

Here is the footage of

“Site Safety Seminar for Capital Works New Works Contracts”

which was held on 7 November 2018

by the Hong Kong Housing Authority

Topic is Questions & Answers

Hello, I would like to ask Mr. Yu

about safety audit at the operation level

Even with the best system

there is no way to supervise every worker’s behavior at work

I would like to ask, as contractors

how do we make full use of

this safety audit at the operation level?

Supervising the behaviour of every worker

is the responsibility of the foreman

Just now, I mentioned safety audit at the work level

I was stressing the procedure before that

That is to make an operation plan

and make sure the operation plan is flawless

In fact, we need to consider many issues

So, when I conduct an audit

the safety audit at the work level

there must be a person with professional knowledge

to inspect and review all aspects and issues

to see whether the method is in order

before operation is allowed to go ahead

Regarding the difficulty in supervising workers

as Ms. Lung mentioned just now

a lifting operation supervisor is needed

This is a requirement

The lifting operation supervisor is responsible

for following method statement

The supervision of the entire work operation
is not just the operation that was mentioned just now
That should also include an initial stage of planning
Make sure your method statement works in coordination with all issues
Then, when work begins
workers are assigned to different work duties
To promote a little here
in fact, Construction Industry Council is planning to
in fact, Construction Industry Council is planning to
prepare a document to cover guidelines
for stakeholders to refer to
The document will tell everyone, at every position
their duties and responsibilities
The report will be published shortly
Thank you for watching
