

Hello, everyone! Welcome to our seminar.  
Thank you for your punctuality.  
It's my pleasure to see so many colleagues present.  
First of all, I would like to welcome stakeholders from the industry, distinguished guests, and colleagues to join the "Site Safety Seminar for Capital Works New Works Contracts" today.  
Also, I'd like to take this opportunity to express my gratitude to the co-organisers of the seminar, including the Labour Department, the Occupational Safety and Health Council (OSHC) and all the guests who honoured us with their presence.  
Today's seminar will consist of several sections.  
The first section is the Finding of the Safety Auditing System and the Surprise Safety Inspection Programme in the 2<sup>nd</sup> & 3<sup>rd</sup> Quarters of 2014 presented by (OSHC), including all the good practice on HA sites (Hong Kong Housing Authority).  
Next, OSHC will report the status of the "Occupational Injury & Disease Surveillance System" developing for HA. After the system is put into the service in the future, it will contain a lot of data and information on which we will be able to conduct series of statistics analysis in order to find out various causes of the accidents. It is expected to formulate relevant measures to prevent similar incidents from occurring again in the future.  
In the past two years, as we learnt from the newspapers, under the "Near Miss and Fatal Accident" section, there were many incidents related to electrical works and lifting operations. Therefore, the colleagues from the Labour Department will explain to us the regulations on safety and safe operation today, so that we can reduce accidents in the future.  
Technology brings a lot of convenience to us, which, as we all agree, also improves our lifestyles. We can use technology to improve the safety and health on our sites. For example, "Wireless Site" has the ability to reduce the chance of electric shock for construction workers on site.  
Mr. Jiang from HILTI will present how the advanced technology can improve productivity and reduce the occurrence of accidents, and protect the health of our fellow workers.  
Next, our colleague Mr. Lau will talk about his trip to South Korea earlier this year and share his experience regarding the safety inspection of infrastructure project.

And we can consider  
how to apply these measures or equipment  
to the construction industry.  
Facing various challenges in the construction industry,  
we hope that our friends from all sectors can work together  
to jointly promote the "Occupational Safety & Health" in the construction industry.  
As we all agree,  
returning home safely every day  
is the best gift that a fellow worker can give to his family.  
I hope that after you return to work,  
you can share what you have seen and heard today with your colleagues  
to promote the safe practice.  
We will upload today's safety seminar and video  
to the "Site Safety Website" of the Housing Authority,  
which will be convenient for you  
or colleagues that are not present today to watch together.  
Finally, I wish all our friends in charge of projects  
"Zero Incident and Happy Fellow Workers"  
Thank you.
