Title: Reduce Waste for a Better Future – Recycling

Anchorman: Can you share with us how “Recycling” can help to reduce domestic waste more effectively?

Wife: We have long developed the habit of source separation of waste within the household. Other than the 5 colored bins for waste paper, metals, plastics, glass bottles and used clothing, we also put fluorescent lamps and rechargeable batteries into the recycle boxes at the lift lobby.

Chung: Before putting plastic containers into the recycling bin, I would remove any bottle caps and labels and then rinse them.

Chan: I would try to recover and repair old computers, electronic appliances and furniture. If it is no longer usable, I would deliver it to local recycling companies for recycling.

Chan: It is indeed easy and convenient to separate waste for recycling. Just clean them up and put recyclable items into corresponding bins. As such, the amount of waste to be sent to the landfills will definitely be reduced.
