Title: The Proper Way to Operate Fire Hose Reels

Super The Proper Way to Operate Fire Hose Reels

Sister Hey! Bro, is there a fire?

Brother No, there are some dirt at our doorway
and I just wanted to wash it with the fire hose

Sister Don't you know that the fire hose is for putting
out fires only

You will be fined for unlawful taking of water

Brother I just want to get the hang of using it
So when there is a fire, I would know how to operate

Sister I can't say you're wrong,
You just need to follow the steps
as shown in this pictorial guide

Brother Yes! When there is a fire
First, break the fire alarm glass
The alarm will then sound and alert people to escape
At the same time, the fire pump will start to work
Providing sufficient water pressure for the fire hose
Then, open the control valve
And break the glass of the nozzle enclosure

pull out the fire hose

and turn on the water jet

aim the water jet at the base of fire

Sister Mind you, make sure that conditions allow
before using the fire hose reel to stop the fire from spreading
and dial 999 immediately to report the
incident to the Fire Services Department

Brother Got it, let me study it in more detail
