

This is a clip from the 18 October 2024 recording of the  
Hong Kong Housing Authority  
"Site Safety Seminar for Capital Works New Works Contracts"

The first Q&A session

\*\*\*\*\*  
(00:12)

Colleagues on-site, if you have any questions, please raise your hand

Okay, this colleague here

Hello, I have two questions to ask

When applying for the Smart Site Safety System Labelling Scheme  
is it mandatory to have a centralised management platform

The second question is

if the project does not use smart site safety system products  
listed under the Construction Innovation and Technology Fund  
can it still apply for this scheme

Thank you for your questions, let me answer the first one first

As mentioned earlier, the centralised management platform in the Smart Site Safety System  
Labelling Scheme

is not a mandatory requirement

Based on the recommended packages just mentioned  
some trades are advised to have a centralised management platform while others are not  
So even if you do not use a centralised management platform  
you can still join the Scheme based on the smart site safety system products you have used

The second question is about the application of the Construction Innovation and Technology  
Fund (CITF)

When submitting the form, we will ask what products you are using

If those products are the Construction Innovation and Technology Fund approved  
they should have a product code, you can just fill in the code

If the products are not CITF approved

it does not mean you cannot apply

You can still apply for the Smart Site Safety System Labelling Scheme

However, you may need to provide additional information

to clarify the functionality and appearance of your product

so that during inspections, we know what we are checking for

As long as you submit all the required details, you can still apply for the Scheme

Thank you for watching
