

Safe Use of Lifts

Voice over:

How did all these happen?

If we use the lift properly

none of these would have happened

First of all, if you can't get into this lift

just wait for the next one

Do not force into the lift

If you see the lift is full

you shouldn't go in

Overloading must be avoided

Take care of the elderly and children

Particularly, children must be

accompanied by adults when using the lift

Move right to the back of the lift car

Do not stand near the door

for it may cause accidents

Also, take good care of your belongings

If they get trapped by the lift doors

it can be very dangerous too

Children must not play with the lift doors

because this will likely cause injury

Do not press the lift buttons playfully

because this may affect the operation of the lift

Under no circumstances

should the lift doors be forced open

If assistance is required

use the intercom to speak to the security guard

In addition, when you step in or out of the lift

see if the lift floor is level with the landing

This will protect you from tripping and falling

Super:

Follow safety guidelines

Use lifts properly

Voice over:

If all of us remember these rules

we can use the lift properly

and stay safe going up and down
