

Here is the footage of "Site Safety Forum for Works Contracts and Property Services Contracts 2017" which was held on 6 July 2017.

Here is a briefing on the latest safety products by suppliers of safety equipment.

The speakers are

Mr. Jason K F Wong, the representative of Asia Pacific Industrial Safety Equipment

Mr. Billy C H Ho, the manager of Ironsteel International Limited

Mr. Kelvin K H Kwong, the manager of Kervin Limited

Ms. F S Lam, the representative of Makita Power Tools (HK) Limited

Ms. Adriana H K Tse, the manager of Leung Yau Company

Mr. Mike K T Yeung, the Sales and Marketing Manager of Safetech Limited

Ms. Alyssa Y Y Choi, the Business Development Manager of Solute (HK) Company Limited

Mr. W. K. Mak, Director of Board of Standard Supply Co. Ltd.

Mr. David D W Law, Business Planning Manager of Tak Kee Hardware Development Limited

Mr. K K Song, the representative of Top Advance Limited

The following is the sharing of Mr. Jason K F Wong, the representative of Asia Pacific Industrial Safety Equipment

Hello everyone, I am going to share our company's

Full body personal protective equipment.

We supply safety helmets with Y-type chin straps in accordance with EN397 safety standards,

IP67-compliant waterproof circuit breaker,

safety lifeline and the latest step platform and hop-up platform.

Hop-on platform in accordance with EN131-7 standard (2nd generation),

Detail information, step platform and the hop-up platform have been placed at the exhibition booth.

Everyone can visit.

The following is the sharing of Mr. Billy C H Ho, the manager of Ironsteel International Limited

We supply Ironsteel safety shoes.

Our company has safety shoes business only.

We sell our products in Europe,

and also have different points of sale in different countries.

The Hong Kong government and various agencies are also using our products.

Safety shoes are the indispensable product in the industry.

The standard of safety shoes is very important.

We hope to make safe and

CE compliant products for the industry.

EN ISO 20345 is a common standard of the industry

which is supported by the Bamboo Scaffolding Association of Hong Kong.

The winner of the Bamboo Scaffolding Gold Award is also using our products.

I hope that our products can enable everyone to work safely and protect everyone.

We have our exhibition booth at the back, you are welcome to visit.

The following is the sharing of Mr. Kelvin K H Kwong, the manager of Kervin Limited

Dear guests, hello everyone.

I am Kelvin K H Kwong, the representative of Kervin Limited

The company acts as the agent of Kee Safety in the United Kingdom

selling working platforms and safety fences.

Today, I will mainly introduce the self-closing barrier which

seems to be simple, but can follow the requirements of the Labour Department and OSH

to enhance the existing guardrails, reinforcement cages and cat ladders

Addition of an automatic door can protect the safety of the user and

this is simple and practical.

There are exhibits at the back, welcome everyone to visit.

The following is the sharing of Ms. F S Lam, the representative of Makita Power Tools (HK) Limited  
Hello everyone, I am the representative of Makita Power Tools (HK) Ltd.

I am Christine.

Nowadays, the workplace requires power tools to have wireless and dust-free functions.

We offer solutions for wireless dust-free power tools which are able to meet these requirements.

The workers are using a backpack vacuum cleaner in the picture.

This vacuum cleaner can be connected with any hand-held electric tools of Makita.

As you can see in the picture, the vacuum cleaner is equipped with a grinder.

Both of these two sets of tools use 18V lithium battery.

This battery can be used on more than 130 kinds of tools and therefore it is convenient and flexible.

A battery, the same amount of power, can be used for more than 130 kinds of tools.

We have different kinds of tools, including this grinder, having related safety devices.

Taking this grinder as an example, there is an electronic brake technology.

When turned off, it will stop after two seconds.

There is a safety switch when a worker releases, the grinder will stop immediately and this can avoid the risk of cuts. It also has the technology to prevent rebound.

It will slow down when encountering hard objects and then stop.

These are some relatively new safety measures.

This backpack vacuum cleaner is one of the choices,

there are many different kinds of vacuum cleaners,

for example, ground, single back or other standards.

Different vacuum cleaners for different requirements of work to

suit the working environment, such as on board or in confined spaces.

Choose a suitable dustproof device

with a converter, you can connect it with other tools.

My briefing finishes here.

Excuse me, I forgot to play the short film.

The screen is playing the video, and the clip shows that the worker is using a piggyback vacuum cleaner connected to a cutting machine to cut the concrete.

With vacuum cleaner connected to the cutting machine, there is no dust on the site.

We achieve wireless and dust free working environment.

Thank you all.

The following is the sharing of Ms. H K Tse, the manager of Leung Yau Company.

Hello everyone, I am the representative of Leung Yau Company.

I will introduce the Milwaukee's rechargeable tools.

Wireless tools are becoming more common,

The main reason is convenient, you won't be tripped by the wire.

Since the wireless tools are fed by direct current, most of them have an emergency brake design.

For example, the 18V 5-inch grinder, it has a safety switch.

When the handle is released, the disc will stop within 2 seconds, which is safer.

Working in low light conditions will be prone to danger.

We also introduce different kinds of lithium lights,

providing enough light in the dark in order to let the workers work safely.

Safety is as important as health,

there are different types of vacuum cleaners.

There are also two types of concrete drills that can be installed on different brands which can reduce the hazard of dust to users

Welcome to visit our exhibition.

The following is the sharing by Mr. K T Yeung, the Sales and Marketing Manager of Safetech Ltd.

Hello everyone, I am the representative of Safetech Ltd.

Introducing the WISABlock to everyone today which is a anti-piercing protector for rebar.

It is different from the protective cover on the market,

it is not necessary to install a protective cover on each rebar.

Just install one every 1.5 meters with a wooden plank in between

to form a good protection system.

The system is tested according to US Occupational Safety and Health (OSHA) standards. A 140-kilogram dummy will not damage the system when it falls for three meters. It is more protective than the current protective cover. It can also be used repeatedly to reduce installation time. Many companies have implemented the system now. Welcome everyone to visit the exhibition booth.

The following is the sharing by Ms. Y Y Choi, the Business Development Manager of Solute (HK) Co, Ltd. Hello everyone, I am Elisa. Solute's products aim for the convenience of everyone, build a smooth and healthy working environment, and let everyone pay attention to the lives of every employee or partner. The company's products include workplace warning signs, for example, pipe marking and marking instructions for escape guidance equipment, there are also lockout and tagout procedures for mechanical and electrical equipment during operations and maintenance. More important is to introduce the SME insole subsidy scheme promoted by OSHC. Details can be found at the exhibition booth Thank you.

The following is the sharing by Mr. W K Mak, Director of Board of Standard Supply Co. Ltd. Hello everyone, I am the representative of Standard Supply Co. Ltd. Our company serves Hong Kong Industries for 35 years. We have introduced a lot of safety equipment to prevent fall of person from height in this decade. This time, we mainly introduce equipment that prevents fall of tools from height. For an object which weighs 1 kg and falls at a height of 6 meters, the force has exceeded 15 kg. Even wearing a helmet is futile. There are a lot of tool straps. Welcome to share with each other at our exhibition booth. Thank you

The following is the sharing by Mr. David D W Law, Business Planning Manager of Tak Kee Hardware Development Ltd. Hello everyone, I am the representative of Tak Kee Hardware. The company has a history of 65 years. I would introduce two new products for everyone, the first one is Dr. Ladder's portable working platform which is a new generation working platform that provides a mid rail to enhance safety. New diagonal support is added on the rear foot to prevent flipping. The protection nets have gone through water catalysis, antibacterial and anti-mildew process. The second product is Dr. Ladder's hop-up platform. New telescopic struts can adjust the level of the platform even the platform is on a floor with a low inclination. The new design of four-sided installation of detachable guardrails increases workspace. It has a new bridge function to connect two hop-up platforms in order to create more workspace. The related products have been put at the back, I hope everyone can give us your opinions. Our company will continue to design and manufacture safe and stable products. I hope everyone can support, thank you.

The following is the sharing by Mr. K K Song, the representative of Top Advance Ltd. Hello everyone, I am the representative of Top Advance Ltd. My company mainly acts as an agent for safety products. Here I mainly introduce safety helmets. Since OSHC promoted safety helmets just now, I would introduce SH0411 to everyone today. The material is resin (ABS), it is harder and more protective when compared with the other helmets.

Besides complying with the EN397:2012 +A1:2012 standard, it also meets the LD standard.

The LD standard is about the impact protection of the side.

When working, there are chances that the helmet will be hit from the side.

In general the helmets protect the top of the head, but the side is not tested.

I am not doubting their degree of protection,

they just did not conduct related tests.

But our products are tested, and it

is more protective.

We have other safety products,

but today I mainly introduce the characteristics of this helmet.

If you are interested in other products

you can visit the exhibition booth

Thank you.
