This is a clip from the 18 April 2023 recording of the

Hong Kong Housing Authority

“Site Safety Seminar for Capital Works New Works Contracts”

This is Part I of the Q&A session

M.C. :

This is the first part of our question and answer session

Please raise your hand if you have any question

We will pass you a microphone

I have a question from an online participant

It is for structural engineer Robin Chu and

architect Eddie Yeung from Housing Department

“Will the broader use of Modular Integrated Construction (MiC) undermine site safety?”

Mr. Robin Chu :

We all know that components for MiC

are much bulkier and heavier

So, there is a greater risk involved in lifting operations

Housing Authority and the Occupational Safety and

Health Council (OSHC)

have jointly compiled specific safety guidelines for MiC

It details the risk involved in the manufacturing

on-site handling, as well as lifting operations for MiC

The OSHC and relevant departments also provide

safety training for lifting operations

to enhance knowledge and awareness within the trade  
Housing Authority also uses mobile applications  
to manage works sites and streamline communications  
We will enhance site safety management with innovative technology  
We will continue to improve and optimise MiC  
to make it safer

M.C. :

Thank you Mr. Chu
