Renewable Energy and Energy Saving

Renewable Energy

To promote the use of renewable energy, we have been installing grid-connected photovoltaic (PV) systems in new public rental housing projects for over a decade. Our PV systems are designed to generate electricity to meet approximately 1.5% to 2.5% of the building communal area's demand. As of March 2023, over 140 new rental domestic blocks have already installed PV Systems with a total system capacity over 1200kW. We are committed to exploring new renewable technologies to reduce our carbon footprint and promote sustainable living in public housing developments.

Renewable Energy and Energy Saving

Electric Vehicles Charging Facilities

To tie in with the initiatives on popularization of electric vehicles (EV), we will continue to provide EV charging facilities for carpark spaces in all the upcoming new public housing developments.
