentiate different types of vehicles in order to determine automatically various fee rates for hourly parking and to facilitate car counting.

ELE26.3.090 PROXIMITY CARD

1. When short range proximity card for season/monthly parking is specified in the Project Specific Specification, the short range proximity card shall be made of durable plastic with size to ISO/IEC7810 ID-1. The card shall be a type commonly used in the automatic carpark control system. The reading range shall be not less than 5cm;
2. When long range proximity card for season/monthly parking is specified in the Project Specific Specification, the long range proximity card shall be made of durable plastic with size of credit card. The card shall be a type commonly used in the automatic carpark control system. It shall be built-in with battery with lifetime of at least 4 years. The reading range shall be not less than 3 meters. The card reader shall enable frequency offset/hopping for operation on different frequencies such that multiple readers can be operated in close vicinity of each other without interference;

3. The Housing Authority logo and the name of the corresponding estate shall be clearly shown on the proximity cards.

ELE26.3.100.8 MAGNETIC STRIPE PAPER TICKET
Magnetic stripe paper ticket for hourly parking shall be made of durable paper and of magnetic operated type with the size same as the proximity card. They shall be capable of being printed with the date and time and encoded to enable the system to read.

ELE26.3.110.8 "FULL" SIGN
1. The “Full” sign box shall be housed in a cabinet made of not less than 1.5mm thick stainless steel;

2. The characters on the sign shall be in both English ("FULL") and Chinese ("滿") and arranged in bright LED matrix unless otherwise Approved. The shorter length on the effective illuminated area shall be not less than 250mm;

3. The Sub-contractor shall submit detailed drawings and samples of materials regarding the construction of illuminated signs for Contract Manager's Approval prior to the fabrication and installation;

4. The sign shall illuminate on receiving a signal from the central data station/cashier computer.

ELE26.3.120.8 INTERCOM SYSTEM MASTER AND SLAVE STATIONS
1. The master station(s) shall be designed for desk-top mounting;

2. Each master station shall comprise:
   a. A slave station selection panel;
   b. A microphone unit; and
   c. A built-in loudspeaker.

3. The number of master station(s) to be provided shall be sufficient for connection with each entrance and exit control points plus at least two spare ways;

4. A slave selection panel shall be provided to incorporate the following controls/indicators:
   a. 4 heavy duty Press-ON/Press-OFF slave station selection buttons;
   b. 4 slave station selection indicators;
   c. A heavy duty spring-loaded slave station "CALL" button;
   d. A loudspeaker volume control;
   e. A power supply status indicator;
   f. A lamp test button; and
   g. A buzzer alarm.
5. The slave stations shall be incorporated in the Entrance Control Unit and the Exit Control Unit. The slave station shall be integrated into the Control Units as a factory fitted product. Each slave station shall be completed with the following:
   a. A loudspeaker for hands free operation in a noisy environment;
   b. A heavy duty spring-loaded "CALL" button; and
   c. A buzzer alarm.
ELE26.4 TESTING AND COMMISSIONING

ELE26.4.010.8 TESTS

The Sub-contractor shall carry out the following tests for the installation in the presence of the Contract Manager:

1. Test of earth loop impedance of all relevant metallic parts of the equipment in compliance with the Electrical COP;
2. Continuous operation of the barrier and operating time as specified;
3. Testing and demonstration of all functions of the ACCS, VLRS, Car counting System, Octopus Card clearing, data exchange with HA's data hub server, intercom system and carpark CCTV system as mentioned in the Specification.

ELE26.4.020.8 TEST RECORD

The Sub-contractor shall record all the tests and submit to the Contract Manager for Approval.

ELE26.4.030.8 TRAINING

1. The Sub-contractor shall provide not less than 40 hours training of the operation and maintenance for the carpark control and management facilities with a proposed training programme approved by the Contract Manager. The training shall be conducted during normal working hours for the estate management staff. The Sub-contractor shall record in 720p video or better throughout one training session and hand over 2 copies of DVD-videos of the record to the Contract Manager;
2. The Sub-contractor shall provide sufficient copies of detailed training manuals for operation and maintenance for the estate management staff;
3. The Sub-contractor shall provide 2 sets of the recovery disks for system restoration and e-copies of operation and maintenance manuals to the Contract Manager before handover.
ELE26.5 MAINTENANCE

ELE26.5.010.8 GENERAL

1. The Sub-contractor shall provide free maintenance including labour and materials to the system installation for the entire Maintenance Period after completion of the installation;

2. During the Maintenance Period, the Sub-contractor shall attend to all faults and complaints, remedy all defects, replace all malfunction items and maintain the complete installation in a clean, tidy and functional condition to the satisfaction of the Contract Manager.

ELE26.5.020.8 24-HOUR ON-CALL SERVICE DURING MAINTENANCE PERIOD

1. The Sub-contractor shall provide 24-hour on-call service at any time during the Maintenance period. The Contract Manager may instruct the Sub-contractor, in the Maintenance Period via telephone, mobile phone, paging service or any other means as advised by the Sub-contractor and Approved by the Contract Manager, to attend the reported breakdowns, and the Sub-contractor shall dispatch competent technicians or such other suitable personnel, who shall arrive at site and shall carry out any necessary inspection testing and repair work as soon as practicable and under all weather conditions;

2. The Sub-contractor shall submit to the Contract Manager for this purpose at least two names of English speaking representatives, who can be reached at any time of the day, with contact telephone numbers of direct lines, mobile phones or paging service for Approval. Prior Approval shall also be obtained for any subsequent changes of representatives, contact telephone numbers etc. during the Maintenance Period at least two weeks before the change is effected;

3. The Sub-contractor shall attend to emergency calls within three (3) hours of receiving such calls out of normal working hours and a maximum time limit of two (2) hours during normal working hours. For other repair calls, they shall carry out repair work within twenty four (24) hours;

4. The maintenance and servicing works, as described above, form part of the Main Works described in Clause 8.3(2)(c) of the General Conditions of Main Contract.

ELE26.5.030.8 PREVENTIVE MAINTENANCE

1. The Sub-contractor shall provide quarterly maintenance inspection and service to the ACCS, VLRS, Car Counting System and intercom system such as checking overall functioning of the system, cleaning of roller and magnetic heads, lubricating the mechanical part, adjusting inductive detection loops etc. The Sub-contractor shall submit a proposed maintenance programme, including the scope of maintenance activities, to the Contract Manager for Approval within 14 days after the commencement of the maintenance period. An inspection report should be submitted to the Contract Manager after each quarterly inspection;

2. The specification for maintenance inspection and service to the carpark CCTV System shall be referred to ELE24.4.3;

3. Upon request by the Contract Manager within the Maintenance Period, the Sub-contractor shall also provide free service to modify the computer programme to facilitate alteration of the system, such as change of tariff structure;
4. Four weeks before expiry of the maintenance period, the Sub-contractor shall carry out a hand/take-over inspection with the party taking up the on-going maintenance of the system in the presence of the representatives of the Contract Manager. Defects found should be rectified by the Sub-contractor to the satisfaction of the Contract Manager;

5. At the end of the Maintenance Period, the Sub-contractor shall execute all work of inspection, examination, and overhaul as required, to the complete installation to the satisfaction of the Contract Manager.

</table>
ELE28.1 LABELS AND NOTICES

ELE28.1.010.8 INSCRIPTION OF LABELS AND ENGRAVING
1. The labels shall be in both English and Chinese characters;
2. The labels shall be legible and durable such as by method of inscription or silk printing with transparent covering. Other methods giving legible and durable label are also acceptable;
3. Samples shall be submitted to the Contract Manager for approval prior to ordering.

ELE28.1.020.8 MATERIAL FOR LABELS
1. Labels shall be made of white plastic material with required letterings in red colour, unless otherwise specified;
2. Where equipment is fitted with labels provided by the manufacturer of the equipment, these labels may be used in lieu of the plastic material, provided that they are of equivalent quality and Approved.

ELE28.1.030.8 FIXING OF LABELS
Labels shall be fixed to switchgear and distribution board by screws. Where drilling and tapping of the equipment is impracticable, Approved adhesive means may be used subject to prior Approval.

ELE28.1.060.8 ENGRAVING FOR ELECTRICAL ACCESSORIES
1. Inscription is not required on front plate of control switches feeding fixed electrical appliances in domestic blocks;
2. For other building and/or occupied non-domestic premises, the front plate of each control switch, feeding a fixed electrical appliance, such as a wash boiler, water heater, cooker, wall-mounted fan, wall-mounted radiator, incinerator, exhaust fan, room cooler, etc., shall be engraved according to the appliance being controlled;
3. Details of the inscription shall be submitted for Approval;
4. Additional engraving to other electrical accessories will be as specified on the Drawings.

ELE28.1.070.8 LABELS AND WARNING NOTICES
1. Labels and warning notices as required by the Electricity Ordinance and the Electrical CoP shall be provided where appropriate;
2. Labels may be fixed in other positions specified or directed by the Contract Manager;
3. The following warning notices in English and Chinese shall be provided at the positions where appropriate:
   a. A label having a minimum size of 65 mm x 50 mm marked with the words "DANGER - HIGH VOLTAGE 危險 - 高壓" in lettering not less than 5 mm high to be fixed on every container on enclosure of ancillary equipment for discharge lighting installations operating at voltages exceeding "Low Voltage";
b. Where terminals or other fixed live parts between which a voltage exceeding 250 volts exists are housed in separate enclosures or items of equipment which, although separated, can be reached simultaneously by a person, a notice shall be secured in a position such that anyone, before gaining access to such live parts, is warned of the maximum voltage which exists between those parts.

ELE28.1.080.8 TREATMENT OF ELECTRIC SHOCK POSTER

The sub-contractor shall supply and fix an anodised aluminium frame with transparent plastic front plate of 3 mm minimum thickness and wooden backing board of 5 mm minimum thickness inside each main switch room and mount it with a "Treatment of Electric Shock" poster which may be obtained from the Labour Department free of charge. If the poster is not obtained from Labour Department, the sub-contractor shall ensure the poster supplied will have the same quality and size.
ELE28.2  SPARE FUSES IN SWITCH ROOMS

ELE28.2.010.8  FUSE REQUIREMENTS
The Sub-contractor shall provide in each switchroom of this project one complete set of spare fuses for each rating of fuse-switches or switchfuses installed.

ELE28.2.020.8  MOUNTING
Each set of spare fuses shall be hung on a wooden board with brass hooks. The wooden board shall be smoothed on both front and edges, painted and labelled.

ELE28.2.030.8  HAND-OVER
All the boards with fuses provided under this project shall be handed over to the Housing Manager.
ELE28.3  FIXINGS

ELE28.3.010.8  SCREWS AND BOLTS
1. Machine screws and nuts shall be to ISO/885;
2. Hexagon bolts, screws and nuts shall be to BS EN ISO 4016, BS EN ISO 4018 and BS EN ISO 4034;
3. Wood screws shall be to BS 1210 with countersunk head unless otherwise specified;
4. Bolts, nuts and washers shall be manufactured from non-ferrous materials;
5. Holes for bolts, screws and other fixings shall be drilled or stamped, and no larger than required for clearance of the bolt, screw, etc..

ELE28.3.020.8  PLUGS
1. Proper methods of fixing, such as expanding plugs of adequate size or other purpose-designed fixing devices approved by Contract Manager shall be used;
2. Screws shall not be fixed to wooden plugs unless otherwise specified.
ELE28.4 INSULATING MATERIALS

ELE28.4.010.8 INSULATING TAPES

Insulating tapes for low voltage applications shall comply with IEC 60454-3-1 pressure sensitive adhesive tape type F-PVCp (plasticized PVC) and have a minimum thickness of 0.21 mm.

ELE28.4.020.8 RESTRICTED MATERIALS

Non-impregnated paper, fabric, wood or press-hemp shall not be used for insulating purposes. Where synthetic resin bonded insulating boards are used, all cut edges shall be sealed with an Approved varnish.
ELE28.5 OPENINGS IN BUILDING STRUCTURE

ELE28.5.010.8 SLEEVES
1. Provide PVC sleeves for openings in walls within a fire compartment;
2. Provide galvanised mild steel sleeves for openings in walls and slabs connecting the fire compartment with other fire compartments/public areas.

ELE28.5.020.8 MAIN CONTRACTORS WORK
The holes, sleeves and slots reserved through walls/slabs/beams will be cleared and cleaned by the Main Contractor before hand-over to the Sub-contractor for use.

ELE28.5.030.8 SUB-CONTRACTOR’S WORK
The nails appertaining to concealed electrical boxes shall be cleared by the Sub-contractor subsequent to work completion and prior to execution of final painting work by the Main Contractor.

ELE28.5.040.8 WATERPROOFING
Where any work pierces the waterproofing including waterproof structure, the method of installation shall be as Approved.
ELE28.6 SHEET METALWORK

ELE28.6.010.8 CONSTRUCTION
Sheet metal boxes, meter chambers etc. shall be manufactured from plain steel sheets. The thickness of steel sheet shall be as specified in the relevant Worksection subject to a minimum of 1.0 mm. Where necessary, suitable stiffeners shall be provided to give adequate rigidity.

ELE28.6.020.8 PROTECTION AGAINST CORROSION
Protection against corrosion shall be achieved by means of hot-dip galvanising, anti-rust painting or enamel, or the use of stainless steel.

ELE28.6.030.8 STAINLESS STEEL SHEET
If stainless steel sheet is specified, it shall be to BS EN 10088-2, Symbol F9 for matt finish and F8 for polished finish.
ELE28.7 PAINTING METALWORK

ELE28.7.010.8 SCOPE

1. Exposed metal parts of the installation as specified in the Contract or as directed by the Contract Manager shall be painted by the Sub-contractor;

2. Wherever necessary, parts of the installation may be painted by the Main Contractor under the instruction of the Contract Manager. Under such circumstances, the Sub-contractor shall ensure that painting provided by the Main Contractor shall not cause any detrimental effects to the electrical installation.

ELE28.7.050.8 GENERAL

1. The Sub-contractor shall comply with the requirements on materials and workmanship for painting as specified in Worksection FIN7 of HKHA Architectural Works Specification unless otherwise specified;

2. Metalwork to be painted shall be cleaned, prime coated with the appropriate primer and completed with two coats of synthetic paint in accordance with the manufacturer's recommendation.

ELE28.7.060.8 EVIDENCE OF COUNTRY / PLACE OF MANUFACTURE AND AUTHENTICITY

The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the country / place of manufacture and authenticity of the paints delivered to Site.

GENERAL

SCOPE
This specification covers the supply, installation, testing and commissioning, maintenance of standby diesel generating sets and associated accessories. The scope shall also include all necessary design and provisions of acoustic treatment associated with the installation for compliance with the Noise Control Ordinance and all necessary submissions to the Authorities (such as EPD) in connection with the installation and operation of generating sets.

PURPOSE
A standby diesel generating set shall be provided as an emergency supply to comply with the Fire Services Department requirements and meet essential loads as specified or shown on the Drawings.

FACTORY ASSEMBLY
1. Each generating set shall be a factory-assembled packaged unit and shall comprise a diesel engine directly coupled to an alternator, mounted on a common steel baseframe. Each generating set shall be provided with a control cubicle housing all control equipment. The generating set shall comply with all parts of ISO 8528 and the requirement of this specification;
2. The factory of generating set assembly shall comply with audited quality management system requirements of ISO 9001 and the certification shall be produced to the Contract Manager upon request.

FS CODE OF PRACTICE
Standby diesel generating sets shall comply in all respects with Part V, Section 5.8 of The 'Code of Practice for Minimum Fire Service Installations and Equipment' issued by Fire Services Department (hereinafter referred to as F.S. Code of Practice). The generating sets shall be of proven reliability established in local application and evidence shall be produced to the satisfaction of the Contract Manager upon request.

COMPATIBILITY OF COMPONENTS
The manufacturer of the various components to be used with the generating set shall be as recommended by the manufacturer to ensure compatibility of the components.

COMPONENTS
The Sub-contractor shall ensure and verify to the satisfaction of the Contract Manager that all components employed in this installation conform to the relevant International and local Standards.

OPERATING CONDITIONS
The generating set shall be capable of continuously operating under the appropriate site conditions which shall normally be a temperature range of 5°C to 40°C, relatively humidity 100% and the altitude of the actual site.

</tbody>
</table>
ELE29.2 OUTPUT AND RATING

ELE29.2.010.8 OUTPUT
The generating set shall be of 380V, 50Hz, 3 phase, 4 wire output.

ELE29.2.020.8 ACCURACY OF OUTPUT
Unless otherwise specified, the generating set shall comply with the operating limits of performance class G3 in accordance with ISO 8528-5.

ELE29.2.030.8 RATING
1. The generating set shall have a prime power rating sufficient to satisfy both the steady and transient states of the electrical loads detailed in this Specification and Drawings. The power output shall be rated as prime power in accordance with ISO8528-1 and the permissible average power output during a 24 hour period shall not exceed 70% of the prime power unless otherwise agreed by the engine manufacturer;

2. The generating set shall be capable of meeting the basic electrical load requirements and also the starting kVA and starting kW as shown on the drawings. The Sub-contractor shall verify the actual amount of electrical loads connected to the generating set and prove that the generating set selected can satisfy this specification under both starting and steady conditions for such connected loads;

3. Power rating shall be net, excluding all accessories and shall be taken as at ambient temperature 40ºC and at sea-level;

4. The Sub-contractor shall supply, install and commission a generating set of rating, 0.8 power factor lagging, not less than the minimum rating as specified in the drawings taking into account all de-rating factors as recommended by the generator manufacturer;

5. A sign made of at least 1.5 mm thick stainless steel plate shall be provided for each generator set and affixed in a prominent position inside the emergency generator room and main switch room to indicate the essential loading of fire service installations and fireman's lift(s) connected to the generator. The English and Chinese characters of the sign shall be at least 8 mm and 15 mm high respectively and the details are as follows:

```
EMERGENCY GENERATOR
應急發電機
LOADING OF FIRE SERVICE INSTALLATIONS AND
FIREMAN'S LIFT(S)
消防裝置及消防升降機負荷
XXXX kVA/XXXX kW
WARNING: DO NOT OVERLOAD THE GENERATOR
警告：切勿引致發電機過量負荷
```
ELE29.2.040.8 TIMING OF LOADS APPLICATION

1. The generating set shall be designed for cold starting and be capable of supplying power for the full rated essential load in not more than 15 seconds from initiation of the starting procedure;

2. Unless otherwise specified, all essential loads other than non-fireman's lifts, will be started simultaneously. After an adjustable period up to 45 seconds, the non-fireman's lifts will be started sequentially to travel to the ground floor one at a time before the next non-fireman's lift is started and remains stationary.

ELE29.2.050.8 EXCESSIVE REGENERATIVE POWER AND NON-LINEAR LOADS

1. There will be high current harmonics from the variable voltage variable frequency controlled lift motors, light fittings with electronic ballasts, pump motors with soft starters, etc. and precautions shall be taken in the design of the generating set to guard against any adverse effects so caused;

2. The Sub-contractor shall provide appropriate dummy loads to absorb excessive regenerative power from the lifts as detailed on drawings, if necessary.
ELE29.3 DESIGN

ELE29.3.010.8 MANUFACTURER'S RECOMMENDATIONS
The complete installation shall be in accordance with the manufacturer's recommendation and to the satisfaction of the Contract Manager. Any design deviating from the manufacturer's recommendation shall be verified by the manufacture before being submitted to the Contract Manager for approval.

ELE29.3.020.8 SAFETY
All moving parts and bare exhaust manifolds and pipes shall be properly and completely guarded and/or insulated in accordance with the relevant International Standards and local regulations. The guards shall be of such design that will guard against the serviceman from coming into contact with any part which is likely to cause injury to personnel. All guards shall be detachable.

ELE29.3.030.8 SPACE FOR MAINTENANCE
Adequate space (not less than 600 mm) all round the set shall be provided for maintenance and cleaning.

ELE29.3.040.8 VENTILATION
Ventilation to the Approval of the Director of Fire Services shall be provided for both combustion and cooling air. If fans are necessary to provide this air they shall be provided by the Sub-contractor and shall operate at all times while the generator set is running.

ELE29.3.050.8 AIR SUPPLY AND DISCHARGE
The air supply and discharge shall be direct to outside air without any possible obstructions, i.e. no fire, smoke or regulating dampers shall be fitted, and shall not cause a public nuisance. However, silencers shall be provided at the air inlet and outlet apertures of the generator room as shown on the Drawings. Added pressure loss constituted by the silencers shall be kept to a minimum, and shall not affect the proper operation of the generator set.

ELE29.3.060.8 EXHAUST SYSTEM
Exhaust of combustion products shall be discharged through the exhaust system to the location as shown on the Drawings. The Sub-contractor shall ensure that the exhaust system meets the relevant requirements of the Air Pollution Control Ordinance. The Sub-contractor shall also ensure and verify, to the satisfaction of the Contract Manager, that the bends and the length of the exhaust pipe will not build up back pressure causing low efficiency and loss of engine power; otherwise, pipe bore will have to be increased.

ELE29.3.070.8 EXHAUST AIR PIPES
Exhaust air pipes outside the generator room shall be mounted with stainless steel brackets. Shop drawings showing the details of mounting and fixing of cladding shall be submitted for Approval prior to material ordering and fabrication. Adequate fall and drain point shall be provided for the exhaust pipe so that no water can enter into the engine through the exhaust outlet. The exhaust pipe outlet shall also be fitted with a stainless steel wire mesh to prevent ingress of birds or debris.
ELE29.4  ENGINE

ELE29.4.010.8  TYPE AND DESIGN
The engine shall be a four stroke, multi-cylinder, direct injection, naturally aspirated or turbo-charged, water-cooled diesel engine and shall be of industrial type complying with ISO 8528-2. The shaft speed shall not exceed 25 rev/s. The fuel used shall be diesel fuel complying with EPD’s requirement. The engine shall be designed to comply with the Air Pollution Control Regulations such that the emissions there from will not create an air pollutant nuisance.

ELE29.4.020.8  COOLING SYSTEM
The engine cooling system shall comprise a set-mounted radiator with engine or electric driven cooling fan, water circulating pump, water temperature regulating device, etc., and in addition to the operating conditions specified in ELE29.1.070, shall be suitable for operating at ambient temperatures up to 50°C.

ELE29.4.030.8  SPEED GOVERNOR
The engine speed governor shall provide governing in accordance with the relevant requirements for Performance Class G2 of ISO 8528-2.

ELE29.4.040.8  FILTERS
Filters shall be provided for the fuel oil and lubricating oil systems as well as the air intake and shall be of replacement element.

ELE29.4.050.8  EXHAUST CONNECTORS
The engine exhaust shall be provided with flexible connectors and tubular absorption type silencer.

ELE29.4.060.8  AUTOMATIC SAFETY CUT-OUT DEVICES
Automatic safety cut-out devices shall be provided for engine overspeed, high cooling water temperature and low lubricating oil pressure. An electric fuel stop solenoid valve as well as a manual fuel shut-off valve shall be provided.

ELE29.4.070.A  INSTRUMENT PANEL
An instrument panel, incorporated with lubricating oil pressure and temperature gauges, cooling water temperature gauge, tachometer and individual fault indicating lamps for low lubricating oil pressure, high-cooling water temperature & engine overspeed, shall be provided. Fuel level gauge shall be provided on the panel when the fuel tank is not located in the same room with the generating set. The panel with supporting stand shall be floor mounted on plinth adjacent to the generating set and properly isolated from vibration.

ELE29.4.080.8  STARTER UNIT
The engine shall be equipped with a D.C. electric starter motor, fly-wheel, flexible couplings, etc. to form a complete working unit.
ELE29.5 ALTERNATOR

ELE29.5.010.8 TYPE
The alternator shall be of salient pole, self-exciting, self-regulating, brushless type and shall comply with ISO 8528-3. The alternator shall be of basic continuous rating (BR) based on duty type S1 according to IEC 60034-1.

ELE29.5.020.8 PROTECTION
The alternator shall be screen protected and drip proof in accordance with IEC 60034-5 to degree IP21. Anti-condensation heaters of 220V shall be provided, connected to the mains, and shall be arranged to be switched off when the alternator is in operation. All exposed moving parts shall be provided with protection screens.

ELE29.5.030.8 INSULATION SYSTEM
The insulation system shall be IEC 60085 Class F or Class H.

ELE29.5.040.8 TERMINAL BOX
A terminal box of sufficient size shall be provided for cabling.

ELE29.5.050.8 RADIO INTERFERENCE SUPPRESSION
The alternator shall be fully equipped for radio interference suppression to BS EN 55014-1 or BS EN 55011 or BS EN 61000-6-4.
ELE29.6 BASEFRAME AND FUEL TANK

ELE29.6.010.8 BASEFRAME
The baseframe of the generating set shall be of prefabricated, structural steel type of all welded construction. The baseframe shall be provided with lifting points for transportation.

ELE29.6.020.8 INTEGRAL FUEL TANK
1. Whenever specified, a fuel tank shall be integral within the base frame and shall be complete with filler, vent, drain, feed and return connections, fuel content gauge, flexible fuel lines between tank and engine connections;
2. The capacity of the tank shall be sufficient for sustaining operation of the connected loads for a period of not less than 6 hours but shall have a minimum capacity of 490 litres. If the minimum tank capacity required exceeds 500 litres, the tank shall be installed in a separate fuel tank room in accordance with FSD's requirement.

ELE29.6.025.8 SEPARATE FUEL TANK
1. Unless otherwise specified, a separate fuel tank shall be installed inside the standby generator room and shall complete with cover, drip tray, fuel hand pump, fuel content gauge, vent pipe, control valves, fuel supply and return pipes between the tank and engine connections, etc.;
2. The capacity of the tank shall be sufficient for sustaining operation of the connected loads for a period of not less than 6 hours but shall have a minimum capacity of 490 litres. If the minimum tank capacity required exceeds 500 litres, the tank shall be installed in a separate fuel tank room in accordance with FSD's requirement;
3. A Surveyor's Report shall be submitted to certify that the fuel tank has been properly constructed, installed and tested and the fuel tank is in sound condition and is suitable for the storage of fuel oil without any leakage;
4. The tank shall be fabricated from mild steel plates welded on to a mild steel frame. Mild steel flat bars shall be welded on the inside of the tank to stiffen the tank when required;
5. All parts of the exterior surfaces of the tank shall be thoroughly cleaned to remove all rust, mill scale, grease and other foreign matters to achieve a bright, rust free and dry surface and then painted with one cost of zinc rich primer, one coat of epoxy based under coat and two finishing coats of approved paint. The interior surface of the tank shall be thoroughly dried out and applied with a thick coat of linseed oil to prevent rusting;
6. A semi-rotary double acting hand pump shall be provided for the fuel tank and consist of 25 mm diameter inlet, outlet and flexible oil resistant inlet pipe of adequate length to suit Site condition;
7. The Sub-contractor shall submit shop drawings showing all installation details of the fuel tank, pipe routing and associated builder's works for approval before commencement of works.

ELE29.6.030.8 FUEL LEVEL SWITCH
The fuel tank shall be fitted with two stages fuel level switches to alert the caretaker and to shut down the non-fire services equipment supply when the remaining fuel capacity falls to a level adequate for 7.5 hours and 6.5 hours continuous running of the fire services equipment. The fuel level switch shall comply with the following requirements:
For Immersed Type Level Sensor:

1. The fuel level switch shall be suitable for measurement of fuel level in the integral tank;

2. The fuel level switch shall consist of two major components - a fuel level sensor and a switch unit. The fuel level sensing element shall be installed in a tube of stainless steel and placed inside the fuel tank. The switch unit shall be mounted on the tank and with the fuel level sensor to form an integral set. The unit shall be housed inside a casing made of cast iron or aluminium alloy and shall be capable of detecting the signal from the sensor and transmitting it to control the on/off operation of the non-fire services equipment supply;

3. The level switch shall be manufactured to IEC 60079 Explosive Atmospheres or BS EN 60079 Explosive Atmospheres;

4. The level switch shall be at least of Group IIA and Temperature Class T1 in accordance with IEC 60079-0 or BS EN 60079-0;

5. The electrical components of the level switch installed in the vapour space above fuel and inside the fuel tank shall be of the type of protection of Ex ia which is suitable for installation in Zone 0 Hazardous Area as classified in IEC 60079-10-1 or BS EN 60079-10-1;

6. The electrical components of the level switch installed outside of the fuel tank shall be of the type of protection of Ex ib or Ex d which are all suitable for installation in Zone 1 Hazardous Area;

7. A copy of certificate to prove the apparatus rating shall be submitted for checking.

For Ultrasonic Type Level Sensor:

8. The fuel level switch shall consist of two major components - a fuel level sensor and a control unit;

9. The level sensor shall have non-contacting liquid level transmitter utilizing ultrasonic pulses technology for measurement and suitable for the application of fuel tank;

10. The control unit shall connect with the fuel level sensor and contain a digital display showing fuel level information and system alarms. The control unit shall be equipped with output relays for external interface to control the on/off operation of the non-fire services equipment supply. The control unit shall be housed inside the control cubicle as stipulated in ELE29.10;

11. The fuel level switch shall be manufactured to IEC 60079 Explosive Atmospheres or BS EN 60079 Explosive Atmospheres;

12. The fuel level sensor shall be at least of Group IIA and Temperature Class T1 in accordance with IEC 60079-0 or BS EN 60079-0;

13. The electrical components of the fuel level switch installed in the vapour space above fuel and inside the fuel tank shall be of the type of protection of Ex ia which is suitable for installation in Zone 0 Hazardous Area as classified in IEC 60079-10-1 or BS EN 60079-10-1;

14. A copy of certificate to prove the apparatus rating shall be submitted for checking.
**ELE29.6.040.8 CONTROL REQUIREMENT**

The fuel level switches and the associated control shall be capable to control on/off operation of the non–fire services equipment supply as shown on Drawings. When the remaining fuel capacity falls, at or below a level adequate for 7.5 hours continuous running of the fire services equipment, the alarm connecting to the FS alarm panel shall be activated. When the remaining fuel capacity further falls, at or below a level adequate for 6.5 hours continuous running of the fire services equipment, a signal shall be provided to trip the non-fire services equipment automatically and the corresponding alarm connecting to the FS alarm panel shall also be activated.

**ELE29.6.050.8 VERIFICATION OF FUEL LEVEL SETTINGS**

1. A test report shall be submitted to substantiate that the fuel capacity inside the fuel tank according to each level settings as mentioned in ELE29.6.040 are accurately shown on the fuel level sensor;

2. The accuracy of the fuel level settings shall be demonstrated to FSD’s officer during FSD’s inspection;

3. For demonstration in sub-clause 2, the integral fuel tank shall be emptied for refilling in the presence of the FSD’s officers to demonstrate the readings of the fuel level sensors be consistent with various settings and the capacity of fuel inside.
ELE29.7 STARTING SYSTEM

ELE29.7.010.8 SPECIFICATION
Engine starting shall be electric. The starting system shall be of 12V or 24V and shall comprise batteries, charger, contactors, wiring, etc.

ELE29.7.015.8 TYPE OF BATTERIES
The batteries shall be of nickel-cadmium type with plastic cases complied with IEC 60623. The batteries shall be suitable for engine starting application.

ELE29.7.020.8 MOUNTING OF BATTERIES
The batteries shall be mounted on a hardwood floor stand adjacent to the starter motor. A double pole D.C. battery switch shall be provided between the batteries and the starter. When the switch is turned to 'open' positing, the "auto-starting of generator disabled" alarm, as stated in Clause ELE29.12.020, shall be activated.

ELE29.7.030.8 CAPACITY OF BATTERIES
The batteries shall have sufficient capacity for 4 operations of engine cranking each 15 seconds duration with 5 seconds intervals between each operation without permanent damage nor reduction in the rated life.

ELE29.7.040.8 BATTERY CHARGER
The battery charger shall be of trickle/boost type and shall be connected to the essential power supply socket/connection unit located at the generator room. The battery charger shall have sufficient capacity to maintain the batteries in fully charged condition at all times. The charger shall be capable of automatically recharging the discharged batteries to 75% of its rated capacity within 6 hours. Current limiting device shall be provided to limit the charging current as recommended by the battery manufacturer.
ELE29.8 ENGINE EXHAUST SYSTEM

ELE29.8.010.8 SCOPE OF SYSTEM
The engine exhaust system comprising silencers, flexible connectors, rain hoods, expansion joints, hangers, pipes & accessories etc., shall be provided as shown on the Drawings.

ELE29.8.020.8 EXHAUST AIR PIPES
Exhaust air pipes shall be black steel pipes to BS EN 10255 medium grade for pipe diameters up to and including 150 mm, or comply to BS EN 10216 or BS EN 10217 for larger pipe diameters and jointed by welding. Pipes shall be adequately supported and provided with flexible / expansion joints to allow for expansion / contraction and for vibration isolation.

ELE29.8.030.8 SIZING OF EXHAUST AIR PIPE
The exhaust pipe shall be sized so that the back pressure created will not exceed the amount recommended by the manufacturer and the output power of the engine will not be derated.

ELE29.8.040.8 LAGGING EXHAUST AIR PIPES
1. The exhaust pipes outside the generator room, where exposed, shall be lagged with non-combustible and non-water-absorption type insulating materials complying with BS 476. The lagging shall be protected by a stainless steel cladding of 2 mm thick constructed in sections;
2. The thermal insulation material provided shall have a thickness of not less than 50 mm and maintain the external cladding temperature not exceeding 50ºC. Calculation to substantiate the adequacy of insulation thickness shall be submitted to Contract Manager for checking;
3. The exhaust pipe in the generator room shall also be properly lagged in order to protect against any harmful thermal effects to personnel in carrying out operation and maintenance. The lagging shall be protected by a stainless steel cladding of 0.8 mm thick constructed in sections;
4. Each section of the cladding shall be removable for replacement of the insulating materials;
5. No flanged joint shall be used and the end product of the cladding shall be of a plain surface stainless steel pole;
6. Asbestos shall not be used for lagging.
ELE29.9  AIR DUCTWORK

ELE29.9.010.8   SCOPE

Air ducts, if required, shall be provided to connect the radiator to the metal louver provided by others at the generator room as shown on the Drawings.

ELE29.9.020.8   CONSTRUCTION

Air ducts shall be constructed of 1 mm thick galvanised mild steel sheets and shall be adequately sized to deliver the required cooling air through the radiator.

ELE29.9.030.8   SUPPORTS

Air ducts shall be adequately supported and provided with connection flanges and flexible connections for vibration isolation.

ELE29.9.040.8   SILENCERS

Silencers shall be provided to attenuate the noise from the generating set through the intake and exhaust air louver. The silencer shall consist of an outer casing fabricated from galvanised steel sheet not less than 1.6 mm thick and a number of splitters made from 0.8 mm perforated galvanised steel sheets which divide the silencer into separate longitudinal airways. All acoustic infill materials shall be inert, non-combustible, vermin proof, non-hygrosopic, wrapped in an acoustically transparent polyester membrane and sealed with polyester sealant to the approval of FSD.
ELE29.10 CONTROL CUBICLE

ELE29.10.010.8 CONSTRUCTION

1. The control cubicle shall be constructed of sheet steel not less than 2 mm thick;
2. The cubicle shall preferably be floor mounted;
3. If set mounted, the cubicle shall be effectively isolated from vibration to prevent damage;
4. Gaskets shall be fitted on doors and removable covers and shall be continuous without joints around corners;
5. The cubicle shall be treated with an Approved rust inhibitive priming coat and then two stoved finish coats of gloss paint of an Approved colour.

ELE29.10.020.8 PROTECTION DEVICES

The cubicle shall contain programmable controller (if provided), delay timers, indicators, etc. necessary to fulfill the operation requirements as stipulated in ELE29.11. The dry contacts for detection of main supply voltage should be obtained from the main switchboard cubicle and the lift supply switchboard respectively. The automatic voltage regulator unit shall be contained within the generator set.

ELE29.10.030.8 FRONT PANEL

The following shall be provided on the front panel of the control cubicle unless prior Approval has been obtained for some instruments/indicators to be located on the instrument panel in ELE29.4.070:

1. Hour run meter;
2. Auto/off/manual selector switch;
3. "Start" & "Stop" push buttons for manual operation;
4. Battery charger ammeter and voltmeter;
5. "Mains On" indicating lamps - 3 phase;
6. "Generator On" indicating lamps - 3 phase;
7. "Engine Fault" indicating lamp & audible alarm;
8. "Fail to Start" indicating lamp & audible alarm;
9. "Auto Starting of Generator Disabled" indicating lamp & audible alarm;
10. "Fuel level at or below 7.5 hours operation of fire services equipment" indicating lamp & audible alarm;
11. "Fuel level at or below 6.5 hours operation of fire services equipment and non – fire services equipment supply tripped" indicating lamp & audible alarm;
12. Reset push button;
13. "Simulate mains failure" key switch;
14. Lamp Test Button;
15. Fuel level display of fuel level control unit (for ultrasonic type fuel level switch only).
CONTROL CUBICLE

ELE29.10

ELE29.10.040.8 ALARMS
Remote visible & audible alarms shall also be provided as shown on the Drawings

ELE29.10.050.8 ANTI-CONDENSATION HEATERS
The control cubicle shall be provided with thermostat controlled anti-condensation heaters, connected to the mains.

ELE29.10.060.8 CONTROLLER
Programmable controller if provided in the control cubicle to control the automatic start and stop of the engine shall comply with the following requirements:

1. The controller shall have local job reference and shall operate satisfactorily for at least 12 months;

2. Details of the controller including operation instruction, software for programming and the data set in the controller, etc. shall be included in the O&M manual and soft copy of programme together with data loaded in the controller shall be submitted upon project completion;

3. One set of all necessary computer interfacing connection cable & associated accessories shall be provided;

4. Training on data entry and configuration of a new controller suitable for replacement shall be provided to the maintenance staff before expiry of the defects liability period. A video in DVD disc showing the details shall be submitted upon completion of the training.
ELE29.11 OPERATION

ELE29.11.010.8 GENERAL
The operation of the generating set shall be fully automatic and shall comply with the requirements stipulated in the F.S. Code of Practice. Manual start/testing facilities shall be provided.

ELE29.11.020.8 WORK BY OTHERS
One pair of normally open dry contacts will be provided by others at the location as shown on the Drawings for the purpose of giving a signal to override all automatic shut down features on fault.

ELE29.11.030.8 APPROVAL OF CONTROL CIRCUIT
The control circuit shall be submitted for Approval.

ELE29.11.040.8 PURPOSE
The generator set shall be provided as the standby supply for the essential loads of the building as shown on the Drawings.

ELE29.11.050.8 PROVISIONS OF OPERATION
The essential loads shall normally be fed from the mains supply and be switched automatically to the generating set through a changeover contactor in accordance with the following provisions:

1. A mains sensing device shall be provided to detect condition of the mains supply at the mains supply incoming terminals of the changeover switch, located in the main cubicle switchboard and at other location as shown drawings;

2. When failure of one or more phases of the mains supply or a reduction of voltage to less than 70% of normal is detected, a timing device having an adjustable setting from 0.5 to 2.0 seconds shall be initiated;

3. If the mains failure persists for the pre-set period, the generator set starting sequence shall be initiated automatically;

4. Within 15 seconds from the commencement of the starting sequence, the set shall be stabilised at its rated speed and full load transfer shall take place automatically;

5. Should the generating set fail to start after a period of 15 seconds, the sequence shall be interrupted for a period of 5 seconds and a further attempt to start, of 15 seconds duration, shall then be made. If it again fails to start, the starting sequence shall be locked out, an audio visual alarm given as described in ELE29.12 and it shall remain in this locked out condition until manually reset;

6. If the mains supply is restored during the starting period, the starting sequence shall not be interrupted but the operation of load transfer shall be prevented. After starting, the set shall continue to run on no-load for an adjustable period of 0 - 15 minutes and then stop if no further mains failure;

7. Subsequent failure of the mains supply while the set is running on no-load under provision (6) above shall, after expiration of the 0.5 - 1.0 second delay, cause load transfer to take place;
8. On restoration of the mains supply the set will continue to run and supply essential loads for an adjustable period of 0 - 10 minutes. Thereafter automatic transfer of essential load to mains supply shall take place as soon as the adjusted period has expired;

9. At the end of the adjustable period in provision (8) above the set shall continue to run on no-load for an adjustable period of 0 - 30 minutes;

10. If the mains supply fails again during the adjustable period specified in provision (8) above the control timer setting of the adjustable period (0 - 10 minutes) shall be cancelled in order to prevent the sequence of load transfer. When the mains power is restored again, the operating sequence will start again from sub-clause (8) above;

11. If the mains fails again during the adjustable period specified in provision (9) above the essential loads shall be connected automatically back to the set and the operating sequence will continue as if the connection had been made in the manner as described in provision (7) above;

12. In order to give a signal for lift control, the Sub-contractor shall provide one pair of normally open voltage free contacts terminated inside an adaptable box in each lift machine room. The contacts shall be closed upon load transfer to the generating set.

**ELE29.11.060.8 REMOTE SHUT-OFF VALVE**

1. A remote shut-off valve shall be installed in the supply pipe linking the fuel tank to the engine. The actuation of such a valve shall also actuate the audio and visual alarm outside the generator room and the 'auto starting of generator disabled' alarm as stated in ELE29.12.020;

2. The pull handle of the remote shut-off valve shall be housed inside a breakglass unit installed at the entrance of the generator room;

3. An operation instruction notice, made of white plastic material engraved with the the following wordings in English and Chinese characters of at least 5 mm high in red colour, shall be provided and affixed adjacent to the breakglass unit.

```
GENERATING SET EMERGENCY STOP
SWITCH

IN CASE OF EMERGENCY
BREAK GLASS AND
PULL HANDLE TO FULL EXTENT

發電機停機掣
如須要緊急停機
打碎玻璃並盡拉此手掣
```
ELE29.12 AUDIO AND VISUAL ALARMS

ELE29.12.010.8 ENGINE OVERSPEED PROTECTION
1. In the event of a fault arising from engine overspeed, high water temperature or low oil pressure, the set shall initiate a 2-stage engine protective device;
2. The first stage shall be arranged to initiate both audio and visual alarm at the control cubicle and also at the remote indicator above the door outside the generator room as shown on the Drawings;
3. The audio alarm shall be cancelled by an acknowledge push button. The second stage shall be arranged to shut down the engine;
4. The setting of the two stages, for each system being monitored, shall be as specified by the manufacturer.

ELE29.12.020.8 STARTING FAILURE PROTECTION
1. However, for failure of starting under the condition as stated in ELE29.11.050 (5), the local and remote audio and visual alarms shall initiate immediately at the control cubicle and the remote indicator above the door outside the generator room. The indicator shall be of colour RED;
2. In addition, remote audio and visual alarms above the door outside the generator room to indicate "generating set supply disabled" by the following shall be provided:
   a. Pressing of the emergency stop switch of the generating set;
   b. Tripping of the main MCCB/ACB or any outgoing MCCBs of the switchboard cubicle inside the generator room;
   c. Switching off of the main MCCB/ACB or any outgoing MCCBs of the switchboard cubicle inside the generator room;
   d. Turning the "manual/auto" switch to "manual" or "off" position;
   e. Switching off of the battery supply switch;
   f. Actuation of remote shut-off valve.
3. The indicator shall be of colour RED.

ELE29.12.030.8 VOLTAGE FREE CONTACTS FOR FIRE CONTROL MAIN PANEL
The following pairs of voltage-free contacts, terminated inside a surface mounted box next to the Fire Control Main Panel, shall be provided from the Generator Room via concealed conduit system:
1. A pair of normally close dry contacts which shall be opened only when the generating set is running;
2. A pair of normally close dry contacts which shall be opened only when the generating set fails to start;
3. A pair of normally close dry contacts which shall be opened when the generating set supply is disabled under conditions as stated in ELE29.12.020 (2);
4. A pair of normally close dry contacts which shall be opened when the generating set is on fault;
5. A pair of normally close dry contacts which shall be opened when the generating set having fuel level at or below 7.5 hours operation of fire services equipment;
6. A pair of normally close dry contacts which shall be opened when the generating set having fuel level at or below 6.5 hours operation of fire services equipment and non–fire services equipment tripped.

ELE29.12.035.N VOLTAGE FREE CONTACTS FOR LIFT CONTROL PANEL

The following pair of voltage-free contacts, terminated inside a surface mounted box near one of Lift Control Panels inside Lift Machine Room, shall be provided from the Generator Room via fire resistant cables in concealed conduit system to facilitate the subsequent control mechanism by Lift Sub-contractor for the activation of lift homing upon absence of normal power supply:

1. A pair of normally open dry contacts which shall be closed only when the generator supply is available based on both conditions as stated below are fulfilled
   a. The generating set is running; and
   b. The contactor or circuit breaker of essential power supply of lift cubicle switchboard is closed.

ELE29.12.040.8 OPERATION

Whenever the generating set is started, an audio and visual alarm, at the control cubicle and at the remote indicator above the door outside the generator room, shall be actuated and shall remain in operation until reset manually. The indicator light shall be of colour AMBER. The voltage-free contacts next to the Fire Control Main Panel, as mentioned in ELE29.12.030, shall be actuated to indicate that the generating set is running.

ELE29.12.050.8 TYPE OF INDICATOR LIGHTS AND METAL ENCLOSURE

The above remote indicator shall be mounted on a Grade 304 stainless steel enclosure with a thickness of not less than 1.2 mm and installed outside the generator room. The indicator lights shall be of flashing type.
ELE29.13 INSTALLATION

ELE29.13.010.8 COMPLIANCE WITH INSTRUCTIONS
The generating set shall be installed in accordance with the instructions of the manufacturer.

ELE29.13.020.8 SUBMISSION FOR APPROVAL
Details of the installation shall be submitted for Approval.

ELE29.13.030.8 VIBRATION ISOLATION
1. Suitable vibration isolators shall be provided to prevent the transmission of vibration to the building structure;
2. The completed installation, when in operation, shall not cause any noticeable or objectionable vibration to any part of the building structure or unacceptable level of structure-borne noise in accordance with the Noise Control Ordinance;
3. In the event that undue vibration or excessive structure-borne noise occurs, the Sub-contractor shall rectify the installation or replace the equipment as necessary at his own expense to the satisfaction of the Contract Manager.

ELE29.13.040.8 PAINTING
1. All exposed ferrous metal surfaces of the generating set, pipes and accessories, air ducts, etc. shall, where applicable, be treated with a primer coat of rust resistant paint, followed by two coats of high gloss enamel;
2. Painting of the generating set shall be done at the place of manufacture, before despatch;
3. Touching up, when required on site, shall be carried out to the satisfaction of the Contract Manager.
ELE29.14 ELECTRICAL WORK

ELE29.14.010.8 GENERAL

1. All electrical work shall comply with the relevant sections of this specification;
2. All cables used at the engine shall be heat and oil resisting cables suitable for this purpose;
3. The earthing system & neutral connection for the generating set shall be as shown on the Drawings;
4. All exposed metal work inside the generator room shall be effectively bonded and earthed in accordance with the Electrical CoP;
5. The Sub-contractor shall ensure that the part of the installation which comprises of the essential loads shall be protected in accordance with the Electrical CoP when the installation is fed by the generating set. Protection shall include overcurrent and earth fault as detailed in this Section;
6. The Sub-contractor shall also provide a reverse power sensing device which shall initiate a visual indicator on the control panel and actuate the connection of the dummy load if the reverse power exceeds the regenerative power absorption limit of the generating set.

ELE29.14.020.8 OVERCURRENT PROTECTION

1. The rating and the tripping characteristics of the air circuit-breaker/MCCB in the switchboard cubicle shall be coordinated with the characteristics of the generating set to provide proper protection of the generating set and its associated power cables;
2. The Sub-contractor shall ensure, and verify to the satisfaction of the Contract Manager, that the essential loads, when fed by the generator, are also protected against short circuit in accordance with the Electrical CoP under that particular fault level of the generating set.

ELE29.14.030.8 EARTH FAULT PROTECTION

1. The Sub-contractor shall supply and install an earthing system independent of any other earthing system for the neutral connection and earthing of the generator;
2. The Sub-contractor shall ensure that the generating set installation is solidly and effectively earthed in accordance with the Electrical CoP, and BS 7430;
3. When the plant is subject to vibration, or where circumstances necessitate, the earthing connections shall be made of flexible copper conductor having a green-and-yellow PVC sheath;
4. Earth fault protection shall be provided at the switchboard cubicle inside the generator room to disconnect the supply from the generator to the connected installation within 5 seconds when earth fault occurs at any part of the connected installation other than the final circuits.

ELE29.14.040.8 INTERFACING WITH SWITCHBOARD CUBICLE

1. The Sub-contractor shall coordinate the interfacing signal required between the generating set control panel and the switchboard cubicles for the control and protection of the generating set;
2. The generator set starting sequence in the event of mains failure shall be initiated from the signals provided from voltage sensing devices used for detection of supply incoming terminals located in the main cubicle switchboard, lift cubicle switchboards and at other location as shown in drawings;

3. For current signals to be connected from the switchboard cubicles, the Sub-contractor shall ensure the current transformers be properly selected with adequate burden and accuracy to suit the requirement of control equipment of the generating set;

4. The signal cables shall be coded with ferrules and clearly shown on the control wiring diagram;

5. The signal cables shall be of 1-core PVC surface mounted. The size of cable shall be provided according to the requirement of the generator control equipment but in any case shall not be less than 1.5 mm².
ELE29.15 PROVISION OF TECHNICAL INFORMATION

ELE29.15.010.8 LANGUAGE
All technical information provided shall be in English.

ELE29.15.020.8 SUBMISSIONS FOR APPROVAL
Within six weeks from the date of acceptance of tender the Sub-contractor shall forward the following drawings etc. for all items of work to the Contract Manager for approval:

1. Confirmation by the manufacturer that the size of the generating set offered satisfies the specified loads, with relevant supporting document for verification;

2. A general arrangement drawing of the generating set and controls with leading dimensions, weights, foundation details, oil and water drains, air intake and exhaust arrangement, etc.;

3. Complete schematic and wiring diagrams of the electrical systems;

4. One set of instruction manuals which shall cover the following aspects:
   a. Data Sheet which shall include the basic technical data appertaining to the engine, alternator, battery, etc.;
   b. Description which shall give a brief description of the equipment supplied including instrumentation, lifting arrangement, operation of control circuitry, etc.;
   c. Installation which shall state the basic principles to be observed when installing the plant;
   d. Commissioning;
   e. Operating Instructions which shall cover starting, stopping, protective circuits, automatic controls, battery charging, etc. method of adjustment, safety precaution requirements and performance parameters including the relevant nominal values and acceptable limits, etc. shall be detailed;
   f. Maintenance Instructions, which shall include the schedules for maintenance and the maintenance procedures for servicing, major overhaul and corrective maintenance. This section shall also give the guidance with respect to selection of fuel oil, lubricating oil, use of water treatment additives and anti-freeze as necessary;
   g. Fault finding guidance;
   h. Spares ordering information which shall give details of each item of plant and ancillaries including the name and address of the manufacturer and type and model serial number, etc..

ELE29.15.030.8 ADDITIONAL COPIES
Subject to the Approval of the above information submitted, the Sub-contractor shall supply the Contract Manager with a further three sets of all the information required above except item in ELE29.13, bound in durable hard covers.
ELE29.15.040.8 PRE SHIPMENT TEST EVIDENCE

The Sub-contractor shall submit, in triplicate, before shipment, test certificates for all plant, equipment and major components of the generating set.

ELE29.15.060.8 DISPLAY OF INSTRUCTIONS AND SCHEMATIC WIRING DIAGRAM

1. Detailed instructions for operation, manual testing and shut down of the generating set and the schematic wiring diagram shall be clearly displayed in a separate anodised aluminium frame with transparent plastic front plate of 3 mm minimum thickness and wooden backing board of 5 mm minimum thickness adjacent to the control panel in each generator room;

2. A warning sign shall be provided with a prominent red notice on white ground, of durable material, with a size of not less than 300 x 300 mm inscribed in English and Chinese characters as follows:

```
DANGER 危險
THIS GENERATING SET IS AUTOMATICALLY CONTROLLED AND MAY START WITHOUT WARNING
此發電機組乃自動操作並會隨時起動
```

Lettering shall be at least 25 mm high. The notice shall be displayed adjacent to each generating set.
ELE29.16 ACCEPTANCE TESTING AND COMMISSIONING

ELE29.16.010.8 TESTING STANDARDS

1. The generating set shall be tested and maintained in accordance with this Section, the F.S. Code of Practice, the relevant F.S.D. circular letters and the standard forms for commissioning tests and routine monthly tests prepared by the Housing Department;

2. The engine shall be tested in accordance with ISO 3046-1, ISO 3046-3 and ISO 15550 and the alternator shall be tested in accordance with IEC 60034-1 and IEC 60034-2-1. The test report shall consist of measurements in ISO 15550 Table 6 - List A, items A1 – barometric pressure, humidity and ambient temperature, A2 – engine speed or cycle frequency & A5 – fuel consumption only and in Table 7 - List B – brake power and specific fuel consumption and IEC 60034-1 – basic tests or routine check tests. The results of earlier basic tests on a similar machine shall be provided to the satisfaction of Contract Manager upon request.

ELE29.16.020.A FACTORY TESTING

1. The assembled generating set shall be conducted with a factory acceptance test (FAT) at the place of manufacture according to the acceptance test requirement of ISO 8528-6, before despatch. The tests shall also comprise insulation resistance tests, starting load acceptance capability test, voltage dip test, starting system test, fuel consumption test and full connected load test. Certified records of the above full operation tests and the manufacturers’ test reports of engine and alternator at time of delivery to factory for assembly shall be submitted to the Contract Manager before installation of the set;

2. The Sub-contractor shall directly employ an independent Generator Inspection Body (GIB) to witness the FAT at the place of assembling generating set. The GIB shall be one of the following:

a. an organisation / company listed under Hong Kong Inspection Body Accreditation Scheme (HKIAS) operated by the Hong Kong Accreditation Service (HKAS) or an inspection body recognized by the country where the generator set is assembled and recognized by HKAS under Mutual Recognition Arrangement (MRA); or

b. an organisation / company listed under Hong Kong Certification Body Accreditation Scheme (HKCAS) operated by the Hong Kong Accreditation Service (HKAS) or an accreditation body recognized by the country where the generator set is assembled and recognized by HKAS under Multilateral Recognition Arrangement (MLA); or

c. a consultant company listed under the Architectural and Associated Consultants Selection Board's (AACS) List of Building Services Engineering Consultants.

3. The selected GIB shall appoint a competent person (CP) to witness the FAT. The CP shall possess the following qualifications as minimum:

a. The CP shall possess not less than 10 years’ experience in conducting testing and commissioning for electrical installations;

b. The CP shall also be a direct employee of the GIB for the past consecutive 6 months at the time of witness; and
c. The proof of qualifications of the CP together with evidences to support the compliance with this clause shall be submitted to CM's approval. The Sub-contractor shall obtain CM’s approval for the proposed GIB and CP before conducting the FAT.

4. The GIB shall witness every FAT of all the generator sets supplied under the Sub-contract. The generator manufacturer shall prepare and submit the test report to the CM for approval;

5. The GIB shall ensure every single test result of the FAT, including those in failed attempts, be properly and accurately recorded in the FAT test report prepared by the generator manufacturer. The GIB, upon completion of the FAT, shall sign on each item of the test report as a witness. The completed test report shall be submitted to the CM before dispatch of generator set from factory;

6. The Sub-contractor and the generating set manufacturer shall declare no conflict of interest with the GIB and the CP;

7. The Sub-contractor shall bear all costs and expenses including transportation, accommodation, etc. in relation to the appointment of the GIB and the CP;

8. The Sub-contractor shall seek CM’s approval if there is any subsequent change of the GIB or the CP during the course of services.

ELE29.16.030.8 SCOPE OF TESTING

When the installation is completed, commissioning of the installation and performance tests shall be carried out for all equipment's and systems at site and witnessed by an authorised representative of the Contract Manager. The on-site tests shall include insulation resistance test, electrical circuit protection test, control function test, load acceptance capability test, dummy load test, on-load test, noise & vibration test and phase sequence test.

ELE29.16.040.8 TESTING OPERATIONS

The acceptance testing shall include the satisfactory operation of the following:

1. The normal supply shall be switched off in order to start the generating set;

2. When the generating set is ready to accept the Fire Services Installation load, each fire service installation shall be switched on until all installations are in operating conditions. A "simultaneous running" test shall then take place and shall last for a continuous period of one hour;

3. After one hour of testing the generating set shall be examined and all instruments, safety devices, etc. shall indicate "normal” running of the generator;

4. Noise measurement shall be made during the test to ascertain that the noise level emitted during the period of generator operation shall not exceed the limits imposed by Environmental Protection Department and in accordance with the Noise Control Ordinance.

ELE29.16.050.8 LABOUR AND MATERIALS

The Sub-contractor shall provide all labour, apparatus, instruments, tools, fuel, water, lubricants, cable connections etc. required for the testing and commissioning and shall fill up the fuel tank after testing to ensure that the set is in proper order prior to the handover of the installation to the Contract Manager.

ELE29.16.060.8 ACCURACY OF INSTRUMENTS

1. All instruments required for testing of the installation shall be supplied by the Sub-contractor;
2. The instruments used shall be of accurate type and calibrated;

3. The Sub-contractor may be required to produce calibration records and to verify the declared accuracy;

4. The Contract Manager may reject any instrument which, in his opinion, is not suitable for the test and the Sub-contractor shall replace the instruments when required.
ELE29.17 MAINTENANCE AND FINAL TESTING

ELE29.17.010.8 ROUTINE MAINTENANCE

Routine maintenance work shall include:

1. Regular monthly visits to inspect, clean, lubricate and necessary adjustments to maintain optimum operating conditions;

2. All repairs and replacements necessary to maintain optimum operating conditions;

3. Immediate answering of all emergency calls both during and out of working hours, and attendance at site within one (1) hours after receiving emergency calls from any place other than the outlying islands (Note: With the opening of the North Lantau Expressway, Lantau Island is not considered as an Outlying Island if it can be accessed by vehicle.) and within two (2) hours from receipt of such calls from outlying islands;

4. Recording all site attendances, on arrival and departure, whether regular service visit or emergency breakdown call, together with details of the work carried out, in the Emergency Generator record book held at the estate office. Note comments inserted in the record book and take suitable action accordingly;

5. On-load testing all sets once monthly for a period of not less than 30 minutes as below:
   a. Coordinate with the Building Management in advance and take every necessary step to ensure the testing can be carried out effectively with minimum disturbance to the tenants;
   b. Obtain necessary keys such as those of the generator rooms, switch rooms, and lift machine room, etc. from the estate office and have them returned after use;
   c. Before changing over the essential load to the generating set supply, discharge all passengers from all lifts including the fireman's lifts. During the changing over operation, ensure that no passenger is using any of the lifts. However, such lifts shall be in normal operation during the on-load testing of generating set;
   d. Simulate the normal supply failure by switching off the normal supply switches at the upstream of the changeover contactors of the essential supply at the main switch cubicle and of the fireman's lift supply inside the lift machine room. The generating set shall be automatically started up to supply the essential load of fireman's lifts and essential lighting and power. After testing, the electrical system shall be switched back to normal condition.

6. During this on-load testing period, all operating conditions shall be checked and recorded. Following the on-load testing, functional tests shall be carried out on all automatic and manual starting devices and safety controls. The monthly running and functioning tests shall be in accordance with the F.S. Code of Practice;
7. Annual on-load testing shall be performed on all generating set once every 12-months. During the testing, all connected load, including fireman's lifts, essential lighting and power and other fire services installations shall be operated on the generator set supply for a period of not less than 30 minutes. The procedures as stated in (1) to (6) above shall be followed. The Sub-contractor shall coordinate with the Main contractor in advance to arrange annual on-load testing together with F.S. & Water Pump Sub-contractor for on-load running of the fire services installation. The testing shall be in accordance with the requirement as stipulated in the Fire Services COP.

**ELE29.17.020.8  MANUFACTURERS RECOMMENDATIONS**

1. The Sub-contractor shall also provide the following maintenance as recommended by the manufacturer and to the satisfaction of the Contract Manager:
   a. Necessary maintenance for period longer than one month;
   b. Necessary maintenance on an hour run basis.

2. Fully detailed maintenance and testing instructions shall be provided in a permanent form adjacent to the sets.

**ELE29.17.030.8  MAINTENANCE OF BATTERIES**

Care and maintenance, if necessary, of any batteries shall be based on the relevant Standard but shall incorporate the manufacturer's specific recommendations for operation under Hong Kong conditions.

**ELE29.17.040.8  PROVISION AND COMPLETION OF LOG BOOK**

A log book shall be provided, be retained in the generator room and be kept up to date, recording, at the time of occurrence, all operations, faults occurrences and corrective actions taken, routine servicing, maintenance and periodic operation, etc. including dates, times, hour meter readings, worker/supervisors names and signatures, etc. for the set, batteries, compressors, etc.

**ELE29.17.050.8  FINAL TESTING**

At the end of the Maintenance Period the Sub-contractor shall repeat the tests including the insulation resistance test, electrical circuit protection test, control function test and the annual on-load test to the satisfaction of the Contract Manager.

**ELE29.17.060.8  LABOUR AND MATERIALS**

The Sub-contractor shall provide all labour, apparatus, instruments, tools, fuel, water, lubricants, fuses, lamps etc., during maintenance and final testing to ensure that the set is in proper order after each operation during the Maintenance Period including filling fuel tanks after each testing.

ELE30.1 TESTING

ELE30.1.010.8 GENERAL

1. Inspection and testing shall be carried out on all new installations and alterations to an existing installation in accordance with the requirements of this Section;

2. During the construction stage, the Sub-contractor shall submit test report for conduit continuity test executed prior to concreting of the concealed steel conduit work as specified in the ELE11.3.010;

3. The Sub-contractor shall be responsible for the electrical conductivity testing on samples of aluminium window frames submitted by Main Contractor on Site;

4. The Sub-contractor shall ensure the bonding for extraneous conductive parts is sound and the result complies with the Electrical CoP and BS 7671 by proper measurement with records at good time. For those parts for equipotential bonding system found not electrical conductive, the Main Contractor and the Sub-contractor shall be responsible for rectification of their own works at early as possible;

5. Upon the completion of the sample flats and the sample wing, the Sub-contractor shall carry out the equipotential bonding test to extraneous conductive parts as directed by Contract Manager and to his satisfaction. Test results shall be submitted to the Contract Manager for record purposes;

6. The whole installation shall be tested on completion by the Sub-contractor in compliance with the relevant clauses in this Section. In particular, the earth fault loop impedance shall be tested when the permanent electricity supply is available. The test reports, which shall be verified and endorsed by the Supervising Engineer and registered electrical worker of appropriate grade in accordance with ELE1.8.020, together with the Inspection and Completion Certificates as prescribed in the Electrical CoP for the whole installation shall be submitted to the Contract Manager for Approval before acceptance of the installation;

7. The Sub-contractor shall take account of the accuracy of the instruments when verifying the compliance of the installation. Appropriate safety margin shall be achieved on Site to ensure that the safe and proper functioning of the installation is within the specified safety and performance limits.

ELE30.1.020.8 INSTRUMENTS

1. In addition to PRE.BS1.630 which specifies the provision of a set of measuring instruments for BSPASS and Contract Manager's Representatives' use, which will be under the custody of the CMR, the Sub-contractor shall provide all necessary instruments used for measurement and testing of the installation. The instruments shall be capable of carrying out the measurement and testing with the necessary accuracy. Except for dummy resistive load bank given in sub-clause (1)(r) below, the instruments shall be calibrated with traceability to internationally or nationally recognized standards. Each instrument shall carry an indelible identification and, except where calibration is specified not necessary, be attached with a label showing the due date for calibration. The instruments shall include, but are not limited to, the following:
   a. Low resistance ohmmeter;
   b. Insulation resistance tester;
   c. Earth-fault loop impedance tester;
   d. Earth electrode resistance tester;
e. RCCB tester;
f. Voltmeter;
g. Clamp-on ammeter;
h. Measuring tape;
i. Vernier calliper;
j. Frequency meter;
k. Sound Level Meter;
l. Lux meter;
m. Luminance meter;
n. Equipment for measurement of total harmonic distortion;
o. Multi-function electronic meter for measurement of current, voltage, power factor, kW, kVA, kVAr and KWh;
p. Primary current injection tester;
q. Secondary current injection tester;
r. Phase sequence tester / meter;
s. Dummy resistive load bank;
t. Digital stop watch;
u. Thermometer;
v. Pressure gauge.

2. Upon request by the Contract Manager, the Sub-contractor shall submit calibration certificates or other evidence of calibration and records of calibration results for inspection. The Contract Manager may reject any instrument(s) which in his opinion are not suitable for the measurement or testing, and the Sub-contractor shall replace them with Approved types immediately when required.

ELE30.1.030.8 VISUAL INSPECTION
A visual inspection should be made to verify the electrical equipment as installed is correctly selected, erected and there is no apparent damage. The visual inspection should include a check on items as stipulated in the Electrical CoP Code 21A.

ELE30.1.040.8 TESTING SEQUENCE
Where relevant, the following items are to be tested preferably in the sequence indicated below:

1. Continuity of protective conductors, including main and supplementary equipotential bonding;
2. Continuity of ring final circuit conductors;
3. Insulation resistance;
4. Polarity;
5. Earth electrode resistance;
6. Earth fault loop impedance;
7. Functions of all protective devices;
8. Functions of all items of equipment.
ELE30.1.045.8 TESTING ARRANGEMENTS

1. The details and arrangements for each of the aforesaid tests shall refer to relevant clauses stipulated in Code 21B of the Electrical CoP;

2. In the event of any test indicating failure to comply, that test and those preceding, the results of which may have been influenced by the fault indicated, shall be repeated after the fault has been rectified.

ELE30.1.160.8 RECORDING OF TEST RESULTS

The test results of electrical work shall be recorded in the format be approved by CM. The test reports, together with Work Completion Certificates shall be certified by registered electrical worker of appropriate grade and registered electrical contractor, as prescribed in the Electrical CoP for the whole installation shall be submitted before acceptance of the installation.

ELE30.1.170.8 LIGHTNING PROTECTION SYSTEM

Every lightning protection system shall be tested in accordance with ELE14.

ELE30.1.180.A FIRE SERVICE (F.S.) INSTALLATION

1. All plants, equipment and systems included in the scope of the Sub-contract and classified as fire services installations under F.S. Regulations/Code of Practices shall be installed, tested, certified and maintained in accordance with the relevant F.S. Regulations/Fire Services COP. The fire services installations included in the scope of the Sub-contract shall consist of, but are not limited to, the following:
   a. Emergency Lighting;
   b. Exit Signs and Directional Signs;
   c. Emergency Generator;
   d. Ventilation/air conditioning control system (as shown on the Drawings or Specifications).

2. The emergency lighting shall include all essential lighting points along the escape route within the building such as lift lobbies, staircase, corridor, etc. and self-contained emergency lighting inside the switch/service/plant rooms, non-domestic premises etc. as shown on the Drawings;

3. For the F.S. installations mentioned above, the Sub-contractor shall produce Completion Certificates (i.e. FSI/501a) upon completion of installation and Maintenance Certificates (FS 251) at the end of the Maintenance Period in accordance with F.S. Regulations/Fire Services COP. These certificates shall be duly signed by an appropriate Registered F.S. Contractor. The Maintenance Certificate shall be submitted to FSD and copied to the Contract Manager within 14 days after a final acceptance test has been carried out. The Maintenance Certificate together with a list of fire services installation and equipment shall also be copied, framed and displayed in a prominent area of each building concerned under the direction of the Contract Manager.

ELE30.1.190.8 EMERGENCY GENERATOR INSTALLATION

Testing, commissioning and maintenance of the standby diesel generating sets shall be carried out as specified in ELE29.
ELE30.2 MAINTENANCE

ELE30.2.010.8 24-HOUR ON-CALL SERVICE DURING MAINTENANCE PERIOD

1. The Sub-contractor shall provide 24-hour on-call service at any time during the Maintenance Period;

2. The Contract Manager may instruct the Sub-contractor, in the Maintenance period via telephone, mobile phone, paging service or any other means as advised by the Sub-contractor and Approved by the Contract Manager, to attend to reported breakdowns, and the Sub-contractor shall dispatch competent technicians or such other suitable personnel, who shall arrive at site, carry out any necessary inspection, testing and repair work for service resumption within the time stipulated under the Performance Pledge of the Employer as listed below and under all weather conditions. In the event that it being impossible to perform the requirement as stipulated in the Performance Pledge, the Sub-contractor shall explain immediately to the Contract Manager or his or her representatives the reason for such non-conformance;

Performance Pledge of the Employer

<table>
<thead>
<tr>
<th>Description</th>
<th>Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Arrival for maintenance during office hours</td>
<td>Within 1 hour</td>
</tr>
<tr>
<td>Arrival for maintenance after office hours</td>
<td>Within 2 hours</td>
</tr>
<tr>
<td>Resumption of power supply</td>
<td>Within 8 hours after inspection for power interruption that affects more than one domestic flat and/or the common areas of the domestic block</td>
</tr>
</tbody>
</table>

3. The Sub-contractor shall submit to the Contract Manager, for this purpose, at least two names of English speaking representatives, who can be reached at any time of the day, with contact telephone numbers of direct lines, mobile phones or paging service for Approval;

4. Prior Approval shall also be obtained for any subsequent changes of representatives, contact telephone numbers, etc., during the Maintenance Period at least two weeks before the change is effected;

5. The maintenance and servicing works, as described above, form part of the Main Works described in Clause 8.3(2)(c) of the General Conditions of Main Contract.

ELE30.2.020.8 SUB-CONTRACTORS OBLIGATIONS

During the Maintenance Period, the Sub-contractor shall attend to all faults and complaints, remedy all defects, replace all malfunctioning items and maintain the complete installation in a clean, tidy and functional condition to the satisfaction of the Contract Manager unless otherwise specified.

ELE30.2.030.8 REPLACEMENT OF DEFECTIVE BULBS / TUBES / FUSES

1. For all domestic buildings during the Maintenance Period, the defective lamp bulbs / fluorescent tubes and fuses shall be replaced by others;

2. For all other non-domestic buildings during the Maintenance Period, the defective lamp bulbs / fluorescent tubes and fuses shall be replaced by the Sub-contractor;
3. In all cases, the Sub-contractor shall replace defective lamps within their life expectancy as specified in the Contract.

ELE30.2.040.8 EMERGENCIES
If any work is, in the opinion of the Contract Manager, required to avoid danger or to restore supply and the Sub-contractor is not available immediately and/or fails to arrive on site within the time required, the Contract Manager may instruct any other contractor, workman or person to carry out the work immediately and the responsibility of the Sub-contractor to fulfil the contractual obligations shall not be relieved under such circumstances, in which case the Sub-contractor shall be liable for all the cost incurred as if such work has to be carried out by the Sub-contractor.

ELE30.2.050.8 ELECTRICITY SHUT-DOWN
Should shut-down of electricity to buildings be required for the execution of the work, the duration should be kept to a minimum and prior agreement of the Contract Manager shall be sought except for emergency operation.

ELE30.2.060.8 PREVENTIVE MAINTENANCE
At the end of the Maintenance Period, the Sub-contractor shall execute all work of inspection, examination, and overhaul as required, to the complete installation, other than the installation inside domestic flats, to the complete satisfaction of the Contract Manager.

ELE30.2.070.8 REPAIR, CORRECTIVE AND POST-FAULT MAINTENANCE
1. The Sub-contractor shall carry out all repair, corrective and post-fault maintenance as soon as practicable after receiving instruction from the Contract Manager;
2. Such work shall be carried out by the Sub-contractor at his own cost if the necessity for the work shall, in the opinion of the Contract Manager, be due to the use of materials or workmanship not in accordance with the contract, or due to failure on the part of the Sub-contractor to comply with any obligation expressed or implied in the Contract;
3. If, in the opinion of the Contract Manager, the necessity of such work is due to other causes for which the Sub-contractor is not responsible, the value of the work will be ascertained by the Contract Manager and paid for;
4. Post-fault maintenance of switching devices, distribution boards and switchboards shall be carried out in accordance with BS 6423.

ELE30.2.080.8 FINAL INSPECTION
1. At the end of the Maintenance Period, the Sub-contractor shall carry out the visual inspection of the whole electrical system except the installations inside the domestic flats, and shall submit the inspection reports to the Contract Manager for record;
2. Should the inspection results indicate that the equipment or system not in full compliance with this specification, the Sub-contractor shall carry out, at his own expense, any alterations, replacements, or adjustment, as may be required to correct the faulty work;
3. The Contract Manager's decision as to what constitutes a satisfactory inspection shall be final.

ELE31.2 EQUIPMENT & MATERIALS

ELE31.2.010.8 VENTILATION FANS

1. This section should be read in conjunction with Section B3 and C3 of the General AC Specification;

2. Fan capacities, heads, working pressures, minimum efficiencies and motor powers indicated are for reference and tendering purposes only. Any modifications to the system or any of its components such as fans, ductwork, motors, cables, switchgear etc. which may be required to meet the scheduled duties and space limitations shall be carried out at the Sub-contractor's expenses, except where modification is brought about by the written instruction of the Contract Manager. Notwithstanding this, no modification to any system shall be carried out where such modification may result in a reduction in system performance and efficiency, without the prior approval of the Contract Manager;

3. Sound power rating curves shall be certified by the manufacturer for the complete fan and drive assemblies and tested in accordance with BS EN ISO 5136 or Parts 1 to 4 of BS ISO 13347 or other equivalent standard;

4. The Sub-contractor shall be responsible for checking the actual data before ordering of equipment. It shall be supported with full fan duty calculations.

ELE31.2.020.8 DUCTWORK

1. General:
   a. Ductwork shall generally comply with Section B2 and C2 of the General AC Specification;
   b. Duct sizes given on the Drawings are clear internal dimensions and allowance shall be made for both internal and external insulation where applicable;
   c. All ductwork shall be fabricated as far as practicable according to site dimensions taken by the Sub-contractor. The Sub-contractor shall make suitable provision to accommodate any discrepancies that may occur between the Drawings and site dimensions. The Sub-contractor shall also note the obligations pertaining to coordination of services on site;
   d. The air leakage limit on ductwork shall conform and be tested to the requirements as stipulated in the AC Energy Code;
   e. This Specification and the Drawings only indicate the extent and general arrangement of the ducting system. If any departure from the Drawings is deemed necessary, details of such departure and reasons shall be submitted by the Sub-contractor to the CM for approval. Approved departures shall be made at no extra cost. Preferential changes arising from the Sub-contractor's processing and/or fabrication methods where approved shall be made at no extra cost.

2. Material:

   Unless otherwise specified on the Drawings or elsewhere in this Specification, air ducts shall be fabricated from hot dipped galvanised steel sheet to BS EN 10327 and any damage to the galvanised finish shall be made good with three coats of aluminium zinc rich paint or other approved corrosion resistant paint to the satisfaction of the CM in addition to painting as specified. Uninsulated ductwork running exposed to view shall be painted as specified in relevant sections of the General AC Specification and in white or another colour as directed by the CM.
3. Construction and standard:
   a. All sheet metal ductwork described in this part of Specification and shown on the Drawings shall be constructed to the recommendation of the United Kingdom Heating and Ventilating Contractors Association in the latest editions of their Publication DW/144 and the additional requirements of this part of Specification;
   b. Circular and flat-oval ductwork shall be spirally-wound and shall be suitable for medium pressure applications;
   c. Pressure rating of rectangular ductwork shall be classified as per DW/144 according to the associated fan duty or as specified in other parts of this Specification;
   d. Where ductwork passes through or connects to concrete and / or masonry walls and air shafts, ducts shall be collar flushed with metal angle flushing pieces, effectively sealed air tight and neatly finished. The annular space around the duct shall be caulked tight with approved gasket or sealant;
   e. Flanged joints shall be provided for duct connections to plants and where removable sections are required to provide access for cleaning and maintenance;
   f. Where duct bends or joints occur in ceiling spaces and flanges may foul ceiling suspension members, slip joints may be used and the duct stiffened locally, if necessary, to avoid duct vibration;
   g. Test holes shall be provided where necessary for effective balancing and testing. Test holes shall be 25 mm diameter and fitted with removable sealed cap. Test points shall be provided for all dampers and equipment to enable fan duties and other items to be assessed and for commissioning of the system. Location of test holes shall be at a point of minimum turbulence;
   h. Regulating dampers or split dampers shall be provided in every branch-off;
   i. All intake and discharge openings to the building shall be fitted with 10 mm grid stainless steel wire mesh. This requirement is additional to any grilles or louvres indicated on the Drawings;
   j. Open ends of ducts shall be covered with plastic sheets during erection to prevent ingress of dirt and rubbish. All ductwork shall be cleaned internally before the system is tested, commissioned and put into operation;
   k. Side inspection and access panels for the purpose of cleaning duct interior shall be provided. The cleaning point shall in general be installed at a maximum distance of 4 metres between centres in fully accessible locations and subject to CM's approval. Stainless steel drain points complete with plugs and caps shall be provided at all low points of the air ducts.

ELE31.2.030.8 DUCTWORK ACCESSORIES

1. General:

Ductwork accessories shall generally comply with Section B2 and C2 of the General AC Specification.

2. Volume control dampers:

The Sub-contractors shall provide all necessary volume control dampers whether shown on the Drawings or not so that airflow rates specified can fully be achieved. Ductwork regulating dampers shall be of the opposed blade type with low pressure drop and noise regeneration characteristics.

3. Access doors and panels:
a. Access doors shall be hinged type and of double skin sandwich construction each having a cam-lock action retaining lock and complete with gaskets. Multiple screw fixings shall not be acceptable. Access openings shall be adequately reinforced. Insulation thickness in the door shall be equal to that of the duct or cabinet into which it is installed;

b. Access doors shall not be removable unless no larger than 300 mm x 300 mm or essential for access or maintenance purpose, in which case approval shall be sought from the Contract Manager;

c. Access doors shall be provided at all fire/smoke dampers, silencers, fans, duct probe type smoke detectors and where necessary for maintenance and other purposes whether or not they are specifically shown on the Drawings.

4. Turning vanes:
Wherever DW/144 requires the use of bend splitters, proprietary tuning vanes and square bends shall be provided whether detailed on the Drawings or not. Turning vanes shall be of aerofoil using proprietary vane rails.

**ELE31.2.040.8 GRILLES AND DIFFUSERS**

1. This section shall be read in conjunction with Section B3 and C3 of the General AC Specification;

2. All air supply, return, exhaust and dummy fittings shall be provided according to the types and duties shown on the Drawings;

3. All aluminium or steel louvres, grilles, diffusers, unless otherwise stated, shall have phosphate treatment with baked enamel finish to colours approved by the Contract Manager;

4. Before any diffusers, grilles, etc. are ordered or manufacture of fittings commences, confirmation must be obtained from the Contract Manager in respect of the exact finishes of fittings required. Samples of every type of grilles, diffusers, etc. shall be submitted to the Contract Manager for approval before orders are placed;

5. Supply grilles and diffusers shall be of aluminium construction with concealed fixings and shall incorporate rear opposed blade volume control damper with front accessible adjustment screw. Grilles shall have horizontal and vertical adjustable blades to suit the particular application;

6. Exhaust/return grilles shall be of aluminium construction with concealed fixings and square neck connection as indicated on the Drawings. The vanes shall be of extruded aluminium sections fixed at an inclined angle of 45 degrees. An opposed blade damper with front accessible adjustment screw shall be fitted to the neck for volume control.

**ELE31.2.050.8 FILTERS**

1. Filters shall in general comply with Section B1 and C1 of the General AC Specification;

2. Filter media shall be of FSD approved type;

3. Washable panel filter shall have the minimum efficiency reporting value (MERV) by ANSI/ASHRAE Standard 52.2 and initial resistance at 2.5 m/s face velocity as shown below. The filter shall operate to a final resistance of 150, 100 or 75 Pa for 50, 25 or 12.5 mm thick panels respectively.

<table>
<thead>
<tr>
<th>Thickness</th>
<th>MERV Not Less Than</th>
<th>Initial Resistance Not Exceeding</th>

</table>

Specification Library 2018 Edition (Batch 2)
ELE31.2 ACTIVATED CARBON/CHEMICAL FILTERS (FOR REFUSE COLLECTION POINT/JUNK COLLECTION POINT, REFUSE STORAGE & MATERIAL RECOVERY CHAMBERS AND REFUSE CHUTES)

1. General:
   a. The activated carbon/chemical filters shall be Underwriters Laboratories (UL) Class 1 listed and FSD approved;
   b. The filter unit shall consist of housing, modules and filtering media. The complete unit shall be manufactured by the same manufacturer with well-proven experience in construction of similar filter units;
   c. All filtering media shall be recognised by FSD as complying with the non-combustible requirement;
   d. Four sets of spare module with filtering media and pre-filter shall also be provided at completion stage.

2. Housing:
   a. Housing shall be constructed of AISI type 304 stainless steel sheet. Extruded luminous filter slide tracks shall be bolted to vertical formed channel supports at 610 mm intervals across the width of the housing;
   b. Filter tracks shall include nylon pile seal to match with the sealing face of all filters. Doors, on both sides, shall be hinged with stainless steel hinges and pins, and shall include permanently attached positive locking door latches. Gaskets shall be provided to prevent air leakage around doors and between the doors and the filters;
   c. Housing shall consist of two sections, first section for housing 50 mm pre-filters, second section for housing modules;
   d. The Sub-contractor is responsible for calculating the actual size of filter sections required for sizing of housing. The Sub-contractor shall also size the filter sections with face air velocity across the filter section not more than 2.5 m/s.

3. Modules:
   Modules shall be constructed of disposable paperboard or ABS (acrylo-nitrile butadiene styrene terpolymer) grade DFA-R thermoplastic. Modules shall have V-shape cross sections containing media. The modules shall be nominally 152 mm x 610 mm x 457 mm overall. Perforated plastic portion shall have 53% open area. Modules shall carry an Underwriters Laboratories (UL) Class 2 listing when filled with media. The modules shall be disposable, no separate handling of media to reduce the time of maintenance.

4. Filtering media:
   a. Media in the modules shall be mixture of 50% Medium A and 50% Medium B. Media should be able to absorb organic and inorganic gases;
   b. Medium A:

<table>

<td>3</td>
</tr>
</tbody>
</table>

Specification Library 2018 Edition (Batch 2)
i. Medium A shall consist of manufactured, generally spherical, porous pellets (nominal pellet diameter is 3 mm). Pellets shall be formed from a combination of powered activated alumina and other binders, suitably impregnated with potassium permanganate (minimum 4%) to provide optimum absorption and oxidation of a wide variety of gaseous contaminants. The potassium permanganate shall be applied during pellet formation, such that the pellet volume is totally available for reaction. The media shall be inorganic, non-toxic, non-flammable and shall not support bacterial or fungal growth;

ii. Medium shall meet the following removal capacities:
- Hydrogen sulphide: 8.0% minimum by weight
- Sulphur dioxide: 3.5% minimum by weight
- Nitric oxide: 2.5% minimum by weight
- Nitrogen dioxide: 1.0% minimum by weight

iii. Medium shall operate normally at temperature -20°C to 51°C with 10 to 95% R.H. Medium shall have a scrubbing efficiency of not less than 99.95% at air velocities of 0.3 to 2.5 m/s.

c. Medium B:

Medium B shall be manufactured from a combination of coconut shells, bituminous coal and contain elemental sulphur less than 0.005%. The hardness of medium shall be 97 determined by ASTM D3802-79. The absorptive capacity for carbon tetrachloride shall be minimum 50% according to ASTM D3467-04.

d. Amount of media provided in the modules shall be capable of removing offensive smell in the exhaust air such that replacement of media is required not more than once every six months.

5. Pre-filter:

a. Pre-filter shall be 50 mm thick washable panel type with average efficiency of 20% tested in accordance with ASHRAE 52.1 or ASHRAE 52.2. Pre-filter shall be of FSD approved type;

b. Air resistance when clean shall not exceed 80 Pa. Design final resistance shall be 150 Pa.

6. Replacement of Filters:

Dirty filters will be cleaned or replaced by others during the Maintenance Period.

ELE31.2.070.8 ACTIVATED CARBON/CHEMICAL FILTERS (FOR REFUSE STORAGE & MATERIAL RECOVERY ROOMS)

1. The activated carbon/chemical filters for refuse storage & material recovery rooms shall be 50 mm thick panel type with proven local job installation records and approved by the Contract Manager;

2. Filter shall be housed in the same galvanised steel cabinet that houses the exhaust fan or as otherwise specified. Filter track shall be provided to facilitate secure filter fixing and easy filter removal.
ELE31.3 SYSTEM REQUIREMENTS

ELE31.3.010.8 VENTILATION FAN CONTROL

1. Where a supply fan is specified in addition to an exhaust fan for a room, the operations of the two fans shall be interlocked;

2. Exhaust fans for refuse storage & material recovery rooms shall be group controlled by 24 hour time switches installed in a weatherproof enclosure in the refuse storage & material recovery chamber at ground floor as shown on the Drawings. The enclosure shall be constructed from minimum 1.5 mm thick sheet steel, rust proofed and epoxy powder painted or baked enamel finished for the inside and outside surfaces. The enclosure opening shall be rolled up with curled edges in order to stop water ingress slip into inner side of the panel. The front panel door shall be hinged permitting not less than 110 degree opening, inserted with a durable clear transparent panel sealed by rubber gaskets, and fitted with watertight handle. The edges of the door shall be fitted with neoprene rubber gaskets which at closing position, shall be tightly rested on the curled edges of the panel opening. The enclosure shall have an index of protection not less than IP42 to BS EN 60529 or IEC 60529;

3. For ventilation fans for refuse chute, refuse storage & material recovery chambers, pump rooms and lift machine rooms, the ventilation fan(s) in each room shall be operated by manual control and a 24 hour time switch;

4. In addition, thermal control device shall be used to control the ventilation fans in lift machine rooms and roof fresh water booster pump rooms;

5. A by-pass switch shall be provided for the manual control of each time switch;

6. The time switch shall be submitted for approval prior to installation;

7. Local control panels:
   a. Local control panels shall be provided for individual or each group of fans for refuse storage & material recovery chambers, refuse collection point and where specified;
   b. The whole enclosure of the local control panels shall be constructed from minimum 1.5 mm thick sheet steel, rust proofed and epoxy powder painted or baked enamel finished for all inside and outside surfaces. The panel opening shall be rolled up with curled edges in order to stop water ingress slip into inner side of the panel. The front panel shall be of double-door construction. The outer doors of the front panel shall be hinged permitting not less than 110 degree opening, inserted with a durable clear transparent panel sealed by rubber gaskets, and fitted with watertight handle. The edges of the outer doors shall be fitted with neoprene rubber gaskets which at closing position, shall be tightly rested on the curled edges of the panel opening. The inner doors of the front panel shall be hinged permitting not less than 90 degree opening and recessed in the panel with indication lights, selector switches, isolating switches etc. fitted on. The back sides of the inner panels shall be fitted with insulation boards to prevent direct exposure of live parts when opened. At closing position, the inner doors shall be fastened onto the panel by stainless steel screws. The panels shall be of a robust design, capable of withstanding the mechanical, electrical and thermal stresses under all working conditions including fault conditions. The enclosure shall have an index of protection not less than IP42 to BS EN 60529 or IEC 60529;
c. Panels shall include all necessary components and accessories to form a complete assembly. Components and accessories shall be firmly fixed in position in the panel and shall be assembled in such a way that it shall be possible to remove or replace any component parts and to carry out cable connections from the front;

d. Permanently engraved labels in both English and Chinese shall be provided on the panel for identifying each piece of instrument and equipment such as push buttons, signal lights etc.. The labels shall be engraved with white lettering on a black background. In addition to the aforesaid, each control panel shall have an identity label showing its designation as indicated on the Drawings;

e. Panels having equipment requiring three phase feed shall be complete with HRC fuses and individual on-load door interlocked isolators. Panels having equipment requiring only a single phase feed may be isolated by means of a switch mounted within the panel but in such circumstances every item inside shall be fully shrouded and the panel door shall be provided with barrel lock and keys. Alternatively, the Sub-contractor can propose alternative means of isolation, switching and/or emergency switching which satisfies safety requirements of users, occupants and maintenance personnel for approval by the Contract Manager;

f. Control panel for each refuse storage & material recovery chamber shall at least include the following operational features:
   i. Local start/stop push buttons and manual/off/auto switch;
   ii. Status and alarm indicating lamps (supply healthy, on, trip, overload, etc.);
   iii. Panel-mount time switch with a removable clear plastic front cover and its by-pass switch;
   iv. Isolating switch interlocked with the panel door, or isolating switch with door lock.

g. Control panel for each refuse collection point shall at least include the following operational features:
   i. Local start/stop push buttons;
   ii. Status and alarm indicating lamps (supply healthy, on, trip, overload, etc.);
   iii. Isolating switch interlocked with the panel door, or isolating switch with door lock.

h. The Sub-contractor shall submit full details of each type of control panel for approval before fabrication.

8. Motors under automatic control shall be provided with a warning notice, which shall be a prominent red notice on white background of durable material, displayed adjacent to each fan or each pair of fans, and inscribed in English letters and Chinese characters of at least 15 mm high as follows:

```
DANGER
THIS MOTOR IS AUTOMATICALLY CONTROLLED AND MAY START WITHOUT WARNING – ISOLATE BEFORE INSPECTION

危険
此機乃自動操作-維修前請先關掣
```

9. In each refuse storage & material recovery chamber, motorised shut-off dampers shall be provided to the intake air external louvres and interlocked with the exhaust fan operation as shown on Drawings;
10. In refuse collection point, a prominent notice of durable material shall be provided and inscribed in English and Chinese characters of at least 25 mm high as follows:

<table>
<thead>
<tr>
<th>PLEASE KEEP DOOR OPEN WHEN EXHAUST FAN IS IN OPERATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>抽氣扇運行時請保持房門開啟。</td>
</tr>
</tbody>
</table>

ELE31.3.020.8 EXTRACTION SYSTEM FOR VEHICLE EXHAUST

1. Extraction fan shall be of centrifugal type and shall meet the demands and duties for conveying vehicle exhaust gases. Construction shall be compatible with both petrol and diesel engine emissions and capable of withstanding high temperature (at least 125°C continuously) and corrosive nature of the exhaust gases. The induction motor to IP 44 shall be directly coupled to the fan and shall be designed to give long and continuous service;

2. The whole system shall be designed for use by heavy refuse collection vehicles of up to 24 tonnes gross vehicle weight with engine capacity of 15,000 c.c.;

3. The extraction unit shall be fitted with chained cap adaptors to suit the vehicles using the refuse collection point. The following accessories are to be provided:
   a. 12 m length of minimum 100 mm diameter crush proof metallic flexible hose;
   b. High and low point inlets to suit the overhead and under-chassis exhaust discharges of the vehicles;
   c. Exhaust funnels to fit tail pipe from 63.5 mm to 127 mm in diameter;
   d. Hose brackets, plugs and fitted kit as required.

4. Hose reel shall be of electric motor driven type with waterproof control panel at low level to the approval of the Contract Manager.

ELE31.3.030.8 NOISE AND VIBRATION CONTROL

1. General:
   a. The Sub-contractor shall supply and install noise and vibration control equipment to ventilation fans, ductwork silencers, flexible duct connections and acoustical enclosures to noise generated equipment where specified and where necessary;
   b. The Sub-contractor shall be responsible for checking and calculating the noise level generated by the ventilation equipment and providing suitable acoustic treatment to comply with the Noise Control Ordinance, requirements of Environmental Protection Department, the Drawings and General AC Specification. Such calculations shall be submitted to the Contract Manager for approval;
   c. All noise absorbing materials shall be inert, non-hygroscopic, verium proof and fire retardant. All materials installed outside building or uncovered shall be suitable for outdoor use;
   d. For evaluation of vibration standard and measuring techniques, BS ISO 3334 shall be applied;
   e. When ductwork or conduit crosses structural movement joints, flexible connection must be installed;
   f. The Sub-contractor shall be responsible for ensuring that all penetrations in walls, floors and ceilings provided for ducts, conduits, etc. are isolated and sealed around the penetrations. In all cases, masonry and other structure surrounding the plant shall not be in direct contact with the equipment;
g. The Sub-contractor shall be responsible for selecting vibration isolators, ductwork supports, ductwork acoustic insulation, silencers etc. where appropriate and taking into account the manufacturers' recommendations to ensure that the noise and vibration generated from the system could be effectively isolated in accordance with the requirements in Section B8 and C8 of the General AC Specification;

h. Suspended equipment shall be supported on Type “F” spring and double deflection neoprene hangers;

i. Flexible connectors shall also be provided at ductwork connections to the ventilation equipment and at all building movement joints.

2. Duct silenters/sound attenuators:
   a. Duct silencers/sound attenuators where shown on the drawings shall be provided for all ducted ventilation fans. Additional attenuators shall be provided where necessary to meet relevant statutory requirements;
   b. Duct silencers/sound attenuators shall be factory constructed and tested;
   c. The duct silencers/sound attenuators shall be selected in accordance with the requirements of the General AC specification. The maximum pressure drop across the selected silencer shall not exceed 50 Pa;
   d. All acoustic infill materials shall be inert, non-combustible, vermin proof, non-hygroscopic, wrapped in an acoustically transparent polyester membrane and sealed with polyester sealant to the approval of FSD;
   e. All attenuators shall be fitted with end plates and packed in sealed bags at factory prior to shipment.

3. Acoustic enclosures:
   a. The Sub-contractor shall supply and install ventilation fan acoustic enclosures where shown on the Drawings and where necessary to satisfy the noise criteria specified. The arrangement shall be submitted to the Contract Manager for approval prior to installation;
   b. Construction of the enclosures shall generally be in accordance with the General AC Specification. Enclosure panel thickness shall be as recommended by the acoustic specialist but not less than 25 mm. Access panel shall be provided so that all removable and serviceable parts can be accessed for maintenance;
   c. All acoustic infill materials shall be inert, non-combustible, vermin proof and non-hygroscopic. The infill shall be wrapped in an acoustically transparent polyester membrane and sealed with polyester sealant to the approval of FSD except where detachment of fibres into the air stream is prevented by solid double wall construction.

ELE31.3.040.8 TESTING AND COMMISSIONING

1. All tests shall be carried out in accordance with this Specification and the following documents where applicable:
   a. Section A9 of the General AC Specification;
   b. Testing and Commissioning Procedure for Air conditioning, Refrigeration, Ventilation and Central Monitoring & Control System Installation in Government Buildings of the Hong Kong Special Administrative Region published by Architectural Services Department, Hong Kong;
   c. Relevant CIBSE Commissioning Code;
   d. Relevant British Standard or British Standard Code of Practice.
2. All costs associated with the testing and commissioning procedures including materials, labour, instruments and provisions of all necessary test points shall be borne by the Sub-contractor. Such costs shall also include the cost of making good any defects arising out of such tests and having the work re-tested. In the case of off-site, all other incidental costs shall also be included;

3. Testing and commissioning shall also be required for all temporary works;

4. All tests shall be carried out to the satisfaction of the CM and shall be witnessed by the CM and/or his representative;

5. At least two months prior to the testing or commissioning of any system or process, the Sub-contractor shall furnish the following information to the CM for approval:
   a. Type of instrument to be used;
   b. Manufacture of instrument;
   c. Calibration methods for instrument;
   d. Operating instructions for instrument;
   e. Accuracy and tolerances of instrument;
   f. Proposed formats of testing and commissioning reports;
   g. Schedule and programme of testing and commissioning activities.

6. The Sub-contractor shall submit in triplicate the testing and commissioning reports/certificates for each system to the CM on work completion.

Specification Library 2018 Edition (Batch 2)  ELE33 /2
ELE33.1 SCOPE OF WORKS AND GENERAL REQUIREMENTS

ELE33.1.010.8 GENERAL

1. The works under this part of the Sub-contract shall include the whole of the materials and the labour as prescribed or as necessary for the design, supply and installation of the entire grid-connected photovoltaic system (hereinafter refer to as PV System) and training of personnel nominated by the Contract Manager. The photovoltaic (PV) modules shall be installed at the location(s) as shown on the Drawings or described hereafter;

2. The PV System shall include not only the plant and equipment shown on the Drawings or specified, but also include all the incidental sundry components, software and licences necessary for the complete execution of the works and for the proper operation and maintenance of the PV System;

3. The Sub-contractor shall employ a specialist contractor with proven experience in the design, installation and maintenance of PV system of a scale similar to that required by this Specification to carry out the works. Local qualified technical service team shall be available for maintenance and backup service after completion of works;

4. Manufacturers of major components of the PV System including PV modules and inverters shall be implementing quality and environmental management systems in accordance with ISO 9001 and ISO 14001 or other internationally recognized standards in the design, procurement and manufacturing processes.

ELE33.1.020.8 SCOPE OF WORK

The scope of works shall include:

1. Design, supply and installation of the PV System complete with PV modules as described in sub-clause (2) below, solar conversion systems, monitoring & management systems, interconnection & power distribution wirings and all other necessary equipment and accessories;

2. Provision of a total of _____kWp (rated at Standard Testing Conditions according to IEC 60904) mono-crystalline silicon PV modules at the following location(s) with respective capacities as shown inside brackets:
   a. Upper roof of Block __ (___kWp);
   b. ..............................................;
   c. ..............................................;
   d. ..............................................;
   e. ..............................................

3. Submission of schematic wiring diagrams of the PV System and all necessary equipment for the CM's approval. Shop drawings indicating the LED / LCD display panel construction details, sizes of PV modules, their mounting details, orientation, spacing and a calculation to demonstrate the monthly and annual power output profiles of the system shall be provided for the CM's approval before fabrication and installation;

4. Providing all necessary design drawings and technical data of the offered equipment including the synchronisation and de-coupling procedure of the PV System prior to installation;
5. Liaison with the power supply company for assessment and approval of the PV System design and equipment, and grid connection of the PV System. The Sub-contractor shall allow sufficient time in his programme for all necessary submissions and testing, and make modifications to the PV System as required by the power supply company before connection to the grid;

6. Payment of charges levied by the power supply company for the assessment of the PV System and connection to the grid;

7. Testing, commissioning and putting into operation, the PV System to the satisfaction of the CM;

8. Except general cleansing of photovoltaic modules, the Sub-contractor shall provide servicing and maintenance of all equipment of the PV System including regular calibration of sensors and measurement equipment as recommended by the manufacturers during the Maintenance Period. Temporary replacement shall be provided for sensors / equipment removed for off-site calibration;

9. Submission of monthly reports on PV System energy production to the power supply company and CM during the Maintenance Period, and half-yearly reports on system operation and performance to the CM as required in ELE33.6.020;

10. Provision of training to the CM's Representatives, estate management staff or other personnel as instructed by the CM for a total duration of six working days, on the testing & commissioning, operation and maintenance of the PV System. The training shall be conducted in three sessions, one before and one after commissioning of the PV System, and the remaining session shall be at the end of the Maintenance Period. Each training session shall be approved by the CM to cover any or all of the following topics:
   a. Testing & commissioning procedures;
   b. Operation and maintenance of the complete system including PV modules, solar conversion system (SCS), etc.;
   c. Use of all software programmes of the monitoring & management system(s) and SCS for daily operation and monitoring of the PV System and the analysis of data collected.

**ELE33.1.030.8 STANDARDS**

The International System of Units (SI) shall be used. The PV System shall be designed and installed in compliance with the Specification and the latest editions of the following standards and codes, including all latest amendments:

1. General Requirement for Electronic Contracts Specification No. ESG01 issued by the Electronics Division, Electrical and Mechanical Services Department;

2. Technical Guidelines on Grid Connection of Small-scale Renewable Energy Power Systems issued by the Electrical and Mechanical Services Department;

4. IEC 60891: Procedures for temperature and irradiance corrections to measured I-V characteristics of crystalline silicon photovoltaic devices;

5. IEC 60904-1: Photovoltaic devices Part 1: Measurement of photovoltaic current-voltage characteristics;

9. IEC 60904-5: Photovoltaic devices – Part 5: Determination of the equivalent cell temperature (ECT) of photovoltaic (PV) devices by the open-circuit voltage method;
10. IEC 60904-6: Photovoltaic devices – Part 6: Requirements for reference solar modules;
11. IEC 60904-7: Photovoltaic devices – Part 7: Computation of spectral mismatch error introduced in the testing of a photovoltaic device;
12. IEC 60904-8: Photovoltaic devices – Part 8: Measurement of spectral response of a photovoltaic (PV) device;
14. IEC 60904-10: Photovoltaic devices – Part 10: Methods of linearity measurement;
15. IEC 61173: Over-voltage protection for photovoltaic (PV) power generation systems – Guide;
16. IEC 61215: Crystalline silicon terrestrial photovoltaic (PV) modules – Design qualification and type approval;
17. IEC 61277: Terrestrial photovoltaic (PV) power generating systems – General and guide;
18. IEC 61345: UV test for photovoltaic (PV) modules;
20. IEC 61701: Salt mist corrosion testing of photovoltaic (PV) modules;
21. IEC 61721: Susceptibility of a photovoltaic (PV) module to accidental impact damage (resistance to impact test);
22. IEC 61724: Photovoltaic system performance monitoring – Guidelines for measurement, data exchange and analysis;
23. IEC 61725: Analytical expression for daily solar profiles;
24. IEC 61727: Photovoltaic (PV) systems – Characteristics of the utility interface;
25. IEC 61730-1: Photovoltaic (PV) module safety qualification Part 1: Requirements for construction
26. IEC 61730-2: Photovoltaic (PV) module safety qualification Part 2: Requirements for testing
27. IEC 61829: Crystalline silicon photovoltaic (PV) array – On-site measurement of I-V characteristics;
28. IEC/TR2 61836: Solar photovoltaic energy systems – Terms and symbols;
29. IEC 62116: Testing procedure – Islanding prevention measures for power conditioners used in grid connected photovoltaic (PV) power generation systems;
30. IEEE 519: Recommended practices and requirements for harmonic control in electrical power systems;
31. IEEE 928: Recommended criteria for terrestrial PV power systems;
32. IEEE 929: Recommended practice for utility interface of residential and intermediate PV systems;
33. IEEE 1374: Guide for terrestrial photovoltaic power system safety;
34. IEEE P1547: Distributed resources interconnected with electric power systems;
35. UL1703: Flat-plate photovoltaic modules and panels;
36. UL 1741: Static inverters and charge controllers for use in PV power systems;
37. VDEW Guideline for operating in-plant generating units in parallel with the power company's low voltage main.

ELE33.1.040.8 SUBMISSION FOR TENDER ASSESSMENT

The following information shall be submitted in the "Information to be Supplied by Tenderer" for tender assessment purpose:

1. Technical information of the proposed equipment for the PV System;
2. Schematic diagrams of the PV system;
3. A schedule of spare parts and tools required for servicing the installation after the expiry of the 2-year Maintenance Period;
4. The proposed specialist contractor for the design, supply, installation and maintenance of the PV System including his job references with details of system rating, installation completion dates, etc.

ELE33.1.050.8 INFORMATION TO BE SUBMITTED BEFORE INSTALLATION AND UPON COMPLETION

1. The Sub-contractor shall submit the following information for the Contract Manager's approval prior to the commencement of installation work on site:
   a. 3 copies of complete set of detailed shop drawings and calculation including the sizes and types of the proposed PV modules, mounting details, connection diagram, heat dissipation of equipment and simulated monthly and annual power output profiles of the PV System taking into account any shadowing effect due to nearby modules/structures/buildings;
   b. 3 copies of shop drawings and specifications of the equipment/materials.
   c. 3 sets of method statement of installation;
   d. 3 copies of Manufacturer's Certificates of Origin, sensor / measurement equipment calibration certificates, test reports, reports for wind load withstanding capabilities of the PV modules and other relevant documents showing compliance with the Specification;
   e. 3 sets of draft certificates of product warranty specified in ELE33.2.030 & ELE33.3.030;
   f. 1 set of approved materials and accessories samples to be kept in the site office.
2. The Sub-contractor shall submit the PV System design and equipment for approval by the power supply company and shall program the submissions in such way as to allow sufficient time for both the power supply company and the Contract Manager to check and approve the design and equipment before installation;
3. The Sub-contractor shall submit upon completion of installation work on site:
   a. 2 sets of all equipment/system software in CD-ROMs or DVDs and relevant software licences;
   b. 3 sets of approved operation and maintenance manual including servicing and maintenance requirements recommended by equipment manufacturers, test reports with all equipment settings, name(s) of staff responsible for 24 hour on call service, schedule of spare parts and tools with indicative unit prices, etc. in both hard copy and electronic "pdf" format;
c. 3 sets of training manual in both hard copy and electronic "pdf" format.

**ELE33.1.060.8 ARCHITECTURAL REQUIREMENTS**

The design of the PV System shall take into consideration the various architectural characteristics including but not limited to the following:

1. The PV System shall be designed to fit into the designated areas with due regard for the visual appeal and green image;

2. The shapes, sizes, surface finishes and colours of the PV System elements, which constitute the main aesthetic characteristics of the PV System, shall be proposed by the Sub-contractor for approval by the Contract Manager.

**ELE33.1.070.A STRUCTURAL REQUIREMENTS**

1. The supports and holding frames for the PV modules shall be of hot-dip galvanized steel and fixed by stainless steel bolts and nuts with spring washers supplied and installed by the Sub-contractor who shall also be responsible for the corresponding calculations to demonstrate the structural adequacy. The structural calculations shall be endorsed by a Registered Structural Engineer employed by the Sub-contractor and be submitted for approval by the Contract Manager prior to installation of the PV System supports / holding frames;

2. The supports / holding frames shall be designed and installed in such a way that any of the PV modules can be replaced without the need of dismantling any structural member or adjacent module;

3. Flat concrete plinths shall be provided by the Main Contractor above structural beams/columns for fixing of the PV module supports / holding frames by the Sub-contractor. The Sub-contractor shall be responsible for providing relevant information to the Contract Manager for the design of the concrete plinths.
ELE33.2 PHOTOVOLTAIC MODULES AND DC SOURCE CIRCUITS

ELE33.2.010.A GENERAL REQUIREMENTS

1. The design and choice of photovoltaic (PV) modules and their mounting angle and/or direction shall be made in such way as to maximize the possible solar energy gain at their respective fixing locations;

2. The Sub-contractor shall design, supply and install PV modules, array combiners, circuit breakers, fuses, connectors, power cables, conduits, and other necessary equipment and accessories for integration with the solar conversion system(s) and monitoring & management system(s) to complete the PV System;

3. The Sub-contractor shall review the Drawings and conduct site visit to evaluate any possible shadowing effect due to nearby modules/structures/buildings, and to design the PV arrays and circuits in such way as to avoid/minimize interruption of power output from the PV strings due to shading between 9:00 a.m. and 3:00 p.m;

4. The PV arrays shall also be designed to avoid/minimize possible glare to occupants of nearby buildings;

5. The Sub-contractor shall submit for Approval his proposed lightning protection system to protect personnel and the PV System from lightning stroke and transient over-voltage;

6. Mounting holes on the PV modules shall be fully utilized for fixing the PV modules onto the supports and holding frames as recommended by the manufacturer using stainless steel bolts and nuts with spring washers. All mounting holes on the PV modules shall be of factory-made. Nevertheless, each PV module shall be fixed to the supports and holding frames by at least eight points. Should there be less than eight factory-made mounting holes on the PV module, additional panel fixing clamps shall be provided to ensure not less than eight points for fixing each PV module. The adoption of these fixing clamps should be endorsed by the manufacturer. The fixing method shall facilitate subsequent removal and reinstallation whenever necessary;

7. The Sub-contractor shall submit loading calculation (including wind load) endorsed by a Registered Structural Engineer to substantiate that the proposed PV module assembly (including the supports and holding frames, bolts and nuts with spring washers and fixing clamps for fixing PV module onto the supports and holding frames at the mounting points) can withstand any adverse weather conditions likely occurring in Hong Kong for CM’s approval as required in ELE33.1.070 & ELE33.2.020;

8. Manufacturer(s) of the offered PV modules shall have proven experience in the production of the respective products and have an annual production capacity of 25MW or above. Manufacturer(s) shall also be member(s) of the PV Cycle Association.

ELE33.2.020.A TECHNICAL REQUIREMENTS

1. Mono-crystalline silicon PV modules complying with the following requirements shall be provided:

   a. PV module shall consist of tempered / heat-strengthened glass panel with solar factor greater than 0.91, solar cells and back supporting sheet with proper binding agent;
b. The front glass panel of PV module shall be appropriately treated to ensure solar light reflection of not more than 4% as determined by ISO 9050. For locations where specified in the Drawings and/or where the PV modules will produce glare to nearby building occupants upon completion of works, the front glass panels shall be of textured surface;

c. PV cells shall be of dark colour with optimised surface treatment;

d. PV module shall be sealed to protect against ingress of moisture and to ensure UV stability and electrical isolation;

e. The solar conversion efficiency of PV module shall be not less than 14% at Standard Testing Conditions in accordance with IEC 61215 and with a power tolerance not exceeding ±3%;

f. The temperature coefficient for the power output of PV module shall not exceed –0.45% per °C.;

g. The guaranteed performance of PV module shall be not less than:
   i. 90% of the rated power output for the first 10 years;
   ii. 80% of the rated power output for the 11th to 25th year.

h. PV modules assembly (including the supports and holding frames, bolts and nuts with spring washers and fixing clamps for fixing PV module onto the supports and holding frames at the mounting points) shall be capable of withstanding the wind load at the location of installation, estimated according to the Code of Practice on Wind Effects in Hong Kong 2004 or the latest edition published by the Buildings Department;

   i. Testing for wind load withstanding capability of PV modules such as wind tunnel test etc., if required by the Buildings Department / ICU, shall be in accordance with relevant national/international standards;

   j. Wiring connection for PV modules shall be located at the back of each module and with factory assembled cable connector.

2. Exposed wiring cables shall be of low smoke zero halogen and UV resistant type complying with IEC 61034, IEC 60754 and EN-ISO 4892 or other relevant national/international standards, suitable for an operation temperature of up to 90°C and complete with weatherproof type prefabricated plug and socket cable connectors. Wiring cables in conduit or the like shall also be suitable for operation up to 90°C;

3. All array combiners / junction boxes to be installed in external areas shall be of weatherproof type to IP55 minimum and shall complete with surge arresters. Detailed arrangement and sample of the junction boxes shall be submitted to the Contract Manager for approval;

4. Sizing of DC source circuit conductors and over-current protection devices shall take into account appropriate de-rating factors (e.g. peak module operating temperatures, grouping of conductors in conduit, etc.). Over-current device shall have trip rating not greater than the de-rated ampacity of the conductor that it protects;

5. The overall loss in the PV array DC source circuits due to losses across conductors, all fuses / circuit breakers, blocking diodes, termination points and other factors such as normal dust accumulation on PV modules shall be limited to not more than 10%.
WARRANTY

1. The Sub-contractor shall provide the following within 4 weeks from the date of completion of the Works:
   
   a. A certificate of product warranty from each of the manufacturers of the Approved PV modules in favour of the Employer to warrant that their said respective products shall be free from any defect, failure, imperfection or fault and be capable of carrying out its functions for the respective periods of warranty as specified below:

<table>
<thead>
<tr>
<th>Warranty aspects</th>
<th>Period of warranty</th>
</tr>
</thead>
<tbody>
<tr>
<td>i. Free from any defect, failure, imperfection or fault</td>
<td>Five years</td>
</tr>
<tr>
<td>ii. Capable of carrying out the power output and performance in accordance with ELE33.2.020 sub-clause 1(g)</td>
<td>Twenty-five years</td>
</tr>
</tbody>
</table>

2. Each of the periods of warranty stated above shall commence from the date of completion of the Works as certified by the CM in the certificate of completion but in the event of there being more than one certificate of completion, then from the date of completion of the Section of the Works in which the respective PV modules are situated as certified by the CM in the certificates of completion issued pursuant to Clause 53 of the General Conditions of the Main Contract. The Sub-contractor shall submit the content and format of the manufacturers’ certificate(s) of product warranty for Approval as required in ELE33.1.050.
ELE33.3 SOLAR CONVERSION SYSTEMS

ELE33.3.010.8 GENERAL REQUIREMENTS

1. Solar Conversion Systems (SCS) comprising grid connection type photovoltaic (PV) inverters, AC and DC circuit breakers, wiring and other required equipment shall be provided for the PV System as shown on the Drawings. Separate SCS shall be installed to serve the PV sub-systems on the roofs of individual blocks and to provide a balanced 3-phase AC supply;

2. The SCS inverters, AC and DC circuit breakers and other required equipment shall be located in the PV control rooms of individual blocks as shown on the Drawings. The Sub-contractor shall coordinate with other parties concerned and provide all necessary equipment, materials, protection / monitoring devices, control and wiring, etc. for integration of the PV System with the building power distribution system;

3. Where equipment are exposed to weather and subject to vandalism, proper enclosure complete with venting and weather sealing shall be provided to protect the equipment;

4. The Sub-contractor shall also supply and install equipment, such as energy meters and harmonic meters, etc. as required by the power supply company, to measure / monitor the generated solar power.

ELE33.3.020.8 TECHNICAL REQUIREMENTS

1. Grid connection type SCS inverter shall comply with UL1741, IEC61727 and IEC62116 or other equivalent international standards on grid connection requirements, and be capable of continuous operation over the range of voltage, current, and power output of the PV array connected;

2. SCS inverter shall have a "Mean Time Between Failure Index" of minimum 10 years and have separate provisions for power on/off, system reset and for communication with other equipment and monitoring system. The SCS inverter shall have a power management system to automatically control the power supply to the connected load;

3. SCS inverter shall possess the following:
   a. True sinusoidal output voltage of low harmonic distortion;
   b. Maximum Power Point Tracking (MPPT) function which shall be accurate and stable, and the adaptation efficiency shall be higher than 99%;
   c. Anti-islanding function;
   d. Output isolation transformer;
   e. Capability of automatic adaptation to the solar power generation of PV modules so that no range selection by the installer shall be required.

4. The following protection shall be incorporated in SCS inverter:
   a. Continuous self-diagnosis by internal microprocessor;
   b. Monitoring of the grid and the PV string voltages;
   c. Monitoring of temperature of power switches and the output isolation transformer;
   d. Prevention of injection of direct current into the grid;
e. Supervision of all power stage transistors which shall be automatically switched off within a few milliseconds under fault condition. Fast response over-current detection for all transistors shall be used to guarantee maximum reliability in operation.

5. SCS inverter shall be self-commutated utilizing power electronics in a circuit topology suitable for meeting the specification with 3-phase or single-phase AC output. If three identical single-phase SCS inverters are offered for each PV subsystem, the design shall be such that supply currents are balanced over the three phases. The rating of each offered SCS inverter shall be capable of handling the available DC power input and other design requirements;

6. Characteristics of SCS inverter:
   a. Controller Type: Step-down converter;
   b. Bi-directional Sine-wave Inverter: IGBT-based pure-sinewave BI-modal inverter;
   c. Nominal output voltage: 380V 3-phase or 220V 1-phase; ± 6%;
   d. Utility service: Grounded wye;
   e. Output frequency: 50Hz (48.5 – 51Hz);
   f. Inverter efficiency: Minimum 95% EURO efficiency;
   g. Power factor shall be unity (1) at rated output;
   h. The total harmonic distortion (THD) of the normalized output current shall not exceed 5%;
   i. Losses in the READY or STANDBY modes shall not be more than 10% of the total useful power output.

7. SCS inverter shall include the following modes of operation:
   a. On;
   b. Off;
   c. Start;
   d. Ready;
   e. Standby;
   f. Reset.

8. SCS inverter shall automatically go to the standby mode if a fault occurs. If the fault is cleared, the SCS inverter shall automatically restart after a programmed time delay. The hardware protection shall include the following:
   a. AC surge protection;
   b. DC surge protection;
   c. Over-current protection and PV string isolation;
   d. Over-voltage protection.

9. The instrumentation and control of SCS inverter shall include the following:
   a. Maximum power point (MPP) tracking;
   b. Automatic start-up when there is sufficient solar power;
   c. Automatic turn-off when there is insufficient solar power.

10. SCS inverter shall provide the following signals for monitoring:
    a. Inverter On / Off / Standby;
b. Power supply Normal / Fault / Low;
c. Inverter Healthy / Trip / Fault;
d. DC input current, voltage and instantaneous / cumulative power;
e. Instantaneous AC output current and voltage per phase, supply frequency, instantaneous / cumulative output power and harmonics;
f. High and low current and voltage alarms;
g. MPP status;
h. Inverter On-line / Off-line.

11. If any of the signals stipulated in sub-clauses (10d) & (10e) above is / are not available, separate meter(s) shall be provided to fulfil such requirements;

12. Anti-islanding protection shall be provided to ensure there is no supply of solar power to the building electrical distribution system in case of abnormality. The SCS shall be automatically disconnected from the electrical distribution system of the building concerned in the event that the utility supply voltage and / or frequency deviate outside the allowable limits persistently for a pre-determined period as agreed by both the CM and the power supply company, or when there is a fault or malfunction of the SCS. The SCS shall be completely isolated within 0.2 second or such period as required by the power supply company upon occurrence of the said abnormality / fault;

13. Overall circuit loss of the SCS other than those through the SCS inverters shall be not more than 2%.

**ELE33.3.030.8 WARRANTY**

1. The Sub-contractor shall provide the following within 4 weeks from the date of completion of the Works:-
   a. A certificate of product warranty from each of the manufacturers of the Approved SCS inverters in favour of the Employer to warrant that their said respective products shall be free from any defect, failure, imperfection or fault for the periods of warranty as specified below:-

<table>
<thead>
<tr>
<th>Warranty aspects</th>
<th>Period of warranty</th>
</tr>
</thead>
<tbody>
<tr>
<td>i. Free from any defect, failure, imperfection or fault</td>
<td>Ten years</td>
</tr>
</tbody>
</table>

2. Each of the periods of warranty stated above shall commence from the date of completion of the Works as certified by the Contract Manager in the certificate of completion but in the event of there being more than one certificate of completion, then from the date of completion of the Section of the Works in which the respective SCS inverters are situated as certified by the Contract Manager in the certificates of completion issued pursuant to Clause 53 of the General Conditions of the Main Contract. The Sub-contractor shall submit the content and format of the manufacturers’ certificate(s) of product warranty for Approval as required in ELE33.1.050.
ELE33.4  MONITORING & MANAGEMENT SYSTEMS

ELE33.4.010.8  GENERAL

1. A monitoring system consists of measurement equipment, energy meter, data logger, LED display panel, wirings and accessories shall be provided for the PV sub-system of each individual block;

2. A central monitoring & management system shall be provided at the Estate Management Office to collect operation data of individual PV sub-systems for analysis and to display designated information on a LCD display panel at the location as shown on the Drawings;

3. The Sub-contractor shall provide all necessary equipment, wiring and accessories to complete and interconnect the individual and central monitoring/management system(s);

4. Provisions shall be made to prevent interruption of signal/data transmission of the monitoring & management systems through underground cables under adverse weather conditions.

ELE33.4.020.8  INDIVIDUAL MONITORING SYSTEM

1. Measurement equipment with good accuracy and reliability shall be provided and appropriately sited to collect the following weather data for posting to the data logger provided:
   a. Ambient temperature;
   b. Global irradiation at inclined angle of PV modules;
   c. PV module operating temperature.

2. The Sub-contractor shall provide additional measurement equipment for one of the PV sub-systems to collect wind speed/direction and UVB level data for the central monitoring & management system;

3. Normal/Fault status of the measurement equipment and circuit shall also be captured in the data logger;

4. An energy meter with visual display shall be provided for each PV sub-system to record its cumulative power output at the point of grid connection and for posting to the data logger;

5. Data logger shall also capture operation data including alarm/fault statuses of all the SCS inverters of each PV sub-system;

6. A data logger shall serve one or more PV sub-systems. It shall be capable of capturing all the data required at a sampling frequency of 1 minute and retaining them for a minimum period of 12 months. Data collected shall be stored in removable flash memory card and be capable of being downloaded directly by a handheld PC through connection to the data logger;

7. Data collected shall be time stamped and stored in the data logger in "csv" format. Data logger shall be capable of communicating with the central monitoring & management system and other monitoring/management system through Intranet and Internet;
8. A LED display panel shall be provided for each PV sub-system at the location as shown on the Drawings and interface with the data logger for collecting and displaying the following information of the sub-system in both Chinese and English:
   a. Instantaneous output power;
   b. Cumulative power output;
   c. Solar irradiation;
   d. Reduction of carbon dioxide emission;
   e. Sub-system servicing required (for fault/alarm conditions).
9. Letter height of the LED display panel shall be 50 mm minimum;
10. All equipment exposed to weather shall be of weatherproof type to IP55 minimum.

ELE33.4.030.8 CENTRAL MONITORING & MANAGEMENT SYSTEM

1. The Sub-contractor shall provide a user friendly graphic based central monitoring & management system in the Estate Management Office to capture the weather and operation data of all PV sub-systems through a dedicated Intranet. It shall include a workstation for local operator interface and hardware/software provisions for monitoring & management of the PV System. The system shall include the following features:
   a. Dynamic graphic monitoring and control of operation parameters including the On, Off, Standby, On-line and Off-line, etc. of each PV sub-system;
   b. Dynamic trend history report function;
   c. Utility cost management;
   d. Real time alarm management;
   e. Full password and user name protection;
   f. Setpoint archiving, retrieval and printing.
2. The central monitoring & management system shall include PC hardware, firewall protection software, alarm printer, report printer, LCD display panel and application software. The application software shall be able to control, monitor and indicate operation statuses, and capable of logging all operation data and issuing alarms of the PV System. Hardware configuration of the system shall be similar to those of the security system as specified in ELE24.3.5.020. The system shall also be capable of broadcasting DVD video and input text signals to the LCD display panel specified hereunder;
3. An uninterruptible power supply capable of backing up the central monitoring & management system, except the LCD display panel, for one-hour operation upon failure of normal power supply shall be included;
4. A weatherproof type display panel with casing constructed of Grade 316 stainless steel sheet of 1.5 mm minimum thickness shall be installed at the location as shown on the Drawings. The display panel shall:
   a. Consist of a 47” 1920x1080 full High Definition IPS LCD display and stereo speakers;
   b. Be suitable for outdoor application with a low reflective surface and high display intensity;
   c. Interface with the central monitoring & management system workstation to obtain the required information and signals.
5. Information and signals to be displayed shall include, but not be limited to:
a. Video and input test signals from the central monitoring & management system workstation;
b. Instantaneous output power of individual PV sub-systems and total output power;
c. Individual PV sub-system output power and total output power of the day;
d. Maximum system output power day and the total output power;
e. Minimum system output power day and the total output power;
f. Cumulative output power of individual PV sub-system, cumulative system total output power, corresponding electricity cost saving and equivalent carbon dioxide emission reduction;
g. Cumulative system running time; and
h. Instantaneous weather conditions including ambient temperature, wind speed/direction, solar intensity and UVB level.

6. The LCD display shall be capable of displaying the PV System information in the form of animated pictographs. Design of the display of PV System information shall be submitted to the Contract Manager for prior approval;

7. Operation data and signals shall be collected from each PV sub-system for storage and analysis by the central monitoring & management system. The system shall also be capable of producing reports for:
   a. Operation conditions and alarms of each PV sub-system and respective trend histories including:
      i. On/Off/Standby/Online/Offline status;
      ii. Power supply Normal/Fault/Low condition;
      iii. Healthy/Trip/Fault status;
      iv. DC input current, voltage and instantaneous/cumulative power;
      v. Instantaneous AC output current and voltage per phase, supply frequency, instantaneous/cumulative output power and harmonics;
      vi. Total input and output power each day;
      vii. Maximum input and output power each day;
      viii. Minimum input and output power each day;
      ix. High and low current and voltage alarm;
      x. Total running time;
      xi. Sun Hour of each day;
      xii. Cumulative Sun Hour;
      xiii. Test/Auto status;
      xiv. MPP status;
      xv. Weather condition measurement equipment and circuit Normal/Fault status.
   b. Performance indicators of each PV sub-system and respective trend histories including:
      i. Daily, weekly, monthly and yearly yield;
      ii. Daily, weekly, monthly and yearly performance ratio;
iii. Cumulative output power, corresponding electricity cost saving and equivalent reduction of carbon dioxide emission.

c. Weather data collected by each PV sub-system and respective trend histories including:
   i. Ambient temperature;
   ii. Wind speed/direction;
   iii. UVB level;
   iv. Global irradiation at horizontal level;
   v. PV module operating temperature.
ELE33.5 TESTING AND COMMISSIONING

1. The Sub-contractor shall carry out all necessary testing and commissioning work upon completion of the installation of the PV System;

2. Verification tests shall be performed in the presence of the Contract Manager's representatives and if necessary, with the power supply company's representatives on all metering, protection, communication and control equipment/system. The harmonic voltage, current distortion and voltage fluctuation as a result of the connection and isolation of the PV System shall be measured. Testing of protection and synchronising systems shall include individual device settings and function. A copy of the test results and all protection settings shall be submitted to the Contract Manager for further transmission to the power supply company for approval;

3. The Sub-contractor shall prepare itemized and detailed testing and commissioning schedules for Contract Manager's approval prior to commencing the tests;

4. The Sub-contractor shall carry out preliminary tests to his own satisfaction before arranging for any formal witness test;

5. Unless otherwise indicated, the Sub-contractor shall be responsible for the cost of necessary instrument, plant and labour for all tests, including those witness tests in the presence of the representatives from the power supply company;

6. The Sub-contractor shall carry out all such tests as required by the Contract Manager to demonstrate that each item of equipment meets the requirements of the Specification;

7. Valid calibration certificates of testing instruments shall be produced upon request by the Contract Manager. The accuracy of testing instruments shall also be demonstrated if directed by the Contract Manager irrespective of whether valid calibration certificate is available.
ELE33.6 ANALYSIS SOFTWARE AND REPORT FOR SYSTEM OPERATION AND PERFORMANCE

ELE33.6.010.8 ANALYSIS SOFTWARE FOR SYSTEM OPERATION AND PERFORMANCE

1. The Sub-contractor shall provide to the CM, upon completion of the PV System installation, a "Windows" based analysis software for generating reports on the PV System operation and performance basing on the data downloaded from a data logger. The reports shall cover information required in ELE33.4.030 sub-clauses (7a) to (7c) for a rolling period of 12 months;

2. The analysis software shall be capable of automatically capturing the data downloaded from a data logger for generating the required reports;

3. Format of report shall be submitted to the CM for approval before completion of the PV System installation.

ELE33.6.020.8 HALF-YEARLY REPORT ON SYSTEM OPERATION AND PERFORMANCE

1. The Sub-contractor shall submit reports generated by the same software as specified in ELE33.6.010 to the Contract Manager on half-yearly basis for the 24 months after completion of installation and grid connection of the PV System;

2. Each report shall cover a rolling period of the past 12 months and shall be submitted within one month from the last day of the 6-month period concerned.

ELE34.1 SCOPE OF INSTALLATION

ELE34.1.010.8 SCOPE OF WORK

1. Grid-backup solar powered pole top lighting(s) shall be provided at the location(s) as shown on the Drawings for general lighting purpose;

2. Training shall be provided to the Contract Manager’s representatives, estate management staff or other personnel as instructed by the Contract Manager for the proper operation and maintenance of the grid-backup solar powered lighting.
ELE34.2 REQUIREMENTS

ELE34.2.010.8 GENERAL REQUIREMENTS

1. Each pole top lighting shall consist of a hot-dip galvanized lighting pole, lamp source, photovoltaic (PV) module(s), battery set and charger, inverter, changeover contactor and other necessary equipment and accessories to ensure proper functioning of the lighting at the time required under all weather conditions;

2. Electrical power generated by the PV module(s) shall be used for charging the battery set and powering the lamps. If power of the battery set has dropped to a low level, normal supply shall automatically cut in to power the lamps;

3. Lighting pole shall be painted to colour matching with the surrounding and as approved by the Contract Manager;

4. PV module shall be mounted on lighting pole top as far as practicable to receive the most amount of sunlight;

5. Pole top lighting shall be switched on and off through the timer or photocell control of other outdoor lightings in its vicinity;

6. Battery set and charger, inverter, changeover contactor and other necessary equipment shall be housed in a well ventilated stainless steel box of grade 316, integrated with or separated from the lighting pole, with adequate access for maintenance and suitable for outdoor use;

7. The Sub-contractor shall submit all relevant details including proposed lighting pole mounting arrangement for Approval before fabrication and installation of the pole top lighting(s);

8. The Sub-contractor shall submit, upon completion of the installation work, 3 sets of approved operation and maintenance manual including servicing and maintenance requirements recommended by manufacturers and schedule of spare parts and tools with indicative unit prices, etc. in both hard copy and "pdf" format.

ELE34.2.020.8 TECHNICAL REQUIREMENTS

1. Lamp source of each pole top lighting shall be of ________ type rated at ___W and shall comply with relevant requirements in other parts of the Specification;

2. PV module(s) of each pole top lighting shall be of mono-crystalline silicon type with a total capacity of ___Wp minimum. Specifications of the PV module(s) shall comply with the requirements in ELE33.2;

3. Battery set shall be of sealed (valve regulated), maintenance-free, lead acid type to IEC 61427 or other relevant national/international standards and with a capacity, when fully charged, to power continuously the lamp source for 18 hours;

4. Lighting pole shall be of __m high and shall comply with relevant requirements in other parts of the Specification;

5. Anti-glare provision shall be included to prevent possible nuisance to occupants of nearby domestic flats in accordance with relevant requirements of BEAM-Plus.

ELE35.1 SCOPE OF WORKS AND GENERAL REQUIREMENTS

ELE35.1.010.8 GENERAL

1. The works under this part of the Sub-contract shall include the whole of the materials, the labour and necessary software as prescribed or as necessary for the design, supply, delivery, installation, testing, commissioning and maintenance of the entire Smart Meter Monitoring and Energy Information Display System (hereinafter refer to as the System); putting the whole system into full operation as stipulated on the Drawings and the Specification; and training of personnel nominated by the CM. The System shall be capable of receiving, monitoring and processing all parameters of the power supply systems of all domestic blocks and their communal facilities including, but not limited to, power distribution to tenants, lift systems, water supply system, lighting system, grid-connected photovoltaic (PV) system, water and gas consumptions etc.;

2. The Sub-contractor shall design, supply and install the System and the selection of proper, correct and compatible equipment, components and interfacing unit to achieve the performance specified. Any equipment necessary for achieving the performance specified shall be provided by the Sub-contractor. Detailed design layouts and full technical information of the System shall be submitted for approval by the CM;

3. The System shall include not only the plant, equipment and software specified, but also include all the incidental sundry components, conduit / wiring system, data/communication networks and licences necessary for the complete execution of the works and for the proper operation and maintenance of the whole System;

4. The Sub-contractor shall employ a specialist service provider with proven experience in the design and installation of systems of similar functions and scale to that required by this Specification to carry out the works. Local qualified technical services team shall be available for maintenance and backup after completion of works. The Sub-contractor shall submit the proposed specialist service provider for approval by the CM.

ELE35.1.020.8 SCOPE OF WORKS

The scope of works shall include:-

1. Design, supply, and installation of the System complete with central monitoring and management workstation, Data Gathering Units (DGU), associated peripheral devices/equipment, interconnection wirings & network and all necessary softwares. The central monitoring and management workstation shall be located at the Estate Management Office (EMO) of the estate or as shown on Drawings, and shall include but not be limited to the following features:
   a. Dynamic graphic monitoring and control of operation parameters;
   b. Dynamic trend history report function;
   c. Utility cost management;
   d. Real time alarm management;
   e. Full password and user name protection;
   f. Set point archiving, retrieval and printing.

2. Design, supply and commission a customized application software to perform all the required functions as described in the Specification;
3. Submission of schematic wiring diagrams of the System and all equipment for the CM’s approval. Shop drawings indicating the design of the display arrangement of display panel shall be provided for the CM’s approval before placing order and installation;

4. Testing, commissioning and putting into operation, the System to the satisfaction of the CM;

5. Submission of monthly reports on the information processed by the System to the CM during the Maintenance Period, and half-yearly reports on system operation and performance to the CM;

6. Provision of training to the CM’s Representatives, estate management staff or other personnel as instructed by the CM.

ELE35.1.030.8 FUNCTIONAL REQUIREMENTS

1. The System shall be designed to perform the following functions in outline terms:-
   a. To collect, store, monitor and analyse the electrical parameters of communal area and domestic flats including currents (three phases and neutral), total energy consumption (kWh), total energy generation (kWh), voltages (all phase-to-phase and phase-to-neutral), maximum demand (kVA), total power factor, total harmonic distortion of current (capable of measuring 31st and lower harmonic order) (%) etc. as illustrated in ELE35.5 in adjustable sampling interval, with a minimum of once every 15 minutes, for data processing and display purpose;
   b. To collect, store and monitor water consumption data of domestic blocks for data processing and display purposes;
   c. To allow local input of other data, such as gas consumption data of tenants for analysis and display in desired format;
   d. To collect, store, monitor and analyse the electrical parameters of the power generated from the grid-connected PV system for data processing and display purpose;
   e. To select and integrate the information/data as specified in ELE35.3 and transmit the video/media signals via data transmission cables to the Energy Information Display System located at ground floor lift lobby of each domestic block;
   f. To allow download of information/data and media at the local workstation from designated server(s) in other locations via internet connection;
   g. To generate audio and visual alarms automatically in the event of major alarms, system faults and errors, communication line fault and failure of DGU etc. at the local workstation inside EMO of the estate;
   h. To consolidate energy consumption data of tenant supply, water pumps, public lighting, fire services, ACMV, lifts, security, and CABD, etc. Analyse the collected data and present the data in table, spread sheet and graph formats for energy monitoring and energy audit exercise for compliance with BEAM Plus, Building Energy Efficiency Ordinance (BEEO), Energy Measurement of ISO50001 and others as required by the CM.

2. The Sub-contractor shall liaise with the Main Contractor and Fire Services and Water Pump (FSWP) Installation Sub-contractor in advance on the signal interfacing requirement of digital water meter at the fresh water pump room provided by the FSWP Installation Sub-contractor.
ELE35.2 SMART METER MONITORING AND MANAGEMENT SYSTEM

ELE35.2.010.8 CENTRAL MONITORING AND MANAGEMENT WORKSTATION

1. The central monitoring and management workstation shall include server hardware, DVD and media player, all other necessary computer hardwares, system operation and firewall protection software, printer and all peripheral connection modem and ports necessary for the proper operation of the System. An uninterruptible power supply capable of backing up the central monitoring and management workstation for a minimum of one hour operation upon failure of normal power supply shall be included;

2. The central monitoring and management workstation shall be capable of keeping the System operation and daily logged data from all blocks for a minimum of two years in Microsoft Office compatible data format such as Excel format or equivalent for subsequent processing and analysis. 100% data backup capacity shall be provided by dual harddisk. The data storage hard disk shall have at least 25% spare capacity or 2TB total capacity whichever is larger. At least 5 spare input ports and output ports/channels shall be provided for future expansion of meters, measurement devices, data input and display output, etc.. The system shall automatically store the logged and processed data in the harddisk and the backup to prevent accidental loss of data;

3. The central monitoring and management workstation shall generate audio and visual alarms in the event of system faults and errors, communication line fault, failure of major switchgears in main switchboards, DGUs and smart meters etc. at the local workstation inside EMO of the estate;

4. The central monitoring and management workstation shall allow input and retrieve of various data for record, monitoring, processing, reporting, display, change of system settings, system diagnosis and all other necessary operations by local operators for the proper functioning of the System;

5. The central monitoring and management workstation shall possess all necessary capacity and configuration for the proper functioning of the System and with the following minimum hardware requirements whichever is higher:

<table>
<thead>
<tr>
<th>Specification</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>Processor:</td>
<td>Four Core Chip minimum</td>
</tr>
<tr>
<td>CPU Speed:</td>
<td>3.4 GHz or above</td>
</tr>
<tr>
<td>Memory:</td>
<td>16GB RAM or above</td>
</tr>
<tr>
<td>Storage hardisk:</td>
<td>Dual harddisk each with a 125% capacity for the required operation, or not less than 2TB each whichever is higher</td>
</tr>
<tr>
<td>Monitor:</td>
<td>Minimum 22” 1920 x 1080 full High Definition LED display</td>
</tr>
<tr>
<td>Communications:</td>
<td>Ethernet 10/100BaseT connection or equivalent</td>
</tr>
<tr>
<td>Drive:</td>
<td>DVD ± RW</td>
</tr>
<tr>
<td>Accessory:</td>
<td>Internal card reader with USB port</td>
</tr>
</tbody>
</table>

6. An laser colour printer shall be provided (shared with the printer of other electrical system such as the central alarm and door monitoring system);

7. A read and write DVD player used for playing media information such as green estate/environmental education programs in the form of video, powerpoint slideshow and computer animation shall be provided;
8. The offered software shall be certified for use with Windows 7 or the update version of Windows operation system and be able to generate reports compatible with ordinary personal computers in required format basing on the data automatically downloaded from data gathering/converting units;

9. All recorded data shall write to both hard drives for back up;

10. There shall be two levels of monitoring. The central monitoring and management workstation shall monitor and control the operation conditions of the DGUs installed in each block while the DGUs shall perform close monitoring over different energy meters and digital water meters, and upload all parameters back to the central monitoring and management workstation inside EMO of the estate;

11. All the system components shall be compatible for communication and control with each other;

12. The System shall be two-tier distributed intelligent system with latest state of the art design, most current model and latest technology. It shall have various levels of accessibility and control priority for effective control and monitoring of various parameters of electrical switchgears, PV system, water supply system, town gas supply system, etc..

**DATA GATHERING UNIT**

1. DGU shall have its own microprocessor, memory and communication units. It shall be able to collect all data from digital water meters, energy meters and PV system via RS 485 communication port and/or other appropriate signal lines, and then upload them to the central monitoring and management workstation via Local Area Network (LAN). Upon failure of the communication with the central monitoring and management workstation, it shall function autonomously and provide at least 14 days’ data storage at the first-in first-out basis for all monitoring electrical parameters. All setup parameters and accumulated energy data such as total energy consumption (kWh), maximum demand (kVA), total power factor, usage time quantities shall be stored in non-volatile memory and retained in the event of a control power interruption;

2. All DGUs shall be linked together through a LAN bus. The LAN shall be Ethernet 100 Base T or equivalent latest version with data switch located inside EMO of the estate. The LAN bus shall allow equal transfer of data between each DGU on the bus. All DGUs shall be operated in parallel and have equal access to all data in the system;

3. Each DGU shall have a built-in display or tools to allow for direct-access to the DGU for local adjustment of all set points and display of all input and output values and status;

4. To ensure reliable communication between the central monitoring and management workstation and DGUs, a ring circuit wiring arrangement shall be adopted for the LAN;

5. DGUs shall be provided in each block for collecting data from energy meter and digital water meter and shall be located in the main switch room of each block;

6. For interfacing of DGU and PV system, appropriate interfacing unit shall be provided if necessary;

7. All operation data as described in ELE33.4 shall be collected, stored, monitored, and analysed by the central monitoring and management workstation. The analysed information of the PV system as described in ELE33.4 shall be displayed at the LED display panels at each block and monitored at the local workstation.
ELE35.2.030.8 SYSTEM SOFTWARE COMPONENTS

1. This section details the performance criteria for the System software and serves as a guideline for the System capabilities to be implemented. The Application Software program for the entire System in the form of prototype specifically designed and prepared for the development shall be completed with demonstration to the satisfaction of the CM upon 6 months after the award of the sub-contract. The Sub-contractor shall provide the System software to support all command functions and application programmes and shall satisfy the requirements as stipulated in the Drawings and Specification;

2. The System software, which shall be user friendly multi-tasking/multi-user allowing multi-terminal operation and concurrent execution of multiple real time programs, shall be an energy information system offering monitor capabilities, comprehensive power quality and reliable analysis to help reduce energy consumption. It shall help to analyse all electrical data connected to the network by storing and sharing data across the entire estate. All collected and processed data as described in ELE35.5 can be gathered from any notebook computer connected to the network or via internet by designated personal computers in HA’s office with appropriate passwords. It shall be flexible, scaleable and compatible with industry-standard MODBUS protocols and the data protocols of the meters connected to the System;

3. The System software shall support an arbitrary number of Windows-based server workstations which shall include the local workstation and any notebook computers;

4. The System software shall exercise all features of central monitoring and management workstation, DGUs, all associated devices/equipment and report all detected failures. Standalone diagnostics shall be provided for central monitoring and management workstation and DGUs and peripherals. On-line diagnostics shall be provided for the memories, central management computer and printers;

5. The central monitoring and management workstation and DGUs shall perform a scanning test including peripheral devices for proper operation at interval of not more than one hour. Any system not functioning properly shall be annunciated with alarm signal and noted on the log as non-responsive;

6. There shall be a minimum of three security levels of operator access. Each operator’s identifier can be up to twenty (20) characters, and associated with a field programmable password of a minimum of six characters; The three levels of access shall be generally according to the following basic principles:
   a. Level 1: Display only;
   b. Level 2: Display plus download of designated data;
   c. Level 3: Display, download of any data, reset and amend passwords, etc. plus full program and data base editing.

    Operator inputs executed under valid system request shall be logged. This record shall contain the operator command and the time and date of input execution.

7. The System software shall include but not limited to the following features/software capabilities:
   a. User display software from human machine interface (HMI) graphical display or equivalent in which user can insert any graphical bmp or jpg or wmf format of pictures, icon and any mpeg4 or wmv or mov video format to design the user interface;
   b. Device configuration software to allow user to add or deduct the quantity of energy meters and digital water meters in future with no modification of software programme required;
   c. Data collection from DGU and data conversion to Microsoft Office compatible data format such as Excel format or equivalent for subsequent processing, analysis and report generation;
d. Trending: Graphical representation of user-selected data values as a function of time (data trending displays). The System software shall allow user to obtain accumulated figures (e.g. kWh etc.), average figures (e.g. kW, current etc.), line charts of the variation of kW, current, voltage, power factor, harmonic contents for any randomly selected period;

e. The ability to manage event and alarm information using the following features:
   i. Display system, energy meter and PV system events stored in the system database;
   ii. Display events sorted according to time stamp, source meter, PV system, priority level, cause or effect;
   iii. Display events within a range of time stamps, source meters, priority levels, causes or effects.

8. Dynamic data shall be automatically logged and updated at a pre-programmed interval of minimum 15 minutes or otherwise specified in clause ELE35.5. Manual update shall be allowed via a screen update key;

9. The reports shall provide but not limited to the following information on regular intervals such as daily, weekly, monthly, half-yearly, yearly and etc. as required:
   a. monthly and annual electrical energy consumption of all tenants of each domestic block;
   b. monthly and annual electrical energy consumption of communal area;
   c. monthly and annual electrical energy generation of the grid-connected PV system of each block;
   d. monthly and annual water consumption of each block.

10. The record format of the collected and processed data should be similar to the sample formats as shown in ELE35.5 and shall be submitted for approval by the CM;

11. All collected and processed data as described in ELE35.5 shall be tabulated, stored and able to be retrieved in excel format for manual processing if required;

12. The System software shall be capable of generating pop-up graphics in the event of major faults and failures as described in ELE35.2.010 sub-clause (3);

13. The System software shall be able to be restored to its original conditions and settings by means of a rescue disk or appropriate backup in the event of system software breakdown, such that the whole system could be resumed to normal operation;

14. The Sub-contractor shall supply and install all necessary software programs required to facilitate the operation of the System such as Windows 7, Microsoft Office, etc..

---

**ELE35.2.040.8 COMMUNICATION NETWORK AND CABLEING SYSTEM**

1. The network equipment, components, connection cables and all associated interfaces and accessories shall be commonly available in the market with good compatibility and connectivity among different brands or manufacturers;

2. For the interface of signal cables installation between the System and energy meters or digital water meter, the Sub-contractor shall provide interfacing termination boxes inside the main switch room, meter rooms, R/F PV equipment room and G/F fresh water pump room where energy meters and digital water meter are installed. Different specialist service provider shall terminate the required signal cables from their respective system to the above interfacing termination boxes;

3. The cabling system shall include the optical fibre cables, cat-5e multi-pair UTP cables, Cat-6 UTP cables, twisted pair cable, cable containments equipment rack and all necessary accessories as necessary for the System;

4. The cabling system shall be designed, installed and tested in accordance with ANSI/EIA/TIA-569B standard;
5. All UTP and twisted pair cables shall conform to ANSI/EIA/TIA-569B Commercial Building Standard for Telecommunications Pathways and Spaces (latest amendment and including all applicable addenda) and ISO/IEC 11801 (International) Information technology - Generic Cabling for Customer Premises (latest amendment and including all applicable addenda);

6. The multi-core optical fibre shall consist of multi-mode laser-optimized, 62.5 / 125 micron. Core/fibre minimum density per sheath shall be six (6). The multimode Optical Fibre Cable shall meet all the requirements delineated within the Specifications of ANSI/TIA/EIA-568-B.3 and ISO/IEC 11801 for 62.5/125 micron fibre optic cable. The multi-core optic fibre cable shall have an effective modal bandwidth of 2000 MHz*km at 850 nm wavelength light source capable of performing up to 10 GbE (10 Gbps /IEEE 802.3ae) to a maximum range of 300-meter. The LED Bandwidth shall be not less than 500/500 MHz*km at 850/1300 nm while the laser bandwidth shall be not less than 2000/500 MHz*km at 850/1300 nm. The cable shall be suitable to run in underground cable duct environment and be manufactured by an ISO Certified Manufacturer.
ELE35.3 ENERGY INFORMATION DISPLAY SYSTEM

ELE35.3.010.8 GENERAL
1. The display system shall include a LED TV display panel of minimum 40 inches, integrated stereo speakers, display interfacing unit and all peripheral devices and connections necessary for the proper operation of the display system;
2. The display panels shall display information, video and/or audio signals originated from the central monitoring & management system in the EMO of the estate;
3. Installation details and shop drawings shall be submitted to the CM for approval prior to installation.

ELE35.3.020.8 LED TV DISPLAY PANEL
1. The LED TV Display Panel shall be of the minimum requirements as below:

<table>
<thead>
<tr>
<th>Requirement</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Screen Size</td>
<td>40 inches minimum</td>
</tr>
<tr>
<td>b. Aspect Ratio</td>
<td>16:9</td>
</tr>
<tr>
<td>c. Resolution</td>
<td>High Definition1920 x 1080 p</td>
</tr>
<tr>
<td>d. Screen Enhancement</td>
<td>Anti-reflective coating</td>
</tr>
<tr>
<td>e. Intensity</td>
<td>High display intensity</td>
</tr>
</tbody>
</table>

2. The LED TV Display Panel shall be installed on a mounting frame that allows adjustment of viewing angle.

ELE35.3.030.8 DISPLAY REQUIREMENTS
1. Information and signals to be displayed for each individual block shall include, but not be limited to, the following items:
   a. Average energy consumption (kWh/flat), water consumption (m³/flat) and gas consumption (MJ/flat) by tenants in last month, and compared with data of same month of last year for each block, the whole estate, and/or average of all public rental housing estates in Hong Kong (subject to data availability);
   b. Average energy consumption (kWh/flat) for communal area in last month and same month of last year for each block;
   c. Cumulative energy consumption (kWh) of tenants of each domestic block of all days in each month and the last month;
   d. Monthly electricity, water and gas consumption by tenants of each block in past 12 months to be displayed in bar chart or curve format, etc.;
   e. The corresponding monthly carbon emission in tones of each domestic block due to the energy consumption and the difference by comparing with the corresponding data of previous period;
   f. Output power and energy generation information of PV system include but not be limited to:
      i. Instantaneous output power of individual PV sub-systems and total output power;
      ii. Individual PV sub-system output power and total output power of the day;
      iii. Maximum system output power day and the total output power;
      iv. Minimum system output power day and the total output power;
v. Cumulative output power of individual PV sub-system, cumulative system total output power, corresponding electricity cost saving and equivalent carbon dioxide emission reduction;
vi. Cumulative system running time;
g. Date and time;
h. Green information and/or video of various format provided by HA according to programmed schedule;
i. Green and educational information and/or video of various format provided by other environmental organizations and bodies according to programmed schedule;
j. Input text signals.

2. The above information could be randomly selected for display in each of the LED TV Display Panel with the aid of tailor-made graphical or animation software to enhance the attractiveness of presentation to the tenants;

3. The Sub-contractor shall submit the design of the display arrangement to the CM for prior approval;

4. The above displayed information shall be linked with the output data as shown in the reports on the System operation and performance as described in ELE35.4.050 sub-clause (5).
ELE35.4 MISCELLANEOUS

ELE35.4.010.8 DOCUMENTATION
1. Labelling of Cables:
   a. Machine-printed, self-laminating vinyl for cabling and patch cords;
   b. Backbone cables shall be labelled at each end. The cable or its label shall be marked with its identifier;
   c. All cables shall be labelled with numbered markers at both ends.
2. Labelling of Faceplates:
   a. An unique identifier shall be marked on each faceplate to identify it as connecting hardware;
   b. A unique identifier shall be marked on each piece of connecting hardware to identify it as connecting hardware;
   c. Each port on the connecting hardware shall be labelled with its identifier.

ELE35.4.020.8 TESTING AND COMMISSIONING
1. The Sub-contractor shall carry out all necessary testing and commissioning work upon completion of the installation of the Smart Meter Monitoring and Energy Information Display System in accordance with ELE30.1 where applicable;
2. Verification tests shall be performed in the presence of the CM’s representatives. A copy of the test results and all protection settings shall be submitted to the CM;
3. The Sub-contractor shall prepare itemized and detailed testing and commissioning schedules for the CM’s approval prior to commencing the tests;
4. The Sub-contractor shall carry out preliminary tests to his own satisfaction before arranging for any formal witness test;
5. The Sub-contractor shall be responsible for the cost of necessary instrument, plant and labour for all tests;
6. The Sub-contractor shall carry out all such tests as required by the CM to demonstrate that each item of equipment meets the requirements of this Specification;
7. Valid calibration certificates of testing instruments shall be produced upon request by the CM. The accuracy of testing instruments shall also be demonstrated if directed by the CM irrespective of whether valid calibration certificate is available;
8. Any defects of workmanship/materials, mal-adjustments or other irregularities which become apparent during tests and may affect the test results shall be rectified by the Sub-contractor and the tests shall be repeated at the Sub-contractor’s expense before acceptance by the CM.

ELE35.4.030.8 HAND-OVER DOCUMENTS
The Sub-contractor shall provide all necessary documents required for the operation and maintenance of the Smart Meter Monitoring and Energy Information Display System and shall include but not limited to the following:
1. Certification and warranty from manufacturer of all major equipment, devices and materials;
2. Detail layout shop drawings of backbone cabling distribution;
3. Detail schematic diagram of the System and all sub-systems;
4. Cabling inventory record and connection details;
5. 3 sets of approved Operation and Maintenance manual including servicing and maintenance requirements recommended by equipment manufacturers and the Contractor, full test reports of the system and all equipment, system settings, all routine operation procedures, reports and graphics generation procedures, maintenance and inspection schedules, necessary tools, system diagnosis, system reset and restoring operation procedures, etc. in both hard copy and electronic “pdf” format;

6. A rescue disk or other appropriate backup means for restoring the System software to original conditions and settings. Detailed step-by-step procedures for using the rescue disk or backup means to restore the system shall be included in the Operation and Maintenance manual;

7. License of all software programs including dongle keys, serial numbers, etc.;

8. Software programs in any formats like installation discs, USB, etc..

ELE35.4.040.8 TRAINING

The Sub-contractor shall provide training to the CM’s representatives, estate management and technical staff or other personnel as instructed by the CM for a total duration of six working days, on the testing & commissioning, operation and maintenance of the System. The training shall be conducted separately for technical and management staff in three sessions, one before and one after commissioning of the System, and the remaining session shall be at the end of the Maintenance Period. Each training session shall be approved by the CM to cover any or all of the following topics and items:

1. Testing & commissioning procedures;
2. Operation and maintenance of the complete system including data gathering units, workstation etc.;
3. Use of all software programmes of the System for daily operation and monitoring of the System, including but not limited to storage and retrieval of data, generation of reports, spread sheets and graphics, analysis of data collected, modification of the quantity of energy meters, switchgears & digital water meters, and restoring the whole system by a system rescue disk or backup means as described in clause ELE35.2.030 sub-clause (13);
4. Hands-on training of all operations for technical staff;
5. Training video showing step-by-step operation;
6. Training manuals with extracted screen front panels showing step-by-step procedures of all operations.

ELE35.4.050.8 MAINTENANCE

The Sub-contractor shall carry out all necessary routine maintenance work of the Smart Meter and Energy Information Display System in accordance with ELE30.2 where applicable and shall include but not limited to the following:

1. To despatch competent and specially trained workmen to attend any requirement for an emergency inspection and repair;
2. To carry out, at three months intervals, routine servicing and maintenance to maintain the System, including both hardware and software, in proper working condition within the Maintenance Period;
3. To provide repairs and replacement parts at no additional cost to the Authority for the correct operation of the System;
4. During the warranty period for items provided by suppliers, the Sub-contractor shall be responsible for calling and liaison with the suppliers for repair/maintenance of faulty equipment/devices. Upon the expiry of the warranty and in case of equipment fault, the Sub-contractor shall obtain details of the necessary repair including cost information from the suppliers and report to the CM.
5. Submission of reports on the System operation and performance at three months intervals during the Maintenance Period and at the end of the Maintenance Period. Each report shall cover a rolling period of the past 12 months where applicable and shall be submitted within one month from the last day of the 3-month period concerned.
ELE35.5 DATA COLLECTION POINT SCHEDULE AND DATA REPORT
### DATA COLLECTION POINT SCHEDULE

**Data Collection Point Schedule**

Data to be collected for each Domestic Block

Total :

Remark: This report includes data measured by multi-function electronic meter only and provides supportive information for the Energy Measurement Report. PBSI and PBSE should add/deduct data measured by other kWh meters in each category item, as appropriate, for the submission of formal Energy Measurement Report.

Abbreviation for the category for Energy Measurement for communal area of domestic block:

- PL  Public lighting
- PL  Public lighting (deduction)
LIFT  Lift
WS  Water Supply
LE  Low Energy Use Systems (include Security, CABS, A/C & Ventilation and Fire Services systems)
-LE  Low Energy Use Systems (deduction)

ELE36.1 SCOPE OF WORK

ELE36.1.010.N GENERAL

1. This specification stipulates the requirements of the Automatic Meter Reading (AMR) Outstation which shall be read in conjunction with the “Typical Drawings for the Supply and Installation of AMR Outstation” issued by the WSD and the following Water Supplies Department (WSD) standard specifications:
   a. E-89-01 Automatic Meter Reading (AMR) Outstation
   b. E-11-03 Electrical and Instrumentation Panels and Cubicles
   c. E-78-04 Programmable Logic Controller
   d. E-80-01 Instrumentation Equipment – General
   e. E-88-05 Power Supply Equipment for Telemetry Systems
   f. E-30-01 Electrical Cables

2. The Sub-contractor shall design, supply and install the AMR Outstation as shown on the Drawings and Specification. The Sub-contractor shall coordinate with all parties concerned, in particular to the Main Contractor and other Sub-contractors to cope with the construction programme; and

3. An AMR Outstation proposal detailing the design, layout and equipment for building up the AMR Outstation shall be submitted by the Sub-contractor to the WSD for approval prior to commencement of installation work. The sample for the “Checklist on documents for inclusion in the AMR Outstation proposal” is shown in ELE36.6.

ELE36.1.020.N SCOPE OF WORK

The scope of work shall include the following:

1. Design, supply, installation, testing and commissioning of the AMR Outstation with the number of AMR Outstation(s) as shown on the Drawings;

2. Preparation and submission of AMR Outstation proposal, testing and commissioning (T&C) procedure, operation and maintenance (O&M) manual complete with all necessary documentation and test certificates to the WSD for approval;

3. Coordination, communication and attending meetings with project team and WSD in building up the AMR Outstation from time to time;

4. Design, supply and installation of all infrastructures for AMR equipment and network including concealed conduits, cabling and junction boxes;

5. Provision of site works for laying, connection and termination of associated cables for all equipment and smart water meters including power cables, signal cables, control cables and communication network cables;

6. Provision of site works for the programming and configuration of AMR Outstation(s) including programmable logic controller (PLC), data concentration unit (DCU), meter interfacing unit (MIU), pulse-to-M-Bus converter and communication equipment. Configuration details of MIU will be provided by the WSD;

7. Detailed design and requirements of data and alarm transmission between (a) smart water meters and DCU; (b) PLC/DCU and Master Station shall be proposed by the Sub-contractor in accordance with the specification and drawings. The Sub-contractor’s proposal shall be agreed by WSD prior the site installation;

8. Provision of electricity power supply at all necessary locations for operation of AMR Outstation(s);
9. Supply, installation, connection and termination of a complete system of power cables, control cables, M-Bus cables and communication network cables to all equipment, instrument and ancillaries supplied, modified and installed;

10. Supply and installation of all necessary earthing system to form a complete, neat and safe installation as required to comply with the relevant wiring regulations;

11. Provision of the broadband (3G network services may be accepted subject to CM’s approval in case of unavailability of broadband network) to enable the AMR Outstation(s) to securely communicate with the AMR Master Station prior to handing over of the system to the WSD;

12. Provision of pulse-to-M-Bus converter for Electromagnetic (EM) water meter (if any) for interfacing of metering data in pulses with DCU in M-Bus protocol;

13. Preparation and submission of operation and maintenance (O&M) manuals, including all approved drawing, documents, test records / certificates and submit to WSD for approval prior to handing over of the system; and

14. Even not explicitly specified, all required works arising from execution of the AMR System works shall be deemed to have included.
ELE36.2 SYSTEM DESCRIPTION

ELE36.2.010.N AUTOMATIC METER READING (AMR) SYSTEM

1. The AMR System of the WSD shall collect metering data remotely and automatically, manage and analyse metering data, provide output for billing and water supplies management and disseminate useful information to customers;

2. The infrastructure of the system shall consist of AMR Outstations and AMR Master Station;

3. The AMR Outstation(s) shall comprise smart water meters equipped with meter interfacing units (MIU) compatible with hard-wired Meter-Bus (M-Bus) communication protocol, an M-Bus network, -AMR panel comprising programmable logic controller (PLC), data concentration unit (DCU), communication router and the associated networking equipment as well as 24V battery, battery charger and other associated power supply equipment. The AMR Outstation shall be interfaced with the AMR Master Station at the WSD and utilize broadband/3G networks as deemed appropriate by the WSD;

4. The AMR Master Station shall be supplied and installed by the WSD. The AMR Master Station shall comprise necessary hardware and software, equip with the required network communication and security equipment, together with all AMR Outstations to form a complete AMR System; and

5. The smart water meters equipped with MIUs for building up AMR Outstation shall be supplied by the WSD and installed by Main Contractor. The Sub-Contractor shall supply (except the smart water meters), install and commission the AMR Outstation according to this specification and the requirements as specified by the WSD from time to time.
ELE36.3 MATERIALS AND EQUIPMENT

ELE36.3.010.N GENERAL

1. An AMR Outstation shall be designed to collect metering data from smart water meters and transmit them to the AMR Master Station at the WSD. The requirements of the components composing the AMR Outstation shall be as follows:
   a. Smart Water Meters and Meter Interfacing Units (MIUs)
      - Mechanical water meters and MIUs
      - Electromagnetic (EM) water meters
   b. M-Bus Network
   c. Automatic Meter Reading (AMR) Panel
      - Panel Enclosure
      - Data Concentration Unit (DCU)
      - Programmable Logic Controller (PLC) Unit
      - Router and Switch
      - Cables
      - Power Supply Unit
      - MCB Unit
      - 24V dc to 220V ac Inverter
      - Selector
      - Communication Networks (Broadband/3G)
   d. Backup Battery Unit
      - Battery Charger Panel
      - Battery Panel
   e. Cabling Facilities and Site Installation
   f. Data Transmission Equipment and Network

ELE36.3.020.N SMART WATER METERS AND METER INTERFACING UNITS (MIUS)

1. Smart water meters shall be provided by the WSD for installation by the Main Contractor. The meters shall be of mechanical, electromagnetic type or other types as deemed appropriate by the WSD. The maximum distance between the terminal box to either of the smart water meter shall be 1.5 metres.
   a. Mechanical water meters and MIUs

   The mechanical water meters provided by the WSD for installation by the Main Contractor shall be equipped with MIUs which read the meter register and transfer the meter reading via a wired M-Bus communication protocol to a DCU. Each MIU is equipped with a connecting cable complying with the M-Bus protocol EN 13757 and EN 1434 for connection to the bus-wire of the M-Bus network. The Sub-contractor shall be responsible for the cable connection and termination between the MIUs and the bus-wire of the M-Bus network.

   The MIU shall serve as an interface between the water meter and the M-Bus network. It shall record the meter readings and store in its internal memory with date and time stamps and to transmit the stored data to the DCU via the M-Bus bus-wire once a data interrogation request is initiated by the DCU.

   The data and alarm required to transmit from mechanical meter with MIU to DCU shall include, but not limited to, the following:
b. Electromagnetic (EM) water meters

The EM water meters provided by the WSD for installation by the Main Contractor shall be equipped with a flow converter capable of generating electric pulse output for AMR application and the flow converter shall be installed by the Sub-contractor.

A pulse-to-M-Bus converter together with IP54 panel for interfacing of metering data in pulses with DCU in M-Bus protocol shall be supplied and installed by the Sub-contractor. The pulse-to-M-Bus converter shall be housed in the panel with a degree of protection of IP54 and shall be properly fixed or mounted on the secured location. The Sub-contractor shall be responsible for the cable connection and termination between the EM water meters and pulse-to-M-Bus converter and also the converter to the M-Bus network.

The pulse-to-M-Bus converter shall consist of an electronic unit that collects meter pulses which are converted into physical units. The data is transmitted via Meter-Bus protocol (EN 13757) to a data concentration unit. The converter shall equip with the following characteristics:

- Physical unit and medium programmable for the pulse counter input;
- Power supply via M-Bus / Backup battery to ensure pulse counting if M-Bus fails;
- Support external power supply;
- Minimum 1.5m cable length for connecting pulse transmitter.

The data and alarm required to transmit from EM water meter to DCU shall include, but not limited to, the following:

- Data required: Volume flow from pulse to M-Bus and any other data as required by WSD; and
- Alarm required: Low Battery alarm any and other alarm as required by WSD.

ELE36.3.030.N M-BUS NETWORK

1. The M-Bus is a European Standard EN 13757 and EN 1434 which is developed for the remote reading of utility meters. The M-Bus network shall supply the power necessary for interrogation of metering data from the MIUs installed on the smart water meters;

2. The M-Bus network shall be composed of a 4-core 1.5mm² copper cable with two cores to serve as the bus-wire for the M-bus system, while reserving the remaining two cores as spare cores. The cable shall be laid inside at least 25mm diameter concealed conduits. The spur cables from the MIUs shall be connected to the main bus cable via terminal blocks inside the terminal box. Spare cores shall be terminated to the terminal blocks. The specification for the wiring system in conduits/trunking shall be referred to ELE11, 12 and 13;

3. The specification of the copper cable shall refer to the “Standard Specification E-30-01, Electrical Cables” from WSD;

4. The M-Bus shall be reverse-polarity protected and used for both data transmission and power supply from the DCU to the MIUs. The M-Bus shall be short-circuit proof and no bus failure shall be resulted in case of faults in any MIU;
5. The M-Bus shall support various bus topologies, including linear, star and tree configuration with any given segment, up to 250MIUs. For each AMR Outstation, the M-bus network shall provide 10% spare capacity for domestic flats and 20% spare capacity for non-domestic units for connection of additional MIUs in future expansion at each DCU. Network cascading with additional DCUs shall also be acceptable for provision of the required spare capacity. The maximum cable length and cable capacitance shall be 350 metres and 180nF respectively;

6. The M-Bus shall adopt a master-slave communication protocol, which shall facilitate bi-directional data transmission from DCU to MIU triggered by changing voltage in the M-Bus bus-wire. The nominal bus voltage shall be around 36V at the master’s output. Communication requests shall be activated by change of voltage to the input circuits of the MIU by the DCU, while the data transmission from MIU to DCU shall be triggered by changing current demand at the MIU. The transmission rate shall be adjustable from 300 to 2400 baud (bits per second) supporting automatic error detection by means of parity and checksum to enable repetition of data transmission in the event of an error;

7. All softwares included shall be in free or full user licenses with no expiry date. Full set of system recovery diskettes, back up diskettes for the softwares shall be provided;

8. Terminal blocks shall be used for the connection of all external cables. Power supply terminals of all equipment and terminals within fabricated panels or cubicles shall comply with IEC 60947-7-1. It shall be single-level feed-through, screw or screwless type connection, DIN rail-mounted, vibration and corrosion resistant and modular design suitable for harsh industrial environment;

9. Terminals shall be permanently identified by number or letter, and shall be so positioned as to permit convenient access for wiring. Adjacent rows of terminals shall not be closer than 150mm. Power supply terminals shall be segregated from signal terminals and shall be shielded to prevent accidental contact. Access to the terminals of instruments shall not expose internal components, require the disassembly of the instruments or removal of the instruments from the installation as a whole; and

10. Internal panel wiring shall be coloured black for a.c. connections, grey for d.c. connections and green/yellow for earth connections. At least 10% spare terminals shall be provided.

ELE36.3.040.N AUTOMATIC METER READING (AMR) PANEL

1. AMR panel shall be installed in the water meter room / AMR equipment room / AMR equipment cabinet on the ground floor, or near the ground floor, so as to facilitate ease communication network connection and maintenance works. Particular attention should be paid on the maximum length of M-Bus cable from smart water meters to the AMR panel;

2. The AMR panel shall be designed for housing the PLC, DCU, communication router, communication networking equipment, terminal blocks for power supply, control wiring connection and associated equipment; and

3. The AMR panel is supplied by both 220V a.c. and 24V d.c. supplies. Most of the equipment, except DCU, inside the AMR panel is running on 24V d.c. which is provided by 24V d.c. power supply unit inside the panel and the external 24V d.c. from battery charger. As the DCU inside the AMR panel is operating on 220V a.c., an inverter is required to convert secured 24V d.c. to 220V a.c. supply for the DCU only.
ELE36.3.050.N  PANEL ENCLOSURE
The panels shall be designed for indoor wall-mounted installation and fabricated with 1.5mm thick stainless steel. The size of the panels shall be not larger than 600(h) x 400(w) x 300(d) mm. The panels shall be designed to the degree of protection of IP54. The design and construction of the panels shall be in compliance with the WSD Standard Specification E-11-03. The circuit and connection diagrams shall be provided inside the panel.

ELE36.3.060.N  DATA CONCENTRATION UNIT (DCU)
1. The DCU shall serve as the M-Bus master of the M-bus network, which is designed to collect metering data at a programmable interval from the MIUs of meters and store the meter readings to its non-volatile memory for transmission to the AMR Master Station via the communication network;
2. The DCU shall be able to exchange data with the existing application server in the AMR Master Station;
3. The DCU shall be able to automatically transmit the metering data via internet connection using integrated LAN interface and shall be equipped with at least one Ethernet RJ45 port for data transmission;
4. The DCU shall be capable of connecting all the M-Bus devices of the AMR Outstation with 10% spare capacity for domestic flats and 20% spare capacity for non-domestic units at each DCU. Additional DCU shall be provided if necessary;
5. The DCU shall be programmable to initialise retrieval of meter reading data from the MIUs at an interval of 15 minutes, 30 minutes, 1 hour, 2 hours, 4 hours, 6 hours, 12 hours or 24 hours;
6. The DCU shall have an internal non-volatile memory of capacity sufficient to store 500,000 meter readings;
7. The DCU shall be equipped with at least one USB 2.0 port and one Ethernet RJ45 port for firmware upgrading, parameter configuration and diagnosis by a notebook computer installed with the DCU configuration and diagnosis software. The software shall be provided together with the DCU;
8. The DCU shall be cascadable for connecting more devices to build up larger M-Bus networks;
9. The DCU shall use FTP protocol to transmit XML metering data to the AMR Master Station while the PLC will use TCP Client to transmit AMR panel status to the AMR Master Station;
10. The DCU shall be suitable for operating at ambient conditions of temperature 0 to 50°C; and
11. The DCU shall operate on 220V 50 Hz a.c. power supply or a 24V d.c. power supply either from the battery charger output or from the 24V battery.

ELE36.3.070.N  PROGRAMMABLE LOGIC CONTROLLER (PLC) UNIT
The PLC Unit shall be provided to facilitate automatic, remote control and monitoring of equipment such as DCU, power supply, battery, communication equipment, etc.
1. The PLC Unit shall be of compact design housing embedded inputs, outputs, power supply and communication ports and equipped with an embedded LCD or indicating lights for showing modes of PLC operation, e.g. program mode, run mode and diagnosis mode etc.;
2. The PLC Unit shall operate on 24V d.c. power supply and possess battery backed up internal memory for user program and data with a minimum memory size of at least 64 kbyte for data logging;
3. The PLC Unit shall have at least one (1) RS232/RS485 port and one (1) Ethernet port supporting serial protocols including DH-485 and TCP/IP for connection of router, programming tools for data communication, on-line programming and diagnosis;
4. The PLC Unit shall be equipped with at least six (6) nos. of digital input and six (6) digital output with volt-free contacts. The digital input channels shall be fast enough to catch pulse input up to 100kHz;
5. The PLC shall be programmed to force a reset to the router and/or DCU upon detection of cessation of data communication for a period of time;
6. All input / output channels shall be adequately programmed to relay the required alarm signals such as power supply failure, battery low, battery fault, etc.;
7. Twenty per cent (20%) of readily available spare channels for each type of digital, analogue counter input / output channels of the PLC Unit shall be provided. The Sub-contractor shall be responsible for providing all the labour, equipment, cabling, materials, programming and engineering costs for the utilization of the spare channels when any additional site signals are considered necessary by the WSD;
8. The PLC Unit shall accept program downloaded locally via their communication ports from a notebook or tablet computer. The Sub-contractor shall be responsible for providing the programming software for the PLC Unit;
9. The PLC Unit shall have provisions for communicating with the AMR Master Station on a report-by–exception manner in order to reduce network traffic and shall be capable of stand-alone operation in the event of communication link and the AMR Master Station failure;
10. The PLC shall be suitable for operating at ambient conditions of humidity 10 to 90% and temperature 0 to 50°C; and
11. The specification of the PLC shall be read in conjunction with the “Standard Specification E-78-04, Programmable Logic Controller” from WSD.

ROUTER AND SWITCH

The communication equipment shall facilitate the communication and data transmission between the AMR Outstation and the AMR Master Station. The metering data collected by the DCU shall be transmitted to the AMR Master Station at the WSD via Ethernet router through broadband, 3G network or other means as deemed appropriate by the WSD.

1. The router shall be designed for enterprise or industrial use capable of serving a high speed, high availability and high reliability performance. The router shall support the features of firewall support, VPN security and SNMP management;
2. The router shall provide broadband network interface, 3G/4G network interface via SIM card and wi-fi interface for data transmission;
3. The router shall provide VPN security encryption feature with VPN tunnelling protocol IPSec with AES 256;
4. The router shall provide the feature of Dyn DNS client which support the access to the router with a dynamic IP address;
5. The router shall be integrated with Ethernet switch which shall provide at least 1 number of Ethernet WAN 10/100Mbps port (RJ45) and 4 numbers of Ethernet LAN 10/100mb port (RJ45), or a separated Ethernet switch with same port numbers shall be provided; and
6. The router shall be suitable for operating at ambient conditions of humidity 10 to 90% and temperature 0 to 50°C.
ELE36.3.090.N  CABLES
1. The M-Bus network shall be composed of a 4-core 1.5mm² copper cable with two cores to serve as the bus-wire for the M-bus system, while reserving the remaining two cores as spare cores. The maximum cable length shall be 350 metres (from MIU to a DCU). All M-Bus cable maximum cable capacitance is 180nF;
2. PVC insulated power and control cables shall comply with IEC 60502-1;
3. PVC insulated cables for panel wiring shall comply with IEC 60227-3 or BS 6004;
4. The conductor shall be of stranded, plain, annealed copper complying with IEC 60228. Four-core cables shall have full size neutral conductors;
5. The specification of the copper cable shall refer to the “Standard Specification E-30-01, Electrical Cables” from WSD;
6. Ethernet cable shall transmit digital signal among AMR Panels in a form of Ethernet network;
7. Ethernet cable shall be Cat 5e cable complying ANSI/TIA-568-C.2 and IEC 61156-5; and
8. The maximum Ethernet copper cable length shall be 100 metres. In case the cable distance exceeded 100 metres, ethernet to optical fiber converter and the associated equipment/power supplies shall be supplied and installed by the Sub-contractor.

ELE36.3.100.N  POWER SUPPLY UNIT
The power supply unit shall comply with EN/IEC 60950 and support the power supply of the AMR panel.

ELE36.3.110.N  MINIATURE CIRCUIT BREAKERS (MCB) UNIT
1. The rating of the MCB unit shall be determined by the power requirement of the overall components of the AMR panel; and
2. The specification for the MCB shall be referred to ELE3.5.

ELE36.3.120.N  24V DC TO 220V AC INVERTER
It shall transform 24V d.c. supply to 50 Hz (+/-0.1%) 220V (+/-3%) a.c. sinusoidal supply for the consumption of a.c. loading(s) in AMR Panel. The rating of the inverter shall be 125% of that of the a.c. loading(s). The output efficiency of the inverter shall be 88% or above at 50-100% loading condition. The inverter shall comply with EN/IEC 60950.

ELE36.3.130.N  SELECTOR SWITCH
1. Selector switches shall be of rotary, independently manual operated action with double break air-break contacts complying with the following requirements:-
   a. Rated insulation voltage: 600V 50 Hz a.c. or 300V d.c.;
   b. Rated thermal current of contacts: Not less than 15A at 220V 50Hz a.c.;
   c. Endurance: 1 million mechanical operations and 0.1 million on-load electrical operational cycles.
2. The specification of the selector switch shall refer to the “Standard Specification E-11-03, Electrical & Instrumentation Panels and Cubicles” from WSD.

ELE36.3.140.N  BACKUP BATTERY UNIT
1. A battery charger and backup battery unit shall provide the backup power to the system when the input power source is interrupted;
2. In general, the equipment shall include the following:
   a. Maintenance free battery
   b. Battery charger with both float and boost charging facilities
   c. Panel enclosure for both a. and b.
d. Interconnecting cables between a. and b.

3. The system shall operate from a 220V 50Hz a.c. power supply. Unless otherwise specified, the output voltage of the battery supply shall be 24V d.c.. The equipment supplied shall include all sub-units and components to form a complete system. The equipment shall be suitable for operation from 0 to 50°C with a relative humidity up to 90%.

ELE36.3.150.N  BATTERY CHARGER PANEL

The Battery Charger Panel for housing the 24V battery charger shall comply with the following requirements:

1. The enclosure shall be fabricated with 1.5mm thick stainless steel to IP54;
2. Unless otherwise approved by WSD, the size of the panel shall be not larger than 400(h) x 300(w) x 210(d) mm;
3. It shall be designed for housing a 24V battery charger and the associated control board and terminal blocks for power supply and control wiring connection;
4. The 24V battery charger shall be in compliance with the WSD Standard Specification E-88-05; and
5. The front panel shall be installed with a voltmeter and an ammeter of appropriate ranges for load output voltage and current and LED alarm indications.

ELE36.3.160.N  BATTERY PANEL

The Battery Panel for housing the 24V battery shall comply with the following requirements:

1. The enclosure shall be fabricated with 1.5mm thick stainless steel to IP54;
2. Unless otherwise approved by WSD, the size of the panel shall be not larger than 380(h) x 380(w) x 210(d) mm;
3. It shall be designed for housing the battery cells and the associated terminal blocks for power supply and control wiring connection;
4. The 24V battery charger shall be in compliance with the WSD Standard Specification E-88-05; and
5. The battery cell capacity shall be able to support operation of the AMR Outstation for six (6) hours with 20% safety margin taking into account all various derating factors under a.c. power failure condition.

ELE36.3.170.N  CABLING FACILITIES AND SITE INSTALLATION

1. A complete cabling system shall consist of power cables, control cables, M-Bus cables and communication network cables including associated conduits to all equipment;
2. Except for surface mounted conduit which shall be of G.I. type, a system of concealed PVC conduit and steel trunking together with accessories for the AMR system of water suppliers shall be provided as shown on the Drawings;
3. The cabling work shall include the provision of conduits, cable trays, ladders, mounting brackets, supports, channels, cleats, ties, lugs, glands, shrouds, tapes, markers, ferrules, joints, terminations etc., as necessary and required to form a complete, neat and safe installation. All conduits and equipment boxes shall be marked for identification;
4. The Sub-contractor shall prepare a complete cable list for the power, control, M-Bus and communication network cables shown on the Drawings; and
5. Terminal boxes with size of 150mm(h) x 150mm(w) x 75mm(d) complete with the associated connectors and connection terminal blocks on the concealed junction boxes shall be supplied and installed on each floor to facilitate connection of the signal cables of the MIUs to the M-bus wires. The bus-wires shall be terminated to the DCU for data concentration and temporary storage.

6. At least two 25mm cable conduits shall be provided to run through the water meter room/cabinet of each floor and water meter room/AMR equipment room/AMR equipment cabinet and terminate with a 150mm(h) x 150mm(w) x 75mm(d) adaptable box in each of the water meter rooms/cabinets for installing M-Bus cables and network communication cables.

7. A 220V 50Hz a.c. power supply with a 13A fuse spur unit for each AMR panel and the required wall space for mounting AMR panel(s) shall be provided;

8. A 25mm cable conduit running through the AMR equipment room/AMR equipment cabinet to the telecommunication room/TBE room shall be provided and to be terminated with 100mm(h) x 100mm(w) x 50mm(d) adaptable boxes;

9. For cases with more than one AMR equipment room within a development, a 25mm cable conduit running through those of the AMR equipment rooms/AMR equipment cabinets for network communication cables shall be provided and to be terminated with 100mm(h) x 100mm(w) x 50mm(d) adaptable boxes;

10. If master meter and check meter positions are provided, two 25mm cable conduits running through the master meter room and check meter room to the AMR equipment room shall be provided and to be terminated with 150mm(h) x 150mm(w) x 75mm(d) adaptable boxes, or individual AMR panel with associated electricity power supply point and telecommunication cable conduit shall be provided at each of the water meter rooms/cabinets; and

11. If the cables run across the access or without proper supports, suitable fixed cable conduits and flexible conduit shall be provided for cable protection.

**DATA TRANSMISSION EQUIPMENT AND NETWORK**

The AMR Outstation communication equipment and all required network shall be provided to enable the AMR Outstation to securely communicate with the AMR Master Station for data transmission through broadband/3G communication networks as deemed appropriate by the WSD.

1. The data transmission from smart water meters to the AMR Master Station shall be initiated by the DCU. The time for data transmission of the AMR Outstation shall be preset by the AMR Master Station, in which clock synchronisation of the DCU with the AMR Master Station shall be carried out;

2. TCP/IP communication protocol shall be adopted, in which a broadband account or a 3G mobile data services account as deemed appropriate by the WSD with dynamic IP address shall be assigned to the AMR Outstation;

3. The communication network shall be capable of forming a connection established by the AMR Master Station to obtain AMR data, diagnostic information or programming the DCU of the AMR Outstation on an ad hoc basis;

4. The metering operation shall be handled by the AMR Master Station, which shall respond to the pre-scheduled data transmission requests initiated by the AMR Outstations. The AMR Master Station can also initiate ad-hoc polling to particular AMR Outstation on need basis;

5. Communication network service from ISP shall be provided to enable effective data transmission from the AMR Outstation to the AMR Master Station during testing and commissioning (T&C) and before handing over of the system to WSD; and
6. The Sub-contractor shall be responsible for the subscription and maintaining of the communication network services between AMR Outstation(s) and the AMR Master Station at WSD for the entire period starting from testing and commissioning phase of the Works till the expiry of Maintenance Period. The details of the broadband/3G connection services shall be approved by the Contract Manager.

ELE36.3.190.N INTELLECTUAL PROPERTY AND PROPRIETARY RIGHTS

1. If the supplied equipment required intellectual property rights, appropriate licences shall be obtained from the relevant rights owners and copies of which shall be furnished to the WSD prior to handing over of the system;

2. All technical information, documents and manuals furnished to the WSD shall have the license, copyright or written permission from the proper rights holder for using of these materials by the WSD; and

3. Documentary evidence of all licences of all software for the Works shall be provided prior to handing over of the system to the WSD.

ELE36.3.200.N BUILDING SERVICES PROVISION FOR AMR EQUIPMENT ROOM

1. The Sub-contractor shall supply and install mechanical ventilation, lighting and power for the AMR equipment as shown on the Drawings.
ELE36.4 TESTING AND COMMISSIONING

ELE36.4.010.N INSPECTION AND EQUIPMENT TEST

1. The Sub-contractor shall inspect the supplied equipment for verification of the brand, model, capacity, clock speed, ratings specifications, serial numbers of the hardware as well as the brand, version, serial number, licence keys, licence documents of all hardware, software and firmware supplied;

2. The Sub-contractor shall carry out equipment test including, but not limited to, the following procedures:
   a. Verify the correct inventory of hardware including software licences, authentication certificates, cables, etc.;
   b. Demonstrate that all spare memory, equipment capacity and system expansion requirements;
   c. Demonstrate that all input and output expansion requirements have been met, including wiring and signal isolation, and verify that power supplies are capable of supporting the increased load for this expansion;
   d. Demonstrate all hardware and software boot-up and diagnostics;
   e. Verify all power supply voltages are within tolerance;
   f. Verify proper earth connections and isolation of instrumentation earth for all equipment;
   g. Demonstrate that all preloaded software and firmware have been properly installed and are operating correctly;
   h. Verify the connectivity and speed of the communications network equipment; and
   i. Demonstrate the systems to full functioning.

ELE36.4.020.N TESTING AND COMMISSIONING (T&C)

1. A testing and commissioning procedure shall be proposed by the Sub-contractor and submitted to the WSD for approval prior to commencement of testing and commissioning work;

2. After completing the installation of the AMR Outstation and prior to setting to work, individual equipment shall be tested to ensure that it performs in accordance with the specified requirements and is in satisfactory working conditions;

3. Before carrying out the required site test, the Sub-contractor shall ensure the following:
   a. The AMR Outstation is installed in accordance with all relevant drawings, circuit diagrams and the specified requirements;
   b. All cables and individual conductors are labelled and ferruled as per the relevant drawings;
   c. All items of the AMR Outstation are adequately and correctly labelled and identified;
   d. The insulation resistance and continuity of all conductors of cables, etc. are acceptable; and
   e. The earthing arrangements are complete and a satisfactory value of earth loop impedance has been achieved.

4. The test procedures and format of test records shall be submitted to the WSD for approval prior to the scheduled commencement of testing and commissioning;

5. All measuring instruments, indicators, testing computers, network testing instruments and other apparatus necessary for carrying out the tests shall be provided by the Sub-contractor and accepted by the WSD;
6. The Sub-contractor shall submit a comprehensive T&C procedure including, but not limited to, the following items for approval:
   a. Integrity of the AMR data on the DCU;
   b. Integrity of the AMR data on the Router/Modem;
   c. Integrity of the AMR data on the AMR Master Station;
   d. Configuration and operation check on the MIUs;
   e. Operation check on the PLC;
   f. Change over test on the backup battery unit;
   g. Operation check on the AMR Outstation upon a.c. power supply failure;
   h. 6-hour discharge test on the battery of the AMR Outstation;
   i. Demonstration of remote programming and diagnosis of the AMR Outstation.
7. Final acceptance test full function of the AMR Outstation including successful data transmission to the AMR Master Station shall be conducted by the Sub-contractor to the satisfaction of the WSD.

ELE36.030.N SYSTEM TRANSFER FOR OPERATION AND MAINTENANCE
1. Upon successful commissioning of the AMR Outstation by the Sub-contractor to the satisfaction of the WSD, when requested by the WSD, the whole system including communication network shall be handed over to the WSD for operation and maintenance;
2. An Operation and Maintenance manual complete with all necessary documentation, catalogues, drawings, reports, test certificates and T&C records shall be submitted to the WSD for approval prior to handing over of the system. Four (4) complete sets of hardcopy of the final O&M manual with softcopy in pdf format in a CD-ROM shall be provided; and
3. Upon requested by the WSD for handing over of the AMR Outstation, the Sub-contractor shall arrange a joint inspection with the WSD to check and confirm the AMR Outstation for the purpose of system handing over.

ELE36.040.N TRAINING
1. The Sub-contractor shall provide not less than 40 hours training of the operation and maintenance for the AMR system with a proposed training programme approved by the Contract Manager / WSD. The training shall be conducted during normal working hours for the estate management staff/WSD. The Sub-contractor shall record in 720p video or better throughout one training session and hand over 2 copies of DVD-videos of the record to the Contract Manager; and
2. The Sub-contractor shall provide sufficient copies of detailed training manuals for operation and maintenance for the estate management staff and WSD.
ELE36.5 MAINTENANCE

ELE36.5.010.N GENERAL
1. The Sub-contractor shall provide free maintenance including labour and materials to the system installation for the entire Maintenance Period after completion of the installation; and
2. During the Maintenance Period, the Sub-contractor shall attend to all faults and complaints, remedy all defects, replace all malfunction items and maintain the complete installation in a clean, tidy and functional condition to the satisfaction of the Contract Manager and WSD.

ELE36.5.020.N 24-HOUR ON-CALL SERVICE DURING MAINTENANCE PERIOD
1. The Sub-contractor shall provide 24-hour on-call service at any time during the Maintenance period. The Contract Manager may instruct the Sub-contractor, in the Maintenance Period via telephone, mobile phone, paging service or any other means as advised by the Sub-contractor and Approved by the Contract Manager, to attend the reported breakdowns, and the Sub-contractor shall dispatch competent technicians or such other suitable personnel, who shall arrive at site and shall carry out any necessary inspection testing and repair work as soon as practicable and under all weather conditions;
2. The Sub-contractor shall submit to the Contract Manager for this purpose at least two names of English speaking representatives, who can be reached at any time of the day, with contact telephone numbers of direct lines, mobile phones or paging service for Approval. Prior Approval shall also be obtained for any subsequent changes of representatives, contact telephone numbers etc. during the Maintenance Period at least two weeks before the change is effected;
3. The Sub-contractor shall attend to emergency calls within three (3) hours of receiving such calls out of normal working hours and a maximum time limit of two (2) hours during normal working hours. For other repair calls, they shall carry out repair work within twenty four (24) hours; and
4. The maintenance and servicing works, as described above, form part of the Main Works described in Clause 8.3(2)(c) of the General Conditions of Main Contract.
ELE36.6  CHECKLIST ON DOCUMENTS FOR INCLUSION IN THE AMR OUTSTATION PROPOSAL
CHECKLIST ON DOCUMENTS FOR INCLUSION IN THE AMR OUTSTATION PROPOSAL

[Extracted from the appendix of WSD’s standard specification: E-80-01, “Automatic Meter Reading (AMR) Outstation”]

Appendix
[August 2017]

Check List on Documents for Inclusion in
Automatic Meter Reading (AMR) Outstation Proposal

Part I – General Information

Address of Premises: ____________________________________________________________

__________________________________________________________

Name of Consumer: (In English) _________________________________________________

(In Chinese) __________________________________________________________________

Contact Tel No.: ______________________________________________________________

Email address: ________________________________________________________________

ASN No. / CCID No. (if applicable): ____________________________________________

WSD Reference No. (if applicable): _____________________________________________

Part II – Documents to be included

The AMR Outstation proposal/supplementary information includes:

Please tick the appropriate boxes:

<table>
<thead>
<tr>
<th></th>
<th>Enclosed in the proposal</th>
<th>Not Applicable</th>
</tr>
</thead>
</table>
| (1) | Site location plan  
- showing the location and boundary of the development | ☐ | ☐ |
| (2) | Building floor layout plan  
- showing the meter room(s)/box(es) for housing the AMR panel(s) | ☐ | ☐ |
| (3) | Meter room/box layout  
- indicating typical meter room/box  
- showing the detailed layout of the meter room/box with dimensions | ☐ | ☐ |

Remarks:

a. The submission and approval of AMR Outstation proposal shall be separated from the submission and approval of plumbing proposal for application of water supply. The information submitted for the above purposes shall be self-contained and shall not be mixed up.

b. Information (e.g. meter room/box layout, meter schedule, etc.) related to the application of water supply shall be approved under the plumbing proposal. Such information provided in the AMR Outstation proposal is for reference only.

c. Catalogues of equipment are not required to be submitted at the Proposal Stage. However, such catalogues shall be submitted to the WSD for information together with the submission of operation and maintenance manual.

FWP1.1  THE WORKS

FWP1.1.010.8 SITE OF THE WORKS

The site of the Works is specified in Project Specific Specification.

FWP1.1.020.A SCOPE OF THE WORKS

1. The works to be carried out under this Sub-contract shall include the whole of the materials and labour necessary for the complete fire services installation, water pump installation and rainwater treatment installation, and the maintenance of the same for twenty four (24) months following the certified completion date of the Main Works or any Section(s) of the Main Works, for the buildings/premises specified in Project Specific Specification all as shown on the Drawings and detailed in this Specification;

2. The fire services installation comprises fire hydrant/hosereel system, sprinkler system, alarm system, smoke and heat detection system, portable fire appliances etc, the water pump installation comprises fresh water pumps, flush water pumps, fire services feed pumps, rainwater pumps, fittings, control and electrical work, etc, and the rainwater treatment installation comprises chlorinators, cartridge filters and the associated pipework, fittings, control and electrical work, etc. The complete installation shall mean, not only the major items of equipment and apparatus conveyed in this Specification, but all the incidental sundry components necessary for the complete execution of the works and for the proper operation of the installation with their labour charges, whether or not these supply components are mentioned in detail in the tender documents;

3. The rainwater treatment installation by the Sub-contractor is part of the rainwater harvesting system which also include the rainwater catchments areas, rainwater collection pipeworks and treated rainwater distribution system. The Sub-contractor shall coordinate with the Main Contractor for the completion of the whole rainwater harvesting system.

FWP1.1.030.8 SAMPLE FLATS AND SAMPLE WING

During the construction for domestic building blocks, a specified sample flats and wing located on a typical floor will be required to be completed by the Main Contractor including the flats, the corridor and the lift lobby etc.. The Sub-contractor shall complete the fire service installations such as fire hydrant, hose reel etc. in the specified sample flats and wing in coordination with the Main Contractor to cope with the sample flats and wing construction programme. The proposed samples and details of fire service installations in the sample flats and wing shall be submitted to the CM for Approval prior to commencement of works. The Sub-contractor shall be responsible for replacement of any fire services installations which are found damaged or deformed and to carrying out the necessary adjustments to restore to as-new condition before building completion.
FWP1.2 DOCUMENTATION

FWP1.2.010.8 DRAWINGS AND DOCUMENTS

1. Schedule of the Sub-contract Drawings is listed in the Appendix as specified in Project Specific Specification;

2. The tenderer's attention is also drawn to the latest revision of the following Standard Drawing and Document issued by the Housing Department which shall also be complied with where relevant:

3. The aforesaid Standard Drawings and Documents will be available for inspection at the office of Housing Department during normal office hours upon application to the Contract Manager;

4. The Sub-contract Drawings and the above Standard Drawings and Documents shall hereinafter be referred to as the Drawings.

FWP1.2.020.8 TECHNICAL INFORMATION SUPPLIED WITH TENDER

1. All technical information supplied with the tender, including the materials offered, is for tender assessment only;

2. Acceptance of the tender will not relieve the Sub-contractor of his responsibility for the proper working of the installation to meet the specified requirements in compliance with the Sub-contract documents to the entire satisfaction of the Contract Manager;

3. In the event of the installation being, in the opinion of the Contract Manager, not in compliance with the specified requirements, the Sub-contractor shall modify his design, replace any unsatisfactory materials and do everything necessary for compliance with the specified requirements at his own cost.

FWP1.2.030.8 DEFINITIONS AND ABBREVIATIONS

In this Specification the word "shall" is mandatory, the word "will" is informative, the word "should" is advisory, and the word "provide" means supply and fix, or supply and install. In addition, the following words shall have meanings herein assigned:

1. "Authority"
   Hong Kong Housing Authority.

2. "Indicated"
   Indicated elsewhere in the Specification or on the Drawings.

3. "Or Equal" or "Or Similar"
   Having similar characteristics and specification as regards type of construction, performance, general appearance and standard of quality of manufacture.

4. "FSD"
   The Fire Services Department of the Government of Hong Kong.

5. "BS"
   British Standards, including British Standard Specifications and British Standard Codes of Practice published by the British Standards Institution.

6. "EN"
European Standard.

7. "BS EN"
   European Standard adopted by the British Standards Institution to replace any relevant British Standard.

8. "LPC"
   Loss Prevention Council, United Kingdom.

9. "NFPA"
   National Fire Protection Association, USA.

10. "UL"
    Underwriters' Laboratory, USA.

11. "IEE Regulations"
    The "Regulations for Electrical Installations" 17th Edition or later published by the BSI and the IET.

12. "ASTM"
    American Society for Testing and Materials.

13. "ANSI"
    American National Standards Institute.

14. "PASS"
    Performance Assessment Scoring System.

15. "BEC"
    Code of Practice for Energy Efficiency of Building Services Installation.

FWP1.2.040.8 REQUIREMENTS FOR SUB-CONTRACTOR'S DRAWINGS

1. Size of Drawings:
   Drawings submitted by the Sub-contractor shall be of a standard size from A0 to A4 in accordance with BS EN ISO 5457. "As-fitted" drawings shall be of A0 or A1 size only.

2. Installation Drawings
   a. The Installation Drawings (See PRE.BS1.210) shall detail and dimension the following, where relevant:
      i. General layout drawings giving accurate and dimensioned locations of all plant and equipment included in the Sub-contract;
      ii. Details showing arrangement of assemblies, piping and valve arrangements, connections and junctions between components, etc., which cannot be accurately defined on layout drawings;
      iii. Schematic diagrams for each system to confirm the principle of operation and operating conditions, provisions for testing and commissioning to be included;
      iv. Electrical details, including schematic diagrams for motor control panels, component layout, cable and conductor sizes, cabling arrangement, termination details, control & interlocking logic diagram;
      v. Fire detector and alarm positions and wiring routes with details and function;
vi. Conduit and trunking routes with conduit / trunking sizes, showing all accessories, details of cables and circuit references;

vii. Earthing and equipotential bonding system with details of conductor sizes and routing, bonding arrangement;

viii. Label schedules, showing wording and formats for the labelling of equipment and distribution board circuits.

b. Operating and maintenance clearances for the equipment and their static and dynamic structural loading shall be shown on the installation drawings wherever necessary.

3. "As-fitted" Drawings

a. The "as-fitted" drawings shall be based on the full set of Approved Installation Drawings updated to show the actual positions and arrangement of all items installed. Any additional drawings which are considered necessary by the CM for showing the complete installation shall be included. The Drawings shall be drawn in black-ink lines on quality paper suitable for reproduction of prints;

b. "As-fitted" drawings shall include, but not be limited to, the following:

i. Site plan (showing street hydrant and underground pipe routes, water mains and pump room locations, rainwater treatment plant room locations etc.);

ii. Schematic piping diagram;

iii. Schematic wiring diagram;

iv. Block control diagram for fire services and water pump systems;

v. Block control diagram for rainwater treatment system;

vi. Operation sequence for fire services and water pump systems;

vii. Fire services layout plan;

viii. Pump / booster pump room layout plan;

ix. Rainwater treatment plant room layout plan;

x. Control cubicle layout;

xi. Details for other installations (such as water feature, etc.);

xii. Conduit drawings;

xiii. Other items as required by the CM.
FWP1.3 COMPLIANCE WITH REGULATIONS AND STANDARDS

FWP1.3.010.8 STATUTORY REGULATIONS
The Sub-contractor shall comply with all Regulations and requirements including those of the Government of Hong Kong, the Hong Kong Fire Services Department (FSD), the Water Authority, the Building Authority, the Electrical and Mechanical Services Department (EMSD) and Electricity Supply Company, together with any revisions or amendments made thereto, and shall be responsible for giving notifications to the appropriate Authorities and for paying all fees all in accordance with the Sub-contract. The following are particularly relevant:

1. The Fire Services Ordinance and its Regulations;
2. The Waterworks Ordinance and its Regulations;
3. The Electricity Ordinance and its Regulations;
4. The Noise Control Ordinance;
5. The Radiation Ordinance and its Regulations;
6. Codes of Practice for Minimum Fire Service Installations and Equipment and Inspection, Testing and Maintenance of Installations and Equipment, and Circular Letters issued by the Fire Services Department (hereinafter referred to as Fire Services CoP);
7. Circular Letters issued by the Fire Services Department;
8. Rules of Loss Prevention Council for Automatic Sprinkler Installations incorporating BS EN 12845 and relevant FSD circular letters (hereinafter referred to as LPC Sprinkler Rules);
9. The standard for fire detection and alarm systems BS 5839-1 and relevant FSD circular letters (hereinafter collectively referred to as AFA Rules);
10. Hong Kong Waterworks Standard Requirements and Circular Letters issued by the Water Authority;
11. Code of Practice for the Electricity (Wiring) Regulations (hereinafter referred to as the Electrical CoP);
12. Building Energy Efficiency Ordinance;

FWP1.3.020.8 STANDARDS AND PRACTICE
All materials and workmanship shall comply, where applicable, with all relevant sections, together with any revisions or amendments made thereto, of the following:

1. Relevant Worksections for Electrical Installation of Building Services Installation Specification of the HKHA Specification Library (hereinafter referred to as the HKHA Electrical Installation Specification) as specified in Project Specific Specification;
2. The BEC issued by the Electrical and Mechanical Services Department. The Sub-contractor shall provide necessary information and documents to the Contract Manager for preparation of submissions under the Building Energy Efficiency Ordinance;
3. The Supply Rules issued by the respective Supply Company currently in operation in Hong Kong;

4. Relevant Worksections of Building Works Specification of the HKHA Specification Library (hereinafter referred to as the HKHA Building Works Specification);

5. Appropriate British Standard Specification(s) (subject to FWP1.3.040). When a British Standard quoted in this Specification has been wholly or partially superseded by another equivalent or similar national / international standard, the Sub-contractor is allowed to offer material in compliance with the latter in lieu of the former for the Contract Manager's Approval, on condition that prior approval by the appropriate Authorities (where required) has already been given;

6. National Fire Protection Association codes/standards (hereinafter referred to as NFPA codes/standards);

FWP1.3.030.8 PRECEDENCE

In case of conflict between the requirements among the publications referred to in FWP1.3.010 and FWP1.3.020, interpretation shall be in accordance with the following order of precedence unless otherwise directed by the Contract Manager:

1. Ordinances and Regulations, Laws of Hong Kong;
2. Fire Services CoP and Circular Letters issued by the Fire Services Department;
3. Electrical CoP;
4. LPC Sprinkler Rules and AFA Rules;
5. The Specification and/or the Drawings;
6. HKHA Electrical Installation Specification;
7. Building Energy Code;
8. Supply Rules;
9. HKHA Building Works Specification;
10. British Standard Specifications and British Standard Codes of Practice;
11. NFPA codes/standards.

FWP1.3.040.8 APPLICATION OF BRITISH STANDARDS / INTERNATIONAL OR NATIONAL STANDARDS / CODES OF PRACTICE

1. Where the date / year of British Standards (BS) / International or National Standards / Codes of Practice (CoP) is not specified in the Specification, it shall be deemed to refer to any valid or latest version, and any applicable amendments to that version;

2. Where the date / year is specified, due to intended purposes, the specified version and any amendments to that version shall be complied with unless otherwise approved by the Contract Manager;

3. "Head standards" (HS) are not dated because they do not contain any technical content. However reference to a head standard invokes all relevant extant "parts" of that standard which are themselves dated. Reference to head standards is a practicable method of using a general BS reference in situations where detailed reference to each part would be cumbersome.
FWP1.4 MATERIALS

FWP1.4.010.8 METRIC UNITS

Unless otherwise specified, only materials of metric unit shall be used.

FWP1.4.020.8 SUBMISSIONS FOR APPROVAL

1. The Sub-contractor shall submit catalogues, technical information and samples of the materials proposed for Approval as required by the CM. (See PRE.BS1.350 and PRE.BS1.360);

2. The Sub-contractor shall include in the submissions copies of valid Approval documents / certificates issued by FSD and / or product certification bodies recognised by FSD for those items on the List of Fire Service Installations and Equipment and other products requiring FSD’s Approval / Acceptance published by FSD;

3. The Sub-contractor shall include in the submissions copies of valid Approval documents issued by the Water Authority and test certificates / reports issued by the certification bodies or accredited laboratories acceptable to the Water Authority for those piping and fittings as listed on the Annex - “Fittings to be Installed or Used in Inside Service or Fire Service” to WSD’s Form WWO 46.

FWP1.4.030.8 SAMPLES - SPECIAL REQUIREMENTS

In addition to the requirements of PRE.BS1.360 a sample of each type of sprinkler head, fire alarm call point, heat detector and smoke detector as included in the tender shall be submitted to the Contract Manager upon request. Tests to demonstrate the function of the equipment shall be conducted where required. Samples may be required immediately after submission of Tender and before tender recommendation or acceptance. The Tenderer shall be prepared to deliver the materials to the Contract Manager's office and collect after examination and demonstration.

FWP1.4.040.8 EQUIPMENT SCHEDULE

The Tenderer shall complete the Equipment Schedule attached to the Tender Document and also furnish the following information, as required by the Contract Manager:

1. Name of manufacturer, country of manufacture, type and catalogue number, and full technical performance details, of all major items of equipment offered;

2. Voltage of operation and current consumption of automatic smoke and heat detectors under:
   a. Normal conditions; and
   b. Alarm conditions.

3. Type and size of wiring for alarm circuits;

4. Evidence, or a signed statement, to the effect that all items of equipment are approved by FSD;

5. Copies of test certificates showing compliance with the specified standards of the offered equipment and materials issued by the British Standards Institution or any other recognized international testing authorities;

6. Illustrated technical brochures in English showing all major items of equipment and their installation requirements.
FWP1.4.050.8 ALTERNATIVE SOURCES OF SUPPLY

1. Items of equipment and materials for the Works included in the Equipment Schedule shall fully comply with the Specification and Drawings and the Tenderer is allowed to include up to three offers for any one item;

2. Following acceptance of the Tender the Contract Manager may accept alternative equipment and materials proposed by the Sub-contractor in writing provided always that they are fully in compliance with the Specification and Drawings without imposing any additional contractual and financial liabilities on the Authority. Save as aforesaid, alternatives to the agreed Equipment Schedule will not be accepted.

FWP1.4.070.8 CONSISTENCY

All equipment of the same category shall preferably be of the same colour scheme throughout and shall be the product of the same manufacturer.

FWP1.4.080.8 ZINC FREE BRONZE

Where zinc free bronze is specified in the Specification, the zinc content shall not exceed 0.5%.

FWP1.4.090.8 USE OF ASBESTOS

Asbestos or products containing asbestos shall not be used without prior Approval.

FWP1.4.100.8 FIRE EXTINGUISHING MEDIA

Fire extinguishing media for any fire services equipment installation shall be of zero ozone depleting potential product. Upon request, the Sub-contractor shall produce evidence and document to prove that the fire extinguishing media is of zero ozone depleting potential product.

FWP1.4.110.8 SITE STORAGE

1. Tubes and all items of plant and equipment shall be delivered, stored, and maintained in perfect condition;

2. Tubes shall have their ends effectively sealed;

3. All plant and equipment shall be stored under weatherproof cover until they are required to be incorporated into the installation.
FWP1.5 SUPERVISION

FWP1.5.010.8 APPOINTMENT OF SUPERVISING ENGINEERS AND SITE SUPERVISORS

1. Immediately upon the award of the Sub-contract, the Sub-contractor shall appoint Supervising Engineer(s) and Site Supervisor(s) specified in this Specification, who shall be both English and Cantonese speaking and in the Sub-contractor's full-time employment for the supervision of the Sub-contract Works to the satisfaction of the Contract Manager;

2. Immediately after the award of the Sub-contract, the name, qualifications and curriculum vitae of the Supervising Engineer(s) and Site Supervisor(s) shall be submitted for Approval to the satisfaction of the Contract Manager;

3. None of the Supervising Engineer(s) and Site Supervisor(s) shall be removed from their respective duties without prior Approval;

4. In the event of any of them being unsatisfactory, in the opinion of the Contract Manager, or misconducting themselves, they shall be removed forthwith and be replaced by suitable substitutes to the Contract Manager's satisfaction within seven days from the Contract Manager's instruction in writing.

FWP1.5.020.8 SUPERVISING ENGINEERS

1. Unless otherwise specified, the Sub-contractor is to employ for the supervision of all works on Site, at least one qualified Supervising Engineer. The Supervising Engineer shall generally represent the Sub-contractor in all respects of the Sub-contract and assume the following duties:

   a. Coordinate and supervise the work in the Sub-contractor's office and the Site;

   b. Develop, in conjunction with the Main Contractor, schedules of installation drawings, builder's work drawings, material submission and delivery, statutory submissions, the programme of works and testing and commissioning programme, for approval by the CM;

   c. Liaison with the CM and other parties;

   d. Attend at the office of the CM for the finalisation of drawings and equipment selection;

   e. Attend progress meetings and coordination meetings;

   f. Monitor and supervise installation drawings submission, builder's work drawings submission, material submission and delivery, statutory submissions in accordance with the respective submission schedules approved by the CM. Submit progress reports to the CM monthly or at shorter intervals when such requested by the CM;

   g. Check and confirm the installation drawings, builder's work drawings and material submissions are suitable for the installation works and in compliance with the requirements of the Sub-contract;

   h. Examine, verify and confirm in writing to the CM on a monthly basis that the material delivered to the Site under the Sub-contract has been approved by the CM;

   i. Certify all material delivery vouchers in accordance with PRE.B12.280 of the Main Contract;

   j. Prepare, in conjunction with the Main contractor, the delivery method statements for delivery of plant and equipment;
SUPERVISION

FWP1.5

k. Undertake all site test and commissioning of the Sub-contract Works and endorse the test and commissioning reports to confirm that he is satisfied with the completeness, workmanship and performance of the installations which comply fully with the Sub-contract requirements, prior to submission to the CM.

2. Qualification requirements:

At least one year of proven post qualification experience at supervisory level on fire services and water pump installations in buildings with the following qualification:

a. Registered Professional Engineer (Mechanical, Fire or BS Discipline) under the Engineers Registration Ordinance; or
b. Member of the Institution of Mechanical Engineers, UK; or
c. Member of the Chartered Institution of Building Services Engineers, UK; or
d. Member of the Hong Kong Institution of Engineers (Mechanical, Fire or BS Discipline) elected after 5 December 1975.

3. The Supervising Engineer shall be highly competent and experienced, and shall be given a high level of delegated authority such that he / she can take decisions, including those involving expenditure.

FWP1.5.030.8 SITE SUPERVISORS

1. Unless otherwise specified, the Sub-contractor is to employ at least one qualified Site Supervisor. The Site Supervisor shall be stationed on site;

2. Qualifications requirements:

Mechanic with at least 3 years of practical experience in fire services and water pump installation.
FWP1.6 SUB-CONTRACTORS OBLIGATIONS

FWP1.6.010.8 RADIATION ORDINANCE - IONISATION TYPE SMOKE DETECTORS

The Sub-contractor shall hold a valid Radioactive Substances Licence granted by the Hong Kong Radiation Board and observe all conditions of licence, rules and regulations of the Radiation Ordinance and Radiation (Control of Radioactive Substances) Regulations in the storage, handling, installation, disposal etc. of ionization type smoke detectors throughout the whole contract period and the subsequent Maintenance Period.

FWP1.6.020.A OBTAINING FIRE CERTIFICATE

1. The Sub-contractor shall be responsible for giving notifications to the appropriate Authorities, attending necessary inspection and paying all fees levied, including them in the Tender Price, and also for collecting all necessary certificates and licences for the installation as soon as available, and delivering them to the Contract Manager;

2. The Sub-contractor shall also be responsible for amending FS installation drawings for submission of FSI/314 in accordance with the latest approved building plans certifying that the details and specifications of all installations shown on drawings are prescribed by the Fire Services Department and in accordance with all relevant rules and codes;

3. The Sub-contractor shall also be responsible for submission of FSI/501a to the Fire Services Department for all FS installations and the associated requirements including fireman's lifts.

FWP1.6.030.8 BUILDING SERVICES PERFORMANCE ASSESSMENT SCORING SYSTEM

1. The Housing Authority has adopted a Building Services Performance Assessment Scoring System (BSPASS) to assess the performance of building services Nominated Sub-contractors undertaking works for the Authority;

2. BSPASS will be operated in this Sub-contract and assessments by Building Services PASS Assessment Team (BSPAT) or other staff of the Housing Authority will be conducted at quarterly intervals or other intervals as required by the Contract Manager;

3. Upon the Contract Manager's notification, the Sub-contractor's authorised representative shall attend all such assessments;

4. The Sub-contractor shall provide all necessary attendance, and all necessary measuring instruments, in addition to those specified in PRE.BS1.630, etc. to facilitate the BSPASS assessment as stipulated in the relevant BSPASS manuals;

5. In addition, the Sub-contractor shall also provide labours for the opening up and re-fixing of the works, the operation of the equipment and the testing, etc. as required by the assessment.

FWP1.6.040.8 MODIFICATION WORKS IN NON-DOMESTIC PREMISES DURING MAINTENANCE PERIOD

1. During the Maintenance Period, the Employer may employ other workmen or contractors to carry out modification works pertaining to the installation to suit the fitting out works of the tenants;

2. The Sub-contractor shall provide the necessary attendance, including operation of the installation, as instructed by the Contract Manager to facilitate such modification works;
3. The costs of the attendance will be determined by a fair valuation made by the Contract Manager in conjunction with the Sub-contractor and paid for separately;

4. The employment of other workmen or contractors by the Employer for the modification of the installation shall not in any way relieve the Sub-contractor of his responsibilities for the maintenance and defects of the Works, other than those parts which have been modified by others, in accordance with the Contract.

FWP1.6.050.8 LICENSED PLUMBER AND ATTENDANCE FOR INSPECTION BY THE WATER AUTHORITY

1. The Sub-contractor and their employed Licensed Plumber (LP) shall carry out the water services works for fire services and water pump installation mentioned in this Specification and shown on the Drawings, as approved by the Water Authority;

2. The LP should have obtained Level 2 or above in English Language in the Hong Kong Diploma of Secondary Education Examination (HKDSEE), or Grade E or above in English Language (Syllabus B) in the Hong Kong Certificate of Education Examination (HKCEE), or equivalent. In case the LP cannot meet such requirement, the Sub-contractor shall provide a competent personnel (e.g. registered engineer, relevant site personnel) with equivalent qualification in English to support the water services works for fire services and water pump installation handled by the LP;

3. The Sub-contractor shall submit and update all necessary applications and forms to the Water Authority and attend upon their representative for the purpose of tests and inspections for the water services works for fire services and water pump installation. All applications and forms for WSD submission shall be submitted to the Contract Manager for comment before submitting to WSD and record after approval;

4. The LP referred to in sub-clause (1) shall:
   a. Submit material list to WSD under Form WWO-46 and subsequent update as soon as the proposed materials, and / or proposed change of approved materials, which are approved by the Contract Manager, and before placement of order for such materials;
   b. Ensure that all pipes and fittings have been acknowledged by the Water Authority with permission given for proceeding with the approved water services works for fire services and water pump installation before installation;
   c. Supervise all water services works for fire services and water pump installation under his charge with attendance record submitted to the Contract Manager on monthly basis after commencement of water services works for fire services and water pump installation on Site;
   d. Attend the Main Contractor’s regular site meetings with Nominated Sub-contractors, Direct Contractors and Utility Undertakings as appropriate;
   e. Submit monthly report on quality control and progress for review at the site meetings. The report shall include progress of water services works for fire services and water pump installation, LP’s site inspection and site attendance records, record of material quarantine and verification tests, updated WSD submission record etc.;
   f. Attend regular site meetings if required by the Contract Manager;
   g. Upon completion of the water services works for fire services and water pump installation:
      i. Submit LP’s inspection report of the completed water services works for fire services and water pump installation;
ii. Declare that all pipes and fittings installed on Site have been approved by the Water Authority and registered with WSD under Form WWO 46;

iii. Declare that only cadmium-free category brazing alloy and lead-free category soldering alloy are used, if applicable;

iv. Declare that all pipes and fittings installed and any materials used for the construction and installation of the water services works for fire services and water pump installation are as prescribed by the Waterworks Regulations and approved by the Water Authority.

h. Attend all WSD inspections for the water services works for fire services and water pump installation.

5. The Sub-contractor shall monitor the LP’s carrying out of duties as specified in sub-clause (4) above and ensure water services works for fire services and water pump installation under the LP are in full compliance with the Specification and as prescribed by the Waterworks Regulations;

6. The Sub-contractor shall monitor the LP’s submission to WSD related to the water services works for fire services and water pump installation. The Sub-contractor shall check the validity of the WSD Form and attachments before onward submission to the Contract Manager for comment / signing. The Sub-contractor’s checking of the WSD submission forms, with declaration that the materials used and the construction of the fire services and water pump installation described therein are as prescribed by the Waterworks Regulations, shall be recorded in a standard form in AP2.FWP.APPEND1 which shall be jointly signed by the Sub-contractor’s supervising engineer and their employed LP, and countersigned by the building services engineer of the Main Contractor and submitted to the Contract Manager for record;

7. The Sub-contractor shall verify that the LP’s declaration under sub-clause (4)(g) are valid. The verification and the declaration shall be recorded in a standard form in AP2.FWP.APPEND2 which shall be jointly signed by the Sub-contractor’s supervising engineer and their employed LP, and countersigned by the building services engineer of the Main Contractor and submitted to the Contract Manager for record.

FWP1.6.060.8 WSD INSPECTION OF UNDERGROUND AND CONCEALED PIPEWORK BEFORE COVERING UP

Before covering up of the underground and concealed pipework, the Sub-contractor and their employed Licensed Plumber shall invite WSD to conduct interim inspection of the pipework in accordance with the Waterworks Regulations.

FWP2.1  FIRE SERVICES INSTALLATION

FWP2.1.1  FIRE HYDRANT/HOSE REEL (FH/HR) INSTALLATION

FWP2.1.1.010  FH/HR SYSTEM DESCRIPTION

1. The FH/HR system comprises main risers, with Fire Services Inlets, supplying the fire hydrants on each floor and secondary risers supplying hose reels on each floor as shown on the Drawings;

2. The FH/HR system shall be fed from the fire services tank which will be erected by the Main Contractor;

3. Identical duty and standby intermediate booster pumps / fixed fire pumps as shown on the Drawings shall be used in the system to ensure sufficient pressure at each hose reel to provide a minimum jet stream of 6 m and an aggregate flow of not less than 900 l/min at any two hydrant outlets each with a flow of 450 l/min at a running pressure of not less than 350 kPa when the system is fed from the roof tank or with the fire engines boosting water into the Fire Services Inlet at a constant pressure of 800kPa upstream of the Inlet. Pressure reducing valves or self-contained pressure reducing hydrants shall be used wherever the pressure at any hydrant outlet is over 850 kPa;

4. The pressure at any fire hydrant shall in no case exceed 850 kPa. The running pressure at any hydrant outlet, when delivering 450 l/min, shall be not less than 350 kPa.

FWP2.1.1.020  FH/HR SYSTEM OPERATION

1. The system shall be inter-connected with the Fire Alarm and Control System in accordance with the Drawings and Specification;

2. The standby intermediate booster pump / fixed fire pump shall start when the pressure switch in the duty intermediate booster pump / fixed fire pump discharge does not sense a correct pressure within 15 seconds after the duty intermediate booster pump / fixed fire pump receives the "start" signal. The timer shall be adjustable from 0-2 minutes;

3. For intermediate booster pump, 'pump running' indicating light, alarm buzzer and fire pump 'start/stop' push buttons shall be provided adjacent to the fire services inlets;

4. The fire services alarm control panel shall start the fixed fire pump automatically upon receiving the call from any manual call point and once started, the fixed fire pump shall run continuously until it is stopped only manually at the pump control panel;

5. When the intermediate booster pump is independent of the fixed fire pump, it shall be controlled by the 'start/stop' push buttons adjacent to fire service inlets. Once started, the pump shall run continuously until stopped manually either at the 'start/stop' button adjacent to the same fire service inlet or at the pump control panel;
6. When the intermediate booster pump also serves as fixed fire pump, it shall be either started automatically upon receiving the call from any manual call point as stated in above paragraph 4, or by the 'start/stop' push buttons as stated in above paragraph 5. Once started, the pump shall run continuously until stopped manually either at the 'start/stop' push buttons adjacent to the same fire service inlet or at the pump control panel.

FWP2.1.1.030.8 SPRINKLER HEAD OVER REFUSE CHUTE AND AT REFUSE STORAGE AND MATERIAL RECOVERY CHAMBER

1. Quartzoid bulb type sprinkler head shall be provided at the top of the refuse chute and at the Refuse Storage and Material Recovery Chamber (RS&MRC) of domestic blocks;

2. The operating temperature of the sprinkler head at refuse chute and at RS&MRC shall be 57°C and 68°C respectively;

3. The isolating stop valves with micro switches shall be provided for the top of refuse chute and RS&MRC to identify the valves at open/close status at the fire services alarm control panel. Security devices shall be provided to prevent tempering / unauthorized operation of the valves;

4. The flow switch provided to detect the operation of the sprinkler shall be of high sensitivity as in FWP11.6.040. The location and method of connection shall be submitted for Approval.

FWP2.1.1.040.8 PIPEWORK

1. Unless otherwise shown on Drawings, galvanised steel pipework and fittings complying with FWP3 and FWP4 shall be used;

2. The installation shall include all pipework and fittings fully installed as indicated on the Drawings.

FWP2.1.1.050.8 DUTY OF INTERMEDIATE BOOSTER PUMP / FIXED FIRE PUMP

1. The pressure of the intermediate booster pump / fixed fire pump shall fall progressively with the increase of flow, with the shut-off pressure being at the highest. The pump shall deliver not more than 150% of rated capacity at 65% of rated head and the shut-off head shall not exceed 130% of the rated head;

2. Overheating due to continuous operation at no system draw-off condition is not acceptable. By-pass device for excessive water flow to the suction tank shall be provided by the Sub-contractor. The leak off rate of the pump(s) to prevent overheating shall be determined by Sub-contractor;

3. The pump shall be able to deliver water at flow rate and pressure head as indicated on the Drawings;

4. The duty and standby intermediate booster pump / fixed fire pumps shall each be capable of providing an aggregate flow of not less than 900 l/min at any two hydrant outlets each with a flow of 450 l/min at a running pressure of not less than 350 kPa. The pressure at any hydrant shall in no case exceed 850 kPa;

5. The intermediate booster pump shall also be able to maintain the required aggregate flow and pressure at any two hydrants when water is pumped through the FS Inlet at a constant pressure of 800 kPa;

6. The sub-contractor shall be responsible for checking the pump duty operating head and capacity of flow based upon the characteristics of the pipework system and equipment actually installed. Any non-compliance with the design requirements found shall be notified to the Contract Manager;
7. Predicted total head, efficiency, required NPSH and power absorbed versus flow
quantity curves shall be submitted. The curves shall commence at zero and be
extended to show the performance at 150% of the rated capacity to demonstrate that
the pump will be capable of meeting the full range of operating condition on site.

FWP2.1.060.8 TYPE OF INTERMEDIATE BOOSTER PUMP AND FIXED FIRE PUMP

1. The intermediate booster pump/ fixed fire pump shall be either horizontal split
casing, end suction or horizontal/vertical multi-stage type as shown on the Drawings.
Construction of the horizontal split casing or end suction pump shall permit removal
of back cover, stuffing box and impeller without disturbance of suction/delivery
pipework;

2. For installation with motor rating not exceeding 2.2 kW, close-coupled pumps may
be accepted as alternative subject to Approval.

FWP2.1.070.8 MOTOR RATING OF INTERMEDIATE BOOSTER PUMP AND FIXED FIRE
PUMP

The motor driving the intermediate booster pump / fixed fire pump shall be rated to give
20% more power in addition to the hydraulic power required for the rated flow of the
system.

FWP2.1.2 FIRE SERVICES PUMP CONTROL
CUBICLE

FWP2.1.2.010.8 APPROVAL OF LAYOUT

Unless otherwise Approved, prior to manufacture, control circuit and panel layout
arrangement of the control cubicle shall be in accordance with the Drawings and
FWP11.3, FWP11.4 and FWP11.5.

FWP2.1.2.020.8 MOTOR STARTER PROTECTION

The Sub-contractor shall advise the CM of the appropriate type and rating of the short
circuit protective device to be used in conjunction with the motor starter in accordance
with the motor starter manufacture's recommendation in order to achieve the specified
type of coordination.

FWP2.1.2.030.8 TANK EMPTY SIGNAL AT FIRE SERVICES SUPPLY TANK

1. A level control switch for tank empty signal shall be provided at fire services supply
tank such as FH/HR tank, sprinkler tank, street fire hydrant tank and drencher tank,
when applicable;

2. When water level at fire services supply tank falls to 150 mm above the top level of
the suction pipe of the fire services pump, the level control switch at the fire service
supply tank shall:

   a. Switch off the pump when it is operating under manual mode; and
   b. Activate a tank empty indication light on the pump control cubicle.
FWP2.1.3  FIRE ALARM AND CONTROL SYSTEM

FWP2.1.3.010.8  ALARM AND CONTROL SYSTEM

1. The Sub-contractor shall provide, install and connect up, by concealed PVC conduit system, fire alarm and control, sprinkler control panel and repeater panel in the location as shown on the Drawings. The fire services alarm control panel and associated repeater panel shall be of conventional electronic type acceptable to FSD unless otherwise approved by the Contract Manager;

2. The Sub-contractor shall provide the concealed PVC conduit system complete with wiring for and in connection with the fire alarm and control system, fire services alarm control panel and the sprinkler control;

3. The arrangement on the fire services alarm control panels shall be submitted for Approval. The system shall be operated from the 24V battery supply and direct link as mentioned in FWP2.1.3.040 if required;

4. Whenever necessary and subject to Approval, parts of the conduit system may be installed in galvanised steel surface conduit/trunking.

FWP2.1.3.020.8  MANUAL FIRE ALARM POINT

1. The manual fire alarm point shall comprise a manual fire alarm call point and an audible alarm point as shown on the Drawings;

2. The manual fire alarm call point shall be semi-flush mounted or surface mounted with the thickness of mounting box not more than 25 mm unless otherwise approved by Contract Manager. Its drip holes beneath the mounting box shall not be blocked.

FWP2.1.3.030.8  CIRCUITRY OF MANUAL FIRE ALARM POINTS

1. Wiring of the manual fire alarm points shall be divided into zones;

2. The manual fire alarm points in each floor shall form an individual zone;

3. The sprinkler head over refuse chute and at the refuse chamber shall each form a separate zone at the fire services alarm control panel;

4. The circuit of each zone shall be individually wired to the fire services alarm control panel;

5. Cables shall be clearly labelled by cable markers so as to be easily identified at the fire services alarm control panel to facilitate testing of each individual circuit.

FWP2.1.3.040.8  FIRE SERVICES ALARM CONTROL PANEL

1. Control and monitoring details shall be referred to the Drawings and FWP10 and submitted for Approval prior to installation;

2. A key box with glass front shall be installed next to the fire services alarm control panel or other location as directed by the Contract Manager. One set of properly labelled key for operation of the panel shall be provided in the key box. Another two sets of keys shall be provided to the Contract Manager;

3. The fire alarm and control system and the fire services alarm control panel shall operate at 24V DC supply from battery and charger unit connected to essential power supply.
FWP2.1.4 PORTABLE EQUIPMENT

GENERAL
Fire extinguishers, sand buckets and fire blankets shall be provided if applicable and mounted in the positions as shown on the Drawings.

FIRE EXTINGUISHERS INSIDE TRANSFORMER ROOM
The fire extinguishers inside the Transformer Rooms shall be supplied and installed by the Sub-contractor unless otherwise specified.

FWP2.1.5 SPRINKLER SYSTEM INSTALLATION

SPRINKLER SYSTEM DESCRIPTION
1. The sprinkler system shall be designed as specified in Project Specific Specification;
2. The system is to provide an automatic fire fighting system using fresh water as the extinguishing medium within the areas as shown on the Drawings;
3. The system shall be fed from a sprinkler water tank located as specified in Project Specific Specification;
4. The Main Contractor will erect the sprinkler water tank;
5. The Sub-contractor shall carry out the installation work from this water tank onward including the connection of this system thereto;
6. The system shall comprise sprinkler pumps (if applicable), control valves, sprinkler inlet valves, non-return valves, risers, distribution pipes, range pipes, sprinkler heads, flow switches, pressure switches, drains, etc. together with all associated equipment, whether or not they are shown on the Drawings, necessary for a complete installation.

SPRINKLER SYSTEM OPERATION
The sprinkler system will operate automatically and shall be inter-connected with the Fire Alarm and Control System. Should a sprinkler head located at any part of the area served by the sprinkler system on any level operates, the pressure switch, on sensing the pressure drop, shall start the sprinkler pump. The flow switch, on sensing the flow of water, shall actuate the fire services alarm control panels.

DUTY OF SPRINKLER PUMP
1. For duty/standby pumps for sprinkler system, the pumps (including any orifice plates) must comply with the pressure/flow characteristics, suction lift requirement, close off maximum pressure and other relevant paragraphs in the LPC Sprinkler Rules;
2. The discharge rate of the jockey pump shall be less than that of the most hydraulically remote sprinkler head or discharge outlet, but in no case less than 25 1/min, and the pressure generated by the jockey pump shall not exceed the maximum allowable pressure permitted on the sprinkler system;
3. The Sub-contractor shall be responsible for checking the pump duty operating head and capacity of flow based upon the characteristics of the pipework system and equipment actually installed. Any non-compliance with the design requirements found shall be notified to the Contract Manager.
FWP2.1.5.040.8 TYPE OF SPRINKLER PUMP
1. The sprinkler pump shall be either horizontal split casing, end suction type or horizontal/vertical multi-stage type having construction permitting removal of back cover, stuffing box and impeller without disturbance of suction/delivery pipework;
2. For jockey pumps, multi-stage pumps shall be used. The maximum number of stages acceptable is seven unless otherwise Approved;
3. For installation with motor rating not exceeding 2.2kW, close-coupled pumps may be accepted as an alternative subject to Approval.

FWP2.1.5.050.8 PIPEWORK
1. The installation shall include all pipework and fittings complying with FWP3 and FWP4, installed to LPC Sprinkler Rules and as indicated on the Drawings;
2. The distribution pipes as well as the range pipes shall run through beams as far as possible unless otherwise specified.

FWP2.1.5.060.8 SPRINKLER HEADS
1. The sprinkler heads shall be located as shown on the Drawings and they shall be of quartzoid bulb type, unless otherwise Approved;
2. Samples of each type of sprinkler heads shall be submitted for Approval before installation.

FWP2.1.5.070.8 SPRINKLER CONTROL VALVE SET
1. Each control valve set shall comprise:
   a. Main stop valve of gate type;
   b. Alarm valve of wet pipe;
   c. By-pass stop valve or duplicated alarm valve set for sprinkler system in compliance with LPC Sprinkler Rules, if applicable;
   d. Alarm devices, including water motor alarm and gong, pressure switch, etc.;
   e. Facilities for testing to suit Fire Services Department's requirements;
   f. Pressure gauges to indicate "upstream" and "downstream" system pressure;
   g. Retarding chamber or other device as necessary to prevent false alarm due to incoming pressure variations;
   h. Other equipment as necessary.
2. The control valve set shall be installed at the location as shown on the Drawings. All installation, materials and fixing bolts, etc. for mounting the equipment inside the cabinets or on walls as applicable shall be provided by the Sub-contractor;
3. The main stop valve location plate shall be as detailed in LPC Sprinkler Rules, but lettering shall be in both English and Chinese.

FWP2.1.5.080.8 WATER MOTOR ALARM AND GONG
Water motor alarm and gong shall be constructed of non-corrosive materials and shall have gong of not less than 250 mm in diameter, suitable for external installation. The water motor alarm gong shall be painted and labelled as required by the Fire Services Department.
FWP2.1.5.090.8 FLOW SWITCHES
1. Flow switches shall be installed to such positions as indicated on the Drawings;
2. Water flow alarm switches as detailed in LPC Rules for Sprinkler Installations shall be utilized for sending signal back to the fire alarm control and indicating panel to indicate which the location is under operation with both visual indication and audible alarm. LPC approved high sensitive water flow alarm switch capable of actuation by operation of one sprinkler head shall be used.

FWP2.1.5.100.8 DRAIN PIPE WORKS
Drain pipe works complete with supports and accessories, duly painted, shall be supplied and installed by the Sub-contractor, connecting various drain points of the sprinkler system to the nearest drains. The drain valve and drain pipe shall be not less than 25 mm in diameter, to allow the system to be efficiently drained if required.

FWP2.1.5.110.8 ORIFICE PLATE/LOCK-SHIELD VALVES
Notwithstanding that the orifice plate/lock-shield valve is not shown on the Drawings, the Sub-contractor shall provide the suitably sized orifice plate/lock-shield valve in the sprinkler system wherever necessary, to suit the pressure/flow characteristics of the sprinkler pump and to meet the requirements of LPC Sprinkler Rules.

FWP2.1.5.120.8 SPRINKLER AND CONTROL SYSTEM
1. The Sub-contractor shall provide concealed PVC conduit system complete with wiring for and in connection with the fire alarm and control system, fire services alarm control panel and fire services pump control cubicle all as shown on the Drawings;
2. The sprinkler panel and repeater panel shall be of conventional electronic type acceptable to FSD, unless otherwise approved by the Contract Manager. The arrangement on the panels shall be submitted for Approval. The system shall be operated from the 24V battery supply and direct telephone link as mentioned in FWP2.1.3.040 sub-clause (3);
3. Whenever necessary, and subject to Approval, parts of the conduit system may be installed in galvanised steel surface conduit/trunking.

FWP2.1.6 AUTOMATIC SMOKE AND HEAT DETECTION SYSTEM

FWP2.1.6.010.8 SYSTEM DESCRIPTION
1. Automatic smoke and heat detection system comprising smoke detectors, heat detector, visual alarm points, etc. shall be supplied and installed by the Sub-contractor as shown on the Drawings;
2. Smoke detector shall be of photoelectric type. The design and construction shall be of LPC approved type or other standards acceptable to FSD;
3. Heat detector installed shall be of combined fixed temperature and rate of rise type except in kitchen area which shall be of fixed temperature type. The design and construction shall be of LPC approved type or other standards acceptable to FSD;
4. The smoke/heat detection system shall be of "closed" circuit type.
ALARM ANNUNCIATOR PANEL FOR AUTOMATIC SMOKE AND HEAT DETECTION SYSTEM

1. Where automatic smoke and heat detection (AFA) system is to be provided as indicated on the Drawings, the Sub-contractor shall provide, install and connect up, by concealed PVC conduit system, alarm annunciator panel(s) and repeater panel(s) at the locations shown on the Drawings;

2. The alarm annunciator panel and repeater panel shall be of conventional electronic type acceptable to FSD and compatible with the smoke/heat detector installed, unless otherwise approved by the Contract Manager;

3. The Sub-contractor shall provide the concealed PVC conduit system complete with wiring for and in connection with the fire alarm and control systems, fire services alarm control panel and the alarm annunciator panel;

4. Battery and charger
   a. The alarm annunciator panel shall be operated from a 24V battery together with trickle charger. Batteries shall be of nickel-cadmium type;
   b. The battery and the charger shall be housed in a well ventilated painted cabinet of robust construction and made from galvanised sheet metal;
   c. Trickle charger shall be of automatic type complete with indication lamps, fuses and suitable for a single phase 220V, 50Hz a.c. supply;
   d. In all cases, the battery shall be installed in a separate compartment from the charger. Details of the battery charger set shall be submitted for Approval.

5. Alarm annunciator panel
   a. The alarm annunciator panel for domestic block and each of the ancillary facilities premises accommodated in the domestic block shall be separately provided. Associated battery supply and telephone link with Fire Services Communication Centre (FSCC) shall also be separated;
   b. For the domestic block alone if AFA system is provided, the alarm annunciator panel shall be operated from the 24V battery supply and direct telephone link as mentioned in FWP2.1.3.040 sub-clause (3);
   c. For each of the ancillary facilities premises, an AFA annunciator panel shall be installed at the main entrance of the premises with a fire signal to the alarm annunciator panel at G/F of the domestic block. Furthermore, a fire alarm signal for the AFA system shall be transmitted to the alarm annunciator panel for domestic block to actuate the FH/HR fire alarm bells. An additional fire alarm bell for the AFA system of each ancillary facilities premises shall also be installed on the outside wall of the building at ground floor.

6. The repeater AFA panel if required shall comprise full indicating lights showing all the features of the master panel;

7. The arrangement on the panels and construction details shall be submitted for Approval;

8. Whenever necessary and subject to Approval, parts of the conduit system may be installed in galvanised steel surface conduit/trunking;

9. The cost of rental and maintenance charge within the Maintenance Period for each of the telephone link shall be borne by the Sub-contractor.
FWP2.1.7 AUDIO / VISUAL ADVISORY SYSTEM

FWP2.1.7.010.A WORKS DESCRIPTION

1. The Sub-contractor shall provide audio / visual advisory (AVA) system(s) at the areas as shown on the Drawings with equipment and components as specified in FWP10.10. The relevant Standard Detail drawings and schematics in the Sub-contract are for indication of the design intent only. The Sub-contractor shall be responsible for the detailed design of the system to meet with the statutory and performance requirements in the Specification;

2. The Sub-contractor shall provide all necessary equipment and materials to complete the AVA system in order to meet all prescribed requirements in the Fire Services CoP to the satisfaction of the FSD. The Sub-contractor shall propose and submit the system layouts, equipment, materials and detailed wiring schematics for Approval;

3. The AVA system shall provide audio advisory signals throughout the specified areas using an audio advisory system located adjacent to the fire services alarm control panel in the fire services control room and loudspeakers at the areas as shown on the Drawings;

4. The Sub-contractor shall be responsible for designing the audio advisory system including the exact quantity and positioning of loudspeakers. The layout of loudspeakers as shown on the Drawings is the design intent for indication of the areas where the audio announcement is required to be provided and the types of loudspeakers required at specified locations;

5. When any of the loudspeakers for the audio advisory system are required to be connected to the public address system(s) provided by other(s), an automatic audio input change-over unit shall be provided for automatic switching of audio inputs;

6. The AVA system shall include visual advisory signs of flashing exit sign boxes in the AVA system protected areas, high level flashing directional sign boxes and low level photo-luminous directional signs in the specified areas for indication of evacuation route to the nearest exit.

FWP2.1.7.020.A SYSTEM OPERATION

1. Upon receipt of the fire alarm signal from the fire services alarm control panel, the flashing mode of the exit sign boxes inside AVA system protected areas and directional sign boxes shall be activated throughout the AVA system protected areas;

2. The fire alarm bells shall operate for 10 seconds and then be followed by a pre-recorded emergency announcement in English, Cantonese and Putonghua to alert occupants and direct them to evacuate immediately following the flashing exit signs and flashing directional signs. An attention drawing signal such as a chime sound shall be given out each time before broadcasting of the emergency announcement;

3. The fire alarm bells and the emergency announcement for the AVA system protected areas shall repeat alternately until the fire alarm signal has been reset;

4. The message of the emergency announcement shall be recorded in a voice message module and shall be announced using amplifiers and loudspeakers;

5. In case of failure of the voice message module, the microphone of the audio advisory system in the fire services control room shall be used by an operator to give emergency announcement with a preceding attention drawing signal such as a chime sound to draw the attention of the public;

6. Fire alarm bells shall be operated continuously to give the fire alarm warning if no audio signal is received from the voice message module or microphone.
FWP2.2 WATER PUMP INSTALLATION

FWP2.2.1 SYSTEM DESCRIPTION

FWP2.2.1.010.8 GENERAL
1. The water pump installation for each domestic block shall comprise the following as shown on the Drawings:
   a. Two sets of fresh water pump;
   b. Two sets of flush water pump;
   c. A fresh water booster pump system on Roof;
   d. Two sets of fire services feed pump;
   e. One set of night duty pump for fresh water;
   f. Two sets of rainwater irrigation pump system.
2. The water pump installation shall include all associated electrical works, pipework and system components such as pressure switches, pressure gauges, flexible connectors, gate valves, check valves and strainers as shown on the Drawings.

FWP2.2.1.020.8 SUB-CONTRACTOR’S RESPONSIBILITIES
1. The Sub-contractor shall be responsible for connecting the suction and discharge pipework to the puddle flanges at the sump tanks and the riser pipes connection point inside the pump room as shown on Drawings;
2. The Sub-contractor shall provide and install pressure reducing valves and modulating float valves at the fresh and flush water sump tanks as shown on the Drawings. Ball float valve shall also be provided and installed by the Sub-contractor at the fire services sump tank as shown on the Drawings;
3. The Sub-contractor shall provide, install and connect concealed PVC conduit system for water pump control;
4. The Sub-contractor shall provide and install a PRV fault indication system to the flush water down-feed system as shown on Drawings.

FWP2.2.1.030.8 FRESH WATER BOOSTER PUMP SYSTEM
1. A fresh water booster pump system shall consist of the following:
   a. Three sets of fresh water booster pumps as specified in FWP6.2.025, two duties and one standby, coupled with induction motors as specified in FWP11.2, assembled in the manufacturer's factory, suitable for variable speed drive control;
   b. Three sets of variable speed drive (VSD) units as specified in FWP11.3.030 consisting of multi-pump control microprocessors and variable frequency drives with static frequency inverters of appropriate rating to match with the pump motors, and whenever necessary, including an associated master multi-pump display and control panel board;
   c. A pump control cubicle as specified in FWP11.4 consisting of power supply, control and indication wiring circuits;
   d. A set of at least two nos. of stainless steel pneumatic pressure vessels as specified in FWP5.2.056 and of capacities as shown on Drawings;
e. Pressure transducers as specified in FWP11.6.080 to hunt water discharge pressure and transmit feedback signal to the multi-pump control microprocessors in the VSD units; and

f. Other necessary components for completing the system.

FWP2.2.2 SYSTEM OPERATION

FWP2.2.2.010.8 FRESH AND FLUSH WATER PUMP INSTALLATION

1. The pumps shall be operated by level control switches installed at the roof tanks of each block. The control schematic wiring diagram of the fresh and flush water pump installation is shown on the Drawings;

2. When the water level at the roof tank is 100 mm above the top of the outlet pipe, the low level control switch shall start the duty pump until the water level corresponding to the specified tank capacity is reached;

3. When the water level at sump tank falls to 150 mm above the top level of the suction pipe of the pump, a level control switch at the sump tank shall switch off the pump;

4. An audio and visual alarm panel shall be provided at conspicuous high level outside the fresh and flush water pump room to indicate the common fault alarm at each pump control cubicle. The audio alarm shall be a buzzer rated for continuous operation with its sound audible at a distance of not less than 10 m and the visual alarm shall be a red indicating light. The audio and visual alarm shall be reset manually at the pump control cubicle;

5. For domestic blocks, daily automatic operation of full capacity duty pump at an adjustable preset time on or before 11 p.m. shall be incorporated in the fresh and flush water pump controls to fill up the roof water tanks for use over the night.

FWP2.2.2.020.8 FRESH WATER BOOSTER PUMP SYSTEM INSTALLATION

1. The fresh water booster pump system shall perform automatic multi-pump control functions as follows:

   a. To maintain preset constant water output pressure as specified on the Drawings by varying the motor running speed according to the feedback signals of corresponding pressure transducers at pump discharge side to meet system water flow demand;

   b. To switch on lagging pump when demand exceeding the maximum capacity of leading pump;

   c. To switch pump start-and-stop automatically according to the programme built in the multi-pump control microprocessor of the VSD unit for pump sequence operation and alternatively in order to maintain equal tear and wear of all pumps;

   d. To count the running hours of each pump and to perform automatic switching of pumps to avoid non-stop operation of any pump exceeding the preset maximum running hours in every on/off cycle;

   e. To utilize the associated pneumatic pressure vessels to keep pump running at zero demand for certain moment before pump stopping and to supply the least flow prior to pump starting to avoid quick start-and-stop of pump;

   f. To enable automatic switching of duty pump and trigger visual and audio alarm in case of any VSD fault and/or pump failure in running;

   g. To stop all pumps and trigger alarm for low water level at supply water tank.
2. The fresh water booster pump system shall comply with the following operating and installation requirements:
   a. All pumps in a booster pump system shall be capable of operating simultaneously regardless of their design function of duty and standby purposes;
   b. Each VSD unit is normally equipped with its own pressure transducer. For any system which feedback signal is grouped from one common pressure transducer for all pumps, a duplicate transducer capable of automatic changeover shall be provided as a standby;
   c. When a master multi-pump display and control unit is necessary to fulfil the multi-pump control functions, an identical duplicate shall be provided in parallel with selector knob for easy changeover in case the master unit in use is found faulty. Both units shall be installed in either the pump control cubicle or a separate metal panel board;
   d. Functions of the multi-pump control on every VSD unit in operation shall be maintained when one or more VSD units in the water booster system is/are isolated no matter being switched off manually or tripped automatically at fault. Failure of any individual system component including pump, VSD unit, master display and control unit and pressure transducer shall not cause total stoppage of the booster pump system;
   e. Each pump shall be capable of switching on/off manually at its associated VSD unit;
   f. The Sub-contractor shall submit calculations to demonstrate the inclusion of harmonic currents in arriving at the calculated cable losses within the maximum allowable limit in the BEC, for the final power circuit of the VSD units.

3. The following power supply and indications shall be provided in the booster pump control cubicle:
   a. Switch isolator for each pump motor;
   b. Contactor for emergency stop for each pump motor;
   c. Automatic/OFF selector for VSD of each pump motor;
   d. Multi-function electronic meter as specified in ELE4.4.5.040 for each pump motor;
   e. Phase indication for each pump motor;
   f. Pump running indication for each pump motor;
   g. Visual and audio indication for pump fault coming from VSD of each pump motor;
   h. Visual and audio indication for low water level at supply water tank;
   i. Visual and audio indication for low pressure at discharge side.

4. Upon failure of one pump, the faulty pump shall be automatically switched off while at the same time an audio and visual alarm shall be given at the alarm panel outside the pump room on roof and repeated at the alarm panel outside the water pump room on G/F installed with Fresh Water Pump with clear label "Alarm for Roof Fresh Water Booster Pump System". The audio and visual alarm shall be same as that described in FWP2.2.2.010. Upon failure of the control system and when the system pressure has dropped to or below a pressure setting as shown on the Drawings, the audio and visual alarm shall also be actuated.
RAINWATER IRRIGATION PUMP SYSTEM INSTALLATION

1. The pumps shall be under automatic control according to the cut-in/cut-out sequence as shown on the Drawings;

2. Upon failure of one pump, the faulty pump shall be automatically switched off while at the same time an audio and visual alarm shall be given at the alarm panel outside the pump room and repeated at the alarm panel outside the water pump room as shown on Drawings with clear label "Alarm for Rainwater Irrigation Pump System". The audio and visual alarm shall be same as that described in FWP2.2.2.010. Upon failure of the control system and when the system pressure has dropped to or below a pressure setting as shown on the Drawings, the audio and visual alarm shall also be actuated.

FIRE SERVICES FEED PUMP INSTALLATION

1. The fire services feed pump shall be operated by level control switch(es) installed at the roof fire services supply tanks such as FH/HR tank, sprinkler tank, street fire hydrant tank and drencher tank, if applicable. The control schematic wiring diagram of the fire services feed pump installation and supply tank low level alarm system is shown on the Drawings;

2. When the water level at a roof fire services supply tank has fallen to a level close to and above 90% of the full effective capacity, the level control switch shall start the feed pump until the water level corresponding to the specified tank capacity is reached;

3. The level control switch for tank empty at the sump tank shall be adjusted to switch off the fire services feed pump when the sump water level falls to 150 mm above the top level of the suction pipe of the pump;

4. An audio and visual alarm panel shall be provided at conspicuous high level outside the feed pump room to indicate the common fault alarm at the feed pump control cubicle. The audio alarm shall be a buzzer rated for continuous operation with its sound audible at a distance of not less than 10 m and the visual alarm shall be a red indicating light. The audio and visual alarm shall be reset manually at the pump control cubicle;

5. For water level monitoring of sprinkler system, it shall also comply with BS EN 12845.

LOW LEVEL ALARM AT FIRE SERVICES SUPPLY TANK

1. A level control switch for low level alarm shall be provided at each of the fire services supply tanks. It shall actuate alarms when the water level in any of the fire services supply tanks falls more than 10% below the level of full effective capacity;

2. In case that the fire services supply tank(s) is / are located at roof or on building higher level where the water is fed by fire services feed pump,
   a. A fire services tank low level indication lamp shall be lit on at the front panel of the feed pump control cubicle; and
   b. The alarm signal wiring for water low level of fire services supply tank shall also be connected to the audio and visual alarm panel as described in FWP2.2.2.030 outside fire services feed pump room. The signal for low level alarm shall be reset manually at the pump control cubicle.

3. In case that a fire services supply tank is located at basement or on building lower level where the water is directly fed from town mains,
   a. A fire services tank low level indication lamp shall be lit on at the front panel of the FS pump control cubicle; and
b. The alarm signal wiring for water low level of fire services supply tank shall also be connected to an audio and visual alarm panel outside the fire services supply tank room. The signal for low level alarm shall be reset manually at the pump control cubicle.

4. In any case, the low level alarm signals at fire services supply tanks shall be further connected to the Fire Services Alarm Control Panel (FAP) near security counter at entrance lobby of a domestic block or FAP / repeater panel at the FS Control Room where provided in any building. Alarm signal shall also be provided at the FAP / repeater panel when there is fault at the water level monitoring and control circuits.

FWP2.2.2.040.8 CONTROL CUBICLE LAYOUT FOR FRESH / FLUSH WATER PUMPS, RAINWATER IRRIGATION PUMPS AND FOR FS FEED PUMP AND FS / SPRINKLER TANK LOW LEVEL ALARM SYSTEM

1. Unless otherwise Approved, control circuit and panel layout arrangement of the control cubicle shall be as shown on the Drawings;

2. The Sub-contractor shall advise the CM of the appropriate type and rating of the short circuit protective device to be used in conjunction with the motor starter in accordance with the motor starter manufacturer's recommendation in order to achieve the specified type of coordination.

FWP2.2.3 PUMPS

FWP2.2.3.010.8 PUMP DUTY

The fresh, flush, booster fresh and fire services water pumps shall be able to deliver water at flow rates and pressure heads as indicated on the Drawings.

FWP2.2.3.020.8 TYPE OF PUMPS

1. Fresh water pumps: horizontal/vertical multi-stage;
2. Flush water pumps: horizontal/vertical multi-stage;
3. Fire services feed pumps: horizontal/vertical end-suction/multi-stage;
4. Fresh water booster pumps: stamped stainless steel multi-stage vertical in-line pump for variable speed drive;
FWP2.3  RAINWATER HARVESTING SYSTEM INSTALLATION FOR DOMESTIC BLOCK

FWP2.3.1  SYSTEM DESCRIPTION

FWP2.3.1.010.8  GENERAL

1. The rainwater harvesting system (RWHS) installation shall comprise the following as shown on the Drawings:
   a. Chlorine Dosing;
   b. Cartridge Filter;
   c. Two number of 2-way Valves;
   d. Rainwater Irrigation Pumps;
   e. Control and Metering System.

2. The collected rainwater in the rainwater collection tank shall be treated by both chlorinated solution and cartridge filter before being fed to the 2-way valve, and finally to the irrigation points. Fresh water from break tank shall be fed to the irrigation points through another 2-way valve if the rainwater collected inside the collection tank is at low level. Control and metering system shall monitor the performance of the RWHS with monitoring measurements on the water and electricity consumptions.

3. The RWHS installation shall include all associated electrical works, pipework and system components as shown on the Drawings.

FWP2.3.2  SYSTEM OPERATION

FWP2.3.2.010.8  SYSTEM CONTROL

1. Water to the irrigation points being fed either from the rainwater collection tank or fresh water break tank shall be controlled by 2 number of inter-connected 2-way valves.

2. One inlet port of a 2-way valve shall be connected to the rainwater outlet pipe of the collection tank through a cartridge filter while the inlet port of another 2-way valve shall be connected to the fresh water supply through a break tank.

3. When the water level in the rainwater collection tank is above the preset low level, the level sensor shall issue a signal to allow rainwater instead of fresh water entering the 2-way valve connected to the rainwater outlet pipe of the collection tank through a cartridge filter.

4. When the water level in the rainwater collection tank is below the preset low level, the level sensor shall issue a signal to allow fresh water instead of rainwater entering the 2-way valve connected to the fresh water supply through a break tank.

5. The function of the two 2-way valves shall be electrically interlocked such that water is either fed from rainwater collection tank or fresh water break tank.

FWP3.1 MATERIALS

FWP3.1.1 GENERAL

FWP3.1.1.010.8 SUITABILITY FOR PURPOSE
All pipes and fittings shall be constructed of materials suitable for the required working pressures and temperatures of the fluid carried.

FWP3.1.1.020.8 CONFORMITY WITH SPECIFICATION
1. All pipes and fittings shall conform to the Specification. Alternative materials may be used only with prior Approval;
2. Comply with BS 6920 for non-metallic components in contact with water intended for human consumption. Submit test reports or test certificates to demonstrate full compliance with BS 6920.

FWP3.1.1.030.8 PIPE SIZES
Pipe sizes indicated on the Drawings or in this Specification are nominal bores, with the exception of copper tube, for which the sizes indicated are nominal outside diameters.

FWP3.1.2 PIPEWORK

FWP3.1.2.010.8 DUCTILE IRON PIPES, FITTINGS AND ACCESSORIES
1. Ductile iron pipes, pipe fittings and accessories to BS EN 545;
2. Be capable of withstanding the concerned working pressure and maximum static pressure that may arise upon failure of the associated pressure reducing devices;
3. Be accepted by the Water Authority for the intended application. Produce type test certificate / report issued by the certification bodies or accredited laboratories acceptable to the Water Authority for the verification of compliance with this Specification;
4. Slip on flange adaptors:
   a. Be provided at check meters positions;
   b. Be designed and manufactured to suit the pipework installation. The flanges shall comply with BS EN 1092-2 PN 16 or PN 25 as appropriate;
   c. Be made of ductile iron to BS EN 545 and shall be coated with epoxy externally and internally comply with BS EN 14901;
   d. Stud bolts and nuts of the flange adaptors shall be made of stainless steel to BS EN 10088-3-1.4401;
   e. Gaskets shall be made of Ethylene Propylene Diene Monomer (EPDM). If used for fresh water, it shall comply with BS 6920;
   f. Be equipped with guide rod assembly to prevent damage from excessive movement. The assembly shall consist of guide rod plates, guide rods and steel washers on both sides, and shall be fitted with resilient neoprene sleeves, resilient neoprene washers on at least one side of the assembly for isolating vibration transmission.
5. Be coated with metallic zinc and bitumen finishing externally to BS EN 545 and lined with cement mortar internally, or be coated with metallic zinc and epoxy externally and lined with cement mortar and epoxy internally for use in corrosive condition. Epoxy coating shall comply with BS EN 14901. Adoption of epoxy coating shall be submitted to the CM for Approval;

6. The minimum wall thickness of pipes and fittings, which has already taken into account the negative tolerance, shall comply with the following table:

<table>
<thead>
<tr>
<th>Nominal size</th>
<th>Minimum wall thickness of pipes and fittings</th>
</tr>
</thead>
<tbody>

</tr>
</tbody>
</table>

7. The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the ductile iron pipes and fittings delivered to the site or installed.

**FWP3.1.2.020.8 GALVANIZED STEEL PIPES AND FITTINGS**

1. Galvanised steel pipes to BS EN 10255 with screwing to BS EN 10226-1 and of medium grade for above ground installation and of heavy grade for below ground installation unless otherwise Specified or shown on the Drawings;

2. Galvanised malleable cast iron pipe fittings to BS 143 and 1256 or BS EN 10242;

3. Galvanised wrought steel pipe fittings (screwed BS 21R series thread) to BS EN 10241;

4. The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the galvanized steel pipes and fittings delivered to the site or installed.

**FWP3.1.2.040.8 CARBON STEEL PIPES AND FITTINGS**

1. Carbon steel pipes of P195TR1 to BS EN 10216-1 and BS EN 10217-1 for operation in high pressure from 16 bar to 20 bar with dimensions to BS EN 10220;

2. Correlated fittings shall be butt welding type carbon steel for pressure purposes to BS EN 10253-1.

**FWP3.1.2.045.8 UNPLASTICIZED PVC (UPVC) PIPES AND FITTINGS**

1. Pipes: comply with BS 3505, Class E or BS EN ISO1452-2 series S6.3 or higher to suit system working pressure and as shown on the Drawings;

2. Fittings: comply with BS 4346-1 in conjunction with BS EN ISO 1452-3 for fittings jointed by solvent cementing, comply with BS EN ISO 1452-3 for other fittings;

3. Colour: white unless approved by the Contract Manager;

4. Jointing compound: be of a type recommended by the manufacturer of the pipes and fittings.
**Material: FWP3.1.2.050.A  PIPEWORK APPLICATION**

Installations shall be carried out using the specifications indicated below unless otherwise specified elsewhere or shown on the Drawings:

**FWP3.1.3  PIPE FITTINGS**

**FWP3.1.3.010.8  STANDARD PIPE FITTINGS**

1. Unless otherwise specified or Approved, only standard fittings and pipe fittings as appropriate shall be used;
2. Pipe fittings shall be of the same size as the pipework connected to them;
3. Pipe fittings fabricated on site, reducing bush and locally manufactured pipe fittings will not be accepted.

**FWP3.1.3.020.8  LOCALLY MANUFACTURED PIPE FITTINGS**

1. Where restricted site condition does not permit the use of standard pipe fittings, purpose made local fittings may be used only with prior Approval;
2. Local fittings shall be internally and externally painted with two coats of anti-corrosion materials and pressure tested as directed by the Contract Manager, prior to installation.

**FWP3.1.3.030.8  BENDS**

All bends shall be of long radius type unless otherwise Approved;
Short radius bends can be used for pipe size up to 50 mm diameter and for pipes installed in limited spaces.

**FWP3.1.3.040.8**  
**TEES**  
All tees shall be of the pitcher or twin elbow type, unless otherwise indicated or Approved.

**FWP3.1.3.050.8**  
**FLANGES**  
1. All flanges shall conform to BS EN 1092 and shall be of suitable pressure rating;  
2. Gaskets to BS EN 681-1 and shall be suitable for the operation condition in which they are installed.

**FWP3.1.3.060.8**  
**REDUCERS**  
1. Pipe size changes shall be effected by reducers of appropriate length to minimize pressure loss or otherwise by reducing bends or tees;  
2. In the case of suction lift, eccentric reducers shall be used at pump suction for air elimination.

**FWP3.1.3.070.8**  
**PIPE BRACKETS**  
1. Pipe brackets shall be of sufficient strength to take the load with no noticeable deflection with clips detachable without disturbing the fixing;  
2. Samples or details of the pipe brackets shall be submitted for Approval prior to installation.

**FWP3.1.3.080.8**  
**PROVISION OF SLEEVES**  
All sleeves for openings in walls within a fire compartment shall be PVC. All sleeves for openings in walls and slab connecting the fire compartment with other fire compartments/public area shall be galvanized mild steel.

**FWP3.1.3.090.8**  
**POLYTETRAFLUOROETHYLENE (PTFE) TAPES**  
1. Use PTFE tapes complying with BS 7786 to form a leak-free seal to screw joint;  
2. When used under the conditions for which they are designated, PTFE tapes in contact with, or likely to come into contact with potable water shall comply with BS 6920.

**FWP3.1.4**  
**EXPANSION JOINTS AND FLEXIBLE CONNECTORS**

**FWP3.1.4.010.8**  
**STAINLESS STEEL TYPE EXPANSION JOINTS**  
1. Stainless steel expansion joints shall be used in fresh, rainwater and fire services water pipeworks passing through building expansion joints or other locations as shown on the Drawings, and they shall comply with the following requirements:  
   a. Be of axial pattern bellows type and be able to withstand horizontal and vertical movement;  
   b. Be screwed ends to BS EN 10226-1, 2, 3 or flanged ends to BS EN 1092-1 as appropriate to facilitate replacement;
c. Be manufactured from stainless steel of Grade 1.4301 to BS EN 10088-1 or equivalent standard or other Approved material appropriate to the system;
d. Be designed to withstand the test pressure of the system and maximum static pressure that may arise upon failure of the associated pressure reducing devices;
e. Be equipped with guide rod assembly to prevent damage from excessive movement. The assembly shall consist of guide rods, rod plates and steel washers on both sides, and be fitted with resilient neoprene sleeves and resilient neoprene washers on at least one side of the assembly for isolating vibration transmission;
f. Testing pressure of the expansion joints shall be not less than twice of the system pressure involved;
g. All expansion joints shall be designed with a long cycle life to suit a pipe system with at least 20 years life expectancy and be installed properly without misalignment;
h. The expansion joints shall be the type accepted by the Water Authority and FSD. For sprinkler system, the expansion joints shall be provided according to the requirement of LPC Sprinkler Rules;
i. Anchors and guides shall be installed according to the recommendations of the expansion joint manufacturer and the details shall be submitted for Approval.

2. Submit the following for Approval of the CM:
   a. Type hydraulic test certificates / reports from accredited laboratories; and
   b. The installation lengths, materials, rated movements (axial extension, axial compression, lateral deflection, angular rotation, or any combination thereof) and pressure ratings of the expansion joints.

3. The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the stainless steel type expansion joints delivered to the site or installed.

**FWP3.1.4.020.8 RUBBER FLEXIBLE CONNECTORS / EXPANSION JOINTS**

1. Rubber flexible connectors shall be used for pipeline vibration elimination in flush water and fire services water pipeworks at pump rooms and rubber expansion joints shall be used in only flush water pipework passing through building expansion joints. Rubber flexible connectors / expansion joints shall comply with the following requirements:
   a. Be of double or multiple arch / sphere type;
   b. Be able to sustain a working pressure compatible with the piping system with which they are connected. Unless otherwise specified, the working pressure shall be no less than 16 bars with a minimum test pressure of 150% of the working pressure and a minimum burst pressure of 55 bars;
   c. Be non-toxic, corrosion and abrasion resistant and of sufficient length for effective isolation of vibration;
   d. Be fitted with corrosion resistant steel or ductile iron floating flanges to BS EN 1092;
   e. Be provided with a flexible tube made of multiple layers of high tensile fabric reinforcement with EPDM, neoprene or synthetic rubber cover and liner. Tube end shall be of locked bead construction with steel wire bead ring and raised face;
f. Be equipped with control rod assembly to prevent damage from excessive movement. The assembly shall consist of guide rods, rod plates and steel washers on both sides, and be fitted with resilient neoprene sleeves and resilient neoprene washers on at least one side of the assembly for isolating vibration transmission.

2. Submit the following for Approval upon the CM's request:
   a. Type hydraulic test certificates / reports from accredited laboratories; and
   b. The installation lengths, materials, rated movements (axial extension, axial compression, lateral deflection, angular rotation, or any combination thereof) and pressure ratings of the rubber flexible connectors.

3. The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the rubber flexible connectors / expansion joints delivered to the site or installed.

FWP3.1.4.030.8 STAINLESS STEEL FLEXIBLE CONNECTORS

1. Stainless steel flexible connectors shall be used for pipeline vibration elimination in fresh water and rainwater pipework at pump room, and they shall comply with the following requirements:
   a. Be of omega-shape, close pitch annular corrugation, and fabricated from stainless steel plates / sheets / strips;
   b. Be able to sustain a working pressure compatible with the piping system with which they are connected. Unless otherwise specified, the working pressure shall be no less than 16 bars with a minimum test pressure of 150% of the working pressure and a minimum burst pressure of 40 bars;
   c. Be provided with a bellow which shall be non-toxic, corrosion and abrasion resistant and complete with braiding. Appropriate heat treatment shall be conducted to release the internal stress imposed on the bellow during the forming process when the convolution of the bellow is not gradually formed by continuous rolling in shape;
   d. Be of sufficient length for absorption of offset motion and effective isolation of vibration. The total stress on bellow due to internal pressure, offset motion and vibration shall not exceed the design endurance limit. Unless otherwise specified, the minimum rated lateral movement shall be as tabulated below:

<table>
<thead>
<tr>
<th>Nominal bore of braided bellow</th>
<th>Minimum rated lateral movement</th>
</tr>
</thead>
<tbody>
<tr>
<td>Up to 100 mm diameter</td>
<td>4 mm offset motion plus ±1 mm vibration</td>
</tr>
<tr>
<td>Above 100 mm diameter</td>
<td>6 mm offset motion plus ±1 mm vibration</td>
</tr>
</tbody>
</table>

   e. Be comprised of the following component material unless otherwise specified and inert gas arc welding shall be used for the termination of bellow and braiding at the tube ends:
      i. Bellow: austenitic chromium nickel or austenitic chromium nickel molybdenum stainless steel sheet to BS EN 10029, BS EN ISO 9445-2, BS EN 10048, BS EN 10051 or BS EN 10095;
      ii. Braiding: stainless steel wires or plates;
      iii. Flange: corrosion resistant carbon steel.
   f. Have any part which is in contact with the water of the same material as the bellow;
g. Unless otherwise specified, be of flanged end connection. Flanges shall comply with BS EN 1092-1;

h. Have identification markings for the brand name, model number, bellow material, braiding material, working pressure and bellow nominal diameter;

i. Be equipped with guide rod assembly to prevent damage from excessive movement. The assembly shall consist of guide rods, rod plates and steel washers on both sides, and be fitted with resilient neoprene sleeves and resilient neoprene washers on at least one side of the assembly for isolating vibration transmission.

2. Submit the following for Approval upon the CM's request:
   a. Type hydraulic test certificates / reports from laboratories accepted by the Water Authority; and
   b. The installation lengths, materials, rated movements (axial extension, axial compression, lateral deflection, angular rotation, or any combination thereof) and pressure ratings of the stainless steel flexible connectors.

3. The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the stainless steel flexible connectors delivered to the site or installed.

**FWP3.1.5 STRAINERS**

**FWP3.1.5.010.A TYPE AND APERTURE**

Strainer shall be of Y-type or U-type (Bucket/Basket type) as specified below, unless otherwise specified on Drawings. The minimum free flow area ratio shall be 2 and the maximum aperture size shall be of Ø1.5 mm for strainers of nominal size 100 mm or below and of Ø3.0 mm for strainers of nominal size 150 mm or above, unless otherwise specified. For U-type strainer of any nominal size to be used as secondary stage strainer at discharge side of water pump in flush water system, the minimum free flow area ratio shall be 1 and the maximum aperture size shall be of Ø1.0 mm, unless otherwise specified.

**FWP3.1.5.020.8 SIZE AND PERFORMANCE**

Strainers shall have the same nominal sizes as the pipes in which they are connected and shall be suitable for both working and test pressures of the piping system in which they are installed. Unless otherwise specified all strainers shall have a working pressure of not less than 16 bar.

**FWP3.1.5.030.8 CONSTRUCTION**

1. Strainers shall be constructed of materials as specified below suitable for the required working and test pressures and temperature of the fluid carried. Better or equivalent materials may be offered for Approval;

2. At nominal sizes 50 mm and below:
   a. For fresh water and fire services, use the following:
      i. Adoption: Y-type screwed joint;
      ii. Body and cover: bronze to BS EN 1982 CuSn5Zn5Pb5 or CB491K or CC491K;
      iii. Screen: stainless steel to BS EN 10088-1 Grade 1.4401.
b. For flush water, use the following:
   i. Adoption: Y-type screwed joint;
   ii. Body and cover: stainless steel to BS EN 10088-1 Grade 1.4401;
   iii. Screen: stainless steel to BS EN 10088-1 Grade 1.4401.

3. At nominal sizes above 50 mm:
   a. For fire services, use the following:
      i. Adoption: Y-type flanged joint;
      ii. Body and cover: grey cast iron to BS EN 1561 EN-GJL-250 or spheroidal graphite cast iron (ductile iron) to BS EN 1563 EN-GJS-400-15;
      iii. Screen: stainless steel to BS EN 10088-1 Grade 1.4401;
      iv. Drain Plug: malleable iron;
      v. Stud and Nut: stainless steel to BS EN 10088-1 Grade 1.4401.
   b. For fresh water and flush water, use the following:
      i. Adoption: U-type flanged joint with quick release cover;
      ii. Body: grey cast iron to BS EN 1561 EN-GJL-250 or spheroidal graphite cast iron (ductile iron) to BS EN 1563 EN-GJS-400-15;
      iii. Cover: stainless steel to BS EN 10088-1 Grade 1.4401;
      iv. Screen: stainless steel to BS EN 10088-1 Grade 1.4401;
      v. Drain Plug: malleable iron;
      vi. Clamper, Stud and Nut: stainless steel to BS EN 10088-1 Grade 1.4401.

4. All cast iron components shall be coated with epoxy based material both on internal and external surfaces. The coating for use in fresh water shall be in compliance with BS 6920 or equivalent for potable use and to the satisfaction of the Water Authority;

5. U-type strainer shall be equipped with quick release cover composed of clamper and hand nuts which shall be so designed that the basket can be taken out for cleaning without using tools. Appropriate safety mechanism shall be incorporated in the quick release cover.

FWP3.2 INSTALLATION

FWP3.2.1 SITE HANDLING

FWP3.2.1.010.8 STORAGE
Prior to installation, all materials shall be stored properly in accordance with the manufacturer's instructions to afford maximum protection against weather, corrosion, mechanical damage and other causes. All pipes shall be stored with closed ends. All damaged materials shall be removed from site immediately.

FWP3.2.1.020.8 CLEANLINESS
All pipes and fittings shall be cleaned before erection with all scale, burrs, furs, sand, slag etc. removed. Cleanliness shall be maintained throughout erection by covering the exposed ends of pipework with a metal or plastic cap.

FWP3.2.2 PIPEWORK LAYOUT

FWP3.2.2.010.8 COORDINATION OF PIPEWORK
The Drawings are diagrammatic and indicate only the approximate location and manner in which the pipework is to be installed. The Sub-contractor shall allow for any diversion to avoid structural beams and other services etc., ascertain the actual work involved and coordinate his pipework installation with the work of other trades and services.

FWP3.2.2.020.8 ROUTING AND GRADING OF PIPEWORK
Pipework shall, where applicable, follow the lines of walls and be graded to ensure venting and draining. A minimum clearance of 25 mm shall be maintained between the pipework and the finished mounting surface.

FWP3.2.2.030.8 ARRANGEMENT OF PIPEWORK
All pipework shall, be neatly arranged and mounted. For a number of pipes running close to one another, they shall be grouped and mounted on steel framed racks arranged so that the number of cross-over is minimum. All vertical pipes shall be plumbed.

FWP3.2.2.040.8 VENTING
Air vents of automatic type must be provided at all high points wherever required.

FWP3.2.2.050.8 DRAINING
1. All water pipework, except those for fire services, shall be fitted with 13 mm diameter key operated cocks, with hose unions, at low points in the system to facilitate drain down;
2. A 25 mm diameter drain cock with hose bib shall be provided between the check valve and the gate valve at the pump discharge to facilitate draining of the riser pipe.
PROVISION FOR DISMANTLING

1. Sufficient joints and fittings shall be provided to facilitate easy removal of pipes, valves, pumps, etc., for inspection and repair. Disconnecting flanges, or screwed unions as applicable, shall be provided at suitable locations and at valves, pumps, etc;

2. Pipes shall not be embedded in the concrete structure, or grouted in or otherwise installed in such a way as to make alterations difficult at a later date.

LOCATION OF STRAINERS

Install strainers in positions shown on the Drawings.

PIPEWORK JOINTING

MANUFACTURERS INSTRUCTIONS

Installation, jointing, storage and handling of the pipes and fittings shall be in accordance with the manufacturer's recommendations.

LOCATION OF PIPE JOINTS

Pipe joints shall not be made in the thickness of any wall, floor, ceiling or beam.

JOINTING GALVANIZED STEEL PIPES

1. Unless otherwise Approved, galvanized steel pipes with diameter less than and equal to 150 mm shall be jointed with screwed fittings. Screwed flanges shall be employed only for connection to flanged end valves or equipment;

2. Unless otherwise Approved, galvanized steel pipes with diameter greater than 150 mm shall be jointed with screwed flanges or flanged fittings;

3. Jointing of steel pipes by welding shall only be used when Approved;

4. Screwed fittings shall have pipe threads complying with BS EN 10226-1, 2, 3. Screwed joints shall have tapered threads and shall be made with Approved jointing material. Where the cutting of threads removes the galvanising, an anti-corrosive sealing compound shall be applied to restore the integrity of the protective finish;

5. Galvanized steel pipes for fire services pipework can be jointed by mechanical couplings and fittings with the Approval of the Contract Manager.

JOINTING DUCTILE IRON PIPES

Unless otherwise specified, all ductile iron pipes shall be jointed:

1. For above ground installation: with screwed flanges or flanged fittings, stainless steel bolts and nuts of BS EN 10088-3 Grade 1.4401 for fresh and flush water pipes and fittings inside water pump room;

2. For below ground installation: with flexible push-on type connection joints.

JOINTING UNPLASTICIZED PVC (UPVC) PIPES

1. All pipes shall be cut to square ends, free from harmful burrs and be prepared in accordance with the manufacturer's recommendations. Purpose made equipment recommended by the manufacturer shall be used for cutting the pipes and shall be submitted for the Contract Manager's approval;
2. All uPVC pipes shall be jointed with sockets and fittings and as recommended by the uPVC pipes manufacturer;

3. Solvent cementing shall be used for all pipeworks. All the surfaces shall be cleaned with abrasive paper and spirit cleaner. In the application of solvent cementing, heat shall be avoided as the cement may dry before chemical bonding between the two surfaces is completed. Mating surfaces shall be turned for even spread of the solvent. Excessive cement shall be wiped off quickly;

4. Flanged joints shall be used where solvent cementing is not practicable and at locations to facilitate dismantling. Neoprene ring gaskets provided or approved by the flange manufacturer shall be used between flanges. The jointing compound for the pipe and flange must be applied in accordance with the jointing compound manufacturer's recommendation.

FWP3.2.3.050.8 MECHANICAL COUPLINGS AND FITTINGS FOR FIRE SERVICES SYSTEM

1. As an alternative to flanged and screwed joints, grooved end mechanical couplings may be employed subject to the Approval of the CM;

2. Mechanical couplings shall be hot dip galvanized, self-centering, engaged and locked in place onto the grooved or shouldered pipe and pipe fitting ends. The result shall be a positive watertight couple providing some allowance for angular pipe deflection, contraction and expansion. Coupling housing clamps shall consist of two or more malleable iron castings or rolled steel or ductile iron segment holdings with a composition water sealing gasket so designed that the internal water pressure increases in the water tightness of the seal. Sealing gasket shall be selected for the service and working temperature according to the manufacturer's recommendations. The coupling assembly shall be securely held together by two or more zinc plated track head square or oval-neck heat-treated carbon steel bolts and nuts. All pipe fittings connected to mechanical pipe couplings shall have groove and shouldered ends. Flanged or threaded end valves may be used with grooved adapters;

3. Regarding material specification, specifications on components of mechanical couplings shall be as follows:
   a. For coupling housing material, ductile iron shall be to ASTM A536 or to BS 4772 or BS EN 1563 or other standards subject to the CM's Approval;
   b. Rubber gaskets shall be tested to the following specifications:
      i. Hardness: ASTM D2240;
      ii. Tensile testing: ASTM D412;
      iii. Compression: ASTM D395;

4. Before couplings are assembled, pipe ends and outsides of gaskets shall be lightly coated with suitable lubricant or graphite paste to facilitate installation;

5. Pipe grooving shall be carried out by using proprietary grooving machine and in accordance with the pipe coupling manufacturer's latest specifications. The grooving shall be roll-grooved without the removal of any metal. Zinc coating damaged during the grooving operation of galvanized steel pipe shall be rectified by scrubbing clean the affected area and coated with a zinc rich galvanizing paint approved by the CM;
6. Unless otherwise specified, all mechanical couplings and fittings shall have a minimum working pressure of not less than 16 bars and the testing pressure shall not be less than 1.5 times the working pressure;

7. The electrical continuity of the mechanical couplings shall be effective and shall be verified by site measurement;

8. The mechanical couplings and fittings shall comply with standards acceptable to FSD;

9. The entire coupling installation shall be in accordance with the latest published selected manufacturer's recommendations;

10. The sub-contractor shall obtain WSD's consent on project basis for adopting mechanical couplings and fittings for pipework installation;

11. The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the mechanical couplings and fittings delivered to the site or installed.

**FWP3.2.4 PIPEWORK SUPPORTS**

**FWP3.2.4.010.A FIRE SERVICES PIPEWORK**
1. Pipe bracket for fire services pipework shall be of fixed type;
2. Neoprene or rubber vibration isolation pad of 6 mm thick shall be added between pipe and bracket for installation inside fire services pump room.

**FWP3.2.4.020.A FRESH WATER AND FLUSHING WATER PIPEWORK**
1. Pipe bracket for fresh water and flushing water pipework inside water pump room and pressure reducing valve chamber shall be completed with vibration isolator in accordance with FWP3.2.4.060. Where it is impractical to provide vibration isolator in accordance with FWP3.2.4.060, 6 mm thick neoprene or rubber isolation pad between pipework and bracket or other means of vibration isolation shall be provided subject to Approval by the Contract Manager;
2. Fixed type pipe bracket shall be installed at anchor points of the pipework system to avoid pipe movement in critical areas such as at pump suction connecting to puddle flange of water tank, non-return valve at pump discharge side, etc. Means of vibration isolation such as neoprene/rubber pad between pipework and bracket has still to be provided;
3. The sub-contractor shall be responsible for selecting fixed type pipe brackets or brackets with vibration isolator, as appropriate, for the whole pipework system and installing in accordance with the manufacturer's recommendations of brackets with vibration isolator to ensure that the vibration and noise generated from the pipework system would be isolated, in particular, to avoid causing nuisance to the tenants of the domestic flats.

**FWP3.2.4.030.8 PERFORMANCE**
All pipework shall be well supported so that it is free from excessive stress due to weight of its contents, its own dead weight, and dynamic forces due to liquid movement. Particular care should be taken with branches from vertical risers to ensure that the branch is not supporting the riser.
FWP3.2.4.040.8  **PROVISION FOR MOVEMENT**

Pipework shall be supported in such a manner as to allow adequate movement for expansion and contraction.

FWP3.2.4.050.8  **FIXED TYPE PIPE BRACKET**

1. Fixed type pipe bracket shall comprise pipe clip and hanger as follows:
   a. Pipe clip refers to the two halves components which are in direct contact with the pipework;
   b. Hanger refers to the component connecting the pipe clip for fixing onto the mounting structure/supports.

2. Components of the pipe brackets shall be not less than 3 mm thick. Materials of the pipe brackets shall be not less than those as specified below:
   a. Except for sprinkler pipework, pipe brackets for all pipeworks shall comply with the following requirements:
      i. All components including pipe clip, bolt, nut, washer, hanger and anchor bolt shall be made of stainless steel.
   b. Pipe brackets for sprinkler pipework shall comply with the following requirements:
      i. Pipe clip, bolt, nut and washer shall be made of stainless steel; and
      ii. Hanger and anchor bolt shall be made of galvanised mild steel.
   c. I-beam and U-channel for further supporting pipe brackets shall be made of mild steel with anti-corrosion painting;
   d. Stainless steel for components including pipe clip, bolt, nut, washer, hanger and anchor bolt shall be at least to BS EN 10088-3 grade 1.4301 unless otherwise specified.

3. Pipe brackets shall be arranged as close as possible to joints and changes of direction, with each bracket taking its share of the load and of sufficient strength to take the load with no noticeable deflection with clips detachable without disturbing the fixing. Brackets fixing to structure shall be fixed by at least two anchor bolts of adequate size. Samples or details of the pipe brackets shall be submitted for Approval prior to installation;

4. Supports shall be spaced at intervals as specified in FWP3.2.4.070;

5. For all pipeworks except sprinkler pipework where LPC Sprinkler Rules shall apply, the minimum bolt diameter for the clips and the minimum anchor bolt diameter for fixing the pipe hanger to the mounting structure/support at two or more points shall be as follows:

<table>
<thead>
<tr>
<th>Nominal Pipe Size (mm)</th>
<th>Minimum Bolt Diameter for Pipe Clips (mm)</th>
<th>Minimum Anchor Bolt Diameter for Hanger, Double Fixing (mm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>25 – 50</td>
<td>6</td>
<td>6</td>

<tr>
<td>65 – 100</td>
<td>10</td>
<td>10</td>
</tr>
<tr>
<td>125 – 150</td>
<td>12</td>
<td>12</td>
</tr>
</tbody>
</table>

6. For pipe bracket and support interval designs other than those specified above, substantiation/calculation to demonstrate that the proposed bolt/anchor has sufficient strength to take up the load shall be submitted by the Sub-contractor for Approval by the Contract Manager.
FWP3.2.4.060.8 PIPE BRACKET WITH VIBRATION ISOLATOR

1. Vibration isolator:
   a. Vibration isolator shall contain a steel spring with minimum 8 mm pad of neoprene in series and enclosed in hanger box. The neoprene element shall be moulded with a rod isolation bushing that passes through the isolator hanger box. Spring diameter and isolator hanger box lower hole sizes shall be large enough to permit the hanger rod to swing through a 30 degree arc before contacting the edge of the hole and short circuiting the spring. The minimum static deflection of the spring shall be 20 mm;
   b. Unless otherwise Approved, vibration isolator shall be selected fully in accordance with manufacturer's guidelines and taken into account weight distribution of the pipework system, pipe anchor points, guide etc. to produce uniform deflections and to ensure that the vibration and noise generated from associated pipework system would be isolated and would not be transmitted to other parts of the building, in particular, to avoid causing nuisance to the tenants of the domestic flats;
   c. The Sub-contractor shall be responsible for and submit calculation to verify the correctness of selection and overall suitability of every vibration isolator for the pipework system.

2. Pipe bracket:
   Details of the pipe clip, bolt, nut, washer, hanger and anchor bolt shall be in accordance with those specified in FWP3.2.4.050 wherever applicable.

3. Connection between vibration isolator and pipe bracket:
   Unless approved by the Contract Manager, pipe bracket shall be secured firmly to the vibration isolator in accordance with the manufacturer's guidelines of the vibration isolator.

FWP3.2.4.070.8 SUPPORT INTERVALS

1. Supports shall be spaced at intervals not exceeding those shown in the following tables for straight runs, as defined in Table 2 of BS 8000:Part 15, with additional supports for bends and tees:
   a. Ductile iron pipes:

<table>
<thead>
<tr>
<th>Nominal pipe size (mm)</th>

2. Supports on ground for pipework inside water pump room for fresh and flush water service shall be of stainless steel of BS EN 10088-3 grade 1.4401.

#### FWP3.2.4.080.8 HANGERS FOR HORIZONTAL PIPEWORK

Unless otherwise specified, hangers for horizontal pipework at high level shall be supported from angle or channel irons, provided by the Sub-contractor, suitable for building-in or otherwise secured to the structure.

### FWP3.2.5 INTEGRATION WITH STRUCTURE

#### FWP3.2.5.010.8 MARKING OUT

The Sub-contractor shall be responsible for marking the exact location of all holes/slots which will be cut by the Main Contractor where required and permitted.

#### FWP3.2.5.020.8 CLEARANCE OF HOLES

The holes, sleeves and slots reserved through walls/slabs/beams will be cleared and cleaned by the Main Contractor before handover to the Sub-contractor for use. The nails appertaining to concealed electrical boxes shall be cleared by the Sub-contractor subsequent to work completion and prior to execution of final painting work by the Main Contractor.

#### FWP3.2.5.030.8 FIXING PIPE SLEEVES

Where pipes pass through walls, beams, floors and ceiling, sleeves shall be provided. The Sub-contractor shall ascertain whether slots/holes are to be grouted later and shall fix galvanized steel/PVC sleeves with 2 to 12 mm clearance to allow for expansion and movement of pipe, as FWP3.1.3.080, immediately after pipe erection as follows:

1. Through walls and beams: fix sleeves flush with the finished surfaces;
2. Through floor slabs: fix sleeves in position with 100 mm projection above finished floor level and flush with the underside of the floor.

#### FWP3.2.5.040.8 CAULKING PIPE SLEEVES

Galvanized steel sleeves used in walls and slabs between fire compartments shall have the full length of annular space between the sleeve and the pipe filled with non-flammable mineral wool or Approved equivalent materials, pointed with Approved fire-rated sealant to maintain the required FRP of the walls / floor slabs, and are durable and effective in sound insulation.
PIPE ENTRY TO BUILDINGS
Pipe entries into buildings shall be sealed and plugged with mastic compound after installation of pipework to prevent the ingress or egress of water or vermin.

PROTECTION OF UNDERGROUND PIPES
1. Underground pipes shall be protected against corrosion;
2. Pipework shall be cleaned after jointing and treated with two coats of good quality bituminous paint and wrapped with petrolatum tape for protection against corrosion due to water, salts, soil organics, etc. before laying, and rested on sand or sieved soil before the trench is backfilled;
3. All underground pipework shall be pressure tested before the application of bituminous paint and the application of the petrolatum tape.

PIPES PASSING THROUGH ASPHALT COVERED FLAT ROOFS
Where pipes pass through flat roofs covered with asphalt, the Sub-contractor shall, unless otherwise specified:
1. Cast or build in cast iron or galvanized mild steel sleeve, of internal diameter 20 mm (minimum) larger than the external diameter of the pipe concerned, projecting minimum 150 mm above roof finish;
2. Caulk space and fill both ends with fire-rated mastic sealant;
3. Cover tops of sleeves with lead collars or pre-fabricated 304 stainless steel collars of 1.5 mm thick to fit the pipe size and sleeve.

FWP4.1 VALVES - GENERAL

FWP4.1.010.8 GENERAL
1. All valves shall be designed and constructed of materials suitable for both the working and test pressures of the piping system in which they are installed and the temperature of the fluid carried. Unless otherwise specified, all valves shall have a working pressure of not less than 16 bar;
2. Valves of the same type shall be from the same manufacturer.

FWP4.1.020.8 STANDARD

Valves shall comply with the following standards unless otherwise specified:

<table>
<thead>
<tr>
<th>Type of Valve</th>
<th>Standard</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>For nominal size up to and including 50 mm</td>

<td>Copper alloy to BS 5154</td>
</tr>
<tr>
<td>Non-return valves</td>
<td>Copper alloy to BS 5154</td>
</tr>
</tbody>
</table>

FWP4.1.030.8 TESTING

All valves shall be pressure tested in accordance with the relevant British Standards / European Standards or equivalent international / national standards by the valve manufacturer before leaving the factory.

FWP4.1.040.8 CERTIFICATION
1. Be of the type accepted by the Water Authority as required by the statute;
2. Type test Certificate / Report from certification bodies or accredited laboratories acceptable to Water Authority confirming that the valves have been tested conforming to this Specification shall be produced;
3. The following type test Certificates / Reports shall be submitted, wherever applicable:

   a. Test certificates for valves in compliance with the Standards quoted in FWP4.1.020;
   b. Test certificates on composition analysis, chemical, physical and mechanical properties of the metallic materials for valves;
   c. Test certificates for resilient seating material and epoxy coating showing compliance with the physical property and thickness requirements of this Specification;
   d. In case of valves in potable water application, test certificates for non-metallic materials including resilient seating material and epoxy coating, showing compliance with the full tests of effect on water quality to BS 6920 and suitable for potable water usage issued by Water Research Centre of UK or an equivalent organisation.

FWP4.1.050.8 SIZE
All valves (except those for flow or pressure control such as modulating float valve and pressure reducing valve) shall have the same nominal size as the pipe in which they are installed unless otherwise specified.

FWP4.1.060.8 ROTATION
Manually operated valves shall be closed by turning the handwheel in a clockwise direction when facing the handwheel. All valves of cast iron body construction shall be provided with an indicator to show the open and shut position.

FWP4.1.070.8 LOCATION
All valves shall be located at convenient positions of operation from the floor.

FWP4.1.080.8 CONSTRUCTION
Valves shall be constructed to the following minimum specification; better or equivalent materials may be offered for Approval:

1. Specification A in FWP4.1.090:
   a. For nominal sizes up to and including 50 mm:
      i. Body, bonnet and disc
         Bronze to BS EN 1982 CuSn5Zn5Pb5 or CB491K or CC491K;
      ii. Stem
         Brass to high tensile brass to BS EN 12163.
   b. For nominal sizes above 50 mm:
      i. Body and bonnet
         Grey cast iron to BS EN 1561 EN-GJL-250, or spheroidal graphite cast iron (ductile iron) to BS EN 1563 EN-GJS-400-15;
      ii. Disc or Seat
         - Solid or trimmed with bronze to BS EN 1982 CuSn5Zn5Pb5 or CB491K or CC491K; or
         - Resilient material to BS EN 681-1, Type WA, Hardness Category "70" with nominal thickness of minimum 1.5mm on the non-seating areas and 4.0mm on the seating areas, and in case for fire services and fresh water application, showing compliance with full tests of effect on water quality to BS 6920.
      iii. Stem
Brass to high tensile brass or leaded brass to BS EN 12163, or stainless steel to BS EN 10088-3 Number 1.4301, 1.4401, 1.4006, 1.4005, 1.4021 or 1.4057.

2. Specification B in FWP4.1.090:
   a. For nominal sizes up to and including 50mm
      i. Valve components:
         - UPVC;
         - Ball center-pivoted, smooth and spherical with a circular orifice, and seated on resilient seating suitable for tight shut off;
         - Stem one piece with O-ring made of Ethylene Propylene Diene Monomer (EPDM) for positive sealing of the body.
      ii. Valve operation:
          - By wrench turned in a clockwise direction to close when facing the wrench;
          - At fully open position of valve, wrench to be mounted parallel to the flow of passage through the ball;
          - Wrench to fully close valve at a quarter turn;
          - Provide suitable stops for both fully open and fully closed positions of valve.
      iii. Valve end connections and pressure standards:
          - Socket or union suitable for directly connecting the pipe to which it is installed;
          - Testing method to BS 1010-2.
   b. For nominal sizes above 50 mm:
      i. Body and bonnet
         Grey cast iron to BS EN 1561 EN-GJL-250, or spheroidal graphite cast iron (ductile iron) to BS EN 1563 EN-GJS-400-15;
      ii. Disc or Seat
         - Solid or trimmed with zinc free bronze to BS EN 1982 CuSn10 or trimmed with austenitic chromium nickel stainless steel or austenitic chromium nickel molybdenum stainless steel to BS EN 10283 Number 1.4308 or 1.4408; or
         - Resilient material to BS EN 681-1, Type WA, Hardness Category "70" with nominal thickness of minimum 1.5mm on the non-seating areas and 4.0mm on the seating areas.
      iii. Stem
         Stainless steel to BS EN 10088-3 Number 1.4301 or 1.4401 or 1.4057.

### VALVES - GENERAL

#### FWP4.1.080 Specification B

| 2. | a. Flush water | b. Sewage | c. Bore well water - corrosive |

---

#### FWP4.1.100.8 COATING FOR CAST IRON PARTS OF VALVES

1. Cast iron parts of all valves shall be coated with an epoxy based material both on internal and external surfaces. The following minimum thickness of epoxy coating shall apply:

<table>
<thead>
<tr>
<th></th>
<th>Electrostatically Fusion Powder Coated (μm)</th>
<th>Airless Sprayed Application (μm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Flat and Pressurised Parts</td>
<td>250</td>
<td>400</td>
</tr>
<tr>
<td>Convex Outer Edges</td>
<td>150</td>
<td>300</td>
</tr>
</tbody>
</table>

2. The coating for use in fresh potable water shall comply with the requirement laid down in BS 6920 and be to the satisfaction of the Water Authority.
FWP4.2  GATE AND GLOBE VALVES

FWP4.2.010.8 TYPE
1. Gate valves shall be of the full way solid or split wedge disc type and globe valves shall be of the straight globe type;
2. Gate valves shall be handwheel operated with rising or non-rising stem;
3. Globe valves shall be handwheel operated with rising stem.

FWP4.2.020.8 DESIGN AND CONSTRUCTION
1. The valve body shall be robust and capable of withstanding hard wear;
2. For valves of bronze body construction, the bonnet shall be of the screwed type with ample threads to ensure positive sealing to the body;
3. For valves of grey cast iron body and spheroidal graphite cast iron (ductile iron) construction, the body and bonnet shall be bolted together and the disc shall be guided;
4. The gland shall be fitted with non-asbestos packing and shall be bolted for grey cast iron and spheroidal graphite cast iron (ductile iron) valves.

FWP4.2.030.8 END CONNECTIONS
1. All copper alloy valves shall be of the screwed female end connection and all cast iron valves shall be of the flanged end connections;
2. Threads in screwed end connection shall comply with BS EN 10226-1, 2, 3 and flanges of flanged end connection shall comply with BS EN 1092-2 and their bolts and nuts shall be complied to BS EN 1515-1.

FWP4.2.040.8 EVIDENCE OF COUNTRY / PLACE OF MANUFACTURE AND AUTHENTICITY
The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the gate and globe valves for fresh water and fire services systems delivered to the site or installed.

FWP4.2.050.8 CERTIFICATION
When gate valve with nominal sizes up to and including 50mm for fresh water application is used, submit at sample submission and approval stage either:
1. A copy of the Kitemark Certificate or Kitemark Licence, together with the associated test report demonstrating compliance with BS EN 12288, all issued by the British Standards Institution if available for the CM’s information; or
2. Test report issued or certified by the laboratory accepted by the Water Authority demonstrating full compliance with BS EN 12288 for the CM’s information.

FWP4.2.060.8 VERIFICATION TESTS FOR GATE VALVES WITH NOMINAL SIZES UP TO AND INCLUDING 50MM FOR FRESH WATER APPLICATION DELIVERED TO SITE
1. Test Arrangements:
   a. Verification tests shall be carried out by the CM's Representative, a Direct Contractor or the Housing Department Material Testing Laboratory upon delivery of material to Site under a delivery note, or during the course of construction as directed by the CM. A representative batch means the material delivered to Site under the same delivery note;
   b. Comply with the followings pertaining to verification tests:
      i. Provide attendance on the Site;
ii. Provide, deliver and collect samples etc. as directed by the CM or as specified.

2. Testing Samples:
   a. Samples shall be selected by the CM’s Representative and witnessed by representative of the Sub-contractor;
   b. For gate valve with the Kitemark Certificate or Kitemark Licence:
      i. provide one test sample of any sizes of gate valves from a batch of material delivered to Site under the delivery note as selected by the CM;
      ii. when instructed by the CM, provide another test sample of any sizes of gate valves from any other batch of material delivered to Site under the delivery note.
   c. For gate valve without the Kitemark Certificate or Kitemark Licence, when instructed by the CM, provide two test samples of any sizes of gate valves from each batch of material delivered to Site under the delivery note.

3. Testing Methods:
   a. Laboratory testing of chemical composition of the body, bonnet, disc and stem of gate valve as arranged by the CM’s Representative(s);
   b. Acceptance standard:
      The result shall indicate that the chemical composition of the body, bonnet, disc and stem of gate valve complies with the specified standards in FWP4.1.080 or the test report showing the material composition which has been accepted by Water Authority.

4. Non-compliance:
   a. In the event that the testing sample fails to meet the acceptance standard as specified in sub-clause (3)(b), follow either one of the following actions:
      i. Remove the representative batch of material off Site; or
      ii. Carry out re-test for the representative batch of material in accordance with the testing methods as specified in sub-clauses (3)(a) and (3)(b) in a laboratory that accepted by the Water Authority on three separate sets of samples selected by the CM from the representative batch. In the event that the testing sample fails to meet the acceptance standard as specified in sub-clause (3)(b), remove the representative batch of material off Site.
   b. When the representative batch of material is removed off Site, replace with another new batch and carry out test in accordance with the testing methods as specified in sub-clauses (3)(a) and (3)(b) in a laboratory that accepted by the Water Authority for one sample of gate valve with the Kitemark Certificate or Kitemark Licence or two samples of gate valve without the Kitemark Certificate or Kitemark Licence, all selected by the CM from the replacing batch. In the event that the testing sample(s) fail to meet the acceptance standard as specified in sub-clause (3)(b), carry out re-testing as specified in sub-clauses (4)(a);
   c. Bear all associated costs for the test and re-test required in sub-clauses (4)(a) and (4)(b). No extension of time will be allowed.
FWP4.3  BUTTERFLY VALVES

FWP4.3.010.8  TYPE
1. Butterfly valves shall be applied in fire services installation only;
2. Butterfly valves shall be of wafer type to BS EN 593 or grooved end type with FSD approval or equivalent with resilient seat suitable for tight shut-off purpose;
3. Butterfly valve used as sprinkler subsidiary stop valve shall be connected to an actuator for remote indication of its open/close status in the fire services alarm control panel.

FWP4.3.020.8  DESIGN AND CONSTRUCTION
1. The valve body and disc shall be of ductile iron of grades as specified in FWP4.1.080, or equivalent;
2. Shaft shall be of stainless steel of grades as specified in FWP4.1.080, or equivalent;
3. Unless otherwise specified, valves shall be operated by handwheel or wrench.

FWP4.3.030.8  END CONNECTIONS
1. For wafer type, the valve body ends shall be capable of matching connecting flanges complying with the requirements of BS EN 1092-1, 2 and 3;
2. For grooved end type, the valve body ends shall match with the mechanical couplings and fittings as stated in FWP3.2.3.050.

FWP4.3.040.8  EVIDENCE OF COUNTRY / PLACE OF MANUFACTURE AND AUTHENTICITY
The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the butterfly valves for fire services systems delivered to the site or installed.
FWP4.4 NON-RETURN VALVES

FWP4.4.010.8 TYPE
1. Unless otherwise specified, non-return valves shall be of the hinged swing or recoil type for horizontal installation and spring type shall be of globe or wafer type suitable for both vertical and horizontal installations;
2. When the valve is installed vertically, the flow shall be in an upward direction;
3. When installed at the pump discharge with a water head exceeding 15 m, non-return valves shall be of the recoil or spring type to ensure silent shut-off operation;
4. Notwithstanding the requirements of clause FWP4.1.080, recoil or spring type check valve of cast iron or spheroidal graphite cast iron (ductile iron) body construction shall be acceptable for nominal size of 65mm or below.

FWP4.4.020.8 DESIGN AND CONSTRUCTION
1. Hinged swing type:
   a. The valve body shall be robust and capable of withstanding hard wear;
   b. Bronze swing non-return valves shall have screwed type cap and cast iron swing non-return valves shall have the cap and body bolted together to ensure a strong, tight closure;
   c. Hinge pins shall be of brass / bronze for nominal size of 50mm or below and stainless steel for nominal size above 50mm;
   d. The valves shall be designed to close before reversal of flow starts.
2. Recoil type non-return valves shall have a flow area not less than the cross-sectional area of the connected pipework and shall be non-slam in operation;
3. Spring type:
   a. The valve body shall be robust and capable of withstanding hard wear;
   b. Springs shall be of stainless steel;
   c. The valves shall have a flow area not less than the cross-sectional area of the connected pipework and shall be non-slam in operation;
   d. The valves shall be designed to close before reversal of flow starts.

FWP4.4.030.8 END CONNECTIONS
1. End connections of non-return valves shall be as FWP4.2.030;
2. Wafer type spring non-return valves will be acceptable, provided the body ends are capable of matching connecting flanges complying with the requirements of BS EN 1092-1, 2 and 3.

FWP4.4.040.8 EVIDENCE OF COUNTRY / PLACE OF MANUFACTURE AND AUTHENTICITY
The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the non-return valves for fresh water and fire services systems delivered to the site or installed.
**FWP4.5 BALL FLOAT VALVES**

**FWP4.5.010.8 GENERAL**

1. Unless otherwise specified, ball float valves shall have a working pressure of not less than 10 bar and be tested to 16 bar on the body;
2. Ball float valves of all sizes shall be accepted for fire services systems only;
3. For installations other than fire services system, only ball float valves of size less than 65mm shall be accepted.

**FWP4.5.020.8 TYPE**

Ball float valves shall be of the slow closing type, unless otherwise specified.

**FWP4.5.030.8 DESIGN AND CONSTRUCTION**

1. General:
   a. The valve body shall be robust and shaped to give a good flow pattern;
   b. The valve piston shall close in the direction of flow such that the pressure in the main will tend to keep the valve closed and that the piston seal is afforded protection from the flow by the piston;
   c. All internal parts shall be easily removable for maintenance with the face and piston seals easily replaced.
2. Fresh water and rainwater application: cast iron body with gunmetal piston, seat and guide;
3. Flush water application: cast iron body with zinc free bronze trimmed piston, seat and guide;
4. For nominal sizes below 65mm: bronze construction valves shall be accepted.

**FWP4.5.040.8 BALL FLOATS**

Ball floats shall be spherical or cylindrical, comply with BS 1968 and be constructed of tinned copper for fresh water application and of neoprene coated copper or stainless steel for flush water application.

**FWP4.5.050.8 LEVER ARMS**

Lever arms for flush water application shall be of stainless steel and of direct mechanical linkage type.

**FWP4.5.060.8 BALL FLOAT VALVES FOR FLUSHING TANKS**

Be of diaphragm type, plastic body to BS 1212-3 with rubber or plastic diaphragm, unless otherwise approved by the Contract Manager and be suitable for high, medium or low pressure as required. Be suitably coated to prevent corrosion on metal parts. Submit valve sample for Approval prior to installation.

**FWP4.5.070.8 EVIDENCE OF COUNTRY / PLACE OF MANUFACTURE AND AUTHENTICITY**

The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the ball float valves for fire services systems delivered to the site or installed.
FWP4.6 PRESSURE REDUCING VALVES (PILOT TYPE)

FWP4.6.010.8 TYPE

The pressure reducing valve shall be hydraulically operated, pilot-controlled type. The whole valve shall be assembled and tested by the manufacturer.

FWP4.6.020.8 OPERATION AND PERFORMANCE

1. The operating range shall be suitable for the particular application;
2. The valve shall maintain a constant reduced downstream pressure regardless of changes in upstream pressure or flow rates;
3. The pilot control system shall be provided with a strainer. The valve shall be flanged-end connection with flange to PN16. The main valve and its pilot control system shall contain no packing glands or stuffing boxes;
4. The valve shall reduce a higher inlet pressure to a steady downstream pressure regardless of fluctuations in flow rate and/or varying inlet pressure. The downstream pressure shall be adjustable and could be reduced down to a pressure suitable for the application. The valve shall be selected in such way that no cavitation shall occur within the anticipated flow and pressure ranges;
5. The amount of pressure reduction against various flow rates and inlet pressures shall comply with the requirements as indicated on the Drawings;
6. Performance curves showing the above characteristics shall be submitted to the Contract Manager upon request.

FWP4.6.030.8 MATERIAL

Material composition of every component of the valve shall be suitable for fresh or flush water use as in accordance with its application, and shall have the minimum standard as specified below for its intended purposes. Equivalent materials may be offered for Approval.

1. Body & bonnet
   Cast iron to BS EN 1561 (EN-GJL-250) or ductile iron to BS EN 1563. The body of the valve shall be coated with an epoxy based material both on internal and external surfaces.

2. Disc
   a. Solid or trimmed with bronze to BS EN 1982 (CuSn5 Zn 5Pb5) or ductile iron to BS EN 1563 for fresh water use;
   b. Solid or trimmed with zinc free bronze to BS EN 1982 (CuSn10) or trimmed with austenitic chromium nickel stainless steel or austenitic chromium nickel molybdenum stainless steel to BS EN 10283 or ductile iron to BS EN 1563 with the same coating of body for flush water use.

3. Seat
   a. Bronze trimmed as disc or stainless steel as disc for fresh water use;
   b. Zinc free bronze or stainless steel trimmed as disc for flush water use.

4. Stem
   a. High tensile brass or leaded brass to BS EN 12163 or 13% chromium stainless steel to BS EN 10088-3 for fresh water use;
   b. Austemtic chromium nickel stainless steel or austenitic chromium nickel molybdenum stainless steel to BS EN 10088-3 for flush water.
### PRESSURE REDUCING VALVES (PILOT.......)

**FWP4.6.040.8 PRESSURE**

1. Each valve shall be hydraulic tested at 1.5 times the nominal pressure of the valve for a period of not less than 1 minute at the factory;
2. The valve shall be suitable for both the working and test pressure of the piping system in which they are installed. Unless otherwise specified or Approved, it shall have a working pressure of not less than 16 bar.

**FWP4.6.050.8 CERTIFICATION**

The valve shall be of the type acceptable to the Water Authority for fresh or flush water use as in accordance with its application. Type test certificate / report from certification bodies or accredited laboratories acceptable to Water Authority for the verification of the hydraulic pressure requirements and material used shall be produced.

**FWP4.6.060.8 EVIDENCE OF COUNTRY / PLACE OF MANUFACTURE AND AUTHENTICITY**

The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the pressure reducing valves for fresh water system delivered to the site or installed.
MODULATING FRESH AND FLUSH WATER SUMP TANK

GENERAL
1. The modulating float valve shall be hydraulically operated, pilot-control and of diaphragm. The whole valve shall be assembled and tested by the manufacturer;
2. The pilot control system shall be provided with a strainer. The valve shall be flanged-end connection with flange to BS EN 1092 PN16. The main valve and its pilot control system shall contain no packing glands or stuffing boxes. The ball float shall be spherical and comply with BS 1968. Lever arm /float connecting rod shall be of direct mechanical linkage type;
3. The valve shall be operated to modulate water flow into the tank in such way as to maintain predetermined water tank level within narrow limits. The valve shall be installed such that there is an air gap between the float and the pilot valve.

MATERIAL
Material composition of every component of the valve shall be suitable for fresh or flush water use as in accordance with its application, and shall have the minimum standard as specified below for its intended purposes. Equivalent materials may be offered for Approval;
1. Body & bonnet:
   Cast iron to BS EN 1561 (EN-GJL-250) or ductile iron to BS EN 1563. The body of the valve shall be coated with an epoxy based material both on internal and external surfaces;
2. Disc:
   a. Solid or trimmed with bronze to BS EN 1982 (CuSn5Zn5Pb5) or ductile iron to BS EN 1563 for fresh water use;
   b. Solid or trimmed with zinc free bronze to BS EN 1982 (CuSn10) or trimmed with austenitic chromium nickel stainless steel or austenitic chromium nickel molybdenum stainless steel to BS EN 10283 or ductile iron to BS EN 1563 with the same coating of body for flush water use.
3. Seat:
   a. Bronze or stainless steel trimmed as disc for fresh water use;
   b. Zinc free bronze or stainless steel trimmed as disc for flush water use.
4. Stem:
   a. High tensile brass or leaded brass to BS EN 12163 or 13% chromium stainless steel to BS EN 10088-3 for fresh water use;
   b. Austenitic chromium nickel stainless steel or austenitic chromium nickel molybdenum stainless steel to BS EN 10088-3 for flush water use.
5. Ball float:
   a. Spherical or cylindrical and comply with BS 1968;
   b. Constructed of tinned copper or stainless steel for fresh water application and of neoprene coated copper or stainless steel for flush water application.
6. Lever arm/float connecting rod for flush water application:
   Stainless steel.
FWP4.8.030.8 PRESSURE
The valve shall be suitable for both the working and test pressure of the piping system in which they are installed. Unless otherwise specified or Approved, it shall have a working pressure of not less than 16 bar.

FWP4.8.040.8 TEST CERTIFICATE
The valve shall be of the type acceptable to the Water Authority for fresh or flush water use as in accordance with its application. Type test certificate / report from certification bodies or accredited laboratories acceptable to Water Authority confirming that the valve has been tested conforming to this specification shall be produced.

FWP4.8.050.8 EVIDENCE OF COUNTRY / PLACE OF MANUFACTURE AND AUTHENTICITY
The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the modulating float valves for fresh water system delivered to the site or installed.
FWP4.9 BALL VALVES

FWP4.9.010.8 TYPE

Unless otherwise specified, the application of ball valves shall only be used for hose reel control valve in fire services installation and pipeline drain cock for pumpset, pressure switch and pressure vessel in water pump installation. Ball valves shall be of spherical bore with PTFE seats and directly operated by a lever. Lever shall be so mounted that it is parallel to the valve axis when the valve is in the fully open position. When the valve is in the fully closed position, the lever shall be at 90° to the valve axis.

FWP4.9.020.8 DESIGN AND CONSTRUCTION

1. Valves shall be robust and capable of withstanding hard wear;
2. Valves shall be constructed to the following minimum specification:
   a. Body and stem
      Brass to BS EN 12165 (CuZn40Pb2) with or without nickel/chromium plated,
   b. Seat bore
      Carbon steel to BS ISO 7121 or brass to BS EN 12165 (CuZn40Pb2);
   c. Lever handle
      Carbon steel or zinc plated steel with red plastic sleeve and open/close operating direction marking.
3. The lever retaining nut or screw of ball valves shall be permanently sealed with industrial type heavy duty threadlocking adhesive/sealant;
4. Valves shall have a working pressure of not less than 20 bar. The test pressures of valve body and seat shall be 1.5 and 1.1 times the maximum permissible working pressure respectively.

FWP4.9.030.8 END CONNECTIONS

1. Ball valves shall be of the screwed female end connection;
2. Threads in screwed end connection shall comply with BS EN 10226-1, 2, 3.

FWP4.9.060.8 EVIDENCE OF COUNTRY / PLACE OF MANUFACTURE AND AUTHENTICITY

The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the modulating float valves for fresh water system delivered to the site or installed.
FWP4.11 OTHER FITTINGS

FWP4.11.010.8 VORTEX INHIBITORS
1. Vortex inhibitors shall be LPC approved type with PN16 flanges and confirm to BS EN 12845. They shall be used for operation under positive head conditions;
2. The Sub-contractor shall provide copies of valid certificates issued by LPCB or other recognized product certification bodies acceptable to the CM;
3. The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the vortex inhibitors delivered to the site or installed.

FWP4.11.020.8 ORIFICE PLATES
1. Orifice plates for system balancing, pump churning water circuits, where applicable, shall be provided as required for proper commissioning of the systems. Wherever necessary to suit the pump performance in respect of system balance, orifice plates shall be provided even if they are not indicated on drawings;
2. Orifice plates shall be generally constructed and installed according to LPC Sprinkler Rules or other standards acceptable to FSD.
FWP4.12  SUBMERSIBLE BALL FLOAT VALVES

FWP4.12.010.8  DESIGN AND CONSTRUCTION
This valve is a non-modulating valve which controls the liquid level in tanks. This valve shall open fully when the liquid level reaches a preset low point and closes drip tight when the level reaches a preset high point.

FWP4.12.020.8  MAIN VALVE
The valve shall be hydraulically operated, single diaphragm-actuated, globe or angle pattern. The valve shall consist of three major components: the body with seat installed the cover with bearing installed, and the diaphragm assembly. The diaphragm assembly shall be the only moving part and shall form a sealed chamber in the upper portion of the valve, separating operating pressure from line pressure. Packing glands and/or stuffing boxes are not permitted and there shall be no pistons operating the main valve or pilot controls.

FWP4.12.030.8  MAIN VALVE BODY
1. No separate chambers shall be allowed between the main valve cover and body. Valve body and cover shall be bronze to BS EN 1982 CuSn5Zn5Pb5 of cast material. No fabrication or welding shall be used in the manufacturing process;
2. The valve shall contain a resilient, synthetic rubber disc and forming a tight seal against a single removable seat insert. The bronze disc guide shall be of the contoured type to permit smooth transition of flow and shall hold the disc firmly in place;
3. The diaphragm shall be nylon reinforced rubber assembly contains a non-magnetic 316 stainless steel stem, nut and spring of sufficient diameter to withstand high hydraulic pressures and shall be fully guided at both ends by a bearing in the valve cover and an integral bearing in the valve seat. The stem shall be drilled and tapped in the cover end to receive and affix such accessories as may be deemed necessary. The diaphragm assembly shall be the only moving part and shall form a sealed chamber in the upper portion of the valve, separating operating pressure from line pressure;
4. The flexible, non-wicking diaphragm shall consist of nylon fabric bonded with synthetic rubber compatible with the operating fluid. The centre hole for the main valve stem must be sealed. The diaphragm shall be fully supported in the valve body and cover by machined surfaces which support no less than one-half of the total surface area of the diaphragm in either the fully opened or fully closed position;
5. The main valve seat and the stem bearing in the valve cover shall be removable. The cover bearing and seat valves shall be threaded into the cover and body. The lower bearing of the valve stem shall be contained concentrically within the seat and shall be exposed to the flow on all sides to avoid deposits. To insure proper alignment of the valve stem, the valve body and cover shall be machined with a locating lip. Cover bearing, disc retainer, and seat shall be made of the same material. All necessary repairs and/or modifications other than replacement of the main valve body shall be possible without removing the valve from the pipeline.

FWP4.12.040.8  PILOT CONTROL SYSTEM
1. The valve pilot system shall contain a flow clean brass Y-strainer to BS EN 1982 with stainless steel screen to BS EN 10088-3. The strainer shall project into the flow stream. The eddies and current caused by this projection shall self clean the screen;
2. The float and float rod shall be stainless steel and float control shall be a rotary disc, plate-type pilot. The pilot shall direct supply pressure into the cover of the main valve to close it. Then vent the cover of the main valve to atmosphere to open the main valve;

3. The valve shall open wide when the float is at a low liquid level and close drip tight when the float is at a high liquid level. Once the pilot signals the main valve to open or to close, the valve shall travel through its entire stroke without additional movement of the pilot control.

  FWP5.3.020.8  RESPONSIBILITY OF SUB-CONTRACTOR................................................................. 6
  FWP5.3.030.8  VERIFICATION BY SUB-CONTRACTOR ........................................................................ 6
FWP5.1 GENERAL

FWP5.1.010.8 COMPLIANCE WITH RULES/REGULATIONS

1. All fire services water tank installations including gravity tank/pump suction tank provided by the Sub-contractor shall comply with the LPC Sprinkler Rules;

2. All water tank installations provided by the Sub-contractor shall comply with the requirements of the Water Authority.

FWP5.1.020.8 EVIDENCE OF COUNTRY / PLACE OF MANUFACTURE AND AUTHENTICITY

The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the pneumatic pressure vessels delivered to the site or installed.
**FWP5.2  PNEUMATIC PRESSURE VESSELS**

**FWP5.2.055.8 MILD STEEL PNEUMATIC PRESSURE VESSEL**

1. The vessels shall be constructed of welded mild steel to BS EN 13831 or European Directive 97/23/EC or other approved standards. The internal mild steel surfaces of the vessels shall be coated at manufacturer's factory with a resin (such as epoxy resin) of anti-corrosion material suitable for use with potable water. The vessels shall be provided with appropriate certificate issued by an approved authority or laboratory to substantiate their suitability in potable water application;

2. The vessels shall be pre-charged with air or nitrogen at factory at a pressure suitable for the application. The pre-charged pressure shall be adjustable and charging port with non-return device shall be provided in each vessel;

3. Gas and water space shall be separated by a bladder made of rubber membrane, which must be acceptable to and acceptable to the Water Authority. There shall be no contact between the water and metal surface of the vessel;

4. The bladder shall be replaceable and made of rugged rubber membrane. Material of the membrane shall be flexible, non-porous, of resistance to acids and alkalis, non-toxic and free of impairing taste and odour;

5. Whereas for potable water use, rubber bladder shall be provided with type-tested certificate(s) issued by approved authority or laboratory acceptable to the Water Authority to substantiate its suitability in contact with potable water;

6. The vessel shall withstand a minimum working pressure according to system configuration and under no circumstances less than 10 bar. A manufacturer's test certificate for the test pressure of the vessel shall be submitted for Approval;

7. The vessels shall be provided with air bleed cock, pressure gauges and drain cock with drain pipe extension to the nearest drain point;

8. A test certificate for the test pressure of the pneumatic pressure vessel issued by the manufacturer shall be submitted to the Contract Manager's Approval;

9. An open-up inspection randomly chosen from one of the delivered vessels shall be carried out. If the opened-up vessel is found lack of internal coating of anti-corrosion material or any non-conformance, the Sub-contractor shall open up all delivered vessels for inspection with no additional charge. The conformed vessels shall be re-charged to a pressure suitable for the application. All non-conformed products shall be removed off site for replacement;

10. In addition to the Regular Monthly Visits as stipulated in FWP14.3.040, the Sub-contractor shall inspect every pneumatic pressure vessel bi-weekly to identify any sign of rupture of the internal bladder inside the vessel. The Sub-contractor is required to identify the tones of knocking at the upper and lower portions of the vessel and to check the pressure at the gas inlet point in order to ensure the health of the bladder.

**FWP5.2.056.8 STAINLESS STEEL PNEUMATIC PRESSURE VESSEL**

1. The construction of a welded stainless steel pneumatic pressure vessel shall be to BS EN 13831 or European Directive 97/23/EC or equivalent international standards. Body, flange, bolts and nuts shall be of AISI grade 304 stainless steel or better in corrosion resistivity. Whereas for salt water use, flange shall be of AISI grade 316 stainless steel;
2. The vessel shall be pre-charged with air or nitrogen at a pressure suitable for the application. The pre-charged pressure shall be adjustable. Gas charging port with non-return device shall be provided in each vessel;

3. Gas and water space shall be separated by a replaceable bag-type bladder. There shall be no contact between water and metal surface of the vessel;

4. The bladder shall be replaceable and made of rugged rubber membrane. Material of the membrane shall be flexible, non-porous, of resistant to acids and alkalis, non-toxic and free of impairing taste and odour;

5. Whereas for potable water use, rubber bladder shall be provided with type-tested certificate(s) issued by approved authority or laboratory acceptable to the Water Authority to substantiate its suitability in contact with potable water;

6. The vessel shall withstand a minimum working pressure according to system configuration and under no circumstances less than 8 bar. A manufacturer's test certificate for the test pressure of the vessel shall be submitted for Approval;

7. The vessel shall be provided with drain cock and drain pipe connected to the nearest drain point;

8. The Sub-contractor shall inspect every stainless steel pneumatic pressure vessel at the Regular Monthly Visits as stipulated in FWP14.3.040. The Sub-contractor is required to identify the tones of knocking at the upper and lower portions of the vessel and to check the pressure at the gas inlet point in order to ensure the health of the bladder.
FWP5.3 CONCRETE WATER TANKS

FWP5.3.010.8 RESPONSIBILITY OF MAIN CONTRACTOR

1. Water tanks forming part of the building construction, or of concrete, including overflow, drains and inlet piping shall be supplied and installed by the Main Contractor;

2. Puddle flanges at the water tank for inlet and outlet pipes shall be supplied and installed by the Main Contractor.

FWP5.3.020.8 RESPONSIBILITY OF SUB-CONTRACTOR

All other piping connections and valves shall be supplied and installed by the Sub-contractor as indicated on Drawings.

FWP5.3.030.8 VERIFICATION BY SUB-CONTRACTOR

The Sub-contractor shall check the construction drawings for concrete water tanks for fire service installations and water pump installations and verify their correctness for his installation purposes, or submit proposals for modification to the design, as necessary.

FWP6.1 DESIGN AND SPECIFICATION

FWP6.1.010.8 COMPLIANCE WITH RULES/REGULATIONS
1. Pumps and pump installations for sprinkler systems shall comply with the detailed requirements of the LPC Sprinkler Rules;
2. Pumps and pump installations for hydrant/hosereel systems shall comply with Code of Practice for Minimum Fire Service Installations and Equipment published by Hong Kong Government and BS 5306: Part 1 wherever applicable.

FWP6.1.020.8 TYPE
1. The type of pump(s) required for any particular application is detailed in FWP2;
2. Only the type specified should be listed in the tender documents; alternative proposals may be submitted separately, together with a list of advantages for Approval;
3. All pumps shall be electric motor driven centrifugal pumps, unless otherwise specified.

FWP6.1.030.8 DUTY
1. The pump(s) shall be selected to suit the design requirements for capacity as indicated in FWP2 or Drawings;
2. The pump heads stated in FWP2 or Drawings are only for the reference of tendering purposes;
3. The Sub-contractor shall calculate the actual pump heads based upon the characteristics of the pipework systems including fittings, equipment and accessories and carry out such alterations as may be necessary to achieve the specified duty.

FWP6.1.040.8 PUMP CURVES
1. Predicted total Head/Quantity, required NPSH/Quantity, Efficiency/Quantity, and Power Absorbed/Quantity Curves shall be supplied;
2. The curves shall commence at zero flow and be extended to show the performance at heads lower than the minimum head;
3. In general, the pump shall be selected to operate near its best efficiency point shown on the performance curves;
4. Unless otherwise specified, fresh and flush feed pumps selected to operate below the best efficiency point by a figure of 10% or more (in efficiency) will normally be unacceptable.

FWP6.1.050.8 MAXIMUM PUMP SPEED
1. Maximum speed of fresh and flush water pumps shall not exceed 25r/s;
2. Maximum speed of booster fresh water pumps shall not exceed 25r/s;
3. Maximum speed of fire services feed pumps shall not exceed 50r/s;
4. Unless otherwise specified, maximum pump speed shall not exceed 50r/s.
FWP6.2 CONSTRUCTION

FWP6.2.010.8 GENERAL

1. All pump parts shall be constructed of materials suitable for the required working pressure, temperature and mechanical strength and also the liquid handled by the pump. The materials specified in this Section shall be of the minimum standard required. Better or equivalent materials may be offered for Approval (including alternative international / national standards);

2. Pump seals shall be mechanical seals for fresh water up-feed pumps, fire services water up-feed pumps, fresh water booster pumps, various fire services pumps as well as flush salt water up-feed pumps unless otherwise specified;

3. All dangerous accessible rotating and moving parts which would cause injury upon bodily contact, including but not limited to rotating shafts, couplings etc., shall be effectively guarded against contact of bodily parts with stainless steel see-through guards. All apertures shall be such that finger access to dangerous part is not possible. Removable stainless steel see-through guards shall be used for rotating and moving parts which require inspection during pump running.

FWP6.2.020.8 FRESH WATER/FIRE SERVICES PUMPS

1. Casing:
   Grey cast iron to BS EN 1561 EN-GJL-250, or JIS G5501FC250.

2. Impeller:
   a. Bronze casting to BS EN 1982 CuSn5Zn5Pb5, or CuSn10; or
   b. Bronze casting to JIS H5120-CAC406, JIS H5120-CAC502A; or
   c. Austenitic chromium nickel molybdenum stainless steel casting to BS 3100 grade 316, or BS EN 10283 grade 1.4408.

3. Diffuser (detachable):
   Grey cast iron to BS EN 1561 EN-GJL-250, or JIS G5501FC250.

4. Wearing ring:
   a. Grey cast iron to BS EN 1561 EN-GJL-250, or JIS G5501FC250; or
   b. Copper-tin alloy to BS EN 1982, or phosphor bronze to JIS H5120.

5. Shaft:
   Stainless steel to BS EN 10088-3 - 1.4301, or JIS SUS 304.

6. Sleeve:
   Stainless steel same as shaft or cast bronze.

7. Bearing bush (for vertical pump only):
   Tungsten carbide or silicon carbide.

8. Bearing for horizontal pump:
   Stainless steel.

9. Pump seals:
   Mechanical seal.

10. Other parts which may be in contact with water:
Stainless steel or bronze.

11. Prior to the time of material submission for Approval, the equipment shall have proven record of reliability in local application for a minimum continuous period of 12 months to the satisfaction of the Contract Manager.

FWP6.2.025.A **FRESH WATER BOOSTER/RAINWATER IRRIGATION PUMPS**

Unless otherwise specified, fresh water booster pumps / rainwater irrigation pumps shall be of stamped stainless steel vertical multi-stage in-line type which shall comply with the following requirements:

1. **Casing**
   a. Casing shall be made of stainless steel of AISI grade 304 or better in corrosion resistivity, accurately machined and assembled with metal-to-metal joints;
   b. Suction and discharge ports shall be in line with one another.

2. **Impellers and Diffusers**
   a. Impellers and diffusers shall be made of stainless steel of AISI grade 304 or better in corrosion resistivity. They shall be welded to sufficient strength, mechanically balanced, and all water ways to be finished smooth;
   b. Each stage of the pump casing, diffusers and impellers shall be identical and interchangeable;
   c. Individual impeller lock nut with guides shall be of stainless steel.

3. **Shaft, Bearing and Seal**
   a. Shaft shall be made of stainless steel with water lubricant bearing bush at the suction casing;
   b. Bearings shall be made of ceramic, silicon carbide, and/or tungsten carbide where appropriate;
   c. Shaft seal shall be mechanical seal.

4. **Motor Bracket, Mounting Foot, Tie Bolts and Nuts**
   a. Motor bracket and mounting foot shall be made of cast iron coated with epoxy paint or of stainless steel;
   b. Tie bolts shall be made of high tensile steel with epoxy paint or of stainless steel;
   c. Nuts shall be made of stainless steel.

5. **Pump Strength**
   The pump shall be capable of withstanding a pressure of 1.5 times of the operating pressure or minimum 16 bar;

6. **Reliability**
   a. The pump shall be the product of a pump manufacturer who continuously manufactured similar type of products in the past 5 years;
   b. Prior to the time of material submission for Approval, the pump model shall have proven record of reliability in local application for a minimum continuous period of one year to the satisfaction of the Contract Manager.

**FWP6.2.030.8 FLUSH WATER PUMPS**

1. **Casing:**
   Stainless steel to BS 3100 grade 316 C16 or BS EN 10283 grade 1.4408, or JIS SCS14 or SCS14A.
2. Impeller:
   Stainless steel to BS 3100 grade 316 C16 or BS EN 10283 grade 1.4408, or JIS SCS14 or SCS14A.

3. Wearing ring:
   Stainless steel of grade 316.

4. Shaft:
   Stainless steel to BS EN10088-3 – 1.4401, or JIS SUS316.

5. Sleeve:
   Stainless steel of grade 316.

6. Diffuser (detachable):
   Stainless steel to BS 3100 grade 316 C16 or BS EN 10283 grade 1.4408, or JIS SCS14 or SCS14A.

7. Bearing for horizontal pump:
   Stainless Steel.

8. Bearing bush for vertical pump:
   Tungsten carbide or silicon carbide.

9. Pump seals:
   Mechanical Seal.

10. Parts which may be in contact with water:
   Stainless steel of grade 316.

11. No external painting is allowed for the pump body.

12. In-service records of stainless steel pumps shall be as specified in FWP6.8.010.

FWP6.2.035.8 JOCKEY PUMPS FOR FIRE SERVICE INSTALLATION
Unless otherwise specified, jockey pumps for fire service installation shall be constructed as per fresh water/fire service pumps as specified in FWP6.2.020, or as per fresh water booster pumps as specified in FWP6.2.025.

FWP6.2.040.8 SEWAGE/WASTE WATER/STORM WATER PUMPS
Sewage, waste water or storm water pumps shall be constructed of:

1. Casing
   Grey cast iron to BS EN 1561 EN-GJL-250 or JIS G5501FC250.

2. Impeller
   Grey cast iron to BS EN 1561 EN-GJL-250 or JIS G5501FC250.

3. Shaft
   a. Stainless steel to BS EN 10088-3 - 1.4301, or JIS SUS 304 for waste/storm water;
   b. Stainless steel to BS EN10088-3 - 1.4401, or JIS SUS316 for sewage.

FWP6.2.050.8 BORE WELL PUMPS
1. Bore well pumps for use with corrosive water shall be constructed of the same material specification as FWP6.2.030;
2. Bore well pumps for use with non-corrosive water shall be constructed of:
   a. Casing
      Grey cast iron to BS EN 1561EN-GJL-250, or JIS G5501FC250.
   b. Impeller
      Bronze to BS EN 1982 CuSn5Zn5Pb5, or JIS H5120-CAC406.
   c. Shaft
      Stainless steel to BS EN 10088-3 - 1.4301, or JIS SUS 304.
FWP6.3 PUMP TYPES

FWP6.3.010.8 HORIZONTAL SPLIT CASING PUMPS

1. Casing:
   a. The casing shall be of the volute type, of robust construction, split axially, accurately machined, with the suction and delivery connections mounting feet, bearing pedestals cast integrally in the lower half of the casing;
   b. The water passages shall be smooth, free from blow holes, sand pockets and other detrimental defects, to permit maximum efficiency;
   c. Means shall be provided to drain the casing;
   d. An air bleed cock at the upper most point of the casing shall also be provided;
   e. Flanges shall conform to BS EN 1092: HS PN16;
   f. The casing bolts shall be of corrosion resistant high strength steel.

2. Impeller:
   a. The impeller shall have sufficient strength at the boss to withstand all possible stresses that may be imposed by the drive;
   b. The impeller shall be machined to close limits, hand finished and balanced dynamically;
   c. The impeller is to be keyed to the shaft, and fixed in an axial position by corrosion resistant fixing nuts of the same material as the shaft, threaded opposite to rotation and secured by set screws or other means;
   d. Renewable guide rings are to be provided in the casing, keyed to prevent rotation by stainless steel pin;
   e. Wearing ring shall be straight type with close tolerance to permit minimum recirculation.

3. Shaft:
   a. The shaft shall be of sufficient size and strength to withstand the impeller weight, the torque to be transmitted as well as the axial and radial load developed in operation;
   b. Shaft sleeves, if used, shall be keyed to prevent rotation and secured against axial movement.

4. Shaft Seal:
   a. Mechanical seal for pumps shall be provided as specified in FWP6.4.030.

FWP6.3.020.8 END SUCTION PUMPS

1. Casing:
   a. The casing shall be of the volute type and of robust construction;
   b. Suction and delivery flanges shall conform to BS EN 1092: HS PN16;
   c. Means shall be provided to bleed the air and drain the casing;
   d. The water passages shall be smooth, free from blow holes, sand pockets, and other detrimental defects to permit maximum efficiency;
   e. The casing bolts shall be of corrosion resistant high strength steel.
2. Impeller:
   a. The impeller shall have sufficient strength to withstand all possible stress that may be imposed by the drive;
   b. The impeller shall be of the shrouded type, dynamically balanced to ensure vibration free operation;
   c. The impeller is to be keyed to the shaft, and fixed in an axial position by corrosion resistant fixing nuts of same material as the shaft, threaded opposite to rotation and secured by set screws or other means;
   d. Renewable guide rings are to be provided in the casing, keyed to prevent rotation by stainless steel pin;
   e. Wearing ring shall be straight type with close tolerance to permit minimum recirculation.

3. Shaft:
   a. The shaft shall be of sufficient size and strength to withstand the impeller weight, the torque to be transmitted as well as the axial and radial load developed in operation;
   b. Shaft sleeves, if used, shall be keyed to prevent rotation and secured against axial movement.

4. Shaft Seal:
   a. Mechanical seal for pumps shall be provided as specified in FWP6.4.030.

5. Close-coupled Pump:
   For installation with motor rating not exceeding 2.2 kW, close-coupled pumps may be acceptable, subject to the Approval of the Contract Manager.

FWP6.3.030.8 MULTI-STAGE PUMPS

1. Casing:
   a. Unless otherwise specified, multi-stage pumps shall be of the radially split casing type, with all casing parts kept together by external tie bolts and sealed against each other by gaskets or O-rings, suction and discharge flanges shall conform to BS EN 1092 PN16;
   b. Wearing / split ring shall be provided between impeller, detachable diffuser, pump packing and pump casing;
   c. Means shall be provided to bleed the air and drain the casing;
   d. Pumps shall be vertically or horizontally mounted as specified in FWP2. For vertically mounted pump, the bearing bush shall be made of tungsten carbide or silicon carbide to minimise wear. Besides, stainless steel motor stool should be provided for vertically mounted stainless steel flush water pump.

2. Impeller:
   a. The impellers shall have sufficient strength to withstand all possible stress that may be imposed by the drive;
   b. The impellers shall be of the shrouded type, dynamically balanced using grinding machine to ensure vibration free operation;
   c. The impellers shall be keyed to the shaft and fixed in an axial position by corrosion resistant fixing nuts of same material as the shaft, threaded opposite to rotation and secured by setscrews or other means.

3. Diffuser (detachable):
PUMP TYPES

FWP6.3

1. Stage:
   a. The diffuser should be the same material as casing with sufficient strength. It should be so designed to have even water passage to avoid turbulence;
   b. Diffuser shall be detachable and prevented from rotation by an acceptable means;
   c. A pin if so designed to withstand the diffuser from rotation shall be an integral part of the casing. Detachable pin fixed on the casing shall not be allowed.

4. Shaft:
   a. The shaft shall be of sufficient size and strength to withstand the impeller weight, the torque to be transmitted as well as the axial and radial load developed in operation;
   b. Shaft sleeves, if used, shall be keyed to prevent rotation and secured against axial movement.

5. Shaft seal:
   a. Mechanical seal for pumps shall be provided as specified in FWP6.4.030.

6. Stage:
   a. Unless otherwise specified, the maximum number of stages shall not exceed twelve (12).

7. Efficiency:
   a. Multi-stage pumps shall be selected with efficiency as specified in FWP6.1.040. When appropriate pumps are not available, pumps with lower efficiency may be acceptable, subject to the Approval of the Contract Manager.

FWP6.3.040.8 SUBMERSIBLE SUMP PUMPS

1. Stage:
   Pump shall be of single stage centrifugal type.

2. Casing:
   a. The casing shall be of the volute type and robust construction;
   b. The water passage ways shall be smooth and free from blow holes and sand pockets;
   c. Casing bolts shall be of stainless steel.

3. Impeller:
   a. For sewage pumps, the impeller shall be of the non-clog type with minimum solid passage of 50 mm diameter, unless otherwise specified;
   b. For waste or storm water pumps, smaller solid passage impeller with suction strainer will be acceptable;
   c. The impeller shall be dynamically balanced for all hydraulic loads within the pumps operating range and shall be keyed to the shaft and secured in an axial position by corrosion resistant fixing nuts;
   d. Renewable wear rings shall be provided and shall be keyed to prevent rotation by stainless steel pin.

4. Shaft:
   a. The pump shall be of mono-block type with the impeller keyed to the motor shaft;
b. The shaft shall be of sufficient size and strength to withstand the impeller weight, the torque to be transmitted as well as the axial and radial load developed in operation.

5. Shaft seal:
   a. Double mechanical seal lubricated by an oil chamber shall be provided;
   b. Lower seal faces shall be of tungsten carbide or other Approved hard metal;
   c. All components shall be of corrosion resistant materials with high quality stainless steel spring;
   d. Lower seal shall be protected from ingress of grits.

6. Bearing:
   a. The bearings shall be of the ball or roller type, oil or grease lubricated;
   b. Bearings shall have a minimum re-grease interval of 5000 hours.

7. Motor:
   a. Motor shall be of the submersible type and conform to FWP11 of this Specification;
   b. Built-in thermal protection to BS EN 60034-11 shall be provided for motor of rating exceeding 7.5 kW.

8. Cable:
   a. The cable used inside sump shall be multi-core submersible cable and shall be of sufficient length without connections inside the sump;
   b. Cable entry to the junction chamber of the motor shall be provided with strain relief clamp and seal gland.

9. Installation and accessories:
   a. The pump shall be capable of being raised from or fixed back to the sump without the need to enter or drain the sump;
   b. For installation with motor rating exceeding 2.0 kW, the pump shall be provided with slide rails, lifting chain and quick discharge connection;
   c. For smaller installations, lifting chain and flexible hose-coupling connection will be acceptable.

10. Surface treatment:
    All surfaces of pump and motor in contact with the fluid handled shall be treated with anti-corrosion primer or paint for additional protection.

**FWP6.3.050.8 MULTI-STAGE SUBMERSIBLE PUMPS**

1. Construction:
   a. The pump and motor shall be of small diameter profile to suit the bore well size specified; arranged vertically with the discharge connection on top, followed by the pump, the suction port with strainer and the motor at the bottom;
   b. The assembly is to be submerged below the lowest pumping level and suspended in the well by the discharge pipe;
   c. Pump shall also be suitable for horizontal installation if specified in FWP2.

2. Casing:
a. Pump shall be made up of independent stage casing bowls, complete with diffuser vanes or inter-stage piece and sleeve bearing for the pump shaft and easily removable for servicing;

b. The water passage way shall be smooth to provide best efficiency.

3. Impeller:
   a. Impeller shall be of axial, enclosed radial or mixed flow type, machined to close limit with smooth water passage and dynamically balanced;
   b. The impellers shall be secured to the shaft by taper lock bushes or keys and fixed in the correct axial position by distance sleeve, shaft sleeves or the extended boss of the impeller, all keyed to prevent rotation;
   c. Renewable guide rings shall be provided in the pump casing;
   d. Guide rings shall be of straight type providing close radial running clearance.

4. Shaft and sleeve bearings:
   a. Pump shaft shall be carried by sleeve bearings at both ends and intermediate stage positions, all lubricated by the fluid handled;
   b. Downthrust shall be transmitted to and carried by the motor shaft, however, the pump shall be designed to carry momentary upthrust encountered under normal operation.

5. Motor:
   a. The submersible motor shall be a water-fitted squirrel cage induction motor and conform to FWP11;
   b. The motor shaft shall be connected to the pump shaft by a keyed sleeve coupling;
   c. A thrust bearing shall be located at the bottom end of the motor to absorb the axial thrust generated by the pump.

6. Cable:
   a. The cable inside the bore well shall be multi-core submersible cable and shall be of sufficient length without connections inside the well;
   b. The cable shall be secured to the discharge riser by corrosion resistant clips.

7. Accessories:
   a. Each pump shall be provided with a non-return valve immediately connected to the discharge of the pump;
   b. A pipe support clamp shall be provided at the top of the bore well for holding the discharge pipe and the pump.
**FWP6.4 BEARINGS AND PACKINGS**

**FWP6.4.010.8 PUMP BEARINGS**
1. All bearings shall be of types readily obtainable;
2. For horizontal mounted pumps, the bearings shall be of the sealed ball or roller type, oil or grease lubricated;
3. Means shall be provided to protect the bearing from ingress of dust and water;
4. Appropriate lubrication nipple/connections or oiler sump with drain plug shall be provided for maintenance purpose;
5. For fresh water pumps, the bearing housings shall be cast iron. For flush water and rainwater pumps, the bearing housing and cover shall be stainless steel to BS 3100 grade 316 C16 or BS EN 10283 grade 1.4408, or JIS SCS14 or SCS14A. The bearing housing and covers shall be easily removable for service;
6. The bearing cover shall provide a suitable seal to contain grease/oil in the housing;
7. For vertical pumps, the bearing bush (thrust bearing) shall be made of tungsten carbide or silicon carbide.

**FWP6.4.020.8 PUMP PACKING**
1. All pump packing shall be in square plait braided construction and shall contain no asbestos. Sleeves shall be provided to prevent the packing rubbing against the shaft;
2. The braids shall not be liable to become loose or peel off throughout their life;
3. The packing shall be suitable for use in fresh water or flush water application;
4. Size of the packing shall be commensurate with the size of the pump;
5. The packing shall be made from any one of the following materials: aramid fibre, carbon yarn, PTFE or other non-asbestos fibres. It shall be impregnated with PTFE and/or heat resistant lubricants. Any coating that will lead to the particles being rubbed off is not acceptable;
6. The packing shall also satisfy the following requirements:
   a. Rated pH value: 5-9;
   b. Rated maximum operating speed: not less than 10 m/s;
   c. Rated maximum operating temperature: not less than 150°C.

**FWP6.4.030.8 PUMP SEALS**
1. For various fire services pumps and fresh water pumps, the materials of mechanical seal heads and seal seats, and the materials of seal faces, shall be suitable for conveying fresh water at a speed of 2900 rev/min for non-stop running up to 6 hours unless otherwise specified;
2. For flush water up-feed pumps, the materials of mechanical seal heads and seal seats, and the materials of seal faces, shall be suitable for conveying flush salt water at a speed of 2900 rev/min for non-stop running up to 6 hours unless otherwise specified;
3. For sewage and rainwater pumps, the materials of mechanical seal heads and seal seats, and the materials of seal faces, shall be suitable for conveying waster water at a speed of 2900 rev/min for non-stop running up to 6 hours unless otherwise specified.
FWP6.5 FITTINGS AND ACCESSORIES

FWP6.5.010.8 FITTINGS
Each pump shall be fitted with:
1. Valves: suction and discharge valves, strainer, and non-return valves as shown on the Drawings;
2. Cocks: suction and discharge gauge cocks of 10 mm BSP female thread;
3. Pressure gauges: pressure gauge as FWP11.6.060 complete with cock and coiled connector as sub-clause (2) above at the suction and discharge side of each surface mounted pump;
4. Gland drain where applicable: 25 mm or larger uPVC gland drain pipe which shall discharge to the nearest drain or waste pipe.

FWP6.5.020.8 COUPLINGS
1. Each pump, except "close-coupled" type, shall be fitted with a secure coupling and shaft guard. Mild steel coupling can be provided for stainless steel flush water pumps;
2. The coupling shall be of semi-flexible steel pin and rubber bush type, accurately aligned on site;
3. The Sub-contractor shall be required to demonstrate correct alignment prior to handover of the installation;
4. The couplings shall be totally enclosed by stainless steel see-through guard to prevent any direct contact of bodily parts.

FWP6.5.030.8 LUBRICATION FITTINGS
Each pump shall be fitted with appropriate lubrication fittings, where necessary.

FWP6.5.040.8 AIR BLEED COCKS
Each surface mounted pump shall be equipped with test and/or air bleed cocks of the high pressure type.

FWP6.5.050.8 LIFTING EYES
Vertical pumps of more than 200 kg in weight shall be provided with lifting eyes to facilitate maintenance and future replacement.

FWP6.5.060.8 IDENTIFICATION
A serial number for identification purpose should be indelibly marked or label fixed on the pump casing. An arrow indicating the normal direction of rotation shall be cast clearly on the pump casing or a brass arrow and plate engraved with the words "Direction of Rotation" shall be screwed to the pump casing near the coupling.

FWP6.5.070.8 MOTORS AND WIRING
Electrical motors and wiring shall comply with FWP11 and the relevant sections of the HKHA Electrical Installation Specification.
FWP6.6 INSTALLATION

FWP6.6.010.8 GENERAL

All pumps shall be installed as per manufacturers' recommendations and instructions and shall be carefully levelled and aligned by competent specialist before start-up.

FWP6.6.020.8 BASEPLATE

1. The pump and motor for all horizontal pumpset shall be mounted on a single baseplate constructed of stainless steel of grade 316; vertical pumpset shall be provided with integral base suitable for direct mounting onto the pump plinth;

2. The pump and motor of horizontal pumpset with motor rating exceeding 22 kW shall be secured with jack bolts or dowel pins as recommended by the motor manufacturer;

3. The baseplate shall be a stainless steel plate welded on a stainless steel channel base frame. The stainless steel plate shall not be deformed after welding;

4. The baseplate shall be sufficiently rigid and properly supported such that it will not deflect under the weight of the pump and motor. The pump set and baseplate shall be fixed in place by sufficient number of suitably sized anchor bolts cast or grouted in the concrete inertia block or pump base.

FWP6.6.030.A VIBRATION ISOLATION

1. Pumpsets shall be provided with Approved vibration isolators to prevent the transmission of vibration to the building structure;

2. Vibration isolators shall be carefully selected and installed in accordance with manufacturers' recommendations and instructions;

3. For horizontal pumpsets, spring isolators shall be provided for all installations;

4. For vertical pumpsets, isolation cork shall be acceptable for all installations;

5. Isolation cork shall be in the form of cork panels installed under and around the whole concrete pump base. Cork panels shall be at least 50 mm thick and shall have a density suitable for the load they carry. Cork panels shall be entirely covered by waterproof paper prior to pouring of concrete for the pump base and after the pump base is formed, all exposed cork shall be sealed by mastic or bitumen;

6. Anti-vibration spring isolators shall have a rated deflection of not less than 38 mm unless otherwise specified. Each spring isolator shall consist of one or multiple steel helical coil springs, seated inside a robust cast iron or steel housing with an external-accessible adjustment bolt and lockout for levelling;

7. Spring isolators shall be laterally stable. Spring diameter shall be no less than 0.8 of the compressed height of the spring at rated load. Spring isolators shall have a minimum additional travel to solid equal to 25% of rated deflection. They shall have identification markings / colour codes for identification of rated load;

8. Spring isolators shall be integral with non-adjustable neoprene sponge inserts between the projections of the upper and lower housing. Non-skid neoprene acoustic isolation pad of no less than 6 mm thick shall be properly bonded to the underside of the lower housing of the isolator;

9. Information as required in Clause 11 of BS ISO 2017-1 shall be submitted for Approval;
10. The Sub-contractor shall advise the Main Contractor of the detailed requirements of the fabricated steel framed reinforced concrete inertia block for pumpset, which shall be provided by the Main Contractor to decrease the vibrational motion. Inertia block shall have a minimum thickness of 150 mm and weight 1½ times that of the pumpset. If there is additional piping rigidly connected to the pump suction inlet and/or discharge outlet before the flexible connectors, the inertia block shall be large enough to accommodate the support to be provided for this piping to prevent its load being imposed onto the pump where applicable;

11. Each pumpset shall be connected to its pipework with flexible connectors to prevent the transmission of vibration to the pipework, and the flexible connectors should be close to the pump as far as practicable;

12. Supports for piping between each pumpset and its flexible connectors shall be properly mounted on the inertia block as required whilst supports for piping after the flexible connectors shall be attached to structural members such as beams, columns or floating/ground floor slabs in preference to walls and shall be provided with rubber or neoprene pads for vibration isolation;

13. For horizontal split-casing pumpset mounted on inertia block with spring isolators for vibration isolation, bends should be used after the flexible connectors, and the piping after the flexible connectors shall be properly supported as specified above and shall not impose additional load onto the pumpset and inertia block;

14. The completed pump installation, when in operation, shall cause no noticeable or objectionable vibration transmission to any part of the building structure. In the event that undue vibration occurs, the Sub-contractor shall rectify the installation or replace the equipment as necessary at his own expenses to the satisfaction of the Contract Manager.
FWP6.7 TESTING AND CERTIFICATION

FWP6.7.010.8 TEST
Pumps shall be type-tested in accordance with the requirement of BS EN ISO 9906 or equivalent. Performance curves under tests shall be submitted for Approval.

FWP6.7.015.8 PROVISION OF TEST PIECE FOR STAINLESS STEEL FLUSH WATER PUMP AND ATTENDANCE FOR INSPECTION AND TESTING
1. A test piece, forming an integral part of the pump casing shall be provided for each stainless steel flush water pump. The size and shape of the test piece shall not be smaller than 25 mm diameter x 150 mm length. The test piece shall be suitable for conducting the following tests:
   a. Tensile test;
   b. Chemical composition analysis.
2. The Sub-contractor shall provide assistance, instruments, machines, labour and other facilities necessary for cutting the test piece, open-up inspection and examining the quality of pump. The pump shall be randomly selected by the the Contract Manager. The Sub-contractor shall arrange such inspection in his workshop or elsewhere if Approved;
3. The expense involved for complying with the above requirements, including any transportation costs, tests etc. shall be borne by the Sub-contractor;
4. The Sub-contractor shall cut the test piece in the presence of the Contract Manager or his representatives and send it to an accredited laboratory for carrying out the chemical composition analysis and tensile test. The laboratory shall be accredited for testing such type of alloy under the “Metallic Materials” or “Steel” sub-category of the “Construction Materials” category in the HOKLAS list;
5. The pumps shall be free from blow holes, sand pockets, cracks, welding, pitting, hammering marks, excessive machining / wearing and other detrimental defects;
6. If the selected pump fails either the tensile test or chemical composition analysis as mentioned in sub-clause (1) above or the open-up inspection, the entire batch of stainless steel flush water pumps shall be rejected. The Contract Manager may at his discretion to call for further open-up inspection and material test on another pump as appropriate. The cost so arisen will be borne by the Sub-contractor;
7. For the rejected pumps, the Sub-contractor shall arrange free replacement of them in accordance with the Conditions of Contract, and no extension of time to the Contract period will be allowed.

FWP6.7.020.8 PUMP CERTIFICATES
1. Each pump shall be provided with a certificate issued and signed by the manufacturer. The certificate shall clearly record the pump model, serial number and the materials of the casing, shaft and impeller;
2. Each pump or each batch of pumps shall also be provided with a certificate on their place of manufacture. The certificate shall be issued by a recognized Chamber of Commerce of the place of manufacture concerned.
IN-SERVICE RECORDS FOR STAINLESS STEEL FLUSH WATER PUMPS

1. When instructed by the Contract Manager, the Sub-contractor shall submit full details and particular of in-service records established in local application for the pump offered to substantiate conformance with the Specification. Failure to submit full and complete details and particulars of in-service records or failure to allow sufficient time for site inspection may result in rejection of the pump offered:

2. The in-service records shall contain the following information:
   a. Place of manufacture of the materials and parts of the pump;
   b. Rated capacity of the pump, which shall not be less than 6 l/s and 70 m at 1450 rpm unless otherwise accepted by the Contract Manager;
   c. Period of continuous and satisfactory operation and maintenance which shall be at least six months prior to the time of tender submission; and
   d. Provision of a test piece for materials composition and tensile test and open-up inspection.

WARRANTY FOR STAINLESS STEEL FLUSH WATER PUMPS

1. Each stainless steel pump shall be supplied with a certificate of warranty issued by its manufacturer guaranteeing to provide free replacement for defective parts, components or the pump as a whole against inferior materials, faulty design and/or workmanship for a period of five years commencing from the date of completion of the Section of the Works within the scope of which the pump is installed. Consumables items such as bearing, soft packing, wearing ring and sleeve are excluded from the warranty. The Sub-contractor shall submit the content and format of the letter of warranty for Approval before shipment;

2. Each pump shall also be supplied with a certificate issued by the manufacturer stating the chemical composition for the materials used for the pump casing, impeller, shaft and diffuser etc.;

3. Each pump shall be fixed with a metal nameplate showing the manufacturer's name, serial number, pump head, flow rate, speed, rated power absorbed, material used and warranty expiry date. The Sub-contractor shall be responsible for collecting and punching the information on the nameplate;

4. The Sub-contractor shall also submit an undertaking issued by the local supplier of the pump guaranteeing to provide the following:
   a. Free labour and materials for replacing any parts, components or the pump as a whole found to be defective except consumables items; and
   b. Free on-site technical support during testing and commissioning and the 5-year warranty period.

FWP7.1 SYSTEM EQUIPMENT

FWP7.1.010.8 GENERAL REQUIREMENT

1. The hydrant / hosereel system and the individual equipment installations shall comply with the Fire Services CoP, FSD Requirements and Circular Letter;

2. The Fire Service inlets, hydrant outlet valves, hose reels, related equipment fittings shall be approved by FSD;

3. Copies of valid Approval documents issued by FSD and / or product certification bodies recognized by FSD for the Fire Services inlets, hydrant outlets and hose reels shall be produced for the CM’s inspection;

4. Copies of valid Approval documents issued by the Water Authority and test certificates / reports issued by the certification bodies or accredited laboratories acceptable to the Water Authority for the Fire Service inlets, hydrant outlets and hose reels shall be produced for the CM’s inspection;

5. Higher standards wherever required are described elsewhere in this Specification or on the Drawings;

6. The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the fire services inlet, fire hydrants and hose reels delivered to the site or installed.

FWP7.1.020.8 FIRE SERVICE INLETS AND HYDRANT OUTLETS

1. The Fire Service inlets and hydrant outlets shall conform to BS 5041: Part 1 and be of copper alloy construction except for the handwheel which shall be of cast iron or hard aluminium alloy;

2. The inlet and outlet fittings shall be supplied and manufactured to the quality of material, construction, and dimensions as detailed in the British Standard Specification listed:
   a. Globe & check valve of service rating 1000 kPa to BS 5154 or BS EN 12288;
   b. Male and female instantaneous terminals to BS 336;
   c. All fittings shall be tested to at least 2000 kPa.

3. Each hydrant outlet shall be tested at factory in accordance with manufacturer’s quality assurance / control system. In particular, testing on the proper connection of hydrant outlet (female coupling) with male delivery hose coupling shall be carried out for each hydrant outlet to verify that the outlet connection is manufactured to BS 336. The dimensions of the male delivery hose coupling for the testing shall comply with BS 336. A water resistant and indelible label bearing the name or logo of the manufacturer and the signature of their quality controller shall be stuck at a conspicuous position on the body of hydrant outlet to denote the outlet has passed the manufacturer’s quality assurance / control system;

4. After installation, each hydrant outlet shall be checked at site by the Sub-contractor and witnessed by the Contract Manager’s Representative for verifying whether it can be properly connected to a pair of calibrated male delivery hose couplings provided by the Employer and of dimensions to the lower and upper limits specified respectively in BS 336. Any installed hydrant outlet which cannot pass the site check shall be removed and replaced;

5. The record of site check for individual hydrant outlets shall be included in the testing and commissioning report of the O&M Manual.
FWP7.1.030.8 FIRE SERVICE INLETS

Fire service inlets shall:

1. Be connected to the main riser and located as shown on the Drawings;
2. Be of twin type, comprising screw-down globe type stop valve with male screwed outlet of suitable bore and two horizontal male instantaneous inlet connections, complete with integral spring loaded non-return valves;
3. Have a separate non-return valve behind the inlets;
4. Have a metal plate with minimum 70 mm high marked "FIRE SERVICE INLET 消防入水掣" or "SPRINKLER INLET 花灑入水掣" in RED letters in both English and Chinese characters using raised letterings, hung on each of inlet;
5. For intermediate booster pump systems only, a waterproof box comprising pump start and stop push buttons; pump running indication light and alarm buzzer shall be provided in the FSI cabinet for fire hydrant/hosereel system; (Details shall be submitted for Approval prior to installation.);
6. Have an enclosure constructed by the Main Contractor.

FWP7.1.040.8 HYDRANT OUTLETS

Hydrant outlets shall:

1. Be of single type;
2. Comprise screw-down globe type stop valve with male screwed inlet of suitable bore and female instantaneous outlet;
3. Have the stop valve controlled by a handwheel to close in clockwise rotation with the direction of open and close engraved on the wheel of the valve in both English and Chinese characters;
4. Have outlet branches inclined 70 degrees from the centre line of the handwheel;
5. Have release plunger located at the side of each outlet branch for locking any connecting male delivery hose coupling;
6. Have the letters “HKHA” and the name of the estate and the phase number together with the batch number (e.g. SMP5-1 for Sau Mau Ping Phase 5 batch 1), or a suitable description of the Contract approved by the Contract Manager, indelibly marked on a conspicuous surface of the copper lock nut of the release plunger and on the body of the valve but not on the handwheel for identification;
7. Be selected to carry out and report on dimensional checking and chemical composition analysis against inferior materials and faulty workmanship, as follows:
   a. One hydrant outlet from each batch delivered to site or two hydrant outlets if the batch quantity exceeds 200, shall be randomly selected by the Contract Manager or his representative and then sent to an accredited laboratory to carry out the following tests:
      i. Dimensional checking of the connector section of the hydrant outlet against the matching delivery hose connector specified in BS336. The laboratory shall be accredited to carry out dimensions measurement under the “Specific Test or Property Measured” for a material or product of the “Construction Materials” or “Calibration Services” category in the HOKLAS list;
ii. Chemical composition analysis for the body of the hydrant outlet against the copper alloy specified in BS5041-1. The laboratory shall be accredited for testing such type of alloy under the “Metallic Materials” sub-category of the “Construction Materials” category in the HOKLAS list.

b. The expense involved, including any transportation cost, checking and testing, etc. shall be borne by the Sub-contractor;

c. If the selected hydrant outlet fails in the dimensional checking and / or the chemical composition analysis, the Contract Manager or his representative may at his / her discretion call for the same checking and testing on another hydrant outlet. The cost so arisen shall be borne by the Sub-contractor;

d. If the second hydrant outlet still fails in the checking and testing mentioned in c. above, the entire batch of the hydrant outlets shall be rejected. The Sub-contractor shall arrange replacement free of charge to the Employer and no extension of time to the contract period will be allowed. The batch of rejected hydrant outlets shall not be re-used in any HKHA’s projects.

VENTING AND DRAINING

All hydrant risers, shall be provided with automatic air relief valves of 25 mm size at the highest points and drain valves at the lowest points of the systems.

EARTHING OF RISING MAINS

Rising mains shall be effectively electrically earthed and joints, which are not provided with electrical continuity, shall be bonded. Earthing and bonding shall be in accordance with the Electrical CoP.

PRESSURE REDUCING HYDRANT OUTLETS

1. Pressure reducing hydrant outlets shall be adopted at locations where the running pressure at the hydrant outlets exceeds 700kPa. The pressure at any hydrant outlet even at no flow situation shall in no case exceed 850 kPa;

2. In accordance with the Drawings, pressure reducing hydrant outlet shall be either:

   a. Self-contained type without the use of parity valve, which shall be capable of reducing the running pressure and satisfying the flow test requirements. The pressure reducing mechanism of the valve shall be located downstream of the valve seat. Pressure reduction shall be achieved by means of hydraulic pressure balancing with metal diaphragm. The 100% effectiveness pressure reducing performance shall be maintained at all time of operation; or

   b. Achieved by installation of parity valve in conjunction with the hydrant outlet. The parity valve shall have a relief connection to drain of not less than 40 mm in diameter. Material of parity valve body shall be same as that of hydrant outlet. The cover of the parity valve shall be indelibly marked with the letters “HKHA” and the name of the estate and the phase number (e.g. SMP5 for Sau Mau Ping Phase 5) or a suitable description of the Contract approved by the Contract Manager.

3. Specification for hydrant outlets in Clause FWP7.1.040 shall also be applicable to the pressure reducing hydrant outlets.

HOSE REELS

1. Hosereels shall be type-tested to BS EN671-1 or other recognized standard(s) and with FSD acceptance letter.

2. A hosereel shall be:
a. of fixed or swinging type to suit site installation conditions or as indicated on the Drawings;
b. drip free for the entire assembly;
c. with drum to be constructed of diecast light alloy, or spindle of rigid construction with equivalent robust material(s), hydraulically balanced, free from denting and twisting, and finished red colour in enamel or epoxy powder coated;
d. with a device to prevent overrun of the hose and a glandless centre seal at the hub and shaft;
e. with permanently and firmly connected reinforced rubber or PVC hose tubing of 30 m in length and 19 mm in internal bore to be capable of withstanding a bursting pressure of not less than 2700 kPa and connected to hose reel shut-off nozzle as specified in FWP7.1.100;
f. unless otherwise specified, with two-way ball valve as hose reel control valve, supported with WSD acceptance letter;
g. with hose guide complete with nylon or similar runners adjacent to fixed type hose reel to enable the hose to be run out in any direction as required;
h. with wall-mounting bracket to be capable of supporting the whole weight of the hose reel and tubing for the fixed type hose reel;
i. with support brackets and swinging arm to enable the whole hose reel assembly to be swung to 180° in a horizontal plane for the swinging type hose reel;
j. with two nos. of 30 mm wide white ring marking of completed circumference with durable paint indelibly marked on hose tubing, making the first marking at the connection point of the hose tightened to the hose reel drum/spindle and the second marking at the required minimum length of the hose, i.e. if the farthest point of the hose reel protected area is 24 m, the second marking shall be at 24 m measured from that of the first marking;
k. with an operation instruction notice affixed to the wall in a prominent position adjacent to the hose reel or affixed on the outer surface of the hose reel door. If the hose reel is located in a recess to which a door is fitted, such notice shall be affixed immediately below the words 'FIRE HOSE REEL 消防喉轆' on the outer surface of the door. The operation instruction notice shall be submitted for Approval prior to installation.

3. The Sub-contractor shall coordinate with the Main Contractor to position a metal/plastic striker and a glass fronted box for housing the hose reel shut-off nozzle so that no undue obstruction will be imposed to the free use of the hose reel. The glass fronted box and the striker shall be supplied and installed by the Main Contractor.

FWP7.1.100.8 PLASTIC HOSEREEL SHUT-OFF NOZZLE

1. Hosereel nozzle shall have a 4.5 mm orifice and be fitted with a lever-operated two-way valve to open or shut off the jet. The valve shall not be spring-loaded;
2. The nozzle shall be constructed of PVC or high quality ABS plastics in red colour or other materials as approved by the Contract Manager. The surface of the nozzle shall be smooth;
3. The nozzle shall be coupled to the F.S. hose by at least four holding threads and further secured by means of a worm-drive clip or other devices as approved by the Contract Manager;
4. The nozzle shall be indelibly marked with the manufacturer's name or trademark for identification purpose;

5. Under the operating condition as specified in the Fire Services CoP issued by FSD, the nozzle shall be capable of delivering water in the form of a water jet with flow rate not less than 24 litre/min. and the range of the jet not less than 6 metres as in accordance with BS EN 671-1;

6. The nozzle shall be tested according to the following procedures:
   a. The nozzle is connected to a 19 mm diameter (internal bore) F.S. hose and secured by means of a worm-drive clip;
   b. Water is supplied to the nozzle with 8.5 bar pressure at inlet of the nozzle;
   c. Fully open the nozzle cock by hand for 5 second and then fully close the nozzle cock by hand for 5 second;
   d. Repeat the cycle of open/close the nozzle cock in item (6)(c) above for 500 times.

7. During the test specified in sub-clause (6) above, there shall not be any sign of water leakage, crack or damage in any part of the nozzle assembly, including connection to the F.S. hose;

8. The nozzle shall be approved by FSD. Type test reports/certificates from an independent and reputable laboratory for verification of compliance with the test requirement in sub-clauses (6) and (7) above shall be produced upon request.

FWP7.110.8  OPERATION INSTRUCTION AND WARNING NOTICE FOR HOSEREEL

1. The notice shall be clearly marked with the following standard wording in English and Chinese characters of at least 5 mm high in red lettering on white background. The wording of the Chinese characters shall follow Fire Services CoP and the Water Authority Circular Letter as below.

TO OPERATE FIRE HOSE REEL

(1) BREAK GLASS OF THE FIRE ALARM CALL POINT
   打爛火警鐘玻璃 (or)
   ACTUATE FIRE ALARM CALL POINT
   按動火警鐘掣

(2) OPEN CONTROL VALVE BEFORE RUNNING OUT HOSE
   先開啟來水掣，再拉出膠喉

(3) TURN ON WATER AT NOZZLE AND DIRECT JET AT BASE OF FIRE
   將喉咀掣開啟，然後射向火之底部
   (NOT SUITABLE FOR ELECTRICAL FIRES)
   (不適用於電火)

消 防 用 水

嚴禁作其他用途

USE OF WATER FROM FIRE SERVICES

FOR PURPOSES OTHER THAN FIRE
2. The notice shall be made of 3 mm thick plastic material with engraved characters.

**FWP7.1.120.8 CABINETS**

1. Cabinets for the housing of fire service inlets, hydrant outlets, and hosereels, if specified, shall be provided by the Main Contractor;

2. The Sub-contractor shall furnish all necessary information to enable these cabinets to be designed and constructed including proposed dimensions for the cabinets and the dimensions, weights, etc. of the apparatus supplied by him;

3. Requirements for any special housings for electrical controls shall be included;

4. It should be noted that space may be required in hosereel cabinets for portable equipment, as indicated elsewhere;

5. Where hosereels are located in recesses to which doors are fitted, the doors (whether glazed or otherwise) shall be painted in red with the words “FIRE HOSEREEL 消防喉轆” prominent and easily identifiable from all lines of sight in the surrounding. The lettering of wording shall be of at least 50 mm high;

6. In the case of doors which can only be opened by pushing in first, they shall also be annotated "PUSH TO OPEN推開";

7. Hosereel cabinets fitted with doors shall not be locked but shall be easily identified and opened in time of emergency.

**FWP7.1.130.8 INSTALLATION MATERIALS**

All installation materials, fixing bolts etc. for mounting the equipment except for the nozzle box and striker inside the cabinets or on walls as applicable shall be provided by the Sub-contractor.

**FWP7.1.140.8 PIPEWORK INSTALLATION**

The installation shall include all pipework and fittings fully installed as indicated on the drawings and as specified in Worksections FWP2 and FWP3 of this Specification.

**FWP7.1.150.8 HYDRANT BOOSTER PUMPS, TANKS, ETC**

Hydrant booster pumps, tanks, etc., where indicated, shall comply with the general requirements of Worksection FWP6 of this Specification.

**FWP7.1.160.8 CONTROLS**

Hydrant system controls, including control of booster pumps, shall be as detailed in Worksection FWP2 of this Specification.

**FWP7.1.170.8 STOP VALVES MANAGEMENT SYSTEM**

1. The Subcontractor shall provide stop valves management systems as per FSD’s requirements for all fire services systems including FH/HR system and other fixed installations such as foam system and street fire hydrant system;

2. Stop valves in fire services systems shall refer to all essential valves which have to be kept open for proper functioning of the fire services systems;

3. A stop valves management system (SVMS) shall comprise the following:
a. The maintenance services and operation of the stop valves for each fire services system shall be maintained and recorded as required in the “Log Book” provided and kept by the Estate Management of the employer after handover;

b. Each stop valve shall be provided with a pull-up tamper-proof seal security tag using steel wire-rope with pad lock and labelling with unique tag number and a durable warning label placed inside a durable and readable plastic bag;

c. Each stop valve shall have an identification label with estate code, block code, floor number and valve number assigned by the Estate Management for easy identification and traceability of records. For SVMS hidden inside false ceiling or covered up area, a label shall be posted at a prominent location to show the position of the hidden SVMS;

d. Each SVMS shall have a “Normally Open” weatherproof label attached to the valve body confirming the valve status;

e. A proper registry on the serial numbers of the security tag shall be kept and produced for inspection upon request.

4. The Sub-contractor shall carry out regular maintenance visits to ensure the systems are in sound operating condition as described in FWP14.

FWP8.1 SYSTEM INSTALLATION

FWP8.1.010.8 STANDARDS AND CERTIFICATION

1. Sprinkler systems shall be installed in accordance with the latest edition of the following standards and with all amendments issued before tendering:
   a. LPC Sprinkler Rules;
   b. Fire Services CoP;
   c. FSD Circular Letters.

2. Copies of valid certificates issued by LPCB or other recognized product certification bodies acceptable to the FSD, including but not limited to sprinkler heads, sprinkler control valves, and subsidiary valves and otherwise as required by the CM shall be produced for CM’s inspection;

3. The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the sprinkler equipment delivered to the site or installed.

FWP8.1.020.8 DEFINITION OF TERMS

For the definitions of terms used for sprinkler systems, reference should be made to the LPC Sprinkler Rules and Fire Services CoP.

FWP8.1.030.8 TYPES OF SYSTEMS

Types of Sprinkler systems are as defined in the LPC Sprinkler Rules and as Worksection FWP2 of this Specification.

FWP8.1.040.8 CLASSIFICATION OF FIRE HAZARD

LPC Sprinkler Rules define various classes of fire hazard according to the occupancy of the building to be protected. Reference should be made to this standard.

FWP8.1.050.8 CLASSIFICATION OF WATER SUPPLIES

Sprinkler systems are graded according to the number and type of water supplies available. Reference should be made to the LPC Sprinkler Rules.

FWP8.1.060.8 TYPE OF WATER

Unless otherwise indicated the sprinkler system shall be suitable for use with fresh water from the Water Authority.

FWP8.1.080.8 BRANCH CONNECTION TO WATER SUPPLY SYSTEM

Whenever a direct feed town mains, gravity tank or other supply systems are used to supply any sprinkler system, no branch connection for any other purpose, hosereels included, will be permitted.

FWP8.1.090.8 ANTI-POLLUTION VALVE FOR DIRECT CONNECTION TO TOWN MAINS

1. For sprinkler systems without water storage tanks and supplied from a direct connection to town mains, an anti-pollution valve to the Water Authority's Specification shall be fitted to the sprinkler installation at a point between the town mains connection and the fire service inlet;
2. The anti-pollution valve shall be installed in accordance with the relevant Circular Letter of FSD and the Water Authority requirements.

**FWP8.1.100.8 SPRINKLERS**

1. Sprinklers shall be with the approval of the FSD. Sprinkler for general application shall be of LPC approved conventional type or type approved by similar recognised independent regulatory body. Sprinklers shall not be altered in any respect, nor have any type of ornamentation or coating applied after leaving the production factory;

2. Sprinklers shall be constructed with the appropriate characteristics, to suit each particular application. The sprinkler types shall suit the installation requirements in accordance with the LPC Rules for Sprinkler Installations and FSD requirements. Each one may be defined by any of the following characteristics:
   a. Nominal size of orifice;
   b. Type of heat-operated element;
   c. Operation temperature;
   d. Type of deflector.

3. Glass bulb sprinkler shall be constructed with heat sensitive quartzoid bulb with temperature rating as required by the FSD, typically as follows:
   a. General purposes (including Refuse Storage and Material Recovery Chamber): 68°C;
   b. Heated rooms such as kitchen cooking area : 93°C;
   c. At top of refuse chute: 57°C.

4. Sprinklers installed at false ceiling shall be of the flush pattern, pendant type, and be provided with an adjustable screw type metal escutcheon and rosette to be installed flush with the false ceiling with the heat sensitive element exposed below the false ceiling line. The escutcheon and rosette shall be chromium plated or finished to a coating of white colour subject to Approval;

5. For sprinklers installed at false ceiling at locations susceptible to outdoor conditions, the escutcheon and rosette shall be made of gloss stainless steel or formed by metal sheet finished to a rustproof coating of white colour subject to Approval;

6. Where indicated on Drawings, concealed pendant type sprinklers shall be provided at false ceiling. Each concealed pendant type sprinkler head assembly shall include a metal flat cover plate that conceals the sprinkler operating components above the ceiling. Being an integral component of the sprinkler head assembly, the cover plate shall be chromium plated or finished to a coating of white colour subject to Approval.

**FWP8.1.110.8 SPRINKLER GUARDS**

In situations where sprinklers are liable to accidental or mechanical damage or where otherwise specified by FSD, sprinklers shall be protected by approved metal guards. Guards shall not be used in conjunction with ceiling type sprinklers.

**FWP8.1.120.8 SPACING AND LOCATION OF SPRINKLERS**

1. The Sub-contractor shall inform the Contract Manager immediately of any spacing or location of sprinklers which he knows will contravene the LPC Sprinkler Rules due to actual site conditions;
2. The Sub-contractor shall provide metal baffles of the correct size between sprinklers wherever required by the LPC Sprinkler Rules.

**FWP8.1.130.8 SPARE SPRINKLERS**  
The Sub-contractor shall provide a cabinet containing a minimum number of spare sprinklers as recommended by the LPC Sprinkler Rules or as required by Worksection FWP2 of this Specification. Sprinkler spanners shall be provided and kept in the painted steel cabinet.

**FWP8.1.140.8 PIPEWORK INSTALLATION**  
1. Pipework installation for sprinkler systems shall be installed in accordance with the LPC Sprinkler Rules and, wherever applicable, with Worksections FWP3 and FWP4 of this Specification;

2. The Sub-contractor shall inform the Contract Manager immediately of any on-site situation which he knows will contravene the LPC Sprinkler Rules.

**FWP8.1.150.8 PRESSURE GAUGES, VALVES, ALARM DEVICES**  
Pressure gauges, various types of valves and alarm devices shall be installed in accordance with the LPC Sprinkler Rules.

**FWP8.1.160.8 CABINETS FOR CONTROL VALVE SETS AND FIRE SERVICE INLETS**  
1. Cabinets for housing the sprinkler control valve sets and fire service inlets will be provided by the Main Contractor. The Sub-contractor shall furnish all necessary dimensional information to enable these cabinets to be designed and constructed;

2. Construction of the Sprinkler Inlet shall be the same as "Fire Service Inlet" described in Worksection FWP7 of this Specification. Labelling and lettering shall be in accordance with Fire services CoP.

**FWP8.1.170.8 PUMPS AND TANKS**  
Pump and tanks where applicable, shall comply with Worksections FWP5 and FWP6 of this Specification.

**FWP8.1.180.8 CONTROLS**  
The control system, where applicable, shall comply with Worksection FWP10 of this Specification. All associated electrical wiring and installation shall comply with Worksection FWP11 of this Specification.

**FWP8.1.190.8 NOTICES FOR SPRINKLER SYSTEM**  
All notices required by LPC Sprinkler Rules and/or Fire Services CoP shall be in both the English and Chinese languages.

**FWP8.1.200.8 SPRINKLER SUBSIDIARY STOP VALVES MANAGEMENT SYSTEM**  
The Sub-contractor shall provide a sprinkler subsidiary stop valves (SSSV) management system including the following:

1. Provide all necessary information of SSSV for each sprinkler system as required in the 'Log Book' provided and kept by the Estate Management of the employer after handover;
2. Each SSSV shall be provided with a pull-up seal security tag using steel wire-rope with pad lock and labelling with unique tag number and a warning label placed inside a durable and readable plastic bag;

3. Each SSSV shall have an identification label with estate code, block code, floor number and valve number assigned by the Estate Management for easy identification and traceability of records. For SSSV hidden inside false ceiling or covered up area, a label shall be posted at a prominent location to show the position of the hidden SSSV;

4. Each SSSV shall have a "Normal Open" weatherproof label attached to the valve body confirming the valve status;

5. A proper registry on the serial numbers of the security tag shall be kept and produced for inspection upon request;

6. The Sub-contractor shall carry out regular maintenance visits to ensure the system is in sound operating condition as described in FWP14; and

7. SSSV Management System shall include valves governing the sprinklers over the top of refuse chute and at ground floor refuse storage and material recovery chamber of the domestic blocks, not forming part of a sprinkler system.

| FWP9.9.030.8 | SYSTEM ODORISERS........................................................................ 12 |
FWP9.1 SYSTEM REQUIREMENTS

FWP9.1.010.8 GENERAL

1. Unless otherwise specified, gas extinguishing systems shall be of the total flooding type with a high pressure open-ended piping installation on the distribution side;

2. The automatic gas release mechanism shall be operated by means of fire detection units at the protected compartment or manually by a pull handle or push button as described below;

3. FM-200 shall be used for total flooding systems in normal occupied areas;

4. Where local application systems are specified they will normally use carbon dioxide gas as the extinguishing agent;

5. Copies of valid Approval documents / certificates issued by FSD and / or product certification bodies recognized by FSD for the components in gas extinguishing system shall be produced for CM’s inspection;

6. The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the gas extinguishing equipment delivered to the site or installed.

FWP9.1.020.8 FM–200 EXTINGUISHING SYSTEM

FM-200 system shall be designed and installed in accordance with UL Standard 1058, NFPA 2001 or BS ISO 14520 or other recognized established standards on Clean Agent Fire Extinguishing Systems acceptable to FSD, FSD requirements and Circular Letters.

FWP9.1.030.8 MATERIAL STANDARDS

Materials shall be to the appropriate British Standard and sized in standard metric dimensions. Where the installation is designed in accordance with NFPA codes/standards, the Sub-contractor shall show that the materials selected are in accordance with a British Standard not inferior to the standard recommended in the NFPA standard and that the metric sized materials are sized to give a performance of the system not inferior to the performance called for this Specification and the NFPA standard. The Sub-contractor shall also show that all components are compatible and that any variations in dimensions due to the use of metric sized components do not adversely affect the balance of the system.
FWP9.3 SYSTEM PERFORMANCE

FWP9.3.010.8 FM-200 TOTAL FLOODING SYSTEM

FM-200 total flooding system shall be designed to achieve an acceptable concentration in the protected compartment as stipulated in NFPA 2001 or any recognized system design manual from the manufacturer at room temperature. Discharge of gas shall be substantially completed within 10 seconds. Following discharge, the concentration of FM-200 shall develop throughout the protected compartment to achieve final extinguishment of fire within 60 seconds.

FWP9.3.020.8 RESPONSIBILITY

1. The enclosure to be protected and the position of the gas cylinders shall be as indicated on the Drawings. The layout of pipework and nozzles indicated on the Drawings is optional but if the Sub-contractor proposes any other layout he remains responsible for ensuring that the proposed layout is acceptable to the Contract Manager, that it will not obstruct any other services, and that necessary openings in the structure are permissible and are provided, by giving sufficient notice for them to be provided by the Main Contractor;

2. Notwithstanding that the Sub-contractor has demonstrated, by calculation, to the satisfaction of the Contract Manager, that the system will perform to the standard required, the Sub-contractor shall remain responsible for ensuring that under test the system does, in fact, perform in accordance with this Specifications.

FWP9.3.030.8 DESIGN CALCULATIONS

1. To justify the selection of components and pipe sizes for the system, the Sub-contractor shall provide with his tender either full mathematical calculations or computer model flow calculations. Where the computer programme does not show all calculation steps it will be necessary for the Sub-contractor to produce evidence that the computer programme produces a design that will perform in accordance with the Specification as indicated by Underwriters’ Laboratory listing or approved by any similar widely recognised independent regulatory body acceptable to the Contract Manager;

2. 
   a. The calculations shall be based on the equipment offered;
   b. Valves, syphon tubes, distribution valves as well as bends and junctions shall be represented in the calculations as equivalent lengths of pipe;
   c. The actual size and location of pipes and nozzles and the number of nozzles shall be designed on the basis of the calculated flow rates and terminal pressures required to ensure successful operation;
   d. The calculations or computer programme shall provide all the information necessary to complete the installation including the quantity of gas used to flood to the required concentration, the allowance for losses and the total quantity, the flow rate and start and end pressure of each section of pipe and the orifice size for each nozzle.

FWP9.3.040.8 COMPLETE WORKING SYSTEM

The Sub-contractor shall provide all the components necessary for full operation of the system in the automatic or manual mode regardless of whether or not such components are detailed on the Drawings or in this Specification.
FWP9.4  GAS STORAGE PRESSURE

FWP9.4.010.8  STORAGE

All the gas extinguishing agents shall be stored in rechargeable cylinders to hold the pressurized agents in liquid form at ambient temperature.

FWP9.4.020.8  FM-200

FM-200 cylinders shall be charged in accordance with NFPA 2001 or any recognized system design manual from the manufacturer acceptable to FSD.

FWP9.4.030.8  DESIGN

Gas cylinders, distribution pipework, valves, nozzles and fittings shall be manufactured to standards designed to withstand the maximum pressure of stored agent allowing for variations in ambient temperature.
FWP9.5 GAS CYLINDERS

FWP9.5.010.8 FM-200 CYLINDERS
1. FM-200 cylinders shall be of high-strength alloy steel construction that complies with the Department of Transportation regulation for refillable pressure vessels and conform to NFPA 2001;
2. The maximum storage gaseous agent at each gas cylinder shall be not more than 120kg. Each cylinder shall have a permanent nameplate indicates the agent, tare and gross weights, and super-pressurization level of the cylinder.

FWP9.5.020.8 CYLINDER MOUNTING
Cylinders shall be securely mounted in a frame bolted to the wall and arranged so that external parts may be readily inspected and corrosion cannot occur.

FWP9.5.030.8 CYLINDER OVER PRESSURE PROTECTION
Where pressure–operated cylinder valves are used, means shall be provided to vent any cylinder gas leakage. The means of pressure venting shall be arranged so as not to prevent reliable operation of the cylinder valve.

FWP9.5.040.8 CYLINDER ACCESSORIES
Each cylinder shall be complete with gas valve/actuator, pressure gauge, flexible hose, check valve and all other necessary accessories.

FWP9.5.050.8 CYLINDER CONTENTS MEASURING DEVICES
1. A device shall be provided for measuring the amount of liquid in the cylinder at any time;
2. This shall be done by a method which does not require the cylinder to be detached from the remainder of the plant;
3. If a weighing device of the type that requires suspension is proposed, means shall be provided above each cylinder for the attachment of the weighing device;
4. The contents of the cylinders may alternatively be checked by the use of a liquid level indicator of an Approved type.

FWP9.5.060.8 DISCHARGING FROM CYLINDERS
1. The liquid shall be discharged from the cylinder through a syphon tube;
2. The pressure of the liquid stored in the cylinder shall be such that freezing cannot take place at the lowest possible ambient temperature;
3. Means shall be provided to prevent gas discharging into empty containers and to prevent loss if the gas is released when any of the cylinders is disconnected.

FWP9.5.070.8 PAINTING CYLINDERS
Gas cylinders shall be painted signal red as specified in BS 381C in accordance with the requirements of BS 5252. The type of extinguishing agent, the tare weight, gross weight and liquid level at 25°C shall be clearly painted on each cylinder with white paint.
FWP9.6 SYSTEM RELEASE OPERATION

FWP9.6.010.8 AUTOMATIC RELEASE MECHANISM

1. Fire detection in the protected area shall be by means of ionization chamber smoke detectors and heat detectors as detailed in FWP2. The detectors, of sufficient number and suitably positioned to give duplicate coverage of the whole of the protected area, shall be connected in zones so that smoke or heat generated in any part of the area will activate two zones. The fire detection control panel and the detectors shall be compatible and the fire detection system shall comply with FWP10;

2. Activation of a detector on one zone shall cause alarm bells to sound. Activation of detectors on two zones shall cause a siren or Klaxon horn to sound to warn that, if the system is in the automatic mode, the extinguishing agent is about to be released. These warnings will also be activated by operation of the manual release;

3. The gas extinguishing control panel shall control and monitor the release system. It will include an automatic/manual lock-off unit controlled by keyswitches at each entrance to the protected area. Any one keyswitch shall be capable of switching the automatic system on or off. A time delay unit shall be provided which shall be adjustable and lockable in the range 15 to 30 seconds. Relays shall be provided, to shut down ventilation and air conditioning, to close openings and to switch off equipment as necessary. These relays will operate immediately when two zones of the fire detection system are activated or when the manual release is operated. Release of the gas will follow after the pre-set time delay.

FWP9.6.020.8 MANUAL RELEASE MECHANISM

A manual release unit shall be provided in a suitable position outside each entrance to the protected compartment. The manual release unit shall consist of a pull handle or push button mounted in a box with "break glass" cover. The box shall be so designed that its glass front may be readily replaced and that its front cover can be opened with a key for the purpose of operating the switch without breaking the glass.

FWP9.6.030.8 EMERGENCY RELEASE MECHANISM

An emergency release handle with direct mechanism shall be provided in an accessible position at or near the gas cylinders. The emergency release shall require no power supply to operate and it shall be provided with a removable pin to prevent accidental release of gas. Provision shall be made for operation of the emergency release to activate the relays to cause simultaneous shutdown of ventilation, air-conditioning, equipment etc. and to sound the alarm.

FWP9.6.040.8 GAS RELEASE MECHANISM

1. The operation of the gas release mechanism shall require minimum power from an external electrical, pneumatic or mechanical source and shall preferably be operated by a falling weight device. No springs shall be used in any position where their failure or fracture would prevent the correct operation of the gas release mechanism or cause the inadvertent release of the gas;

2. All release devices and mechanisms shall be designed for the working conditions they will encounter and shall not readily be rendered inoperative or susceptible to accidental operation. They shall have proper protection from mechanical, chemical or other damage that would render them inoperative.
FWP9.7 PIPEWORK AND FITTINGS

FWP9.7.010.8 GENERAL

All pipework shall be non-combustible and able to withstand the expected pressures and temperatures without damage. Specification of materials and installation shall conform to the relevant British Standards for the respective gas extinguishing agent used.

FWP9.7.020.8 FM-200 SYSTEMS

Pipes for FM-200 system shall be as follows:

1. For system pressure not more than 25 bars:
   a. Up to and including 65 mm: Galvanized steel pipes conforming to BS EN 10255, heavy grade, butt welded;
   b. All other sizes Carbon steel pipes conforming to BS EN 10216-1, seamless, schedule 40 or ASTM A53, seamless, grade A.

2. For system pressure more than 25 bars:
   a. Up to and including 100 mm: Carbon steel pipes conforming to BS EN 10216-1, seamless, schedule 80 or ASTM A53, seamless, grade B.

FWP9.7.030.8 PIPE FITTINGS AND FLANGES

Pipe fittings and flanges shall be as specified in the following relevant Standards for the particular gas extinguishing installations in accordance with the pipe size and pressure of the system. The following British Standards are relevant:

| BS 3799 | Forged steel pipe fittings, screwed and socket-welding for the petroleum industry. |
| BS EN 10253-2 | Butt-welding pipe fittings. Non alloy and ferritic alloy steels with specific inspection requirements. |

FWP9.7.040.8 PIPE JOINTING

1. All pipework and fittings shall be free of burrs, spelter and rust and shall be galvanized inside and out;
2. Screwed threads shall conform to the dimensions specified in BS EN 10226-1, 2, 3;
3. Screwed joints shall be made with PTFE tape or Approved equivalent but chemically inert to the extinguishing agent used;
4. Compressed fibre gaskets free of asbestos shall be used for flange joints.

FWP9.7.050.8 PIPEWORK SUPPORTS

1. Pipework supports shall be arranged as near as possible to joints and changes of direction and each support shall take its share of the load. The maximum space between supports to take into the total mass of pipe and extinguishing agent shall be as tabulated in sub-clause (2) but additional supports shall be provided where there are extra loads such as valves;
2. Maximum space between supports:
### Pipe Size and Span

<td>4.2</td>
</tr>
</tbody>
</table>

### Discharge Nozzles

1. Discharge nozzles shall be of robust construction and designed for use with the expected working pressure and temperature without deformation. The discharge orifices shall be made of corrosion resistant metal and have a permanent marking for identification and to show the equivalent single orifice diameter;

2. Gas discharge nozzles shall be provided to distribute the gaseous agents uniformly throughout the protected spaces, the nozzles shall be discharged in either 180° or 360° patterns, depending on location. The nozzles shall be permanently marked to identify the manufacturer as well as the type and size of the orifice. The flow characteristics, area coverage, height limits, and minimum pressure of discharge nozzles shall be in accordance with the manufacturer's listed limitations;

3. Gas discharge nozzles shall be certified by UL / FM and approved by FSD for use in clean agent gas flooding fire extinguishing system.

### Flexible Hose Connections

Flexible hose connections shall be selected, inspected and tested only by a suitably trained engineer or technician and shall be designed for service at the pressures and temperatures involved.

### Pressure Relief Valves

1. To prevent entrapment in pipework, a suitable excess pressure relief valve shall be provided at any section of high pressure piping blocked by valves at both ends and shall operate at the following pressures:
   - 2 times the maximum system pressure
2. Valves shall be capable of being opened when subjected to the maximum operating pressure and shall be so equipped that they can be opened manually. Valves for FM200 system constantly under pressure shall be designed for maximum working pressure plus a 50% safety factor.

### Manifolds

Manifolds shall be tested for a duration of minimum 5 minutes at the manufacturer's works to the following minimum pressures:

- 2 times the maximum system pressure

### Earthing

Pipework shall be earthed to prevent build up of electrostatic charge.

### Painting

Pipework shall be painted signal red as specified and illustrated in BS 381C in accordance with the requirements of BS 5252. Brass fittings shall be left unpainted.

---

Specification Library 2018 Edition (Batch 2)
FWP9.8 SYSTEM PROTECTION

FWP9.8.010.8 SECURITY OF FIXING
The whole gas discharge system including cylinders, pipework and nozzles shall be securely fixed to the structure with saddles or brackets correctly spaced so that all components will remain in place when subjected to the pressures and forces produced during discharge. Fixings shall allow for movement due to thermal expansion.

FWP9.8.020.8 GUARDING
The system shall be guarded so that it shall be impossible to obstruct the operation of any moving parts.
FWP9.9  INDICATOR LIGHTS, WARNING NOTICES AND LABELS

FWP9.9.010.8  GAS STORAGE COMPARTMENTS AND PROTECTED COMPARTMENTS

1. All gas storage compartments and compartments protected by a gas extinguishing system shall have a warning notice fixed on each entrance door to the compartment;
2. Configuration, lettering, colour and size of the notice shall be in accordance with the requirement of FSD for the respective gas extinguishing system;
3. The notice shall be made of sheet metal plate not less than 1.6 mm thick.

FWP9.9.020.8  TOTAL FLOODING SYSTEM

For a total flooding system, protecting a normally occupied area, which is designed to operate automatically when unoccupied but to be in the manual mode when occupied, the following warning lights shall be installed together with explanatory/warning notices in English and Chinese. Such notices shall be clearly legible and painted or engraved on substantial durable material. Warning lights and notices for systems other than as described above (e.g. local application systems or systems designed to be in the automatic mode when the area is occupied), shall be equally informative and suitably substantial and shall be arranged and worded either as specified in FWP2 or as agreed with the Contract Manager:

1. Inside the protected area: a flashing red light to indicate gas release imminent with a notice which shall read:
   "WARNING - FM-200 gas release imminent. Leave the room at once."
2. Outside each entrance to the protected area:
   a. A green light to show that the system is on manual control with automatic control locked off, with a notice which shall read:
      "Safe to enter. FM-200 fire extinguishing system on manual control. When room vacated switch to automatic control."
   b. An amber light to show that the system is on automatic control, with a notice which shall read:
      "Not safe to enter. FM-200 fire extinguishing system on automatic control. Switch to manual control before entering."
   c. A red light to show that the system has operated, with a notice which shall read:
      "DANGER - Do not enter. FM-200 gas discharged."
3. The manual/automatic lock off key switches, the manual release units and the emergency release handle shall all be labelled in English and Chinese so that it is clear what their purpose is and how to operate them.

FWP9.9.030.8  SYSTEM ODORISERS

Odorisers, where specified in FWP2, shall be capable of automatically treating the gas after release from the cylinder and shall be of citrus odour type, so that a hazardous atmosphere can be recognised at once. Where odorisers are provided, a suitable notice to the effect that anyone detecting the citrus odour should leave the area immediately and report the occurrence to a responsible person shall be provided worded in English and Chinese.

FWP10.1 GENERAL

FWP10.1.010.8 COMPONENTS AND EQUIPMENT COMPATIBILITY

1. All the devices, components and equipment used in the system shall be of highest quality and suitable for humid tropical working conditions;

2. They shall be fully compatible with one another throughout the whole system;

3. Special attention should be drawn to the compatibility between automatic detectors and control equipment and the Sub-contractor shall supply information of the detectors and the required electrical interface with the control and indicating equipment;

4. All the components in such a system shall preferably be from one principal system manufacturer and form one compatible system approved by the relevant widely recognised independent regulatory body with the approval of FSD;

5. Certificate to prove compatibility shall be produced upon request. Confirmation from panel manufacturer on compatibility of connected components will normally be acceptable;

6. Devices mounted at locations susceptible to weather conditions shall be of weatherproof type construction.
FWP10.2 MANUAL FIRE ALARM POINTS

FWP10.2.010.A CONSTRUCTION

1. Manual fire alarm call point unit shall be of direct operation type equipped with resettable frangible element complying with BS EN 54-11 or other international standards and acceptable to FSD;

2. The unit shall comprise an electrical contact which will operate automatically upon displacing the resettable frangible element at the operating face of the unit;

3. Cover of the unit shall be locked in position with a special tool and the frangible element shall be clipped firmly into place;

4. The words “Fire 火警” and its actuating method in English and Chinese shall be indelibly marked on the operating face of the unit;

5. Suitable means of earth continuity shall be provided at the mounting box of the unit connecting to steel conduits;

6. The unit and its mounting box shall be of pleasing appearance and styling, constructed by non-corrodible materials and finished in signal red colour;

7. Manual fire alarm call point located at outdoor or at location(s) susceptible to weather conditions or where specified on the Drawings shall be of weatherproof type to IP66 or better;

8. The unit shall be permanently marked with the following information:
   a. the number of the standard such as “BS EN 54-11”;
   b. the name or trademark of the manufacturer;
   c. the model designation;
   d. environmental category;
   e. the wiring terminal designations;
   f. any mark or code by which the manufacturer can identify the date or batch and place of manufacture.

9. Manual Fire Alarm Call Point(s) complete with proprietary transparent hinged protective cover shall be provided at the exit location(s) of the building where Door Release Button for Electro-Magnetic Door Lock are installed nearby, or where specified on the Drawings;

10. Manual Fire Alarm Call Point complete with transparent hinged protective cover shall be on the list of LPCB or other Product Certification Bodies recognized by FSD;

11. A permanent operation instruction plate shall be provided next to the Manual Fire Alarm Call point. The instruction plate shall be in red colour and fabricated from 3mm thick acrylic sheet of dimensions approximate 86mm (W) x 55mm (H). The Chinese characters and English letters shall be white colour and etched onto the surface of the acrylic sheet with height not less than 14mm and 6mm respectively.

MANUAL FIRE ALARM CALL POINT

火警鐘掣

FWP10.2.020.8 OPERATION

1. The method of operation shall be referred to Type A as specified in BS EN 54-11;
2. The manual fire alarm call points shall be suitable for 24 V DC operation;

3. Contacts shall be of silver or approved non-deteriorating alloy, normally-open or normally-closed type to suit the alarm system;

4. The voltage and current ratings of the contacts shall be marked in the unit, or clearly indicated in the corresponding installation instruction sheet;

5. A concealed test facility and a special tool shall be included. Use of the special tool is necessary to reset the displaced frangible element after operation.

**FWP10.2.030.8 CERTIFICATION**

1. Copies of type test / approval certificates from product certification bodies recognised by FSD shall be produced to prove the manual fire alarm point complies with BS EN 54-11 or other standards acceptable to FSD;

2. The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the manual fire alarm points delivered to the site or installed.

**FWP10.2.040.8 MOUNTING**

The manual fire alarm call point shall be mounted on wall or as specified in Project Specific Specification at position within 900mm to 1200mm above finished floor level. It shall be suitable for direct connection to the concealed wiring system therein.
FWP10.3 HEAT DETECTORS

FWP10.3.010.8 STANDARD
Automatic heat detectors shall be of point-type complying with, BS EN 54-5 or other standards acceptable to FSD.

FWP10.3.020.8 TYPE
Detectors shall be of combined fixed temperature and rate-of-rise type except in high temperature areas such as kitchens or boiler rooms where, because the risk of false alarms caused by rapidly rising temperatures is high, detectors without a rate-of-rise element should be used.

FWP10.3.030.8 MOUNTING
1. Detector units shall be of flush or surface mounting type as indicated in the Specification or Drawings;
2. Detector units in suspended ceilings shall be flush mounted and shall, in the case of modular constructed ceilings, be coordinated into the ceiling layout.

FWP10.3.040.8 CERTIFICATION
1. Copies of type test / approval certificates from product certification bodies recognized by FSD shall be produced to prove that the heat detector complies with BS EN 54-5 or other standards acceptable to FSD;
2. The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the manual fire alarm points delivered to the site or installed.
FWP10.4  SMOKE DETECTORS

FWP10.4.010.8  STANDARD

1. Automatic smoke detectors shall comply with, BS EN 54-7 or other standards acceptable to FSD;
2. They shall function correctly at continuous ambient temperature between 0°C to 48°C, relative humidity between 20% to 95% continuous without condensation;
3. They shall be designed to assume protection rating of IP 43;
4. They shall also be suitable for stable operation in the Hong Kong climate especially where high humidity conditions may exist without constant air-conditioning.

FWP10.4.020.8  TYPE

1. Detector shall be photoelectric type unless otherwise specified;
2. If ionization type of detector is specified, it shall be of the type responding to both visible and invisible products of combustion and shall be of the radioactive isotope pattern having two ionisation chambers, one for detection and one for reference, connected in electronic circuits. Radiation level from the isotopes shall be within the safety limit specified by EURATOM i.e. less than 0.1 mR/h at a distance of 100 mm. The combined radiation activity of each smoke detector shall not exceed 555 kBq for commercial/industrial buildings and 370 kBq for residential buildings.

FWP10.4.030.8  CONSTRUCTION

1. Detectors shall be housed in a corrosion-proof plug-in unit designed to be mounted pendant, surface or semi-recessed;
2. Removal of the unit from its base shall cause a fault alarm signal to be given;
3. Built-in wind-shields shall be provided to ensure that air currents of up to 10 m/s do not affect the proper operation of the detectors;
4. Each unit shall be fitted with an alarm condition indicator lamp and shall also have an auxiliary facility for connecting an extended alarm indicator lamp;
5. A built-in wire mesh shall be incorporated to prevent entry of insects into the interior.

FWP10.4.040.8  ELECTRONIC CIRCUITRY

1. For ionization type detector, the electronic circuitry may be of cold-cathode tube type, operating at low voltage d.c., or of solid-state type, operating at extra low voltage d.c.;
2. The quiescent current consumption of the unit shall be minimal and shall not exceed 100 microampere;
3. The printed circuit boards shall be varnished and protected against moisture and dust;
4. The internal electronic circuitry shall be of highest possible reliability and protected against voltage spikes and surges;
5. The detector shall be capable of operating satisfactorily under minimum variation of ±25% in supply voltage;
6. The circuitry shall also be protected against electromagnetic interference.
SMOKE DETECTORS

FWP10.4.050.8 ELECTRICAL CONTINUITY
The detector base shall be sealed with a plate during the installation period. This plate shall facilitate electrical continuity through the base such that the circuits can be tested or maintained.

FWP10.4.060.8 INSTALLATION
1. When a detector is concealed inside the false ceiling, a remote alarm indicator lamp shall be mounted at the ceiling level immediately below the hidden detector and visible from any unobstructed position of the area;
2. Where detectors are mounted at levels above 4 m they shall be capable of being removed and re-fixed from below by means of a special extended arm tool.

FWP10.4.070.8 REVERSIBLE RESPONSE TIME DELAY
Where signal integration feature is specified as to avoid the unwanted alarms caused by transient interferences, the smoke detector shall be characterised by a reversible response time delay from 15 to 30 seconds depending on the concentration of smoke continuously present before an alarm is initiated. Upon clearance of the transient interference within the time delay, the smoke detector shall resume its quiescent state without any alarm initiation.

FWP10.4.080.8 RADIATION LEVEL
For ionization type detector, the Sub-contractor shall submit the total American 241 radiation level to Hong Kong Radiation Board for approval on behalf of the Employer where necessary before practical completion of the works. The Sub-contractor shall also make all necessary arrangements, if required by the Hong Kong Radiation Board, for inspection of the installation by the authorized representatives of the Board.

FWP10.4.090.8 PROBE UNITS
Probe units for air duct insertion mounting shall be of robust corrosion-proof construction and capable of accurately sampling the air flowing in the duct over a wide range of velocities. Insertion of the probe shall cause negligible air flow head loss. Probe units shall be suitable for use with smoke detectors as specified above and shall be installed in the centre of a straight section of ducting that has a length at least 6 times its width.

FWP10.4.100.8 CERTIFICATION
1. Copies of type test / approval certificates from product certification bodies recognized by FSD shall be produced to prove that the smoke detector complies with BS EN 54-7 or other standards acceptable to FSD;
2. The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the manual fire alarm points delivered to the site or installed.
FWP10.5  CONTROL AND INDICATING EQUIPMENT (CONTROL PANELS)

FWP10.5.010.8  DESCRIPTION
Control and indicating equipment (control panels) for sprinkler system, automatic smoke/heat detection system, and manual fire alarm points and signals shall comply with BS EN 54-4 and BS EN 54-2 or other standards acceptable to FSD. It shall be of robust construction in non-corrodible materials, with hinged front door having cylinder-type lock and keys.

FWP10.5.020.8  OPERATION
The equipment panel shall be equipped to suit the fire alarm system of which it forms a part and shall be compatible with all other system devices and components. Fire alarm signals may originate from manual fire alarm call points, heat detectors, smoke detectors, flow switches, pressure switches, FM200 extinguishing system alarm contacts, sprinkler system alarm contacts etc. as applicable. The connection of these devices in "zones" (alarm circuits) shall be as scheduled in FWP2 or on the Drawings.

FWP10.5.030.8  EQUIPMENT
The control and indicating equipment and the alarm circuits are DC operated with battery backup, should generally include the following basic equipment:

1. "Supply On" visual indicator;
2. "System On" visual indicator;
3. "System Isolated" visual indicator with buzzer;
4. "Fire" alarm visual indicator for each zone, red;
5. Alarm re-set button for each zone;
6. Alarm silencing switch, with local and remote warning buzzers and visual indicating lights;
7. Relays, terminal strips, wiring, labels, etc. for the proper operation of the whole system including detectors and alarm bells, etc.;
8. Auxiliary relay or additional relay contacts for automatic starting of fire booster pump etc. as detailed in FWP2;
9. Test facilities for each alarm zone;
10. Isolating switch for each alarm zone with light indication;
11. Indicator light and warning buzzer showing whether auto-starting of generator (where provided) disabled or not, emergency stop buttons for FS/SP pumps pressed, water tanks empty etc. as shown on the Drawings;
12. Key switch, indicator light and warning buzzer for testing of direct line connection (where provided) to a Fire Services Communication Centre.

FWP10.5.040.8  ALARM OPERATION
Upon operation of one or more trigger devices, the control equipment shall give a fire alarm by:

1. All internal alarm sounders in or near the indicating equipment;
2. All external alarm sounders;
3. A visible indication for each zone in which a trigger device operates;
4. A signal transmitted to a Fire Services Communication Centre, where a direct line connection is provided.

**FWP10.5.050.8**

**FAULT INDICATION**

1. Automatic alarm systems, and manual alarm systems where so indicated in FWP2, shall be arranged for continuous monitoring of all alarm circuits, including the wiring and the alarm signalling devices connected thereto;
2. The control equipment in this case shall be provided with suitable fault warning signals including an amber fault indicator for each alarm zone (alarm circuit) and a warning buzzer for sprinkler and AFA system;
3. Faults to be detected shall include open-circuits, short-circuits, and removal of signalling devices for sprinkler and AFA system;
4. Battery-operated systems shall be provided with a battery supply indicator mounted upon the indicating equipment.

**FWP10.5.060.8**

**INDICATOR LAMPS**

1. Indicator lamps shall be of voltage rating 20% higher than the applied voltage, and shall wherever possible be of extra low voltage type;
2. Where a.c. mains operation is required, indicator lamps shall be operated at extra low voltage via a step-down transformer and be suitably rated for long life and reliability.

**FWP10.5.070.8**

**RELAYS**

Relays shall be of "potted" type, or similarly protected against dust, and shall have solenoids with varnish-impregnated or plastic encapsulated windings.

**FWP10.5.080.8**

**CONTACTS**

Contacts shall be of silver and adequately rated. Additional contacts shall be provided as required for the operation of auxiliary controls.

**FWP10.5.090.8**

**VOLTAGE REGULATION**

1. The control equipment shall incorporate battery charger set with appropriate voltage regulators suitable for the rating of the interconnected trigger devices and the equipment shall incorporate overload cut-out or limiting devices to protect the external circuit against excess current;
2. Protection against earth leakage currents shall be provided in accordance with the Electrical CoP, latest Edition, if the equipment contains apparatus or conductors operating at a voltage exceeding extra low voltage.

**FWP10.5.100.8**

**CERTIFICATION**

1. Copies of type test / approval certificates from product certification bodies recognized by FSD shall be produced to prove that the control panel complies with BS EN 54-4 and BS EN 54-2 or other standards acceptable to FSD;
2. The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the manual fire alarm points delivered to the site or installed.
FWP10.6  BATTERIES AND CHARGERS

FWP10.6.010.8  PERFORMANCE

1. The capacity of the battery and charger unit shall be as stated in FWP2 and the type shall be acceptable to FSD;

2. Unless otherwise specified, the battery and charger units shall be capable of maintaining the system in normal operation for a period at least 24 hours longer than the maximum period for which the premises are likely to remain unattended without recharging and thereafter shall remain capable of operating in the maximum "alarm" condition for at least 30 minutes;

3. If the system is connected by an alternative standby supply such as an automatically started emergency generator approved by FSD, the capacity of the battery and charger unit may be reduced to that capable of maintaining the system in normal operation for 6 hours and thereafter capable of operating in the maximum "alarm" condition for at least 30 minutes;

4. The Contractor shall submit calculation to demonstrate that the capacity of the battery and charger unit is able to cope with the power demand of the whole system.

FWP10.6.020.8  BATTERY TYPE

1. The batteries shall be either one of the following types:
   a. Nickel-cadmium accumulator and ultra-low maintenance type requiring no water replenishment throughout the normal service life of the battery. The battery shall be of the highest quality materials complying with IEC 60623 and IEC 62259;
   b. Valve regulated sealed lead acid batteries complying with BSEN60896-21 & -22 (or BS6290-4) and maintenance free.

2. The batteries shall have a minimum design life of 10 years rated at 20°C;

3. The Sub-contractor shall provide copies of type test certificates from accredited laboratories to prove the batteries are in compliance with the specification requirements;

4. The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the manual fire alarm points delivered to the site or installed.

FWP10.6.030.8  BATTERY VOLTAGE

Where applicable the alarm system battery shall be of sufficient voltage to operate the remote indicator unit at the Fire Services Communications Centre via the alarm transmitter unit and the Telephone Company lines. If necessary a separate battery complete with separate charger, not exceeding 50V, shall be provided for this purpose.
FWP10.6.040.8  BATTERY CHARGERS

1. Battery chargers shall be of the automatic trickle charge type, suitable for a single phase 220V, 50 Hz a.c. supply with facility for manually-operated boost charge, capable of re-charging the battery from fully discharged to fully charged condition in not more than twenty four (24) hours. Battery overcurrent protection shall be provided to safeguard the battery against short-circuit. Instruments shall include voltmeter for output voltage and ammeter for output current. Auxiliaries shall include fuses, buzzer alarm and mute button, lamp test button, LED indicators for mains and charger supply healthy, battery fault, battery low-volt, and charger fault;

2. The charger unit shall consist of a rectifier with the AC mains input supplied via an isolation transformer and the ripples of its DC output smoothed out by a DC filter for the connected load under normal operation or after the battery having discharged in AC mains failure;

3. Battery chargers shall be compatible with the types of batteries used;

4. Battery chargers shall be capable of detecting AC mains supply failure and its own DC output failure for actuating changeover to battery supply when either one of the failure signals is detected.

FWP10.6.050.8  FAULT WARNING

1. Battery chargers shall give visible and audible fault warnings when any AC mains supply failure, DC output failure, battery fault, battery low-volt, and charger fault is detected;

2. The output of the rectifier shall be sufficient for the system to give fault warnings upon failure of the battery.

FWP10.6.060.8  BATTERY / CHARGER MOUNTING

1. The battery and charger shall each be housed in a well ventilated cabinet made of galvanised sheet steel of at least 1.2 mm thick, complete with two layers of stoved enamel or one layer of stoved epoxy powder paint. Detail of the battery charger set shall be submitted for Approval;

2. In all cases, the battery shall be installed in a compartment separate from the charger.
FWP10.7  FIRE ALARM BELLS AND CIRCUITS

FWP10.7.010.8  BELL LOCATION
The fire alarm bells shall be located as shown on the Drawings. Necessary adjustment to the bell locations and quantities to comply with relevant audibility requirements basing on the alarm bell characteristics shall be proposed and submitted by the Sub-contractor to the Contract Manager for Approval prior to installation.

FWP10.7.020.8  BELL PERFORMANCE
1. The sound generated by the bell shall be easily distinguishable from other bells;
2. Unless otherwise specified on the Drawings, each alarm bell shall be capable of producing a sound level of at least 90 dB(A) at 3 m from the location of installation.

FWP10.7.030.8  BELL CONSTRUCTION
1. Under-dome type iron clad bells, suitable for operation at 24 V DC system as stated on the Drawings and in FWP2 shall be used;
2. Alarm bells shall be of minimum 150 mm diameter gong;
3. Bells shall be of weatherproof construction if susceptible to weather conditions;
4. The bells shall have a suitable conduit entry.

FWP10.7.040.8  BELL FINISH
Bell domes shall be finished in signal red.

FWP10.7.050.8  BELL CIRCUITS
Bell circuits shall be separately fused at the control equipment.

FWP10.7.060.8  ALARM TRANSMITTERS
1. The alarm transmitter, where called for in FWP2 shall be of polarity reversal type compatible with the Remote Indicator Unit at FSD Fire Control;
2. The cost of the telephone line connection and rental charges within the Maintenance Period for the telephone line and for the remote indicating unit, shall be borne by the Sub-contractor.

FWP10.7.070.8  EVIDENCE OF COUNTRY / PLACE OF MANUFACTURE AND AUTHENTICITY
The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the fire alarm bells delivered to the site or installed.
FWP10.8  AUXILIARY SYSTEMS

FWP10.8.010.8  SYSTEM CONTROL

Control for the operation of auxiliary systems, including fire booster pumps, fire damper release mechanisms, door release mechanisms, smoke extraction fans, fireman's lift, etc., where called for in FWP2, shall comply with the general requirements of this Specification and the Sub-contractor shall carry out all associated electrical control wiring and connections unless otherwise indicated.

FWP10.8.020.8  AUXILIARY BATTERY

Where battery operation of auxiliary control systems is required, a separate nickel cadmium battery and charger for these systems shall be provided and suitably labelled for identification. The main fire alarm system battery shall not be connected directly to any auxiliary circuits other than those essential to the detection and alarm system.
FWP10.9 VISUAL FIRE ALARM

FWP10.9.010.8 SYSTEM

The visual alarm signal shall be in the form of a red flashing light and be located at prominent locations such that its effect can be seen from everywhere in the building when the fire alarm is activated. The visual fire alarm system shall conform to NFPA 72 or BS 5839: Part 1 and acceptable to FSD. Sample of the flashing red light shall be submitted for Approval.

FWP10.9.020.8 LABEL

Each red flashing light of the visual fire alarm system shall be provided with indication showing "FIRE ALARM 火警". The height of the English letters and Chinese characters shall not be less than 10 mm and 15 mm respectively, or the size of the characters is acceptable to FSD.

FWP10.9.030.8 EVIDENCE OF COUNTRY / PLACE OF MANUFACTURE AND AUTHENTICITY

The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the visual fire alarm delivered to the site or installed.
FWP10.10 AUDIO/VISUAL ADVISORY SYSTEM

FWP10.10.010.A GENERAL

1. The Sub-contractor shall design, supply and install the audio / visual advisory (AVA) system and the selection of proper, correct and compatible equipment and components to achieve the performance specified. Detailed design layouts and full technical information and calculations for the system shall be submitted for Approval;

2. AVA system shall comprise AVA system control panel, complete audio advisory system, audio advisory system power supply module, flashing exit sign boxes inside AVA system protected areas, flashing directional sign boxes, photo-luminous directional signs, batteries and chargers, cables and other items of equipment required for the complete and workable system;

3. All equipment and components offered shall be proven products with good quality to facilitate the safe evacuation of occupants in the premises during a fire condition. They shall be suitable for continuous operation at ambient temperature between 0°C and 40°C and relative humidity up to 99% saturation;

4. Labels shall be provided to all indicators, buttons, switches, internal wiring terminals and all other components to facilitate operation and proper maintenance. Descriptions shall be in both English and Chinese where applicable;

5. Servicing facilities and replacement spare parts shall be available locally for future maintenance of the system;

6. The Sub-contractor shall coordinate with other concerned parties for the selection of mixer preamplifiers, power amplifiers and loudspeakers if the loudspeakers are required to be connected to the public address system(s) provided by others. In such circumstance, the arrangement of speaker zones shall also fulfil the requirements of the public address system(s);

7. The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the AVA system control and components, flashing exit sign boxes, flashing directional sign boxes and low level directional signs delivered to the site or installed.

FWP10.10.020.8 AUDIO ADVISORY SYSTEM

1. The audio advisory system shall be designed and installed in accordance with the FSD CoP and Circular Letters;

2. The audio advisory system shall comprise mixer preamplifiers, power amplifiers, input selection panel, monitor panel, volume control panel, line fault monitoring units, desktop microphone, loudspeakers, automatic audio input changeover unit (where loudspeakers are also required to be connected to a public address system), etc. and all necessary components;

3. Audio advisory system of digitized system architecture with integrated digital products fulfilling all necessary functions of the system can also be submitted for Approval. The Sub-contractor shall provide proper user interface to mimic the functions of AVA system control panel, mixer preamplifier, power amplifiers, input selection panel, monitor panel, volume control panel, line fault monitoring unit and automatic audio input changeover unit, etc.. Any equipment necessary for establishing the user interface, such as a central operator terminal and display monitor, shall be provided by the Sub-contractor;
4. The audio advisory system shall be designed to ensure matching of amplifier rating and connected equipment load. The variation in available power shall not exceed 3dB between the outlet nearest to the amplifier and any other outlet in the system. Suitable repeaters and signal conditioners shall be installed as necessary to maintain the sound power level. A load variation of 50% shall not affect the quality of sound or cause the output voltage at any outlet to vary by more than 6dB;

5. The arrangement of loudspeakers shall refer to the relevant clauses in BS5839-8;

6. Broadcasts shall be at least 10dB above background noise levels to optimize audibility and intelligibility. The design background noise levels shall refer to a recognized international standard such as BS5839-8 and take into account the conditions of the localities concerned;

7. The loudspeakers shall be so positioned as not to cause adverse interference with each other.

**FWP10.10.030.A** AVA SYSTEM CONTROL PANEL

1. The AVA system control panel shall comprise all necessary components including power supply module, desktop microphone with manual override switch, attention drawing signal (chime sound) module, voice message module, timers, relays and terminals where appropriate;

2. The AVA system control panel shall:
   a. be capable of receiving the fire alarm signal from fire services alarm control panel, and also transmit the AVA system fault signals to fire services alarm control panel;
   b. indicate power supply, charger and battery status and report faults such as “System Common Fault”, “Charger Fault” and “Speaker Line Fault”;  
   c. be provided with emergency announcement control and “Power ON”, “Fire Signal ON”, “Microphone ON” and “Emergency Message ON” indication;
   d. interface with the fire alarm bells and flashing directional signs and flashing exit signs located at the AVA system protected areas / zones;
   e. be provided with a microphone input socket for connection to the desktop microphone;
   f. be provided with facilities for controlling the operation sequence of alarm devices / emergency announcement;
   g. be provided with other necessary facilities, indications and controls as required by the FSD.

3. Adequate dry contacts controlled by timers and control relays shall be provided and incorporated in the fire alarm bell circuit so as to alternate the alarm bells operation and emergency announcement as required by the FSD. At least 10% spare dry contacts shall be provided.

**FWP10.10.040.8** VOICE MESSAGE MODULE

1. Voice message module with voice recording facilities shall be provided for broadcasting of pre-recorded message. The pre-recorded message shall be stored in non-volatile memory chip(s) controlled by the voice message module.

2. The message storage capacity (recording time) shall be at least two times of the capacity required for the recording and broadcasting of the following message in English, Cantonese and Putonghua:

   “This is a fire alarm message. Please keep clam. Follow the flashing light direction to the nearest exit. Do not use the lift.”
This is a fire alarm, please keep calm, follow the flashing direction, walk to the nearest exit, do not use the elevator."

**FWP10.10.050.8 AVA SYSTEM POWER SUPPLY MODULE**

1. AVA system power supply module shall conform to relevant requirements in BS5839-8 and comprise standby supply with rechargeable battery and automatic charger. The standby power shall be capable of maintaining normal operation of the AVA system under no-fire-alarm condition for at least six hours, after which sufficient capacity shall remain to provide an evacuation broadcast in all alarm zones for at least 30 minutes;

2. The batteries for the power supply module shall be rechargeable, maintenance free and with a design life of minimum 10 years rated at 20°C. The batteries shall conform to BSEN60896-21 & -22 (or BS6290-4) for sealed lead-acid type or to IEC60623 and IEC62259 for gas recombination nickel-cadmium type;

3. The batteries shall be properly stored in a battery cabinet made of galvanised sheet steel of at least 1.2 mm thick, complete with two layers of stoved enamel or one layer of stoved epoxy powder paint;

4. Calculation of AVA system loads and battery capacity shall be submitted for Approval.

**FWP10.10.060.8 MIXER PREAMPLIFIER**

1. The mixer preamplifier shall be fully solid-state in design and provided with the following facilities:
   a. Volume control for adjusting the output level;
   b. Individual volume control for voice message and desktop microphone input;
   c. Bass and treble tone controls;
   d. Output terminals complete with volume control with “OFF” position;
   e. Standard sockets with plugs and lock nuts for each input and output terminal;
   f. Facilities for proper operation of all required auxiliary equipment controls.

**FWP10.10.070.8 POWER AMPLIFIER**

1. The power amplifier shall be fully solid-state in design and provided with the following facilities:
   a. Volume control for adjusting the output level;
   b. A VU meter or LED / LCD indicators to indicate the output level;
   c. Balanced floating outputs of 70V and 100V for loudspeaker connections;
   d. Standard sockets with plugs and lock nuts for each input and output terminal.

2. The total load connected to each individual power amplifier shall be not more than 80% of its rated power output at the time of completion.

**FWP10.10.080.8 INPUT SELECTION PANEL, MONITOR PANEL AND VOLUME CONTROL PANEL**

1. Refer to ELE25.3.050, ELE25.3.060 and ELE25.3.070 for requirements of input selection panel, monitor panel and volume control panel respectively;

2. The function of input selection panel can be integrated into the mixer preamplifier subject to Approval;
3. The function of monitor panel and volume control panel can be integrated into the power amplifiers subject to Approval.

**FWP10.10.090.8 LINE FAULT MONITORING UNIT**

1. The line fault monitoring unit shall check the ‘non-break’ status of wiring of each speaker zone by automatically generating signals at preset time everyday. Open circuitry in speaker line(s) or accidental speaker removal from the line(s) shall be monitored;
2. The line fault monitoring unit shall provide “fault” and “System ON” indications for each speaker zone on the AVA System Control Panel.

**FWP10.10.100.8 AUTOMATIC AUDIO INPUT CHANGE-OVER UNIT**

1. When the loudspeakers are required to be connected to the audio advisory system and other public address system(s), an automatic speaker change-over unit shall be provided;
2. The loudspeakers shall be set as default speakers for the public address system(s) under no-fire-alarm condition. When a fire alarm signal is received, the audio lines connection shall be switched automatically to the audio advisory system for broadcasting;
3. The function of line fault monitoring unit as specified in FWP10.10.090 can be incorporated into the automatic audio input change-over unit.

**FWP10.10.110.8 LOUDSPEAKERS**

1. Refer to ELE25.3.090, ELE25.3.100 and ELE25.3.110 for requirements of ceiling speaker, horn speaker and column speaker respectively. Refer to ELE25.4.020 for mounting requirements of ceiling speakers;
2. The loudspeakers shall be of ceiling-mounted type or wall-mounted type as shown on the Drawings. They shall provide a crisp, clear reproduction of voice and alarm tone signal;
3. The loudspeakers casing shall be constructed of sheet steel or high impact ABS plastic in colour matching with false ceiling or wall finishes. Any loudspeaker mounted at outdoor location shall be of weatherproof construction;
4. Each zone of loudspeakers shall cover not more than one floor.

**FWP10.10.120.8 DESKTOP MICROPHONE**

1. Desktop microphone shall be single zone type complete with condenser microphone on gooseneck and with a built-in push-to-talk switch;
2. The microphone shall have a minimum cable length of 1m. The cable for microphone shall be terminated with a phone plug;
3. The built-in push-to-talk switch (emergency manual override switch) shall be activated to stop the pre-recorded message and alarm bell operation and allow the operator to give particular emergency announcement through the microphone.

**FWP10.10.130.A FLASHING DIRECTIONAL SIGN BOXES AND FLASHING EXIT SIGN BOXES**

1. Flashing exit sign boxes inside AVA system protected areas and directional sign boxes shall be installed at high level. The sign box shall be of full box or pendant acrylic panel design and shall be submitted for Approval;
2. The flashing exit sign boxes and flashing directional sign boxes shall:
a. Be complete with coloured graphic, internally illuminated and conforming to BS5499-10;

b. Be positioned between 2m and 2.5m above finished floor level measured to the base of the flashing lights and complete with suitable mounting brackets;

c. Be pressed or rolled from quality steel sheet and complete with durable paint to form a rigid, robust, high quality body. The steel sheet thickness shall not be less than 1mm;

d. Be of weatherproof construction at outdoor locations;

e. Be of maintained type and internally illuminated evenly by LED lighting and complete with all necessary control gears and flashing modules for receiving fire alarm signal from fire services alarm control panel as necessary.

3. Under no-fire-alarm condition, the flashing exit sign boxes and flashing directional sign boxes shall be illuminated in static mode. Upon receiving fire alarm signal, they shall operate in flashing mode. The flashing action of all exit sign boxes inside AVA system protected areas and directional signs on the same floor shall be synchronized;

4. Each zone of flashing exit sign boxes and directional sign boxes shall cover not more than one floor.

FWP10.10.135.A FLASHING EXIT SIGN AND FLASHING DIRECTIONAL SIGN POWER SUPPLY

1. The flashing exit sign boxes and flashing directional sign boxes shall be powered by 24V DC centralized battery and charger on each floor. The battery and charger cabinet shall be incorporated with flashing module as necessary for receiving fire alarm signal from fire services alarm control panel and complete with voltmeter, ammeter, and LED alarm indicators;

2. The batteries shall be rechargeable and maintenance free and with a design life of minimum 10 years rated at 20°C and comply to BSEN60896-21 & -22 (or BS6290-4) for sealed lead-acid type, or to IEC60623 and IEC62259 for gas recombination nickel-cadmium type;

3. The capacity of the batteries shall be capable of maintaining the connected flashing exit sign boxes and directional sign boxes in alarm operation for at least 2 hours. Each centralized battery and charger set shall have at least 20% spare capacity over the connected loads. Calculation of battery and charger capacity shall be submitted for Approval.

FWP10.10.140.8 LOW LEVEL DIRECTIONAL SIGNS

1. Low level directional signs shall be of non-radioactive photo-luminous type conforming to DIN 67510 Part 4 or other standards acceptable to FSD;

2. Low level directional signs shall be installed with the lower edges not higher than 200mm from the finished floor level of the protected areas to indicate the evacuation routes;

3. Low level directional signs shall be made of plastic material with coloured graphic;

4. Low level directional signs shall be framed with rust-proof metal or a material approved by the Contract Manager and fixed on walls, columns or fixtures by gloss stainless steel button screws or otherwise concealed fixing. A sample shall be submitted for Approval prior to installation.
AVA SYSTEM CABLES AND WIRING

1. All cables of the AVA system for power supply, signalling and audio transmission shall be fire resisting types acceptable to FSD;

2. Wiring circuits for the flashing exit sign boxes and flashing directional sign boxes and the loudspeakers shall be of ring loop configuration such that any damage to the wiring at a single point shall not affect the proper operation of all flashing exit sign boxes and flashing directional sign boxes and loudspeakers;

3. No cable joint or connector shall be permitted between cable originating and terminating points;

4. Unless otherwise specified, audio cables shall be copper, stranded and sheathed type, and compatible with the types of loudspeakers / power amplifiers connected. Twin cables with low power loss and protected against interference shall be used for the amplifier output circuits to the loudspeakers.

EQUIPMENT CABINET

1. Refer to ELE25.3.080 for requirements of equipment cabinet;

2. Equipment cabinet shall be equipped with multiple power socket rack, etc., where appropriate, for power supply to the housed equipment.

FWP11.1 GENERAL INSTALLATION

FWP11.1.010.8 SPECIFICATION

1. The electrical equipment, installation materials, cables, wiring, and installation practice, shall comply with the Drawings and Specification;
2. For fire services installations, the use of fire resistant cables shall be in accordance with Fire Services CoP unless otherwise specified.

FWP11.1.020.8 ELECTRICITY SUPPLY

Unless otherwise specified, the complete electrical installation shall be suitable for operation under the supply system with nominal frequency of 50 Hz and nominal voltage of 380 V, 3 phase and 220 V, single phase within the variation limits as declared by the local Supply Companies.

FWP11.1.030.8 SERVICE CONDITIONS

The complete electrical installation shall be suitable for use under Hong Kong climatic condition with relative humidity and ambient temperature as shown below:

1. Relative Humidity: up to 0.99 saturation;
2. Ambient temperature: peak from minus 5°C to plus 40°C for 4 hours continuously with an average from 0°C to plus 35°C over a 24 hour period.

FWP11.1.040.8 WIRING SYSTEMS

1. All wirings in water pump rooms shall be in surface conduit/trunking system or by armoured cables as detailed in this Specification or as shown on the Drawings;
2. Wiring and cabling systems in other areas shall be of the type or types detailed elsewhere in this Specification and as shown on the Drawings;
3. Unless Approved for the purpose, cables and wires shall not be located in damp, wet and excessively hot locations, or exposed to gases, fumes, vapours, liquids and other agents having a detrimental effect on the conductors.

FWP11.1.050.8 CONDUCTOR SIZES

1. Conductor sizes for alarm circuit wiring to automatic detectors shall be in accordance with AFA Rules and may be smaller than the minimum called for in the Specification provided that satisfactory operation of the system is achieved and that the wiring is capable of being installed, and subsequently maintained, easily and without damage as well as approved by the Contract Manager. The installed conductor size shall also be in accordance with the recommendations of the panel and detector manufacturer;
2. Conductor sizes for other applications shall strictly comply with the Drawings and Specification.

FWP11.1.060.8 CONDUIT SYSTEMS

1. Conduits shall be of steel or PVC as specified in the Specification or Drawings;
2. Conduits shall be completely separated from those for all other services. Separate channels shall be used for any wiring using duct systems;
3. Conduits shall be routed and installed in such a way as to give maximum protection against mechanical damage. Where it is unavoidable to run conduits across other services conduits, water pipes, air conditioning ducts, etc., they shall be installed first and fixed closest to the structure;

4. Conduit routes shall avoid areas of high risk such as lift wells, open staircases and unenclosed vertical shafts;

5. Galvanized iron draw-wires of adequate size shall be provided in all empty conduits.

**FWP11.1.070.8**

**MICC CABLES**

1. MICC cables shall not be used on circuits involving the switching of inductive or capacitative loads where there is a possibility of insulation damage due to high voltage surges;

2. Where bare MICC cables are run on galvanized steel cable trays, and in other situations where contact between dissimilar metals may lead to electrolytic corrosion, electrical contact shall be prevented by using plastic-coated fixing saddles supplemented by properly fixed plastic spacers, or by other Approved means.

**FWP11.1.080.8**

**EXPOSED PLASTICS**

The use of wiring, cables or installed materials having plastic sheathing or finish or constructed predominantly of plastic, and not enclosed in metal, shall be avoided wherever possible. Plastic cable trunking, etc. will not be acceptable. MICC cables shall be of non-PVC-sheathed type.

**FWP11.1.100.8**

**IDENTIFICATION OF CONDUCTORS, CABLES AND CABLE DUCTS**

1. Identification of conductors and cables on L.V. and M.V. power circuits shall be in accordance with the Electrical CoP, except that ELV alarm circuit wiring shall be identified by the basic colour in red. If other colours are to be used, they shall be submitted for Approval. Colour tracers may be used, in addition, to distinguish cables one from another;

2. All surface conduits, cable ducts and cable trays, armoured cables, MICC cables etc., forming part of the Fire Service Installation provide by the Contractor, shall be colour coded in red in such a way as to permit ready identification. Banding by means of paint will be acceptable where this can be carried out permanently and effectively. Durable high quality red plastic self-adhesive tape may be used for armoured and MICC cables, applied at intervals not exceeding 3 m;

3. Suitable identification plates shall be provided on all electrical equipment giving voltage, current, wattage or other ratings and manufacturer's name, trademarks or other descriptive markings by which the organisation responsible for the product may be identified;

4. Each disconnecting means required for all electrical equipment and each electrical source of supply shall be legibly marked to indicate its purpose unless located and arranged such that the purpose is clearly self evident;

5. All markings and identifications shall be of sufficient durability to withstand the environmental effects.

**FWP11.1.110.8**

**CABLES CONNECTED TO OR IN CONTACT WITH BARE CONDUCTORS OR BUSBARS**

Cables connected to or in contact with bare conductors or busbars shall be in accordance with **ELE8.2.060** of HKHA Electrical Installation Specification.
FWP11.1.120.8 EARTHING AND BONDING PROVISION

The Sub-contractor shall provide all necessary earthing, equipotential and supplementary bonding in accordance with the Electrical CoP. The Sub-contractor shall provide 25 mm² PVC insulated copper bonding conductors from the termination gland at the main incoming fuse combination unit to the pump discharge pipes which shall be bonded by Approved clamps.

FWP11.1.130.8 POWER FACTOR AND TOTAL HARMONIC DISTORTION

1. For circuit with circuit protective device rating at or above 400A, single or three phase, the Sub-contractor shall be responsible for providing equipment as necessary to any pump control cubicle or motor for fresh and flush water pump installation, with or without variable speed drives, to improve the power factor to a minimum of 0.85 and restrict the total harmonic distortion of current to the value in accordance with the BEC;

2. Capacitor bank shall comply with IEC 60831-1 and IEC 60831-2 and shall be housed in a separate metal enclosure. Harmonic filter shall conform to IEC 61000-4-2, IEC 61000-4-3, IEC 61000-4-4 and IEC 61000-4-5 or other similar recognised international standards.
FWP11.2 MOTORS FOR PUMP DRIVES

**FWP11.2.010.8 CONSTRUCTION**

1. All electric motors shall be of squirrel-cage induction type and comply with BS EN 60034-1 or IEC 60034-1;
2. The stator windings shall be copper wire with Class F insulation to BS EN 60085 or IEC 60085 terminated in stud terminals;
3. The motors shall be totally-enclosed fan-cooled to BS EN 60034-6 or IEC 60034-6 IC411 and ingress protection to BS EN 60034-5 or IEC 60034-5 IP55 or better with cast iron frame, metal or polypropylene fan cover and metal terminal box. For motors of 15kW or less, aluminium alloy frame will also be acceptable;
4. Unless otherwise specified, the motors shall be foot-mounted to BS EN 60034-7 or IEC 60034-7;
5. For fresh water and flush water supply systems only, the motors for pump drives shall be of Class IE2 to IEC60034-30.

**FWP11.2.020.8 RATING**

The motors driving the fire services pumps including sprinkler and street fire hydrant pumps shall be rated to give 20% more power in addition to the hydraulic power required for the rated flow of the system while other pump motors shall be 15% more unless otherwise specified.

**FWP11.2.030.8 METHOD OF STARTING**

The method of motor starting shall be selected according to the characteristics of the pump and shall comply with the Electricity Supply Co's limitations on starting current. Unless otherwise indicated, the type of starter shall be as follows:

1. Up to 7.5 kW - Direct-on-line;
2. 11 kW to 55 kW - Star-delta;
3. Over 55 kW - Soft starter, for fresh/flush water pump motors and other pump motors; auto-transformer, for fire services water pump motors.

**FWP11.2.040.8 NOISE LEVELS**

1. The mean sound pressure level at free field conditions over a reflecting plane at one metre from the surface of every single machine due to transmission through air for fresh, booster fresh and flush water installation shall not exceed 70 dB(A) for motors of 75 kW or below;
2. The method of measurement of noise and vibration level generated by the motors shall comply with BS EN 60034-9 or IEC 60034-9 and BS EN 60034-14 or IEC 60034-14 respectively;
3. Manufacturers' type-test certificates and reports to verify the noise levels of motors shall be produced upon request by the Contract Manager.

**FWP11.2.050.8 WARNING NOTICE**

Motors under automatic control shall be provided with a prominent red notice on white ground, of durable material, with a size of not less than 300 x 300 mm inscribed in English and Chinese characters as follows:
DANGER 危険

THIS MOTOR IS AUTOMATICALLY CONTROLLED AND MAY START WITHOUT WARNING - ISOLATE BEFORE INSPECTION

此機乃自動操作 - 維修前請先關掣

Lettering shall be at least 25 mm high. The notice shall be displayed adjacent to each pumpset or each pair of pumpsets.

FWP11.2.060.8 EFFICIENCY

The nominal full-load motor efficiency, tested to BS EN 60034-2-1 or IEC 60034-2-1, shall be no less than those as shown in Minimum Nominal Full-Load Motor Efficiency for Single-Speed Three-phase Totally Enclosed Motor of the BEC.

FWP11.2.070.8 EVIDENCE OF COUNTRY / PLACE OF MANUFACTURE AND AUTHENTICITY

The Sub-contractor shall provide documentary evidence as PRE.BS1.205 to verify the place of manufacture and authenticity of the motors for fire services pump drives delivered to the site or installed.
FWP11.3 MOTOR STARTERS

FWP11.3.010.8 DIRECT-ON-LINE, STAR-DELTA AND AUTO TRANSFORMER STARTERS

1. Type:
   a. Unless otherwise indicated, each motor provided with an independent motor starter shall comply with BS EN 60947-4-1 or IEC 60947-4-1;
   b. The coordination requirement shall be type "2";
   c. The short circuit protective device shall be in accordance with the recommendation made by the motor starter manufacturer in order to achieve the specified type of coordination.

2. Contactors:
   a. The contactors in the motor starter circuit shall comply with BS EN 60947-4-1 or IEC 60947-4-1 suitable for a rated operational current at a utilisation category AC-3 of not less than the full load line current of the motor, capable of carrying out an intermittent duty of class 120;
   b. The rating of contactors for the star and delta circuit connections shall be selected in accordance with the contactor / starter manufacturer's recommendation;
   c. The star and delta contactors shall be electrically interlocked so that it is impossible for both contactors to close or be closed at the same time;
   d. The mechanical endurance of the contactors shall not be less than 1 million no-load operating cycles;
   e. The timers for star-delta and auto-transformer starters shall be adjusted for a maximum of 10 seconds with clear calibration;
   f. For auto-transformer starter, it shall comply with BS EN 60076 or IEC 60076 with class E insulation and shall be rated for a duty not less than 15 starts per hour.

3. Thermal overload relay:
   a. A thermal overload relay complying with BS EN 60947-4-1 or IEC 60947-4-1 shall be provided in each motor starter;
   b. The thermal overload relay shall have thermal elements for all three phases, trip contacts, adjustable trip current setting and manual reset push. It shall also provide protection against phase failure;
   c. The inverse time operating characteristics of the relay shall be submitted for Approval.

4. Certification and Evidence of Country / Place of Manufacture and Authenticity
   a. The Sub-contractor shall provide copies of type test certificates from accredited laboratories in prove the motor starters are in compliance with the specification requirements;
   b. The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the motors starters for fire services pumps delivered to the site or installed.
The soft starter shall employ microprocessor-controlled power electronics to regulate the starting torque of a motor in order to minimize mechanical shock during starting and stopping;

2. The soft starter shall conform to BS EN 60947-4-2 or IEC 60947-4-2 and utilization category of the soft starter shall be AC-53a or AC-53b. When utilization category AC-53b is adopted for the soft starter as stipulated in BS EN 60947-4-2 or IEC 60947-4-2, a bypass contactor shall be provided in the starter circuit to take up the motor load during the steady state operation of the motor. The transfer of the load from the soft starter to the bypass contactor and vice versa shall be automatically initiated;

3. The soft starter shall be type-tested to of BS EN 60947-4-2 or IEC 60947-4-2. Manufacturer's type test certificate shall be submitted for Approval;

4. The soft starter shall conform to BS EN 50081 or BS EN 61000-4 or relevant recognized international standards for electromagnetic compatibility requirement;

5. The duty of the soft starter shall be compatible with the power requirements of the electric motor concerned;

6. The soft starter's control circuit shall be completely independent of the power supply circuit for the motor and the same control module shall be used for all power ratings;

7. The soft starter shall be installed in the concerned motor control panel and protected by fast acting semi-conductor fuses against short circuit faults. The semi-conductor fuses shall conform to BS EN 60269-1 or IEC 60269-1 and BS EN 60269-4 or IEC 60269-4;

8. The pre-set starting current of the soft starter shall be compatible with the starting torque-speed characteristics of the concerned motor and loading;

9. A built-in LCD / LED display shall be provided for the soft starter to assist in setting-up and trouble-shooting. At least the following monitoring functions shall be indicated through the LCD / LED display:
   a. Fault conditions;
   b. Motor current; and
   c. Starter operation status.

10. All adjustable parameters shall be set by a keypad on the control module. The keypad shall be accessible without the need to open the cover of the motor control panel;

11. Modes of operation:
   a. The soft starter shall be provided with the following modes of operation and the transition shall be smooth with minimum current inrush and torque surges. Operation shall be as stipulated below:
      i. Soft start:
         The soft starter shall provide an acceleration ramp such that motor shall accelerate linearly with closed loop control during starting. The acceleration ramp time shall be adjustable up to 30 seconds;
      ii. Current limitation:
         It shall be provided with current limiting capability on the starting current of the motor. The maximum starting current limit of the motor shall be adjustable up to 5 times rated current;
iii. Soft stop:

A deceleration ramp shall be applied to the motor such that free-wheeling is prevented for a smooth deceleration with closed loop control during motor stopping. The deceleration ramp time shall be adjustable up to 60 seconds.

b. The soft starter shall be rated for a duty not less than 15 starts and 15 stops per hour.

12. Protection:

a. The following protective devices shall be provided for the soft starter:
   i. Motor overload even in a bypass configuration (adaptive to the motor thermal characteristics);
   ii. Phase unbalance / loss;
   iii. Phase reversal; and
   iv. Underload.

b. All protective features shall be active even when the motor load is transferred to the bypass contactor;

c. The soft starter shall perform self-diagnosis for internal faults during operation.

13. Certification and Evidence of Country / Place of Manufacture and Authenticity:

a. The Sub-contractor shall provide copies of type test / certificates from accredited laboratories to prove the soft starter is in compliance with the specification requirements;

b. The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the soft starters for fire services pumps delivered to the site or installed.

FWP11.3.030.8 VARIABLE SPEED DRIVE UNIT FOR BOOSTER PUMP SYSTEM

1. Variable speed drive (VSD) unit for booster pump system shall act as both motor starter and multi-pump sequence controller and be a complete product comprising:

a. A variable frequency drive with static frequency inverter which generates a sinus evaluated pulse with stable modulated output voltage for varying pump motor speed; and

b. A multi-pump control microprocessor which provides functions including setting of constant water output pressure, control of motor speed, automatic changeover of pumps, selection of various pump operation modes, protection against various faults, and storage of fault event records.

2. Product requirements:

a. The VSD unit shall perform automatic multi-pump functions and comply with booster pump system operating and installation requirements as described in FWP2.2.2.020;

b. The VSD unit shall comply with the general EMC (electromagnetic compatibility) regulations to BS EN 61800-3 or similar recognised international standards;

c. The VSD unit shall incorporate with appropriate measure(s) to avoid undesirable high frequency noise generated from the driving motor and / or the VSD unit and to prevent interference with other electronic devices;

d. The VSD unit shall contain buttons for switching on / off and allow manual operating mode for individual pump;
e. The VSD unit shall contain buttons to input settings with password protection and LCD panel to display pump control parameters as follows:
   i. Discharge pressure value setting;
   ii. Operating frequency setting;
   iii. Switch interval for cyclic changeover setting;
   iv. Power on, run and fault indication;
   v. Running pressure value indication;
   vi. Running frequency indication;
   vii. Hours of operation log indication;
   viii. Error messages indication.

f. The VSD unit shall provide automatic protections to the booster pump system as follows:
   i. To shut off all pumps at zero suction, high pressure overshoot and loss of pressure at discharge;
   ii. To protect pump motor from over-voltage, under-voltage, over-current, overload, overheat and loss of phase;
   iii. To protect frequency inverter from overheat;
   iv. To conduct automatic test-run at adjustable periods.

g. The VSD unit shall activate audio and visual alarm for the following faults:
   i. Low suction pressure;
   ii. Pump motor failure;
   iii. Frequency inverter failure;
   iv. Pressure transducer failure;
   v. System failure.

h. The VSD unit shall provide dry contacts for the following remote monitoring outputs:
   i. Pump running status;
   ii. Common fault signal.

i. The VSD unit shall keep record of at least 5 nos. of last fault events for retrieval;

j. The VSD unit shall have dust and water ingress protection to at least IP55 for enclosure and cable connection;

k. The VSD unit shall be able to recover automatically after power failure.

3. Installation Requirements:

a. Every VSD unit shall be able to set as master and perform full multi-pump control functions independently unless an associated master multi-pump display and control unit forms part of the control system and provides necessary control functions for multi-pump operation. When a master multi-pump display and control unit is necessary, an identical duplicate shall be provided in parallel with selector knob for easy changeover in case the master unit in use is found faulty;

b. Every VSD unit shall be compatible with its connected motor so as not to result in excessive power loss or heat generation at the motor over entire speed range;
c. All VSD units in a booster pump system shall be identical and automatically form an integrated multi-pump control system via interconnecting control cables;

d. Input parameters on any VSD unit in the booster pump system shall be automatically synchronized to other VSD units;

e. Pump running and fault status indications from each VSD unit shall be repeated on the pump control cubicle;

f. VSD units shall be mounted individually on wall or enclosed collectively in a fan-ventilated metal cubicle mounted on wall unless the VSD unit and the pump motor forms an integrated design at factory;

g. All non-armoured cables connecting from VSD unit to unit and from pressure transducer to VSD unit shall be enclosed in watertight flexible conduits and terminated in rigid box with glands and nuts;

h. Control cables connecting to the VSD units shall be separated from power supply cables. The power supply cables shall be kept as short as possible and not be installed in parallel to the control cables;

i. VSD multi-pump control shall be commissioned by the manufacturer's representative and set up with the optimum parameters in order to attain the best operating efficiency of the booster pump system.

4. Maintenance Requirements:

a. User interface of the input panel on VSD unit and master multi-pump display and control unit when provided, shall be clear and simple to use;

b. Complete documentary of user manuals covering operation and maintenance procedures, and where necessary for future maintenance, data disk containing software, firmware, etc. for VSD unit shall be provided in the O&M Manual of Water Pump Installation. An extra on-site user manual shall be properly bound in plastic folder and kept in a durable wall hanging box inside each booster pump room;

c. Training shall be provided by the manufacturer's representatives on equipment setting, operational and maintenance aspects including essential trouble-shooting techniques;

d. In case any mal-function found, replacement of only faulty parts in VSD unit shall be possible, instead of total replacement.

5. Reliability:

a. The VSD unit shall be the product of a manufacturer who has continuously manufactured similar type of products in the past 3 years;

b. The VSD unit shall have proven record of reliability of a minimum continuous period of one year prior to the time of material submission for Approval, in relevant application in local or overseas to the satisfaction of the CM.

6. The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the variable speed drive unit for fire services booster pumps delivered to the site or installed.
FWP11.4 PUMP CONTROL CUBICLE

FWP11.4.010.8 LOCATION
In each fixed fire pump/intermediate booster pump room, sprinkler pump room, water pump room and those as shown on the Drawings, a pump control cubicle for each of the pumping systems shall be provided.

FWP11.4.020.8 CONSTRUCTION
1. The pump control cubicle shall be suitable for wall mounting with a degree of protection of at least IP42 to BS EN 60529;

2. The whole cubicle except for its front panels shall be made of galvanized sheet steel not less than 1.5 mm thick and formed in such a way as to give a rigid structure without cross struts. The cubicle opening shall be rolled up with curled edges in order to stop water ingress slipped into inner side of the cubicle. The front panels shall be of double-door construction and made of galvanized sheet steel not less than 2.0 mm thick;

3. The outer doors of the front panels shall be hinged permitting not less than 110 degrees opening and inserted with a durable clear transparent panel sealed by rubber gaskets. They shall be fitted with multi-point swing handle latches of watertight zinc alloy bodies with cam levers and locking bars but with no locks. The edges of the outer doors shall be fitted with neoprene rubber gaskets which at closing position, shall be tightly rested on the curled edges of the cubicle opening;

4. The inner doors of the front panels shall be hinged permitting 90 degrees opening and recessed in the cubicle with indication lights, selector switches, ammeters, isolating switches, etc. fitted on. The back sides of the inner panels shall be fitted with insulation boards to prevent direct exposure of live parts when opened. At closing position, the inner doors shall be fastened on the cubicle by stainless steel screws;

5. The cubicles shall have ventilation louvers for heat dissipation at lateral panels.

FWP11.4.030.8 FITTINGS
The pump control cubicle shall be complete with isolating switch, selector switch, indicating lights, starters, relays etc. as shown on the Drawings.

FWP11.4.040.8 FINISH
The inside and outside surfaces of the pump control cubicle shall be painted with one coat of primer, followed by a coat of stoved polyester-epoxy powder finish of an Approved colour which for fire services installations shall be of gloss signal-red.

FWP11.4.050.8 EVIDENCE OF COUNTRY / PLACE OF MANUFACTURE AND AUTHENTICITY
The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the pump control cubicles for fire services pumps delivered to the site or installed.
FWP11.5  PUMP CONTROL CUBICLE COMPONENTS

FWP11.5.010.8  ISOLATING SWITCH

Unless otherwise specified, a triple pole isolating switch with removable neutral link shall be provided for the main supply to each pump motor. The isolating switch shall be in compliance with BS EN 60947-3 or IEC 60947-3 suitable for a rated operational current at a utilisation category of AC 23 of not less than the rated current of the motor circuit. It shall be fixed inside the control cubicle and operated by a handle fitted on the hinged front panel. Positive "ON" and "OFF" indication shall be provided.

FWP11.5.020.8  AMMETER AND CURRENT TRANSFORMER

Ammeter of moving iron type complete with a selector switch shall be provided in each control cubicle to indicate the current supplied to the motor. The ammeter shall comply with IEC 60051-1 with class index 2.5 and shall be of flush mounting type with 75 mm dial and external zero adjustment. The full scale deflection of the ammeter shall be about 200% of the rated current of the motor. Where necessary, current transformers of encapsulated type complying with IEC 60044-1 with an accuracy class I shall be provided for the supply to the ammeter.

FWP11.5.030.8  PUSH-BUTTON AND SELECTOR SWITCH

Push-button and selector switch for mounting on to control cubicle shall conform to EN 60947-1 and EN 60947-5-1 and shall be of splash-proof type with a thermal current rating of not less than 5A and the contacts shall be silver-plated. Push-button shall have a diameter of not less than 20 mm and shall be flush with its guard ring to prevent inadvertent operation. Selector switch shall be of rotary type with a handle of not less than 25 mm long.

FWP11.5.050.8  TIME SWITCH

Where specified, a time switch used for starting the pumping system at a predetermined time of a day shall be provided. The time switch shall be provided with 24-hour dial and battery backup or of other types as approved by the Contract Manager.

FWP11.5.060.8  INDICATION LIGHT

Unless otherwise specified or Approved, indication/pilot light shall conform to EN 60947-1 and EN 60947-5-1 and shall have built-in transformer complete with a 6V LED lamp and a plastic lens of suitable colour.

FWP11.5.070.8  CONTROL RELAY

Control relay, including time-delay relay shall be of contactor type in compliance with EN 60255-1-00 or IEC 60255-1-00 or other standards as approved by the Contract Manager. The relay shall have a thermal current rating of not less than 5A and its contacts shall be silver-plated. Shading ring shall be provided in the magnetic circuit to eliminate noise and vibration. The relay shall have a mechanical endurance of not less than 5 million operations.
FWP11.5.080.8 TERMINAL BLOCK

All control cables connected to the cubicle shall be terminated in feed-through terminal blocks with screw clamp connections and conforming to the following requirements and sleeve type cable markers shall be fitted to both ends of each length of cable:

1. Electrical and mechanical characteristics to be type tested to BS EN 60947-7-1 or IEC 60947-7-1;
2. Voltage rating 750V;
3. Moulding material to be melamine with low flammability as certified to UL94;
4. Designed for mounting directly on assembly rail to EN 50035;
5. All current carrying parts to be copper coated with tin lead alloy. Clamping yokes and screws to be zinc plated steel with additional protection by a chromate layer.

FWP11.5.090.8 PROGRAMMABLE LOGIC CONTROLLER

1. Execution:
   a. Upon Approval, Programmable Logic Controller (PLC) can be used to form part of the pump control wiring circuit in lieu of conventional control relays and time switches;
   b. The Sub-contractor shall complete the programming of the PLC and provide a comprehensive instruction manual for adjusting the pump control such as timer settings, etc. The sequence of control and values of settings in connection with the pump-set operation shall be saved as a switching program in a piece of EPROM (Erasable Programmable Read Only Memory). The steps for programming the switching program shall be literally printed in the instruction manual. Two programmed EPROMs (one socketed in the PLC and one spare) shall be provided for every pump control wiring circuit. Detailed instruction for replacing the EPROM and rebooting the PLC shall be included in the instruction manual;
   c. The Sub-contractor shall provide one spare set of PLC including the associated components such as expansion modules and power supply modules for every three sets of PLC of the same make and model to enable one-to-one replacement. However, one spare set of PLC shall be provided if the number of PLC of the same make and model installed is less than three. The spare unit(s) shall be tested, kept in original packings, and stored in lockable partitioned space inside pump control cubicle(s). Label(s) showing the storage location(s) of spare unit(s) shall be affixed prominently in cubicle(s) not storing the spare unit(s);
   d. The Sub-contractor shall provide two (2) times of free on-site services for modification of the PLC programming upon request of the Contract Manager within the Maintenance Period.

2. Product Requirements:
   a. The PLC shall be the product of a reputable manufacturer and commonly available in the local market;
   b. The PLC shall be capable of counting, regulating, archiving and performing timer and logic operation functions;
   c. The PLC shall be expandable in the number of digital and analogue input/output ports, 35mm DIN rail mounted, fitted with socketed EPROM module for ease of replacement, and provided with serial port for personal computer connection if required for programming and control setting adjustment;
d. The programmed PLC shall be password protected and possesses integrated data latch to protect current settings against loss in the event of a power failure;

e. Operating voltage: DC 24V;

f. Operating ambient temperature: 0°C to 55°C;

g. Operating ambient relative humidity: 5% to 95%; transient condensation permissible;

h. Storage temperature: -10°C to 70°C;

i. Radio interference suppression to BS EN 55011 (limit value class B);

j. Degree of protection: IP20 to BS EN 60529;

k. Certification to VDE0631, IEC 61131, UL or equivalent.

FWP11.5.100.8 EVIDENCE OF COUNTRY / PLACE OF MANUFACTURE AND AUTHENTICITY

The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the pump control cubicle components for fire services pumps delivered to the site or installed.
FWP11.6 CONTROLS AND GAUGES

FWP11.6.010.8 LEVEL CONTROL SWITCH FOR WATER TANKS

1. Level control for any water tank shall be achieved by the use of weight and ball float, operating a remote mercury switch;

2. Unless otherwise specified, the mercury switch shall be housed in a weatherproof type box to IP 54 or above, which is of non-metallic and corrosion resistant material. The mercury switch inside the weatherproof box shall be accessible for inspection / servicing through an openable cap;

3. Alternatively, or where specified, mercury switch encapsulated in corrosion proof float with "ON" and "OFF" control, as described in FWP11.6.020 below, may be used;

4. Level control switch shall cope with the chlorine concentration when used in the rainwater collection tank. The Sub-contractor shall demonstrate the compliance to the satisfaction of the CM;

5. The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the level control switches for fire services system delivered to the site or installed.

FWP11.6.020.8 LEVEL REGULATOR FOR WASTE WATER, STORM WATER AND SEWAGE SUMP TANKS

Mercury switch encapsulated in corrosion proof float shall be used for level control. The float shall be freely suspended in the liquid of the sump tank by a waterproof multi-core PVC sheathed cable.

FWP11.6.030.8 LEVEL REGULATOR FOR DEEP BORE WELLS

Level control for deep bore well shall be of electrode type or magnetic type. Detailed information of the level control device shall be submitted for Approval prior to ordering.

FWP11.6.040.8 FLOW SWITCHES

1. For fire services alarm:
   a. Flow switches for fire services alarm shall be of vane type or as approved by the CM, and shall be approved by LPC and FSD;
   b. They shall be capable of withstanding a test pressure of 15 bar or 1.5 times of the maximum working pressure whichever is higher for not less than 2 hours without showing any sign of leakage;
   c. The sensitivity of the flow switch shall be such that it will respond to the water flow when even only one sprinkler head is in operation;
   d. The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the flow switch delivered to the site or installed.

2. For general purposes:
   a. Flow switches for general purposes shall be of paddle type with magnetic switching mechanism or as approved by the CM;
   b. Paddles shall be made of stainless steel;
c. Body materials shall be suitable for the purposes of applications against corrosion;

d. The products shall be robust and durable for daily switching operations;

e. They shall sustain a maximum operating pressure of 20 bar and be taken part in the water system tests mentioned in FWP14.1.060.

3. Contacts shall be suitable for the working voltage and current of the circuits controlled, and shall be plated with silver or Approved alloy.

FWP11.6.050.8 PRESSURE SWITCHES

1. Pressure switches shall have contacts plated with silver or Approved alloy rated to suit the working voltage and current of the circuits controlled and shall have independent adjustments for the cut-in and cut-out points and for the operating differential;

2. For fire services systems, pressure switches shall be LPC approved type or acceptable to FSD;

3. For flush water supply system, pressure switches shall be constructed of corrosion resistant material;

4. The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the pressure switch delivered to the site or installed.

FWP11.6.060.8 PRESSURE GAUGES

Pressure gauges shall comply with BS EN 837-1 and have brass cases with dials not less than 100 mm diameter. They shall be calibrated in kPa to a maximum of not less than 1-1/3 times and not more than 2 times the operating pressure. Divisions of scale shall not exceed 20 kPa for a maximum scale value of 1,000 kPa, 50 kPa for a maximum scale value of 1,600 kPa and 100 kPa for maximum values in excess of 1,600 kPa. An isolating valve/cock shall be provided for each pressure gauge.

FWP11.6.070.8 EMERGENCY STOP SWITCH

An emergency stop switch of mushroom head push stop lock out type, coloured red shall be provided adjacent to each pump to stop the motor in case of emergency.

FWP11.6.080.8 PRESSURE TRANSDUCER FOR BOOSTER PUMP SYSTEM

1. Pressure transducer for booster pump system shall match with the variable speed drive (VSD) unit and fully cover the required operating parameters of the booster pump system using VSD control;

2. Unless otherwise Approved, enclosure and wetted parts of pressure transducer shall be made of Grade 316 stainless steel.
FWP11.7 L.V. SWITCHGEAR AND ASSOCIATED EQUIPMENT

FWP11.7.010.8 GENERAL

The Sub-contractor shall comply with all the latest requirements on equipment, materials and installation practice/method as specified in Worksection ELE3 of HKHA Electrical Installation Specification, within the scope of the works specified under this Sub-contract. Electrical installation mentioned therein shall mean electrical works for fire services and water pump installation.
FWP11.8 BUSBAR CHAMBERS AND BUSBAR TRUNKING SYSTEMS

FWP11.8.010.8 GENERAL

The Sub-contractor shall comply with all the latest requirements on equipment, materials and installation practice/method as specified in Worksection ELE6 of HKHA Electrical Installation Specification, within the scope of the works specified under this Sub-contract. Electrical installation mentioned therein shall mean electrical works for fire services and water pump installation.
FWP11.9  CABLES

**FWP11.9.010.8  GENERAL**

The Sub-contractor shall comply with all the latest requirements on equipment, materials and installation practice/method as specified in Worksection ELE7 of HKHA Electrical Installation Specification, within the scope of the works specified under this Sub-contract. Electrical installation mentioned therein shall mean electrical works for fire services and water pump installation.

**FWP11.9.020.8  CABLES FOR FIRE SERVICE INSTALLATIONS**

1. Cables for fire service installations shall comply with the requirements stipulated in Fire Services COP, FSD’s Circular Letters, and relevant BS or other international standards acceptable to the Director of Fire Services;

2. All cables in concealed conduits for fire services installations such as fire alarm and detection system where applicable, in domestic blocks or premises without sprinkler protection, shall be fire-resistant cables.
FWP11.10 INSTALLATION OF POWER CABLES

FWP11.10.010.8 GENERAL

The Sub-contractor shall comply with all the latest requirements on equipment, materials and installation practice/method as specified in Worksection ELE8 of HKHA Electrical Installation Specification, within the scope of the works specified under this Sub-contract. Electrical installation mentioned therein shall mean electrical works for fire services and water pump installation.
FWP11.11 WIRING SYSTEM INSTALLATION IN STEEL CONDUITS

FWP11.11.010.8  GENERAL

The Sub-contractor shall comply with all the latest requirements on equipment, materials and installation practice/method as specified in Worksection ELE11 of HKHA Electrical Installation Specification, within the scope of the works specified under this Sub-contract. Electrical installation mentioned therein shall mean electrical works for fire services and water pump installation.
FWP11.12 WIRING SYSTEM INSTALLATION IN STEEL TRUNKING

FWP11.12.010.8 GENERAL
The Sub-contractor shall comply with all the latest requirements on equipment, materials and installation practice/method as specified in Worksection ELE12 of HKHA Electrical Installation Specification, within the scope of the works specified under this Sub-contract. Electrical installation mentioned therein shall mean electrical works for fire services and water pump installation.
FWP11.13 WIRING SYSTEM INSTALLATION IN PLASTIC CONDUIT OR PLASTIC TRUNKING

FWP11.13.010.8 GENERAL

The Sub-contractor shall comply with all the latest requirements on equipment, materials and installation practice/method as specified in Worksection ELE13 of HKHA Electrical Installation Specification, within the scope of the works specified under this Sub-contract. Electrical installation mentioned therein shall mean electrical works for fire services and water pump installation.
FWP11.14 EARTHING AND PROTECTION AGAINST INDIRECT CONTACT

FWP11.14.010.8 GENERAL

The Sub-contractor shall comply with all the latest requirements on equipment, materials and installation practice/method as specified in Worksection ELE17 of HKHA Electrical Installation Specification, within the scope of the works specified under this Sub-contract. Electrical installation mentioned therein shall mean electrical works for fire services and water pump installation.
FWP11.15 WIRING ACCESSORIES

FWP11.15.010.8 GENERAL

The Sub-contractor shall comply with all the latest requirements on equipment, materials and installation practice/method as specified in Worksection ELE20 of HKHA Electrical Installation Specification, within the scope of the works specified under this Sub-contract. Electrical installation mentioned therein shall mean electrical works for fire services and water pump installation.
FWP11.16 TESTING AND MAINTENANCE

FWP11.16.010.8 GENERAL

The Sub-contractor shall comply with all the latest requirements on equipment, materials and installation practice/method as specified in Worksection ELE30 of HKHA Electrical Installation Specification, within the scope of the works specified under this Sub-contract. Electrical installation mentioned therein shall mean electrical works for fire services and water pump installation.

FWP12.1 GENERAL

FWP12.1.010.8 DEFINITION
Portable equipment includes extinguishers, fixed sprayer units, fire blankets and any other fire service equipment used as an independent means for extinguishing a fire.

FWP12.1.020.8 APPROVAL
1. Only portable equipment in the lists approved by the Director of Fire Services shall be accepted;
2. The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the portable fire extinguishers delivered to the site or installed.

FWP12.1.030.8 FIXING
All mounting fixtures and labour for installation shall be provided.

FWP12.1.040.8 CONTRACT MAINTENANCE
The Sub-contractor shall include for a Class 3 "Registered Fire Service Installation Contractor" for inspection, repair and maintenance of the portable equipment during the Contract and Maintenance Period.

FWP12.1.050.8 ACCEPTANCE
Portable fire services equipment including fire extinguishers and fixed sprayer units manufactured before the preceding year of contract completion shall not be accepted unless prior Approval from the Contract Manager is obtained.
FWP12.2  FIRE BLANKETS, SAND BUCKETS, ETC.

FWP12.2.010.8  LOCATION
Supply and distribute, sand buckets etc. in the positions shown on the Drawings.

FWP12.2.030.8  SAND AND FIRE BUCKETS
1. Sand buckets shall be of FSD accepted type;
2. Sand buckets with cover shall be of not less than 10 litres capacity and shall be galvanized steel and painted red.

FWP12.2.040.8  FIRE BLANKETS
Fire blankets shall be heavy duty type to BS 7944 and approved by FSD listed in the latest HKSAR Gazette.

FWP12.2.050.8  APPROVAL LETTERS
Approval letters for fire blankets issued by FSD shall be produced for the CM’s inspection.
FWP12.3 PORTABLE FIRE EXTINGUISHERS

FWP12.3.010.8 TYPE

1. The portable fire extinguishers shall be rechargeable hand operated extinguishers of water, carbon dioxide or dry powder type with capacity as specified;
2. Water and dry powder type extinguishers shall be cartridge operated and shall be fitted with replaceable gas cartridge inside the extinguisher cylinder.

FWP12.3.020.8 STANDARDS

All portable fire extinguishers shall be of FSD approved type listed in the latest HKSAR Gazette and shall comply with the standards as indicated below:

<table>
<thead>
<tr>
<th>Type</th>
<th>BS EN Standard</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Water type fire extinguisher</td>
<td>BS EN 3 : Part 1 to 6 or BS EN 3: Part 7 to 10</td>
</tr>
<tr>
<td>b. Carbon dioxide fire extinguisher</td>
<td>BS EN 3 : Part 1 to 6 or BS EN 3: Part 7 to 10 or UL 154</td>
</tr>
<tr>
<td>c. Dry power type fire extinguisher</td>
<td>BS EN 3 : Part 1 to 6 or BS EN 3: Part 7 to 10 or UL 299</td>
</tr>
</tbody>
</table>

FWP12.3.030.8 OPERATION

All extinguishers shall operate without inversion. They shall be so designed with clear indication on whether they have been operated. A device shall be incorporated in the extinguishers to prevent inadvertent operation.

FWP12.3.040.8 APPROVAL LETTERS

Approval letters for portable fire extinguishers issued by FSD, shall be produced for the CM’s inspection.

FWP12.3.050.8 TYPE TEST CERTIFICATES

Type test certificates from British Standards Institution, organisations recognised by British Standards Institution or the Underwriters Laboratories Inc. shall be produced upon request to show that the fire extinguishers are in compliance with BS EN 3 : Part 1 to 6 or BS EN 3: Part 7 to 10 or listed by UL basing on the investigation standards listed above.

FWP12.3.060.8 MARKING AND LABEL

1. All portable fire extinguishers shall be secured tightly with a label indicating the updated maintenance information in accordance with FSD’s requirements. The label shall be made of durable label approved by the Contract Manager;
2. Extinguishers shall be marked with the abbreviation of Hong Kong Housing Authority i.e. HKHA. The letters of the marking shall be 18 mm high and 12 mm wide and shall be painted on conspicuous position of the body subject to the Contract Manager’s Approval.
FWP12.4 FIXED SPRAYER UNITS

FWP12.4.010.8 TYPE
Fixed Sprayer units shall be self-contained automatically operated sprayer units to NFPA Standard 2001 or other standards where applicable, acceptable to FSD, clean agent type fitted with a sprinkler head which activates at 74 or 79°C approximately.

FWP12.4.020.8 IDENTIFICATION SYMBOLS
For rooms fitted with automatic extinguishers, identification symbols prescribed in Director of Fire Services Circular Letters shall be provided and fixed to each entrance door.

FWP12.4.030.8 APPROVAL LETTERS
Approval letters for fixed sprayer units issued by FSD shall be produced for the CM’s inspection.

FWP13.1 PAINTING

FWP13.1.010.8 SCOPE

1. Pipework, installation and equipment shall be painted for the purpose of corrosion protection, restoration of the paint-work to "as-new" condition and identification of the various services or as specified;

2. Pipework, installation and equipment shall not be painted except the following or where specified:
   a. Ductile iron pipes inside pump rooms and water tank rooms;
   b. Galvanised mild steel (GMS) pipes outside pipe ducts and suspended ceilings; and
   c. Carbon steel pipes and mild steel pipes.

FWP13.1.020.8 GENERAL

1. The Sub-contractor shall comply with the requirements on materials and workmanship for painting as specified in Worksection FIN7 unless otherwise specified;

2. Pipework, installation and equipment shall be painted with the correct identification colours, colour code indications and, where appropriate, directional arrows;

3. Pipework, installation and equipment to be painted shall be cleaned, prime coated with the appropriate primer and completed with two coats of synthetic paint in semi-gloss finishing in accordance with the manufacturer's recommendation. For GMS pipework, anti-corrosive primer suitable for galvanised steel shall be used;

4. The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the paints delivered to the site.

FWP13.1.030.8 UPVC PIPES

1. UPVC pipes shall not be painted except those exposed to sunlight, which shall be painted with white acrylic paint;

2. Self-adhesive colour bands shall be applied on each section of pipework for identification.

FWP13.1.040.8 DIRECTIONAL ARROWS

1. Directional arrows shall be painted on the pipes (except sprinkler pipes of less than 100 mm in diameter, drains, valves and fittings) on two visible sides at intervals not more than 6 m apart;

2. Directional arrows shall be white for dark background colours and shall be black for light background colours;

3. The length of the directional arrows shall be 150 mm and can be reduced to 75 mm for pipes equal to or less than 50 mm in diameter. The minimum body width of the arrow shall be 25 mm.

FWP13.1.050.8 IDENTIFICATION COLOUR CODE INDICATION

1. Unless otherwise specified, the identification colours, the colour code indications and the colour codes shall follow BS 1710 and BS 4800.
2. Unless otherwise specified, pipework shall be identified by painting or self-adhesive colour bands at suitable intervals not more than 6m apart as follows:

<table>
<thead>
<tr>
<th>Service Type</th>
<th>Basic Identification Colour Approx 150 mm wide for each ring</th>
<th>Colour Code Indication Approx 100 mm wide for each ring</th>
<th>Basic Identification Colour Approx 150 mm wide for each ring</th>
</tr>
</thead>
<tbody>
<tr>

<td>Green 12 D 45</td>
</tr>
<tr>
<td>Drain pipes</td>
<td>-</td>
<td>Black 00 E 53</td>
<td>-</td>
</tr>
</tbody>
</table>

3. Equipment and fittings shall be painted as follows:

<table>
<thead>
<tr>
<th>Service Type</th>
<th>Colour Code Identification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fresh water pumps</td>
<td>Manufacturer's standard colour or Blue (18 E 53)</td>
</tr>
<tr>
<td>Flush water pumps</td>
<td>Manufacturer's standard colour or Green (12 D 45); no painting on stainless steel components</td>
</tr>
<tr>
<td>Fire Services pumps</td>
<td>Red (04 E 53)</td>
</tr>
<tr>
<td>Rainwater irrigation pumps</td>
<td>Manufacturer's standard colour or Black (00 E 53); no painting on stainless steel components</td>
</tr>
<tr>

<td>Pump Control Panel (fresh water)</td>
<td>Blue (18 E 53)</td>
</tr>
<tr>
<td>Pump Control Panel (flush water)</td>
<td>Green (12 D 45)</td>
</tr>
<tr>
<td>Pump Control Panel (fire services water)</td>
<td>Red (04 E 53)</td>
</tr>
<tr>
<td>Pump Control Panel (rainwater)</td>
<td>Black (00 E 53)</td>
</tr>
</tbody>
</table>

4. GMS and ductile iron pipes inside pump rooms and water tank rooms shall be painted in lieu of colour bands as follows:

<table>
<thead>
<tr>
<th>Service Type</th>
<th>Colour Code Identification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fresh Water</td>
<td>Blue (18 E 53)</td>
</tr>
<tr>
<td>Flushing Water</td>
<td>Green (12 D 45)</td>
</tr>
<tr>
<td>Rainwater pipes</td>
<td>Green (12 D 45) with black (00E 53) colour ring of approx. 100mm wide at suitable intervals not more than 6m apart</td>
</tr>
</tbody>
</table>
FWP13.1.055.8 COLOUR BANDS
1. Colour bands shall be made of good quality, durable and self-adhesive PE sheet;
2. Colour bands for outdoor application shall be coated with UV inhibitor;
3. Colour bands shall be wrapped around the pipes with minimum 25 mm overlap;
4. Colour bands shall have minimum 3 years reputable local job references. The Contractor shall submit all relevant information and samples for Approval prior to ordering;
5. Combustible colour bands shall not be used in the Protected Means of Escape as defined in the Code of Practice for Fire Safety in Buildings published by the Building Department.

FWP13.1.065.8 LETTERING TO RAINWATER COLLECTION AND BREAK WATER TANKS
The following English letters with Chinese characters which shall be 75 mm high shall be painted on one conspicuous side of the rainwater collection tank and break water tank respectively by Main Contractor:
"Rainwater Collection Tank 雨水貯水缸"
"Break Water Tank 分隔水缸"

FWP13.1.070.8 AS-NEW CONDITION
At the time of handover the whole installation shall be in "as-new" condition. The Sub-contractor shall, during the course of the contract, protect all plant and equipment, and shall restore/repaint as necessary before contract completion.
FWP13.2 LABELS AND NOTICES

FWP13.2.010.8 LOCATION
Labels and/or notices shall be provided for all equipment, apparatus, fuses, terminals, lamps, switchgear, gauges, valves etc. wherever their provision will facilitate operation and maintenance of the installation, and where specified elsewhere.

FWP13.2.020.8 STATUTORY REQUIREMENTS
Labels and notices required by statutory requirements shall be inscribed accordingly whereas other labels shall indicate name and purpose of the equipment together with ratings and commissioned set values where applicable.

FWP13.2.030.A MATERIAL FOR LABELS
Unless otherwise specified, labels shall be made of multi-layer bi-colour plastic material with red outer layer and white inner layer for fire services installation and with black outer layer and white inner layer for water pump installation. The labels shall be resistant to discourting even under exposure to sunlight. Lettering shall be engraved on the plastic material by cutting away the outer layer to the outline of the required letters, exposing the inner layer underneath. The Sub-contractor shall be responsible for replacement of any label which is found discoloured at any time within Maintenance Period.

FWP13.2.040.8 INSCRIPTION
Inscription of labels and engraving shall be in both English and Chinese characters. Details shall be submitted for Approval prior to engraving.

FWP13.2.050.8 WARNING NOTICES
Notices, with at least 25 mm high lettering, as detailed in FWP11.2.050 shall be prominently displayed adjacent to each surface pump set or pair of surface pump sets, or in a prominent location above underground sumps and wells for submersible or semi-submersible pump sets.

FWP13.2.080.8 FIXING
1. Labels and notices shall be fixed by screws. Where drilling and tapping of the equipment is impracticable, adhesive may be used subject to prior Approval;
2. For pipelines or valves, where applicable, labels shall be fixed on plastic claim loops.
FWP13.3 DRAWINGS AND DIAGRAMS

FWP13.3.010.8 WORKING DRAWINGS AND FRAMED SCHEMATIC DIAGRAMS

Floor plan and sectional elevation of the building showing fire services installations, schematic diagram of the pipe installation and schematic diagram of the electrical control system shall be provided and fixed properly to the satisfaction of the Contract Manager in the locations hereunder. The diagram shall be of A2 size minimum, unless otherwise Approved and each diagram shall be treated, such as with acrylic varnish, to prevent deterioration and mounted in an anodised aluminium frame with transparent plastic front plate of 3 mm minimum thickness and wooden backing board of 5 mm minimum thickness:

Floor plans and sectional elevations of building showing the locations of the fire services installation provided inside fire control room shall be of A3 size and fixed by folders. The folders shall be housed in a proper container constructed by acrylic plastic and mounted on wall.

FWP13.3.020.8 AS-FITTED DRAWINGS

Separate set of as-fitted drawings including Approved conduit shop drawings shall be provided for each of the systems/installations listed in FWP13.3.010 above, incorporating all amendments made during the course of this Contract on completion of the Works. The complete Approved set shall consist of three (3) print copies, three (3) set of electronic copy in AutoCAD Format and Adobe Portable Document Format and one (1) sepia of each of the drawings conforming approximately to one or other of the following standard sizes:

1. 841 x 1189 mm (AO)
DRAWINGS AND DIAGRAMS

2. 594 x 841 mm (A1)
3. 420 x 594 mm (A2)
4. 210 x 297 mm (A4)

Boxes with proper numbering shall be provided for printed drawings and labelled with the project name, fire services and water pump installation together with comprehensive drawing list.

FWP13.3.030.8 INSTRUCTION MANUALS AND TESTING AND COMMISSIONING REPORTS

1. The Sub-contractor shall submit the following documents and technical literature to the Contract Manager for the whole installation and equipment provided under this Sub-contract, including, but not limited to, the following (See PRE.BS1.200):
   a. Table of Content with numbering and index;
   b. System description;
   c. Operation instructions;
   d. Maintenance instructions;
   e. Highlights on special precautions/procedures/methods required on the use, operation, cleaning, servicing, maintenance, repair and replacement of any proprietary material and equipment installed. Requirements on proper use and operation, durability, safety and statutory side shall also be stated clearly;
   f. Supplier list for major equipments;
   g. Catalogue, user manual, operation and maintenance manual for the installation such as motor, pump (including pump curve showing the operating point), sprinkler control valve, AFA panel and motor starter, etc.;
   h. Plant and equipment catalogue and user manual as required by the Contract Manager;
   i. Priced list of recommended spares (see FWP13.3.040 below);
   j. Priced list of special tools;
   k. Copy of the certificate of warranty for those material, equipment and installation with warranty period last beyond Maintenance Period;
   l. Testing and commissioning reports of the installation and equipment provided;
   m. Emergency call and maintenance services;
   n. Other items as required by the Contract Manager.
2. Draft copies in Box files with proper numbering shall be provided and labelled with the project name and, fire services and water pumps installation for comment and Approval;
3. After Approval, the Sub-contractor shall submit three (3) sets of electronic copy (in compact disc) for all items above in Adobe Portable Document Format to the Contract Manager;
4. For the Rainwater Harvesting System, the Sub-contractor shall submit, in addition to the whole documents and technical literature a “Water Safety Plan” which addresses the requirements stipulated in Section 4.1 of Code of Practice for Prevention of Legionnaires’ Disease.
FWP13.3.040.8  RECOMMENDED SPARES

The priced list of "Recommended Spares" referred to in FWP13.3.030 above shall include the following:

1. All bearings and bearing bushes;
2. All gaskets and jointing;
3. All seals, gland packings;
4. All filter cartridge and chemicals for rainwater harvesting system installation, etc.;
5. Other items as required by the Contract Manager.
FWP13.4 SPARES AND TOOLS

FWP13.4.010.8 WATER PUMP AND RAINWATER HARVESTING SYSTEM INSTALLATION

1. The Sub-contractor shall provide, for each Pump Room and rainwater harvesting system treatment facility room, one (1) complete set of spare fuses for each rating of fuse-switches or switch fuses installed including those fuses installed in the control circuit;

2. The Sub-contractor shall provide on the wall inside the Pump Room and rainwater harvesting system treatment facility room a wooden board with brass hooks and other device for holding the spare fuses for fuse switches or switch fuses;

3. The board shall be smoothed on both front and edges, and shall be painted to Approval;

4. Spare fuses for control circuit shall be properly fixed inside the control panel/cubicle;

5. The Sub-contractor shall provide the following spares for the rainwater harvesting system installations:
   a. One (1) complete set of spare filter cartridges for each cartridge filter installed in each rainwater harvesting system treatment facility room.

FWP13.4.020.8 FIRE SERVICES INSTALLATION

1. Tenders shall be deemed to have included sets of spare parts and special tools including spare sprinkler heads, replacement break glass plates, indicator lamps, special keys, fuses etc. as required by the Statutory Regulations and Standards in FWP1 of this Specification and for operation and maintenance of the plant and installation within the entire Maintenance Period. In addition a complete list of all replaceable parts with model number, part number and price shall be submitted together with the tender for purchase and use after the expiration of the Maintenance Period;

2. The Sub-contractor shall provide the following spares for the fire services installations in each building:
   a. Ten (10) of hose reel nozzles for each separate fire hydrant/hose reel system;
   b. Ten (10) glasses and two (2) keys of the break glass unit for each alarm system;
   c. Twenty-four (24) sprinkler heads for Ordinary Hazard installations and two (2) sprinkler spanners for each type of sprinkler used in each sprinkler system;
   d. One (1) complete set of spare fuses for each rating of fuse-switches or switch fuses installed in each Pump Room including fuses for control circuits.

| FWP14.6.040.8 | CONDITIONS OF CONTRACT                                        | 23 |
FWP14.1 INITIAL TESTING AND COMMISSIONING

FWP14.1.010.8 PRE-TEST CLEANING

Before installations are subjected to inspection, testing and subsequent handover, the entire installation shall be thoroughly cleaned internally and externally. All water installations shall be flushed out with clean water. During the flushing operation provision shall be made to exclude filters, pumps, meters and any other item of plant which could be damaged during the cleaning operation.

FWP14.1.020.8 PERFORMANCE TESTS, ADJUSTMENTS AND COMMISSIONING

1. The Sub-contractor shall carry out complete performance tests for all equipment and systems installed by him, make all necessary adjustments, including setting all controls and checking the operation of all protective and safety devices, and commission the installations, in accordance with the manufacturers' instructions, the requirements of the statutory rules and regulations and to the satisfaction of the Contract Manager before the installations will be accepted;

2. Prior to any tests, the Sub-contractor shall submit detailed procedures and a programme for testing and commissioning for Approval;

3. The test shall be witnessed by an authorised representative of the Contract Manager and a report shall be submitted for record purposes.

FWP14.1.030.8 PERIOD OF NOTICE

Forty-eight (48) hours notice shall be given by the Sub-contractor to the Contract Manager of his intention to carry out installation tests.

FWP14.1.040.8 TEST INSTRUMENTS

1. In addition to PRE.BS1.630 which specifies the provision of a set of measuring instruments for BSPASS and the Contract Manager's Representatives' use, which will be under the custody of the CMR, the Sub-contractor shall provide all necessary instruments used for measurement and testing of the installation. Except for manual / electric hydraulic pump with pressure gauge given in sub-clause (2)(o) and smoke canister for testing smoke detectors given in sub-clause (2)(p) below, the instruments used shall be calibrated with traceability to internationally or nationally recognized standards;

2. Instruments required for inspection and testing purpose whenever necessary shall include, but are not limited to, the following:
   a. Measuring tape;
   b. Vernier caliper;
   c. Clamp-on ammeter;
   d. Multimeter;
   e. Multi-function electronic meter for measurement of current, voltage;
   f. Insulation resistance tester;
   g. Earth loop impedance tester;
   h. Pressure gauge;
i. Fire hydrant flow gauge;

j. Sound level meter;

k. Dial gauge;

l. Digital stop watch;

m. Male instantaneous coupling to BS 336;

n. Manual / electric hydraulic pump with pressure gauge;

o. Smoke canister for testing smoke detectors;

p. Carpenter (spirit) level.

3. Each piece of instrument shall carry an indelible identification mark, and a label showing the due date for calibration (except otherwise calibration is specified not necessary);

4. The Sub-contractor shall submit evidence of calibration such as calibration certificates and records of calibration results of the instruments used for the Contract Manager's Approval when required. The Contract Manager may reject any instrument(s) which, in his opinion, is not suitable for the inspection or test and the Sub-contractor shall replace the instruments when required.

FWP14.1.050.8 LABOUR AND MATERIALS

1. The Sub-contractor shall despatch competent and experienced commissioning engineers and technicians to carry out the testing and commissioning of the installations;

2. All labour and materials necessary for carrying out the work shall be provided by the Sub-contractor, except that the Main Contractor will supply electricity and water as required;

3. The Sub-contractor shall supply any necessary diesel or other fuel oil for engine-driven pumps, sufficient test gases required for the discharge tests of the gas extinguishing system installations etc;

4. The Sub-contractor shall also replenish all fire extinguishing media and other materials expended or used during the tests and ensure that the entire installations are in "as new" condition at the conclusion of the tests.

FWP14.1.060.8 WATER SYSTEM TESTS

1. Water systems and circuits shall be tested hydraulically to a minimum pressure of 1000 kPa or 1.5 times the working pressure whichever is higher applied at the highest point of the system and held for a period of not less than 15 minutes for fire services installation (except sprinkler installation) and 24 hours for water feed pump installation without leaks appearing. For sprinkler installation, the hydraulic test for pipework shall be in accordance with the LPC Sprinkler Rules;

2. After flushing out the pipework, a flow test shall be performed on the hydrant/hose reel system in accordance with the Fire Services CoP;

3. A water supply test with the drain and test valves fully opened shall be made on the sprinkler system in accordance with the LPC Sprinkler Rules. An alarm test on the water gong shall also be carried out by opening the test valve to ensure that the alarm shall continuously sound in 30 seconds after the flow in the system is detected;

4. The Sub-contractor shall provide whatever hoses or drainage channels are required to safely remove the test water discharged while carrying out these tests in order to ensure that no damage to the building and property will be caused by the test water;

5. All welded joints shall be hammer tested and remain firm;
6. Following the above, a normal working test shall be carried out, during which time adjustments and regulation of valves shall be effected.

FWP14.1.070.8  ELECTRICAL AND ALARM SYSTEMS TESTS

1. Electrical Wiring systems shall be tested generally as required by the latest edition of the Electrical CoP and the HKHA Electrical Installation Specification. Low-voltage wiring shall be insulation tested to a d.c. voltage of twice the normal working voltage of the system. Any tests that are liable to cause damage to the delicate components such as those incorporating electronic circuits shall be carried out with the components disconnected;

2. For electrical power circuits other than those for fire services, tests shall include but not be limited to the measurement of power ratings, power factor and total harmonic distortion in order to ensure the systems are in compliance with the BEC;

3. Smoke detectors shall be checked for correct sensitivity settings by means of manufacturer's test set and for operation by simulated smoke tests using freon;

4. Rate-of-rise heat detectors shall be tested by gentle application of a heat source such as a hair dryer. Fixed temperature heat detectors must not be tested other than using simulated tests;

5. Battery capacity shall be tested by discharging through the alarm circuits and being charged via the incorporated charger unit. The specific gravity of the electrolyte shall be tested with a clean hydrometer;

6. The input d.c. supply to the alarm supervisory circuitry shall be checked for correct voltage and stability such as to match the signal and alarm triggering devices;

7. Audio / Visual Advisory (AVA) system control panel, audio equipment and speakers shall be adjusted and tested such that sufficient sound pressure level can be achieved in all the protected areas;

8. Flashing directional sign boxes shall be tested to verify the proper operation of the AVA System zoning.

FWP14.1.080.8  GAS EXTINGUISHING SYSTEMS TESTS

1. Gas extinguishing system manifolds shall be tested in accordance with FWP9.7.090. Pipework shall be tested to a minimum of 1.5 times the operating pressure of the system;

2. Apart from the performance and electrical tests as indicated above, a discharge test using 10% of the required quantity of the extinguishing agent shall also be performed to ensure continuity of pipework and freedom of discharge through nozzles.

FWP14.1.090.8  FSD INSPECTION AND WITNESS OF TESTS

Additional tests, where not specified in the Specification, shall also be carried out to meet the requirements of the Fire Services CoP to the satisfaction of FSD. The Sub-contractor shall make all necessary applications to FSD and attend upon their representative for the purpose of these tests and inspections.
FWP14.1.100.8 PUMP ROOM NOISE LEVEL TESTS

1. Pump room noise levels shall be measured at the nearest noise sensitive receiver and corrected in accordance with the requirements stipulated in the "Technical Memorandum for the Assessment of Noise from Places other than Domestic Premises, Public Places or Construction Sites", hereinafter referred to as the "Technical Memorandum", issued by the Environmental Protection Department. A measurement report which shall be endorsed by an independent consultant employed by the Sub-contractor shall be submitted to the Contract Manager for Approval;

2. Sound level meters used for the measurements shall comply with the Standard specified in the "Technical Memorandum";

3. Both air and structure borne noises emanated from pump rooms shall be measured to verify their compliance with the requirements stipulated in the "Technical Memorandum" in all circumstances.

FWP14.1.105.8 72-HOUR RECORDING OF FRESH AND FLUSH WATER PUMP OPERATIONS

1. After completion of installation and tenant intake, 72-hour recording of fresh and flush water pump operations over Saturday and Sunday shall be carried out for each building block by the Sub-contractor using automatic recorders to confirm the properness of the pump control settings. The records shall show clearly the time and duration of individual pump operations and be submitted to the Contract Manager for approval;

2. Any control irregularities identified shall be remedied and further recordings shall be carried out until a proper 72-hour pump operation pattern is achieved to the satisfaction of the Contract Manager.

FWP14.1.110.8 TESTING AND COMMISSIONING REPORT

A testing and commissioning report shall be forwarded to the Contract Manager within fourteen days after completion of commissioning the installation. The report shall be verified and endorsed by the Supervising Engineer in accordance with FWP1.5.020 sub-clause (1).

FWP14.1.120.8 WATER QUALITY TESTS FOR RAINWATER HARVESTING SYSTEM INSTALLATION

1. The Sub-contractor shall carry out the first water quality test for the rainwater harvesting system installation after system commissioning to ensure that the water quality requirement has been satisfied. If rain is unavailable for the test, the Sub-contractor shall coordinate with the Main Contractor to pour fresh water supplied by the Main Contractor at catchment areas selected by the Contract Manager to facilitate the test. The second water quality tests shall be carried out after the tenth rainy day or at a specified date before the Contract Completion as instructed by the Contract Manager to monitor the stability of the water treatment performance subsequent to the first water quality test. Afterwards, regular water quality tests shall then be carried out during the Maintenance Period according to the frequency as specified in sub-clause (3) of FWP14.4.060;

2. The Sub-contractor shall make sure the harvested water quality to conform to the parameters of water quality requirement as follows or the latest requirements / standards as specified by the Water Authority, whichever is the stringent:
<table>

</table>

All testing parameters as specified above shall be tested by an accredited laboratory. If water sampling results are satisfactory, system can be operated with the current water treatment set point. For any incidence of unacceptable water quality, the system shall be suspended until the problem is solved and to the satisfaction of the Contract Manager;

3. The methods for collecting water samples and preservation and handling of water samples for testing Legionella and HCC shall comply with relevant internationally recognised standards, such as AS/NZS 2031, BS 7592, BS EN ISO 5667-3, or BS 6068-6.3;
4. The test plan and schedule detailing the sampling points and time shall be submitted to relevant government departments or the designated consultant for comments and acceptance if necessary as directed by the Contract Manager;

5. A testing report issued by the accredited laboratory shall be forwarded to the Contract Manager within fourteen days after completion of the water quality test.

FWP14.1.130.8 TRAINING FOR RAINWATER HARVESTING SYSTEM INSTALLATION

1. The Sub-contractor shall provide 2 training courses as instructed by the CM on the operation and maintenance of the whole rainwater harvesting system installation;

2. The Sub-contractor shall submit the operation and maintenance manual for the rainwater harvesting system installation and obtain an Approval for the manual by the CM prior to the commencement of the training courses;

3. One training course shall cover detailed operational procedures and steps and precautions for training operational and maintenance staff. The other training course shall cover brief description of the system and precautions for briefing management staff and / or non-technical staff. Training notes / manuals are required in both English and Chinese. At least 5 seats shall be given for each training course. Training Venue shall be on Site or other venues as instructed by the CM.
FWP14.2 MAINTENANCE PERIOD

FWP14.2.010.8 DEFINITION

The Sub-contractor shall furnish maintenance for the complete fire services installation and water pump installation for a period of twenty-four (24) months following the certified competition date of the Main Works or any Section(s) of the Main Works.
FWP14.3 GENERAL MAINTENANCE

FWP14.3.010.8 SCOPE
General maintenance shall comprise all items included in this sub-section.

FWP14.3.020.8 REPAIRS AND REPLACEMENTS
All repairs and replacements necessary to maintain the installations in good working order, including supply of materials and labour, carried out in accordance with the manufacturers' recommendations/instructions to the satisfaction of the Contract Manager.

FWP14.3.030.8 CONSUMABLES
Supply of all normally consumable items including lubricants, cleaning materials, fire extinguishing media, fuses, lamps etc. as required.

FWP14.3.040.8 REGULAR MONTHLY VISITS
Regular monthly maintenance visits covering full inspection, lubrication, cleaning, adjustment, testing, and keeping all equipment in first class operating condition.

FWP14.3.050.8 RECORD OF SITE ATTENDANCES
1. To record all site attendance, on arrival and departure, for regular service visits or emergency breakdown call, together with details of the work carried out, in the record book held at the estate office;
2. To note comments, insert in the record book, and action accordingly;
3. A report in duplicate shall be sent to the Contract Manager immediately following a major repair, repeated breakdowns of service due to system or equipment fault of similar nature, or as and when required by the Contract Manager;
4. The report shall include the cause necessitating such a repair, the reasons for such a breakdown of service and the time and date of remedial action taken, of completion of repair and of the resumption of normal service;
5. A list of equipment replaced shall be attached to the report.

FWP14.3.060.8 SIGNING RECORD BOOK
1. For each routine or call out visit, during the Maintenance Period, the workman, on arrival at the Estate, shall report to the Estate Office and sign a "Fire Services and Water Pump Maintenance Record Book", which shall be submitted by the Sub-contractor and shall be kept by the officer-in-charge of the Estate;
2. At the time of signing, they shall note any message written in the book concerning the performance of the Fire Services and Water Pump Installations in the Estate, and shall take such action as may be required;
3. When leaving the Estate, the workman shall report to the officer-in-charge and enter in the "Fire Services and Water Pump Maintenance Record Book" a brief report on any work completed, or on the fact that they have found the system operating satisfactorily;
4. In general, the "Fire Services and Water Pump Maintenance Record Book" shall include, but not limited, to the following items:
   a. The name of the responsible person;
b. Brief details of any servicing arrangement;

c. Dates and times of all alarms (genuine, practices, test or false) together with their causes where known;

d. Dates, times and types of all defects and faults;

e. Dates and types of all test and servicing;

f. Dates and times of all periods of disconnection;

g. All alteration to the system.

FWP14.3.070.8 RESPONSE TIMES

Immediate answering of breakdown calls, whether true or false, and attendance to such calls in accordance with the requirements stipulated below:

<table>
<thead>
<tr>
<th>Description</th>
<th>Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Arrival for maintenance in the case of interruption of fresh water supply</td>
<td>Within 1 hour</td>
</tr>
<tr>
<td>Arrival for maintenance in the case of interruption of flush water supply</td>
<td>Within 2 hours</td>
</tr>
<tr>
<td>Resumption of fresh water supply</td>
<td>Within 9 hours after inspection</td>
</tr>
<tr>
<td>Resumption of flush water supply</td>
<td>Within 20 hours after inspection</td>
</tr>
<tr>
<td>Arrival for maintenance for incidents not affecting fresh or flush water supply</td>
<td>Within 2 hours (3 hours if call from outlying islands) during normal working hours; Within 3 hours out of normal working hours</td>
</tr>
</tbody>
</table>

FWP14.3.080.8 CONTACT POINTS

In connection with FWP14.3.040 to FWP14.3.060 above, the Sub-contractor shall submit the name and telephone number of the responsible persons to be contacted 24-hours a day together with the proposed schedule for the monthly regular maintenance visits at the start of the Maintenance Period.

FWP14.3.090.8 COMPETENCE OF ENGINEERS

1. Despatch competent and experienced maintenance personnel equipped with the appropriate testing instruments, tools, equipment etc. to inspect, service, test, adjust and maintain the fire service, rainwater harvesting system and water pump installation in a satisfactory operating condition. Allow for carrying out such inspection, service, testing, adjustment and maintenance at a time outside normal office hours including general holidays;

2. Particularly in the case of complex fire service, rainwater harvesting system and water pump installations, arrange for at least two senior servicemen being thoroughly familiarised with all aspects of such installation to be responsible for inspection, maintenance and testing of the installation. In this type of installation the Sub-contractor must be prepared to provide a high level of service, allowing for more frequent servicing of environmentally sensitive equipment and when necessary, to ensure prompt rectification of the faults resulting in unacceptably high rate of false alarms all at the expense of the Sub-contractor.
FWP14.3.100.8 24 HOUR ON-CALL SERVICE

1. The Sub-contractor shall provide 24 hour on-call service at any time during the Maintenance Period;

2. The Contract Manager may instruct the Sub-contractor, in the Maintenance Period, via telephone, mobile phone, paging service or any other means as advised by the Sub-contractor and Approved by the Contract Manager, to attend to reported breakdowns, and the Sub-contractor shall dispatch competent technicians or such other suitable personnel, who shall arrive at site and shall carry out any necessary inspection, testing and repair work within the time specified under FWP14.3.070 and under all weather conditions. In the event that it is not possible to meet the requirement as stipulated in FWP14.3.070, the Sub-contractor shall explain immediately to the Contract Manager or his or her representatives the reason for such non-conformance;

3. The Sub-contractor shall submit to the Contract Manager for this purpose at least two names of English speaking representatives, who can be reached at any time of the day, with contact telephone numbers of direct lines, mobile phones or paging service for Approval;

4. Prior Approval shall also be obtained for any subsequent changes of representatives, contact telephone numbers etc. during the Maintenance Period at least two weeks before the change is effected.
FWP14.4 PARTICULAR MAINTENANCE

FWP14.4.010.8 FIRE DETECTION AND ALARM SYSTEM

1. The Sub-contractor shall visit the installation at least once every three months to carry out tests, repairs and adjustment. All environmentally sensitive devices e.g. smoke and heat detectors, electronic sensors, relay contacts, plug and socket contacts, printed circuit boards, edge connectors etc. shall be inspected, cleaned, adjusted, and calibrated. During the visits, the following tests and checks should be made:

2. A test sequence shall be carried out in accordance with the manufacturer's instructions. The test sequence shall prove:
   a. That the condition of the wiring, controls and indicating equipment of all zone circuits are in good working order;
   b. That the alarm condition on each zone will activate the common alarm circuits. If manual fire alarm call points are fitted the alarm conditions shall also be initiated by the operation of one such call point in each zone. A different manual fire alarm call point shall be used on each occasion and a record must be kept by the Sub-contractor;
   c. That activating the common alarm circuits will result in the operation of the alarm bells and the satisfactory transmission of the alarm signal to the appropriate Fire Services Communication Centre if equipped with a direct line connection;
   d. Also that activating the common alarm circuits will result in the starting/stopping of the ventilating fans and/or fire booster pumps as desired and result in the operation of any Fireman's lift, if control circuits for such operation are provided in the system.

3. The operation of alarm bells and the transmission of the alarm signal may be suppressed during tests 1 and 2. Tests 3 and 4 will prove that all system alarms and relevant controls are operating correctly;

4. In the course of the test sequence, the correct operation of all indicators including fault warnings and all alarm bells shall be noted and checked. All indicating lamps shall be checked and, if found defective, shall be replaced by the Sub-contractor at his expense;

5. About 20% of the detectors, chosen at random, with at least one unit in each zone shall be subjected to a simulated functional test. Smoke detectors shall be tested with freon and rate-of-rise heat detectors with an artificial heat source e.g. hair dryer respectively;

6. Battery and chargers shall be examined and tested to ensure they are in good and proper serviceable condition. Battery terminals and connectors shall be tightened and the former shall be cleaned and protected with petroleum jelly. Electrolyte shall be topped up as necessary and its specific gravity shall be measured and corrected to the appropriate value if required. Battery shall also be discharged and recharged to ensure compliance with the AFA Rules;

7. The d.c. power supply to the alarm supervisory circuitry shall be checked and adjusted for correct voltage and stability;

8. In addition to above, the direct line connection to the Fire Services Communication Centre shall be tested once every 2 weeks by the Sub-contractor.
PARTICULAR MAINTENANCE

FWP14.4.015.8 AUDIO / VISUAL ADVISORY SYSTEM

1. The Sub-contractor shall visit the installation at least once every three months to carry out the following tests including necessary repairs and adjustment:
   a. All components, including cables, panels, power supply equipment and batteries, etc. shall be tested and examined as specified in FWP14.4.010 and ELE30;
   b. The audio advisory system shall be tested and examined as specified in ELE25.5.

FWP14.4.020.8 FIXED FIRE PROTECTION SYSTEMS USING GAS EXTINGUISHING AGENTS

The Sub-contractor shall visit each installation at least once every three months and carry out the following tests including necessary repairs and adjustments:

1. All electrical components, including cables, detectors, relays, alarm panel and bells, batteries etc. shall be tested and examined as specified in FWP14.4.010;

2. All automatic/manual release mechanism shall be checked and serviced in accordance with the manufacturer’s instructions to ensure their proper operation. The Sub-contractor shall be responsible for ensuring that all such mechanisms are properly lubricated and kept free from corrosion;

3. All pipes and fittings shall be checked for leakage and corrosion and repaired or repainted as necessary. All valves shall be checked for freedom of operation and nozzles shall be cleaned by removing the dust, dirt and other obstacles deposited on them;

4. All cylinders containing the chemical extinguishing agents shall be checked to ensure that the contents are up to the specified standard and are so marked with paint on the outside of cylinders. The Sub-contractor shall recharge any cylinders to the specified content level if carbon dioxide cylinders are found to exhibit a 10% loss of content by weight except where the discharge (usually total) is due to genuine fire, false alarm or accident caused by others. However, where the discharge is due to a faulty detector or other part of the equipment the Sub-contractor shall recharge the system at his own expense;

5. All warning notices and operating instructions shall be checked to ensure that they are fixed in the proper position, are in a readable condition and are both in English and Chinese unless otherwise confirmed in writing by the Contract Manager;

6. All time delay and lock-off devices shall be inspected and tested to ensure that they are in correct working condition;

7. The coincident unit shall be checked for proper function by actuating detectors of two separate zones;

8. All ancillary functions of the system such as shutting off air-conditioning/ventilation plant, lowering fire shutters or curtains etc. shall be checked for proper operation.

FWP14.4.030.8 WATER PUMP INSTALLATION AND FIXED FIRE SERVICES SYSTEMS USING WATER

The Sub-contractor shall submit for the CM’s approval the maintenance schedule indicating the dates for routine maintenance, and inspection check lists, for the quarterly, half-yearly and annual maintenance service before commencement of the Maintenance Period.

The Sub-contractor shall visit the fire services and water pump installation, including water pumps and the associated electrical works and controls, at least once every three months and carry out the following inspection, tests, adjustment and repairs:
1. All electrical components including cables, alarm panel and bells, batteries, control relays, starters etc. shall be inspected and tested as specified in FWP11 and FWP14.4.010 above;

2. All pipes and fittings shall be checked for leakage and corrosion and repaired or repainted as necessary. All valves shall be checked for freedom of operation, all control valves kept locked in the "open" position by strapping as applicable, inlet valves correctly bonded to earth, water supplies maintained in service etc.;

3. Inspection shall be carried out to ensure that all sprinkler heads are maintained in good working condition, clean and free from corrosion and are not covered with distemper, paint, dust, fluff etc. Any sprinkler heads found defective and suspected of being defective shall be replaced;

4. Water and air pressure gauges must be inspected to ensure that correct pressures are maintained. Gauges shall be calibrated at regular intervals. Water levels and air pressure in pressure tanks must be checked to ensure that they are maintained in proper condition;

5. An alarm test shall be made on the sprinkler system by opening the test valve and the time taken to sound the alarm gong noted. The alarm shall be allowed to ring for about 30 seconds in order to ascertain that it is not ringing intermittently. Any repairs or adjustment which may prove to be necessary after the test shall be carried out with no delay;

6. The alarm and functional signals shall be checked to ensure that they are properly transmitted to the central control and supervisory panel;

7. All metallic elevated, priming and pressure tanks constructed by the Sub-contractor shall be inspected for sediments, rust and corrosion. The Sub-contractor shall remove sediments, rust and repaint the corroded parts as necessary;

8. The Sub-contractor shall grease the valves, the bearing and other relevant mechanical parts of the pumps, motors and engines as recommended by the manufacturers. A test run of at least 10 minutes shall be performed on each pump to ensure the pumping systems are in satisfactory operating condition. Engine driven pumps shall be capable of being started in 30 seconds or less. All manual and automatic starting and control mechanism, components, switches etc. shall be checked for proper functioning;

9. The Sub-contractor shall replace, as required, all parts such as bearings, valve seats, packing etc. due to wear and tear. In addition the Sub-contractor shall maintain in good working order the engines, the motors and also the electrical power supply to the pumps to and from its electrical isolator or switch-fuse, including changeover switches (if any), starters, fixed and flexible conduits between isolator/switch-fuse and cables therein. The Sub-contractor shall also maintain all pump control pressure and level switches in good order and inspect circuitry as previously indicated for electrical systems;

10. All strainers shall be cleaned by the Sub-contractor;

11. In addition to the above, the Sub-contractor shall carry out half-yearly the following maintenance service, including but not be limited to:
   a. Check condition of tie-rods and vibration eliminator;
   b. Check coupling alignment and cushions wear,
   c. Dismantle, clean and re-fix all ball float valves and replace rubber pad as necessary;
   d. Check and secure mounting of guide pipe and condition of bracket;
   e. Operate pump to check abnormal noise of pump set under operation;
f. Check condition of grease nipple for use;
g. Check abnormal vibration of operating pump set due to deterioration of mounting plate/spring isolator/concrete plinth;
h. Check abnormal vibration due to breakage of mounting bracket/spring pipe hanger;
i. Operate pump to check proper operation of all pressure switches, level switches including sump tank low level switch and roof tank high/low level switches and adjust them as necessary;
j. Measure the pressure and flow rate of the pump and check the readings with last record to ascertain impeller/diffuser and wearing ring condition;
k. Check shaft packing with suitable spillage and adjust the packing gland or replace the packing as necessary;
l. Check and keep free flow in the packing water drain pipe and clean it as necessary;
m. Check operation condition and any leakage of drain plug and vent cock, etc.;
n. Check the pressure of water hammer arrester, if any, and recharge it according to manufacturer’s recommendation when necessary.

FWP14.4.040.8 PORTABLE EQUIPMENT

1. Portable equipment if supplied and installed by the Sub-contractor shall be inspected and checked annually to ensure that they are in good working condition;

2. Any fire extinguishers and fixed sprayer units losing 10% of its nominal content by weight shall be recharged / replaced to the required standard.

FWP14.4.050.X DELETED

FWP14.4.060.8 RAINWATER HARVESTING SYSTEM INSTALLATION

1. The Sub-contractor shall provide the following maintenance service during the Maintenance Period:

   a. Check the condition of all components for the rainwater harvesting system installation according to the schedule as specified in sub-clause (2) of FWP14.4.060 and repair/replace the faulty component(s) as necessary;

   b. Conduct the water quality tests on the testing parameters according to the frequency as specified in sub-clause (3) of FWP14.4.060;

   c. Submit a monthly operation and maintenance report which shall record the operation data of the rainwater harvesting system installation including electricity, rainwater and fresh water consumption and the maintenance activities conducted for each month, every two month or each quarter;

   d. All monthly, bimonthly or quarterly activities shall be recorded in record book as specified in FWP14.3.060;

   e. Replenish all the necessary chemicals for the chlorine dosing system.

2. The maintenance schedules shall include, but not be limited to, the following components. The Sub-contractor shall submit a specific maintenance schedule including all the offered equipment and recommendations from the manufacturers for the Contract Manager's Approval.

</table>
3. Sampling and testing of water quality parameters of treated rainwater shall be conducted monthly during rainy season (Apr – Sept) and quarterly during dry season (Oct – Mar).

a. Testing reports issued by the accredited laboratory shall be forwarded to the Contract Manager within fourteen days after completion of the water quality test;

b. If the testing results indicate that the testing samples exceeded the water quality standards as specified in sub-clause (2) of FWP14.1.120, the use of the rainwater harvesting system installation shall be suspended until the problem is resolved and to the satisfaction of the Contract Manager. System operation shall be investigated and subsequent re-sampling and testing shall be performed to confirm the results. Investigation report with remedial proposals shall be submitted for the Contract Manager's Approval prior to implementation of the proposed rectification works. The Sub-contractor shall be responsible for all the costs for investigation and rectification works;

c. Proper measures to prevent health risk or nuisances to the public (e.g. limit the irrigation time and frequency or suspension of the use of Rainwater Harvesting System) shall be carried out according to the nature of the problems and possible consequences.

FWP14.4.070.8 FLUSH WATER PRV FAULT INDICATION SYSTEM

1. The Sub-contractor shall dispatch competent and trained technicians to carry out routine maintenance and servicing works for the PRV fault alarm indication system in order to maintain its proper working condition to the satisfaction of the CM;
2. A brief outline of the routine maintenance and servicing works required to be carried out by the Sub-contractor is given in this clause, which is by no means exhaustive. The Sub-contractor shall base on his own engineering judgement and recommendation of the manufacturers to include any other items of work which are essential to the proper and efficient operation of the system. Detailed maintenance proposal shall be submitted to the CM for approval;

3. The Sub-contractor shall provide the following maintenance service during the Maintenance Period:

<table>
<thead>
<tr>

FWP14.5 ANNUAL AND FINAL MAINTENANCE, TESTING AND HANDOVER

FWP14.5.010.8 FIRE DETECTION AND ALARM SYSTEM
At the annual and final inspection, the Sub-contractor shall, in addition to the quarterly inspection and testing, take down all smoke detectors, clean them "in-situ" in accordance with the manufacturer's instructions, test them for correct operation with the manufacturer's test set before reinstating them for service. Any defective detectors shall be replaced or "factory cleaned" to the manufacturer's recommendation before reinstated for service. Any smoke detectors subjected to dust and dirt accumulating shall also be despatched for factory cleaning as instructed by the Contract Manager. All detectors removed for factory cleaning shall be replaced with spare units or alternatively a separate surveillance system shall be provided to cover the unprotected areas as resulted. All expenses for the above work shall be born by the Sub-contractor.

FWP14.5.015.8 AUDIO / VISUAL ADVISORY SYSTEM
The Sub-contractor shall carry out the same extent of work as the quarterly inspection, testing and maintenance services stipulated in FWP14.4.015.

FWP14.5.020.8 FIXED FIRE PROTECTION SYSTEMS USING GAS EXTINGUISHING AGENTS
The Sub-contractor shall carry out the same amount of work as the quarterly inspection, testing and maintenance services.

FWP14.5.030.8 WATER PUMP INSTALLATION AND FIXED FIRE SERVICES SYSTEMS USING WATER
At the annual and final inspection, the Sub-contractor shall, in addition to the quarterly inspection and testing, carry out the following inspection, tests, adjustment and repairs as required:

1. 
   a. Inspection and testing and by means of wet drill on the hydrant and hosereel installation shall be carried out in accordance with the FSD requirement. The wet drill shall consist of coupling lengths of hose to two or more hydrants and opening the valve to produce water at the nozzles. Great care and precise liaison with all concerned must be exercised by the Sub-contractor to guard against flooding and water seepage. The Sub-contractor shall be liable to bear the full cost of any damage due to flooding and seepage. Hydrants not used at the wet drill shall each be fitted with a blank cap over the outlet, and checked by opening and closing the valve and spindle to ensure that they are free in operation;

   b. Testing of the pressure and flow of the water supply on the hydrant and hosereel installation should be done from the outlets at the highest point. The opening of two or more outlets and directing the water from the roof tanks should be sufficient to indicate the state of the water supply, but if there is any doubt as to the flow or pressure of the water, a more accurate test with suitable gauges should be carried out.

2. Each length of hose shall be uncoiled, laid out straight and examined;
3. The test shall be made with the drain and test valves in accordance with LPC Sprinkler Rules;

4. The concrete water tanks constructed by the Main Contractor shall be inspected for rusting and sediments. The sub-contractor shall inform the Contract Manager in writing if any cleaning and rectification on the tanks are necessary.

FWP14.5.040.8 PORTABLE EQUIPMENT
The Sub-contractor shall carry out annual and final inspection as FWP14.4.040.

FWP14.5.050.8 TESTS AT EXPIRY OF MAINTENANCE PERIOD
At the end of the Maintenance Period the Sub-contractor shall repeat the following tests to the satisfaction of the Contract Manager.
1. All function test for water pumps and pump control cubicles;
2. Cleaning all strainers.

FWP14.5.060.8 FINAL ACCEPTANCE TEST AND CERTIFICATE OF MAINTENANCE FOR FIRE SERVICES INSTALLATIONS
At the end of the Maintenance Period, the Sub-contractor shall ensure that the installations are in an "as-new" condition and shall carry out a final acceptance test for the fire services, rainwater treatment and water pump installation. A Certificate of Maintenance (FS 251) shall be submitted to FSD with a copy to the Contract Manager within 14 days after the annual and final tests. The certificate together with a list of the fire services installation and equipment shall also be copied, framed and displayed in a prominent area of each building concerned under the direction of the Contract Manager.

FWP14.5.070.8 HANOVER
The services installations will not be deemed as acceptable for handover to the Contract Manager until each installation is in good working order and all "as-fitted" drawings, instruction and maintenance manuals, spare parts lists, test reports, test certificates etc. have been submitted to the Contract Manager.
**FWP14.6 RESPONSIBILITIES**

**FWP14.6.010.8 SAFETY OF INSTALLATIONS**

The Sub-contractor shall be responsible for all repairs necessary to maintain the installations in a safe, reliable and operative condition at all times. Ensure that servicing staff carry out necessary repairs immediately, utilising manufacturer’s original replacement parts. Any component taken down for servicing shall be reinstated within 2 hours or otherwise replaced by a spare unit at the Sub-contractor’s expense.

**FWP14.6.020.8 INTERRUPTION OF FIRE SERVICES**

The Sub-contractor shall ensure minimum interruption to the functioning of the fire service installation during each inspection, testing, repair or maintenance service. He shall inform FSD of the commencement and completion of each job whenever the disconnection, reconnection or testing of the fire services communication direct line is involved. Where any part of the fire service installation is out of service temporarily during the progress of work, the Sub-contractor shall place a suitable notice in a prominent position on the Control Panel so that the client is aware of the situation and FSD will not be called out unnecessarily. This is, however, not to be construed as an authority to leave any part inoperative for an undue length of time.

**FWP14.6.030.8 REPLACEMENTS**

1. The Sub-contractor shall, as and when instructed thereof by the Contract Manager, repair or replace at his own cost any part of the system proved to be defective by reason of Sub-contractor’s negligence, faulty design, inadequate routine maintenance and supervision, workmanship or materials. No claim whatsoever shall be made by the Sub-contractor for such repair or replacement if it is within the scope of the Sub-contractor’s responsibility;

2. Any renewals or repairs necessitated by reason of negligence or misuse of the equipment or by reason of any other cause beyond the Sub-contractor’s control (with the exception of ordinary wear and tear) shall be carried out at an additional cost with prior notice to the Contract Manager.

**FWP14.6.040.8 CONDITIONS OF CONTRACT**

1. The maintenance and servicing works as described in FWP14 form part of the Main Works under Clause 8.3(2)(c) of the General Conditions of Main Contract;

2. The Sub-contractor’s attention is drawn to Clause 5.13 of the General Conditions of Main Contract, which appertains throughout the Maintenance Period, and before commencing any work ordered under Clause 10.1 of the General Conditions of Main Contract, the Sub-contractor shall, at his own expense, make all suitable arrangements to avoid damage to property or installations provided by others.

FWP15.1 SYSTEM COMPONENTS

FWP15.1.010.8 CARTRIDGE FILTER

1. Cartridge filter shall be capable to remove 90% of all suspended particulate with diameter equals ten-micron or above;
2. The filter cells shall be assembled in cartridges for easy replacement on site;
3. The filter cells shall be so arranged that the water stream passes uniformly and proportionally through the filter cells. Provision shall be made to retain filter in position and prevent migration and settlement;
4. Filter vessel shall be made of stainless steel of BS EN 10088-1 grade 1.4301 (grade 304) or equivalent. All stainless steel components shall be mirror polished and electro polished to resist adhesion of dirt and scale;
5. Vessel shall be equipped with both automatic air vent and manual air vent;
6. Pressure gauges shall be mounted on vessel for reading the differential pressure before and after the filter for sensing blockage of filter;
7. Working pressure of cartridge filter shall not be less than 10 bar and the testing pressure shall be of 1.5 times of the working pressure;
8. Cartridge filter shall be preassembled and tested by the manufacturer with satisfactory results prior to delivery. Test report for each delivered cartridge filter shall be submitted to the Contract Manager for Approval.

FWP15.1.020.8 CHLORINE DOSING

1. The chlorine dosing system shall comprise of a chemical feed pump, probe type residual chlorine sensor, a chemical storage tank and associated pipework. The chlorine dosing system shall have adequate and adjustable chemical feed rate to achieve the required residual chlorine level under the system flow rate;
2. The chemical feed pump shall be of positive displacement reciprocating diaphragm design with a manually adjustable feed rate;
3. The chemical feed pump shall be gear-driven by close-coupled a.c. motor suitable for operation on the local power supply system. Each pump set shall be a self-contained package unit consisting of a pump, a driving motor and a totally enclosed gear case;
4. The probe type residual chlorine sensor shall conform to the standards of CE, UL listed and CUL;
5. The probe type residual chlorine sensor shall be able to continuously monitor the concentration of chlorine in the collected water at the rainwater collection tank and control the chlorine dosing system to automatically adjust the chemical feed rate once the residual chlorine level deviates from the pre-set values;
6. The probe type residual chlorine sensor shall cope with the concentration of chlorine and the Sub-contractor shall demonstrate the compliance to the satisfaction of the Contract Manager;
7. The chemical storage tank shall be made of a suitable material to contain sodium hypochlorite solution. The tank shall be capable to be replaced without interrupting the rainwater harvesting system installation;
8. Chlorination shall be effected by injecting dosage at the bottom of rainwater collection tank.
FWP15.1.030.8  FLOW METER

1. Flow meters shall be provided as shown on the Drawings. The installation of the flow meter shall follow the manufacturer's recommendation with sufficient length of straight pipe run both at the upstream and downstream piping;

2. The flow meter shall be of electromagnetic or ultrasonic type, and of the cumulative type, i.e. a cumulative volume of water passing through the device in litre or cubic meter, and shall be suitable for the chemical and physical properties of the fluids to be measured and suitable for both horizontal and vertical installations;

3. Each flow meter shall consist of the flow sensor, an integral signal converter/transmitter and a digital display unit. The flow sensor shall be installed in/on the water pipework without obstructing the flow. The protection class of the sensor and converter/transmitter housing shall be at least to IP 67 and IP 65 respectively. The flow meter shall have a constant accuracy to a maximum error of ±0.5% of the actual flow for flow velocity of greater than or equal to 0.5 m/s;

4. The flow meter shall conform to BS EN 61000-6-1, BS EN 61000-3-2, BS EN 61000-6-2, BS EN 61000-6-3 and BS EN 61000-6-4 or similar international standards on Electro-magnetic Compatibility (EMC) compliance for industrial and commercial applications.

FWP15.1.040.8  WATT-HOUR METERS

1. Watt-hour meters shall be provided by the Sub-contractor to monitor the electricity consumption of chlorine dosing equipment in Rainwater Harvesting System Treatment Facility Room and rainwater irrigation pumps when installed at strategic locations approved by the Contract Manager;

2. Watt-hour meters shall comply with IEC 62053-11 and shall have Class 2 accuracy calibrated at the normal working voltage and frequency.

FWP15.1.050.8  CONTROL SYSTEM

1. A control and metering system shall be provided and installed in each plant room for rainwater harvesting system installation to allow standalone control and monitoring of the entire rainwater harvesting system installation. The following functions, but not be limited to, shall be available and performed by the control system:
   a. Automatic control and monitoring upon receipt of monitoring signals from different equipment;
   b. Manage all circuits or signals from different equipment to be monitored, including chlorine dosing system, level control switches of the rainwater collection tank, 2-way valves and rainwater irrigation pump sets;

2. The control system shall monitor the status of rainwater collection tank level control switches to provide on/off control for the 2 number of inter-connected 2-way valves to control water being either fed from the rainwater collection tank or fresh water break tank as specified in FWP2.3.2.010;

3. The Sub-contractor shall provide a local control panel to monitor and allow manual control of the equipment at Rainwater Harvesting System Treatment Facility Room, which shall include, but not limited to the following:
   a. Local on/off switches for chlorine dosing system;
   b. Position indication for the 2-way valves (harvested rainwater / potable water / isolation);
c. Audible and visual fault alarms for any fault of equipment monitored by the control panel, chlorine dosing system, rainwater collection tank level control switches and 2-way valves. The fault signal when triggered shall be transmitted to the security guard counter;
d. Full / empty status of rainwater collection tank;
e. Malfunction of chlorine dosing system;
f. Empty status of chlorine dosing system (if bleaching agent tank used);
g. Blockage of cartridge filter;
h. Opening status of inlet valve of rainwater collection tank;
i. Pressure reducing valve clogging.
4. The Sub-contractor shall provide a local control panel to monitor and allow manual control of the equipment at Rainwater Irrigation Pump Room, which shall include, but not be limited to the following:
a. Local on/off switches for rainwater irrigation pump sets;
b. Operation status indication lamps for rainwater irrigation pump sets;
c. Audible and visual fault alarms for rainwater irrigation pump sets. The fault signal when triggered shall be transmitted to the security guard counter;
d. Audible and visual alerts for the need to prime rainwater irrigation pump sets.

**FWP15.1.060.8**  
**PRE-SETTLEMENT TANK**

1. A pre-settlement tank shall be provided by the Main Contractor inside the rainwater collection tank. Debris and leaves shall be separated from the collected rainwater there with sand and mud settling at the bottom of the pre-settlement tank. The collected rainwater shall overflow into the adjacent storage compartment through a coarse stainless steel screen. Stainless steel shall be of Grade 1.4301 (Grade 304) in accordance with BSEN 100881-1;

2. The Sub-contractor shall provide a perforated or wire mesh stainless steel bucket inside the pre-settlement tank. The bucket shall be easily taken out for removal of the collected debris. Stainless steel shall be of Grade 1.4301 (Grade 304) in accordance with BSEN 100881-1;

3. The bucket of the pre-settlement tank shall be divided into two (or more) mesh buckets each of different mesh sizes if it is too large to perform maintenance. The one closer to the inlet shall have larger mesh and its height shall be lower than the water inlet to avoid possible blocking by accumulated debris. The design of the bucket shall be approved by the Contract Manager.

**FWP15.1.070.8**  
**2-WAY VALVE**

1. 2-way valve shall be an assembly consist of a valve, an actuator and a controller in a cartridge assembly;

2. 2-way valve shall be of on-off control operated by the actuator via controller and allow/prevent water flowing through the valve at on/off position respectively;

3. Valve shall be controlled by level control switches at rainwater collection tank as specified in FWP2.3.2.010;

4. The valve assembly shall operate at low voltage and be of low power consumption;

5. The valve assembly shall operate silently and without water hammer.

AP2 APPENDIX FWP/II

AP2.FWP.APPEND1.8 DECLARATION OF VALIDITY OF WSD SUBMISSION FORMS (FOR FIRE SERVICES AND WATER PUMP INSTALLATION)

HOUSING DEPARTMENT

DECLARATION OF VALIDITY OF WSD SUBMISSION FORMS

Contract Title: Ref. No.: Date:
Contract No.:
Sub-contract: Fire Services & Water Pump Installation
File Reference:
To: Contract Manager’s Representative (Attn.: / PBSE/ ) via PBI/ 
From: (State Names of Main Contractor / Nominated Sub-contractor for FS&W Pump Installation)

1. Pursuant to sub-clause (3) of Specification Clause No. FWP1.6.0.50, we attach for CM’s processing / signing the following WSD Form(s) –

(a) [ ] WWO 542 Application for Water Supply / Request for Work to be Carried out by the Water Authority
(b) [ ] WWO 46 [ ] Part I Application for Constructing / Installation, Altering or Removing an Inside Service or Fire Service
[ ] Part II [ ] Part IV

2. We confirm that the above WSD Form(s) under cover of this declaration have been checked / verified by the Licensed Plumber, the FS&W Pump Installation Sub-contractor and the Main Contractor. We hereby declare that –

[ ] The data entry in the Form is accurate.
[ ] The pipes and fittings to be installed and any materials to be used for the construction, installation, alteration or removal of the Approved water services works for fire services and water pump installation covered by this Form, including those as listed on the attached Annex to this Form and those not listed, shall be as prescribed by the Waterworks Regulations.
[ ] The pipes and fittings installed and any materials used for the construction, installation, alteration or removal of the Approved water services works for fire services and water pump installation covered by this Form are as prescribed by the Waterworks Regulations.
[ ] The water services works for fire services and water pump installation for the captioned Sub-contractor have been completed in accordance with WSD Approved Drawings, WSD Circular Letters in force, the Specification and statutory requirements.
[ ] Others, please state:

For and on behalf of the NSC for FS&W Pump Installation

Contract No.:  
Sub-contract: Fire Services & Water Pump Installation  
File Reference:  

To: Contract Manager’s Representative (Attn.: / PBSE/ )   
via PBSI

From: (State Names of Main Contractor / Nominated Sub-contractor for FS&WP Installation)

1. Pursuant to sub-clause (4) of Specification Clause No. FWP1.6.050, we confirm that water services works for fire services and water pump installation for the captioned Contract have been completed. We hereby declare that -
   a. All pipes and fittings installed on Site have been approved by WSD and registered with WSD under Form WWO 46;
   b. Only cadmium-free category brazing alloy and lead-free category soldering alloy are used;
   c. All pipes and fittings installed and any materials used for the constriction and installation of the water services works for fire services and water pump installation are as prescribed by the Waterworks Regulations and approved by the Water Authority.

2. The Licensed Plumber’s inspection report of the completed water services works for fire services and water pump installation is submitted herewith.

For and on behalf of the NSC for FS&WP Installation  
Checked and acknowledged by the Main Contractor

LTE1.1 SCOPE OF SPECIFICATION AND DEFINITIONS

LTE1.1.010.8 SCOPE OF SPECIFICATION
This Specification covers the lift and escalator installation undertaken for the Hong Kong Housing Authority.

LTE1.1.020.8 SPECIFICATION AND DRAWINGS
The lift and escalator installation shall comply in every respect with this Specification unless otherwise specified in the Project Specific Specification (PSS) and on the Drawings for a particular project, or modified by the written instructions of the Contract Manager.

LTE1.1.030.A DEFINITIONS AND INTERPRETATIONS
In this Specification, the word "shall" is mandatory, the word "will" is informative, the word "should" is advisory and the word "provide" means supply and fix, or supply and install including testing and commissioning. In addition, the following words shall have meanings herein assigned:

1. "Sub-contractor"
   The person, firm or company contracting for the Lift Installation, the Escalator Installation or the Lift and Escalator Installation including his or their personal representative, successors or permitted assigns.

2. "Electrical Sub-contractor"
   The person, firm or company contracting for the Electrical Installation including his or their personal representatives, successors or permitted assigns.

3. "Fire Services Sub-contractor"
   The person, firm or company contracting for the Fire Services and Water Pump Installation including his or their personal representatives, successors or permitted assigns.

4. "Regulations"
   Any Ordinances or Regulations published by the Government, by-laws of any local or duly constituted authority and rules or regulations of public bodies and companies which may be applicable to the Sub-contract Works.

5. "Machine-room-less Lift"
   A lift installation where all its driving machinery and safety components are installed inside the lift well and the requirement for a lift machine room is not necessary.
STATUTORY OBLIGATIONS AND REGULATIONS AND GENERAL PRACTICE

1. Statutory Obligations:
   a. Lifts and Escalators Ordinance (Cap. 618);
   b. Building (Construction) Regulations, Building (Planning) Regulations and Buildings Ordinance (Cap. 123);
   c. Electricity Ordinance (Cap. 406);
   d. Noise Control Ordinance (Cap. 400);
   e. Security and Guarding Services Ordinance (Cap. 460);
   f. Factories and Industrial Undertakings (Guarding and Operation of Machinery) Regulations (Cap. 59Q);
   g. Building Energy Efficiency Ordinance (Cap. 610);
   h. Fire Service (Installations and Equipment) Regulations and Fire Services Ordinance (Cap. 95);
   i. Occupational Safety and Health Ordinance (Cap. 509);
   j. Other subsidiary legislation made under the above ordinances.

2. Codes of Practice, Circular Letters and Design Manuals:
   a. Code of Practice on the Design and Construction of Lifts and Escalators, 2012 Edition, issued by the Electrical and Mechanical Services Department (hereinafter referred to as the Lift COP);
   b. Code of Practice for the Design and Construction of Buildings and Building Works for the Installation and Safe Use of Lifts and Escalators, 2011 Edition, issued by the Building Authority (hereinafter referred to as the Lift Building Works COP);
   c. Code of Practice for Fire Safety in Buildings, 2011 Edition, issued by the Building Authority (hereinafter referred to as the FS Code);
   d. Circular Letters relating to lifts and escalators, issued by the Electrical and Mechanical Services Department;
   e. Codes of Practice for Minimum Fire Service Installations and Equipment and Inspection, Testing and Maintenance of Installations and Equipment, April 2012 Edition (hereinafter referred to as the Fire Services COP), and Circular Letters issued by the Fire Services Department;
f. Code of Practice for the Electricity (Wiring) Regulations, 2009 Edition, issued by the Electrical and Mechanical Services Department (hereinafter referred to as the Electrical CoP);

g. Code of Practice for Lift Works and Escalator Works, 2012 Edition (hereinafter referred to as the Works Code);

h. Design Manual: Barrier Free Access 2008;

i. Code of Practice for Safety at Work (Lift and Escalator), issued by Occupational Safety and Health Branch, Labour Department, October 1997;

LTE1.2.020.8 GENERAL PRACTICE

All materials and workmanship shall comply, where applicable, with all relevant sections, together with any revisions or amendments made thereto, of the following:

1. Hong Kong Housing Authority Specification Library;

2. Approved national/international standards or appropriate British Standard Specifications. The technical standards quoted in this specification are summarized in Appendix LTE/I;

3. The Supply Rules issued by the relevant Power Supply Company currently in operation in Hong Kong;

LTE1.2.030.8 CASE OF CONFLICT

1. In case of conflict among the requirements of this Specification and any other requirements referred to in LTE1.2.010 and LTE1.2.020, interpretation shall be in accordance with the following order of preference:

   a. Law of Hong Kong;

   b. The Lift COP, Lift Building Works COP, BEC, Works Code, FS Code and Fire Services COP;

   c. The Drawings;

   d. This Specification Library of Lift and Escalator & its PSS Clauses;

   e. Other Hong Kong Housing Authority Specification Libraries;

   f. Supply Rules;

   g. Approved national / international standards or British Standard Specifications.

2. Notwithstanding sub-clause (1), in the event where the Drawings or this Specification stipulates more stringent requirements than, but still in compliance with, the COPs in sub-clause (1)(b) above, the Drawings or the Specification shall take the precedence over the COPs. Such requirements shall include, but not be limited to, the following clauses:

<table>
<thead>

</tbody>
</table>

**LTE1.2.040.8**  
**CODE OF PRACTICE FOR ENERGY EFFICIENCY OF BUILDING SERVICE INSTALLATIONS**

1. The Sub-contractor shall provide necessary information and documents to the Contract Manager in accordance with BEC’s requirements;  
2. The Sub-contractor shall attend, provide necessary equipment and carry out on site checks as required by the Contract Manager to verify the electrical measurements of lifts and escalators.
LTE1.3 THE WORKS

LTE1.3.010.8 GENERAL
The Works under this Sub-contract is for the whole of the labour and all materials necessary to form a complete installation and such test, adjustments, commissioning, maintenance and servicing as prescribed. It shall include the responsibility for design work including the selection and suitability of purpose of material or equipment in compliance with the Specification and for the detailed design of the permanent works in accordance with the Sub-contract. It shall also include not only the major item of plant and equipment shown or specified but all the incidental sundry components necessary for the complete execution of the Sub-contract Works and for the proper operation of the installation, including the necessary labour, whether or not these sundry components are mentioned in detail in the Sub-contract.

LTE1.3.020.8 SITE OF THE WORKS
The Site of the Works is specified in Project Specific Specification.

LTE1.3.030.8 SCOPE OF THE WORKS
The Scope of the Works is specified in Project Specific Specification.

LTE1.3.035.8 TIME FOR COMPLETION AND DATE FOR HAND-OVER
The time for completion of the Works and date for hand-over of related working areas are specified in Project Specific Specification.

LTE1.3.040.8 SETTING OUT THE WORKS
The Sub-contractor shall set out the Works and shall be responsible for the accuracy of the same, including the positioning of all doors, guides, machines and machine bases.

LTE1.3.050.8 BUILDING WORKS TO BE PROVIDED BY THE SUB-CONTRACTOR
Building works to be provided by the Main Contractor and others are detailed in Part I - Preliminaries of the Specification included in the Sub-contract documents. The following works in connection with the lift and escalator installation shall be provided by the Sub-contractor:

1. Supporting steel works, inserts, fixing brackets etc. for supporting the lift machine in the lift machine room or in the lift well;
2. Shaft dividing steel work for supporting guide brackets etc.;
3. Mounting brackets, bearing plates etc. required for the installation of the escalator;
4. Red head bolts, inserts, fixing brackets etc. for landing door and guide rail brackets etc;
5. Permanent lights and socket outlets in each lift well and escalator machine pit; and
6. Ferrules projecting at least 50 mm above finished floor or slab to prevent objects from falling through openings situated above lift well and blind hoistway working platform.
**LTE1.4 SUPERVISION AND SITE RECORDS**

**LTE1.4.010.8 APPOINTMENT OF SUPERVISING ENGINEERS AND SITE SUPERVISORS**

1. Immediately upon the award of the Sub-contract, the Sub-contractor shall appoint Supervising Engineer(s) and Site Supervisor(s) specified in LTE1.4.020 and LTE1.4.030 who shall be both English and Cantonese speaking and in the Sub-contractor's full-time employment for the supervision of the Sub-contract Works to the satisfaction of the Contract Manager;

2. Immediately after the award of the Sub-contract, the name, qualifications and curriculum vitae of the Supervising Engineer(s) and Site Supervisor(s) shall be submitted for Approval to the satisfaction of the Contract Manager;

3. None of the Supervising Engineer(s) and Site Supervisor(s) shall be removed from their respective duties without prior Approval;

4. In the event of any of them being unsatisfactory, in the opinion of the Contract Manager, or misconducting themselves, they shall be removed forthwith and be replaced by suitable substitutes to the Contract Manager's satisfaction within seven days from the Contract Manager's instruction in writing.

**LTE1.4.020.8 SUPERVISING ENGINEERS**

1. Unless otherwise specified, the Sub-contractor is to employ for the supervision of all works on Site, at least one qualified Supervising Engineer. The Supervising Engineer shall generally represent the Sub-contractor in all respects of the Sub-contract and assume the following duties:
   a. Coordinate and supervise the work in the Sub-contractor's office and the Site;
   b. Develop, in conjunction with the Main Contractor, schedules of installation drawings, builder's work drawings, material submission and delivery, statutory submissions, the programme of works and testing and commissioning programme, for approval by the CM;
   c. Liaise with the CM and other parties;
   d. Attend at the office of the CM for the finalisation of drawings and equipment selection;
   e. Attend progress meetings and coordination meetings;
   f. Monitor and supervise installation drawings submission, builder's work drawings submission, material submission and delivery, statutory submissions in accordance with the respective submission schedules approved by the CM. Submit progress reports to the CM monthly or at shorter intervals when such requested by the CM;
   g. Check and confirm the installation drawings, builder's work drawings and material submissions are suitable for the installation works and in compliance with the requirements of the Sub-contract;
   h. Examine, verify and confirm in writing to the CM on a monthly basis that the material delivered to the Site under the Sub-contract has been approved by the CM;
   i. Certify all material delivery vouchers in accordance with PRE.B12.280 of the Main Contract;
   j. Prepare, in conjunction with the Main contractor, the delivery method statements for delivery of plant and equipment;
k. Supervise all site test and commissioning of the Sub-contract Works and submit the test and commissioning reports on time to confirm that he is satisfied with the completeness, workmanship and performance of the installations which comply fully with the Sub-contract requirements.

2. Qualification requirements:

At least one year of proven post qualification experience at supervisory level in the installation and maintenance of lifts and escalators with the following qualification:

a. Registered Professional Engineer (Electrical, Mechanical, Building Services and Control, Automation and Instrumentation Discipline) under the Engineers Registration Ordinance;

b. Member of the Hong Kong Institution of Engineers (Electrical, Mechanical, Building Services and Control, Automation and Instrumentation Discipline) elected after 5 December 1975; or

c. Member (electrical, mechanical, building services and Control, Automation and Instrumentation discipline) of an overseas engineering institution which has signed agreements for the mutual recognition of qualifications with the Hong Kong Institution of Engineers.

3. The Supervising Engineer(s) shall be highly competent and experienced, and shall be given a high level of delegated authority such that they can take decisions, including those involving expenditure.

LTE1.4.030.8  SITE SUPERVISORS

1. Unless otherwise specified, the Sub-contractor is to employ at least one qualified Site Supervisor. The Site Supervisor shall be stationed on site;

2. Qualifications requirements:

At least three years practical experience in the supervision of the installation and maintenance of lifts and escalators with Diploma/Certificate in Electrical, Electronic, Mechanical or Building Services Engineering.

LTE1.4.040.8  SITE RECORDS

1. The Sub-contractor is to arrange for a full set of prints to be kept on the Site showing the progress of the Works. Such prints shall be kept up-to-date. Daily labour strength report shall be submitted to the Contract Manager after the Sub-contractor’s takeover of the lift well, machine rooms or escalator areas;

2. The Sub-contractor shall keep the Site records together with all relevant delivery vouchers of all plant and materials delivered to and removed from the Site for the inspection by the Main Contractor and the representatives of the Contract Manager.
LTE1.5  MATERIALS AND EQUIPMENT

LTE1.5.010.8  GENERAL

1. The design, construction and installation of lifts and escalators shall comply with the Regulations and requirements stated in LTE1.2.010 and LTE1.2.020, in particular the Lift COP, Lift Building Works COP and BEC;

2. Type approval/approval-in-principle for the proposed lifts/escalators and their safety components shall be obtained from the Director of Electrical and Mechanical Services and shall be available before commencement of installation.

LTE1.5.020.8  PROVEN RELIABILITY

1. All lift and escalator materials and equipment shall have proven reliability and in-service records established locally and/or overseas as specified in the ensuing sub-clauses. The manufacturer of individual major lift and escalator materials and equipment as listed in sub-clause (2) and (3) shall have at least 5 years’ experience in manufacturing the respective categories of materials and equipment;

2. Major lift materials and equipment refer to traction machine, motor, controller, safety gear, guide rail, ascending car over speed protection means (ACOPM), unintended car movement protection means (UCMPM), governor, buffer, ropes, guide shoes, travelling cable, car sling and cage, car and landing doors and door locking devices;

3. Major escalator materials and equipment refer to motor, reduction gear, controller, truss, landing plate, step, balustrade, steel chain and handrail;

4. The materials and equipment (except those stipulated in sub-clause (5)) which serve as in-service records of the lift/escalator system proposed shall comply with the following:

   a. Be of the same places of manufacture and in the same product ranges as those of the materials/equipment proposed;

   b. Be of the same drive type as that proposed;

   c. Be of the same rated load/capacity and rated speed specified or of higher and comparable rated load/capacity and rated speed;

   d. Comply with the following requirements:

<table>
<thead>
<tr>
<th>Lift / Escalator Type</th>
<th>Location of In-service Records</th>
<th>Minimum No. of Lifts / Escalators serving as In-service Records</th>
<th>Minimum Time Period of Continuous and Satisfactory Operation and Maintenance up to the Time of Tender Submission</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lift of rated speed below 3.5 m/s and escalator of any speed</td>

</tr>
</tbody>
</table>

Specification Library 2018 Edition (Batch 2)
and above | Mainland China or overseas | in the same project | [See Note 2]
--- | --- | --- | ---
Machine-room-less lift | Hong Kong, Mainland China or overseas | 2 nos. | 1 year

Note 1: For traction machine and lift / escalator motor using innovative and green technology that can reduce the running active electrical power below the maximum allowable electrical power value stated in the BEC by 20% or more, the required 4 nos. of lifts / escalators serving as in-service records can be installed in Hong Kong, Mainland China or overseas provided that the electrical power performance can be verified by a test report issued by an approved independent testing institution;

Note 2: For controller and associated equipment such as inverter, converter and filtering facility, compliance to the following requirements can be regarded as an acceptable alternative to the one year in-service record requirement:

i. The Sub-contractor shall provide an undertaking to keep a adequate quantity of new spare parts of the controller and associated equipment in stock in Hong Kong for immediate replacement in case of breakdown of the installed controller and associated equipment;

ii. The Sub-contractor shall provide an undertaking to replace immediately instead of repair any faulty parts of the installed controller and associated equipment so as to keep the down-time of the lift / escalator operation to the minimum in case of breakdown during the Maintenance Period;

iii. The Sub-contractor shall provide an undertaking to upgrade / update the controller and associated equipment software whenever upgrades / updates are released by the manufacturer within the Maintenance Period.

e. Be compatible with other materials / equipment of the lift / escalator system proposed.

5. The materials and equipment which serve as in-service records of guide rail, safety gear, buffer (oil / spring type) and car safety gear acting upwards, counterweight safety gear or rope gripper serving as ascending car over speed protection means of the lift system proposed or other equipment of which no part is in operation under normal circumstances shall comply with the following:

a. Be of the same places of manufacture and in the same product ranges as those of the materials / equipment proposed;

b. Be of the same design, rated load / capacity and rated speed specified or of higher and comparable rated load / capacity and rated speed;

c. Have been installed in Hong Kong, Mainland China or overseas in at least two numbers of lifts / escalators;

d. Have been in continuous and satisfactory operation and maintenance for at least six months up to the time of tender submission;

e. Be compatible with other materials / equipment of the lift / escalator system proposed.
6. For new safety requirements which are not required in existing lift / escalator systems but are required as the result of amendment of relevant Code(s) of Practice or Regulation(s), in-service record is generally not required at the time of implementation. However, when either one of the following conditions occurs, satisfactory in-service records shall be required:

   a. The new safety requirements have been provided by the Sub-contractor in the number of lifts / escalators and in continuous operation for the period as stipulated in sub-clauses (4) or (5) above in Housing Authority projects;

   b. Three years after the effective date for implementing the relevant amendment of Code(s) of Practice or Regulation(s).

7. If there is change of place of manufacture for materials / equipment with previously established in-service records, and the Sub-contractor is capable of producing certificates from the original manufacturer confirming that the materials / equipment to be supplied from the proposed new source have exactly the same design, material, construction and quality assurance / control standards together with an undertaking from the original manufacturer that they will be fully responsible for the product despite the change of manufacture, the requirement of two numbers installed in Hong Kong for one year for lifts of rated speed below 3.5 m/s and escalators of any speed as specified in sub-clause (4)(d) shall be waived;

8. The Sub-contractor shall submit full details and particulars of in-service records to substantiate conformance to the above requirements. The Sub-contractor shall arrange, upon request, site inspection of the lift and escalator installations which serve as in-service records. Failure to submit required details or allow sufficient time for assessment and site inspection may result in rejection of the tender;

9. For Mainland China and overseas in-service records, records of any accident, replacement and major repair and photos of the concerned material / equipment and proof of satisfactory operation and maintenance in writing by one of the following parties shall also be provided:

   a. Owner of the lift / escalator installation; or

   b. Property Management Agent of the property served by the lift / escalator installation; or

   c. Supplier / Contractor / Installer of the lift / escalator installation; or

   d. Maintenance Agent of the lift / escalator installation.

10. If the required information for Mainland China and overseas in-service record is provided by any of the parties listed in sub-clause (9)(c), service log of the past 12 or 6 months shall also be submitted depending on the applicability of sub-clause (4)(d) or (5)(d) to the material / equipment concerned. The Sub-contractor shall certify the authenticity of all the documents provided.

LTE1.5.040.8 TEST CERTIFICATES / SUBSTANTIATION DOCUMENTS

Test certificate for lift and escalator equipment complete with test reports and drawings where applicable, or other substantiation documents, shall be submitted to the CM to prove the compliance with the Specification. In case the original documents are not produced in English or Chinese, an English or Chinese translation of the whole document, including related test reports and drawings, shall be produced and duly certified true by the issuing organization or an approved authority when required.
**LTE1.5.050.8 SERVICE CONDITIONS**

In addition to the service conditions as specified in the relevant BS, all lift and escalator equipment shall also be suitable for use under Hong Kong climatic conditions with relative humidity and ambient temperature as shown below:

1. Relative humidity: up to 0.99 saturation;
2. Ambient temperature: peak from minus 5°C to plus 40°C for 4 hours continuously with an average from 0°C to plus 35°C over only 24 hours period.

**LTE1.5.060.8 ASBESTOS NOT TO BE USED WITHOUT PRIOR APPROVAL**

Asbestos or equipment containing asbestos, including asbestos brake lining, shall not be used without the prior approval from the Contract Manager.

**LTE1.5.080.8 ON SITE WELDED COMPONENTS**

1. The Sub-contractor shall submit a list of on-site welded components that are to be installed inside lift well for Contract Manager's record before commencement of the works;
2. The welding work for those on-site welded components shall be carried out by licensed welder or the holder of the Intermediate Trade Test Certificate in welding issued by Vocational Training Council or such equivalent training bodies as Approved;
3. The worker shall have experience on welding lift components for a period, or an aggregate period of, not less than one year. Experiences before or after passing the trade test are both acceptable;
4. The Sub-contractor shall maintain and submit a register of all the projects handled by individual trade tested welder to substantiate the compliance with the requirements stipulated in sub-clause (3) above for Contract Manager's approval before commencement of the works.

**LTE1.5.090.8 STAINLESS STEEL**

1. Unless otherwise stated, stainless steel shall be of EN 10088-1 grade 1.4401 (grade 316) or equivalent;
2. Supplier of stainless steel shall provide mill certificates of the material to be used in the works.
LTE1.6  PACKING, STORAGE AND DELIVERY

LTE1.6.010.A  PACKING

1. All equipment, apparatus, materials and parts shall be delivered to the Site in a new condition, properly packed and protected against damage due to handling, adverse weather or other circumstances and they shall be kept in the packing cases or under protective coverings provided by the Sub-contractor until unpacking for use;

2. In the case of items of equipment and materials which originate outside Hong Kong:
   a. All items of equipment and materials shall be adequately and securely packed for safe transportation with due regard to the climatic conditions encountered in transit and on arrival, and also to the site conditions during storage on Site. Suspension ropes and governor ropes shall be put in properly sealed packages to avoid ingress of moisture when delivered from factory and shall be kept sealed until installation on Site;
   b. The Sub-contractor shall, at the time of shipping each consignment of equipment, provide to the Contract Manager in duplicate, packing lists and Bills of Lading which shall contain full statements of the packages consigned, with particulars of the dimensions, weights, contents, shipping marks and approximate value of each package; and
   c. BS 1133 and its Supplements shall be used as a guide for the standard of packing and package required. All bright, polished or plated parts shall be treated with suitable rust inhibitor.

LTE1.6.020.B  STORAGE AND DELIVERY

1. Storage area at the Site for lift and escalator equipment will be made available by the Main Contractor twelve (12) months before the contract completion date for the respective Section of the Main Contract;

2. All lift and escalator equipment for each Section shall be delivered to the Site no later than seven (7) months before the contract completion date for the respective Section of the Main Contract, in order to cope with any possible advanced completion of the Main Works;

3. Notwithstanding the preceding paragraph, the Sub-contractor shall arrange storage and delivery of the equipment to suit the progress of the Main Works.

LTE1.6.030.B  PROTECTION OF THE WORKS

The Sub-contractor shall liaise with the Main Contractor to suitably protect, encase, cover up etc. as may be appropriate, all equipment, instruments, etc. installed by him against damage due to building operations, adverse weather or other causes and shall hand over the entire installation in a new and perfect condition to the satisfaction of the Contract Manager.

LTE1.6.040.B  TRANSPORTATION OF EQUIPMENT AND PLANT

1. The Sub-contractor shall liaise with the Main Contractor to ensure that there is adequate access available for transportation and delivery of the equipment and plant to be supplied by him at the time of transportation of the equipment to the required position;
2. The Sub-contractor shall submit the details of equipment delivery and hoisting route including any building work reserves required ten (10) months before the contract completion date for the respective Section of the Main Contract to the Contract Manager, via the Main Contractor, for approval. Should the Main Contractor be delayed or incur additional costs due to the Sub-contractor's failure to submit the required information in time then any expense arising will be the liability of the Sub-contractor.

LTE1.6.050.8 REPLACEMENT

Any items suffering damage in transit or on the Site shall be rejected and replaced without extra cost to the Employer. No item so rejected will be considered as a reason for failure to meet the time for completion of the Sub-contract Works.
LTE1.7 ELECTRICITY SUPPLY AND ELECTRICAL INSTALLATION

LTE1.7.010.8 ELECTRICITY SUPPLY

Unless otherwise specified, the equipment shall be rated for operation under the supply system with nominal frequency of 50Hz and nominal voltage of 380V, 3-phase and 220V, 1-phase within the variation limits as declared by the local Power Supply Companies.

LTE1.7.020.8 WIRING

1. All cables, trunkings, conduits and conduit fittings necessary for the power, lighting and indicator circuits shall comply with and be installed in accordance with the latest issue plus amendments of the Electrical CoP, the Lift COP and Hong Kong Housing Authority Specification Library;

2. All wirings installed in lift machine rooms, lift wells and escalator machine pits, other than travelling cables, shall be enclosed in galvanised steel conduits or steel trunkings.

LTE1.7.021.8 CABLE COLOUR CODES

1. Electric cables complying with a national / international product standard shall have their design, construction and manufacture adhered to that particular standard in all aspects except the cable colour codes which shall be in line with the Electrical CoP unless otherwise stated;

2. For lift and escalator installation based on the new cable colour codes, the workers employed for carrying out the relevant electrical works shall have satisfied the Electrical & Mechanical Services Department's training requirements for the new cable colour codes.

LTE1.7.022.8 CORE IDENTIFICATION OF POWER CABLES

<table>
<thead>
<tr>
<th>Function of core</th>
<th>Colour code</th>
<th>Number code</th>
</tr>
</thead>
<tbody>
<tr>
<td>Phase conductor of a single phase circuit</td>
<td>Brown</td>
<td>L</td>
</tr>
<tr>
<td>Phase conductor of a three-phase circuit</td>
<td>Phase L1: Brown, Phase L2: Black, Phase L3: Grey</td>
<td>L1 or L2 or L3 according to the phase concerned</td>
</tr>
<tr>
<td>Neutral conductor</td>
<td>Blue</td>
<td>N</td>
</tr>
</tbody>
</table>

Note: Cores used as protective conductors shall have an exclusive colour identification of green-and-yellow, unless otherwise stated.

LTE1.7.030.8 BONDING

1. All exposed conductive parts of the lift and escalator equipment shall be effectively bonded by protective conductors in accordance with the Lift COP and Electrical CoP;

2. The exposed conductive parts shall include the machine frames, controller frames, governor frames, guide rails, face plates of landing fixtures, casing of electrical safety devices, and other similar exposed conductive parts which carry electrical equipment;
3. For lift architrave with landing indicator having provided with proper bonding, no additional bonding is required and the Sub-contractor shall ensure the electrical continuity between architrave and landing indicator. For lift architrave without landing indicator, the Sub-contractor shall provide proper bonding through the building structural reinforcement or other appropriate means.

LTE1.7.040.8 LIFT WELL LIGHTING

1. The Sub-contractor shall install lighting in each lift well in surface steel conduit system. The lighting for each lift well shall comprise one lighting fitting not more than 500 mm from the lowest point in the lift well and the highest point of guided travel of the lift car with intermediate lighting fittings at 7 m maximum spacing. The position of each lighting fitting shall be such that servicing personnel can conveniently replace the lamp while standing on the top of the car;

2. The lighting fittings shall be at least 2x11W compact fluorescent bulkhead fittings with polycarbonate diffuser and controlled by 2-way lighting switches at lift machine room or maintenance access panel for machine-room-less lift, and at entrance to lift pit. Lighting switches at lift pit shall be of watertight construction. Sample of the lighting fitting shall be submitted for the Contract Manager's approval.

LTE1.7.050.8 EMERGENCY LIGHTS

1. Emergency lights of adequate illuminance shall be provided by the Sub-contractor in the lift machine room or at the maintenance access panel for machine-room-less lift, and in the lift car. These lights shall be operated by batteries automatically on failure of normal power supply and those lights in the lift machine room or at the maintenance access panel for machine-room-less lift shall be capable of being manually operated by a switch located at a convenient position in the lift machine room or at the maintenance access panel for machine-room-less lift respectively;

2. The batteries shall be capable of maintaining a supply to the connected emergency load for a minimum of two hours continuously, and shall be completed with self-contained and self-maintained trickle charger located within the lift machine room or lift well and at least one for each lift. The charger shall be capable of fully recharging the batteries in not more than 12 hours.

LTE1.7.060.8 LIFT TRAVELLING CABLE

1. Lift travelling cable shall be of flat or circular PVC or rubber insulated type complying with BS EN 50214. Test certificate issued by an approved independent testing institution or the manufacturer shall be submitted to the CM to verify the compliance with the required standard;

2. Travelling cable of the flat type shall only be used where the freely suspended length does not exceed 35 m and the rated speed not exceeding 1.6 m/s unless the cable has integral strain-bearing members;

3. The travelling cable terminal box at lift car shall be positioned at car top;

4. Subject to the approval of the CM, travelling cable in full compliance with relevant national / international standards stipulated in the Lift COP, with the exception of constructional configuration, may be acceptable;

5. The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the lift travelling cables delivered to the site or installed.
LTE1.7.070.8  SUPPRESSION OF RADIO AND TELEVISION INTERFERENCE

The lift and escalator installation shall be adequately suppressed against radio and television interference to limits laid down in BS EN 55014-1, or EN 12015 and EN 12016. Interference suppression components shall not be used in any part of the circuit where their failure might cause an unsafe condition.

LTE1.7.080.8  ELECTRICAL MEASUREMENTS

1. Multi-function electronic meter shall be provided by the Electrical Sub-contractor for each lift / escalator to facilitate electrical measurements;

2. Electrical measurements including but not limited to those on voltages, currents, kW, kVA, kWh, power factor and total harmonic distortion shall be carried out in the final testing for each lift / escalator according to BEC's requirements.
LTE1.8 TESTING AND MAINTENANCE

LTE1.8.010.8 TESTS AND CERTIFICATES

1. The Sub-contractor shall employ lift / escalator engineer(s) registered under the Lifts and Escalators Ordinance to undertake tests and examination of the complete installation, which shall include those specified in Annex D of BS EN 81-1 and clause 7.3 of BS EN 115-1, where relevant, and those recommended by the lift / escalator manufacturer;

2. A statement of conformity shall be provided relating to type tests issued by an approved independent testing institution for the equipment mentioned in clause 16.1.3 of BS EN 81-1 upon the CM's request;

3. For lift installation, progressive safety gear shall be tested with 100% loaded car to be operated by the governor at governor tripping speed unless complete type test certificate of the safety gear in accordance with clause F.3 of BS EN 81-1 from an approved independent testing institution is submitted to the satisfaction of the CM. In the latter case, the safety gear may be tested at reduced speed with 125% loaded car. Before the test, the suspension ropes shall have been checked for even tensioning. After the test, the ropes shall be re-checked for even tensioning, the lift installation shall be inspected and the lift components such as guide rail and safety gear gripping elements shall be reconditioned or replaced as necessary. Rope tension measuring device or method recommended by the lift manufacturer shall be used to check even tensioning of the ropes;

4. Safety certificate and examination report in a prescribed form as required by the Director of Electrical and Mechanical Services shall be submitted and properly signed by the Sub-contractor and his registered lift / escalator engineer as evidence that the installation has been properly tested;

5. The Sub-contractor shall be responsible for all necessary submissions to the EMSD and / or other authorities for the lift and escalator installation;

6. The Sub-contractor shall be required to separately demonstrate to the satisfaction of the CM the installation complies with the provision of LTE1.2.010 (1) of this Specification and the BEC;

7. All tests shall be conducted at the discretion of and in the presence of the CM;

8. The Sub-contractor shall obtain a use permit for each lift / escalator issued by the Electrical and Mechanical Services Department, before the installation is accepted by the CM;

9. The original lift / escalator use permit shall be permanently displayed inside each lift car or adjacent to each escalator when handed over to the CM on completion of the installation;

10. The Sub-contractor shall arrange for and pay any necessary fees for inspections and shall make such tests as are called for by any Regulations or Authorities and shall obtain all permits required. Any tests carried out shall be in the presence of the authorized representative of any such authority;

11. The CM will notify the Sub-contractor the nature of identity of the management agent(s) of the lifts / escalators at least one month before the completion date of respective lifts / escalators;

12. The Sub-contractor shall employ a Registered Electrical Worker registered under the Electricity Ordinance to prepare, sign and submit the test reports including the "WR1(A)" Form for the following electrical works:
a. The lift well and escalator pit lighting and power socket circuitries starting from the power supply point installed by the electrical worker employed by the lift contractor.

13. The Sub-contractor shall employ a Registered Electrical Worker registered under the Electricity Ordinance to prepare, sign and submit the test reports for the following electrical works:

a. The power supply circuitries from the main power supply point to the lift and escalator control panels.

**LTE1.8.020.8 FINAL TEST**

1. After having satisfied himself of the performance of the installation, the Sub-contractor shall demonstrate to the satisfaction of the Contract Manager that the installation, or part thereof as the case may be, complies with all the requirements of the Sub-contract Works;

2. The Sub-contractor shall provide the Contract Manager with at least seven (7) days' advance notice of such testing and shall provide all necessary facilities and instrument for the witnessing and checking of such tests, but this shall not relieve the Sub-contractor of his responsibility for testing and satisfying himself of the adequacy of the installation beforehand;

3. The Sub-contractor shall make complete records of the tests as carried out and when the tests have been successfully completed, he shall provide the Contract Manager with test records and reports; including those specified in the BEC, in duplicate in a form to be approved by Contract Manager;

4. Should the test results indicate that the plant or equipment is not functioning in a satisfactory manner or providing the requirements of the Specification, the Sub-contractor shall carry out at his own expense any alterations, replacements or adjustments as may be required to correct the faulty work. The Contract Manager's decision as to what constitutes a satisfactory test shall be final.

**LTE1.8.030.8 MAINTENANCE AND SERVICING**

1. The maintenance and servicing work required under this clause shall be deemed to include both preventive and corrective maintenance and servicing. Before commencing any work ordered under GCC Clause 10.1 of the Main Contract, the Sub-contractor shall, at his own expense, make all suitable arrangements to avoid damage to installations provided by others;

2. Further to the Sub-contractor's responsibility under Clause 7.1 of the General Conditions of the Sub-contract to maintain the Sub-contract Works, the Sub-contractor shall provide maintenance and servicing to the entire installation for a period of 24 months from the date of completion to the Main Works or of the relevant Section or part thereof as certified by the CM under the Main Contract Conditions. Such maintenance and servicing works shall include the following:

a. To be responsible for any repairs necessary to maintain the equipment in good working order at all times;

b. To dispatch competent and specially trained workmen once weekly during normal working hours to inspect, clean and lubricate as required, and where necessary adjust and maintain all machinery, controllers, doors, locks, guide rails, guide shoes, ropes, bearings and safety devices etc. in a smooth, quiet and safe operating condition;

c. To supply all required lubricants, cleaning materials, rope preservatives etc.;

d. To supply and replace all burnt out indicator lamps;
e. To provide 24-hour on-call service at any time during the Maintenance Period. The CM may instruct the Sub-contractor in the Maintenance Period via telephone, mobile phone, paging service or any other means as advised by the Sub-contractor and approved by the CM, to attend to reported breakdowns, and the Sub-contractor shall dispatch competent technicians or such other suitable personnel to carry out emergency maintenance or to attend to any reported breakdown within 25 minutes where trapping of passengers is involved and within 45 minutes where no trapping of passengers is involved, after receiving the call and under all weather condition. The Sub-contractor shall submit to the CM for this purpose, the contact telephone number(s) of the Service Call Centre or at least two names of English speaking representative, who can be reached at any time of the day, with contact telephone numbers of direct lines, mobile phones or paging service for approval. Prior approval shall also be obtained for any subsequent changes of representatives, contact telephone numbers etc. during the Maintenance Period at least two weeks before the change is effected;

f. To renew wire ropes as necessary to maintain an adequate factor of safety;

g. To provide quarterly reports on the condition of the equipment for approval by the CM;

h. To carry out periodic testing and examination of safety equipment of the installation as may be required by the provisions of any Regulation in force relating thereto and to provide copies of such test certificate, duly signed by a registered lift engineer or a registered escalator engineer as appropriate, regardless whether the lifts / escalators have been exempted from such Regulation;

i. To provide, repair or replace at no cost to the Employer such mechanical and electrical parts of the installation which the Sub-contractor or the CM considers necessary for the safe and proper operation of the installation;

j. To carry out, at the end of the Maintenance Period, a further test to demonstrate the performance characteristic of the installation, and any defects found shall be rectified by the Sub-contractor at his own cost as soon as practicable.

3. The maintenance and servicing works described above form part of the Works under GCC Clause 8.3(2)(c) of Main Contract;

4. Providing always that any renewals or repairs necessitated by misuse of the equipment or by reason of any other cause beyond the Sub-contractor's control with the exception of ordinary wear and tear shall be carried out by the Sub-contractor if so required by the Employer at an additional cost to be valued by the Surveyor;

5. All work under this maintenance and servicing provision shall be performed by competent personnel under the supervision and in the direct employment of the Sub-contractor;

6. A report in duplicate shall be sent to the CM immediately following a major repair, repeated breakdowns of service due to system or equipment fault of similar nature, or as and when required by the CM. The report shall include the cause necessitating such a repair, the reason of such a breakdown of service and the time and date of remedial action taken, of completion of repair and the normal service resumed. A list of equipment replaced shall be attached to the report. At least three months before the end of the Maintenance Period, a report on the rope conditions according to Table 3 of the Works Code shall be sent to the CM. Reports on routine visits are not required except where necessary to draw attention to defects which could not be rectified during the routine visit;
7. The registered engineer / contractor shall ensure that details are properly recorded in the log-book in the specified form as required by the Director of Electrical and Mechanical Services, which is kept by the Officer-in-charge of the Estate, in accordance with the Lifts and Escalators Ordinance and the Works Code;

8. For each routine or callout visit on arrival at the Estate, the workman shall report to the Estate Management Office and sign the log-book which will be kept by the Officer-in-charge of the Estate:

   a. At the time of signing, he shall note any message written in the book concerning the performance of any part of the lifts / escalators in the Estate, and shall take such action as may be required;

   b. The workman shall also inspect the lifts / escalators in the Estate at the time of this regular inspection and make any repairs, replacements of adjustments as required, irrespective of whether or not such repair or re-adjustment is noted in the book;

   c. When leaving the Estate, the workman shall report to the Officer-in-charge and enter in the log-book a brief report on any repairs, replacements or adjustments which have been carried out or on the fact that they have found the lifts / escalators operating satisfactorily.
LTE1.9 MISCELLANEOUS

LTE1.9.010.8 SILENCE OF OPERATION

1. The installation shall be reasonably silent in operation under the conditions which they will be called upon to operate and, in any case shall be such that no unreasonable noise or vibration arising from the operation of the installation is discernible from the lift wells, machine rooms, landing doors, escalator machine pits or similar space in which the equipment is housed. The Sub-contractor shall take all necessary steps to ensure that the equipment provided by him is silent as described above and shall include in his Tender for such sound-absorbing, or anti-vibration materials or devices as are necessary to ensure a satisfactory degree of silence and absence of vibration in the structure of the building in full compliance with the Noise Control Ordinance. The Contract Manager's decision as to what constitutes satisfaction in this respect shall be final;

2. The Sub-contractor shall provide anti-vibration devices wherever lift or escalator equipment with moving part(s), including but not limited to diverter pulley, are mounted directly or indirectly onto the building structure;

3. If on completion the installation is not, in the Contract Manager's opinion, sufficiently silent the Sub-contractor shall, at no cost to the Employer, carry out such modifications or additions as may be required, until the system is made silent to the Contract Manager's satisfaction and the compliance with the Noise Control Ordinance.

LTE1.9.020.8 PAINTING AND FINISH

1. All ferrous metal work supplied by the Sub-contractor in out of the way locations such as lift well, lift pit, machine room and exterior of lift car, etc. shall be properly wire-brushed, cleared of rust, scale, dirt and grease prior to the application of rust inhibiting primer, with particular attention paid to the priming of outer surfaces of car doors, inner surfaces of landing doors, metal work associated with door assemblies, the underside and the framework of lift cars. Any part of the equipment, including guide rails, which requires greasing or oiling and any components which for functional reasons are supplied unpainted by the manufacturers shall not be painted;

2. All normally visible ferrous metal surfaces such as car ceiling, landing door and architraves etc. shall, unless otherwise specified, be finished with one coat of rust inhibiting primer and two finishing coats of synthetic paint to a colour to be selected by the CM;

3. Non-ferrous surfaces and stainless steel surfaces shall not be painted;

4. The Sub-contractor shall comply with the requirements on materials and workmanship for painting as specified in Worksection FIN7 unless otherwise specified;

5. The Sub-contractor shall provide documentary evidence in accordance with PRE.BS1.205 to verify the place of manufacture and authenticity of the paints delivered to the site.

LTE1.9.030.8 METRIC UNITS

Only materials in metric units shall be used unless otherwise specified.
MISCELLANEOUS

LTE1.9.040.8 WEIGHT OF EQUIPMENT

Before ordering equipment the Sub-contractor shall provide the Contract Manager with full details of the weight, dimensions and positioning of the equipment to be installed and the reaction forces imposed on the structural supports for the purpose of determination of floor loadings, etc..

LTE1.9.050.8 TECHNICAL INFORMATION SUPPLIED WITH TENDER AND SUB-CONTRACTOR’S RESPONSIBILITY

1. All technical information supplied with the tender, including the tenderer's proposed design and the materials offered, is for tender assessment only;

2. Acceptance of the tender will not relieve the Sub-contractor of his responsibility for the proper working of the installation to meet the specified requirements in compliance with the Sub-contract documents to the entire satisfaction of the Contract Manager. In the event of the installation being, in the opinion of the Contract Manager, not in compliance with the specified requirements, the Sub-contractor shall modify his design, replace any unsatisfactory materials and do everything necessary for compliance with the specified requirements at his own cost.

LTE1.9.060.8 NUISANCE

The Sub-contractor shall comply with all Regulations and prevent nuisance from noise, water, smoke, dust, rubbish, mosquito breeding and all other similar causes.

LTE1.9.070.8 TEMPORARY USE

The Sub-contractor shall ensure that the installation shall not be used prior to the issue of the Certificate of Completion for purposes other than testing and commissioning of the installation unless otherwise approved by the Contract Manager.

LTE1.9.080.8 INSTRUMENTS

1. In addition to PRE.BS1.630 which specifies the provision of a set of measuring instruments for BSPASS and Contract Manager's Representatives' use, which will be under the custody of the CMR, the Sub-contractor shall provide all necessary instruments used for measurement and testing of the installation. The instruments used shall be capable of carrying out the measurement, test and inspection with the necessary accuracy and precision and calibrated with traceability to internationally or nationally recognised standards;

2. Each instrument shall carry an indelible identification and shall be attached with a label showing the due date for calibration;

3. The instruments shall include but are not limited to the following:
   a. Multi-meter;
   b. Clamp meter;
   c. Multi-function electronic meter for measurement of current, voltage, power factor, kW, kVA, kWAr and kWh;
   d. Equipment for measurement of total harmonic distortion;
   e. Insulation tester;
   f. Lux meter;
   g. Carpenter (spirit) level;
   h. Sound level meter;
   i. Force gauge;
j. Feeler gauge;
k. Measuring tape;
l. Vernier callipers;
m. Tachometer;
n. Test weight;
o. Ride comfort meter.

4. Upon request, the Sub-contractor shall submit calibration certificates or other evidence of calibration and records of calibration results for the Contract Manager's inspection;

5. The Contract Manager may reject any instrument(s) which in his opinion are not suitable for the measurement, test or inspection, and the Sub-contractor shall replace them with Approved types immediately when required.

**LTE1.9.090.8 BUILDING SERVICES PERFORMANCE ASSESSMENT SCORING SYSTEM**

The Housing Authority has adopted a Building Services Performance Assessment Scoring System (BSPASS) to assess the performance of building services Nominated Sub-contractors undertaking works for the Authority. BSPASS will be operated in this Sub-contract and assessments will be conducted at quarterly intervals or other intervals as required by the Contract Manager. The Sub-contractor shall provide all necessary attendance, and all necessary measuring instruments, in addition to those specified in PRE.BS1.630, etc. to facilitate the BSPASS assessment as stipulated in the relevant BSPASS manuals. In addition, the Sub-contractor shall also provide labours for the opening up and re-fixing of the works, the operation of the equipment and the testing, etc. as required by the assessment.

**LTE1.9.100.8 PERFORMANCE ASSESSMENT SCHEME**

The Housing Authority has adopted a Performance Assessment Scheme (PAS) to assess the performance of new lift/escalator installations for the Authority. PAS will be operated in this Sub-contract and assessment will be conducted at completion of the lift/escalator installations as required by the Contract Manager. Upon the Contract Manager's notification, the Sub-contractor's authorised representative shall attend such assessment. The Sub-contractor shall also provide labours for the opening up and re-fixing of the work, the operation of the equipment and the testings required by the Contract Manager. The necessary measuring equipment shall also be provided by the Sub-contractor.

**LTE1.9.110.8 SAMPLE WING**

During the construction for domestic building blocks, a specified sample wing located on a typical floor will be required to be completed by the Main Contractor including the flats, the corridor and the lift lobby etc. The Sub-contractor shall complete the installation of the architraves, the landing doors and landing door sills for the lift lobby in the specified sample wing in coordination with the Main Contractor to cope with the sample wing construction programme. The Sub-contractor shall be responsible to replace any architraves and landing door sills which are found damaged or deformed and to carry out the necessary adjustments to restore to as-new condition before building completion.

**LTE1.9.120.8 OPERATION AND MAINTENANCE MANUAL AND "AS-FITTED" DRAWINGS**

1. The Sub-contractor shall submit to the Contract Manager, the operation and maintenance manual which should include the following:
a. Manufacturer's operation and service instructions for each item of equipment;

b. Special precautions/procedures/methods required on the use, operation, cleaning, servicing, maintenance, repair and replacement of proprietary materials and equipment installed. Requirements on proper use and operation, durability, safety and statutory side shall be stated clearly;

c. Catalogues and user manuals of equipment as required by the Contract Manager;

d. Electronic and hard copies of the testing and commissioning reports of the installation. Electronic copy of the reports shall be in Adobe Portable Document Format (PDF) in compact disc;

e. Original and duplicate of the certificate of warranty for any material, equipment or installation with warranty period last beyond Maintenance Period;

f. A comprehensive list of spare parts and special tools for individual equipment as recommended by the manufacturer for safe operation and proper maintenance of the complete installation.

2. The Sub-contractor shall submit to the Contract Manager, the "as-fitted" drawings chopped "as-fitted", which should include, but not be limited to, lift schedule, elevation and section, machine room layout plan, installation details with loading indicated at structural anchor points, sectional views of lift wells showing overhead run-bys, positions of safe spaces and locations of limit switches, and a register of major equipment showing the equipment identification, capacity, operating range, setting, power requirement, serial number, etc. "As-fitted" drawings shall be of A1 size only.
