Title: Drainage Enhancement Programme

Super: Drainage Enhancement Programme

VO: The Hong Kong Housing Authority will implement the Drainage Enhancement Programme
We will go an extra mile to enhance the existing drainage system where feasible in domestic blocks or flats of public housing estates

VO: The Programme includes three enhancement works

Super: To improve open ends of vent pipes on the roof

VO: The first item is to improve the location of open ends of vent pipes on the roof to address the possible building wake effect

Super: Addition of connecting pipes

VO: Besides, connecting pipes will be added to collect used water from cleansing discharge to replenish the water inside the U-traps of floor drains to prevent loss of water seal

Super: Addition of an independent U-trap

VO: An independent U-trap will also be added to the floor drain

in one of the flats which has been sharing a single U-trap
with its adjacent flat
so as to prevent gas and odour from passing from one flat to the other

VO: Housing Department staff and its contractors
may need to enter into flats to carry out inspection and works
Affected tenants will be notified before the works take place

VO: By then, we appeal for tenants' cooperation
for letting us enter the flats for the arrangement of related works

VO: If residents have any enquiry on this Programme
please contact the estate management office
