

## **Housing Channel**

### **Title: Steel Gate Safety**

VO

To enhance security of public housing estates  
the Housing Department has installed  
at the entrances of most buildings  
password-activated security gates

If residents use these gates properly  
strangers can't get into the buildings easily

To ensure that the gates work properly  
we must know how to use them

The 'push' and 'pull' signs must be followed

Don't push when it says 'pull' and vice versa

Opening the gate by force will upset its normal operations

Don't push or pull too hard

and open the gate wider than 90 degrees

This will damage the hinges

If you're carrying heavy loads

or in need of assistance

please ask the security guard to help you open the gate

If you find the gate being damaged on purpose

Please report it to the estate office at once

Use the gate properly for your own safety
