

Here is the footage from
Hong Kong Housing Authority
"Site Safety Seminar for Capital Works New Works Contracts" which was held on 27
April 2017.
The speaker is
Ms. Connie Yeung Kwong Yim,
Assistant Director (Development and Procurement),
She is now delivering a welcome address.

Hello everyone.
Dear friends, distinguished guests,
colleagues, everyone, good afternoon.
I am Yeung Kwong Yim.
Assistant Director of Housing (Procurement and Development)
The topic of "safety" is part of my duties.
I am here to meet you today.
First of all, welcome everyone to attend
today's "Site Safety Seminar for Capital Works New Works Contracts".
We will hold this type of seminar regularly.
I also hope that the seminar we hold are practical,
can help everyone, don't "get off the ground".
Become a platform for friends in the industry to share with each other.
First of all, thank you for all co-organizers and government departments.
Names not listed in order.
Including the Electrical and Mechanical Services Department, Occupational Safety
and Health Council,
colleagues responsible for the speech and all participants.
Thanks for your support.

The content of each of our seminar is very fulfilling.
I hope to be as practical as possible, and everyone can learn to use it.
Rather than highbrow, pure academic or over-theoretical.
Therefore, the seminar has a question and answer session, and a non-one-way
seminar.
I hope to have communication.

This seminar is divided into two parts.

The first part is three sections with a break in the middle.
The upper part is divided into three sections.
The first and second parts of the seminar,
Mr. Jack Fong from OSHC will
introduce Housing Authority Safety Auditing System (HASAS) in the fourth quarter of
2016 and
in the fourth quarter of 2016 and the first quarter of 2017.
And the results of Housing Authority Lift and Escalator
Nominated Sub-contracts Safety Auditing System (HALENSAS).
Then, Mr. Ho Was Keung of the Electrical and Mechanical Services Department will
explain
the Code of Practice for the Electricity (Wiring) Regulations 2015 Edition

Except for electrical engineering completed before 30 November 2017,
all electrical works of new projects must meet
the requirements for this new code.
I believe that Mr. Ho will help everyone understand more.
Everyone must take the opportunity.
If there is a question, please try to ask in the Q&A session.
There is a break in the middle, then the next part will begin.
The fourth part is by our senior manager (Safety & Health),
Mr. Lau Chee Tim who will share for us the experience of
visiting the Somatosensory Safety Training Centre in Beijing in September 2016.
Hope that is a practical sharing.
Next, Mr. Aton Wong from OSHC
will tell everyone about the findings of Surprise Safety Inspection Programme (SSIP)
in fourth quarter of 2016 and the first quarter of the 2017.
I will also share with you the good practices.
I hope to minimize the safety risks on the site.

Last topic,
Mr. Aton Wong from the OSHC will introduce
latest progress of the Housing Authority
Occupational Injury & Disease Surveillance System.
This system for reporting occupational injury and disease online
was implemented
in existing new construction contracts of HA on 1 May of last year.
We believe that this system will render

occupational injury and disease surveillance work more convenient and faster.

We are willing to listen to different opinions.

to make the system more convenient and faster.

We hope to hear from everyone to

make the system perfect and easy for everyone to use.

If people in the industry fail to attend today,

it doesn't matter.

We will take a video clip of today's seminar and

upload on the site safety website of the Housing Authority.

Let everyone and

friends in the industry who were unable to attend today to watch

and also can learn new things by reviewing.

Finally, I hope that when you return to work,

you can share key messages from this seminar

with your colleagues.

Promote site safety together.

Thank you all.

Thank You For Watching.
