Here is the footage of "Site Safety Forum 2016 for Works Contracts and Property Services Contracts", which was held on 14 July 2016.

This is the 1st Q&A session.

The host was Mr Raymond NG.

The speakers, from left to right, were

Mr YEUNG Chi-kin, Project Manager of Vibro (H.K.) Ltd.

Mr WAI Kwok-kit, Manager (HSE) of Shui On Building Contractors Limited

Mr HO Man-hong, Senior Project Manager of Hsin Chong Construction Company Limited

Mr FONG Lap-hang, Senior Consultant of Occupational Safety and Health Council

Mr LEUNG Lok-chuen, Divisional Occupational Safety Officer of Labour Department

M.C.:

This time we have three vouchers

Mr. Ho of Hsin Chong is going ask a question

All right

I've just asked a question but no one can give an answer

Or let me ask a more interesting question

I just introduced the four moves of martial arts

The four innovative moves of martial arts

They include "Computer Program", "Parental Style"

I want to ask what "Parental Style" is?

Do you still remember?

A friend is raising his hand

It's parents' instigation to remind workers near scaffolds

Yes. The motion sensor will raise an alarm every time people passing by

It is right

Your answer is very vivid

Next, a question from Mr. Wai of Shui On

I've mentioned two cases of near-miss accidents

What types were they?

There are choices: A. work at height

B. lifting

C. electricity

Is there anyone putting up your hands?

Lifting

Right?

Yes. Here is a voucher for you

Thank you

Everyone is so passionate

Mr. Yang from Vibro, would you mind?

I've just shared that

Company's performance

project progress or occupational safety and health

Which one should be given the first priority?

Can anyone answer this one?

Over there, someone is raising his hand

OHS

Right?

Yes

Congratulations and you can get a voucher

I have received some questions

The first question for Mr. Leung of the Labour Department

Recently there've been many new projects in Hong Kong

Infrastructure projects

Some of them have commenced

What policy does the Labour Department have to reduce the number of accidents?

Thank you all

The Labour Department mainly has three directions

The first one is legislation

The second one is education

The third one is publicity

For these new projects and new infrastructures

First, the Labour Department will take the initiative to carry out site inspection

We call one of them "Publicity Inspection"

Try to reach different stakeholders

Discuss with them what can be planned in advance

For example, risk assessment

or safety management plan can be further improved

It is hoped that we can build a relationship with them beforehand

and try to reduce risks

Another one is about education

We all know that a lot of infrastructure works have been started

Many stakeholders have considerable experience

The Labour Department will organise some sharing sessions

Could construction companies and stakeholders share your experience with us?

To let us understand more

Just like what's been done today

The third one is publicity

We all know that we often hold a safety competition

especially on site safety

What is the aim?

It is to develop a safety culture

This is what we aim to

When we have a better safety culture

The number of accidents will be reduced

Thank you everyone

Another question is for Mr. Fong of OSHC

To deal with work at height

last year, OSHC and the Labour Department jointly implemented

Three Safety Buddies for Work at Height – “Light-duty Working Platform Sponsorship Scheme for SMEs” & “Mobile Working Platform Sponsorship Scheme for SMEs”

This scheme is very good

Is there any plan from OSHC

to help the industry upgrade the level of occupational safety and health?

Thank you for your question

In fact, last year, the Labour Department and OSHC found that

" Three Safety Buddies to Safeguard Your Work at Height" is very useful

and it gains support and recognition from the industry

It is very successful

In order to further understand the features and restrictions of equipment

A guide has recently been published

Safety Guide on Use of Light-duty Working Platform and Mobile Working Platform

I hope the industry will know more about the relevant information

OSHC has cooperated with the Labour Department

and launched a Light-duty Working Platform Sponsorship Scheme for SMEs

We welcome the industry to continue to support and apply for the scheme

and to use appropriate working platforms

Apart from that

OSH Star Enterprise – RMAA Safety Accreditation Scheme

is our focus of promotion

Since the scheme has been implemented for four years

and the time is right

We will also invite enterprises with 50 people or more to participate

Everyone joins together to do a good job in occupational safety and health

At the beginning of the Forum, the Chairman has also mentioned that on August 11

there will be a launching ceremony to support the OSH Star Enterprise Accreditation Scheme

It is hoped that through the activities in the market

more organisations will support the scheme

and select star enterprises as their first choice

By the drive of market

more organisations will participate in the scheme

In addition, we will continue to keep in close contact with the industry

and launch a variety of funding programs

such as Portable Residual Current Device Sponsorship Scheme for SMEs

The industry stakeholders are welcomed to join

to purchase the above products

and to make work safe

Thank you, Mr. Fong

Thank you everyone
