

HA W3C 20220927 Opening 余慶儀 ENG subtitle

This is a clip from the September 27, 2022 recording of the Hong Kong Housing Authority's "Site Safety Seminar for Capital Works New Works Contracts".

The speaker on stage is Ms. Emily SER,
Chief Architect / 7.

She will give the welcome address.

Distinguished guests, friends and colleagues, good afternoon.

Welcome to the online

"Site Safety Seminar for New Capital Works Contracts."

I would like to especially thank our guest speakers today for their unwavering support amidst the pandemic, enlightening us with the latest insights on site safety.

The government has allocated funds to establish Construction Innovation and Technology Fund (CITF) for encouraging industry stakeholders to widely adopt innovative methods and technologies in construction to enhance productivity, improve construction quality, site safety and environmental efficiency.

To understand the application procedures of the fund, we have invited Mr. Sam CHAN, Manager (Industry Development) of the Construction Industry Council to give us a detailed introduction.

"Modular Integrated Construction" is an innovative construction method.

The industry should embrace and explore for future applications.

We are delighted to have Ms. Eva CHAN, Lecturer of the School of Professional Development in Construction, to introduce the Modular Integrated Construction course,

which I believe all of us will find helpful.

Technology is changing rapidly, so we invited

Mr. Keith SZETO, Sales Manager of SmarTone,

to discuss the topic of “5G Applications Co-creation”

Through high-speed and large-volume data transmission,

more and faster information exchange is allowed

helping to achieve the goal of smart construction sites earlier.

After the break, Mr. Terry DAO, Chief Executive Officer of

VTM Digital Ltd., will introduce a training kit recently

launched by the Hong Kong Construction Association,

“AR Safety Tool Box Talk Training”

It aims to enhance workers’ learning effectiveness.

In recent years, the Housing Department has introduced

requirements for smart devices in project specifications.

There is great interest in understanding how

the data collected can be analyzed to improve site safety.

Therefore we have invited

Ms. Jackie WONG, Head of Business Development of

CHAIN Technology Development Co. Ltd., to shed light on

the topic of “Digital Twin Technologies and Applications”

(for Construction and Facility Management)

The Housing Department has always placed a strong emphasis

on site safety, collaborating with the Occupational Safety

& Health Council every quarter to conduct “Safety Audits”

and “Surprise Safety Inspections” on new works sites.

Beyond identifying safety deficiencies, the primary focus

is on direct communication with frontline staff

to enhance site safety awareness.

Later, we will have Mr. Jack FONG and Mr. Steve HU,

senior consultants of the Occupational Safety & Health Council, analyze the recent findings of the “Safety Audits” and “Surprise Safety Inspections”

After that, Mr. Enoch LAU, Senior Consultant of the Occupational Safety & Health Council, will share about the “Heart Caring Campaign,” explaining how to prevent cardiovascular diseases with related measures.

It is a topic worth our attention.

Lastly, I urge all of you to take good care of your body and always prioritize health and site safety.

Please visit the Housing Department's site safety website, share your learnings today with your colleagues, and spread the messages about site safety.

Without further ado, I invite you to enjoy the presentations by our speakers today. Thank you, everyone.
