

Dear friends from the industry, guests,  
colleagues, and everyone,  
good morning

Welcome to attend the half-yearly  
Site Safety Seminar for Capital Works New Works Contracts  
Thanks to the co-organizers, including the Labour Department,  
Occupational Safety and Health Council, speakers  
and participants, thank you for your support

Today, the seminar content is rich and divided into six parts

The first and second parts, we invited

Mr. Jack Fong of OSHC to introduce  
the findings of

Housing Authority Safety Auditing System (HASAS) and  
Housing Authority Lift and Escalator Nominated Sub-contracts  
Safety Auditing System (HALENSAS) in the second and third quarters of 2016

Then, we are honoured to invite

principal consultant of OSHC, Dr Winson Yeung to talk about  
how to "Prevention of Accident through Design for Safety"

I believe that everyone will definitely benefit a lot

In the fourth part, we are honoured to invite Divisional Occupational Safety Officer  
of Labour Department, Mr. David Lee Chi Ming to introduce  
latest topic "Safety of Bamboo Scaffolding"

The application of bamboo scaffolding is very common in Hong Kong

I believe that almost all of our construction projects involve  
bamboo scaffolding

Bamboo scaffolding is an important work item  
of working at height

Everyone needs to pay attention to the safety of bamboo scaffolding

Next, Mr. Henry Cheung from OSHC will talk about  
the results of Surprise Safety Inspection Programme (SSIP)  
in the second quarter and third quarter of 2016  
and share some good practices.

to minimise safety risks at the site.

Let the workers realise our slogan:

by going to work with a happy frame of mind and returning home safe and sound to  
their families.

Last topic,

Mr. Henry Cheung of OSHC will take about

the latest progress of the "Housing Authority  
Occupational Injury and  
Disease Surveillance System".

The system for reporting the industrial accident and near miss incident online  
was implemented on 1st May this year

in existing new works contract sites of the Housing Authority

We believe that this system will make the whole occupational injury and  
near miss incident surveillance work more convenient and faster.

We will also upload the today's seminar recording  
on HA's site safety website

for view by everyone and those who are not able to attend today

Our site safety website was migrated to

the website of the Housing Authority on 25th April this year,

changed to a new URL, optimised the accessibility of the website to  
allow more users to view site safety information

Finally, I hope that when you return to work,

will share the important message of this seminar

with colleagues in your industry

Let's promote site safety together

Thank you, everyone
