### **Title: Care for Children**

Mother

Hey kid, be careful!

VO

Accidents can be prevented

if parents take good care of their children

and teach them safe and correct ways

of using public facilities

For example, at the playground

remind children not to poke their heads

or limbs through railings

and not to climb up equipment the wrong way

If you need to get inside premises that are locked

first inform the estate office

and get the staff on duty to help you

Teach children that

some activities need appropriate venues

in the wrong places, they can cause a nuisance

and trigger accidents too

So, playgrounds and rest areas

aren't for skateboarding or cycling

You may collide with someone

and hurt yourself

Also

children shouldn't play in lifts or on escalators

They should be accompanied by adults

And we should teach them

not to play about in lifts

and not to run up and down the escalators

or do anything dangerous while on escalators

When using glass doors

take special care of your child's safety

Running into a glass door

could have serious consequences

Always take great care with children

and ensure they don't do anything dangerous

Prevention of accidents starts with

proper parental guidance
